

CABINET: THURSDAY, 21 JANUARY 2016 at 3.30 PM

A Cabinet Meeting will be held in Function Room L at City Hall on Thursday 21 January 2016 at 3.30 pm

A G E N D A

- 1 Minutes of the Cabinet Meetings held on 3 and 10 December 2015 *(Pages 1 - 12)*

Scrutiny Matters

- 2 To receive the Community and Adult Services Scrutiny Committee report entitled 'Information, Advice and Assistance (IAA) Services for Mental Health Service Users in Cardiff' *(Pages 13 - 106)*

Corporate Services & Performance

- 3 Annual Review of the Council's Voluntary Redundancy Scheme. *(Pages 107 - 110)*
- 4 Review of the Council's Disciplinary Policy and Associated Policies & Procedures *(Pages 111 - 200)*
- 5 Independent Commission on Local Government Finance Wales: City of Cardiff Council Response *(Pages 201 - 216)*
- 6 CCTV Body Worn Camera Policy and Pilot Deployment *(Pages 217 - 274)*

Education

- 7 The Performance of Cardiff Schools and the Youth Service in 2014/2015 *(Pages 275 - 342)*

Leader (Economic Development & Partnerships) and Education

- 8 Cardiff Commitment to Youth Engagement and Progression *(Pages 343 - 368)*

Health, Housing & Wellbeing & Transport Planning & Sustainability

- 9 Gypsy and Traveller Accommodation Assessment and Site Assessment Criteria *(Pages 369 - 426)*

Transport, Planning & Sustainability

10 Adoption of Cardiff Local Development Plan (LDP) *(Pages 427 - 2440)*

PAUL ORDERS

Chief Executive

CITY OF CARDIFF COUNCIL
CYNGOR DINAS CAERDYDD

MINUTES

CABINET MEETING: 3 DECEMBER 2015

Cabinet Members Present: Councillor Phil Bale (Chair)
 Councillor Sue Lent
 Councillor Peter Bradbury
 Councillor Dan De'Ath
 Councillor Bob Derbyshire
 Councillor Graham Hinchey
 Councillor Susan Elsmore
 Councillor Sarah Merry
 Councillor Ramesh Patel

Observers: Councillor Dianne Rees
 Councillor Judith Woodman

Officers: Paul Orders, Chief Executive
 Christine Salter, Section 151 Officer
 Marie Rosenthal, Monitoring Officer
 Joanne Watkins, Cabinet Office

69 MINUTES OF THE CABINET MEETING HELD ON 12 NOVEMBER 2015

RESOLVED: that the minutes of the Cabinet meeting held on 12 November 2015 be approved

70 LLANEDEYRN HUB AND THE MAELFA REGENERATION SCHEME

Appendices 5 & 6 to this report are exempt from publication because they contain information of the kind described in paragraphs 14 and 21 of Parts 4 and 5 of Schedule 12A of the Local Government Act 1972

Cabinet received a report which outlined the results of recent community consultation on the proposed Community Hub in Llanedeyrn and updated plans for the Maelfa redevelopment. Community feedback on the proposals was positive.

RESOLVED: that

1. Agreement be given to proceed with the extension to the Powerhouse to create the Llanedeyrn Community Hub;

2. the progress on the Maelfa regeneration scheme be noted and authority be delegated to the Director of Economic Development to the dispose of land for the purposes of enabling the redevelopment, in accordance with the received valuation advice;
3. authority be delegated to the Director of Communities, Housing and Customer Services, in consultation with the Cabinet Member for Community Development, Co-operatives and Social Enterprise and the Leader as appropriate,
 - a) to agree the detailed plans and undertake all matters relating to implementation of the Llanedeyrn Community Hub and the Maelfa Regeneration Scheme
 - b) to obtain all necessary permissions and consents, in consultation with the Section 151 Officer and Cabinet Member for Corporate Services and Performance, as required;

71 CITY OF CARDIFF COUNCIL LIBRARIES STOCK MANAGEMENT STRATEGY AND LOCAL STUDIES SERVICE

The Cabinet considered a report outlining an approach to the Library Service Stock Management Strategy which supported the Council's commitment to achieve stock related Welsh Public Library Standards.

RESOLVED: that

1. the approach outlined in the report and the adoption of the Libraries Stock Management Strategy, including the creation of the Stock Management Advisory Group be agreed
2. a further report be presented to cabinet that will make recommendations on the future location of the Council's stock and collections informed by the views of the Stock Management Advisory Group.
3. consultation take place on the transfer of the Local Studies service to Cathays.
4. authority be delegated to the Director for Communities, Housing and Customer Service in consultation with Cabinet Member for Community, Development, Co-operatives & Social Enterprise to decide on the permanent location of Local Studies informed by the results of the consultation.
5. Agreement in principle be given to discontinue the use of the current stock storage facility at Dominions Way subject to the appropriate relocation of all stock and collections.

72 COUNCIL TAX - DISCRETIONARY RELIEF POLICY

The Cabinet considered approving the Discretionary Relief Policy for Council Tax which had been created to provide assistance to council tax payers where there is clear evidence that an individual or group of individuals have exceptional circumstances which are not as a result of negligence on their part.

RESOLVED: that

- (1) the Discretionary Relief Policy for Council Tax, attached at Appendix 1 to the report be approved
- (2) the policy be implemented with effect from 1st January 2016
- (3) the power to determine an application for discretionary relief from council tax be delegated to the Revenues Services Manager and that the Corporate Director Resources will determine any appeals.

73 SCHOOL ORGANISATION PROPOSALS: SPECIALIST PROVISION FOR PRIMARY AGED PUPILS WITH SPEECH AND LANGUAGE DIFFICULTIES, AND WITH BEHAVIOURAL EMOTIONAL AND SOCIAL DIFFICULTIES.

A report outlining proposals to re-shape specialist education provision was considered due to the falling demand for speech and language places, and increased demand for provision for children with behavioral social and emotional needs. It was proposed that a public consultation be held on proposals to remodel SEN provision through the closure of Meadowbank Special School, increase the capacity for mainstream support for children with speech and language needs, change the use of the Allensbank SRB to provide additional places for pupils with severe and complex learning difficulties and increase the number of Nurture/Revolving Door classes in mainstream schools across the city

RESOLVED: that:

1. Officers be authorised to consult on the proposal to remodel SEN provision specifically to respond to the falling demand for speech and language places and increased demand for provision of children with behavioural social and emotional needs through:

- The closure of Meadowbank Special School by August 2017.

This will be supported by the following proposed changes:-

- An Increase in the capacity for mainstream support for children with speech and language needs
- A change in the use of the Allensbank SRB to provide additional places for pupils with severe and complex learning difficulties
- An increase in the number of Nurture/Revolving Door classes in mainstream schools across the city

2. prior to implementation of the proposal a further report will be provided to the Cabinet providing details of any objections received, the responses to those objections and recommendations for implementation or otherwise of the proposal.

74 SCHOOLS ORGANISATION PLANNING: THE PROVISION OF WELSH-MEDIUM AND ENGLISH-MEDIUM PRIMARY SCHOOL PLACES IN AND AROUND LLANDAFF NORTH

A report containing details of the responses received following consultation regarding the provision of Welsh-medium and English-medium primary school provision in and around Llandaff North was considered. It was reported that the majority of repondees preferred Option 3 which would consolidate Gabalfa Primary School at 1FE with 48 part-time nursery places from September 2017, permanently establish Ysgol Glan Ceubal on its existing site at Colwill Road, Gabalfa, CF14 2PQ at 1FE from September 2016 and extend the age range of Ysgol Glan Ceubal from 4-11 to 3-11 from September 2016. This option would also retain flexibility around options to address any changes to future demand for English-medium and Welsh-medium primary school places in the area.

RESOLVED: that

1. Authorisation be given to the publication of a Notice to:
 - Consolidate Gabalfa Primary School at 1FE with 48 part-time nursery places from September 2017
 - Permanently establish Ysgol Glan Ceubal on its existing site at Colwill Road, Gabalfa, CF14 2PQ at 1FE from September 2016
 - Extend the age range of Ysgol Glan Ceubal from 4-11 to 3-11 from September 2016
2. the statutory notice will set out Option 3 as the recommended delivery option should the proposal proceed to implementation and subject to securing WG funding at the business case stage.
3. prior to implementation of the proposal a further report will be provided to the Cabinet providing details of any objections received, the responses to those objections and recommendations for implementation or otherwise of the proposal.

75 AMENDMENTS TO THE JOINT SCHEME FOR THE ALLOCATION OF SOCIAL HOUSING

A report providing an update on the operation of the joint Cardiff Housing Allocation scheme was received. The scheme was implemented in January 2015 and it was reported that the changes had resulted in improved advice to applicants with 1,674 housing solutions interviews carried out in the first 6 months of operation and the scheme had been successful in identifying those applicants who are most in housing need and prioritising them accordingly. In

light of operational experience a number of amendments were proposed around homelessness, overcrowding and local connections. Comments from the Community & Adult Scrutiny Committee were circulated to the Cabinet.

RESOLVED: that the amendments outlined in the report be approved in order to further enhance the joint Cardiff Housing Allocation Scheme.

76 CARDIFF CENTRAL TRANSPORT INTERCHANGE

Appendices 3 – 6 of this report are exempt from publication because they contain information of the kind described in paragraphs 14 and 21 of parts 4 and 5 of Schedule 12A to the Local Government Act 1972.

The Cabinet received an update on the Central Transport Interchange project which confirmed the delivery timetable including the anticipated timing of key decisions. The report also provided an update on the Central Square regeneration scheme following the signing of an Agreement to Lease by BBC Wales for a new headquarters building at Central Square. Comments from the Economy and Culture Scrutiny Committee were circulated at the meeting.

RESOLVED: that

- (1) the recent progress made with the Central Square regeneration scheme be noted
- (2) the indicative timetable for the construction of the new Central Transport Interchange building as presented in paragraphs 13-18 of the report be noted
- (3) the costs outlined for the delivery of public realm improvements and other enabling costs related to the Masterplan Agreement to support the delivery of the new Central Transport Interchange building as detailed in confidential Appendix 3 be approved
- (4) authority be delegated to the Director of Economic Development, in consultation with the Leader of the Council, the Cabinet Member for Corporate Services and Performance, the Cabinet Member for Transport, Planning and Sustainability, the Section 151 Officer and the Director of Legal and Governance to consider in detail options for funding the new Central Transport Interchange and to return to Cabinet with a final recommendation.

MINUTES

CABINET MEETING: 10 DECEMBER 2015

Cabinet Members Present: Councillor Phil Bale (Chair)
Councillor Sue Lent
Councillor Peter Bradbury
Councillor Dan De'Ath
Councillor Bob Derbyshire
Councillor Graham Hinchey
Councillor Susan Elsmore
Councillor Sarah Merry
Councillor Ramesh Patel

Observers: Councillor Rod McKerlich
Councillor Judith Woodman

Officers: Paul Orders, Chief Executive
Christine Salter, Section 151 Officer
Marie Rosenthal, Monitoring Officer
Joanne Watkins, Cabinet Office

77 CARDIFF CAPITAL REGION CITY DEAL UPDATE

The Cabinet received an update on the progress of the Cardiff Capital Region local authorities in developing and securing a City Deal with the Welsh and UK Governments. It was reported that the City Council, in partnership with the other Cardiff Capital Region local authorities, was negotiating with the Welsh and UK Governments to secure a significant investment of up to £1.28bn, in projects that will have a very positive impact on the economy of the Region. The majority of the funding provided by the UK Government through the City Deal process would be by a payment by results mechanism based on increases in agreed economic outputs for the Region. It was noted that whilst the current funding scenarios are indicative, there will inevitably be a financial contribution required from local government. The comments from the Economy and Culture Scrutiny Committee were circulated.

RESOLVED: that the progress to date and the estimated timescales to get the full agreement of all parties to complete the City Deal be noted

78 2016/17 BUDGET PROPOSALS FOR CONSULTATION

The Cabinet received an update on the Budget Reduction Requirement for 2016/17 pending receipt of Provisional Local Government Settlement

together with details of draft budget proposals for consultation prior to submission to Council for approval. It was proposed that the online consultation document would be launched on Friday 11 December 2015 with hard copies distributed to hubs, libraries and leisure centres. A series of neighbourhood events would also take place during the consultation period which would run until midnight on Tuesday 12 January 2016.

RESOLVED: that

- (1) the budget proposals as attached at Appendix 2 be agreed as the Cabinet's Budget Proposals for Consultation.
- (2) It be noted that the formal budget consultation will commence on the 11 December 2015 and that there will be additional supporting documentation available as part of this process. The results of the consultation process will then be considered by Cabinet during January and February 2016 as part of their final 2016/17 budget proposal.
- (3) It be noted that the Chief Executive as Head of Paid Service will be issuing all necessary statutory and non-statutory employment consultations in respect of the staffing implications of the proposals.

79 QUARTER 2 PERFORMANCE REPORT 2015/16 (JULY TO SEPTEMBER)

The Cabinet received the Council's performance report for Quarter 2 (July to September) of 2015/16 financial year. It was reported that across all Directorates 69.92% of Corporate Plan commitments were Green and 55.85% of Performance Indicators were Green.

RESOLVED: that the Cabinet note the current position regarding performance and the delivery of key commitments and priorities as at Quarter 2 and the action being taken to address areas of concern

80 CALCULATION OF COUNCIL TAX BASE

The Cabinet received a report outlining details of the calculation of the Council tax base for 2016/17.

RESOLVED: that

- (1) the calculation of the Council's tax base for the year 2016/2017 be approved;
- (2) pursuant to this report and in accordance with the Local Authorities (Calculation of Tax Base) (Wales) Regulations 1995, as amended, the amount calculated by Cardiff Council as its council tax base for the year 2016/2017 shall be 141,288;
- (3) pursuant to this report and in accordance with the Local Authorities (Calculation of Tax Base) (Wales) Regulations 1995, as amended, the

amounts calculated by the Council as the council tax base for the year 2016/2017 in the community areas subject to a precept shall be as follows: -

Lisvane	2347
Pentyrch	3184
Radyr	3655
St. Fagans	1234
Old St. Mellons	1289
Tongwynlais	811

- (4) the arrangements for the payment of precepts in 2016/2017 to the South Wales Police Authority be by equal instalments on the last working day of each month from April 2016 to March 2017 and the Community Councils be by one payment on 1 April 2016, be on the same basis as that used in 2015/2016 and the precepting authorities be advised accordingly.

81 CORPORATE RISK REGISTER - MID YEAR REVIEW 2015/16

The Corporate Risk Register was considered by the Cabinet. The register contained details of the strategic risks facing the Council together with mitigations in place or planned within the Council and a residual risk score which demonstrated the effectiveness of the controls in place to manage the risk. It was reported that there were twenty four risks, all of which were assigned to members of the Senior Management Team to ensure the most senior level of ownership and accountability by officers.

RESOLVED: that the content of the Corporate Risk Register be noted

82 SCHOOL ORGANISATION PLANNING: PROPOSED ESTABLISHMENT OF A NEW HIGH SCHOOL IN THE WEST TO REPLACE GLYN DERW HIGH SCHOOL AND MICHAELSTON COMMUNITY COLLEGE

The Cabinet received a report detailing the responses received following consultation on a proposal for a new build high school in the West of the city from September 2018. It was reported that a total of 11 responses were received and the majority view expressed during the consultation at meetings and in written correspondence was one of support. The report detailed some concerns expressed together with mitigating factors.

RESOLVED: that

1. Authority be delegated to the Director of Education and Director of Governance and Legal Services to publish a statutory notice to:
 - Close Glyn Derw High School and Michaelston Community College (the Glyn Derw and Michaelston Federation) from 31 August 2017
 - Establish a new replacement 11-18 community high school to serve the Caerau and Ely areas from 01 September 2017

- To transfer the newly established high school to new build premises on the current Glyn Derw High School site from September 2018
2. prior to implementation of the proposal a further report be provided to the Cabinet providing details of any objections received, the proposed responses to those objections and recommendations for implementation or otherwise of the proposal.

83 SCHOOL ORGANISATION PLANNING: THE PROVISION OF ADDITIONAL ENGLISH-MEDIUM AND WELSH-MEDIUM PRIMARY SCHOOL PLACES IN THE ADAMSDOWN AND SPLOTT WARDS

The Cabinet received a report outlining received following consultation regarding the provision of English-medium and Welsh-medium primary school provision in the Adamsdown and Splott Wards. It was reported that four options had been subject to consultation.

RESOLVED: that

1. Authority be delegated to the Director of Education and Director of Governance and Legal Services to publish a statutory notice to:
 - Increase the capacity of Ysgol Glan Morfa from 1FE to 2FE with up to 80 part-time nursery places serving the age range 3-11 from September 2017. Transfer the enlarged Ysgol Glan Morfa to a new standardised 2FE primary school on a new site at the Maltings from September 2017.
 - Increase the capacity of Moorland Primary School from 2FE to 3FE with 96 part-time nursery places serving the age range 3-11 utilising the vacated Ysgol Glan Morfa buildings from September 2017
3. the approval of appropriation of the land at the Maltings Park site in principle subject to public consultation in accordance with S122 of the Local Government Act 1972 be authorised
4. prior to implementation of the proposal a further report be provided to the Cabinet providing details of any objections received, the proposed responses to those objections and recommendations for implementation or otherwise of the proposal.

84 SCHOOL ORGANISATION PROPOSALS: THE PROVISION OF ADDITIONAL ENGLISH-MEDIUM AND WELSH-MEDIUM PRIMARY SCHOOL PROVISION IN AND AROUND THE BUTETOWN, CANTON, GRANGETOWN AND RIVERSIDE AREAS (THE 'FOUR WARDS')

Cabinet received details of the responses received following consultation on proposals regarding the provision of Welsh-medium and English-medium primary school provision in and around the Butetown, Canton, Grangetown and Riverside areas. It was reported that a total of 259 responses were received.

RESOLVED: that

The Cabinet is recommended to:

1. Authority be delegated to the Director of Education and the Director of Governance and Legal Services to publish an appropriate statutory notice to:
 - increase the capacity of Ninian Park Primary School Primary School from 2FE to 3FE with additional part-time nursery places serving the age range 3-11 on its existing site from September 2017.
 - establish a new 2 FE Welsh-medium primary school with nursery on the Hamadryad site located adjacent to the Hamadryad playing fields off Hamadryad Road, Cardiff. The School is to open initially at 1FE only in temporary accommodation adjacent to the Ninian Park Primary School site in the accommodation formerly occupied by Ysgol Tan yr Eos on Virgil Street, Cardiff from September 2016 and transfer to its permanent site adjacent to Hamadryad Park from September 2017.
2. the approval of appropriation of the land at Sevenoakes Park in principle subject to public consultation in accordance with S122 of the Local Government Act 1972 be authorised
3. it be noted that subject to approval of the Governing Body the publication by the Governing Body of St Mary the Virgin Church in Wales Primary School of an appropriate statutory notice to make prescribed alterations to that school by increasing its capacity from 1FE to 2FE with nursery places from September 2017 to run concurrent with the Council's notice(s).
4. prior to implementation of the proposal a further report be provided to the Cabinet providing details of any objections received, the proposed responses to those objections and recommendations for implementation or otherwise of the proposal.

85 HACKNEY CARRIAGE FARE INCREASE

Following a public consultation on proposals received from Dragon Taxis to increase the Hackney Carriage Fare, Cabinet considered six representations that had been received with four in support and two objections to the proposed tariff increase.

RESOLVED: that

1. the representations in Appendix B of the report received for and against the decision taken by Cabinet on the 2 July 2015 to amend the tariff of fare be noted
2. the application submitted by Dragon Taxis with an implementation date of 21 December 2015 be approved

CHAIR'S FOREWORD

The Social Services and Well Being (Wales) Act 2014 requires a step change in local authority provision and partnership working. This Committee is aware of the work required to implement the Act and we wish to play a supportive role in this being successful. A key aspect of the Act is the requirement for local authorities to secure the provision of Information, Advice and Assistance services to people accessing care and support.

Members therefore decided to undertake an Inquiry that focused on the work required to meet the specific requirements regarding Information, Advice and Assistance. These duties apply to all our population, to all social care service user groups and carers; however, in order for our scrutiny to be achievable and timely, Members decided to focus on one service user group.

We chose mental health service users and their carers for several reasons: we know that this is a service user group that is growing; we know that a significant proportion of the population will suffer from mental health illness at some stage of their life and will need access to good quality information, advice and assistance services; and we know that other social care service user groups face a higher than average risk of suffering from mental health illness due to the increased pressures they face as a result of their needs and some societal responses to these needs.

In order to understand service users' and carers' experience of existing services, this committee commissioned the Scrutiny Research team to undertake a survey and organise two focus groups. This research gave Members a valuable insight into the current position and ideas for what the Council and partner organisations can do to improve Information, Advice and Assistance services.

We also spoke to many of the organisations that currently provide information, advice and assistance to mental health service users and their carers in Cardiff. Their experiences and ideas for what could usefully be improved in Cardiff have informed this Inquiry and our recommendations.

I wish to express my thanks to all those who contributed to this Inquiry, either in person or in writing. I particularly wish to thank Cardiff and Vale Action for Mental Health (CAVAMH) for their advice and assistance in developing and delivering the Scrutiny Research survey and to thank them and Diverse Cymru for their help in organising and facilitating the two focus groups. I also thank fellow committee members and scrutiny officers for their hard work during this Inquiry.

I hope this report will be of assistance to all those preparing for the implementation of the Act. I firmly believe that, if the recommendations are accepted and implemented, they will improve Information, Advice and Assistance service provision in Cardiff, thus benefitting those that need help to access care and support.

Councillor Mary McGarry
Chair, Community & Adult Services Scrutiny Committee
December 2015

TERMS OF REFERENCE

- To investigate the work underway by statutory, voluntary and third sector organisations regarding:
 - Existing provision of information, advice and assistance services (IAA services) to existing and potential mental health service users in Cardiff¹
 - Preparing for the implementation of the information, advice and assistance requirements of the Social Services and Well Being (Wales) Act 2014 (The Act).
- To gather stakeholders' views with regard to existing provision and implementing The Act.
- To commission Scrutiny Research to undertake primary qualitative research with existing and potential mental health service users in Cardiff to gain their perceptions and views on the provision of these services.
- To explore relevant best practice in external organisations and other local authorities, which is transferable to Cardiff.
- To make evidence based recommendations to improve the way information, advice and assistance services for mental health service users are provided in Cardiff

Members of the Task & Finish Group were:

- Councillor Mary McGarry (Chair)
- Councillor Chris Lomax
- Councillor Eleanor Sanders.

¹ The IAA duties apply to all social services client groups. In order for an Inquiry on IAA to be achievable and timely, Members decided to focus on one client group. Members chose mental health service users given the increase in numbers in recent years in this client group as well as because people in other social services client groups have a higher likelihood of needing mental health services.

KEY FINDINGS

HEADLINE FINDINGS

- KF1. There are existing IAA services in Cardiff, provided by Health and Third Sector partners, which are designed specifically to meet the needs of mental health service users, their carers and families. On their own these are not sufficient to meet the requirements of The Act 2014.
- KF2. The review of good practice undertaken to inform this Inquiry found that the following factors are key in determining the effectiveness of IAA provision: accessibility; timeliness; content quality; usefulness; and the interface experience. In addition, it is important to improve co-ordination and signposting between information providers across professional boundaries, promote information sharing between all providers and involve service users in the design, implementation and evaluation of information advice and advocacy services.
- KF3. There is an opportunity to use the expressed willingness of Health and Third Sector partners to build on existing services to develop an approach to the provision of IAA services for mental health service users, their carers and families that accords with both the requirements of The Act 2014 and good practice.
- KF4. The Act 2014 builds on good practice and sets out that local authorities are required to secure provision of an IAA service that meets a national set of delivery standards, working with Health, the third sector and service users in the design, planning and development of the service and monitoring usage of the IAA service. This service will provide the primary entry point to the care and support system.

MAIN FINDINGS

Existing Provision in Cardiff

KF5. There is a multiplicity of mental health services available in Cardiff, provided by health services, adult social services and third sector groups.

KF6. There are several existing information, advice and assistance services available in Cardiff for adults with mental health needs. However, evidence presented to the Inquiry demonstrated that the existing services are not joined up, as they have tended to develop individually and in response to particular needs, in a reactive way.

Accessibility

KF7. GPs currently play a central role with regards to co-ordinating access to mental health services. However, Members heard that it is not appropriate to rely solely on GPs to provide IAA services for the following reasons: it risks over-medicalising the provision of IAA services for mental health service users and/ or their carers; it can be difficult to obtain a GP appointment in a timely manner; some mental health service users find it problematic waiting in a GP surgery; and some clients do not relate well to their GP and would need a different route for IAA service provision.

KF8. There are currently a number of issues that cause existing IAA services in Cardiff to be inaccessible for a number of people. Members heard that there are barriers preventing access to IAA services, including the stigma associated with mental health, concerns people often have about what will happen to their loved ones if Social Services becomes involved in their lives, language barriers and a lack of childcare.

KF9. In addition, the evidence shows that, even when people want to access IAA services, they often do not know how to access the available IAA services and do not know where to go to find help in accessing these services. 52% of those responding to the Scrutiny Research survey stated that they did not know where to go or how to find out where to go to get help.

Timeliness

KF10. Good practice regarding timely access to IAA is not currently evident in Cardiff, both in terms of being able to access IAA services at the right stage of the care pathway as well as being able to have quick access to IAA services. This links to the above finding that accessibility of IAA is poor.

Quality

KF11. Overall, once IAA services are accessed, the Scrutiny Research findings showed that approximately three quarters of service users have a good experience of these services, in terms of ease of understanding, the content quality, the relevance and the usefulness of the IAA provided.

Interface Experience

KF12. The evidence to the Inquiry demonstrated that the just over half of all respondents to our research felt they were treated positively. However, there was a breadth of respondent views on interface experiences, ranging from “compassionate” and “caring” through to “indifferent”, “rude” and “disrespectful”.

KF13. The range of interface experiences reflects the landscape described to this Inquiry, with regard to disparate provision, changing working place culture and patchy relationship building across teams, sectors and

individuals. A practical example of this is the lack of a system in place to monitor the distribution of third sector information to mental health service users in hospital clinic settings.

KF14. Mental health care professionals recognised the picture described in the research report, and by other witnesses, and recognised the need to improve workplace culture. Members heard that work is on-going to achieve this by embedding the Recovery Model, which requires a person-centred approach, and a consequent enhancement in working practices and culture.

Effectiveness

KF15. With regard to the effectiveness of the IAA provision, nearly two fifths of research responses indicated existing provision is ineffective. The reasons given for this reflect the issues detailed above. In addition, responses highlighted that ineffective service could relate to low staff numbers, time restrictions facing IAA services and resource pressures.

The City of Cardiff Council's proposed approach to implementation of The Act

KF16. This Inquiry heard that there are four main strands to the City of Cardiff Council's proposed approach to meet the IAA requirements of the Act, which are: a directory of services; a 'first point of contact'; improving the Council's website to enable self-assessment; and using the Hubs to provide information and to signpost to advice, assistance and assessment.

KF17. The Council has decided to join the national directory of services, Dewis Cymru, and work is underway to upload local data in January 2016. The Directory will be available online, via Hubs and visiting officers will use it when assisting clients via handheld devices.

KF18. The first point of contact will be subsumed into the wider Customer Relationship Management process (CRM) as that is rolled out across the Council and will then include all customers and client groups including mental health.

KF19. The Stepiau website, jointly supported by Health and the Council, already provides self-assessment and self-referral for mental health service users in Cardiff and so the Council's website will not seek to duplicate this.

KF20. Hubs will be used to provide information, signpost clients and assist clients to access assessments.

Ensuring accessibility

KF21. This Inquiry heard that the accessibility of IAA services can be boosted or hindered depending on the language used to describe access, as terms can be confusing to service users, carers, families and professionals alike. Examples cited to the Inquiry were 'first point of contact', 'single point of entry' and 'gateway', which can be interpreted differently depending on one's previous experience.

KF22. The Inquiry heard that the Council's website and the Directory of Services will be available in English and Welsh, as would publicity materials to promote these. Members heard that the existing Stepiau website is already available in English and Welsh and will soon be available in eight of the most common other community languages in Cardiff.

KF23. Members heard that staff in Council Hubs already provide services in a range of community languages and this would continue, as would work with community groups.

Regional approach

KF24. Members heard evidence that there is work towards a regional approach, with discussions taking place as part of the 'readiness' work for implementation of the SSWB Act. The City of Cardiff Council and the Vale of Glamorgan Council are piloting differing approaches re IAA services with the aim of sharing learning.

KF25. Witnesses welcome a regional approach but take differing approaches to this to reflect the need of their service users and organisations. The final approach to regional working needs to enhance these rather than diminish this provision.

Service Design and Planning

KF26. Members heard clear evidence from all the external witnesses that the IAA requirements of The Act had not been raised or discussed with them by the Council. Indeed, several witnesses stated that the first time they were aware of the IAA requirements was when they were contacted by scrutiny officers to seek their participation in the Inquiry. For example, the Cardiff & Vale University Health Board (UHB) is focused on treatment in clinical settings and responding to changes in mental health service requirements. At the time of giving evidence to the Inquiry, they stated they had limited awareness of the requirements of The Act but expressed a readiness to work in partnership with the local authority to implement these requirements effectively.

KF27. All those currently involved in the provision of IAA services to mental health service users who gave evidence to the Inquiry demonstrated a clear willingness to work with the Council to design, plan and develop IAA services that meet the requirements of The Act. There is a clear plea not to re-invent the wheel but to use the knowledge and mechanisms that already exist.

Appropriate Training

KF28. Members heard time and again that it was critical for frontline staff to receive appropriate training, such as mental health first aid training, which is a step on from mental health awareness training. Members heard that the Cardiff and Vale University Health Board may have available funding for this training and that Cardiff Mind provides this training for a number of organisations in Cardiff, including the Cardiff and Vale University Health Board.

KF29. Diverse Cymru highlighted the need for staff to receive multicultural awareness training to ensure that the needs of minority ethnic mental health service users, their carers and families are recognised, understood and met appropriately.

KF30. Members note the willingness of the UHB's witness to use the evidence provided by the Scrutiny Research Report to redesign their staff training to ensure that the issues raised are incorporated and can be addressed.

Monitoring Requirements

KF31. The draft code of guidance sets out the monitoring requirements, which are: nature of the enquiry; which type of service the enquirer was signposted to; and core data. It also details data they recommend collecting to help with further service improvement e.g. customer feedback and the information exchange route used, such as website/ phone call/ visit.

RECOMMENDATIONS

These recommendations build on the Key Findings of this Inquiry and are designed to assist in ensuring the effective implementation of the IAA requirements of the Act. Members suggest that, on acceptance of the Cabinet Response to this Inquiry, the Act Implementation Plan is revised and updated to reflect recommendations that are accepted, to ensure work to implement these recommendations is captured and monitored. The Committee will then be able to use the Act Implementation Plan monitoring reports to track progress with implementing agreed recommendations, rather than requesting a separate progress report.

Implementation Approach

- R1. Hold a meeting, by end of January 2016, with the Cardiff & Vale University Health Board and relevant third sector organisations to:
- a. build on the awareness raising and goodwill evident from this Inquiry; and
 - b. to design, plan and develop IAA services for mental health service users and carers that meet the requirements of the Act.
(KFs 1- 6 inclusive, KFs 16-20 inclusive and KFs 26-27)
- R2. Seek assurance from the Welsh Government, by end of February 2016, that Cardiff Council's proposed approach to IAA services for mental health service users and carers is compliant with the requirements of the Act, including the proposed regional approach with the Vale of Glamorgan Council.
(KF4, KF7, KF 16-20 inclusive and KFs 24- 25)

Improving Accessibility

- R3. Ensure that the provision of IAA services for mental health service users and carers in Cardiff do not rely solely on accessing IAA services via GPs.
(KF 7)

R4. As part of the IAA service provision for mental health service users and carers, use the existing Stepiau website and CAVAMH Directory of Services and signpost to these from the Council's website and Directory of Services.

(KF17, KF19, KF22 and KF27)

R5. Develop a communication strategy to promote the IAA services that addresses the barriers to accessibility identified in this report, by:

- a. Addressing the stigma attached to mental health;
- b. Addressing the myths and perceptions regarding Social Services;
- c. Using the 10 main community languages of Cardiff to promote the IAA services;
- d. Being culturally appropriate on every channel/ platform;
- e. Providing 'easy read' versions of communications materials;
- f. Using clear definitions.

(KF4, KF8, KF9, KF10, KF21, KF22 and KF23)

R6. Work with the Cardiff and Vale University Health Board, CAVAMH and other relevant third sector organisations to:

- a. improve information sharing, coordination and signposting across sectors; and
- b. put in place monitoring arrangements to capture whether information is reaching those that need it, in a timely manner.

(KF2, KF9, KF10, KF13, KF17, KF18, KF19)

Training

R7. Within six months, put in place mental health first aid training and multicultural awareness training for all Hubs frontline staff and first point of contact staff and all Cardiff Council frontline staff involved in delivering IAA services.

(KFs16-20 inclusive, KF28 & KF29)

R8. Within six months, investigate whether funding is available from Cardiff and Vale University Health Board and other routes to finance the mental health first aid training and multicultural awareness training for Cardiff Council frontline staff.

(KF28)

R9. Within six months, work with UHB to ensure the redesign of staff training for all integrated teams addresses the issues raised in the Scrutiny Research Report regarding working place culture are incorporated and addressed.

(KFs 12- 14 inclusive KF30)

Monitoring

R10. By the commencement of the Act, put in place monitoring arrangements that meet the requirements of the Act.

(KF31)

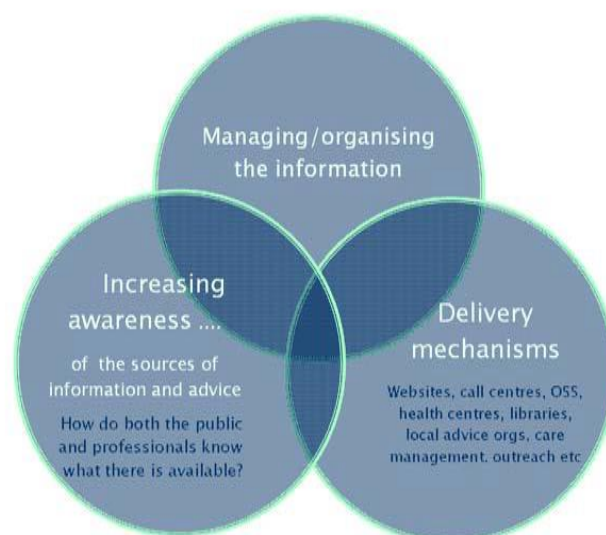

GOOD PRACTICE RE IAA SERVICE PROVISION

1. To inform the approach taken during the Inquiry, Members considered a number of publications detailing good practice with regard to Information, Advice and Assistance Services, hereafter referred to as IAA services. Several of these came about as a result of the requirement in England, since 2010, for local authorities to ensure access to universal information and advice services, contained in *Putting People First*².
2. Since then, the Care Act 2014 has required English local authorities to give priority to information and advice and take a whole system approach by linking with the range of ongoing work to improve the provision of information and advice, ensuring people know where and how to access information, are given consistent advice and are not passed from pillar to post³.
3. The Care Act 2014 advocates that English local authorities develop local strategies that emphasise a joined-up approach across agencies. As part of this Inquiry, Members looked at several examples of Information and Advice Strategies which other English local authorities have developed to meet the requirements contained in the Care Act 2014. Many of these focus on three main elements: increasing awareness of sources of information and advice; managing/ organising the information; and delivery mechanisms, as shown in diagrammatic form below:

² Putting People First applies in England and is a concordat, published by the Department of Health in 2007, which details the transformation of adult social care services.

³ Taken from : <http://www.thinklocalactpersonal.org.uk/Browse/Informationandadvice/Information-and-Advice-Strategy-Toolkit/About-the-toolkit/>

Information and Advice (and Advocacy) map

4. When taken together, the following key factors are commonly cited as determining the appropriateness and quality of IAA services:
- **accessibility** of information, advice and assistance.
 - **timeliness** of information, advice and assistance.
 - **content quality** of information, advice and assistance.
 - **usefulness** of information and advice.
 - **interface experience** - between person seeking advice and information and person providing information and advice, from perspective of person seeking advice and information.
5. In terms of **accessibility**, good practice guides highlight the following:
- Ensure there is awareness raising of information and advice services amongst the public.
 - Ensure information is available in a range of formats and channels and is accessible to all groups.
 - Ensure that information needs for all groups are met.
 - Tailor services to meet to individual needs and preferences.
 - Recognise the needs of minority communities.
 - Ensure information is instantly available to take away.

6. In terms of **timeliness**, good practice guides highlight the following:
 - Provide information and services related to points in people's lives when support is needed e.g. decline in health; onset of illness or disability; bereavement; start of caring role; life transitions – adulthood, retirement; transition between services.
 - Ensuring there is sufficient time to consider the information, advice and assistance given.

7. With regard to **content quality**, good practice guides highlight the following:
 - Information should meet quality standards.
 - There should be consistency of services.
 - Information should be available on services and products that are available both locally and nationally.
 - Information should cover the aims of a service, who it is for, what it does, when it is available, how much it costs and how to access it.
 - Individuals should be able to find out about the quality of a service/ product from star ratings, accreditations, local authority reviews and customer reviews.
 - Comprehensive financial information on current services should be provided to inform future options.
 - Information and advice should be free to the consumer until they need more specialist advice, advocacy or support planning. This will then need to be costed out and included in contracts to be charged to organisations or individuals, depending on need.

8. With regard to **usefulness**, good practice guides highlight that information and advice services should:
 - Help clients to understand their problem.
 - Resolve queries and/ or offer a range of solutions.
 - Advise on waiting list times.

9. In terms of **interface experiences**, good practice guides highlight the following:
- Services should be able to provide explanations in a clear language that is easy to follow.
 - Services should play a role in supporting clients both emotionally and practically.
10. Good practice guides also cover the principles by which IAA services should be developed, highlighting the following:
- The strategic significance of providing good quality information should be understood by all stakeholders.
 - Improve co-ordination and signposting between information providers across professional/governmental boundaries.
 - Promote information sharing between all providers.
 - Involve service users in the design, implementation and evaluation of information advice and advocacy services.
 - Define clear responsibility for service provision.
 - Support organisations to improve their information, advice and advocacy provision.
 - Find out what works and what does not work.
 - Recognise the potential new roles of social workers.
11. In addition, a literature review undertaken by Andrew Dunning, JRF⁴ (2005), found four common overarching principles apparent within the literature on information, advice and advocacy for older people, as follows:
- **Independence:** being independent helps to ensure that the needs and interests of the older person remain paramount. Clear conflicts of interest can arise where service providers also offer information, advice and advocacy relating to the services they themselves deliver.
 - **Empowerment:** information and advice can help to ensure that older people are aware of their circumstances and options as

⁴ Joseph Rowntree Foundation

well as the services and support they may require to take, and to remain in, control. Advocacy should enable older people to find and use their own voice wherever possible, as well as being about speaking up on their behalf if needed.

- **Inclusion:** information, advice and advocacy are ways of supporting older people to become involved in decision making and to be included in the life of the community. Inclusion also means that these services should themselves be accessible and that older people should have equal opportunities to be involved in managing, developing and delivering as well as using them.
- **Citizenship:** older people may need to be informed, advised or represented in order to secure and exercise their rights and entitlements as citizens. This relates both to basic human rights and to consumer rights and entitlements to particular goods and services.

12. The IDeA guide '*Transforming Adult Social Care: Access to Information, Advice and Advocacy*' (2009) sets out numerous examples of good practice across the country. Some of the examples of good practice are highlighted below, with further practice examples, case studies and website links provided in **Appendix D**. Further details of all the good practice publications are contained in the bibliography to this report.

Stockport's My Care My Choice website (www.mycaremychoice.org.uk) invites visitors to choose options based on service-orientated questions. Options are presented as big buttons with short text in simple language with appropriate images. It also provides on-line tools, such as a benefits calculator, and basic assessment and eligibility details to enable people to self-serve information.

MyManchesterServices

(www.manchester.gov.uk/mymanchesterservices) offers a web-based information directory with links from the home page in relation to life events as well as services. It provides information about services and community groups which can be searched in relation to an address or location.

In **Tower Hamlets** a team of outreach workers is funded under the LinkAge Plus initiative. They work with their communities, both geographical and communities of interest. They link people to resources and do some capacity building. They target people who are isolated by disability, language or culture. They work through established advice outlets and centres and have access to legal advice.

In **Gloucestershire**, information and advice is linked to community development/ building social capital and reaching isolated people through 'Village Agents developed through LinkAge Plus. There are also Community Agents who deliver services in community languages. Agents work through community networks, do home safety and benefits checks and link to social activities, support and care.

In **Tower Hamlets** people with disabilities and their supporters provide a range of information, advice and advocacy, including writing specific leaflets, providing information about and support into employment, information and support in relation to benefits and peer information and support for people with learning disabilities.

In **Leeds** 'neighbourhood networks' are established throughout the city. They are voluntary sector organisations, locally 'owned', governed and managed and deliver a range of services, support and activities including information, advice and advocacy and other initiatives that support independence and wellbeing. The focus is prevention. Networks also support people with social care self assessments and support statutory services with delivery of specific initiatives.

Kent Council's website includes the facility for self assessment (which is mainly completed with support), together with access to the Care Services Directory, which is formed of entries from providers and includes price, required links to CSCI reports and links to maps. The directory can be searched by location. It is hoped to add service availability to this. This started as a residential care database and domiciliary care is being added.

REQUIREMENTS OF THE ACT 2014 RE IAA

13. Part 2, Section 17 of The Act 2014 *'places a duty on local authorities to secure the provision of a service to provide people with information and advice relating to care and support and assistance in accessing care and support.'*⁵ The Director of Social Services is responsible for ensuring the design, plan and delivery of the model meets the duties of the local authority.

14. The Welsh Government Executive Summary states:

'As a minimum this service must include the provision of information on:

- How the care and support system operates;*
- The types of care and support available;*
- How to access this care and support; and*
- How to raise concerns.*

Local authorities currently provide an information service but their provision will need to be enhanced to meet the new duties. The aim is to secure a service which is accessible to all people and provides the critical entry point to the new system. The Service will be central to the delivery of care and support and will play a key role in assessing a person's need for care and support and directing people to the most appropriate solution to meet their needs. It will enable early intervention and preventative support to reduce the need for managed care and support... There are no regulation-making powers in relation to this section in the Act. Instead, Chapter 5 of the code sets out requirements for the service including:

- An accessible service available to all people;*
- National delivery standards;*
- A skilled workforce;*

⁵ Welsh Government Executive Summary 'Implementation of the Social Services and Well-being (Wales) Act 2014

- *A service configured on an LHB regional footprint basis as a minimum;*
- *An integrated approach with health, the third and independent sectors;*
- *Recording personal data through the simple assessment process; and*
- *Recording management data for performance and future planning.'*

15. To assist with preparation and implementation of The Act, the Welsh Government is preparing Codes of Guidance. Chapter 5 of the draft Code is attached at **Appendix C** of this report. The draft Code was out for consultation till 2 February 2015 and the final Code is awaited. A definition is provided for each of 'information', 'advice' and 'assistance', as follows:

Information:

Information will be quality data / material that supports a person to make an informed choice about their well-being. This will include financial information, and information on direct payments, information on charges, and other matters that would enable someone to plan how to meet their care and support needs, or support needs if they were a carer.

Advice:

Advice will be a way of working co-productively with a person to explore the options available and offer guidance to them about making the most suitable choice to overcome barriers they may face to achieving their personal well-being outcomes. The provision of advice will require the service provider to conduct a simple assessment and to record basic personal data and the advice given.

Assistance:

Assistance, if needed, will follow the provision of information and advice. Assistance will involve another person taking action with the enquirer, to support the enquirer to **access** care and support, or a carer to access support. Responsibility for the activity undertaken is shared between the giver and receiver of the assistance. The provision of assistance will also require the service to conduct a simple assessment and to record any additional personal data and details of the assistance offered and taken up by the enquirer.

16. Other key points that are made within the Chapter 5 of the draft Code are:
- IAA service will be available to all people in the local area, including those in the 'secure estate';
 - IAA must be accessible and suit the needs of the local authority population;
 - IAA service will be provided via a range of media and formats and be available 24/7;
 - IAA service will provide the primary entry point to the care and support system;
 - IAA service will provide access to relevant, accurate, high quality and timely IAA;
 - IAA service will provide information and advice about how to raise concerns about the well-being of another person who appears to have care and support needs;
 - IAA service will provide information and advice on care and support services, as well as preventative well-being services, Direct Payments, charges for care and support, local advocacy services and complaints procedure;
 - Guidance is provided on the recording and monitoring that IAA service would need to implement for national management information purposes;
 - Safeguarding duties will be acted on immediately and without delay;
 - Staff working for the IAA service will consist of '*a team which reflects a mix of skills and experience from a range of professionals from the social care, health, third and independent sectors*'; staff will be skilled to undertake a simple assessment, in line with Part 3 of the Act relating to Assessing Needs, which will be followed up by a specialist assessment where required;
 - A communications strategy must be produced to promote the IAA service;
 - There is a list of the National Service Delivery Standards that will apply to the IAA service – these are shown at point 275, **Appendix C**.

17. Chapter 5 of the draft Code makes it clear that the new IAA service ‘*is a shift from information about services to information about people and their care and support needs to enable them to better help themselves and others.*’ It also states that ‘*local authorities should consider their duties to promote social enterprises, co-operatives and user-led services in order to approach the development of the Service in an innovative way.*’
18. Chapter 5 of the draft Code states that ‘*local authorities must work together to ensure the IAA service is consistent so that people find information easy to access in local authorities which are not their ordinary residence.*’
19. Chapter 5 of the draft Code stresses the need for integrated services, with local authorities working across departments, with local health boards and NHS trusts, and with other information and advice services at a local, regional and national level, with the aim of reducing duplication and ensuring the most appropriate and skilled agency provides the IAA service. Local authorities have to engage with the Local Health Board, NHS partners, the third sector, private providers and representatives of the community in the design, planning and development of the IAA Service.
20. The Welsh Government has issued a two side briefing entitled the ‘*Implications of the Social Services and Well-being (Wales) Act for the NHS in Wales.*’ This states that, with regard to Section 17: Provision of information, advice and assistance, ‘*A Local Health Board or an NHS Trust is required to provide the local authority with information about the care and support it provides in the respective local authority area.*’

EXISTING LANDSCAPE

Local Mental Health and Wellbeing Needs Analysis

21. The Cardiff and Vale Local Mental Health Partnership Board Annual Report 2013-14 contains the following information:

- As at March 2013, there were 4,111 people with a diagnosis of a serious mental illness in Cardiff and the Vale. It is predicted that, in Cardiff and the Vale, we would expect to find 74 new cases of psychosis per annum, between the ages of 16-64;
- In Cardiff the number of persons age 30 and over predicted to have dementia in 2013 was 3,577 rising to 5,242 in 2030. There are 2,485 people with a diagnosis of dementia on GP registers in Cardiff and Vale. When adjusted to take account of the age structure of the population, the dementia rate is 2.9 per 1,000 people, compared to 2.7 per 1,000 people for Wales as a whole. However, according to the Alzheimer's Society, this represented only 46% of people with dementia in the community; therefore under-diagnosis is an issue, despite Cardiff and Vale having the best detection rate in Wales;
- According to the Welsh Health Survey 2011-12, 11% (age-standardised) of adults in Wales reported currently being treated for a mental illness and this is identical to the Cardiff and Vale prevalence of 11%. This is likely to be an underestimate of the people who have a mental illness as surveys suggest that in England 16% of people have a common mental illness;
- Cardiff has large numbers of students and disproportionately fewer older people. As a higher proportion of mental disorders develop between the ages of 14 to 20, Cardiff has greater incidence of mental illness.⁶

⁶ Please see Appendix B for full extract and references to source documents.

22. In addition, Members heard that there was increasing demand for services to assist people with low level mental health illnesses, such as anxiety, and a fourfold increase in referrals to Community Mental Health Teams.

Existing Mental Health Service Provision in Cardiff

23. There is a range of existing mental health services provided in Cardiff, by the Cardiff and Vale University Health Board, Cardiff Council Adult Social Services and third sector organisations. Further details of these are provided at **Appendix B** along with details of relevant legislation and strategies.

24. Members heard that, following the implementation of the Mental Health Measure in 2004, health, local authorities and the third sector all now work via GP surgeries, liaising over caseloads and referrals, including well-being issues. This has led to the establishment of new services, such as the low level anxiety team which receives approximately 1,000 referrals a month.

25. Members heard that there is a mixed economy of leadership, with all community teams integrated between the local authorities and health, with health leading on Adult Services teams and local authorities leading on Older People Mental Health teams.

26. There are many different services provided by third sector organisations in Cardiff which aim to meet general and specific mental health needs, including:

- Cardiff Mind - an open access service that provides accommodation and support, day services, debt and welfare advice, personal development courses, training, counselling and activities;
- The Alzheimer's Society - provides support and advice services, dementia café, information packs for memory clinics and groups for service users and their families;

- Diverse Cymru - provides direct payment, self-directed and independent living support, a BME mental health and befriending service including Health and Social Care Advocacy, family support, welfare benefit, income maximisation, tribunal, and general advocacy and advice for people;
 - YMCA – Steps project provides advice, support and accommodation for mental health service users.
27. The above list is intended to give a representation of some of the mental health services Members were made aware of as part of this Inquiry; Members are aware that it is not exhaustive and that there are many other third sector organisations providing services in Cardiff to mental health service users, their carers and families.

Existing IAA Service Provision re Mental Health in Cardiff

28. There are several existing IAA services available in Cardiff for adults with mental health needs. These have developed in response to Welsh Government requirements and in response to requests from service users, as opposed to being planned and designed. As a consequence, existing services are not joined up and operate in parallel to one another.
29. The Cardiff and Vale University Health Board has its own IAA services, which cover medical information and diagnoses as well as more general well-being leaflets. In addition, the PMHSS⁷ has worked with the Council and Third Sector to develop the Stepiau website (www.stepiau.org/) that provides information, self-help assessments and links to groups re primary mental health support services in Cardiff and the Vale and can mean that people can access these without having to see a mental health professional.
30. Health staff, local authority officers and third sector organisations can all signpost people to use Stepiau. The information on the Stepiau website

⁷ PMHSS stands for Primary Mental Health Support Services

is being translated into the main 10 community languages for Cardiff, including English and Welsh. At the moment, Stepiau has about 1,000 people using it a month, for Cardiff and the Vale, and the trajectory is upward; whilst this is good news in terms of addressing stigma it may lead to increased demand for services, which will need resourcing.

Screenshot of Stepiau Website Home Page

31. There are several third sector organisations that provide IAA services, in addition to those listed at point 5 above, including CAVAMH and Riverside Advice Centre. CAVAMH⁸ is a mental health development service, providing an overarching reach across 89 third sector groups with an interest in mental health, service users and carers and aiming to help link these together to improve planning and service delivery, including links regarding housing and homelessness, minority ethnic issues and counselling.

⁸ cavamh stands for Cardiff and Vale Action on Mental Health

32. CAVAMH provides the following specific IAA services:
- Nexus – for older people, primarily with dementia related mental health illnesses;
 - Sefyll – for people using adult mental health services 18 years plus; and
 - Information sharing via networks, websites, leaflets and via the Mental Health Services Directory for Cardiff and the Vale of Glamorgan on the CAVAMH website, currently being updated.
33. In addition, Members heard that, since 2000, Riverside Advice has been funded by the Cardiff and Vale University Health Board to deliver specialist welfare benefits and debt advice to people with Mental Health Illnesses. In 2008 this service was enhanced when a successful application was made for a grant from Cardiff Council Adult Services for Carers of people with mental health illnesses. However, this service ceased in October 2014, following the review of Advice Services.
34. The City of Cardiff Council has a series of Hubs across Cardiff, based in libraries or bespoke community buildings, which provide IAA services on a range of topics. Members heard that, whilst it is unusual for someone to come to a Hub to specifically ask for help about mental health illness, staff are trained to be aware of mental health needs, how to deal with these and how to refer onwards appropriately. All staff have received mental health awareness training, Hubs host dementia-friendly groups and staff ensure clients see the same member of staff and so do not have to repeat their history, staff refer to social services if a client is a mental health service user or to the tenant support service, which offers third sector support re housing issues, and staff refer to the Stepiau website as well. Adult Social Services have a good relationship with the Hubs, with onward referrals for screening, signposting etc.

35. In addition to these specific services, people in Cardiff can also access IAA help, such as:

- **National Crisis Call Line** - provided by NHS Wales.
- **Community Advice and Listening Line (C.A.L.L.)** – to take emergency calls out of hours re giving IAA.
- **Solace** - a 9am-5pm helpline for Cardiff and the Vale, to deal with crises associated with dementia.

ISSUES WITH EXISTING IAA SERVICE PROVISION FOR MENTAL HEALTH

36. This Inquiry sought the views of all witnesses regarding the existing provision of IAA services in Cardiff for mental health service users, their carers and families. In addition, the Scrutiny Research team conducted a survey on the experiences of those who have accessed information, advice and/or assistance services in Cardiff relating to mental health for themselves or for those they care for. Young people and people from minority ethnic communities were under-represented in the responses received to the survey. In order to address this, focus groups were held with these groups, with the assistance of Barnardo's and Diverse Cymru. All three evidence sources have been used to inform the findings below. The full results of the survey are presented in the report attached at **Appendix A**.

Accessibility

37. The Inquiry heard that there are several barriers preventing easy access to existing IAA services, including:
- The stigma attached to mental illness;
 - The concerns some people have that involving social services will be detrimental to their and their family's well-being;
 - The lack of IAA service provision that meets the needs of minority ethnic communities, both culturally and in terms of appropriate language provision;
 - The need for childcare provision to enable parents to access service provision.

Stigma

38. With regard to the stigma still associated with mental health illness, Members heard that this was the biggest barrier to accessing mental health services and that it was a reality affecting many service users:

“mental health really needs to be brought to the front as there is not a lot of info out there for the needy; mental health is still regarded as a bit of a taboo subject”

‘I know with people from my background – Pakistan, India or whatever places – people don’t like talking about mental health. They think it’s really bad. There’s a massive stigma about it.’

39. Members heard that work was being undertaken by the third sector to promote positive images of mental health, to try to tackle the stigma, and to avoid over-medicalising mental health illness unnecessarily. This fits with Part 1 of the Mental Health Measure regarding the provision of information and positive images of mental health illness. Members also heard that the Cardiff and Vale University Health Board is working with a Black and Minority Ethnic network group to help build relationships and rapport with communities in order to be able to discuss mental health issues.

Perceptions

40. Members also heard that there is a lot of fear amongst people who have a mental health illness regarding statutory agencies, such as social services, and this fear can prevent people seeking statutory help. Witnesses cited cases where clients had raised concerns that social services will *‘take their kids off them’*, or *‘not allow them access to their children’* or *‘put their loved one in a home’*. Witnesses were clear that they tackle these myths by explaining to clients what their rights are and how they will work with them to provide support.

Language provision

41. Members also heard repeated evidence that there are additional barriers faced by ethnic minority people, due to a lack of IAA services in appropriate languages:

“He didn’t have any information in his own language at all. None at all”

“Especially with people who can’t speak the language, English. They can’t do it, and they don’t... some of the people that we are helping, me

and my mum, they can't access anything by themselves, because they can't speak the language. That's something that they really need to put in place."

Cultural barriers

42. Members heard that the barriers faced by ethnic minority people did not solely focus on language and therefore simply providing interpreters was not sufficient; more was needed to address cultural differences:

"Not even just to have interpreters. Because with interpreters, there are certain things you will say and an interpreter will just not really understand and maybe interpret it in a different way. But if you are trained in that field, if someone says something, you'll understand it in a different way."

"...she's an interpreter. She's properly qualified...And she helps this other person who's got depression and stuff. Even...(her) understanding is a bit difficult. But because she's got mental health awareness, she knows quite a lot...You need someone who understands to be interpreting, or you need the actual person to understand as well. It's not just language. Cultural barriers, as well."

"There should be more support for ethnic minorities to help address their cultural needs, 'There should be more things for the black minority ethnic community with mental health. Where you've got cultural differences."

Childcare provision

43. With regard to child care provision, Members heard that a lack of it can prevent people from accessing services:

"I have to go back to my GP which is very difficult as I am a single mother and my youngest child is not yet in nursery. I don't have anyone to look after him and I don't think it's appropriate to take him to an appointment to discuss my mental health. I also wouldn't be able to concentrate."

"childcare provision when people are accessing services"

"assisting with childcare for appointments if required"

Lack of awareness

44. In addition to these barriers, Members heard that there are problems with accessing existing services due to either a lack of awareness of service provision and/or how to access service provision as well as perceptions of issues regarding 'service gatekeepers' who can prevent people getting the IAA they need.

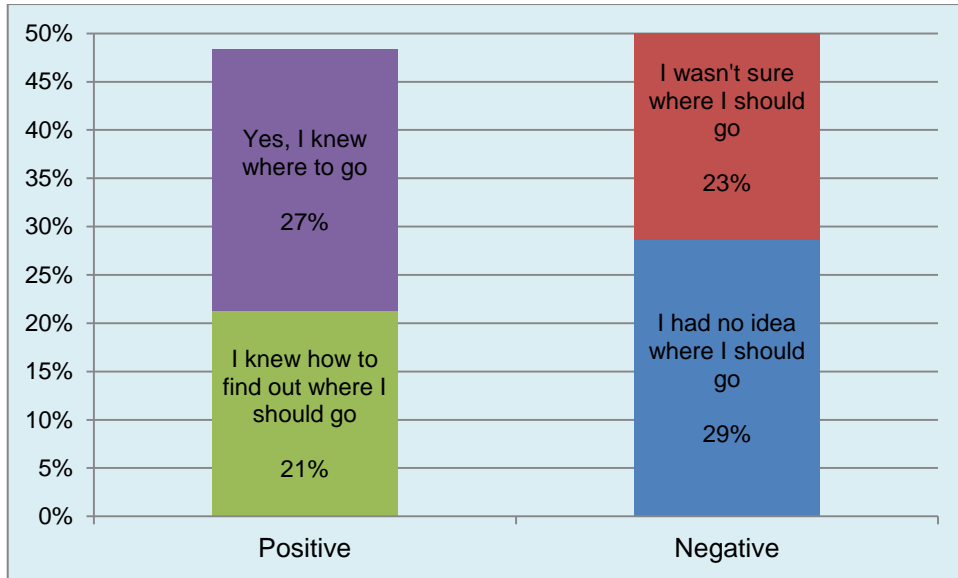

45. Members heard from third sector organisations that often they hear from their clients that they did not know IAA services were available, how to access them or where to go to find help in accessing IAA services.

“Often service users say that initially they had no idea where to go for information, advice, support and assistance when the diagnosis is first made.”

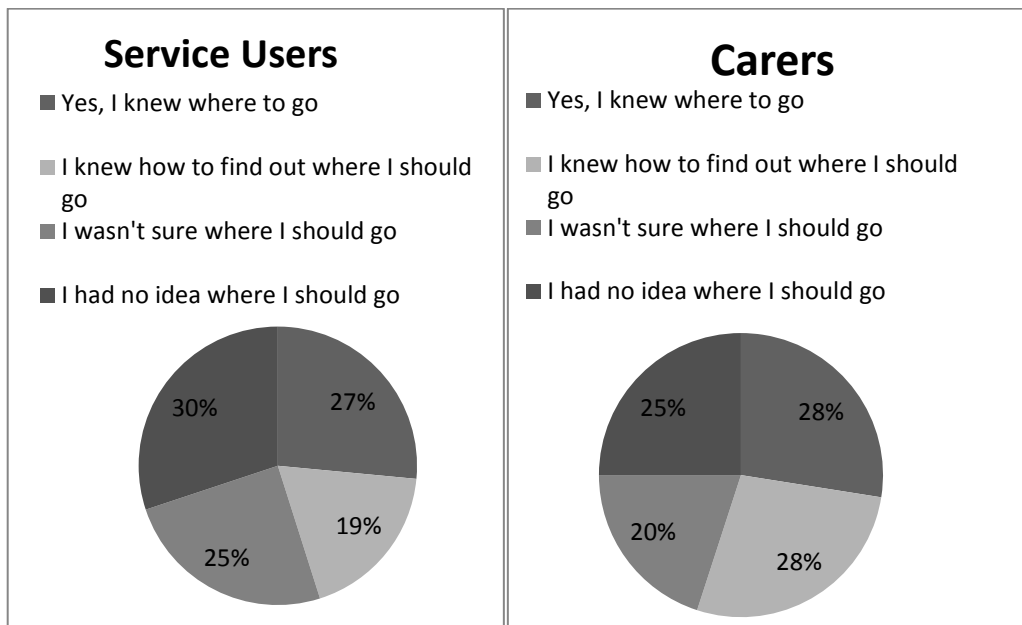

“BME people, especially asylum seekers and refugees, have informed us that they are not given any information on how to access support in relation to their mental health condition. The delays in accessing G.P. appointments, which is the only route to accessing support that many BME people are aware of can lead to deterioration in mental health before support is accessed.”

46. The results of the Scrutiny Research survey support these statements and professionals working in the mental health sector stated that the Scrutiny Research report results were an accurate reflection that mirrored their experience.

47. The Scrutiny Research survey found that, overall, only 48% of those responding to the survey currently know where to go or how to find out where to go to get help.

48. When the Scrutiny Research survey responses are split into service user and carer respondents, the results show that the majority of carers either knew where to go or how to find out where to go (56%) compared to a minority of service users either knowing where to go or how to find out where to go (46%).

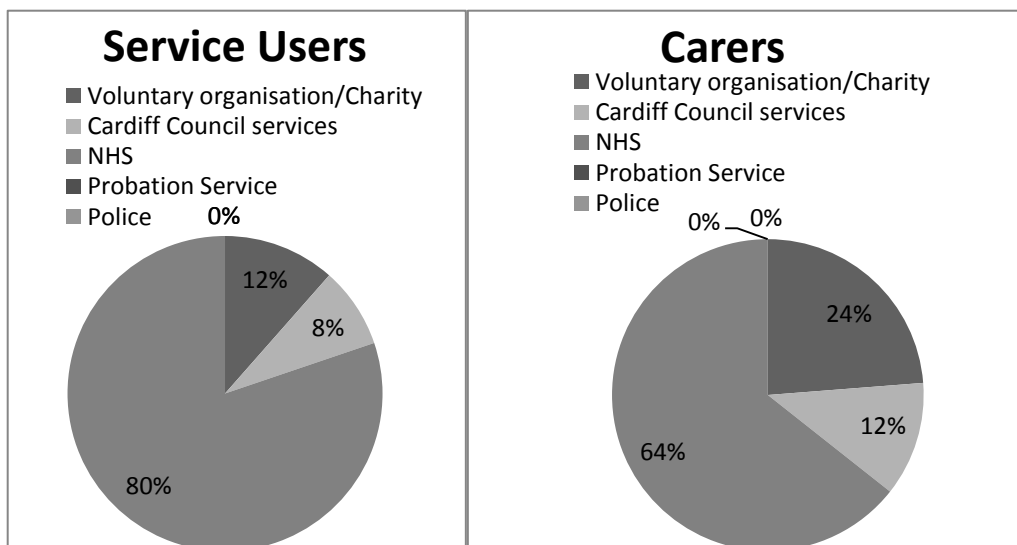

Initial Contacts for IAA services

49. The Scrutiny Research survey also asked respondents to indicate where they initially contacted to obtain IAA services, the means they used to do this and whether they sought further IAA services. The results show that 79% initially access IAA via the NHS; mental health professionals agreed that this reflected their experience and monitoring statistics re referrals.

50. When responses are split into those from service users and those from carers, it shows that 80% of service users initially obtain IAA services from the NHS compared to 64% of carers. In addition, nearly a quarter of carers cited 'other' as their initial source of IAA service, compared to half this amount for service users.

Additional Contacts for IAA services

51. The Scrutiny Research survey also asked respondents to indicate whether they sought further IAA services. Two fifths of respondents confirmed that their only source of IAA services was the organisation that they had initially contacted. Three fifths of respondents confirmed that they had obtained additional IAA services services from other sources.

52. With regard to the 23% ‘Yes, elsewhere’ respondents, the sources specified were: NHS, police, school and from the Citizen Advice Bureau.

Service Gatekeepers

53. With regard to perceptions of issues regarding ‘service gatekeepers’, Members heard from third sector organisations that some service users’ experience has been that it is very difficult to get past the gatekeeper and to get IAA until they are in acute crisis. This point was also raised in the responses to the Scrutiny Research survey:

“It can be difficult to access information when you are dealing with secretaries who block your attempt to speak directly to a professional”

Channels of Access

54. Members heard concerns raised regarding the means or channels for providing IAA services. Witnesses were keen to point out that information provided solely on a website would not be accessible to all, for example those who do not use the internet, those who are too unwell to use websites and those who need face to face contact.

55. The chart below shows how all respondents initially accessed IAA services.

56. When the Scrutiny Research survey responses are split into service user and carer respondents, the results show a significant difference in the responses received by service users and carers, with 47% of carers using the phone, compared to 17% of service users.

57. Further analysis shows that those who knew where to go for help were most likely to use face to face services and those who knew how to find out where to go for help were most likely to use phone services.

Timeliness

58. The evidence to the Inquiry demonstrated that there are issues in the timeliness of IAA services. In part, this follows from the problems in accessing IAA services outlined above. However, other reasons cited to the Inquiry by third sector witnesses focused on inefficient systems for existing services. The Scrutiny Research survey results supported the evidence from third sector witness, finding that 54% felt that IAA services were available when they needed them, and 46% disagreeing with this. There was no difference between service users' and carers' responses.
59. With regard to inefficient systems for existing services, the main reasons cited were long waiting times, services not available when needed, and issues with referrals, including the timing of referrals:

“There was a delay of a few months”

“I needed the service quicker”

“Can’t rely on GP service when needed as too difficult to get an appointment”

“The availability was very patchy especially around holiday periods when help was most needed I couldn’t access any help”

“The amount of delay, and being passed from one person to another”.

“The advice sought appears to be buried beneath so many departments that I feel for people who do not have the persistent nature to follow through”

“The Alzheimer’s Society would prefer to receive referrals after people have had a chance to absorb the diagnosis of dementia – if have referral at the same time as receive diagnosis, it can be too overwhelming and not acted on.”

Content quality

60. The Inquiry heard that the content quality of IAA services, in terms of the knowledge of staff providing IAA services and in terms of the ease of understanding of the IAA provided, was mostly good. Some specific areas for improvement were highlighted, regarding staff training, improving language usage and increasing the type of information and advice available.
61. With regard to the knowledge of staff providing IAA services, 78% of respondents to the Scrutiny Research survey gave positive ratings ranging from “good”, “very good” to “excellent”, with 22% giving a “poor” rating.

The knowledge of staff providing information, advice or assistance

62. However, a number of respondents highlighted the need for further training of staff:

“training for reception staff”

“more qualified staff to be available at point of contact”.

“it would be a big improvement if all GPs had more mental health training”

63. Specifically, Members heard from several witnesses that there was a need for Mental Health Awareness training and Mental Health First Aid training to be compulsory for frontline staff in Cardiff, such as Cardiff Council Hubs staff and GP receptionists. Diverse Cymru also highlighted the need for multicultural awareness training for these groups and for GP practice managers.

64. With regard to the ease of understanding the information and advice provided, the Inquiry heard a range of views expressed. The Scrutiny Research survey found that 79% of respondents gave positive ratings. However, 21% indicated that they found the information difficult to understand. The following quotes illustrate this:

“I found a lot of the advice & info patronizing or seriously oversimplified”

“a simple explanation of what was happening to me would have been useful. Bombarding me with conflicting instructions was not very useful”.

“..leaflets offered were ineffective. Service was a let down.”

65. The Scrutiny Research survey also found that 23% of respondents stated that they either were not able to follow the advice given (19%) or had followed none of the advice given (4%). More than half of the respondents for this question felt that the poor quality of the information, advice and/or assistance that was offered had prevented them from adhering to it e.g. *‘Because it was useless and did not help at all’.*

66. Members heard that there is a need to ensure that information and advice is available in an *easy read* format in order to make it available to the 20% of people in the UK who have reduced levels of literacy.
Members heard that :

“organisations (Including NHS trusts and the likes of MIND) have some excellent information and often in a wide range of languages but never in easy read, thereby cutting off one fifth of the population.”

67. Members also heard that more information is needed, to meet specific needs and to educate people:

“More information is needed to promote healthy lifestyles, to promote prevention of dementia.”

“More information is also needed on the end of life and how to approach and cope with this.”

“Use IAA to educate people, addressing some of the myths re dementia and addressing some of the fears that people may have”

Usefulness

68. Members were keen to learn whether the existing IAA services had helped people using them. In order to test this, respondents to the Scrutiny Research survey were asked to state how they felt before and after receiving IAA services. The vast majority of respondents (cumulative total 92%) indicated that they were worried to varying extents before they contacted the service. Only a very small percentage (8%) stated that they 'didn't feel at all worried or concerned'. When asked how they felt after contacting the service, 44% of respondents stated that they felt better, 35% stated that they felt the same and 21% said that they felt 'worse than before'. Overall, most of the respondents (70%) have stated that they would recommend the service to somebody in the same position.

Interface experience

69. Members heard that it is of key importance to ensure that people feel looked after during the process of accessing and receiving IAA services. The interface experience is crucial and staff need training to get this right. Members heard that it is also important that staff manage expectations and be clear with people about waiting list times etc. so that people understand the parameters.

70. Members heard that culture and working practices vary considerably from team to team and individual to individual; a lot depends on the relationships that have been built between organisations and mental health professionals. Cardiff & Vale University Health Board stated that work is being undertaken to address known issues in culture and working practice and that the culture is changing and that joining up services will continue to help with this. There is a clear move to embed the Recovery Model which has at its heart the need to respect and listen to service users. This should help to improve the culture of working practice, to move towards mutual respect and collaborative working, by hearing the service user's views more and the views of other organisations involved in providing IAA services.
71. Third sector witnesses stated that it requires a lot of training to overcome years of cultural practice; however, they recognise that there has been some movement towards person centred approaches, towards involving service users and carers appropriately.
72. The Scrutiny Research survey specifically asked respondents for their views on how they were treated by staff providing IAA services. Out of 238 respondents, 117 respondents answered this question. Just over half of respondents (52%) stated that they were treated positively, with 26% making reference to the compassionate and caring treatment that they had received. There were some respondents (16%) who suggested that the way they were treated by staff could be regarded as satisfactory. However, nearly a fifth made negative comments and 12% stated that their treatment could have been better. Some of the comments made were regarding the ineffectiveness of the service, low staff numbers and the time restrictions that they had experienced in dealing with staff. Several negative comments were made about rudeness of staff or their lack of compassion.

"I was treated extremely well.. the staff were non-judgemental.... supportive...knowledgeable and facilitated me making some necessary changes in my life"

“They were the first group of people I had met that were non-judgmental about mental illness and its effect on you and others!”

“fine but not great”

“didn’t offer any advice”

treated “like an annoyance” ‘with little respect”

“Just dealt with (me) speedily so they could go onto the next appointment”

they “didn’t really get help x [sic] was left to deal with the situation on our own”

73. The Cardiff & Vale University Health Board witness stated that he recognised the Scrutiny Research findings and that they fitted with the UHB research survey findings. He stated that he would discuss the issues raised by the Report with the Council’s Mental Health Services Operational Manager and would incorporate the issues raised into the training staff receive.

Overall Effectiveness

74. The Scrutiny Research survey specifically asked respondents for their views on the effectiveness of the IAA services they had received. 112 respondents answered this question. Nearly two fifths (39%) of respondents gave negative responses illustrating the existing provision was ineffective; a fifth of respondents (21%) made comments that indicated variability in the effectiveness of provision at different points/timings of contact with services; whilst just under a third of respondents (32%) gave positive comments that indicate they regarded the provision as effective.

75. The reasons given for these responses reflect the range of responses detailed above i.e. those who were critical of provision cited poor accessibility of services; long waiting times; service received not helping; poor attitude and treatment by staff; a lack of support or information; or a poor service received in general.

76. Several witnesses to the Inquiry highlighted that the ineffectiveness of the service could relate to low staff numbers, time restrictions IAA services are facing and resource pressures:

"Most of the staff were excellent but really are stretched"

"My GP is amazing but there is nothing he can do regarding availability of services."

"The lack of time allocated to the patient made it difficult to explain how the extent of his illness was affecting him"

"The staff treated people well but were restricted by lack of recourses [sic] available in an immediate situation of need".

The staff treated them "politely but they didn't help because of lack of service availability".

"staff unable to spend enough time"

"felt they were understaffed (with) no resources available and their attitude was their hands were tied".

" there are no mental health nurses available to assist during their first medical assessment at CHAPS⁹, so information on how to access information and assistance is not readily available."

⁹ CHAPS stands for Cardiff Health Access Practice, which is based at the Cardiff Royal Infirmary and provides services for asylum seekers and refugees as well as other clients.

PREPARING FOR IMPLEMENTATION OF THE ACT

77. The Inquiry investigated the work underway in Cardiff to implement Part 2, Section 17 of The Act, comparing proposals to the requirements of The Act, as set out at points 13-20 above and in **Appendix C**.
78. Members recognise that the requirements of The Act reflect and build on good practice with regard to IAA service provision. Many of the witnesses to the Inquiry agreed that the existing IAA services need to improve, based on service user and carer feedback. The Act contains specific requirements aimed at ensuring good practice IAA service provision, which are examined below.
79. Officers explained that work is underway to prepare for the IAA 'go live' date of April 2016, albeit that the final guidance from Welsh Government on IAA specific requirements is still awaited. A self-assessment readiness tool has been completed on a regional basis, with the Vale of Glamorgan, as required by the Welsh Government, and an implementation plan has been drawn up.

Securing Provision of IAA Services

80. The Act requires local authorities to secure provision, via a variety of different channels and media such as website, phone, face to face and digital, and for there to be an up-to-date directory of services.
81. Officers explained that, in Cardiff, there are four main strands to the proposed approach to meet the IAA requirements of The Act, which are:
- a directory of services;
 - a 'first point of contact';
 - improving the Council's website to enable self- assessment; and
 - using the Hubs to provide information and signpost to advice, assistance and assessment.

82. With regard to the directory of services, officers explained that they are aiming for this to be '*dynamic, interactive and up to date*' but recognise the challenges in doing this. They recognise the need to work with the third sector so they can upload and update the Directory to keep it accurate. Officers explained that the Welsh Government has funded a pilot in North Wales (Dewis Cymru), which is due to go live in December 2015. Other local authorities outside the pilot area have the option to join in January 2016, when they will be able to populate Dewis Cymru with their local data on IAA services.
83. Members heard that The City of Cardiff Council has decided to join Dewis Cymru and preparatory work is underway to ensure quick progress can be made from January 2016. The Directory will be online and Hubs officers will help people to access it if they do not have online access themselves. It will also be on mobile handheld devices carried by visiting officers and outreach staff.
84. Members are aware that CAVAMH already manage an electronic and hard copy directory of mental health services in Cardiff, which is recognised and valued by those working in the health, housing and homelessness sectors. The Cardiff & Vale University Health Board witness stated that he would talk to the Cardiff Council Operational Manager for Mental Health Services and to CAVAMH about how best to use this directory, in light of the Act's requirements.
85. Officers explained that the 'first point of contact' is currently being piloted for older people and people with physical and sensory impairments. The intention is for the first point of contact to be incorporated into the roll out of the Council's Customer Relationship Management (CRM) process, when all service users and customers will be dealt with via one process. In the meantime, Members were assured that officers in the first point of contact team would deal with all calls that came through them, including those who needed IAA regarding mental health.

86. With regard to the self-assessment process due to be piloted on the Council website, officers explained that this will be focused on older people and people with physical and sensory impairments. The intention is for people with queries regarding mental health, to signpost them to the Stepiau website, which already offers self-assessment and self-referral for mental health service users.
87. With regard to the use of Council Hubs to provide information and signpost to advice, assistance and assessment, officers were clear that, whilst it is unusual for someone to come to a Hub to specifically ask for help re mental health illness, staff are trained to be aware of mental health needs, how to deal with these and how to refer onwards appropriately. All staff have received mental health awareness training, staff refer to social services if a client is a mental health service user and staff refer to the Stepiau website as well. In the future, Hubs staff will continue to do these tasks and will provide support and help to people who need it.
88. Further comments on the use of Hubs to provide IAA can be found at points 109-114 below in the section on Entry Point and Assessment.

Regional Provision

89. The Act states that the IAA should be configured on a Local Health Board regional footprint basis as a minimum and that local authorities must work together to ensure the IAA service is consistent so that people find information easy to access in local authorities which are not their ordinary residence.
90. Members heard that there are regional meetings to discuss the readiness for implementation of The Act. Existing regional governance arrangements are being utilised to facilitate this. There are also internal City of Cardiff Council meetings to discuss readiness for implementing various aspects of The Act.

91. Members enquired about work to ensure IAA provision on a regional basis, across Cardiff and the Vale of Glamorgan. Officers explained that the two local authorities are taking the opportunity to pilot slightly different approaches, with the aim of sharing the learning from these pilots and bringing the benefits of both approaches together i.e. City of Cardiff Council is piloting the 'first point of contact' whereas the Vale of Glamorgan Council has a joint contact centre with Health. Membership of Dewis Cymru will also assist by providing one approach to a Directory of Services.
92. Members heard from third sector witnesses who welcomed a regional approach albeit that they took differing approaches to regional working in order to meet the specific requirements of their clients and organisations.

Designing, Planning and Developing IAA Services

93. The draft guidance for the Act states that *'Each local authority must have engaged with its Local Health Board, NHS partners, the third sector, private providers and representatives of the community in the design, planning and development of the model for the Information, Advice and Assistance Service that will operate in its locality.'*
94. Members heard clear evidence from all the external witnesses that the IAA requirements of the Act had not been raised or discussed with them. Indeed, several witnesses stated that the first time they were aware of the IAA requirements was when they were contacted by scrutiny officers to seek their participation in the Inquiry.
95. The witness from Cardiff & Vale University Health Board stated that his focus has been on the Mental Health Strategy and Bills associated with that; however he expressed a readiness to work in partnership with the local authority to implement the IAA requirements of the Act and hoped that this Inquiry would prompt those discussions.

96. Officers explained that the reason for the lack of discussion of the IAA requirements of The Act with mental health professionals and organisations was that the initial work to implement the IAA requirements of the Act has focused on older people and people with physical and sensory impairments. However, Members heard a clear commitment from the Cabinet Member and officers that they wished to work with Health, the Third Sector and relevant stakeholders to plan for the needs of mental health service users, their carers and families.
97. All the third sector witnesses who gave evidence to the Inquiry demonstrated a clear willingness to work with the Council to design, plan and develop IAA services that meet the requirements of the SSWB Act. Concerns were expressed about whether IAA services would receive the attention and work required and whether third sector organisations would be properly involved in the design and planning stages:

“If going to take it seriously, it’s a big piece of work, not a tick box exercise.”

“Hoping that not going to be told ‘we have a plan’ but rather that could be involved in a piece of work that recognises resource limitations, seeks service users views, thinks creatively and designs something that works and that is affordable – doesn’t want to be part of working group that designs Rolls Royce service when can only afford a bicycle..”

98. One third sector organisation, CAVAMH, believes that there needs to be a strategic overview of information pathways, to build links between organisations and enable networking so that people know what is available and they can signpost appropriately. CAVAMH currently undertake this role and recognise that for staff in the statutory sector it can be overwhelming trying to find out about provision and what is available; they urged statutory sector staff to use the third sector to support this work. CAVAMH also made the point that, on initial view, it can look as if there is service duplication in the IAA services but their experience is that this is not the case, as when one looks at the service provision in more detail, it varies in that it serves different clienteles and provides different services.

99. The Alzheimer's Society highlighted that, in their experience, the existing landscape does not effectively utilise the potential that exists. Overall, whilst there is provision and there are good relationships in place, it feels that existing provision is disparate – everyone is doing what they can but it is not integrated enough and sometimes there is duplication (for example, consultation processes) at the same time as there are gaps in provision.

Involve Service Users and Carers

100. The Act requires local authorities to set up Citizen Panels, although officers explained that in their view it is not entirely clear from the guidance what is required, whether the panel is to help shape service design from the beginning or whether it is to seek views on what is proposed. Officers are due to meet the Welsh Government to clarify this and to clarify whether they can use the City of Cardiff Council's existing Citizen Panel or whether they need to set up another panel.

101. Third sector witnesses explained that they have found that sharing service user and carer experiences with statutory agencies (via planning groups for example) has been immensely powerful and a key way for those listening to understand issues and follow this through into service planning. CAVAMH highlighted that, when service users and carers voices are heard and acted on, there can be and has been positive change in culture and working practices, which is one reason that CAVAMH have involvement as a key pillar of work. An example shared with the Inquiry was that, following feedback from young people, there is now an app available for eating disorders which would be more accessible by younger people who are the target audience for this information.

102. CAVAMH stated that they would be willing to bring their forums into the process of planning and designing services, which would bring the benefits of sharing learning and experiences of practice.

103. One witness to the Inquiry highlighted that in her experience some people with some mental health illnesses have not had the opportunity to voluntarily seek IAA services; often people with mental health illnesses such as bipolar, schizophrenia and psychosis will have their first episode of illness in a crisis situation – there will be no knowledge of the illness until the first crisis – and therefore, they will not have attempted to access IAA services before they are hospitalised. Once hospitalised, then the first point of contact will be in a hospital setting with a psychiatrist or mental health nurse or social worker.
104. Also, it was highlighted to Members that some service users and carers have had such bad experiences that they are too angry/ disaffected/ demotivated to give feedback. Third sector organisations stated that they were aware of people who saw the Scrutiny Research survey and did not complete it because of these feelings and experiences and therefore the results in the survey do not reflect this sub-population.
105. Members believe that the above evidence demonstrates the clear need for IAA services to be designed to listen and hear what service users, carers and families are saying as, sometimes, when people realise that they are heading towards another episode of acute crisis, they will seek IAA and, if they are not heard in time, they will hit the crisis and be hospitalised.

Content of IAA Provision

106. The draft guidance to the Act sets out the need to ensure IAA provision is accessible to all, with Welsh language provision, provision that reflects the needs of the local communities and reasonable adjustments made to ensure IAA services are accessible and easy to understand for everyone.
107. Officers confirmed that the website and directory of services would be available in the Welsh language and that publicity material would be in

Welsh as well. With regard to other community languages, officers explained that Hub staff already provide services in a range of community languages and that this would continue as would the work with community groups.

108. Members heard that the accessibility of IAA services can be boosted or hindered depending on the language used to describe access, as terms can be confusing to service users, carers, families and professionals alike. Examples cited to the Inquiry were 'first point of contact', 'single point of entry' and 'gateway', which can be interpreted differently depending on one's previous experience. Further information on this is provided below.

Entry Point and Assessment Role

109. The Act states that the IAA service will provide the critical entry point to care and support services, with a key role in assessing people's need for care and support and directing them to the most appropriate solution to meet their needs; a service user's first assessment would be via the IAA service.
110. There was some discussion with third sector and health witnesses regarding the idea of a first point of entry. Most witnesses felt that a first point of entry, (for example websites/ telephone lines/ app/ face to face) would work as there needs to be a diversity of ways for people to access IAA services; however, a single point of entry was not supported as it was felt that one point alone would not meet all the needs that there are in Cardiff.
111. Several witnesses highlighted that, currently, GPs are almost in the role as single entry point and there are difficulties with this as some clients do not get on well with their GP or can have problems accessing their GP. There is therefore a need for a service providing information and advice that can be accessed when appointments with a GP are not readily available:

“... So really, what people need to put into this is, when that G.P. is not available, which is a 99.9% chance the G.P. is not available, what other door is then available to knock?”

“I’m hearing around this room and quote me if I’m wrong, your G.P. should be your first port of call. But we know, 99.9% you’re not going to get that thing. It could take four days. Are you going to be able to wait those four days?”

112. With regard to Hubs staff dealing with clients who seek IAA, Cardiff Mind and the Cardiff & Vale University Health Board witness highlighted that all staff should receive mental health first aid training, to equip them with the skills and understanding to be able to cope with behaviours exhibited and to deal with people appropriately, rather than being scared or becoming angry with the individual. Members heard that the Cardiff & Vale University Health Board has just received funding to train non-mental health staff and that this money could be used to train Hub staff
113. Cardiff Mind also stated that it should be possible to arrange for those Cardiff Mind staff who are paid by supporting people funding to be on call, to be available to provide telephone back-up support to frontline staff, for instances that are particularly troubling.
114. With regard to Hubs, CAVAMH stated that they have offered training to staff that work in Hubs and have provided leaflets to them so that they can hand these out as needed. However, CAVAMH highlighted that staff in Hubs currently do not have the skills sets required to be able to carry out initial assessments (as envisaged by the Act) but could assist to signpost to services.

Implementation

115. Members were keen to explore what needed to happen to successfully implement the Act’s requirements in Cardiff. The main points that were raised by officers as hindering implementation focused on a lack of final guidance, demand pressures and resources, as detailed below:

- The lack of final guidance leaves a very tight timescale to develop changes and training packages, which could mean that the workforce would not be ready, which also leads to a reputational risk for Cardiff Council.
- The Act was supposed to be implemented at nil cost but there are concerns that the Council will be challenged on decisions made, to test out the new guidance, and that costs may increase with changes to eligibility criteria etc.
- Over the last few years there has been a quadrupling of referrals to primary mental health teams, perhaps due to increased need, greater awareness, less stigma and better accessibility. The challenge with improving access, via improving IAA, is that there will be more referrals and good IAA is needed to avoid unnecessary referrals.
- Cuts to third sector funding at a time of increasing demand pressures.

116. Cardiff Mind highlighted that often, when the Welsh Government introduce a new initiative, they provide a pool of funding to support this and then statutory partners look to use this money to fund a specific new team or initiative as opposed to using the funding to put alongside existing teams, where the money could be stretched further.

Publicising the Service

117. The draft guidance states that a Communication Strategy should be produced with partners with the local authority taking the lead, in order to make IAA services easy to find and ensure all populations are aware of how to access IAA services.

118. Members were advised by external witnesses that the following would be useful places to advertise IAA service provision:

- Cardiff And Vale Action for Mental Health
- Primary Mental Health Support Services

- Cardiff Council website
- Cardiff & Vale University Health Board website
- Stepiau website.

Monitoring

119. The draft guidance sets out the monitoring information that the Welsh Government requires i.e. nature of the enquiry, which type of service the enquirer was signposted to, core data. It also details data they recommend collecting to help with further service improvement e.g. customer feedback, information exchange route such as website/ phone call/ visit etc.

120. Members heard that the following sources would be used to gather monitoring information to assist in collecting and collating the information required by Welsh Government, albeit that it would take time to get the right systems in place: primary mental health referrals, website monitoring and Customer Relationship Management system.

INQUIRY METHODOLOGY

M1. The Community and Adult Services Scrutiny Committee applies a project management approach to its inquiries, including mechanisms to consistently prioritise topics suggested for scrutiny, scoping reports and project plans. The aim of these is to ensure there is a dialogue with the services involved in the scrutiny process with the ultimate aim of improving overall service delivery and enabling effective scrutiny.

M2. Members held seven meetings to hear from witnesses and consider the evidence presented. Witnesses from Cardiff Council included:

- **Councillor Susan Elsmore** – Cabinet Member Health, Housing and Well Being.
- **Tony Young** – Director of Social Services.
- **Sarah McGill** – Director of Communities, Housing and Customer Services.
- **Andy Cole** – Operational Manager Mental Health Services.
- **Sue Schelewa** - Operational Manager Assessment and Care Management.
- **Kate Hustler** – Operational Manager Assessment and Support.
- **Nichola Poole** – Regional Lead Sustainable Social Services.

M3. Members also heard from the following external witnesses:

- **Melanie Andrews** – Alzheimer's Society.
- **Dawn Walters** – Alzheimer's Society.
- **Roger Bone** – Cardiff Mind.
- **Linda Newton** – CAVAMH.
- **Jasmin Choudhury** – Sefyll, CAVAMH.
- **Helen Joy** – Nexus, CAVAMH.
- **Service user** – CAVAMH.
- **Ian Wile** – Cardiff and Vale University Health Board.

M4. Members received written submissions from the following organisations:

- Age Cymru
- Care and Social Services Inspectorate Wales (CHMT report)
- Diverse Cymru.
- Gypsies & Travellers Wales
- Riverside Advice Centre
- South Wales Police
- YMCA.

M5. As part of this Inquiry, the Committee requested dedicated research support in order to understand the experiences of those who have accessed IAA services in Cardiff relating to mental health, for themselves or for those they care for. The City of Cardiff Council's Scrutiny Research Team undertook research through online and hard copy surveys and focus groups. The full report is attached at **Appendix A** and is available separately from the contacts listed at the end of this report.

M6. This evidence from internal and external witnesses was used to identify suitable findings from the Inquiry and has been used to inform the Recommendations.

FINANCIAL IMPLICATIONS

The Scrutiny Committee is empowered to enquire, consider, review and recommend but not to make policy decisions. As the recommendations in this report are to consider and review matters there are no direct financial implications at this stage in relation to any of the work programme. However, financial implications may arise if and when the matters under review are implemented with or without any modifications.

LEGAL IMPLICATIONS

The Scrutiny Committee is empowered to enquire, consider, review and recommend but not to make policy decisions. As the recommendations in this report are to consider and review matters there are no direct legal implications. However, legal implications may arise if and when the matters under review are implemented with or without modification. Any report with recommendations for decision that goes to Cabinet / Council will set out any legal implications arising from those recommendations. All decisions taken by or on behalf of the Council must (a) be within the legal power of the Council; (b) comply with any procedural requirement imposed by law; (c) be within the powers of the body or person exercising powers on behalf of the Council; (d) be undertaken in accordance with the procedural requirements imposed by the Council e.g. standing orders and financial regulations; (e) be fully and properly informed; (f) be properly motivated; (g) be taken having regard to the Council's fiduciary duty to its taxpayers; and (h) be reasonable and proper in all the circumstances.

COMMITTEE TERMS OF REFERENCE

To scrutinise, measure and actively promote improvement in the Council's performance in the provision of services and compliance with Council policies, aims and objectives in the area of community and adult services, including:

- Public and Private Housing
- Disabled Facilities Grants
- Community Safety
- Neighbourhood Renewal and Communities Next
- Advice & Benefit
- Consumer Protection
- Older Persons Strategy
- Adult Social Care
- Community Care Services
- Mental Health & Physical Disabilities
- Commissioning Strategy
- Health Partnership
- Local Service Board

To assess the impact of partnerships with and resources and services provided by external organisations including the Welsh Government, Welsh Government -sponsored public bodies and quasi-departmental non-governmental bodies and health services on the effectiveness of Council service delivery.

To report to an appropriate Cabinet or Council meeting on its findings and to make recommendations on measures which may enhance the Authority's performance in this area.

To be the Council's Crime and Disorder Committee as required by the Police and Justice Act 2006 and any re-enactment or modification thereof; and as full delegate of the Council to exercise all the powers and functions permitted under that Act.

APPENDIX A – SCRUTINY RESEARCH REPORT

The research report is 46 pages long and so has not been included. It is available upon request from Scrutiny Services- contact details are provided at the end of this report.

APPENDIX B – MENTAL HEALTH LANDSCAPE

- a. The landscape for Mental Health Services is complex, with various legal duties and statutory requirements covering health and social care services. These are broken down below into those that cover the whole of Wales and then those that are specific to Cardiff.

Wales wide

- b. Some pieces of legislation cover both England and Wales, for example the Mental Capacity Act 2005, and the Mental Health Act 1983. The responsibility for the strategic approach and delivery of mental health services is devolved to the Welsh Government. The main elements of their requirements are set out below, as are the elements specifically for Cardiff.

The Mental Health (Wales) Measure 2010

- c. *The Mental Health (Wales) Measure 2010* places legal duties on Local Health Boards and local authorities regarding the assessment and treatment of mental health problems. These are set out below.
- Part 1 - ensures more mental health services are available within primary care – for example GPs being able to refer for counselling or stress and anxiety management courses.
 - Part 2 - places a legal duty on secondary mental health service providers to ensure that each service user has a Care and Treatment Plan and the support of a Care Co-ordinator. The Care and Treatment Plans have to cover the following '8 Areas of Life':
 - Rights and entitlements; finance and money
 - A safe home or accommodation
 - Health, personal care and physical wellbeing
 - Early years, school, education and training
 - Work, occupation and valued daily activities
 - Family, parenting and / or caring relationships
 - Access to play, sports and friends; social, cultural or spiritual needs
 - Medical and other forms of treatment including psychological interventions.
- d. Part 3 – enables all adults discharged from secondary services to refer themselves back to those services, within three years of being discharged, without having to see a GP first.
- e. Part 4 – supports every in-patient to have help from an independent mental health advocate if wanted.

Together for Mental Health: A Strategy for Mental Health and Wellbeing in Wales (2012)

- f. Together for Mental Health is the Welsh Government's 10 year '*age inclusive, cross-Government Strategy for mental health and wellbeing*'. It includes the legal requirements of *The Mental Health (Wales) Measure 2010* and provides '*a long-term commitment to improve mental health and wellbeing, backed by significant funding*'. It is the first Mental Health Strategy for Wales that covers people of all ages, aiming to ensure that transfers between services are based on need and not on age boundaries. It replaces former age-based strategies and National Service Frameworks (NSFs).
- g. The Strategy reinforces the need to promote better mental wellbeing among the whole population. It addresses the needs of people with mental health problems or a mental illness. It focuses on how to improve the lives of service users and their families using a recovery and enablement approach.
- h. In order to ensure the Strategy is having an impact, it is supported by a Delivery Plan setting out the detailed actions for Welsh Government and partner organisations to ensure continued progress. A National Mental Health Partnership Board (NPB) is being established to oversee delivery of the Strategy. This is iterated at a local level with Local Mental Health Partnership Boards.
- i. The Strategy is focused around 6 high level outcomes, which are:
 - The mental health and wellbeing of the whole population is improved.
 - The impact of mental health problems and/or mental illness on individuals of all ages, their families and carers, communities and the economy more widely, is better recognised and reduced.
 - Inequalities, stigma and discrimination suffered by people experiencing mental health problems and mental illness are reduced.
 - Individuals have a better experience of the support and treatment they receive and have an increased feeling of input and control over related decisions.
 - Access to, and the quality of preventative measures, early intervention and treatment services are improved and more people recover as a result.
 - The values, attitudes and skills of those treating or supporting individuals of all ages with mental health problems or mental illness are improved.
- j. With regard to this Inquiry, the following outcome is relevant: 'People in Wales have the information and support they need to sustain and improve their mental health and self manage mental health problems.'

- k. The Strategy references the need for information and advice for the whole population as well as specifically re Dementia and for families and carers, as follows:
- 'For the whole population: We will do more to ensure that the public have access to good quality information on how to take care of their mental health throughout their lives. Better, up-to-date information will help people recognise when their own and other people's mental health is deteriorating. It will enable them to seek help early and support families or friends to do so, to use self-help techniques to better manage common mental health problems and to encourage others to do likewise.'
 - 'Staff working in primary care and in mental health services need to be aware of the full range of services available so that they can signpost people to the most appropriate support. This needs to include the range of holistic support services provided by Third Sector organisations across Wales. The Third Sector also have a valued role in distributing information. Health Boards must ensure that national databases are kept up-to-date and that local service directories are available. Mental Health First Aid (MHFA) should continue to expand as organisations should now have trained staff in post who can further disseminate training. *Book Prescription Wales* (BPW) will also continue to raise people's awareness and knowledge. We will look to find ways to provide more information and support, including online.'
 - 'Better information and advice about mental illnesses in older age is important. As people age, the incidence of many illnesses increase, including depression and anxiety. People with dementia and their families need information to help them plan for the future. As part of the commitment under the *National Dementia Vision Wales* we have funded the Alzheimer Society to produce information packs. The Dementia Help line and website will also be promoted and enhanced.'
 - 'Families and carers too can play a crucial and positive role in the Care and Treatment Planning for people with mental health problems. Service providers need to ensure that families and carers get good information, help and support, and have real choices.'
- l. The Strategy also details the following resources that the Welsh Government has funded: help lines such as Community Advice and Listening Line (C.A.L.L) and the Dementia help line.

National Dementia Vision for Wales (2011)

- m. This sets out a commitment to develop dementia supportive communities across Wales. Four priority areas have been identified for improvement as follows:
- Improved service provision through better joint working across health, social care, the third sector and other agencies;
 - Improved early diagnosis and timely interventions;
 - Improved access to better information and support for people with the illness and their carers, including a greater awareness of the need for advocacy;
 - Improved training for those delivering care, including research.
- n. As part of the Vision, the Welsh Government committed to improving information by:
- developing information packs for those diagnosed with dementia;
 - creating a dedicated dementia information helpline for Wales;
 - extending the Welsh Assembly Government's Book Prescription Scheme to include dementia care.

Welsh Health Circular (2008) regarding Priority Treatment and Healthcare for Military Veterans

- o. This Circular states that 'All veterans should now receive priority access to NHS secondary care for any conditions which are likely to be related to their service, subject to the clinical needs of all patients.'

Cardiff Specific

Cardiff and Vale Mental Health Partnership Board

- p. The Cardiff and Vale Mental Health Partnership Board was set up in 2013 to lead on developing the local Delivery Plan in line with the outcomes set out in the national 'Together for Mental Health' strategy. The Cardiff and Vale Delivery Plan covers the following areas, which are relevant to this Inquiry:

i. Promoting better mental wellbeing and preventing mental health problems

The Board has developed a vision document that sets out local priorities for delivering improved services for people living with mental health problems. A number of achievements have already been made in this regard:

- Introduction of a GP service in mental health wards to ensure people's physical health receives proper attention.
- Improved training for a wider staff group to raise awareness of mental health issues.
- Introduction of Peer Support workers in mental health services.
- Joint working with Job Centres.
- Creation of a Community REACT service for older people with mental health problems to support people at home.

Priorities for next year are further development of a suicide prevention strategy and a 'Talk to Me' Action Plan.

II. **A new partnership with the public**

The Board involves service users and carers but acknowledges the challenges that face service users, carers and the wider public when getting involved in strategic development. It is exploring various ways to develop a co-production ethos throughout the partnership. Developments to date include:

- An extended contract with Advocacy Support Cymru, to provide formal and informal advocacy.
- An ongoing contract with Cardiff and Vale Action for Mental Health to provide support and opportunity to service users and carers in becoming involved in the co-production of service provision through the Sefyll and Nexus projects.
- A 'Shared Decision Making' pilot project is being rolled out to ensure that individual Care and Treatment plans are produced together.

Priorities for next year include making services available through the Welsh language and improved accessibility of services for hard-to-reach populations.

III. **A well designed, fully integrated network of care**

As well as influencing universal community opportunities and activities that are inclusive and promote mental wellbeing (such as leisure, education, employment, housing and general medical services), the Partnership Board is responsible for developing a fully integrated network of care and support. Developments to date include:

- The provision of integrated Community Mental Health Services.
- Implementation of the Primary Mental Health Support Service.
- Ensuring that every person who receives a secondary mental health care service has a named Care Co-coordinator and a Care and Treatment Plan.
- Improved access to psychological therapies.

- Production of the Dementia Action Plan, to improve the provision of care and support.
- Promoting use of the Deprivation of Liberty Safeguards across health and social care.
- Appointment of a specialist Child and Adolescent Mental Health Service (CAMHS) to liaise with primary care.

Priorities for the next year include ensuring that young people moving into adult mental health services experience a seamless service.

IV. **One system to improve Mental Health**

The Partnership Board takes a cross-cutting approach by working with statutory, independent and voluntary organisations to facilitate and co-ordinate implementation of the six high level outcomes. Achievements so far include:

- Improved communication and shared protocols with Housing departments to reduce delayed transfers of care and to develop creative housing solutions.
- Introduction of the Peer Support scheme.

Priorities for the next year are to progress work with housing providers to support people with mental health problems when discharging their landlord functions, to further reduce delayed transfers of care from hospital, and to promote the 'Time to Change Wales' campaign which supports people with mental health problems in securing employment.

V. **Delivering for Mental Health**

'Together for Mental Health' sets out a programme of change for mental health services and the wider public sector by ensuring a culture where mental health promotion and anti-discriminatory practices is in place.

Achievements so far include:

- Establishing the Cardiff and Vale Mental Health Partnership Board.
- Introducing Mental Health First Aid Training.

Priorities for the next year include ensuring that clinical and social work interventions provide positive outcomes that can be measured.

Cardiff and Vale University Health Board

- q. The Cardiff and Vale University Health Board UHB currently deliver primary, community, inpatient and tertiary mental health services out of five hospital sites and twelve community bases through over 64 integrated teams at a cost of £60 million per annum.
- r. The range of services includes core mental health services such as adult and older people's community mental health multi-disciplinary teams and

aligned in-patient beds but also support, specialist and tertiary services. The UHB provides mental health services to a population of around 500,000 people.

- s. All the community teams are integrated with the local authorities, with Health leading on Adult Services teams and Local Authorities leading on Older People Mental Health - a mixed economy of leadership.
- t. The services provided are:

I. Adult Acute Mental Health Services

Adult Acute services cover the Cardiff and Vale area and are focussed on providing a community based model of care. Most referrals to adult acute services originate from the primary care services such as your local GP. Recent developments have established services that allow patients to be treated very early on which avoids admission into hospital or allows early discharge.

II. Specialist Rehabilitation Services

Mental Health Rehabilitation services provide support to patients with severe and enduring mental health problems. Referrals generally come from adult acute or community mental health services. Two inpatient wards remain, but the service is largely community based. Some 24 hour supported units support those with intensive rehabilitation needs, while supported housing and a developing community team offer less intense support. The aim of the service is to maximise the independent living skills of mental health service users, enabling them to manage life with sometimes chronic mental illnesses.

III. Mental Health Services for Older People

Older people's mental health services provide care to people who suffer late life onset mental health problems (functional illness) or one of the dementias (organic illness). A range of community, day hospital and inpatient services cover the UHB area with a community focussed model of care. Inpatient services offer assessment, respite and continuing assessment beds.

IV. Neuropsychiatry Services

Neuropsychiatry services cover all Wales and offer a specialist service to people with acquired brain injury. As the result of trauma resulting in damage to the brain, changes in function can result in severe behavioural disturbances which mainstream services find particularly difficult to care for. This is where a specialist Neuropsychiatry service is able to offer advice, support or intervention in challenging circumstances. The service has close links with the UHB's Neurosciences department, with some staff working between the two services.

V. Traumatic Stress Service

The aim of this service is to develop and provide effective interventions to help prevent individuals developing significant mental health difficulties after traumatic events, and to treat individuals with Post Traumatic Stress

Disorder (PTSD). The service also aims to increase awareness of the psychological effects of traumatic events.

VI. Community Mental Health Teams

Cardiff's Community Mental Health Teams are made up of staff from health and social care professions, including social workers, nurses, psychologists, occupational therapists, physiotherapists, support workers and medical staff. Health professionals are employed by the health service and social care staff are employed by Cardiff Council. There are six CMHT's covering Cardiff, as well as a CMHT for Older People with Mental Health needs. Cardiff Council's leaflet on CMHT's states 'Most of the people the teams are helping were referred by a health worker such as their GP, but people can ask for help themselves, or be referred by family, friends, or other professionals working with them. But the teams only work with people who have severe, acute or enduring mental health problems.'

Also, the Cardiff and Vale Mental Health Partnership Board Annual Report 2013-14 states that:

'Cardiff and Vale University Health Board now provide:

Primary Mental Health Support Services working alongside the established GP practice-based primary care counselling service, delivering into Primary care services in meeting the needs of low and medium intensity mental health support alongside **Assertive Outreach Services** including provision for the City Centre and Homeless; **Early Intervention** efforts to detect and intensively treat first episode psychosis support the work of the generic adult services; Tier 3 **Eating Disorders** Specialist Team; Tier 3 **Borderline Personality Disorder** Support Team; **Perinatal** Specialist Service; **Specialist Rehabilitation** teams across Cardiff and Vale to support recovery and move on **Post Traumatic Stress Disorder** team is closely aligned with the all Wales **veteran services** hosted by Cardiff and Vale; Tier two **Eating Disorder team** delivering specialist interventions across community mental health teams and supporting specialist interventions in primary care; A Range of **Low Secure and Forensic** services, including in-patient beds, community team and criminal justice liaison services are available with a range of **substance misuse** services including NHS inpatient provision.

The mental health service continues to provide support collaboratively across the UHB with **Liaison services** present in Emergency Unit, general hospital wards, poisons and elderly wards. Elderly mental health specialist services include **Crisis Resolution (REACT)** community older people's team – one of the few across the UK, working alongside the **Memory team** and **Young Onset service** and **Nursing Home Liaison**. The *delivery of Psychological Therapies* is becoming increasingly embedded in core services with specialist support.

Cardiff & Vale Framework for Older People 2014-2019 'Meaningful and Purposeful Lives'

- u. 'Meaningful and Purposeful Lives' sets out the framework for Older People's services for the Cardiff and Vale of Glamorgan Integrated Health

and Social Care Partnership for the period 2014-2019. It contains 6 themes and actions related to the provision of information to older people, as set out below:

Themes

Actions – relevant to this Inquiry

2. Along with their carers, know where they can receive information, support, resources and advocacy in the community to live independently at home for as long as possible.

Signposting to local community services

Deliver the “Communities around Wyn” recognition and signposting project

4. Receive informed and guided care about services that may be received, so that the different steps of treatment and care where appropriate are clearly understood and shared decisions made.

Develop information that promotes shared decision making

6. Be given information about quality assured value for money long-term care and support options and alternatives should these services be needed.

Information about:
Technology that may provide care or monitoring functions
Housing options including supported and / or adapted housing
Value for money and quality assured long term care

Local Mental Health and Wellbeing Needs Analysis

The information below is extracted from the Cardiff and Vale Local Mental Health Partnership Board Annual Report 2013-14.

Population Size

Currently, around 479,000 people live in this area and between 2003 and 2013, the number of people increased by 9.3%, almost double the Wales average at 4.7%. The number of people aged over 85 years has increased by 28% between 2003 and 2013¹.

Age and Gender

The city of Cardiff has a skewed population compared to the Vale of Glamorgan because of the large numbers of students and disproportionately fewer older people. As a higher proportion of mental disorders develop between the ages of 14 to 20, Cardiff has greater incidence of mental illness.

Ethnicity

The proportion of people from the black and ethnic minority (BME) community² in Wales averages at 6%. In Cardiff, however, the proportion stands at 16%³. Research shows that the incidence of psychosis is higher in the African Caribbean and Black African populations⁴.

Educational Attainment

The percentage of Year 11 school leavers who were known to be not in education, employment or training (NEET) in 2013 in Wales was 3.7%, with 4.9% in Cardiff⁵. In general, people with a psychotic illness have fewer qualifications and are more likely to have left school before the age of 16 with no qualifications, compared to other groups.

Unemployment

The percentage of people who are claiming one or more employment related benefits in Wales stands at 14.7%, whereas in Cardiff this is slightly less at 12.2%. Mental health conditions are the primary reason for those claiming health-related benefits⁶.

Housing and Homelessness

The number of households in Cardiff who were deemed to be eligible, unintentionally homeless and in priority need was 690 in 2013/14. Statistically, you are more likely to have a mental health condition if you are homeless: 43% of those accessing homelessness projects in England were suffering from a mental illness.

Diagnosis of Mental Illness

According to the GP registers in Cardiff and the Vale as at March 2013, there were 4,111 people with a diagnosis of a serious mental illness. There were also 2,485 people with a diagnosis of dementia. However, according to the Alzheimer's Society, this represented only 46% of people with dementia in the community⁸; therefore under-diagnosis is an issue, despite Cardiff and Vale having the best detection rate in Wales.

Deprivation

Deprivation is associated with poorer mental health outcomes and those with a poorer level of income are more likely to have a common mental illness. Deprivation in Cardiff is mainly in the southern arc of the city and 15.8% of Cardiff's areas fall into the 10% most deprived in Wales⁹.

Prevalence

According to the Welsh Health Survey 2011-12, 11% (age-standardised) of adults in Wales reported currently being treated for a mental illness and this is identical to the Cardiff and Vale prevalence of 11%¹⁰.

This is likely to be an underestimate of the people who have a mental illness as surveys suggest that in England 16% of people have a common mental illness. In terms of a diagnosis of a serious mental illness (schizophrenia, bipolar disorder and other psychoses), there are 4,111 people on primary care registers with these conditions, which is 0.8% of the total GP list size¹¹.

A prediction tool, PsyMaptic has calculated that, in Cardiff and the Vale, we would expect to find 74 new cases of psychosis per annum, between the ages of 16-64¹².

In Cardiff the number of persons age 30 and over predicted to have dementia in 2013 was 3,577 rising to 5,242 in 2030. There are 2,485 people with a diagnosis of dementia on GP registers in Cardiff and Vale. When adjusted to take account of the age structure of the population, the dementia rate is 2.9 per 1,000 people, compared to 2.7 per 1,000 people for Wales as a whole¹⁴

Service usage

Benchmarking data shows that the Adult Community Mental Health Team caseload per 10,000 weighted populations is 147 within Cardiff and Vale, which is similar to NHS Benchmarking data of 140. Within this service, there are 252 contacts per whole time equivalent, compared to 240 across the UK. The numbers of admissions per 100,000 populations are 245 in Cardiff and Vale, compared to 234 across UK benchmarking data. Bed occupancy in Cardiff and Vale is 115%, whereas across the UK it is 91% on average.

Suicide

Suicide rates in Wales are higher than in England but lower than in Scotland and Northern Ireland¹⁵. During the period 2003- 2012, European age-standardised rates (EASRs) among men (aged 15+) in Cardiff and Vale ranged from 16 per 100,000 in the Vale of Glamorgan to 19.4 per 100,000 in Cardiff, similar to the Wales rate of 20 per 100,000 males. In women the EASRs in Cardiff and Vale ranged from 4.9 in the Vale of Glamorgan to 5.8 in Cardiff which is slightly higher than the Wales rate of 5.3 per 100,000 females¹⁶

APPENDIX C– EXTRACT FROM WELSH GOVERNMENT CODE OF GUIDANCE - CHAPTER FIVE

Welsh Government – SSWB (Wales) Act 2014 – Code of Guidance for Consultation - ‘Part 2 -Code of Practice and guidance on the exercise of social services functions and partnership arrangements in relation to part 2 (General Functions) of the Social Services and Well-being (Wales) Act 2014 Including Well-being, Population Assessment, Prevention, Promotion of Social Enterprises and Provision of Information, Advice and Assistance Issued under Sections 145 and 169 of the Social Services and Well-being (Wales) Act 2014 (Short title: Code of Practice on General Functions)’

Chapter 5: Information, Advice and Assistance

Introduction: aims and scope

229. This Code of Practice provides guidance on section 17 under Part 2 of the Social Services and Well-being (Wales) Act 2014. Section 17 covers the provision of information, advice and assistance. There are no regulations made under this section of the Act.

Introduction

Aim and scope

230. This code of practice sets out the duties on local authorities in relation to the provision of a service for providing people with: **Information and Advice** relating to care and support, and **Assistance** in accessing care and support

231. This code of practice applies to local authorities although Local Health Boards, or an NHS Trust providing services in the area of a local authority, must provide that local authority with information about the care and support it provides in the local authority’s area. Other partner organisations including third and independent sector organisations, and citizens of Wales, including those in prison, youth detention and bail accommodation, will have an interest in its content and delivery.

232. The **Information, Advice and Assistance** service must include, as a minimum, the publication of information and advice on:

- how the care and support system operates in the local authority area;
- the types of care and support available;
- how to access the care and support that is available; and
- how to raise concerns about the well-being of a person who appears to have needs for care and support.

Purpose of the Information, Advice and Assistance Service

233. The Information, Advice and Assistance Service will be available to *all* people (adults, children, families of children, young people and carers) in the local area and will provide the primary entry point to the care and support system. It will be crucial in empowering and enabling people with the information they need to help them make informed decisions and to tap into resources, including their own and their community resources. The Service will help people, including those in the secure estate, to understand how the care and support system operates in their local area and how they, or someone they care for, can be supported to achieve their personal well-being outcomes. The Information, Advice and Assistance Service will also support professionals to be better informed and able to reply to enquiries.

234. The Information Advice and Assistance Service must provide access to relevant, accurate, high quality and timely information, advice and assistance about ways that people can meet their care and support needs, or the care and support needs of others they may care for, both now and in the future. The Service must also provide information and advice on how to raise concerns about the well-being of another person who appears to have care and support needs.

235. The Service will provide information and advice about the preventative well-being services available in the community that would be most appropriate for people and their individual circumstances. The service will also offer assistance to **access** care and support if needed.

236. The Service will provide information on direct payments, charges for care and support and other information and advice on matters that would enable people to plan for meeting their care and support needs, or support needs for carers that may arise. This is a shift from information about services to information about people and their care and support needs to enable them to better help themselves and others. Further information about direct payments is available in the Code of Practice on Part 4 of the Act and information about charging is available in the Code of Practice on Part 5 of the Act.

237. Local authorities must through partnership working find ways to deliver the Information, Advice and Assistance Service to those in the secure estate while they are detained and in preparation for their release.

Definitions

238. In the context of the Information, Advice and Assistance Service the following definitions for each element of the service apply:

Information:

Information will be quality data / material that supports a person to make an informed choice about their well-being. This will include financial information, and information on direct payments, information on charges, and other matters that would enable someone to plan how to meet their care and support needs, or support needs if they were a carer.

Advice:

Advice will be a way of working co-productively with a person to explore the options available and offer guidance to them about making the most suitable choice to overcome barriers they may face to achieving their personal well-being outcomes. The provision of advice will require the service provider to conduct a simple assessment and to record basic personal data and the advice given.

Assistance:

Assistance, if needed, will follow the provision of information and advice. Assistance will involve another person taking action with the enquirer, to support the enquirer to **access** care and support, or a carer to access support. Responsibility for the activity undertaken is shared between the giver and receiver of the assistance. The provision of assistance will also require the service to conduct a simple assessment and to record any additional personal data and details of the assistance offered and taken up by the enquirer.

Assessment

239. When the Information, Advice and Assistance Service only provide **information** a record of personal data is **not needed**. As such the person accessing the service for information would often remain anonymous for recording purposes. However, those operating the Service should capture information about the nature of the enquiry and which type of service the enquirer was signposted to for national management information purposes.

240. When the Information, Advice and Assistance Service offers **advice and / or assistance** core data **must be recorded**. Further information about core data is available in the Code of Practice on Part 3 of the Act relating to Assessing Needs.

241. Staff working for the Service will be skilled to undertake an assessment in line with the regulations on assessing needs.

242. The assessment process will be applied proportionately to match the person's care and support needs, or support needs of carers. A simple assessment can be conducted and concluded by staff working within the Information, Advice and Assistance Service.

243. If a more comprehensive assessment is required a specialist assessments may follow the initial simple assessment to form a complex assessment. However, the initial information gathered through the simple assessment will not need to be repeated.

244. Where it appears that the needs of the individual are such that there is a duty on the local authority to exercise a function in order to protect and safeguard the person from abuse or neglect or the risk of abuse or neglect (and in the case of a child: harm or the risk of harm) there is a need to act on this information immediately and without delay. Local authorities must also determine whether the needs of the individual call for the exercise of any function it has under Part 4 (Care and Supervision) or Part 5 (Protection of

Children) of the Children Act 1989 and should act on this immediately and without delay.

245. Local authorities **must** work in partnership with its NHS partners to ensure that any personally identifiable information should be shared within the principles of the Wales Accord on Sharing Personally Identifiable Information (WASPI). All Local Health Boards and local authorities in Wales are signatories to this protocol and a link is attached below:
<http://www.waspi.org/>

Recording Management Information

246. Local authorities **must** record management data from their Information, Advice and Assistance Service for the following purposes:

- **Monitoring Performance**

The recording of information is important to support service performance and improvement. Recording the information exchange (calls and web logs) can be analysed to provide a better understanding of the nature of the enquiry and the customer profiles. Management data will also assist in the audit and inspection of the Service and, for this purpose, local authorities should consider obtaining feedback from service users.

- **Planning Services**

It is important for local authorities to record information about the nature of enquiries and responses, as well as the type of information and advice offered by their service to support the population needs assessment and planning of preventative wellbeing services (see the Code on section 14).

- **Service Improvements**

Recording personal data when advice and assistance are provided can prevent an individual having to repeat the same information if they access a service again or proceed through the care and support system. This will also make the system more efficient.

Accessibility

247. Local authorities must seek to ensure that information, advice and assistance offered under the Service must be available in a manner which is accessible and suits the needs of their population. The Equality Act 2010 requires that reasonable adjustments are made to ensure that people have equal access to information, advice and assistance services. Reasonable adjustments could include the provision of information and advice in accessible formats and /or with communication support to meet the different needs of different people and ensuring that those who face challenges are not excluded.

248. Local authorities, with their partners, **must** recognise the needs of their population (See Code of Practice on Strategic Population Needs Assessment section 14, Part 2). The Service will need to be appropriately designed and accessible for different client groups. It must be easy to find, understand and use for everyone.

249. The Information, Advice and Assistance Service must be available through the medium of English and Welsh –many Welsh speakers can only communicate their care needs effectively through the medium of Welsh, additionally, for many Welsh speakers being able to use their own language has to be seen as a core component of the Information, Advice and Assistance Service not an optional extra. However, the Service must be mindful of the need to be accessible to all people. Local authorities should ensure that the Information, Advice and Assistance Service is designed to be pro-active in providing knowledge and help to people of all ages, social and cultural groups whether they are seeking information, advice and assistance for themselves or for others that they care for.

250. People must find it easy to access the Service and be treated with dignity and respect at all times by staff who are well trained to deliver the Service. This is particularly relevant for children and young people who will need to feel confident and reassured that this Service will provide relevant, accurate and up to date information and advice for them and be available in ways that they prefer to use.

251. The local authority **must** ensure that the Information, Advice and Assistance Service will offer support and guidance to people and professionals through a range of media e.g. web, telephone, face to face, outreach, digital media, publications.

252. The local authority **must** ensure that information and advice is available in a variety of formats including easy read and material specially for children and young people and it must be well publicised.

253. The local authority **must** ensure people have access to a 24/7 service, although this does not mean that every component of the Service is provided on a 24 hour basis.

254. A key component of the Information, Advice and Assistance Service will be a directory of services which **must** be accurate, up-to-date and relevant.

255. Local authorities **must** work together to ensure the Service is consistent so that people find information easy to access in local authorities which are not their ordinary residence. This is particularly relevant for those who may be living close to the boundaries of the neighbouring local authority.

256. Local authorities **must** produce a communications strategy to promote their Information, Advice and Assistance Service. Local authorities **should** lead the process, but develop the communication strategy jointly with partners. The strategy should consider the different target audiences and how to reach them, with priority given to the most vulnerable.

257. Local authorities **must** ensure that the Information, Advice and Assistance Service provides information and advice about advocacy services that are available locally and if necessary assists the enquirer to access the service.

Integrated Services

258. Local authorities **must** make links with other information and advice services at a local, regional and national level, particularly those that are publicly funded. All efforts should be made to reduce duplication and ensure the information and advice is offered by the most appropriate and skilled agency.

259. Local authorities **should** consider adopting an integrated approach which draws on the knowledge and services available from their own departments, Local Health Boards, NHS Trusts, the third and independent sectors.

260. Local Health Boards and NHS Trusts **must** provide the local authority with information about the care and support it provides in the local authority's area. Both local authorities and their NHS partners **should** work in partnership to ensure the Information, Advice and Assistance Service is comprehensive and up to date and relevant.

261. Local authorities **should** consider their duties under S16 to promote social enterprises, co-operatives and user led services in order to approach the development of the Service in an innovative way.

262. Local authorities **must** make links to any proposed national information and advice service developments within the health or social care sector so they are integrated into the development of their Information, Advice and Assistance Service.

Workforce Implications

263. Local authorities **must** develop a workforce training plan which should cover front line staff working within the Information, Advice and Assistance Service and the wider workforce.

264. All staff working within the Service should have a clear understanding of the care and support system operating in their locality and be appropriately trained to conduct an assessment, determine eligibility and prepare care and support plans as set out in Parts 3 and 4 of the Act and Code of Practice.

265. Local authorities **must** establish a team which reflects a mix of skills and experience from a range of professionals from the social care, health, third and independent sectors.

266. Local authorities **must** recognise the need for the ongoing training of staff.

267. Local authorities **should** also consider the scope of the training and access rights for the wider workforce delivering information, advice and assistance.

Governance and Accountability

268. Local authorities **should** work in partnership to develop their Information, Advice and Assistance Service on a Local Health Board footprint. Local authorities **should** also consider delivering components of their service on a national basis.

269. Each local authority **must have** engaged with its Local Health Board, NHS partners, the third sector, private providers and representatives of the community in the design, planning and development of the model for the Information, Advice and Assistance Service that will operate in its locality.

270. Local Health Boards, or NHS Trusts operating within the local authority area, **must** provide local authorities with information about the care and support it provides in the local authority area. This information should be relevant and accurate and provided in a format which is agreed by the local authority and accessible to the Information, Advice and Assistance Service.

271. The Director of Social Services will be responsible for ensuring the design, plan and delivery model meets the duties of the local authority. Directors of Social Services, as part of their social services functions developed under section 143 and section 144 of the 2014 Act, **must** report annually on the progress of the Information, Advice and Assistance Service, either separately or as part of the overall care and support arrangements operating in its area. This report **must** be made publicly available and accessible via the local authority's website.

272. If the local authority delivers the service through a third party the Director of Social Services must ensure that the Service is monitored closely and meets the delivery standards. In all cases feedback from service users must be collected and contribute to service improvement.

273. Audit and inspection of the Information, Advice and Assistance Service will also apply.

National Service Delivery Standards

274. Local authorities **must** ensure that they meet the national service standards for the content and delivery model of the Information, Advice and Assistance Service in its area to ensure a consistent Service is delivered across Wales.

275. The Service will:

- a. be well publicised in the locality, particularly in places and through media that will reach people of all ages;
- b. be available through a variety of media (including online, digital media, telephone, face-to-face, outreach, publications);
- c. be available through a variety formats (including easy read, child friendly version etc.);
- d. be available through the medium of both Welsh and English reflecting the Welsh Government Strategy '*More than Just Words*';
- e. be staffed by a range of skilled professionals including those with experience in the social care, health, third and independent sectors to provide an holistic approach;
- f. support individuals to build on their strengths and draw out what the person wants to achieve;
- g. meet service content accreditation standards for the range of formats to ensure a consistent and reliable response;

- h. provide information that is accurate, up to date and relevant;
- i. provide information which is accessible 24/7;
- j. respond to an enquiry within 24 hours;
- k. record data in line with assessment guidance where advice and/or assistance is given;
- l. deliver a positive customer service experience;
- m. provide information about how the care and support system works;
- n. be accessible to all people;
- o. offer a response which is proportionate to the enquiry and empowers the individual to access early support independently;
- p. be widely publicised and recognisable by people in the local area;
- q. work with other local, regional and national advice services to provide an integrated and seamless response for enquirers;
- r. involve service users in the design and review of the service.

Complaints

276. Local authorities **must** provide reference to the complaints procedure operating within the local authority and be able to direct those wishing to make a complaint to the necessary information quickly and efficiently.

277. The Welsh Government has recently issued new complaints guidance: *A guide to handling complaints and representations by local authority social service* which was effective from 1 August 2014. A link to this can be found at: <http://wales.gov.uk/topics/health/socialcare/complaints/?lang=en>

Adults and children in prison, youth detention accommodation and bail accommodation

278. Local authorities are responsible for providing the Information, Advice and Assistance to those people within its geographical boundary as outlined in Section 17. This will include the duty to provide the service to those adults and children in prison, youth detention accommodation and bail accommodation where these establishments fall within their boundaries.

279. Local authorities **must** ensure that the Information, Advice and Assistance Service is in keeping with national and local strategies.

280. Local authorities **must** consider how best to provide the Information, Advice and Assistance Service to those in the secure estate, ensuring that it is accessible both in terms of information content and delivery of service. The Information, Advice and Assistance Service and the provision and accessibility of preventative and well-being services need to be seen as a means of supporting those individuals while they are in the secure estate and in preparation for their release and resettlement.

281. Local authorities **should** ensure that the Information, Advice and Assistance Service is linked into the provision of information and advice and

the provisions for resettlement of prisoners under the Housing (Wales) Act 2014 and that a comprehensive and integrated service is developed.

282. Local authorities **must** have regard to the code on adults and children in prison, youth detention accommodation and bail accommodation under Part 11 of the Act. They must work together with the relevant agencies and establishments to identify how this service will operate and may do this on a national basis.

APPENDIX D – GOOD PRACTICE EXAMPLES AND CASE STUDIES

<http://www.thinklocalactpersonal.org.uk/Browse/Informationandadvice/Informationandadvicecasesstudies/> (downloaded 20th October 2014)

Information and Advice case studies

These case studies are examples of information, advice and brokerage initiatives collected from local authorities and others from across the country.

They will be of interest to organisations as they develop their services in response to the requirements of the Care Bill.

Case studies

Website

- [Connect to Barnsley - Barnsley Metropolitan Borough Council](#)

Connect to Barnsley is a universal information and advice hub that provides a single interface for information about health, social care and wellbeing.

- [Connect to Support in Yorkshire & Humber](#)

Connect to Support (CtS) is a website developed by Local Government Yorkshire and Humber, it is for people who use social care services or who are looking for information and advice about what support and care is available in their local council area.

- [Dudley Community Information Directory - Dudley Metropolitan Borough Council](#)

The Dudley Community Information Directory (DCID) is a central portal for the provision of online information and advice about organisations and support services in Dudley.

- [Durham Information Guide \(DIG\) - Durham County Council](#)

The Durham Information Guide (DIG) is an online database developed by Durham County Council, it allows people to search for information and contacts in order to give them choice and control over the care and support they receive.

- [East Sussex 1Space - East Sussex County Council](#)

East Sussex 1Space is part of a coordinated range of services designed to enable people to exercise choice and control over their lives, by ensuring that they have the right information to help them plan the care and support they need.

- [Gateway to Care Single Point of Access - Kirklees Council](#)

Gateway to Care Single Point of Access is an information and advice service provided by Kirklees Council.

- [Information Now - Newcastle City Council](#)

Information Now is a website developed by Newcastle City Council: Quality of Life Partnership; it was developed with and for older people in 2007.

- [Leeds Directory - Leeds City Council](#)

The Leeds Directory was developed by Leeds City Council, it provides a universal source of quality information accessible in a variety of formats, to meet the needs of a wide range of stakeholders.

- [Living Well with Dementia - Coventry & Warwickshire County Council](#)

Living Well with Dementia is a one-stop portal for information about dementia. It was created by the Coventry and Warwickshire Living Well with Dementia Partnership.

- [My Care, My Choice website - Stockport Council](#)

'My Care, My Choice' is a website developed by Stockport Council that provides information about care and support services in Stockport and acts as an information hub for council staff and partner organisations.

- [My Choice Marketplace - Trafford Council](#)

My Choice Marketplace is an accessible website that was developed by Trafford Council; it informs personal budget holders and self-funders of the services available and ensures a minimum level of quality.

- [MyLife online directory - London Borough of Redbridge](#)

'MyLife' is a web platform developed by the London Borough of Redbridge, it allows people to access information about care and support services.

- [Staffordshire Cares - Staffordshire County Council](#)

Staffordshire Cares is a service developed by Staffordshire County Council. The website helps people to maintain their independence and plan their lives by putting all information, advice and guidance in one place, in a range of formats, to meet individual needs.

- [Swindon Directory of Information, Support & Advice \(DISA\)](#)

Swindon Directory of Information, Support and Advice (DISA) is an online resource to help people and practitioners quickly find information to help people make the most of their lives, in the way they choose.

Prevention

- [Health and Wellbeing Zones - Derbyshire County Council](#)

Derbyshire County Council's Health and Wellbeing Zones first started in 2011 and there are now 20 dedicated zones across the region.

- [Later Life Planning - London Borough of Barnet](#)

Later Life Planning (LLP) aims to provide a flexible and holistic one stop shop for older people to help them plan for their future, retirement and to keep well and active.

- [Your Support Your Choice - Blackburn with Darwen Council](#)

Your Support Your Choice (YSYC) is walk-in health and social care information centre which provides health and social care information , signposting, access to peer support and advocacy.

Brokerage/ Peer Support

- [Derbyshire Adult Care Brokerage Service - Derbyshire County Council](#)

The Adult Care Brokerage Service exists to help people who use services exercise choice and control, by helping them find the services they need.

- [Peer support brokerage - Trafford Council](#)

Peer support brokerage in Trafford assists people with mental health problems to create their own personalised support plans.

- [Support With Confidence - East Sussex County Council](#)

The 'Support With Confidence' scheme provides a list of providers of care and support services who have been approved and have undergone appropriate training and background checks.

- [User-controlled information - London Borough of Barnet](#)

This is a user-controlled IAA (Information, Advice & Advocacy) service and peer support brokerage service commissioned by the London Borough of Barnet.

Assisted signposting

- [Healthwatch Liverpool - Liverpool City Council](#)

Information about local health and social care services is one of the three elements of the service provided by the new Healthwatch Liverpool.

- [Information and advice services - Leicestershire County Council](#)

The council have developed a new 'delivery model' for information and advice services in Leicestershire.

- [Stockport FLAG - Stockport Council](#)

FLAG is an information and advice service managed and delivered through a consortium of voluntary sector organisations working in Stockport.

- [Thurrock Over Fifties Forum \(TOFF\)](#)

It is a free impartial advice session held in local Learning Centre where visitors can get advice in relation to housing, benefits, funding, care and social activities.

- [Village Agents - Hampshire County Council](#)

The Village Agent project is developing a network of local volunteers who help older people living in rural areas find the information and support they need.

Self funders/ financial advice

- [Practical Guide to Care - Birmingham City Council](#)

The Practical Guide to Care is an accessible resource that provides practical information and advice to help adults understand their options and choose a solution that is right for their needs.

- [Supporting people who pay for their own support - Bracknell Forest](#)

Bracknell Forest Council is due to offer people who pay for their own support a referral to a selected organisation that provides advice and guidance to people funding their own care.

Printed guides

- [Wise Guide - Independent Age](#)

Wise Guides are short A5 books of 70-100 pages providing information in a friendly and accessible form.

Remodelling services

- [Remodelling information - Norfolk Integrated Health and Social Care Commissioning Team](#)

A re-modelled information, advice and advocacy (IAA) service for specific groups, developed in consultation with those groups and in a rural area.

Carers

- [Carers Wellcheck - Worcestershire County Council](#)

A 'Carers Wellcheck' is now carried out prior to the statutory Carers Assessment.

Interesting practice examples from six councils on improving the provision of information, advice and brokerage under the Care Act

Added: 25/09/2014

During 2013 TLAP carried out a study to find out how local authorities were meeting the new duty under the Care Act and associated Guidance to improve the provision of information, advice and brokerage to people who use social care services and their carers.

From the original sample of [31 local authorities](#) which took part in the study, six volunteered for closer observation of their work. Local authorities representing Barnet, Cornwall, Derbyshire, Lancashire, Stockport and West Sussex were specifically chosen in order to showcase a range of council types in different parts of

the country which are carrying out innovative work - "interesting practice" in meeting this new duty.

The study involved the gathering of evidence including performance information and customer feedback, and interviews with commissioners, providers, "customers" and other stakeholders at each site. It aimed to capture learning, to highlight interesting practice and to explore these councils' plans for 2014/15.

Please note a summary of Barnet's work can be found in Gearing up for change - part 2 of the suite of three reports which accompany the case studies and are not itemised here.

Documents

CABINET MEETING: 21 JANUARY 2016

ANNUAL REVIEW OF COUNCIL'S VOLUNTARY REDUNDANCY SCHEME

REPORT OF CORPORATE DIRECTOR RESOURCES

AGENDA ITEM: 3

**PORTFOLIO: CORPORATE SERVICES AND PERFORMANCE
COUNCILLOR GRAHAM HINCHEY)**

Reason for this Report

1. Following the last review of the Voluntary Redundancy Scheme (agreed by Cabinet in January 2015 for implementation from April 2015), there was also a commitment made to undertake an annual review of the arrangements. This report confirms the outcome of that review.

Background

2. The January 2015 review resulted in the maximum number of weeks payable reducing from 66 (which is in effect 3 x the statutory scheme) to 45 weeks (1.5 x statutory scheme). Cabinet agreed that the weekly pay used for calculation purposes should remain as that set out in statutory redundancy legislation, increased each April by the Department for Business, Innovation and Skills. Maintaining this link will ensure that costs of redundancies can be budgeted for as the weekly pay cannot exceed this figure. Weekly pay for calculation purposes is currently capped at £475 per week and this may be subject to a slight annual increase from April 2016.
3. Comparisons with other Welsh Local authority schemes were made at that time and this change was broadly comparable to a number of other Councils. The scheme changes, effective from April 2015, resulted in the maximum payment available being reduced from £30,000 to £21,000.
4. Two other changes were made as part of that review. This included (i) a stop on the routine use of Settlement Agreements and (ii) preventing those who took Voluntary Redundancy from returning to work for the Council in any capacity for 12 months from date of leaving.

5. Reference to a further review of the Voluntary Redundancy Scheme was included both within the Budget Strategy Report, considered by Cabinet in July 2015 and the Budget Consultation Report, considered by Cabinet on 10 December 2015. Due to the ongoing and difficult budgetary position, the need for certainty in costs of scheme application continues to be a key consideration and hence the need for an annual review.

Issues

6. The numbers of agreed Voluntary Redundancies over the last few years are shown below:

	Council	Schools	Total
	Voluntary Redundancy	Voluntary Redundancy	Total VR
2011/12	150	36	186
2012/13	158	38	196
2013/14	374	54	428
2014/15	481	128	609
2015/16 (Apr-Nov)	77	27	104

7. Although the number of Voluntary Redundancies has increased over the last 2 years, with a peak of 609 for 2014/15, the data for the current year is showing a slow down in numbers. In the period April - November 2015, 104 Voluntary Redundancies have been agreed. This compares to 309 for the same period in 2014, which is equivalent to a reduction of 66%. This could be due to a number of factors including the reduction in the scheme from April 2015 being seen as unattractive and therefore smaller numbers of volunteers coming forward at the time.
8. A detailed review of the schemes operating elsewhere in comparison to the Council's scheme has been carried out over the last few months. Whilst there are some variations e.g. a small number of authorities have in place a scheme which now differentiates between under 55s and over 55s who could have access to their pension, the Council's current scheme remains broadly comparable to that which operates across Welsh local authorities.
9. It will be important that the scheme continues to attract sufficient numbers of volunteers - less employees coming forward on a voluntary basis will lead to more compulsory processes and the challenges that presents.
10. Consequently, following the conclusion of this specific annual review, it has been proposed that the scheme should not be amended for the time being. Therefore the provisions of the current Voluntary Redundancy Scheme should remain in place until such time as the scheme is

changed in the future. A further annual review of the current Council scheme will be programmed for early 2017.

Reason for Recommendation

11. It is good practise to periodically review the Voluntary Redundancy scheme in order to assess continued fitness for purpose and comparability with others' schemes .The recommendation not to change the scheme's provisions at this time has been made following the most recent review, the continued broad comparability with other schemes and the need for the scheme to remain sufficiently attractive for volunteers to come forward.

Financial Implications

12. There are no financial implications arising from this report with no changes proposed in relation to the Council's current voluntary redundancy scheme.

Legal Implications

13. The Local Government (Early Termination of Employment) (Discretionary Compensation) (England and Wales) Regulations 2006 allow the Council to pay discretionary compensation which is additional to a statutory redundancy payment.
14. Under the Regulations the Council must formulate, publish, and keep under review the policy that it applies in the exercise of its discretionary power. If the Council decides to change its policy it must publish a statement of the amended policy and may not give effect to any policy change until one month after the date of publication.
15. Although enhanced payments are discretionary and not contractual adequate consultation on changes in policy should be carried out with the trade unions.
16. In formulating and reviewing its policy the Council must also, under the Regulations:
 - Have regard to the extent to which the exercise of its discretionary powers (in accordance with the policy), unless properly limited, could lead to a serious loss of confidence in the public service; and
 - Be satisfied that the policy is workable, affordable and reasonable having regard to the foreseeable costs

HR Implications

17. It will be important to have in place a scheme which continues to attract volunteers coming forward who wish to leave. Whilst the numbers volunteering has fallen in comparison to the same period last year, any further reduction in the scheme could have an adverse affect on the

numbers coming forward. This could in turn lead to more compulsory processes and the inevitable challenges that brings.

Trade Union Comments

18. The views of the Trade Unions have been sought in relation to any proposed changes to the current scheme. All the Trade Unions stated their clear resistance to any proposed changes, pointing out the implications this would have if fewer and fewer staff came forward, expressing a wish to leave on the grounds of Voluntary Redundancy. They all requested that the scheme as it stands should remain in place unchanged.

RECOMMENDATIONS

Cabinet is recommended to agree:

- (1) To retain the current Voluntary Redundancy Scheme and that it will continue to apply to both voluntary and compulsory redundancies.
- (2) that the Voluntary Redundancy scheme be subject to annual reviews.

CHRISTINE SALTER
Corporate Director
15 January 2016

The following Background Papers have been taken into account :

Review of Council's Voluntary Redundancy Scheme: Cabinet 29 January 2015.

**CITY OF CARDIFF COUNCIL
CYNGOR DINAS CAERDYDD**

CABINET MEETING: 21 JANUARY 2016

**REVIEW OF THE COUNCIL'S DISCIPLINARY POLICY AND
ASSOCIATED POLICIES & PROCEDURES**

REPORT OF CORPORATE DIRECTOR RESOURCES

AGENDA ITEM: 4

**PORTFOLIO: CORPORATE SERVICES AND PERFORMANCE
(COUNCILLOR GRAHAM HINCHEY)**

Reason for this Report

1. In response to recommendations in March 2015 from an internal review of Council workplace investigations, the current Disciplinary Policy and associated procedures have been subject to a detailed review involving key stakeholder groups, with a view to streamlining the current procedure, improve efficiencies and building in more standardised processes.

Background

2. The Council sets standards of performance and conduct for its employees that are reinforced by its rules and regulations and procedures, which help the Council comply with the law and be fair and consistent. The main aim of the Disciplinary Policy should be to improve an employee's performance or correct their behaviour, and not punish them. Grievance procedures are used by employees when they wish to raise problems or issues concerning their employment with the Council. Workplace investigations, as part of Grievance or Disciplinary procedures are designed to support effective management by enabling quick, cost-effective resolution of problems in the workplace. The last full review of Discipline & Grievance Policies took place in April 2010.
3. As part of the independent review of workplace investigations referred to above, between October and December 2014 a range of stakeholders from Directorates and Trade Unions examined some of the known issues in the current system:-
 - Many potential disciplinary or grievance issues can, and should be, resolved at an early stage, as that is normally less time consuming and damaging to working relationships. It was not obvious that early resolution was happening and evidence suggested that a large number of investigations were taking place. At that time for example,

the Environment Directorate had 60 employees under investigation in the 18 month study period.

- Disciplinary Investigations and Hearings are undertaken in addition to the “day job” for staff. There is currently no training programme available on how to undertake an Investigation or Chair a Hearing, nor any coaching or mentorship scheme.
 - A number of employees have been suspended from duty on full pay for long periods of time. There was little evidence of adequate review of suspensions to ensure continued appropriateness and limited monitoring data provided.
 - Some investigations are taking too long to conclude. Too many investigations have either no disciplinary action or a poor outcome. Evidence also suggests that sickness absence levels are higher amongst people who are undergoing investigations.
 - The Disciplinary policy is too long, is not user- friendly and is a mixture of policy and guidance. The current policy is an amalgamation of other policies that were previously separate. Whilst it is important to keep all aspects of the disciplinary procedures and processes together in one policy, the incorporation of separate policies has resulted in a document that is too long.
 - Roles are inadequately defined in the current policy. There is a lack of description and awareness of individuals’ roles in disciplinary investigations which contributes to unnecessary delays or functions/tasks not happening.
 - The investigatory process needs improvement. Investigating Officer reports vary in quality. As evidenced by examples of poor reports at Hearings, Directors are not robustly applying a degree of standard setting at the stage when the decision to proceed to a hearing takes place.
 - Clearer guidance is needed to enable managers and Investigatory Officers to more effectively manage sickness absences (including those who are suspended) which could be associated with a disciplinary investigation.
4. The outcome of the review resulted in a series of recommendations relating to changes to disciplinary policy, changes to other related policies and procedures, and changes to guidance, training and communication. These recommendations then informed the more recent review of the various policies, procedures and processes which commenced in the summer. A formal consultation process seeking views on the proposals for change from Directorate representatives, Trade Unions and Equality Networks commenced in September 2015 and has now concluded. The opportunity was also taken to ensure that the proposed revisions aligned with the advice provided in the new ACAS

guidance on Conducting Workplace Investigations, published in November 2015.

5. A summary of the key changes proposed and agreed is outlined below:
 - The current corporate Disciplinary Policy has been reduced in length by extracting the guidance information from it.
 - A series of 6 new comprehensive guidance documents for Hearing Chairs, Investigating Officers, Presenting Officers, Managers, Employees and Witnesses have been produced to supplement the policy, ensure more consistent approach /consistent advice, and better support those involved with investigations.
 - Timescales have been revised regarding key decisions during an investigation.
 - Introduction of standardised preliminary assessment, to enable robust decision making regarding the appropriate course of action e.g. informal or formal procedure.
 - Introduction of a new formal Fast Track disciplinary procedure available for misconduct issues.
 - Introduction of a standardised format for suspension from duty, which evidences that all alternatives to suspension have been considered. Authority level to authorise suspension changed to Operational Manager.
 - Requirement to report and review a suspension, and the progress of an investigation every 4 weeks.
 - Hearings to be undertaken in accordance with a new code of conduct and confidentiality.
 - Agreed the principle of setting up a Disciplinary Investigation team within the Council to deal with those investigations which are more complex/involve potential gross misconduct, police/safeguarding concerns. Whilst the details of this will need to be further developed, this will be a virtual team, comprising of Directorate nominated staff who would receive additional specialist training.
6. In addition to reviewing policies and developing new guidance material, the opportunity is being taken to ensure that robust monitoring data is captured and reported to enable compliance to be monitored. Such data will be available for Directorate Management Teams and reported at Senior Management Team level and will also be reported into key Trade Union meetings e.g. SAJCs.
7. Additionally, the 2014 review of workplace investigations highlighted a higher number of disciplinary cases compared to grievances which is indicative of a culture of formal, rather than early, resolution of

disciplinary issues. As a result, the existing Grievance and Bullying & Harassment policies will be replaced with a more progressive “Resolution Policy” to support the cultural change that is required.

8. This new policy has an increased emphasis on early resolution of matters, with managers up-skilled, and Trade Unions involved collaboratively in order to resolve issues at an earlier stage, through a range of resolution methods such as additional training, support, coaching, advice, counselling and mediation.
9. The new Internal Mediation service (within HR People Services) has been expanded, and provisions of the service are detailed in the new Resolution policy. Mediation, whilst voluntary, can be used to prevent escalation to a formal procedure, as well as “repair” damaged relationships within a team after an investigation has concluded.

Issues

10. The vast majority of the proposed revisions have been agreed as part of the consultation. However a number of pinch points emerged in relation to the Disciplinary Policy and associated guidance, where different views were expressed by Directorates and Trade Unions, and relate to the following issues:
 - Role of HR People Services during the investigatory process and at Disciplinary Hearings
 - Use of Expired Warnings in Investigatory Reports and at hearings
 - Extensions to Current Warning Periods
 - Proposed Maximum Timescales for Investigations
 - Consequences for Non Compliance with Policy Timescales
 - Operation of new fast track procedure when a more serious issue emerges

There were no opposing views expressed by Directorate representatives or Trade Unions in relation to the new Resolution Policy

11. All these matters were referred to the Senior Management Team for consideration. Recommendations were made by the Senior Management Team in relation to use of expired warnings, extensions to current warning periods, non-compliance with timescales and proposed maximum timescales for completion of investigations and were accepted by the Trade Unions and therefore reflected in the revised policies and guidance.
12. Following some final operational changes to the new Fast Track process, there remained a final outstanding issue in relation to the role of HR People Services officers at the deliberation stage with the Chair of disciplinary hearings and appeals, which prompted further debate at both the Senior Management Team and amongst the Trade Unions.
13. The changes to policy already agreed as part of the consultation included:

- During the Hearing, HR People Services officers only answer questions on points of clarification on policy and procedure. They can provide procedural advice, but not express opinions on the merits of the case, the people involved or the evidence.
 - Hearing Chairs will be required to evidence how they reached their decision making by completing the 11 key questions on a grid
 - HR People Services officers' advice will be available in writing within the minuted record of the deliberations.
 - Hearing Chairs will be required to attend mandatory training, which will include guidance on deliberations & decision making.
 - New /Inexperienced Chairs can also attend an alternate Hearing in the role of "Observer"
 - Briefing & training for HR People Services officers on HR role in disciplinary process following case law judgements.
14. Following further discussion and through a partnership approach with the Trade Unions, the final position reached is that for a 12 month period, the Council will pilot that the HR Advisor will not be present with the Chair at the Hearing or Appeal when he/she is deliberating the facts and reaching a decision. If further HR advice is required, the Chair will call all parties to be present whilst the advice is given. (This is a similar practice to the policy in Schools).
- 15 In order that the pilot of this specific change is transparent, it has been further agreed that there will be mandatory training for key roles within this process e.g. Chairs, Investigating Officers, ongoing monitoring throughout the period, an interim review at 6 months and a full review in the light of operational experience after 12 months of implementation. Whilst all areas of the new arrangements applying from 1 April 2016 will be reviewed following 6 and 12 months of operational experience, a particular focus on this pilot area will be necessary.
- 16 To support this specific area of review, a framework for evaluation has been agreed against which the 6 month interim and 12 month full reviews will be measured. To include:-
- A minuted record of what the HRPS advice has been during the Hearing
 - Quantitative data on outcomes of Hearings/numbers of Appeals lodged/ reasons for overturn/Employment Tribunals
 - Number of Early Conciliation cases logged with ACAS
 - Comparison of pre implementation period outcomes
 - Qualitative survey to Hearing Chairs, HRPS Officer, Investigating Officer, Companions after the Hearings
 - Audit viewpoint in Fraud/Financial impropriety
 - Viewpoint in Child protection cases

Conclusion

17. The revised Disciplinary Policy is attached as Appendix A and the new Resolution Policy as Appendix B.

18. The 6 Guidance documents provide information relating to all the roles involved in the process and the requirements therein i.e. the manager of the employee under investigation, the employee themselves, the nominated investigating officer, the presenting officer who will present the case should matters proceed to a Disciplinary hearing, the officer who will be the hearing chair and any witnesses required through the process. .
19. As the changes agreed will represent a major cultural shift in how conduct issues will be addressed in the future, it will be important that sufficient preparations in relation to the briefing of managers, development of training programmes and system reconfigurations are put in place to ensure a smooth transition from the current to the revised arrangements can take place. It is therefore proposed that the new policies and procedures will take effect from 1 April 2016.

Policy Performance and Review Scrutiny Committee

20. In addition to Directorates, Trade Unions and Equality Networks, input into the proposals was also sought from Policy Review Performance Scrutiny Committee on 3rd November 2015. The principles of simplifying policies for the management of employees were welcomed and the changes proposed to the Discipline Policy (particularly the introduction of a new Fast Track approach as a speedier avenue to modify behaviour around misconduct issues), the development of new Guidance notes and the new Resolution Policy to assist in streamlining the process, were all well received.
21. The provision of relevant and key management information to monitor compliance was also welcomed in order to ensure that the number and length of some of the suspensions, and the time being taken to conclude current disciplinary and grievance issues is reduced in future. The letter from the Chair of the Scrutiny Committee together with the response from the Cabinet Member are attached at Appendix C

Implications for School Based Employees

22. The Welsh Government's statutory guidance for schools set out in Circular 0002/2013: Disciplinary and Dismissal Procedures for School Staff contains a model Disciplinary Policy. This model policy forms the basis of the Disciplinary Policy and Procedure which has been developed and consulted on across the Central South Consortium region and formally commended to school governing bodies. Whilst representatives from the NUT and NASUWT have been fully involved in the review of the Council policies, any further review of the school policies will be undertaken on a cross consortium basis. It is proposed that once approved by Cabinet, the revised Council policies, procedures and guidance can be used in the forthcoming school policy review.

Reason for Recommendations

23. Based on recommendations arising from an internal review of workplace investigations within the Council, the current Disciplinary Policy and associated procedures have been subject to a detailed review in order to facilitate a culture change towards how conduct issues will be addressed in the future by streamlining the current procedure, improve efficiencies and building in more standardised processes.

Financial Implications

24. The implementation of the revised policy and associated arrangements will be met from within existing resources. This includes the setting up of a Disciplinary Investigation Team which will be developed as a virtual team comprising nominated staff from directorates who are able to undertake investigations. In addition, the expansion of the internal Mediation Service within HR People Services will also be managed within existing resources as will any reconfiguration of systems and training requirements.

Legal Implications

25. Employment policy is a matter for Cabinet under the Local Authorities (Executive Arrangements) (Functions and Responsibilities) (Wales) Regulations 2007.11. From time to time, the Council's Employment Policies will be tested in the Employment Tribunal. Generally speaking there should not be a problem with a Policy in itself if it is fair, reasonable and complies with ACAS Codes and Guidelines. It is considered that the draft revised Discipline and new draft Resolution Policies meet this requirement.
26. The way in which the Council's policies are applied must also be reasonable. Employment policies can never cater for all of the infinitely variable sets of circumstances that arise in individual cases.
27. Thought must always be given to the detail of the case in question in deciding whether to apply the policy. Policy documents and guidance are vitally necessary for good and consistent management across the board and this is a significant consideration in Employment Tribunal proceedings. The new comprehensive Guidance documents will provide reassurance in this matter. Any departure from a policy should be only on an exceptional basis.

HR Implications

28. A fully inclusive consultation process has now concluded, involving key stakeholder groups such as Directorate representatives, Trade Unions and Equality Networks. The agreed changes will provide more positive and transparent management of workplace investigations, help streamline the process by introduction of new Fast Track Procedure and better support all those involved in the process by increasing availability of guidance, training and support. The new Resolution Policy is seeking

to change the culture from grievance to early resolution with key roles in this for managers, employees and Trade Unions.

29. A number of key areas have emerged from this review, which include the need for clearer roles and accountabilities for all those involved in this process, including HR People Services officers. The new guidance will assist this, alongside a range of Learning and Development initiatives which will be developed and put in place.
30. The proposals have been subject to an Equality Impact Assessment.

Trade Union Comments

31. The Trade Unions have fully participated in this comprehensive review and have reiterated importance of transparency in the process. They are keen that the new arrangements which would apply from 1 April 2016 take into account learning from previous experiences, and support the need for culture change across the Council in relation to how disciplinary matters are addressed in the future.

RECOMMENDATIONS

Cabinet is recommended to:

1. Approve the revised Disciplinary Policy (Appendix A), the new Resolution Policy (Appendix B) and the 6 new Guidance documents to support those involved in various aspects of the process, .
2. Agree that the revised arrangements to be implemented from 1 April 2016.
3. Note that there will be ongoing monitoring of the implementation of the revised arrangements
4. Agree that the new arrangements (particularly those referenced under paragraph 14) will be subject to an initial review after 6 months with a full review following 12 months of operational experience.
5. Agree that training be mandatory for those involved in this process e.g. Chairs, Investigating Officers
6. Agree that the revised Council policies, procedures and guidance can be used in the forthcoming schools policy review as part of the Consortium arrangements.

CHRISTINE SALTER

Corporate Director
15 January 2016

The following appendices are attached:

- Appendix A- Revised Disciplinary Policy
- Appendix B- New Resolution Policy (to replace the existing Grievance and Bullying & Harassment policies and procedures)
- Appendix C- Letter from Chair of Policy Review & Performance Scrutiny Committee and Response from Cabinet Member

All 6 Guidance Notes are available on request:

- Guidance for Investigating Officers
- Guidance for Presenting Officers
- Guidance for Managers
- Guidance for Witnesses
- Guidance for Hearing Chairs
- Guidance for Employees

The following Background papers have been taken into account

- Review of Workplace Investigations in Cardiff Council by Chris Synan, March 2015 –Full Report and Executive Summary
- Response from Chair of Policy Review & Performance Scrutiny Committee: 03 November 2015 on Review of Disciplinary Policy
- Equality Impact Assessment
- ACAS Guidance on Conducting Workplace Investigations, published November 2015

SECTION 1 - INTRODUCTION

Policy Statement

- 1.1 Disciplinary rules are necessary for the efficient and safe performance of work, and for the maintenance of good order and relations between the Council and its employees. This is essential to enable the Council to deliver quality services to the citizens of Cardiff.
- 1.2 An employee who breaches a particular disciplinary rule will be liable to Disciplinary action under the Council's Disciplinary Policy and Procedures. It is therefore essential that employees observe and abide by the Council's rules, regulations and standards.
- 1.3 This Disciplinary Policy and its related procedures and guidance notes sets out the actions that will be taken when those rules, regulations and standards are breached or where, other than related to capability, job performance does not reach an acceptable level.
- 1.4 This policy and procedures reflect, and are consistent with, the ACAS Code of Practice on Discipline and Grievance Procedures (2015).

Aims and Objectives

The aims of this policy are to:

- 1.5 Ensure the consistent and fair approach to the application of the Council's rules, regulations and standards for all within the Council. No formal disciplinary action will be taken against an employee without some investigation or assessment to establish the facts.
- 1.6 Primarily help, encourage and support employees to improve their behaviour and conduct, rather than just a way of determining or imposing sanctions.
- 1.7 Ensure that managers, employees and their representatives are aware of their rights, responsibilities and obligations within the disciplinary process.

Scope of the Policy

- 1.8 The Policy applies to **all** current employees (not ex- employees) of the Council with the exception of its schools based employees. The principles will apply to temporary employees including those staff employed through Cardiff Works.

- 1.9 The policy does not apply to agency workers, volunteers or those engaged by the Council on contracts for service. However, where an allegation is made against an individual engaged on a contract for service, the principles of the policy and procedures will be adhered to and, following investigation, appropriate action will be taken. If an issue arises with an agency worker, the matter will be referred to that worker's agency, as they are the employer. A volunteer does not have a contract of employment, therefore their involvement with the Council will be discontinued.
- 1.10 If disciplinary action is being considered against a Trade Union official, the appropriate local Branch Secretary should be notified. If the local Branch Secretary is the subject of potential disciplinary action, then the Full Time Trade Union Officer must be notified. Advice must be sought and obtained from the Chief HR People Services Officer and Legal services, before a Trade Union official or Branch Secretary can be disciplined.

Awareness

- 1.11 All employees should be aware of standards of conduct and performance expected of them by the Council and any recognised professional code of conduct relevant to their role.
- 1.12 This Policy and its related procedures and guidance notes will be drawn to the attention of all employees. Those who have a responsibility to maintain discipline will be given training, and support as required. It is vital that all involved adhere to all aspects of this policy to limit the potential risk of a legal challenge through an Employment Tribunal.

Key Principles

- 1.13 Advice and guidance on the operation of this policy must be obtained from HR People Services before formal disciplinary action is taken against any employee. In the event of a dispute relating to the interpretation of the policy and/ or procedures, HR People Services will make the final decision on interpretation.
- 1.14 As a general principle, the implementation of the investigation and disciplinary process will be confined to the Service Area. A case that appears to be particularly complex or sensitive, may be referred to Cardiff Council Disciplinary Investigation Service (Appendix 3) or to Internal Audit where there are matters of fraud/financial impropriety.
- 1.15 The employee will be advised of the nature of the allegation(s) and given the opportunity to respond to them. In exceptional cases, this may not happen, e.g. Protection of Vulnerable Adults (POVA) and Protection of Children, where separate statutory processes exist.

- 1.16 At all stages of the Disciplinary Procedures, including the informal procedure, the employee will be given the opportunity to be represented by a companion. A companion is defined as an employee of the Council, a trade union representative or an official employed by a trade union in accordance with the ACAS Code of Guidance.
- 1.17 A professional employee facing disciplinary proceedings will not normally be entitled to legal representation at a Disciplinary Hearing, unless the internal proceedings create a legal barrier to working in their chosen profession. Where the issue of an employee's future ability to work in their profession is determined by an independent third party (for example Care Council Wales, Education Workforce Council) then the request for legal representation will not normally be agreed. This is because an internal disciplinary hearing is not normally regarded as determining an employee's civil rights, even if it results in dismissal. Any request to have legal representation at the Disciplinary Hearing will be considered on an exceptional basis only.
- 1.18 An allegation of a disciplinary offence must be dealt with at the time it occurs. It is unfair to stockpile them to deliberately impose a more serious disciplinary sanction on the employee concerned. However there may be occasions where, in order to establish whether an offence has been committed, there could be a period of monitoring employees, sanctioned by Internal Audit. If after that period of monitoring it is decided that a disciplinary offence has been committed, then it will not be regarded as stockpiling.
- 1.19 The policy sets out a series of outcomes that reflect either the progressive levels of disciplinary action having regard to previous action taken, or the seriousness of the allegations which are being considered. Prior to any disciplinary decision being taken, any mitigating factors and/ or circumstances must be taken into account.
- 1.20 No employee will be dismissed for a first breach of discipline except where the breach constitutes gross misconduct. In circumstances where previous disciplinary sanctions have been applied and remain "current" then this may also lead to dismissal. Reference to expired warnings may not be made.
- 1.21 Warnings, issued in accordance with this procedure, shall be time limited and will be disregarded for disciplinary purposes after a specified period of satisfactory conduct has been achieved. The effective date of the warning/dismissal is when the employee is likely to receive the written communication (date of the letter +3 days).
- 1.22 Employees have the right to appeal against any formal disciplinary action taken against them.

- 1.23 Where an employee raises a concern (formerly known as a grievance), during a disciplinary process, the disciplinary process may be temporarily suspended in order to deal with the concern. Where the concern and disciplinary cases are related it may be appropriate to deal with both issues concurrently. Where such matters arise, a decision taken by the Service Area Manager will be communicated to those involved, following advice from HR People Services. If the disciplinary case is a matter of fraud, bribery or financial impropriety then the decision will be taken by the Audit manager.
- 1.24 In accordance with ACAS guidance, and with the agreement of all involved, the disciplinary procedure and other concerns that require resolution can be suspended if mediation is deemed to be an appropriate method of resolving the dispute.

SECTION 2 - ROLES and RESPONSIBILITIES

2.1 It is important that everyone clearly understands their roles and responsibilities within the Disciplinary procedure.

Employee Responsibilities

2.2 All Council employees are responsible for:

- Ensuring that their behaviour complies with the Council's Code of Conduct and any Service Area/ external Codes of Conduct/ Practice that govern the profession in which they are engaged.
- Ensuring they understand and comply with this policy and fully cooperate with the requirements of the procedures when they are in operation.
- Maintaining confidentiality at all times during any disciplinary proceedings, with the exception of any conversations which may be necessary with their companion.
- Behaving and acting in a way that is consistent with the Council's values of openness, fairness and working together with others, as defined by the Employee Charter.
- Participating in hearings (where applicable) in accordance with the key principles of confidentiality and code of conduct, to enable the hearing to be conducted in a consistent and robust manner in the spirit of natural justice.

Manager Responsibilities

2.3 In addition to their responsibilities as employees, Managers are also responsible for:

- Ensuring employees are aware of all relevant policies and procedures.
- Applying the Council's Disciplinary policy and procedures fairly, consistently and in a timely way.
- Seeking advice from HR People Services on all matters relating to conduct and discipline.
- Keeping adequate notes and records of all events and evidence to support the use of the policy.
- Undertaking a preliminary assessment of the likely level of seriousness of any allegation of misconduct.
- Ensuring that if the allegation is in relation to Fraud/Financial impropriety, a referral is made to Internal Audit
- Ensuring that where an issue is identified that relates to the Protection of Vulnerable Adults (POVA) or Protection of Children, a

referral is made to the POVA team or Childrens Access Point respectively.

- Determine whether an informal or formal disciplinary procedure is the most appropriate course of action, including a Fast Track procedure.

Investigating Officer Responsibilities

2.4 In addition to their responsibilities as employees, Investigating Officers are also responsible for:

- Conducting an appropriate investigation, reviewing progress updating the Head of Service and employee, and preparing the investigation report with recommendations.
- Ensuring that the allegation is correctly recorded in all despatched letters.
- Arranging any meetings and support required as part of the procedure, e.g. securing dates, despatching letters, inviting people to investigatory interviews and organising administrative support to make a record of the interviews.
- Ensuring HR People Services are invited to attend all formal meetings and that employees are aware of their right to representation at these meetings.
- Providing a 4 weekly review on progress of the investigation to the Chief Officer/ Director/ Assistant Director or nominated officer
- Where appropriate, providing a 4 weekly review on the suspension decision (in conjunction with the suspending manager) with recommendations to the Chief Officer/ Director/ Assistant Director or nominated officer
- Participating in hearings in accordance with the key principles of confidentiality and code of conduct, to enable the hearing to be conducted in a consistent and robust manner in the spirit of natural justice.

HR People Services Responsibilities

2.5 In addition to their responsibilities as employees, HR People Service Officers are responsible for:-

- Acting as advisor to all involved at all stages of the policy and procedures, and to ensure that the Council's Disciplinary Policy and Procedures are correctly applied.
- Providing all employees with information and advice as necessary throughout the process.
- Attending all formal meetings associated with the process.

- Answering questions on points of clarification of policy and procedure at interviews and hearings.
- Monitoring that the Chair's recommendations are actioned within Directorates, and support Service Areas to undertake any remedial action that may be necessary.
- Reviewing and monitoring disciplinary cases and outcomes.
- Reviewing and collating corporate monitoring data in relation to discipline for consideration by various groups, e.g. Senior Management Team, Works Council, etc.
- Reviewing the application of the policy and procedures in the light of operational experience.
- Participating in hearings in accordance with the key principles of confidentiality and code of conduct, to enable the hearing to be conducted in a consistent and robust manner in the spirit of natural justice.

Hearing Chair Responsibilities

2.6 In addition to their responsibilities as employees, Hearing Chairs are responsible for:

- Ensuring that the Disciplinary hearing is conducted in accordance with the key principles of confidentiality and code of conduct.
- Ensuring that the employee is fully informed of the circumstances and understands the allegations made against them.
- Ensuring that the employee is fully informed of their right of representation.
- Authorising attendance, where requested, of additional people at the hearing in the roles of Observer and/ or Assistant, with consent of the employee concerned.
- Considering all the evidence regarding the allegation(s) and make a decision whether, on the balance of probabilities, it is substantiated, taking into account any mitigating circumstances
- Evidencing and recording their decision making.
- Ensuring consistency of decision making
- Ensuring that where appropriate, recommendations for specific actions are communicated to the relevant Directorate.
- Participating in hearings in accordance with the key principles of confidentiality and code of conduct, to enable the hearing to be conducted in a consistent and robust manner in the spirit of natural justice.

Chief Officer/ Director/ Assistant Director Responsibilities

2.7 In addition to their responsibilities as employees, Chief Officers/ Directors/ Assistant Directors are responsible for:

- Nominating an appropriately trained and competent Investigating Officer within **7 calendar days**, if proceeding to a formal investigation.
- Undertaking an initial assessment (or their nominated representative) in relation to conduct which appears to amount to a criminal offence.
- Convening and chairing a meeting of a Police Referral Panel.
- Following receipt of the Investigating Officer's report, making a determination whether to instigate disciplinary proceedings against the employee concerned.
- Chairing a Hearing/Appeal and make appropriate disciplinary decisions where the employee is at an Operational Manager level.
- Monitoring and reporting on Disciplinary Investigations (including suspensions and associated sickness absence) within their Directorate.

Trade Union Representative Responsibilities

2.8 In addition to their responsibilities as employees, Trade Union Representatives are responsible for:

- Providing advice, support and representation to their members.
- Working with managers, HR People services and employees to ensure that the Disciplinary policy is adhered to.
- Working with all involved to facilitate timely and early resolution to matters.
- Attending interviews and hearings, and if unable to attend, suggest a suitable alternative date or a replacement Representative.
- Participating in hearings in accordance with the key principles of confidentiality and code of conduct, to enable the hearing to be conducted in a consistent and robust manner in the spirit of natural justice.

Suspension Contact Officer Responsibilities

2.9 In addition to their responsibilities as employees, Suspension Contact Officers are responsible for:

- Identifying and collecting any personal possessions left in the workplace to return to the employee. They must not include any items that could be considered pieces of evidence in the forthcoming investigation, such as work records or documents, which should be secured by the manager.

- Updating the employee on team news, providing minutes of meetings and Core Brief.

Presenting Officer Responsibilities

2.10 In addition to their responsibilities as employees, Presenting Officers are responsible for:

- Making all the practical arrangements for the Hearing e.g. date, venue, minute taker.
- Preparing for the Hearing and ensuring the “Disciplinary Pack” is circulated to the Hearing Chair, the Employee under Investigation & their Companion and the HR People Services representative in advance of the Disciplinary Hearing
- Presenting the case using documentary evidence where available and calling witnesses, or referring to witness statements as necessary. One of the witnesses called should be the Investigating Officer.
- Answering any questions asked by the Chair, the Employee or their Companion.
- Questioning the employee’s case as appropriate.
- Summing up the Management’s case highlighting the salient points.

SECTION 3 – PRELIMINARY ASSESSMENT PROCEDURE

- 3.1 Following an incident or where misconduct has allegedly occurred, the manager must make a preliminary assessment to determine, based on the information available at the time, the likely level of seriousness.
- 3.2 The initial assessment will consist of gathering preliminary pieces of information, and may involve discussion with individuals concerned (*Refer to Disciplinary Procedure: A Manager's Guide*).
- 3.3 The manager will then determine one of the following outcomes:-
- a. No case to answer- there is no evidence to support the allegation.
 - b. Informal Procedure- due to the minor nature of the misconduct, actions are appropriate which may include written instruction/ advice/ training/ counselling/ coaching/ mentoring/ mediation etc. Actions must be recorded in DigiGov. (Refer to Cardiff Council Resolution Policy)
 - c. Formal procedure- A Fast Track disciplinary process may be considered appropriate.
 - d. A formal disciplinary investigation will be required.
- 3.4 Where the manager considers that a formal investigation is appropriate, they must advise their Chief Officer/ Director/ Assistant Director, who should make a decision within **7 calendar days**.
- 3.5 Where the Chief Officer/ Director/ Assistant Director/Operational Manager considers that the employee may have committed an act(s) of gross misconduct or there is some other reason why suspension would be necessary, the suspension procedure must be considered (Section 6).

SECTION 4 – INFORMAL DISCIPLINARY PROCEDURE

- 4.1 Where appropriate, problems involving misconduct and poor performance should be addressed at least initially through an informal process. The manager must make every effort to try and resolve the difficulties with the employee concerned through the use of advice, providing clarification on roles and responsibilities and work instructions with the objective of encouraging and supporting employees to improve. (*Refer to Disciplinary Procedure: A Manager's Guide*)
- 4.2 Managers should refer to the Resolution policy, and advice can be sought from HR People Services to support them in dealing with such issues. Mediation may be an option for early resolution to address a range of issues, including relationship breakdowns or personality clashes and so preventing issues escalating unnecessarily. Mediation support can be requested via HR People Services.
- 4.3 It is important that managers deal with issues informally as they occur, to avoid stockpiling, or problems being escalated to more serious stages. A record of discussion of the outcome of the verbal or written instruction to improve must be retained on the employee's DigiGov file and, where possible, the record of discussion should be agreed and signed by all involved.
- 4.4 Employees must understand that the formal disciplinary procedure will be instigated should they fail to meet a reasonable standard of conduct despite the fact that informal discussions have taken place, or where misconduct is sufficiently serious as to merit immediate consideration under the procedure.

SECTION 5 – FAST TRACK DISCIPLINARY PROCEDURE

- 5.1 The Fast Track Disciplinary Procedure is applicable for incidents/ misconduct which would normally result in verbal or written warning. It allows for matters to be dealt with in a timely manner.
- 5.2 It is applicable where the employee has admitted in full all allegations made against them.
- 5.3. The Fast Track Disciplinary Procedure is **not suitable** for
- a) Circumstances where there is potential gross misconduct.
 - b) Cases of repeat misconduct where the employee has already received a written warning.
 - c) Any matters that include a safeguarding issue, a Police matter or fraud / financial impropriety.
- 5.4. Where it would appear that a Fast Track Disciplinary Procedure may be applicable, the manager, HR People Services officer, the employee and their companion **must consent to a Fast Track disciplinary process in writing by completing the Fast Track consent form.**
- 5.5. This process does not require an appointment of an Investigating Officer or submission of a full investigation report. A Fast Track Decision meeting should be held as soon as possible after consent to proceed has been received from all parties. Any delay to the procedure should be for exceptional circumstances only. The Fast Track Decision meeting is the opportunity for the employee and/ or companion to put forward comments and statements including mitigating circumstances. No witnesses will be called. The outcome of the Fast Track Decision meeting must be recorded in DigiGov. The employee will have a right of appeal to the decision in the form of a review. (*Refer to Disciplinary Procedure: A Manager's Guide*).
- 5.6. It is **not acceptable** for a manager to actively seek new evidence with the sole intention of making a Fast Track Procedure ineligible.
- 5.7. Line managers may not deal with any cases in which they are implicated, and an independent manager must be appointed.

SECTION 6 - SUSPENSION PROCEDURE

Key Principles

- 6.1 There may be occasions where it may be appropriate that the employee is removed from their job or place of work whilst an investigation is conducted.
(Refer to Disciplinary Procedure: A Manager's Guide)
- 6.2 Suspension from duty is a neutral act and any removal of an employee from the workplace should be regarded initially as a precautionary measure. It is not a disciplinary sanction, does not imply that the employee has committed an act of misconduct, nor does it prejudice the outcome of any disciplinary investigation or proceedings that may arise.
- 6.3 To avoid any breach of the mutual duties of trust and confidence that exists between the employee and the Council, there must be reasonable grounds for suspension. Other than in exceptional circumstances, suspensions should not be authorised without prior consultation with HR People Services.
- 6.4 The decision to suspend should be determined as quickly as possible. There must be a preliminary examination to establish the facts before suspension is actioned and all other options must be considered before a suspension is authorised. The circumstances surrounding any decision to suspend must be fully documented using the Suspension from Duty Form.
- 6.5 Where a suspension is implemented, the employee must be treated reasonably and fairly. The matter should be treated as confidential, as far as possible, so as not to cause unjustified harm to the employee's reputation.
- 6.6 It is recognised that an employee suspended or under investigation may feel anxious and/or stressed. The employee will have the right of representation throughout this process and they should be advised of various forms of support that are available e.g. Employee Counselling service and Employee Assistance Programme.
- 6.7 The decision to suspend must always be confirmed to the employee in writing including the reasons, and why the other options are not appropriate. *(Refer to Disciplinary Procedure: A Manager's Guide)*.
- 6.8 Where a Trade Union Official is to be, or has been suspended, the appropriate Branch Secretary must be informed. If it is deemed necessary to suspend a Branch Secretary from duty, the appropriate Full Time Trade Union Official must be notified. Advice from HR People Services and Legal Services must be sought and obtained before a Trade Union Official or Branch Secretary can be suspended.

Terms and Conditions of suspension

- 6.9 The terms and conditions of the suspension will be confirmed in the “Suspension from Work” letter. Whilst suspended, the employee’s normal terms and conditions of employment will continue to apply, including rules relating to annual leave and sickness reporting.
- 6.10 All suspensions shall be based on full average earnings but, in wholly exceptional circumstances, the Council reserves the right to suspend an employee on less than full pay or with no pay at all. Such exceptional circumstances could include the physical inability of the individual concerned to report for work should the suspension be lifted (for reasons other than certified sickness). Where employees are moved to alternative duties, an average of any additional payments that they would normally receive will be payable to ensure that employees are not financially disadvantaged.
- 6.11 Suspensions shall not be time limited but there is a clear expectation that all investigations, should be carried out as quickly as possible, and in sufficient time so that any disciplinary hearing deemed necessary can be conducted within **12 weeks** of the start of the investigation, and with reasonable notice of the hearings given to the employee and their companion. An investigation may only be extended in exceptional circumstances, e.g. where the outcome of a court case is pending.

Contact and Review

- 6.12 The suspension decision will be reviewed **every 4 weeks** by the Chief Officer/ Director/ Assistant Director or nominated Officer and the employee will be updated accordingly. A suspension that is without reasonable and proper cause, or unnecessarily protracted, may amount to a breach of the implied terms and conditions, entitling the employee to resign and claim constructive unfair dismissal.
- 6.13 Contact with the suspended employee will be maintained by a specified Contact Officer, at least **every 4 weeks**, or as mutually agreed in writing, to reduce feelings of isolation. (*Refer to Disciplinary Procedure: A Manager’s Guide*).
- 6.14 The restriction to enter the workplace will only apply to the employee concerned. It will not apply to their companion. Where a suspended employee requires access to Council systems or documentation in order to prepare for their defence, they should contact HR People Services who will liaise with the relevant service area in order to obtain the information, and where appropriate arrange supervised access to the Council’s system.

Protection of Vulnerable Adults/Protection of Children

- 6.15 When an issue is identified that relates to the Protection of Vulnerable Adults (POVA), a referral should be made to the POVA team. Where the matter relates to a child protection issue, a referral should be made to the Children's Access Point following the All Wales Child Protection Procedures 2008. In both situations, matters will be dealt with in accordance with interagency protocols.
- 6.16 A multi-agency professional strategy meeting will be convened and appropriate actions agreed. Minutes of Strategy meetings can only be released with the agreement of all attendees, and all personal information relating to the service user must be blanked out to protect confidentiality. Where service users are involved, a decision will need to be taken as to whether this should take precedence over all other considerations.

Alleged Fraud/Financial Impropriety

- 6.17 Fraud is defined as any illegal act characterised by deceit, concealment or violation of trust by parties/organisations to obtain money, property or services; to avoid payment or loss of services; or to secure personal or business advantage.
- 6.18 Under the Financial Procedural Rules, Managers are required to notify Internal Audit whenever any matters arise which involve, or are thought to involve, breaches of security, theft or irregularities concerning cash, stores or other property belonging to the Council.
- 6.19 Management will determine and agree with Internal Audit who will lead the investigation i.e. Directorate or Internal Audit. (*Refer to Fraud, Bribery & Corruption Policy & Disciplinary Procedure: A Manager's Guide*).

Police Involvement in allegations against Council employees

- 6.20 The Chief Officer/ Director/ Assistant Director should make an initial assessment in relation to conduct which appears to amount to a criminal offence. The normal presumption should be to refer the matter to the Police.
- 6.21 If there is a suspicion or an allegation that a serious crime may have been committed (or is about to be committed), e.g. murder, rape, other serious sexual offences, arson, burglary, fraud, violent assault, etc. then the Chief Officer/ Director/ Assistant Director (or their nominated representative) should refer the matter to the police immediately.
- 6.22 If, however, after carrying out their initial assessment the Chief Officer/ Director/ Assistant Director (or their nominated representative) is satisfied that the conduct complained of amounts to a criminal offence,

but is of a lesser order than the activities described in the preceding paragraph, they are required to convene a meeting of a Police Referral Panel as quickly as possible to discuss the suspicion or allegation and the results of their preliminary assessment.

Police Referral Panel

- 6.23. With the exception of Child Protection and Protection of Vulnerable Adult issues (which have their own referral processes), the mechanism for referral will be via a Police Referral Panel which comprises officers from the employee's Service Area, HR People Services, Legal Services and Corporate Services (i.e. the Risk & Audit Manager where allegations concern Fraud and/ or Financial impropriety). The Panel will be **chaired** by the Service Area Chief Officer/ Director/ Assistant Director (or nominated senior representative).
- 6.24 The Police Referral Panel will meet and discuss the issues concerned to determine if the matters should be referred. If the decision is to refer the matter to the Police, the relevant Chief Officer/ Director/ Assistant Director (or their nominated representative) should contact them without delay to formally put the matter into their hands.
- 6.25 The Police Referral Panel will decide whether the employee concerned should be informed that the matter is being, or has been, referred to the Police. Advice will be sought from the Police where appropriate.
- 6.26 Having referred the matter to the Police, the Chief Officer/ Director/ Assistant Director (or their nominated representative) should initiate the Disciplinary Investigatory Procedure so that the internal investigation is conducted at the same time as the Police investigation.
- 6.27 The Police may ask for an internal disciplinary investigation to be delayed and/ or deferred pending the completion of their investigation to avoid the internal investigation interfering with their investigation. If and when such a request is received, advice and guidance must be sought from HR People Services and Legal Services.
- 6.28 Due to the length of time that some Police investigations can take, the Council reserves the right to conduct its own internal investigations and/ or to instigate disciplinary proceedings against employees who are the subject of ongoing Police investigations.
- 6.29 If the decision of the Police Referral Panel is not to refer the matter to the Police, the Chief Officer/ Director/ Assistant Director should follow the Disciplinary Investigatory Procedure in the normal way.

SECTION 7 – INVESTIGATORY PROCEDURE

Purpose

- 7.1 This procedure is to be used to ensure that when a suspicion or allegation of misconduct by an employee comes to the attention of the Council, an adequate investigation, conforming to the rules of natural justice is carried out as quickly as is reasonably practicable.
- 7.2 The purpose of the investigation is to ascertain the facts as far as is reasonably possible, enquire into the circumstances surrounding the alleged misconduct, give the employee the opportunity to offer an explanation, interview all relevant individuals, take a balanced view of the information which emerges and prepare an investigation report detailing the main findings, and making recommendations which may include, amongst others, whether or not disciplinary proceedings should be initiated.
- 7.3 The standard that applies for workplace investigations is for the Investigator to have reached a genuine belief based on reasonable grounds, on the evidence obtained and on the balance of probability, after having carried out as much investigation as was reasonable in the circumstances.

Key Principles

- 7.4 The Chief Officer/ Director/ Assistant Director must nominate an appropriately trained and competent Investigating Officer within **7 calendar days**, and assess the scope of the investigation to ensure the Investigating Officer is provided with the time / resources required to complete the task within the prescribed timescales, wherever possible. The individual appointed to conduct a disciplinary investigation must be aware of and familiar with the Council's Disciplinary Policy and Procedures.
- 7.5 All investigations must be proportionate to the concerns or allegations being considered. They should be carried out as quickly as possible, and in sufficient time so that any disciplinary hearing deemed necessary can be conducted **within 12 weeks** of the start of the investigation, and with reasonable notice of the hearings given to the employee and their companion.
- 7.6 The Service Area is responsible for making arrangements to closely monitor the progress of the investigation, **review it every 4 weeks** and either party will notify the other if a delay in the process is anticipated giving reasons. Extending the investigation beyond **12 weeks** is allowed but only in exceptional circumstances, and where there is reasonable justification. Such reasons should be communicated to all involved.

- 7.7 The Investigating Officer cannot chair any subsequent disciplinary hearing or subsequent appeal, convened as a result of their investigation. Any manager interviewed as part of the process cannot chair any subsequent hearing or appeal.
- 7.8 The Council reserves the right under the Employment Code of Practice & Data Protection Act where it is deemed appropriate to monitor employees as part of a disciplinary investigation. Any such monitoring will be done in line with the Council's Policy/ Procedures on Monitoring Employees. Before contemplating any form of monitoring it is essential that the Investigating Officer seeks advice from Internal Audit/ Monitoring Officer/Legal.
- 7.9 Individuals who have very serious concerns about any aspect of the Council's work should raise their concerns under the Whistleblowing Policy.
- 7.10 The Investigating Officer must assess all the evidence that has been collected and prepare a written report for the Chief Officer/ Director/ Assistant Director, making any recommendations as appropriate which will include whether or not the matter should proceed to a disciplinary hearing.
(Refer to *Disciplinary Procedure: An Investigating Officer's Guide*)

Chief Officer/ Director/ Assistant Director Consideration

- 7.11 Once the report is submitted to the Chief Officer/ Director/ Assistant Director, any further allegations identified will be the subject of a separate investigation.
- 7.12 Following receipt of the Investigating Officer's report, the Chief Officer/ Director/ Assistant Director will make a determination within **7 calendar days** (unless there are exceptional circumstances) whether to instigate disciplinary proceedings against the employee concerned, advise the employee accordingly in writing within **7 calendar days** of the decision being made.
- 7.13 If the decision is made that the matter should not proceed then a letter should be sent to the employee notifying them of this within **7 calendar days** of the decision being made.

SECTION 8 - DISCIPLINARY HEARING

- 8.1 If following a disciplinary investigation, the decision is made to instigate disciplinary proceedings against the employee concerned, it will usually proceed to a disciplinary hearing.
- 8.2 Arrangements for a disciplinary hearing (i.e. date/time/venue) should be made by the Presenting Officer as soon as possible after the decision to proceed following discussion with the employee and their companion (where applicable). Any delays to this should be notified to all involved. (*Refer to Disciplinary Procedure: A Hearing Chair's Guide*).
- 8.3 To ensure impartiality, a disciplinary hearing must be chaired by a manager who has not had any involvement in the circumstances giving rise to the act of alleged misconduct for which the disciplinary hearing has been convened.
(N.B. "Involvement" means **direct** involvement in the case such as carrying out the investigation or witnessing the alleged misconduct. It does not mean that any officer who has some prior knowledge of a case should be prevented from chairing a hearing).
- 8.4 Employees should be notified in writing **14 calendar days*** in advance of the hearing. At the same time they will receive copies of all the relevant documentation that will be presented to the Chair of the hearing, including the Investigating Officer's report concerning the allegations to be considered. In addition to administrative details concerning the arrangements for the hearing, the letter should also refer to the seriousness of the disciplinary allegations and possible outcomes if proven.
- * Where the disciplinary pack contains excessive amounts of information this must be provided to the employee (and their companion) between 14 to 28 calendar days in advance of the hearing.*
- 8.5 The employee is required to submit documents on which they intend to rely upon at the hearing to the Presenting Officer at least **7 calendar days** in advance of the hearing. This will ensure that the Chair receives the bundle of all relevant documents 48 hours (2 working days) prior to the hearing. This will give them the opportunity to review all the information and start to become familiar with the case details beforehand. The Chair should not make enquiries on the case prior to the hearing.
- 8.6 The purpose of the disciplinary hearing is for the Chair to consider all the evidence regarding an allegation, and to make a decision whether, on the balance of probabilities, the allegation against the employee is substantiated. If the allegation is substantiated, the Chair should determine an appropriate sanction, dependant on the seriousness of the allegation and taking into account any mitigating circumstances provided.

- 8.7 Requests for attendance at a Hearing in the roles of “Observer” (developmental purposes) or “Assistant” (complex cases only) must be made to the Chair **7 calendar days** prior to the date of the hearing. Attendance for either role will be at the discretion of the Chair and must be with the consent of the employee under investigation.
- 8.8 Where there is more than one employee subject to disciplinary action, hearings may be held separately or together depending on the circumstances of the case. Where it is decided to hold them together, the agreement of all involved must be obtained beforehand. If disciplinary hearings are held individually, then the outcome should be reserved until all hearings have been completed and jointly considered. The same hearing Chair should be used to ensure consistency.
- 8.9 Where possible, the Chair’s decision, including appeal rights, must be communicated to the employee verbally either on the day or within **24 hours** of the conclusion of the hearing. Where it is not possible to provide the decision verbally, the employee should be informed of the reason(s) for the delay. In complex cases the time may be extended but all involved should be notified where this is the case. Once communicated, the Chair’s decision is final.
- 8.10 The decision including appeal rights, will be confirmed in writing within **7 calendar days** of the hearing.
- 8.11 The Council reserves the right to conduct a disciplinary hearing in the absence of the employee in circumstances where reasonable efforts have been made to secure that individual’s attendance. The employee will be notified in writing of the outcome and their right of appeal.

SECTION 9 - POSSIBLE DISCIPLINARY OUTCOMES

(Refer to Disciplinary Procedure: A Hearing Chair's Guide for applicable letters)

- 9.1 The possible outcomes of a disciplinary hearing are detailed below.
- 9.2 Disciplinary action is cumulative where previous misconduct has occurred and previous disciplinary warnings are current and have not expired. Expired warnings cannot be referenced.
- 9.3 If an employee has more than one allegation proven at a disciplinary hearing, the resultant disciplinary action will need to reflect the most serious allegation.

Verbal Warning – Valid for 3 Calendar Months

- 9.4 This sanction will be appropriate for a first minor breach or where actions taken/ agreed under the informal stage have proven to be ineffective.
- 9.5 The person issuing the verbal warning must ensure that the person receiving it understands:
 - Why the verbal warning has been issued.
 - The improvements required.
 - That it is a formal warning, valid for 3 calendar months, specifies the expiry date and is issued in accordance with the Council's Disciplinary Policy and Procedures and there is a right of appeal.
 - That if within the 3 calendar months they commit the same or different disciplinary offence, further disciplinary action will be contemplated.
 - That the record of the warning will be kept on their DigiGov file but that it will be disregarded for any future disciplinary purposes after 3 calendar months, providing there has been the required improvement whilst the warning was in place.
- 9.6 Once this warning has been communicated to the employee verbally, a record of it should be made on the relevant proforma, agreed and signed by all involved where possible and retained on the employee's DigiGov file for 3 calendar months.

Written Warning – Valid for 6 Calendar Months

- 9.7 This sanction will be appropriate if during the validity of the verbal warning, the required levels of improvement have not been achieved, the employee commits the same or further disciplinary offences or if the nature of the offence is serious enough to warrant action at this level.
- 9.8 A written warning will be valid for 6 calendar months with the expiry date specified. The reasons why the warning has been issued, the improvements required and the right of appeal must be included in the decision letter. A copy of the letter (including details of allegations heard, evidence considered and conclusions reached) will be placed on the employee's DigiGov file and will be disregarded for any future disciplinary purposes after 6 calendar months, providing there has been the required improvement whilst the warning was in place.

Final Written Warning – Valid for 18 Calendar Months

- 9.9 This sanction will be appropriate if, during the validity of the written warning, the required levels of improvement have not been achieved, the employee commits the same or further disciplinary offences or if the nature of the offence is serious enough to warrant action at this level.
- 9.10 A final written warning will be valid for 18 calendar months with the expiry date specified. The reasons why the warning has been issued, the improvements required and the right of appeal must be included in the letter. A copy of the letter (including details of allegations heard, evidence considered and conclusions reached) will be placed on the employee's DigiGov file and will be disregarded for any future disciplinary purposes after 18 calendar months, providing there has been the required improvement whilst the warning was in place.

Dismissal or Demotion to a lower grade position

- 9.11 This sanction will be appropriate if, during the validity of the final written warning, the required levels of improvement have not been achieved, the employee commits the same or any further disciplinary offences or if the nature of the offence is serious enough to warrant action at this level.
- 9.12 If an employee is dismissed or resigns in the course of an investigation/ disciplinary process involving a child protection/ vulnerable adult allegation a referral must be made to the appropriate body. In the case of teachers the General Teaching Council for Wales and for care professionals the Care Council for Wales/Health and Care Professions Council.

- 9.13 The decision may be either dismissal (with or without notice) or, in exceptional circumstances, demotion. **This will however be dependant on the existence of suitable vacancies within the Directorate.** Where, as an alternative to dismissal, the decision is demotion, a final written warning must also be issued.
- 9.14 Where demotion is proposed, the employee's agreement in writing must be obtained, otherwise the employee may make a claim for an unlawful deduction from wages. However the employee should be made aware that if they do not agree to the demotion, then the alternative will be dismissal.
- 9.15 The decision (including details of allegations heard, evidence considered and conclusions reached) must be communicated to the employee in writing and the right to appeal confirmed.

No Action

- 9.16 Where the Chair finds no case to answer, there is a standard letter available that must be issued to the employee within **7 calendar days** of the decision being made. This letter will not be retained on the employee's DigiGov file except where necessary to prove that a sufficient investigation has taken place (e.g. complaints relating to abuse of children / vulnerable adults) and will clearly mark that the allegation was unsubstantiated.

SECTION 10 - DISCIPLINARY APPEALS PROCEDURE

- 10.1 Employees subject to any formal disciplinary action have the right of appeal against the decision and should be notified of this in writing. Appeals must be made within **7 calendar days** from receipt of the written decision from the original hearing.
- 10.2 Employees with access to DigiGov can lodge an appeal using the system. Employees not on DigiGov can appeal via email or in writing. Only the employee has the right of appeal and they should identify the grounds on which they are appealing in that there was either :
- a) **A PROCEDURAL FLAW** clearly indicating what the flaw was and how the policy was not correctly followed / applied; and/ or
 - b) The **FINDINGS** were inconsistent with the evidence presented, providing written reasons for this; and/ or
 - c) The **SANCTION** was inappropriate, providing written reasons for this; and/ or
 - d) **NEW EVIDENCE** has come to light either since, or not considered at the disciplinary hearing, which could have a bearing on the original disciplinary sanction, providing written reasons how this could have a bearing on the case.
- 10.3 Appeals against a verbal warning, written warning and final written warnings will take the form of a review hearing. Appeals against dismissal or demotion will take the form of a complete rehearing.
(Refer to Disciplinary Procedure: A Hearing Chair's Guide)
- 10.4 The Service Area concerned must arrange the appeal hearing (i.e. date/ time/ venue) within **7 calendar days** of receipt of the appeal. Any delays to this should be notified to the employee and their companion (where applicable). If the employee or their companion is unable to attend on the proposed date, they can propose an alternative date/ time providing that it is reasonable and is no more than **7 calendar days** after the date originally proposed for the hearing.

Appendix 1: DISCIPLINARY RULES

- 1.0 The Council's Disciplinary Rules set out below are divided into misconduct and gross misconduct. The lists are intended to be examples only and are neither exclusive nor exhaustive. It has to be recognised that there may well be other acts of misconduct not listed below that would give rise to disciplinary proceedings. In determining the appropriate outcome, each case should be judged objectively, based on the merits of the evidence provided and any mitigation.
- 2.0 The proven degree of the alleged misconduct will determine whether the act is misconduct or gross misconduct. Incidences of misconduct will not normally result in dismissal, but this depends on the seriousness of the incident. However where the employee already has in place unspent warnings, the commission of a proven act of misconduct could result in a final written warning or dismissal.
- 3.0 Proven gross misconduct may result in dismissal without notice unless there are mitigating circumstances.
- 4.0 These Disciplinary Rules should be read alongside the Council's Disciplinary Policy and Procedures.
- 5.0 **Examples of Misconduct**

(Note: in certain circumstances the examples below may be considered to constitute gross misconduct)

- Failure to comply with the Council's Code of Conduct and any specific professional code of conduct and/ or local agreed working arrangements which may exist within Service Areas.
- Minor breaches of any of the Council's employment Policies or Procedures.
- Persistent poor timekeeping.
- Unauthorised absence from work.
- Refusal to comply with a reasonable instruction.
- Failure to comply with requirements within Council procedures, e.g. sickness absence reporting procedures, flexible working schemes / procedures.
- Showing a lack of professional courtesy to colleagues, citizens, service users, suppliers or anyone outside of the Council.
- Misuse or unauthorised use of Council resources, vehicles, equipment and facilities

- Inappropriate use of Council time, e.g. excessive use of time for personal correspondence, telephone calls and emails/ internet use.
- Failure to observe Council IT standards, policies and guidance on the use of IT facilities.
- Failure to disclose an outside interest, gift, benefit or hospitality which would cause loss of confidence in the employee or the Council.
- Failure to declare any other paid work or employment undertaken which conflicts with the Council's interests (in accordance with the Officer's Personal Interests & Secondary Employment Policy) or which results in contravention of Health & Safety or employment legislation.

6.0 Examples of Gross Misconduct

- Gross misconduct is an act or omission that is of such a nature or so serious that, if proven, could lead to summary dismissal (dismissal without notice). The following acts, and offences of a similar nature, will be regarded as gross misconduct.

6.1 Breach of Trust

- Omission or conduct liable to lead to serious loss of confidence in the public service and/ or bring the Council into disrepute.¹
- Criminal offences committed at work.
- Conduct that is a serious abuse of position, e.g. misuse of personal position for personal gain.
- Being an accessory to, condoning or failing to report a serious, potentially criminal disciplinary offence, e.g. an incident of abuse/ suspected abuse of a child or vulnerable adult; failing to report that a colleague was obtaining financial or other reward from Council clients.
- Behaved in a way that has harmed a child/ vulnerable adult, or may have harmed a child/ vulnerable adult.
- Behaved towards a child/ vulnerable adult in a way that indicates that they are unsuitable to work with children/ vulnerable adults.

¹ Refer to Disciplinary Policy Managers Guidance for further information

6.2 **Misuse of Property**

- Theft, or attempted theft, from the Council, its employees, partner organisations or service users, or from premises being visited during the course of employment.
- Unauthorised possession and/ or use of the Council's property, or the property of its employees, e.g. unauthorised use of a Council Identification Card to gain unauthorised access to property, receiving money or other considerations for the use of that property.
- Malicious damage to, or any other unlawful act which involves the property of the Council or its employees.

6.3 **Dishonesty and Fraud**

- Failure to disclose material information or knowingly making a false statement or omission when applying for a job.
- Falsification of time sheets, bonus sheets, expense claim forms, car allowance claims, etc with the intention of defrauding the Council.
- Persistent and/ or serious abuse of the Council's Flexible Working Hours Scheme or any of the other Flexible Working policies and/ or procedures.
- Fraudulently claiming benefits to which the employee is not entitled to.
- Deliberate disregard of the Council's Financial Procedures and Rules or Contracting Procedures or general instructions concerning the collection, transfer, security and paying in of monies, the issue and receipt of tickets and the completion and submission of associated documents.
- Undertaking other paid employment whilst receiving sick pay from the Council during a period of sickness or unauthorised absence, without prior management agreement.
- Whilst on sick leave, indulging in activities that are likely to be inconsistent with the stated reason for absence and/ or which is unlikely to be conducive to recovery.

6.4 **Health and Safety**

- Any act, omission or negligence of H&S legislation or Council H&S related policies & procedures.

6.5 Unacceptable behaviour at work

- Verbal abuse (e.g. swearing) and physical violence (e.g. fighting), whether actual or threatened towards colleagues, service users, citizens, suppliers.
- Inciting others to commit violent acts or acts of gross misconduct.
- Sexual misconduct/ activities whilst on duty.
- Harassment or discrimination on the grounds of race, gender, disability, religious belief, sexual orientation, age, ethnicity, caring responsibilities, membership of a trade union, employment status, marital status, spent convictions other than for jobs excluded by law.
- Bullying, intimidation or victimisation, including inciting racial hatred.
- Wilful and/ or repeated refusal to carry out or comply with a reasonable order, instruction or contractual requirement.
- Sleeping whilst on duty (unless undertaking paid sleeping-in duties).
- Raising issues under the Council's Resolution Policy that subsequently are proven to be malicious or vexatious.

6.6 Alcohol and Drug Use

- Consumption of alcohol or the taking of illegal/ unprescribed drugs or intoxicating substances at work in circumstances where it could constitute a health and safety hazard, where it would be in breach of a position of responsibility and trust.
- Incapacity whilst at work due to the influence of alcohol or non-prescription drugs.

6.7 Confidentiality

- Unauthorised disclosure of confidential and personal information including that which may be of use within a contract tendering situation or quotation procedure.
- Deliberate breach of personal data.

6.8 Use of Information Technology systems

- Serious breach of the Council's IT Policy, e.g. accessing internet sites containing pornographic, racist or other discriminatory images/ text/ material, loss of confidential or sensitive data through negligence, loss of important or expensive equipment through negligence, accessing/ utilising Council's IT for private use and/ or personal gain.

6.9 **Conduct Outside of Work**

- Committing an act of gross misconduct outside work/ working hours or being convicted of a criminal offence which would prevent an employee from continuing to do their job or which affects their suitability to perform their work and/ or which damages the relationship of trust that has to exist between the Council and its employees.
- Acting in a way outside of work that would bring the Council into disrepute, e.g. committing acts of discrimination.

6.10 **Failure to declare an interest**

- Failure to comply with the requirements of the Local Government Act 1972 which requires an employee or office holder to declare an interest where it comes to their knowledge that a contract in which they have any direct or indirect pecuniary interest has been, or is proposed to be, entered into by the Council.

6.11 **Defamation**

- Making defamatory statements in the course of employment (e.g. making statements that are or could be slanderous or libellous) whether orally, written, or in electronic communication. (A defamatory statement is a statement that will injure the reputation of another in the estimation of members of society generally).

Appendix 2: AUTHORITY LEVELS & APPEAL ARRANGEMENTS

GRADE OF EMPLOYEE SUBJECT TO DISCIPLINARY PROCEDURES	MINIMUM LEVEL AUTHORISED TO SUSPEND FROM DUTY	MINIMUM LEVEL AUTHORISED TO CHAIR A HEARING AND MAKE APPROPRIATE DISCIPLINARY DECISIONS	MINIMUM LEVEL AUTHORISED TO CONSIDER AN APPEAL	
			Verbal, Written and Final Written Warnings	Dismissal or Relegation
1. All employees up to and including Grade 10	Operational Manager	Any Officer nominated by the Chief Officer/ Director/ Assistant Director to undertake the delegated task. The officer must be at a more senior level than the employee subject to the disciplinary action.	Operational Manager	Chief Officer/ Director/ Assistant Director
2. Operational Manager	Chief Officer/ Director/ Assistant Director	Chief Officer/ Director/ Assistant Director	Corporate Director	Corporate Director
3. Chief Officer/ Director/ Assistant Director	Corporate Director	Corporate Director	Chief Executive	Panel of Elected Members*
4. Corporate Director	Chief Executive	Chief Executive	Panel of Elected Members*	Panel of Elected Members*
5. Chief Executive	Member Investigating Committee and Independent Officer	Member Investigating Committee and Independent Officer	Panel of Elected Members*	Panel of Elected Members*

* Where Elected Members are involved the Monitoring Officer, in consultation with the Chief HR Services Officer, will organise a meeting of a panel of elected members appointed to hear the disciplinary case at the earliest opportunity. The Panel will contain not more than 5 and not less than 3 Members.

Appendix 3: DISCIPLINARY INVESTIGATION SERVICE

The Disciplinary Investigation Team

1. The Disciplinary Investigation team, based internally in the Council, will be set up to deal with disciplinary investigations that are more complex/potential gross misconduct investigations, those involving the police and safeguarding concerns but excluding schools' child protection cases (refer to Welsh Government Guidance: "*Disciplinary & Dismissal procedures for Schools Staff*").
2. The Team will exist as a "**virtual team**", comprising of staff nominated by each Directorate to deal with these investigations. Nominated staff from HR People services would also be part of the virtual team, and Internal Audit would be involved where there are matters of Fraud/Financial impropriety.
3. Members of the team would receive any additional and higher levels of training as required, to develop their knowledge and expertise.
4. Each Directorate would commit to enabling their nominated team member to be released from their day job during the period of the investigation, to ensure they are undertaken thoroughly, and as quickly, as possible. Directorates would manage their own cover arrangements.
5. Where appropriate, investigations could be cross Directorate if required, to increase impartiality.

Benefits of a Disciplinary investigations team

- a) Ready, willing and engaged Investigating Officers.
- b) Fewer Investigating Officers doing investigations on top of day job with reduced level of stress on staff.
- c) Improved sickness absence levels.
- d) Expertise developed so improved quality with fewer investigations flawed.
- e) Improved impartiality.
- f) Reduced cost of delivering training programme to fewer staff.
- g) Improved consistency of HR People Services advice from Investigation team officers.
- h) Reduced length of suspensions improved cost to Council.
- i) Reduced length of investigations improved cost to Council.
- j) Consistency of decision making.

Future potential

Dependent upon the capacity of the team, there could be potential income generation for the council, if the team offered a costed service to other Local Authorities/ schools.

SECTION 1 – INTRODUCTION

POLICY STATEMENT

- 1.1 This Resolution policy provides an opportunity to link dispute resolution to the Council's values and vision. It replaces the Council's Grievance and Harassment Policies and Procedures, offering a new name and a new focus.
- 1.2 The City of Cardiff Council, like many organisations, has a workforce which is made up of people from increasingly diverse backgrounds, with differing opinions, values and expectations about work. The Council recognises that from time to time, employees may have problems, concerns or complaints about aspects of their employment, e.g. working conditions or working relationships with colleagues, which they wish to raise and have resolved.
- 1.3 It also recognises that it has a responsibility to deal with any such concern raised in a timely manner to maintain discipline, good order, motivation and morale amongst employees in the interests of effective service delivery, to reduce the risk of time consuming formal proceedings and associated sickness absence costs.
- 1.4 The foundation of all forms of **acceptable behaviour** at work is the respect in which we hold every individual working within the Council, and the value we place on their individual contribution to our common purpose. Every individual is entitled to fair and equitable treatment and the Council is committed to providing a caring and supportive working environment which is free from all forms of harassment, discrimination, bullying and intimidation (hereinafter referred to as **unacceptable behaviour**). The trade unions are also fully committed, to taking a major role in preventing all forms of unacceptable behaviour at work (Appendix 1).
- 1.5 This statement of policy underpins a commitment to developing a culture of personal and managerial integrity and professionalism, in which dignity, courtesy and respect are valued, and unacceptable behaviour is identified and dealt with quickly, fairly and sensitively.
- 1.6 It offers a collaborative approach that balances the rights of individuals with their interests and needs. In doing so, it brings the core principles of mediation to the forefront and encourages constructive resolution and positive working relationships. By making mediation available at each stage (even where cases may be escalated to formal actions) greater flexibility is offered to all parties.
- 1.7 This policy and procedure, is consistent with the principles outlined in the ACAS Code of Practice on Discipline and Grievance Procedures (2015).

AIMS AND OBJECTIVES

The aims of this policy are to:

- 1.8 Enable a transition in the organisation from a grievance culture to one that is focussed on innovation - a resolution culture.
- 1.9 Demonstrate a commitment to positively resolving conflict and taking concerns seriously by confronting the conflict, but not in a way that leads people to defensive positions.
- 1.10 Encourage free communication between employees and their respective managers to secure constructive and lasting solutions to workplace concerns, quickly and informally, to the satisfaction of all parties involved. This will increase the levels of staff morale, commitment and productivity.
- 1.11 Help reduce levels of formal procedures, where appropriate, and absences due to stress or stress related illnesses.
- 1.12 Ensure that managers, employees and their companions are aware of their rights, responsibilities and obligations within the resolution process.
- 1.13 A companion is defined as an employee of the Council, a trade union representative or an official employed by a trade union.

SCOPE OF THE POLICY

- 1.14 The Policy applies to **all** current employees of the Council with the exception of school based employees. The policy does not apply to agency workers, volunteers or those engaged by the Council on Contracts for Service. It aims to provide a single framework for the resolution of individual as well as collective concerns about any aspect of their employment with the Council without fear of reprisal and/or recrimination.
- 1.15 Application of this policy is suitable for concerns or disagreements between all work colleagues within or between teams and service areas, between managers and members of their team, or actions/inactions of the employer.
- 1.16 This policy also covers **unacceptable behaviour** in any situation, as the result of which an employee's employment with the Council may be affected. It is not confined **to unacceptable behaviour** occurring in the workplace or during working hours, but extends to situations that occur outside the working environment which arise out of, or may affect, the working relationship between employees and the Council as the employer.
- 1.17 Employees cannot use this Policy and Procedure if the nature of the concern relates directly to their substantive grade (see **Regrading Policy 1. CM.240**) or constitutes an appeal against disciplinary decisions taken against them (see **Disciplinary Policy 1. CM 035**).

AWARENESS

- 1.18 This Policy will be drawn to the attention of all employees. The Council has a duty of care to its employees, and service users, and is legally responsible for ensuring that the behaviour and conduct of employees in the course of their employment is acceptable.
- 1.19 The Council acknowledges that the decision to raise a concern will normally rest with the employee. The Council has a duty of care and management have the right to initiate a preliminary assessment, if they have concerns with regards to an employees conduct, even if a concern has not been raised.
- 1.20 Failure to recognise or investigate incidents of unacceptable behaviour does not excuse the Council from liability and could have serious legal consequences under health and safety and employment legislation. Therefore officers **must** adhere to all aspects of this policy to limit the potential risk of a legal challenge.
- 1.21 All employees have a duty to comply with this policy and to be aware of their personal obligations by eliminating all forms of unacceptable behaviour.

KEY PRINCIPLES

- 1.22 At all stages of the Resolution Procedures, including the informal procedure, employees will be given the opportunity to be represented by a maximum of 2 companions (with the exception of a mediation meeting). Where there are 2 companions, one must take the role of an Observer (refer to Disciplinary Procedures: Hearing Chair's Guide p7)
- 1.23 When concerns or complaints arise, they will be resolved through informal procedures wherever possible.
- 1.24 The Council recognises that the offence may not be intentional. An individual may be subject to unacceptable behaviour, and the person causing the alleged distress may be unaware that their behaviour is offensive or causing a problem.
- 1.25 Differences in culture, attitude and experience or the misinterpretation of social signals can result in differences in perception, and what may be perceived as unacceptable to one person may be perceived by others as normal social behaviour.
- 1.26 An employee will not prejudice their employment, opportunities for progression, promotion or training within the Council by making a complaint of unacceptable behaviour, when it is made in good faith, or by any subsequent investigation.
- 1.27 Where more than one employee has the same concern, then the procedure should be applied on a group basis, where agreed by a group of employees

(collective concern). A group concern will be subject to one procedure and will be treated as a single application albeit from a group of employees.

- 1.28 Records should be kept of each stage of the procedure and checked for accuracy by all parties. Employees should be given copies of any resolution meeting records including any formal minutes. In certain circumstances the Council may withhold some information, for example to protect a witness. All such records will be regarded as confidential and retained in accordance with the provisions of the Data Protection Act 1998.
- 1.29 The Council undertakes to observe and maintain confidentiality wherever possible in dealing with cases of alleged unacceptable behaviour. In this context, confidentiality means that information will be disclosed only on a “need to know basis”
- 1.31 All parties will endeavour to deal with concerns as quickly as possible and within the timescales stated. Should it be necessary, the time limits can be extended or modified with the agreement of all the parties.
- 1.32 Where an employee formally raises a concern or complaint under this policy during a disciplinary process, the disciplinary process may be temporarily suspended in order to deal with the concern. However, where the concern and the disciplinary matters are related it may be appropriate to deal with both concurrently if directly relevant to the outcome of the disciplinary hearing. Where this situation arises, a decision taken by the Service Area Manager will be communicated to the relevant parties, following advice from HR People Services. If the disciplinary case is a matter of fraud, bribery or financial impropriety then the decision will be taken by the Audit manager.
- 1.33 Where a concern relates to a difference in the interpretation and/or application of a particular Council policy, procedure or agreement, consideration of the matter may be adjourned with the consent of all the parties to enable appropriate advice and guidance to be sought. When this has been received, consideration of the concern will be resumed at the point at which it was adjourned.
- 1.34 The Council reserves the right to deal with any unusual or urgent concern outside the normal Resolution Procedure in exceptional circumstances, but will only exercise that right, following consultation with all parties.
- 1.35 Employees have the right to appeal against the formal resolution decision.
- 1.36 The Council recognises the possibility that concerns may be brought with malicious, vexatious or spurious intent. If there is evidence to support such intent, this may result in disciplinary action being taken against the complainant.
- 1.37 This policy and the procedure will be reviewed in the light of operational experience every 12 months.

SECTION 2 - ROLES and RESPONSIBILITIES

2.1 It is important that everyone clearly understands their roles and responsibilities within the resolution procedure.

EMPLOYEE RESPONSIBILITIES

2.2 All Council employees are responsible for:

- a) Behaving and acting in a way that is consistent with the Council's values of openness, fairness and working together with others, as defined by the Employee Charter.
- b) Ensuring that their behaviour complies with the Council's Code of Conduct and any Service Area/ external Codes of Conduct/ Practice that govern the profession in which they are engaged.
- c) Ensuring they read, understand and comply with this policy and fully cooperate with the requirements of the procedures when they are in operation.
- d) Demonstrating an active commitment to this policy and its aims
- e) Raising a concern with their manager in a timely way, clearly stating the basis of the concern including the resolution required.
- f) Undertaking to resolve the concern informally before resorting to the formal stages of the procedure.
- g) Maintaining a written record of the incidents that have caused distress including the time, date, place and a full description of what happened including the names of the people concerned and names of any witnesses.
- h) Maintaining confidentiality at all times during any resolution proceedings, with the exception of any conversations which may be necessary with their companion, and if there is a requirement to share information in relation to safeguarding concerns.
- i) Only raising concerns in good faith. If the Council finds that an employee has made allegation maliciously or vexatiously, it may consider taking disciplinary action against the employee.

MANAGER RESPONSIBILITIES

2.3 **In addition to their responsibilities as employees**, Managers are also responsible for:

- a) Ensuring employees are aware of all relevant policies and procedures.
- b) Taking positive steps in maintaining an environment which is free from unacceptable behaviour, and to treat those for whom they are responsible fairly and with dignity, courtesy, and respect at all times.
- c) Taking the initiative in identifying unacceptable behaviour and taking reasonable corrective or preventative action in accordance with this policy and procedures. It is not acceptable for any manager to ignore unacceptable behaviour. Managers have a responsibility to "ask and act".
- d) Dealing with minor concerns as part of normal day to day operational management.

- e) Dealing with concerns promptly, fairly and consistently in accordance with the procedure and detailed timescales and with advice from HR People Services.
- f) Working with the employee to resolve the matter informally in the first instance, if safe to do so.
- g) Demonstrating a commitment to release employees during working hours for mediation. Special arrangements should be made for shift workers by agreement.
- h) Keeping adequate notes and records of all events and evidence to support the use of the policy.
- i) Writing formally to the employee following consideration of their concerns, detailing their response, explaining the reasons behind their decision (see Appendix 4)

HR PEOPLE SERVICES RESPONSIBILITIES

2.4 In addition to their responsibilities as employees, HR People Service Officers are responsible for:-

- a) Providing support and advice to managers and employees at all stages of the policy and procedures, including the informal, and to ensure that the Council's Resolution Policy and Procedures are correctly applied.
- b) Supporting Directorates to undertake any necessary remedial action by collating management information on cases/ outcomes
- c) Collate and review corporate monitoring data for consideration by various groups, e.g. Senior Management Team, Works Council.
- d) Reviewing the application of the policy and procedures in the light of operational experience.

MEDIATION SERVICE RESPONSIBILITIES

2.5 In addition to their responsibilities as employees, Mediators are responsible for:-

- a) Assessing whether or not cases are appropriate for mediation.
- b) Provide support and guidance to employees entering into mediation.
- c) Co-ordinating, assigning and mediating cases that are deemed suitable.
- d) Maintaining confidentiality at all times, with the exception of the duty to disclose where there are safeguarding concerns. Notes taken by the mediator are destroyed at the end of the mediation process.
- e) Facilitating a written agreement between parties.
- f) Evaluating the effectiveness of the mediation service.

TRADE UNION REPRESENTATIVE RESPONSIBILITIES

2.6 **In addition to their responsibilities as employees,** Trade Union Representatives are responsible for:

- a) Providing advice, support and representation to their members.
- b) Working with managers, HR People services and employees to ensure that the Resolution policy is adhered to.
- c) Working with all parties to facilitate timely and early resolution to matters.
- d) Encouraging the use of informal procedures if appropriate, including promoting the use of mediation to re-establish and maintain working relationships.

SECTION 3 – RESOLUTION PROCESS

APPROACHES TO RESOLUTION

- 3.1 This policy provides employees with the opportunity to take personal responsibility to resolve or discuss their concerns in a supportive, constructive and empathetic forum to enable relationships to be rebuilt.
- 3.2 Employees may seek advice and support from HR People Services or the Trade Union at any time. Being accompanied by a companion does not mean that the formal process has been triggered.
- 3.3 The different approaches to resolution include:-

Informal

- a) **Self Help** – in the first instance, and when considered safe to do so, the expectation is that the employee communicates directly with the person with whom they have a concern. This can lead to an effective resolution as it is likely the individual will modify their behaviour once they are made aware of the concern.
- b) **Resolution meeting** – An employee can meet informally with their line manager, to express their feelings and concerns. The manager and employee can together identify concerns and agree solutions, which could include a number of options, such as instigation of a separate policy (see section 7 Additional Guidance or resolution flow chart)
- c) **Mediation** - employees volunteer to engage in the structured process with the assistance of a neutral third party (mediator), to meet with the two parties (separately then together), in an attempt to resolve the concerns and to build agreement on how interactions will occur into the future. The focus is on rebuilding the relationship and not on finding fault of either party.

Formal

- d) **Formal Resolution Meeting** – If informal resolution has not resolved the concern then employees can move forward to the formal procedure, where they can expect to receive a formal recommendation for resolution from a manager.
- 3.4 The type of resolution approach will depend upon:-
- The seriousness of the concern(s) being raised
 - The willingness of parties to engage in meeting or mediation
 - Whether there have been previous attempts to resolve the situation

Resolution Processes

SECTION 4 – INFORMAL RESOLUTION PROCEDURE

- 4.1 The person causing the alleged distress may be unaware that their behaviour is perceived as such and a simple explanation may be sufficient to resolve the matter.
- 4.2 Employees can seek the advice and support of HR People Services and/or their Trade Union at any stage.

EARLY RESOLUTION – EMPLOYEE LED

- 4.3 The best approach for an employee with a concern or disagreement in work is to face it in a calm and rational way, using a planned approach.
- 4.4 Incidents of alleged unacceptable behaviour can usually be resolved informally and this will be encouraged wherever possible. If the concern is in relation to another employee's behaviour, employees are encouraged to approach the individual causing them concern themselves, and make it clear, in a respectful manner, that they find their behaviour distressful.
- 4.5 Where the concern is not in relation to unacceptable behaviour, but another matter, employees are still encouraged to engage in constructive discussions and try to resolve the dispute on their own in the first instance.
- 4.6 Communicating directly to the employee causing concern can also be done with the support of a companion or their line manager, as a facilitated conversation. Where employees ask a companion to speak to the alleged individual on their behalf, this should be carried out in as low key and non-confrontational manner as possible.
- 4.7 Alternatively, employees may feel more comfortable writing a letter/ email to the person concerned, explaining that the behaviour/concern is causing distress. A companion could help the employee write such a letter/ email if they wish.
- 4.8 If the individual causing distress is the employee's line manager they should raise their concern with a member of the next level of management. In all cases, the seniority of the investigating manager will be equal to or greater than the alleged individual.

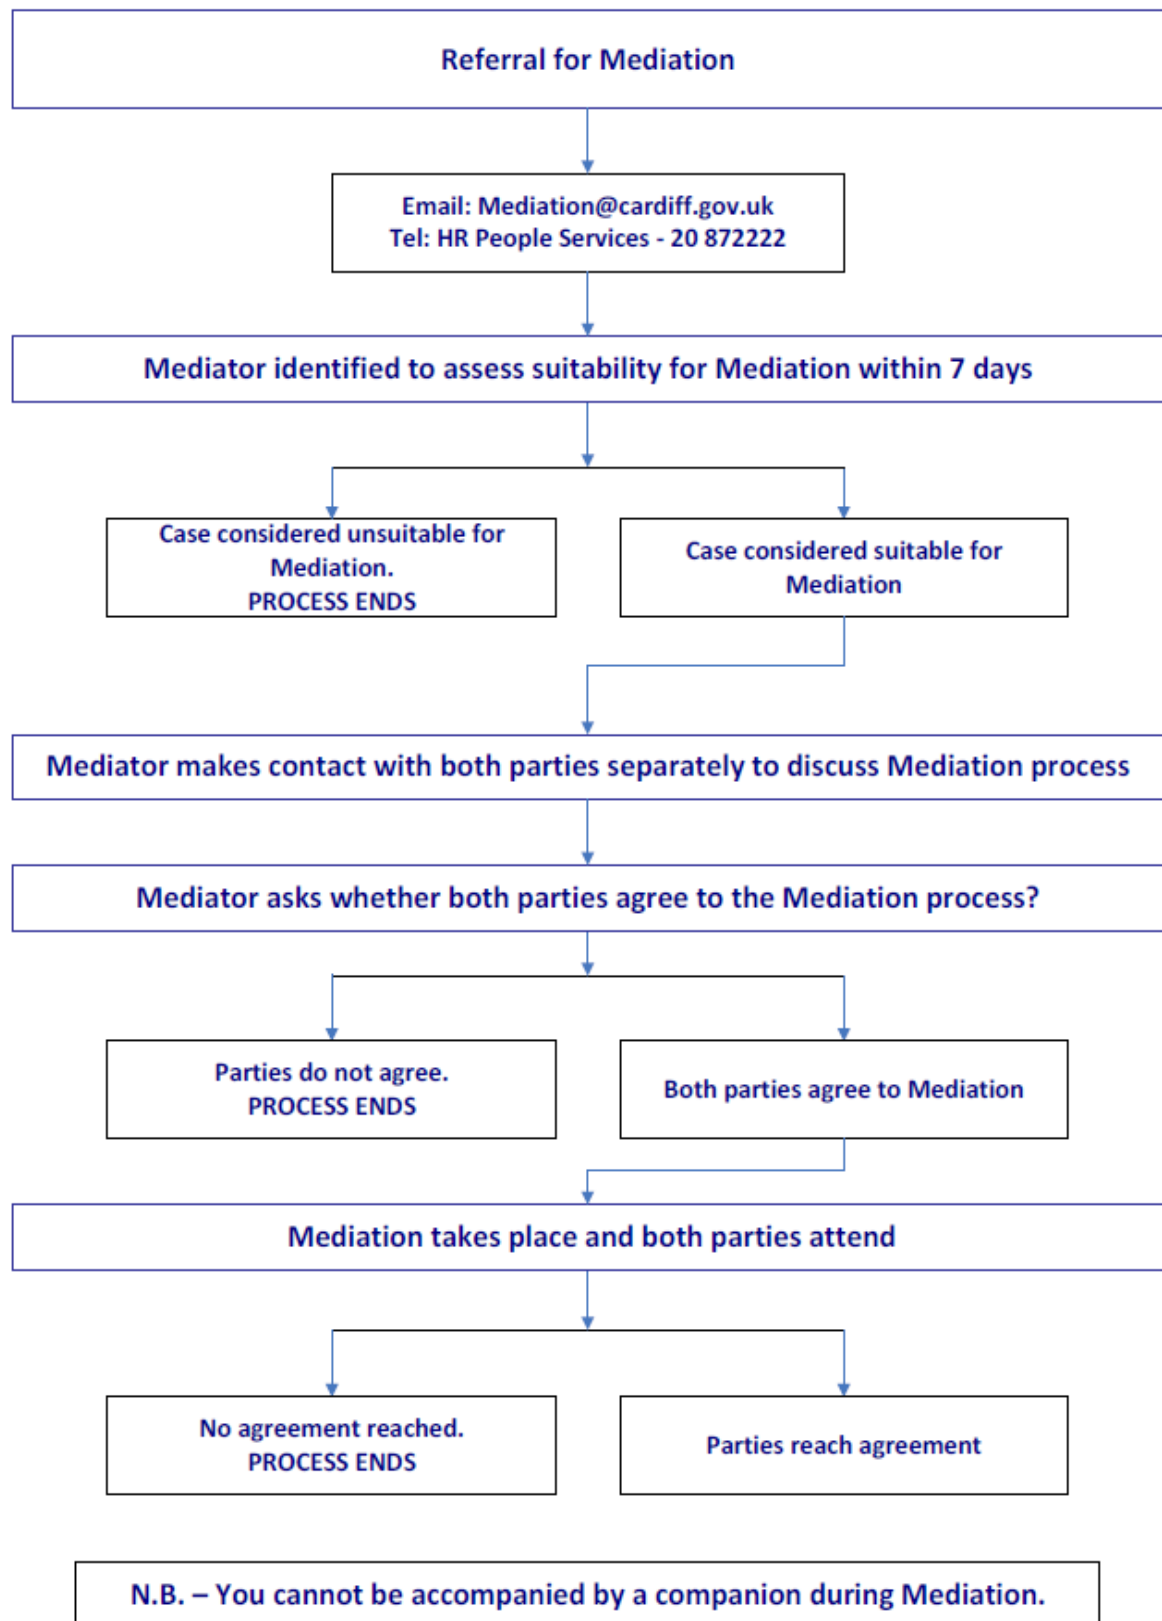

INFORMAL RESOLUTION MEETING

- 4.9 **Mediation may also be considered at this early stage, or at any other time in the process**, as an alternative to a manager-led resolution.
- 4.10 If the matter has not been resolved by speaking to the individual, or it was not possible to do so, then the employee should raise the matter with their line manager, as soon as possible. Employees are encouraged to act promptly and try not to wait until the situation is intolerable, in order to protect their personal wellbeing.
- 4.11 The Council expects employees and managers to work together to try and resolve concerns informally in the first instance, as this can lead to the matter being resolved quickly and with minimum distress to the parties involved.
- 4.12 The manager should meet with the employee and allow them to explain the concern (s) and provide evidence/ information relating to their concerns, and discuss the impact these concerns are having on them/ their role. You can be accompanied by a companion at this meeting if you wish, but being accompanied by a companion does not mean that the formal process has been triggered. It is important that the manager agrees the guidelines for the meeting which should be based on openness, honesty and mutual respect, ensuring confidentiality. The focus on the meeting is to build on the positives rather than focusing just on the negatives, and this can be achieved by de-personalising the situation where possible.
- 4.13 During the meeting it will be important to identify any factors that may have led to the situation. The employee may state how they would like to see the matter resolved. However, the manager and the employee should identify and explore potential solutions to the concern(s), taking into consideration all the pros and cons for the various options. This approach can be empowering as an individual can have a say in the solution.
- 4.14 The outcome being sought by the employee will be personal to them and will be dependant on the nature of the concern(s) raised, but must also be reasonable and achievable. The employee/manager may find solutions to the concern(s), which are applicable to any party, and may include the following (but is not intended to be an exhaustive list):-
- Provide on the job coaching
 - Provide training / Development
 - Give additional support internal/external
 - Clarify revised working instructions
 - Provide new/additional information
 - Undertake clarification of roles within a team
 - Make adjustment of working arrangements/work environment
 - Undertake modification of behaviours
 - Reconfirm employees responsibilities e.g. Equal Opportunities (refer to other policies and the Employee Charter)

- Referral for mediation
- Facilitated discussions between employees

- 4.15 If the manager needs to explore the concern(s) further by speaking to other employees, gathering more information or seeking advice from HR People Services, this should be done within **7 calendar days** of the initial meeting.
- 4.16 The manager should meet with the employee to explain the findings and agree the appropriate course of action. A written note of the agreed actions should be recorded in DigiGov and a copy given to the employee.
- 4.17 Where the employee is dissatisfied with the outcome of the informal stage they can initiate the formal process in DigiGov or by completing the Formal Resolution Application (RS1) (Appendix 2).

Flowchart for Mediation Process

MEDIATION

THE VALUE OF MEDIATION

- 4.18 A protocol to help encourage and support Local Authorities in the use of mediation has been developed by the HR Directors network and endorsed by the WLGA (Welsh Local Government Association) (see section 7). It demonstrates the commitment of Local Government in Wales to supporting the concept of workplace mediation, and encourages organisations to resolve more workplace disputes quickly and effectively without recourse to costly formal processes.
- 4.19 Cardiff Council recognises the value of mediation to resolve workplace disagreements. With the assistance of the WLGA, an internal pool of qualified and accredited mediators has been developed to ensure a consistent approach to the mediation process across the Council.

WHAT IS MEDIATION?

- 4.20 Mediation is a confidential voluntary process that helps two or more individuals in a disagreement, attempt to resolve the concern and to reach an agreement themselves. They are taken through the 'mediation' process by a trained mediator who is responsible for the process of seeking to resolve the problem, but not for determining the outcome as this is arrived at, agreed upon and owned by the individuals involved.
- 4.21 The mediation process provides an opportunity for the parties to take responsibility with discussing situations in a supportive, constructive and empathetic forum and agree the way forward in a safe and confidential environment away from the usual workplace.
- 4.22 The focus for mediation is to agree what will happen in the future, rather than what has happened in the past. The emphasis is on making a forward looking agreement, outlining mutually acceptable future behaviour between the parties.
- 4.23 Mediation is different because it is about collaborating rather than blaming. Any agreement made during mediation comes from those involved and not the mediator. The mediator is not there to judge, to say one person is right and the other is wrong, or to tell those involved in mediation what they should do. Mediation is:
- Less formal
 - Flexible
 - Voluntary
 - Morally binding but normally has no legal status
 - Confidential
 - Unaccompanied
 - Owned by the parties involved.

- 4.24 Due to the voluntary and informal nature of mediation there are some limits to what can be resolved through mediation. Mediation is most effective if it is used early on to enable relationships to be rebuilt. However, **mediation may be requested or recommended at any stage of this policy.**
- 4.25 Mediation can also be effectively used following the conclusion of a disciplinary investigation, where relationships within a team/service have been adversely affected.

WHEN IS MEDIATION APPROPRIATE?

- 4.26 The following is not intended to be an exhaustive list, but to act as a guide for employees who wish to refer a case for mediation. The more of the following points that apply, the more likely that mediation is appropriate:-
- The parties both voluntarily want to use mediation to resolve their concern.
 - The parties are committed to maintaining a working relationship.
 - The parties have the willingness to be open, honest and respectful.
 - The parties can not work through their concerns alone.
 - One or both parties wish to avoid formal procedures.
 - The concerns are affecting other employees and/or service delivery.

WHEN IS MEDIATION NOT APPROPRIATE?

- 4.27 As a guide, mediation is not deemed appropriate where one or both parties are not voluntarily committed to resolving their disagreement. Other areas that may deem mediation not an appropriate option are;
- As a first resort to abdicate managerial responsibilities
 - Criminal activity (e.g. serious discriminatory behaviour or physical assault)
 - Domestic abuse (including emotional/ financial)
 - An alternative to a formal disciplinary process – allegations of gross misconduct
 - Formal negotiations concerning employment rights.
 - There is a risk to health and wellbeing
 - Where one party wants an apology rather than agreement
 - Previous attempts at mediation on the same concern has not been reached

SUPPORT DURING MEDIATION (Reasonable adjustments)

- 4.28 Mediation is most successful when no companion is present, as an open and frank discussion controlled by the mediator to ensure fairness and appropriate behaviour is key. However, the exception to this is where a companion may be needed for reasonable adjustments, for example,
- A hearing impaired employee
 - A non-English speaker, (or a person who does not have sufficient command of the language to express their feelings) who may need an interpreter.

HOW TO MAKE A REFERRAL FOR MEDIATION

- 4.29 Any employee of the Council can request mediation support personally or on behalf of other employees, providing they have discussed the referral with the individual(s) involved.
- 4.30 The referral can be made by sending an email to mediation@cardiff.gov.uk or where the individual has no access to a PC by contacting HR People Services mediation service, confirming the names and contact details of the individuals to be involved in the mediation process. The mediation service will assess the suitability of each case for mediation and this may involve a discussion with the manager to establish what steps have already been taken to address the concern. The assessment will be made within **7 calendar days** of receiving the initial enquiry.

STAGES OF MEDIATION

- 4.31 If mediation is to proceed, HR People Services will assign an impartial qualified mediator to the case. The stages of mediation are as follows:-

Before mediation:

- **Individual contact with mediator**
With parties involved to explain the mediation process and role of mediator
- **Agreement from both parties to proceed with mediation**

During mediation:

- **Individual meeting with mediator**
Parties involved explore their individual concerns and set ground rules for joint meeting
- **Joint meeting with mediator and parties involved**
Each to have uninterrupted time to explain, hear and explore concerns
- **Written agreement between the parties**
Parties generating options for resolution
- **Closure of mediation**
Parties sustain confidentiality on return to workplace
- **Review of written agreement**
Organised by both parties and does not involve the mediator

- 4.32 Mediation will generally last for 1 full day. However, in more complex cases or cases involving more than 2 parties, it may last for up to 2 or 3 days. Managers must release employees during working hours to attend mediation on full pay. Special arrangements should be made for shift workers, by agreement.
- 4.33 Any party, including the mediator, can end mediation at any time during the process if they feel it is appropriate to do so e.g. information may emerge which results in the mediator concluding that mediation is no longer a suitable option (see 4.36).

WHAT HAPPENS AFTER MEDIATION?

- 4.34 Any notes taken by the mediator will be destroyed once the mediation process is complete. The only documentation to be retained will be the written agreement (Appendix 5) if one is reached, and this will be held by the parties engaged in the mediation process. Only with expressed consent of the parties may the agreement be shared with the manager.
- 4.35 Part of the written agreement will involve a review period, agreed and organised by both parties. Generally the mediator does not become involved with the review period as the process is owned by the individuals.
- 4.36 If mediation does not end in agreement, or it has been stopped, then HR People Services will provide information to the individuals involved on alternative options available which may help settle the concern.
- 4.37 Agreement to mediation does not prevent the employee from submitting a formal grievance subsequently, bearing in mind the responsibility to raise their concern within a reasonable amount of time.

SECTION 5 – FORMAL RESOLUTION PROCEDURE

- 5.1 A requirement of this policy is that there must be evidence that actions have been taken to resolve concern(s) informally, before proceeding to any formal part of the procedure.
- 5.2 Where the informal process has failed to resolve the concern, the employee can initiate the formal resolution procedure in DigiGov, or fully complete the Formal Resolution Application form (RS1), detailing the action they have taken to try and resolve the matter.
- 5.3 On completion, the RS1 should be forwarded to the next level of management (i.e. the level above the manager who sought to resolve the matter at the informal stage).
- 5.4 The nature of the concern should be detailed and reference made to specific occurrence(s) with dates if possible. The names of any individuals who are willing to act as witnesses should also be included.

FORMAL RESOLUTION MEETING

- 5.5 Management have a responsibility to act promptly, and the person with whom the formal resolution application has been lodged must meet with the employee as soon as possible but not later than **14 calendar days**, after receiving the request. Employees can choose to have companions with them during formal resolution meetings.
- 5.6 The manager will make arrangements (e.g.date/venue) to convene Formal Resolution Meetings with both parties individually (see **Appendix 4** for standard letters). The meetings will also include HR People Services and a confidential note taker.

N.B. Managers should also refer to the applicability of other relevant policies

FORMAT OF RESOLUTION MEETING

- 5.7 The manager who has received the RS1 will meet the relevant parties separately and produce a brief report.

OUTCOME

- 5.8 The manager, having gathered and considered all information will make a determination whether to :-

- (a) Take no further action - where the facts suggest the concern raised is unsubstantiated, felt to be unjustified or the evidence is inconclusive **OR**
- (b) Resolve the matter by the use of mediation if not previously undertaken or where it is considered that a conciliatory meeting between the two parties, accompanied by appropriate members of management and companions, will be sufficient **OR**
- (c) Arrange counselling or training or any other applicable remedial action for the employee against whom the concern raised, where it is felt to be sufficient to correct the behaviour or resolve the situation **OR**
- (d) Instigate disciplinary procedures - where the facts of the case suggest that the complaint is substantiated **and** that disciplinary action may be appropriate based on the information shared at the meeting, In this circumstance the Manager should proceed under the Disciplinary Policy 1.CM.035 by undertaking an assessment to consider appropriateness of disciplinary action. (Refer to the Disciplinary Procedure: A Manager's Guide).

5.9 Failure to take appropriate action could lead to claims of discrimination being taken against the Council at an employment tribunal. A decision to uphold the complaint and take non-disciplinary action should only be taken in cases of unacceptable behaviour where the behaviour complained of is of a very minor nature, and was either unintentional or a one-off occurrence. In cases of this kind, a judgement should be made as to whether a positive outcome may be more speedily effected through counselling the offender. **This option should not be used to avoid the responsibility to take disciplinary action where this is appropriate.** However, due regard must be paid to the feelings of the complainant who may need support to understand the decision in such cases.

5.10 The Manager will communicate their decision, and provide the rationale in writing to the employee (and their companion, if applicable) and the employee against whom the concern was against, using the outcome template letter 4.C.455 (**Appendix 4**). This should be done within **14 calendar days** of the meeting. The manager should ensure all minutes are uploaded in DigiGov and a copy given to the employee.

5.11 Depending on the nature and severity of the complaint, consideration should be given to the need to temporarily transfer or suspend the employee who is being complained about. Normally this would be in cases where the incident has caused an intolerable working situation.

5.12 Where suspension from duty is being considered, managers must undertake a preliminary assessment to consider appropriateness of suspension from duty (refer to Disciplinary Procedure: A Manager's Guide).

- 5.13 The manager's assessment will be submitted to the Chief Officer/Assistant Director/Director for a decision whether to proceed with a Disciplinary Investigation. The appointed Investigating Officer will take into account the Formal Resolution report.
- 5.14 It must be clear to all parties however, that disciplinary procedures will only be invoked when a management assessment finds this to be the appropriate cause of action i.e. disciplinary action is not an automatic outcome of using the formal procedure.
- 5.15 Where the decision is to uphold the concern and instigate disciplinary proceedings, the complainant may experience mixed feelings, and it is important to be aware of this and to continue to offer counselling and support.
- 5.16 Where the Council's Disciplinary Procedure is invoked as a result of a concern of unacceptable behaviour, the normal channels of appeal will be open to the individual subject to any disciplinary sanction in relation to decisions on disciplinary penalties and to any sanctions imposed.

APPEAL

- 5.17 If the employee is dissatisfied with the decision communicated to them, they have a right of Appeal. Employees with access to DigiGov can lodge an appeal using the system. Employees not on DigiGov will need to complete and return the **Resolution Appeal Form (RSA) (Appendix 3)** which will be included with the decision letter. This must be initiated within **14 calendar days** of the decision being communicated. Employees will need to identify the grounds on which they are appealing and provide details to support those grounds. The completed form must justify the grounds for the appeal in that there was either :
 - a) **A PROCEDURAL FLAW** clearly indicating what the flaw was and how the policy was not correctly followed / applied; and/ or
 - b) The **FINDINGS** were inconsistent with the evidence presented, providing written reasons for this; and/ or
 - c) **NEW EVIDENCE** has come to light either since, or not considered at the formal resolution meeting, providing written reasons how this could have a bearing on the case.
- 5.18 The requirement for indicating the grounds of appeal on the form is to ensure that the appeal can focus on the principle concern(s) of concern thus speeding up the process for **all** parties. Failure to fully complete and return this form could result in a delay to the Appeal being heard.

(See Disciplinary Policy 1.CM.035)

APPEAL RESOLUTION MEETING

5.19 To allow concerns to be resolved locally, the appeal will involve a more senior manager, if necessary from outside the service area. They will make initial contact with the employee (and their companion, if applicable) as soon as is possible but not later than **14 calendar days** after receiving the request in their DigiGov worklist. Also present at this meeting will be HR People Services and a confidential note taker (arranged by the manager).

FORMAT OF MEETING

5.20 The purpose of the meeting is to enable the manager to consider the employee's presentation only on the points raised for the appeal, including any relevant documentation. Generally the appeal resolution meeting will follow the same format as the formal resolution meeting (paragraph 5.7).

COMMUNICATION OF APPEAL DECISION

5.21 The manager, after due consideration of the concern will communicate their decision and provide the rationale in writing to the employee (and their companion, if applicable) using the appeal outcome template letter 4.C.458 (**Appendix 4**). This should be done within **14 calendar days** of the meeting. This decision will be final and there are no other appeal rights within the Council.

SECTION 6 UNACCEPTABLE BEHAVIOUR IN SERVICE DELIVERY BY SERVICES USERS/ CONTRACTORS

Where an employee of the Council experiences unacceptable behaviour not by another employee of the Council, but by a service user/contractor, refer to the following policies:-

- Violence at Work Policy (1.CM.056)
- Complaints Policy (1CM.047)
- Redeployment Policy and Procedure (1.CM.207)

SECTION 7 – ADDITIONAL GUIDANCE

1.0 Unacceptable behaviour can range from violence and bullying to more subtle behaviour such as ignoring an individual at work. It can subject an individual or a group to unwelcome attention, intimidation, ridicule, offence or loss of privacy. It is unwanted by the recipient and continues after an objection is made, although a single incident may be serious enough to constitute harassment and justify a concern being raised. There are certain forms of unacceptable behaviour, which, in the interest of clarity, are explained below:-

2.0 Harassment – The Council will regard harassment as being any of the following;

- Unwanted conduct, whether verbal or not, which affects the dignity of the individual at work; or
- Any form of verbal or non-verbal conduct which could be regarded as bullying or intimidating behaviour.
- Unwanted conduct or behaviour witnessed by others- the “third party “ effect.

Harassment can take many forms and can exist where any of the circumstances outlined above apply. It can be visual (including electronic transmission), verbal or physical and may be focussed on an individual's sex, race, ethnic group, religion, personal beliefs, nationality, sexual exclusion, and/or physical contact.

The Equality Act 2010 s26 uses a single definition of harassment to cover the relevant protected characteristic as ‘unwanted conduct related to a relevant protected characteristic, which has the purpose or effect of violating an individual’s dignity or creating and intimidating, hostile, degrading, humiliating or offensive environment for that individual’.

The relevant protected characteristics are age, disability, gender reassignment, race, religion or belief, sex and sexual orientation.

The most commonly experienced forms of harassment are described in the following paragraphs:-

3.0 Bullying - is a psychological form of persecution, which is present behind all forms of harassment and discrimination. Where it has a focus such as race or gender it becomes racial or sexual discrimination or harassment. Where it has no such focus, it is bullying. It may be characterised as offensive, intimidating, malicious or insulting behaviour, an abuse or misuse of power through means that undermine, humiliate, denigrate or injure the recipient.

Examples of bullying / harassing behaviour include:

- Spreading malicious rumours, or insulting some by word or behaviour
- Copying memos that are critical about someone to others who do not need to know
- Ridiculing or demeaning someone – picking on them or setting them up to fail.
- Exclusion or victimisation.
- Unfair treatment.
- Overbearing supervision or other misuse of power or position.
- Unwelcome sexual advances – touching, standing too close, and the display of offensive materials, asking for sexual favours, making decisions on the basis of sexual advances being accepted or rejected.
- Making threats or comments about job security without foundation.
- Deliberating undermining a competent worker by overloading and constant criticism.
- Preventing individuals progressing by intentionally blocking promotion or training opportunities.

Bullying and harassment are not necessarily face to face. They may also occur in written communications, email, phone and automatic supervision methods such as computer recording of downtime from work or the number of calls handled if these are not applied to all workers. (see Social Media policy)

Bullying and harassment can make someone feel anxious and humiliated. Feelings of anger and frustration at being unable to cope may be triggered. Some people may try to retaliate in some way. Others may become frightened and de-motivated. Stress, loss of self-confidence and self-esteem caused by harassment or bullying can lead to job insecurity, illness, absence from work, and even resignation. Almost always job performance is affected and relations in the workplace suffer.

4.0 Other forms of unacceptable behaviour - the following are further examples of specific types of harassment or bullying:

- Any derogatory or offensive behaviour or language which relates directly to political beliefs or membership of a trade union, and real or suspected infection with HIV.
- Any derogatory or offensive behaviour or language which relates directly to any medical condition e.g. real or suspected infection with HIV.
- Inappropriate reference to a person's appearance or character traits, invasion of privacy or practical jokes which cause physical or psychological distress.
- Conduct that is derogatory, patronising, belittling or humiliating to others and is therefore, inappropriate in an environment which is committed to encouraging opportunity for personal and intellectual development.

- Any pattern of behaviour or verbal and non verbal communication that unjustifiably causes distress, patronises, offends, unfairly excludes or insults an individual, directly or indirectly.

5.0 Victimisation

The Council undertakes to support and protect anyone seeking advice, making a concern of unacceptable behaviour, or assisting in an investigation, from the threat of victimisation. Retaliation against an individual involved in such proceedings is a disciplinary offence and will not be tolerated. Where appropriate either this policy or the Council's **Whistleblowing Policy 1.C.015** will operate.

OUTCOME OF RESOLUTION MEETING

I refer to the resolution meeting that you attended on (date) at which you were accompanied by (name). Also present at the meeting was (Name) of HR People Services and (Name) to take minutes.

I have considered all of the written documentation that has been presented along with your presentation of the concerns at the meeting. It was also necessary for me to gather information from relevant people/witnesses who were able to provide information regarding your concern. The people/witnesses whom I have gathered information from are (list).

After careful consideration of all of the evidence, documentation and your verbal presentation to me, I have to advise you that I uphold/ cannot uphold the concern(s) that you have raised.

The rationale for my decision is as follows. I have addressed the concerns as you raised them in your RS1 form which was received by the Council on the (date).

List each concern individually and give conclusions reached for each with the full rationale for the decision and for any recommendations made.

Should you be dissatisfied with this outcome, the Council’s Resolution Policy and Procedure (a copy of which you will have previously received) allows an appeal. Please find enclosed an appeal form (RSA). You must fully complete this form (in DigiGov if you have access) including the grounds for your appeal. You have **14 days calendar** from the decision being communicated to you to lodge an appeal.

Yours sincerely

Dear Councillor Hinchey,

**Policy Review & Performance Scrutiny Committee: 3 November 2015
Review of Disciplinary Policy**

Following your attendance at the Policy Review and Performance Scrutiny Committee on 3 November 2015 to present the Council's policy development work on Disciplinary Policy, Members wish to thank you for your time in facilitating the scrutiny. They found the presentation from Lynne David and Cath Synan most interesting and have asked that, as Chair of the Committee, I relay how pleased they are to be a planned part of the consultation.

The Committee recognises the Council's work over a number of years toward simplification of its policies for the management of staff. In line with this ethos they welcome the reduction in the Disciplinary Policy from 72 to 32 pages, supplemented by five more informal branded guidance booklets as a positive change in supporting senior managers to discipline staff. They are pleased that following an 18 month review, having consulted all Welsh Authorities and 8 large English cities, you are proposing improved management information reporting, and the creation of a bespoke Investigations Team to undertake complex investigations. Particularly pleasing is that Cardiff are considered to be blazing a trail with this revised approach to disciplinary policy.

Members are pleased to hear the Employee Assistance Programme offering staff a twenty four hour, seven day a week, counselling support service will be launched before Christmas; and that the new Resolution Policy recommends a 'preliminary assessment' to determine 'major' and 'minor' disciplinary incidents so that minor incidents can be assigned to the new Fast Track Disciplinary procedure.

Members are united in their view that the number of suspensions reported over the 18 month period covered by the Disciplinary Review is surprisingly high. They note with some concern the finding that a high proportion of disciplinary to grievance cases indicates a heavy reliance on the implementation of formal proceedings to resolve matters. As such they wish to endorse your view that Operational Managers need instruction to address the figures, and may require compulsory training in the new policy.

The Committee feels that the new policy's downward shift in permission to suspend, to Operational Manager level is appropriate, given that investigations are mostly undertaken within Directorates by managers with an understanding of the issues. They consider this shift has the added benefit of retaining an appeal mechanism to Director/Chief Officer level.

Members feel the new proposals are certainly a step in the right direction; however feel there is an opportunity to set clear targets to be reported upon in quarterly performance monitoring reports, in the same manner as sickness absence targets. Such performance indicators should be developed for: the number of grievances logged; the number of actual suspensions as an outcome of disciplinary action; and the length of time taken to resolve disciplinary cases. Members aspire to reduce resolution time to 4 weeks.

The Committee accepts your suggestion that it monitors how implementation of the new policy is impacting on levels of disciplinary cases. They will factor this into future work programming, and wish to monitor the change in management culture through a disciplinary indicator as a part of quarterly Council performance reports.

For future reference, the Committee notes that certain Directorates have high levels of disciplinary cases relative to headcount, which is largely due to the immediate escalation to formal proceedings, and will monitor to establish that the new Fast Track approach is assisting in reducing the number of formal cases.

Finally, the Committee feels very strongly indeed that, where schools personnel are under disciplinary investigation, governing bodies require more solid advice in undertaking Disciplinary action.

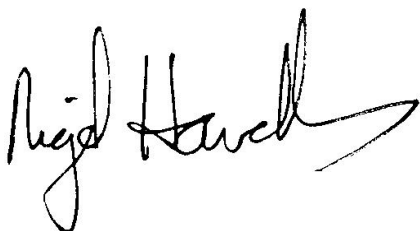

To re-cap, the Committee wishes to monitor:

A disciplinary performance indicator developed with clear target, and progress reported as a part of quarterly Council performance reports for:

- the number of grievances logged;
- the number of actual suspensions as an outcome of disciplinary action; and
- the length of time taken to resolve disciplinary cases.

Finally, on behalf of the Committee, I wish to thank you and the officers for your continued support for the internal challenge of important issues that can improve the quality of services the Council is delivering to its customers.

Yours sincerely,

**COUNCILLOR NIGEL HOWELLS

CF10 4UW

Annwyl / Dear Councillor Howells

**Policy Review & Performance Scrutiny Committee: 03 November 2015
Review of Disciplinary Policy**

Thank you for providing the opportunity to seek the views of the Policy Review and Performance Scrutiny Committee on 03 November 2015 in relation to the review of the Council's Disciplinary Policy and associated procedures. As a key stakeholder group, I felt it was important that you had the opportunity to contribute to this review and gain your views on the changes being proposed. As consultation with Directorates, Trade Unions and the Equality Networks is continuing, we will ensure that your views are considered.

I am pleased that you support the principle of simplifying policies for the management of staff. I would hope that the revisions finally agreed to the Disciplinary policy, the new Resolution policy and the 5 new comprehensive guide notes will assist to streamline this process considerably.

I too am concerned by the number and length of some of the suspensions and the time being taken to conclude disciplinary and grievance issues currently. I firmly believe that the streamlined approach and additional guidance to support the process will help to address this. As referred to at the meeting, the need for transparency and compliance with these processes will be key. Consequently the provision of timely management information will be important for consideration at both Directorate and Senior Management Team meetings.

The new Fast Track process will ensure that there is a speedier avenue to modify behaviour around misconduct issues and this will be a key piece of data to monitor.

Thank you for your suggestions regarding a disciplinary indicator as part of the Quarterly Council Performance reports and this will be explored.

**CITY OF CARDIFF COUNCIL
CYNGOR DINAS CAERDYDD**

CABINET MEETING: 21 JANUARY 2016

**INDEPENDENT COMMISSION ON LOCAL GOVERNMENT
FINANCE WALES: CITY OF CARDIFF COUNCIL RESPONSE**

REPORT OF CORPORATE DIRECTOR RESOURCES

AGENDA ITEM:5

**PORTFOLIO: CORPORATE SERVICES AND PERFORMANCE
(COUNCILLOR GRAHAM HINCHEY)**

Reason for this Report

1. To enable the Cabinet to consider and approve the Council's response to the Independent Commission on Local Government Finance Wales.

Background

2. An Independent Commission on Local Government Finance Wales has been established by the Welsh Local Government Association (WLGA) and the Chartered Institute for Public Finance and Accountancy (CIPFA), the professional body for public finance professionals. The Commission is seeking evidence on how an improved local government finance system could help to address the key economic and social challenges facing the country, at a time when the funding available for local public services is being significantly reduced (see Appendix 1).
3. It is tasked with making recommendations for the reform of local government finance, and with finding better ways of funding local services and promoting economic growth. The Commission's final recommendations will be presented to all of Wales' political parties in order to inform the next Welsh Government, and will help shape the debate on the future of local government in Wales.

Issues

4. In responding to the Commission, it is necessary first to understand the pressures facing public services in Cardiff and consider the emerging models for delivering economic growth and public service reform, and reforms to local government finance which could support these emerging approaches.

5. For Cardiff, there are clear issues associated with rapid population growth and an increase in demand for services at a time of public sector austerity.
6. Between 2002 and 2013, Cardiff's population grew by 13%. This is a bigger percentage increase in population than experienced by any of the English core cities. This growth trend is set to continue with a projected growth of 26% between 2013 and 2034 – an additional 91,500 people – making Cardiff the fastest growing UK City in percentage terms. Cardiff is not only the largest local authority in Wales; it has also experienced the largest population growth in Wales over the last 10 years and is projected to grow far faster than any other Welsh area over the next 10 years. This growth will put significant pressure on the city's physical and social infrastructure, and on its public services.
7. The City of Cardiff Council is facing a budget shortfall of over £115m over the next three years. This follows on from a budget reduction of approximately £103m over the last 5 years. Other public services such as the Cardiff & Vale University Health Board, South Wales Police and the third sector are also facing similar financial pressures.
8. The City of Cardiff Council's response to the Commission (Appendix 2) argues that Welsh Government, local government and public sector partners need to work together to develop responses which are sensitive to the complexities of place.
9. For supporting **economic growth**, this will mean pursuing a city-regional approach, aligning strategic planning and investments across the functional economic area. This approach is currently being developed as part of the City Deal process. The response proposes a series of fiscal and financial reforms which could, if implemented alongside this new model, support economic growth, including:
 - Greater local control over business rates.
 - The introduction of a portfolio of Tax Increment Finance (TIF) initiatives in the Cardiff Capital Region
 - Powers for local government to levy a Supplementary Business Rate to invest in major strategic infrastructure.
 - The introduction of new, small taxes controlled by local government.
10. The **reform of local public services** in the face of increasing demand and funding reductions will require public sector partners to consider how the totality of public resources can be deployed to best effect in a city or a neighbourhood, aligning local budgets and services over several years. This will require budgets that are pooled across local delivery partners, free of national ring-fence constraints and conflicting outcome measures. The Council's response proposes a series of potential fiscal and financial reforms including:
 - The transfer of all specific grants into the Revenue Support Grant (RSG) by Welsh Government to enable greater flexibility to

respond to reducing budgets, and support greater integration locally.

- Multi-year financial settlements to give greater stability in terms of resource planning, and support a move toward preventative services.
- All new burdens that arise as a result of changes in Welsh Government or UK Government policy to be fully funded.
- Reform to enable join up of funding and services locally to deliver better outcomes.
- Devolution of budget and greater local control of national funding programme – for example, the Communities First and Families First outcomes framework.
- Decisions on capital spend to be devolved to local partners, to enable a joined-up local asset management plan for public services to be developed and delivered.

11. Welsh Government set out in the 'Power to Local People' White Paper their aspiration **to renew local democracy**. The Council argues in its response to this White Paper that the best way to achieve this would be through devolving responsibilities and resources down to local authorities and communities, putting decision making in local hands and giving people a major say in how their taxes are spent on the issues that affect them. The Council's response to the Commission proposes a series of reforms which could support a vibrant local democracy including:

- The principles of local democracy to be respected in the setting of local taxation.
- Responsibility for Council Tax exemptions to be devolved to local authorities.
- Local Government to be able to set fees and charges for all discretionary services.
- The protection of Local Authorities' ability to undertake prudential borrowing.

12. The Council's Economy and Culture Scrutiny Committee is also currently undertaking a Task & Finish Inquiry to examine specifically the issue of Cardiff's National Non Domestic Rates (NNDR) allocation. The Committee is considering the current arrangements for business rate collection and redistribution in Wales and whether it is benefiting or impeding economic growth and the development of the city's economy. The recommendations arising from the Committee's work will be considered by the Cabinet in due course and, any further points in addition to the Council's response, as set out in Appendix 2, will be communicated to the Welsh Local Government Association, which provides the secretariat function to the Independent Commission on Local Government Finance Wales.

Reason for Recommendations

13. To enable Cabinet to consider and agree the Council's response to the Independent Commission on Local Government Finance Wales.

Financial Implications

14. The report sets out the background to the financial challenge facing the Council and other Local Authorities across Wales. Whilst there are no direct financial implications arising from this report and its associated appendices, Appendix 2 outlines a strategic financial direction for the medium and longer term.

Legal Implications

15. The Cabinet has authority to agree responses to consultation papers from the Welsh Government and all other bodies in respect of strategic policy matters, and accordingly has power to agree the Council's response to the Independent Commission on Local Government Finance.
16. There are no direct legal implications arising from the recommendations of this report.

RECOMMENDATIONS

The Cabinet is recommended to:

1. note the ongoing Economy and Culture Scrutiny Committee Task & Finish Inquiry into the issue of Cardiff's National Non Domestic Rates (NNDR) allocation; and
2. agree the Council's response to the Independent Commission on Local Government Finance Wales.

CHRISTINE SALTER

Corporate Director

15 January 2016

The following appendices are attached:

Appendix 1: Background Paper on the Independent Commission on Local Government Finance Wales

Appendix 2: Draft Council Response to the Independent Commission on Local Government Finance Wales

Independent Commission on Local Government Finance Wales – Background Paper

About the Commission

The Independent Commission on Local Government Finance Wales is tasked with making recommendations for the reform of local government finance, and with finding better ways of funding local services and promoting economic growth.

The Commission's final recommendations will be presented to all of Wales' political parties in order to inform the next Welsh Government, and will help shape the debate on the future of local government in Wales.

The Independent Commission was established by the Welsh Local Government Association (WLGA), the national voice of local government in Wales, and the Chartered Institute for Public Finance and Accountancy (CIPFA), the professional body for public finance professionals.

The Commission will explore how an improved local government finance system could help to address the key economic and social challenges facing the country, at a time when the funding available for local public services is being significantly reduced.

Membership of the Commission

- Professor Tony Travers – Chair
- Chris Hurst
- Professor George Boyne
- Gill Lewis
- Harry Thomas
- Lynn Pamment
- Simon Parker

Questions

1. What are the strengths and weaknesses of the existing system of local government finance in Wales?
2. Are the objectives of central funding to local government clear and consistent? Is the grant system in need of reform?
3. Is council tax fit for purpose? What reforms might be made, if any?
4. Is the non-domestic rate working well? What reforms might be made, if any?
5. How do reductions in council expenditure affect the sustainability and quality of services? Might different financing arrangements (not just additional resources) improve the outlook?
6. Are grant distribution mechanisms fit for purpose and what changes would be desirable?
7. Will the potential structural reorganisation affect the operation of the system? Would it provide an opportunity for a parallel financial reform?
8. Would you favour local government in Wales taking control of additional taxes? If so, which ones?
9. Should incentives for growth play a greater role in the funding system?
10. Are any reforms required to the system of capital expenditure determination and funding?
11. Are there issues relating to the finance of housing which adversely affect local government? If so, do you have suggestions for change?
12. Could fees and charges be used to a greater extent than at present?
13. Can the quality of management and accountability be strengthened by improved financing arrangements?

APPENDIX 2

Independent Commission on Local Government Finance Wales: The City of Cardiff Council Response

1. Introduction

In responding to the questions asked by the Independent Commission on Local Government Finance in Wales, this paper first considers the pressures facing public services in Wales and the emerging models for delivering economic growth and public service reform, before considering the reforms to local government finance which could support these approaches.

Reforming public services and securing economic growth in the face of cuts, and catalysing local democratic renewal, will require responses which are sensitive to the complexities of place.

For supporting economic growth, this will mean pursuing a city-regional approach, aligning strategic planning and investments across the functional economic area.

For public service reform this will mean a fundamental rethink about how public money is spent in a more effective way, asking how the totality of public resources can be deployed to best effect in a city or a neighbourhood, aligning local budgets and services over several years. This will require budgets that are multi-year and increasingly pooled across local delivery partners, free of national ring-fence constraints and conflicting outcome measures.

The City of Cardiff Council supports the further devolution of powers to the Welsh Government. But it's vital that the benefits of new powers do not just recreate a local version of an unresponsive centralised state. The Council believes that the Welsh Government needs to inventively use the powers they currently have, working with local partners to develop policies which meet the distinct needs of each part of Wales, whilst also recognising the capital city's role in powering the Welsh economy. Cardiff, Cardigan and Caernarfon are very different places and therefore need to be given the freedom to develop different responses, within an outcomes and funding framework set by the Welsh Government.

Developing these responses should not be dominated by a sterile debate about structures. Local government reorganisation can only ever be part of the solution. What is more, the challenges facing local services are immediate. Change to services is happening on the ground **now**. There are pressing demand and financial challenges facing all public services, and these cannot wait for – and in any case will not be solved by – Local Government Reorganisation.

The City of Cardiff Council recognises that local government cannot simply defend the institutional status quo at a local level while arguing for wholesale devolution and the transformation of powers from the centre. If local government is arguing for change, it too must be open to change and to creating the structures and institutions necessary to deliver. With the emerging city-regional approach to economic growth, and the integrated city-level governance and neighbourhood partnerships arrangements for reforming public services, strong foundations are already in place.

2. Delivering Economic Growth

2.1 Cities as drivers of growth

*'Cities are the economic motors of the country. In the UK, they cover just 9 per cent of its landmass but contain 54 per cent of the population and generate 60 per cent of its GVA with 53 per cent of all businesses and 72 per cent of all highly skilled workers. Sustaining cities requires a combination of investments to meet their social needs, help grow their economies and make them better places to live and work. We consider that civic leaders, working with local stakeholders, are much better positioned to get this right than Whitehall officials and ministers working in a number of separate and insufficiently coordinated departments. Better governance would be possible through deciding locally about priorities and helping to integrate investments. In the UK, cities need greater freedoms and tools to do this work; we consider these prerequisites for stronger economic growth.'*¹

Report after report has demonstrated that cities drive economic growth, and that cities with the greatest freedom to invest in infrastructure, skills, trade and innovation are the ones that perform best. Though there is a strong correlation between the levels of local financial control in cities and how competitive and productive they are, cities in the UK typically control only 5-7% of their total tax base – rising to 8%-9% with the devolution of business rates (**with our estimates putting Cardiff at the lower end of this scale; near 5%**). In Canada 10 times this amount is controlled locally or regionally, in the US it is 7.5 times greater, Germany 6 times and 5 times that amount across the OECD on average.

2.2 Cardiff as driver of Growth in Wales

Between 2002 and 2013, Cardiff's population grew by 13%. This is a bigger percentage increase in population than experienced by London or any of the English core cities. This growth trend is set to continue with a projected growth of 26% between 2013 and 2034 - an additional 91,500 people – making Cardiff the fastest growing UK City in percentage terms.

Cardiff is not only the largest local authority in Wales, it has also experienced the largest population growth in Wales over the last 10 years and is projected to grow far faster than any other Welsh area over the next 10 years.

This economic and population growth is good news – a successful city attracts people, particularly talented people.² However, it also brings challenges. Accommodating this growth will mean 41,100 new homes will need to be built and 40,000 new jobs created by 2026. New transport infrastructure and services – roads, buses, trains, cycle-routes – will also be needed to keep the city moving, particularly at peak times. Accommodating this population growth in an inclusive, sustainable manner, and doing so in a way which does not damage Cardiff's economic performance is a major long term challenge for the city, and given its importance for the Welsh economy, for Wales.

The capital city is the economic engine of the city-regional economy. Nearly 2 out of 3 net new jobs created in South East Wales over the last 10 years have been in Cardiff. Each day around 80,000 people – over a third of the city's 200,000 workforce – commute in to Cardiff from elsewhere in the Cardiff Capital Region. Similarly, the capital city hosts major events on behalf of the whole of Wales, and is the centre for culture and leisure for the city region's 1.4m population.

¹ Raising the Capital, (Travers, 2013).

² The Metropolitan Century, OECD (2014) **Page 208**

These additional capital city responsibilities come with additional costs, and for Cardiff to continue to play this important role on behalf of Wales this needs to be reflected in the funding settlement.

While the city is growing fast, and creating jobs, the wider Cardiff Capital Region is continuing to perform relatively poorly against UK and European average, leading to a 'productivity gap' which is amongst the largest of all UK core cities, and getting bigger.

- GVA per capita in the Cardiff Capital Region is only 76% of the UK average.
- This leads to an annual 'GVA gap' of £9.4bn against the UK average. The Total Welsh GVA is £46bn.
- Looking internationally, GVA per person in Munich is nearly double that of the Cardiff Capital Region.

For Cardiff to continue to succeed, its growth needs to be managed – and financed – in a sustainable and coherent manner, in the context of the Cardiff Capital Region.

Wales needs Cardiff to succeed. In turn, Cardiff needs to be an effective and outward looking capital city, powering Wales, providing opportunities, attracting people, tourists, students, businesses and investment in to the Capital Region.

2.3 A place-based, integrated approach to supporting economic growth

*'The fragmentation of a city's administration and the quality of its governance structure is directly related to its economic strength. Cities with fragmented governance structures tend to have lower levels of productivity; for a given population size, a metropolitan area with twice the number of municipalities is associated with around 6% lower productivity. This effect is mitigated by almost half by the existence of a governance body at the regional level.'*³

A tailored response at the sub-national level which reflects economic geographies is needed, not a single local authority approach or a one-size-fits-all approach for Wales. In South East Wales and the Swansea Bay area this means a city-regional approach. A different response will be required for North Wales and for mid and West Wales which reflects their own economic geographies, challenges and opportunities. Leaders in the Cardiff Capital Region are taking this agenda forward, having committed to aligning strategy, resources and delivery capacity at the city-regional level as part of a **City Deal** proposal.

These proposals include:

- **Strategic Infrastructure Planning, Investment and Commissioning:** Responsibility for long-term strategic infrastructure investment plan to direct infrastructure investment priorities, aligned to the Welsh, UK and European Infrastructure Investment Plans, setting out the costs of strategic investment options and matching them to resources available.
- **Transport.** Devolved and integrated long-term transport funds, with powers to deliver an improved, joined-up local transport offer, shaping local bus services, local rail policy and integrated smart ticketing.
- **Skills and jobs:** Locally tailored skills provision to meet the needs of business and get more people into the jobs they train for.
- **Business, trade and investment:** Fully, locally integrated business support, trade and investment budgets and services to simplify and get more return per pound of investment.

³ The Metropolitan Century, (OECD, 2015)

2.4 Fiscal and Funding Reform required to support the new model

In addition to pooling resources, the Capital Cardiff Region proposes to be inventive with the tools available to promote growth. There is a radical agenda of devolution of powers and responsibilities to metro areas emerging in England (and to a lesser extent, Scotland). However, even the most advanced ‘devo deal’ struck between Westminster and Greater Manchester does not deliver the powers already available through Welsh devolution.

“...even the most advanced ‘devo deal’ struck between Westminster and Greater Manchester does not deliver the powers already available through Welsh devolution”

For example, **reform of Business Rates**. The decision by the Welsh Government to place business rates policy within the Minister for Economy’s portfolio suggests that WG see it as a lever for achieving economic or business policy aims, not as simply a stable source of revenue for Welsh Government. Yet Welsh Government has adopted a ‘business as usual’ approach, with a recommendation for stability in the short and medium term and the potential for devolution and greater local retention only being considered following local government reorganisation. This could be over 5 years away. We believe localisation of business rates should be a priority area of fiscal reform. This reform would both incentivise local authorities to promote growth and provide additional revenues to help balance budgets. We believe that the Welsh Government should look again at this issue to ensure that Cardiff and the wider city-region are not left behind English cities.

Additional areas of consideration could include:

- The introduction of a portfolio of **Tax Increment Finance (TIF)** initiatives in the Cardiff Capital Region, overseen by Welsh Government.
- Powers to levy a **Supplementary Business Rate** to invest in major strategic infrastructure – for example the Cardiff Metro – in a similar way to the London Crossrail scheme (2p in the pound) and West Yorkshire should also be examined.
- Increased **Revenue Raising Capacity**, through the introduction of new, small taxes. Though the sums raised by these taxes are relatively small, they do unlock a revenue stream to service some borrowing costs and could include:
 - Tourist / Hotel tax
 - Recycling / Waste taxes
 - Local sales taxes

If introduced these should be fully devolved to local areas and should be considered a net addition to local budgets, and so should not be considered when assessing the revenue support grant.

2.5 Governance

City-regional governance for the Capital Cardiff Region will be required to deliver this approach, based on a real partnership between Welsh Government, local government and the private sector, along with clarity over roles and responsibilities. Building on the City Deal, a strategic, coherent, cross local authority boundary and cross- UK and Welsh government department approach to the Cardiff Capital Region is now needed.

3. Reforming Public Services

3.1 Austerity

The UK's fiscal position continues to present the greatest challenge for public services, with a likelihood that they will have to operate at 35% of GDP and stay there for the foreseeable future, with the greater reduction in spending (60%) are still to come.⁴ The funding gap in Wales has been estimated to be between £2.6bn and £4.6bn by 2025.⁵

The City of Cardiff Council has made over £120m in savings over the past 5 years, and is facing a budget shortfall of over £120m over the next three years. This situation is unprecedented and arguably unsustainable. Indeed, the demands upon the local state are so extreme that in many authorities just one service, adult and children's social care, is projected to swallow up the entire expenditure of some English local authorities within the next 10 years.

Paradoxically, whilst public spending has been cut severely for some services like local authorities the overall levels of Government funding has not gone down in any of the UK Core Cities during the last five years.⁶ This is happening because budget cuts to preventative services- many of which are delivered by local authorities- are leading to equivalent rises in public spending on crisis services, particularly for health and welfare.

3.2 Demand Pressures

Cardiff's rapid growth will put pressure on the city's social infrastructure and public services. A 25% increase in school age children will mean that we will need more schools and more teachers in Cardiff – indeed, the equivalent of 2 new primary schools per year are already being built in Cardiff. Similarly older people – particularly those over 85 years old whose numbers are expected to nearly double in Cardiff over the next 10 years - are far more likely to need health and care services to help them live independent lives.

“... over 60,000 people in Cardiff – more than the entire population of Merthyr – are amongst the 10% most deprived in Wales.”

Big cities, like Cardiff have big social challenges as well as big economies. The recently published Liveable City Report demonstrated clearly that the city faces substantial economic and social inclusion challenges. Unemployment levels, though low in comparison to Core Cities, are persistently higher than the all-Wales average. Crime rates are also persistently higher. Over a quarter of households in Cardiff – that's over 41,000 homes - are deemed to be living in poverty, whilst only two other local authorities in Wales have a higher percentage of people who are amongst the 10% most deprived in Wales. In effect, over 60,000 people in Cardiff – more than the entire population of Merthyr – are amongst the 10% most deprived in Wales.

3.3 The challenges of the current approach

The challenges facing many local communities, families and individuals are often complex and deeply entrenched, requiring multiple and simultaneous interventions across a range of issues – housing, training, employment, childcare. This demands a more effectively 'joined up' government which coordinates and integrates delivery at the local level.

⁴ Office of Budget Responsibility

⁵ (Mark Jeffs, WAO).

⁶ Unlocking the Power of Place, Core Cities (2015)

Yet too often top down 'vertical' funding arrangements deny the flexibility needed to work across departmental boundaries and effectively align services to meet local and individual need. Funding is already locked in, contracted and committed, and services already specified, with pre-determined targets and outputs, long before local partners are able to influence delivery.

Furthermore, the current siloed system of spending means that often there is a financial disincentive to invest in preventative activities. If, for example, a local authority has to spend more from its budget on preventative activities, but the savings accrue in other organisations such as health, the police or other government departments, then local authority budgets remain strained, providing poor incentive for change.

In addition, the obligation to budget year on year inhibits the ability to do integrated, local long term planning.

"... funding is already locked in, contracted and committed, whilst services are already specified through pre-determined targets and outputs, long before local partners are able to influence delivery.."

3.4 Towards place-based, integrated approach to public services

A place-based, integrated approach does not (necessarily) rely on more money, but on a fundamental rethink about how public money is spent in a more effective way, asking how the whole of public resources can be deployed to best effect in a region, city or a neighbourhood, aligning local budgets and services over several years.

This will require better local co-ordination of funding and services, focusing on people and place, wrapping services around individuals and families, and aligning local and national services, for example integrating health and social care. This will require a move towards multi-year budgets that are increasingly pooled across local delivery partners, free of national ring-fence constraints and conflicting outcome measures.

Local Authorities have a long history of partnership working between local government and other public sector agencies. Cardiff has been a pioneer in this area in Wales, having successfully delivered a Local Service Board and Neighbourhood Partnership model which has played a key role in targeting multi-agency intervention. This is recognised in the recent Local Government White Paper, with Cardiff's approach cited as a case study.

There has also been significant success in aligning resources at a neighbourhood level through the delivery of Welsh Government programmes such as Flying Start, Communities First and Families First. These programmes have demonstrated the benefits of addressing complex dependency through the ability to co-commission and pool budgets at the local level.

The City of Cardiff Council has also been consolidating local public services in Community Hubs. The goal is to respond to reducing budgets, protecting services through analysing and responding to (hyper) local demand, consolidating existing (fragmented) assets and services in one place and co-delivering services with local partners. A single location for local services also provides a much simpler means of accessing these services for local residents. For example, the Ely and Caerau Hub which opened in 2014 brought together library, into-work, housing and welfare advice in to one building, alongside a café and community spaces. The goal is for there to be at least one hub in each neighbourhood partnership area, tailored to the needs of that local area, based on needs analysis and consultation. There will not be a 'one size fits all' approach.

By adopting an integrated, place-based approach, local partners and agencies have been able to coordinate and concentrate their efforts, making sure the most disadvantaged and troubled neighbourhoods, families and individuals are receiving the right service, from the right people at the right time.

But we need to go further, faster – with these approaches the becoming the norm, rather than the exception. We need to expand our emerging approach to consider the whole spectrum of public investment going into, and assets which exist in, a ‘Neighbourhood Area’ and better align - or where possible wholly integrate - these to deliver more efficient, joined-up public services.

3.5 Purposeful Partnerships

The ‘Power to Local People’ White Paper and the Well-being of Future Generations Act, places emphasis on the importance of Public Service Boards in delivering a place-based, integrated approach. In order to do so, they must not become bureaucratic structures, but instead be purposeful partnerships, with partners identifying joint issues and common problems, agreeing outcomes, pooling inputs and resources, sharing systems, assessments and data and jointly commissioning services.

In return, Welsh Government should delegate budgets and responsibility for assets down to the Public Service Board to enable a joined-up, long-term strategy for public service delivery to be implemented. For example, local partners need freedom to join up funding and services locally to deliver better outcomes, including: Early Years; Complex Families; Frail Elderly; Offender Management; Worklessness and NEETS; and Health and Social Care integration.

Similarly, to consolidate public services all local partners need the ability to manage their physical assets in response to local needs. In particular, the Local Health Board should have devolved responsibility for capital spend.

To enable longer term planning and a shift to preventative services, this needs to take place in the context of multi-year budgets.

3.6 Fiscal and Funding Reform required to support the new model

Delivering the new model would require:

- The **transfer of all specific grants into the RSG** to enable greater flexibility to respond to reducing budgets, and support greater integration locally.
- **Multi-year financial settlements** to give greater stability in terms of resource planning, and support a move toward preventative services.
- All new burdens that arise as a result of changes in Welsh Government or UK Government Policy to be **fully funded**.
- **Freedom to join up funding and services locally** to deliver better outcomes, including: Early Years; Complex Families; Frail Elderly; Offender Management; Worklessness and NEETS; Asset management; and Health and Social Care integration.
- Devolution of budget and greater local control of national funding programme, for example the **Communities First** and **Families First** outcomes framework
- **Decisions on capital spend to be devolved to Public Service Board members**, to enable a joined-up local asset management plan for the public services to be developed and delivered.

4. Responsibility, Accountability, Democratic Renewal

4.1 Local power in local hands

Welsh Government set out in the 'Power to Local People' White Paper their aspiration to renew local democracy. Devolving responsibilities and resources down to local authorities and communities, putting decision making in local hands and giving people a major say in how their taxes are spent on the issues that affect them can be expected to support this aspiration. The White Paper proposal to explicitly rule out further devolution of powers or freedoms to local authorities until any structural reforms have been undertaken therefore runs contrary to the desire to renew and reinvigorate local democracy.

Equally, it is fair to say that voters will only endorse new powers and new possibilities of local governance if they come with greater transparency and accountability. If local government is arguing for change, it too must be open to change and to creating the structures and institutions necessary for delivery, transparency and accountability.

4.2 Council Tax

Council Tax was revalued in Wales in 2005 and revised bandings were agreed on a national basis which did not reflect regional variances in value for similar property types. As a result, even though the yield in Wales increased by only 0.5%, the yield in Cardiff went up by 6.5% or 13 times the Welsh average. This resulted in 86,000 households increasing in band; therefore, any change to the system in future should take into account regional variations as one size clearly does not fit all.

Local Authorities should also be given greater flexibility to vary or remove discounts and exemptions. The additional income generated should not be included in the Council Tax Base calculation as Local Authorities should be able to use any increase in yield to help fund services. An example of this is the single person discount, which is currently 25% and costs £15 million a year in Cardiff. A reduction to 20% would generate an additional £3 million in income each year.

Similarly, the exemption for student properties should be reviewed, with the responsibility for setting this devolved to the local authority.

4.3 Business Rates

As set out in section 2.4 localisation of business rates should be a priority area of fiscal reform. In England there is already a localisation scheme in place with local authorities retaining 50% of any increases in yield and there is now a firm commitment to 100% localisation by 2020.

Cardiff is a major contributor to the pool in excess of £70 million each year. Reform in this area would incentivise the city – and other local authorities – to both promote economic growth and provide additional revenues to help balance budgets.

Given the need to plan and promote economic growth at a city-regional level (as set out in section 2.3), alongside the need to mitigate against local competition and displacement between neighbouring local authorities, there is a case could also be made for the devolution of business rates to the city-regional level. The Cardiff Capital Region currently raises 52% of the total Welsh business rates and get 48% back in terms of share. In this scenario Cardiff's contribution is broadly balanced by the recipient authorities.

In addition to the reforms to Business Rates discussed earlier in this paper, we would argue that more local flexibility should be introduced in the level of the multiplier to give Local Government more control over the total yield. Consideration could be given to linking the percentage increase in the multiplier to that of Council Tax.

Business rates have become increasingly complex in recent years with the number of reliefs available increasing making the system more bureaucratic to administer and more complicated for business to understand. A good example of this is the Wales Retail Relief Scheme which was application only for 2014/15. Many businesses already in receipt of Small Business Rate Relief didn't realise that they could also claim this relief. This system should be simplified.

4.4 Flexibility and Resilience

One of the key weaknesses of the current system is that balance between the finance received by local authorities in the form of the Revenue Support Grant and other grants, and the ability for local authorities to raise finance locally.

In addition to the proposed changes to Council Tax and Business Rates there are opportunities to create a more diversified funding base for local authorities, thus enhancing resilience.

Newly devolved taxes including stamp duty and landfill could be treated like business rates, collected by local authorities, pooled centrally and then redistributed among local authorities according to a Welsh Government formula. That need not imply any overall increase in their funding if the Welsh Government reduced the revenue support grant accordingly but it would mean more local authority spending was financed by their own tax collection.

Local Government needs to be given the opportunity to raise additional taxation to help diversify its funding base, and ultimately pay for services. This would include the ability to create new, small taxes (see above), and the ability to set fees and charges for local services where appropriate.

The only bodies in Wales that currently have experience of tax collection and administration are local authorities. It therefore makes more sense to use that experience in collecting the smaller taxes to be devolved – landfill and stamp duty.

The value of income collected by Welsh Local Government is significantly higher than the estimated £200 million included in the new devolved taxes which the new Welsh Revenue Authority will be responsible for. Currently, Welsh Authorities collect £1,300 million in Council Tax and £895 million in business rates. Collection rates overall are also extremely high and there is an opportunity to learn from the experience of Local Government.

Fiscal Responsibilities

- **The principles of local democracy to be respected in the setting of local taxation.**
- Responsibility for **Council Tax exemptions** to be devolved to local authorities.
- Local Government to be able to **set fees and charges** for all discretionary services.
- Freedoms to introduce new local taxes subject to local consultation with affected stakeholders.
- The protection of Local Authorities' ability to undertake prudential borrowing and the availability of capitalisation directions.

This page is intentionally left blank

**CITY OF CARDIFF COUNCIL
CYNGOR DINAS CAERDYDD**

CABINET MEETING: 21 JANUARY 2016

**CCTV BODY WORN CAMERA POLICY AND PILOT
DEPLOYMENT**

REPORT OF CORPORATE DIRECTOR RESOURCES

AGENDA ITEM: 6

**PORTFOLIO: CORPORATE SERVICES AND PERFORMANCE
(COUNCILLOR GRAHAM HINCHEY)**

Reason for this Report

1. To approve the Council's policy for determining the use of personal body worn CCTV camera equipment together with a pilot deployment.

Background

2. The development of body worn camera equipment has accelerated with many organisations across the UK and wider now implementing the equipment as part of their business practices.
3. Several service areas across the Council have requested to use CCTV body worn camera devices. It is important that as the Council changes the way it delivers services, whether this be through service improvement initiatives, or alternative delivery models, that a clear policy on the deployment and governance of body worn camera equipment, together with the decision making process is put in place. This will ensure the appropriate and lawful use of such technology throughout the Council.
4. The legislation, and the interaction of the legislation, which applies to body worn cameras is complex, and in order to manage the risks any deployment should be monitored closely. As a result the Council needs to put a policy and effective arrangements to assess, monitor and evaluate requests and deployments in place. This will ensure that the obligations and requirements of the Data Protection Act 1998, the Human Rights Act 1998, the Information Commissioner's CCTV Code of Practice and the Surveillance Commissioner's Code of Practice are all taken into account.

The Policy

5. The draft CCTV Body Worn Camera Council Wide Policy is attached (Appendix 1) and this Policy sets out the:

- strategic policy statement
 - assessment process
 - decision making process
 - purpose for deploying Body Worn Cameras
 - use and control of the devices
 - staff training
 - storage and retention of recordings
 - access, viewing and disclosure of stored data
 - audit arrangements
 - review of the Policy
6. Appendix 1c to the Policy relates to the Privacy Impact Assessment. The Privacy Impact Assessment will be key to the decision making process as it assesses privacy i.e, the risks around the privacy of individuals in the collection, use and disclosure of information. This Assessment will also identify risks to individuals' privacy together with Data Protection compliance liabilities for the Council.

Pilot Arrangements

7. The draft Policy and the existing information governance arrangements have been used to assess and determine the pilot deployment in the Civil Parking Enforcement Team (Appendix 2)
8. The body worn cameras will assist in providing recorded visual and audio evidence of threats to safety in connection with any parking enforcement managed by the Council. They will be used for:
- Staff safety and protection
 - Staff training and development
9. The operation of these cameras will be on a 'use when necessary' principle. This means that activation will only occur when there is a perceived act of aggression towards an officer and in order to ensure that these cameras are used appropriately and in accordance with the legislative requirements a review process has been built in. This will inform the overall evaluation of the deployment, including lessons learned to be fed into any future deployment requests.
10. Once the deployment of the cameras has been reviewed by both the service and the Improvement and Information Team further potential deployments will be assessed in line with the Policy. All deployments are approved by the Senior Information Risk Owner (SIRO), who has delegated authority under the Council's Scheme of Delegation to determine to manage and maintain compliance with the Data Protection Act 1998, and the Council's Data Protection policies and Privacy Impact Assessment requirements under the CCTV Code of Practice. It should be noted that the associated Privacy Impact Assessment and decision will be added to Appendix 1C of the CCTBV Body Worn Camera Policy in order to keep an accurate and up to date schedule of deployments.

11. The Improvement and Information Management Team will provide training for officers on the correct and appropriate use of the cameras and protocols prior to them being issued. The Civil Parking Enforcement Officers will also receive diversity training surrounding the appropriate use of the equipment prior to the devices being issued
12. The City Operations Directorate will be required to ensure that required provisions are in place to enable the Information Management Team and Internal Audit to undertake an audit of the use of the cameras, including spot checks, and to ensure that there are provisions in place to complete assessments and training on an annual basis.
13. The use of cameras will be for limited/specific purposes as defined within the Council's Policy and it should be noted that failure to use devices as outlined within specific parameters for which they are authorised would be classed as a breach of the Data Protection Principles and therefore a criminal offence.

Reasons for Recommendations

14. The Policy and decision making process will ensure that the risks associated with the use of the body worn cameras are managed, and that the pilot deployment will provide a level of evidence to inform a review of the implementation of the Policy.

Legal Implications

15. The legislation covering this area is as set out in the CCTV Body Worn Camera Council Wide Policy. Particular regard needs to be had to training, secure storage and appropriate processing of all recorded data to ensure compliance with the legislative requirements.
16. The Council has to satisfy its duties under the Equalities Act 2010 (including the specific Welsh public sector duties). Pursuant to these legal duties Councils must in making decisions have due regard to the need to:
 - (a) eliminate unlawful discrimination,
 - (b) advance equality of opportunity and
 - (c) foster good relations on the basis of protected characteristics
17. As such the decision on the recommendations in this report and will need to be made in the context of the Council's Equality Act public sector duties.
18. This will include undertaking an Equality Impact Assessment to ensure that the Council has understood the potential impacts of the decision in terms of equality so that it can ensure that it is making proportionate and rational decisions having due regard to the public sector equality duty.

Financial Implications

19. There are no financial implications arising directly from this policy. However, in implementing the policy the cost of the equipment and any other associated items will need to be funded from individual directorate budgets linked to the specific project. In respect of the pilot referred to in this report the costs will be funded from the Civil Parking Enforcement Account.

RECOMMENDATIONS

Cabinet is recommended to

- 1 approve the CCTV Body Worn Camera Council wide Policy (Appendix 1)
- 2 note the current delegation to the Council's Senior Information Risk Owner in relation to approvals for Body Worn cameras initiatives that accord with the Policy.

CHRISTINE SALTER

Corporate Director
15 January 2016

City of Cardiff Council

CCTV Body Worn Camera Council Wide Policy

Introduction

This policy is a statement of the principles and assurances which govern the use of CCTV Body Camera units by the Council. It provides best practice advice for those involved in using CCTV Body Camera units and utilising the material recorded.

The Policy has been drawn up to govern the management of all operations of CCTV Body Worn Cameras within the Council which are subject to the provisions of the:

- Data Protection Act 1998
- ICO CCTV Code of Practice requirements
- Human Rights Act 1998
- Surveillance Commissioners' Code of Practice.

This policy will operate in conjunction with the Council wide [CCTV Policy and Code of Practice](#)

This policy will assist users of CCTV Body Camera units and users of information recorded on CCTV Body Camera unit to comply with their legal obligations under the Data Protection Act 1998 and where applicable, the Human Rights Act 1998 and the Freedom of Information Act 2000.

The adoption and implementation of this policy will also ensure

- ongoing compliance with any data protection good practice notes as may be released from time to time by the Information Commissioner's office
- that captured and retained images, and sounds, are of a suitable evidential quality
- confidence in the Council by those persons whose personal data may be captured, retained or shared

A number of appendices have been attached to this policy to assist in the deployment and usage of CCTV Body Camera units. These dependencies include links to corporate policies and processes which services will have to adhere to, and includes a copy of the Privacy Impact Assessment(s) completed where authorisation to use devices has been granted.

Strategic Policy Statement

The Council will not use CCTV Body Worn Cameras as “spy systems”. There will be no interest shown the deliberate monitoring of people going about their legitimate business.

CCTV Body Cameras will only be deployed in an overt fashion. The covert use of a CCTV Body Camera device will not be permitted.

All devices used by the Council must be encrypted and procedures adopted by services to ensure the secure processing of personal data.

Assessment Process

All devices operated are subject to Privacy Impact Assessments in line with the CCTV Code of Practice to ensure they there are legitimate purposes for processing in line with the requirements of the Data Protection Act 1998 and Article 8 of the Human Rights Act 1998.

Decision Making Process

Each service of the Council who wish to use this technology will be required to have completed a Privacy Impact Assessment and the suitability of use will be considered and authorised by the Council’s Senior Information Risk Owner

Purpose for deploying Body Worn Cameras

The Council will deploy CCTV Body Camera units to assist in providing recorded visual and audio evidence for the following purposes:

- staff safety and protection,
- staff training and development

Use and Control of the Devices

Activation will only occur in cases where there is deemed to be a potential threat to officer safety.

Where a deployment of CCTV Body Camera unit is undertaken within the areas of staff safety and protection, it will be deployed in a 'use when necessary' mode. This means that the CCTV Body Camera in normal/default mode will be switched to off and the system will be switched on to 'record'

only when a staff member perceives aggression. The unit will remain in record mode until such time as the staff member considers that the threat is no longer perceived.

CCTV Body Camera units deployed for this purpose will enable partial records of staff movements and actions are obtained to:

- assist in the investigation of any allegation of assault or abuse where a staff member is either the alleged victim or alleged aggressor
- cater for any random or unexpected act of assault or abuse, staff, members of the public and investigating agencies can have a greater confidence in the fact that a recording has been made of the incident

The definition of Perceived Aggression in this context is:

- an individual threatening an Officer with a weapon, or other object
- an individual threatening an Officer with the intention of causing bodily harm
- an individual encroaching within an arms-length of an Officer (within their personal space)
- an individual making physical contact with an Officer

Any inappropriate use will be detected when the footage is later reviewed and any action that could give rise to concern will be fully investigated. All instances of when the CCTV Body Camera has been used for recording during a relevant activity or incidents will be logged by the officer who has used the camera and verified by a supervisor.

All staff using a CCTV Body Camera unit will visibly display a sign identifying their use of CCTV Body Camera equipment and as far as is practicable, inform members of the public who may be the subject of a recording that they are being recorded.

Staff Training and Development

Training will be provided by the Improvement and Information Team who will ensure that the appropriate staff are trained in the use of the device, their responsibilities, and the restrictions relating to the recording of activities and individuals. This training will take place in a controlled environment.

This training will be supplemented by specific training provided by accredited bodies such as City & Guilds based on the needs of the specific deployment.

All training will be recorded on the individual's HR file.

All staff using CCTV Body Cameras will be issued with specific managerial instructions relating to the use of CCTV Body Camera. This includes possible disciplinary consequences should they fail to use the device in an approved manner or should they tamper, or interfere, with recorded sound or images.

Storage and Retention of Recordings

For data protection purposes the Council will act as the Data Controller for any obtained or retained recorded material.

The Council will ensure that it complies with all necessary legislation and obligations and as such services authorised to use such technology will be required to have clear procedures established setting out how storage and retention of recordings will be handled.

All recorded material will be securely stored to ensure that at all times no unauthorised access to recorded material is allowed. All access to stored data will be recorded.

On a daily basis, or as and when an incident occurs, recorded material stored on a CCTV Body Camera will be transferred to a secure server on the Council system. Stored data must be retained in a manner that allows for a defined CCTV Body Camera unit's data to be separated from any other CCTV Body Camera unit's data and uniquely identified at all times.

Following the transfer of recorded material to a secure Council server, CCTV Body Cameras must be electronically cleansed to erase all stored data prior to any further usage.

Stored data or images will not be retained for longer than necessary. In some cases, especially where the data or images are to be used for legal purposes, it may be necessary to retain, data or images for longer than the normal retention period. Where it becomes apparent that stored data or images are no longer required to be retained, they should be deleted. The Council's Corporate Retention Schedule will set out how long such information may be retained.

Access, Viewing and Disclosure of Stored Data

Access, viewing and disclosure of stored data will be controlled by the Council as Data Controller in adherence with this policy or any specific legislative requirement or obligation.

Access to stored data will be restricted to named and trained individuals/roles within the Council. Any unauthorised access must be reported immediately to the Parking Manager or the Data Protection Officer of the Council, who will take appropriate action.

All persons with access to stored data should be aware of the requirements of the Data Protection Principles as outlined in Appendix A of this Policy, which need to be followed when accessing stored data. All such persons should be aware that all access to stored data will be recorded and they must keep their password secure and not share it with anyone else.

Access to and disclosure of stored data to third parties will only be made in limited and prescribed circumstances. Details of those circumstances can be found in the [framework code of practice](#) for the sharing, disclosure or viewing of obtained or retained CCTV Body Camera data.

Where permitted, permanent copies of stored data will be provided on request in the form of a video. Video footage will be provided in line with the Council's Access to Information procedures.

Audit arrangements

An Audit Programme will be implemented by the Improvement and Information Team in conjunction with the Internal Audit Team. Services authorised to use CCTV Body Cameras will be expected to support these teams to ensure that spot checks are conducted and the use of devices assessed on an annual basis.

Review of the Policy

Due to the ongoing changes in legislation this Policy will be reviewed and updated annually.

Guide to Appendices

A number of appendices have been attached to this Policy to assist in the compliance with legislative requirements and to assist in the implementation of processes and procedures for the capture, retention, sharing and disclosure of obtained or retained data.

Appendix A

This provides a brief outline of the Data Protection Principles and the Councils Data Protection Policy.

Appendix B

This sets out the Councils Access to Information Procedures including the Data Protection Act Requests for Information Policy, Freedom of Information Requests and Environmental Information Regulations Requests procedures.

Appendix C

This provides the Privacy Impact Assessment(s) and the decision to approve their use. These will act as the schedule of deployments.

Appendix 1A

The Data Protection Principles

- 1 Personal data shall be processed fairly and lawfully and, in particular, shall not be processed unless;
 - (a) at least one of the conditions in Schedule 2 is met; and
 - (b) in the case of sensitive personal data, at least one of the conditions in Schedule 3 is also met
- 2 Personal data shall be obtained only for one or more specified and lawful purposes and shall not be further processed in any manner incompatible with that purpose or those purposes
- 3 Personal data shall be adequate, relevant and not excessive in relation to the purpose or purposes for which they are processed
- 4 Personal data shall be accurate and, where necessary, kept up to date.
- 5 Personal data processed for any purpose or purposes shall not be kept for longer than is necessary for that purpose or those purposes.
- 6 Personal data shall be processed in accordance with the rights of data subjects under this Act.
- 7 Appropriate technical and organisational measures shall be taken against unauthorised or unlawful processing of personal data and against accidental loss or destruction of, or damage to, personal data
- 8 Personal data shall not be transferred to a country or territory outside the European Economic Area unless that country or territory ensures an adequate level of protection for the rights and freedoms of data subjects in relation to the processing of personal data.

NB This is not a full explanation of the principles

More detailed information can be found on the Information Commissioner's website at www.ico.gov.uk.

Data Protection Act Requests for Information Policy

There are a number of different types of requests which can be submitted to the authority under the Data Protection Act which are outlined in this policy.

The procedures set out in this policy must be followed at all times when dealing with such requests.

Subject Access Requests (SAR's)

All Subject Access requests received by the Council must be forwarded onto the Improvement & Information team where they will be logged so that the Council has a clear record of the request and subsequent response issued.

Requests regarding more than one area of the authority will be managed by the Improvement & Information team with relevant officers contacted and asked to provide any information held (redacted where necessary). Requests relating to specific service areas will be passed onto the relevant area which will then be expected to manage such requests and respond directly to applicant. These requests are not quality assured by the Improvement & Information team.

The Council has developed letter templates which comply with our statutory obligations when dealing with Subject Access Requests under the Data Protection Act which must be used at all times.

Under the Data Protection Act 1998 a £10 fee is payable for anyone wishing to obtain their personal data. A request cannot be processed until the fee has been paid. The £10 fee, in line with the Council's Data Protection Policy & Procedure, will be waived for current Council employees.

The 40 calendar days' response time commences from date of receipt of the fee. In the case of a request for an educational record, a fee up to a maximum of £50 depending on the number of documents held, may be required.

Any applicant must also supply the Council with proof of their identity. They must supply either a recent bank statement, or a utility bill, (within the last three months), and Photographic ID - i.e. Passport, Drivers Licence - this must be a clear photocopy.

It is best practice to send a copy of the Council's Subject Access Request form and guidance to anyone wishing to obtain their personal data to make it easier for individuals to advise of the specific data they wish to obtain and from which Council service(s). It is also best practice to pass this on if clarification or direction is required for such a request.

Council Guidance note on SAR Requests:

http://www.cardiff.gov.uk/ObjView.asp?Object_ID=22434&Language=&YYY=0

Cardiff Council's Subject Access Request form:

http://www.cardiff.gov.uk/ObjView.asp?Object_ID=22432&Language=&YYY=0

Subject Access Requests for CCTV Footage

Cardiff Council operates a CCTV system in partnership with South Wales Police. The system has 200 cameras throughout Cardiff and provides images which are used to manage the highway network throughout Cardiff and also for the prevention of crime and community safety.

Cardiff Council also operates cameras for providing evidence in criminal proceedings, providing evidence in civil proceedings or tribunals and for the prevention of crime.

There may be occasions when individuals request CCTV footage where they have been captured on cameras. This mainly occurs when a crime has taken place or for evidence to support an accident which has occurred.

All requests for CCTV footage must be processed as outlined in the Council's CCTV policy & Code of Practice.

The same identification and fee is required as per Subject Access Request provisions before processing any such request. If a request is submitted on behalf of someone else (i.e Insurance Company/Solicitor) the Council must ensure that consent has been supplied before information is passed onto anyone acting on behalf of the data subject.

Consent Form -

<http://web1/corpgms/corporate%20general/Guidance%20Notes/FOI%20&%20EIR%20Letters/CCYV%20Templates/Consent%20Form.doc>

Access to Health Records Act Requests

There may be occasions when relatives of the deceased request access to records which are classified as Health Records. Where this occurs requests should be dealt with under the Access to Health Records Act.

The person who requests such data must be the personal representative of the deceased and have a claim arising out of the person's death. A personal representative is the executor or administrator of the deceased person's estate.

Evidence must be provided to support that they are the executor of the deceased and the individual must also supply identification in the same way as the Subject Access Request provisions. This ensures that the Council can confirm their identity before providing any information.

In the main this type of request would be received by the Social Services area of the Council. It is important that a detailed record is kept of the request and how it has been dealt with. Copies of all correspondence (including emails) between the Council and the requestor must be kept together with any additional documentation.

Data Protection Act Section 29/35 Disclosure Requests

Sections' 29 and 35 of the Data Protection Act are exemptions within the non-disclosure provisions of the Data Protection Act. It allows the organisation to disclose information about a member of staff or citizen if requested by an outside organisation, which in normal circumstances may be a breach of the Data Protection Act.

Requests can come from organisations that can rely upon these exemptions because they have a crime prevention or law enforcement function and therefore have an appropriate purpose for requesting such information.

Main organisations that will request information under Sections 29 and 35 of the Data Protection Act are HMRC, the UK Border Agency, the Police, The Department for Work and Pensions or other local Authorities.

Any organisation requesting such information have to provide the Council with a completed Section 29/35 Disclosure form, (some organisations such as the Police who have their own form), otherwise they must complete the Council's Section 29 Disclosure request form.

The Council has a Section 29/35 Disclosure Request Form which can be forwarded onto any appropriate organisation requesting information and a Guidance Note which should be followed when dealing with such requests.

Before information is released this must be authorised by the relevant Operational Manager or Chief Officer who must decide whether to release or not release personal information to the requestor. Officers should ensure that they refer to the Council's guidance on Section 29/35 Disclosure requests or contact the Improvement & Information team if they are unsure whether to disclose information.

Such requests should be managed within their relevant service areas unless they relate to a number of service areas in which case they should be immediately passed onto the Improvement and Information team who will be responsible for co-ordinating any such request on behalf of the authority.

A detailed record must be kept of the request and how it has been dealt with. Copies of all correspondence (including emails) between the Council and the requestor must be kept and also internal documentation.

Information Requests Policy

Introduction

The Freedom of Information Act 2000 is designed to promote greater openness and transparency throughout the public sector. Under the Act any person, has rights of access to recorded information held by the Council.

Requests for information can arrive in any part of the organisation by a number of means.

In responding to any request for information regard must be had to the potential impact of the Freedom of Information Act (FOI), the Environmental Information Regulations (EIR), the Data Protection Act (DPA) and the Councils policies on Access to Information.

Anyone responding to or handling a request for Information must take into account the policy agreed by the Executive on 4th November 2004 which states:

- The Council will consider that it is in the public interest to disclose information unless it can be clearly shown that it is in the public interest not to do so (e.g. because such disclosure would cause substantial harm or breach confidentiality). In particular the Council will not regard the following factors as reasons to withhold disclosure:
- that disclosure may reveal incompetence on the part of, or corruption within, or would cause embarrassment to the Council: and
- that information is too complicated for the applicant to understand, or that disclosure might misinform the public because it is incomplete.

Submitting a Request For Information

To request information from Cardiff Council, individuals should first check whether it is available through the publication scheme (in many cases it will be quicker to simply use the search facility on this website). If an applicant cannot find what they are looking for they should submit a formal request under the Act, giving as much detail as possible, using the contact details below:

Email: foi@cardiff.gov.uk

Post:
Information Request Officer,
Room 108,
County Hall,
Atlantic Wharf,
Cardiff Bay,
CF10 4UW

Submit an online request:

http://www.cardiff.gov.uk/content.asp?nav=2872,3252,4532,6313&parent_directory_id=2865&pagetype=&keyword

Processing of Requests for Information

There are three main options for processing requests:

- immediate release of routine and Publication Scheme Information,
- Business as Usual Response & Release by Service Area,
- official FOI/EIR Requests – Managed by the Improvement & Information Team and assisted by the relevant service area FOI Officers.

The Council has developed precedent letters which comply with our statutory obligations under the Freedom of Information Act and Environmental Information Regulations which must be used at all times.

Immediate Release

Information that is reasonably accessible to an applicant by other means is exempt from FOI. This includes information identified in the Council's Publication Scheme. Where a request can be fully satisfied by providing or referring to information identified in the Publication Scheme the only action required is:

- To provide, or refer the applicant to, the appropriate information in the manner identified in the Publication Scheme.
- There is no requirement either to record the request or the response for FOI purposes if the information is provided as above, unless the request specifically refers to FOI or EIR in which case it must be logged as an FOI request and Section 21 letter should be sent to record the transaction.
- Where information is exempted under Section 21 of the Act, a refusal notice under Section 17 does not have to be issued when the applicant is advised where and how the information may be obtained. Normal records of the communications should be kept so as to be able to satisfy the Information Commissioner that appropriate advice and assistance was given.
- Where information is available under the Publication scheme the response providing the information, or advising where it may be found, must be sent promptly and within five working days as a minimum. If the information needs to be viewed at the Council's premises, the Council must contact the individual within five working days to arrange an appointment convenient to both parties.

Business as Usual Response & Release by Service Area

Service Areas should handle the majority of routine requests for information that they receive in the normal way without logging them as FOI requests (unless the request specifically states FOI / EIR). This is the business as usual principle. There is no need to add any additional process or bureaucracy to the handling of simple requests.

Consideration should only be given to deal with such requests under FOI / EIR if the Council is considering not disclosing information, in which case FOI / EIR should be invoked to ensure lawful processes are followed if exempting information from disclosure.

If a request for information is submitted through complaints procedures specifically requesting information under FOI / EIR, dialogue should be opened up to deal with such requests through business as usual channels as part of the complaints procedure rather than added additional bureaucracy and dealing with the request under FOI / EIR.

However in such cases the applicant should be informed of this and advised that information disclosed specifically under FOI would be available to any other member of the public and that under the Council's duty to assist the customer it would be more beneficial to deal with the request without invoking FOI / EIR.

However care should be taken to ensure that information disclosed does not breach the Data Protection Act and other legislation in the same way as formal FOI / EIR requests.

If the applicant wishes to request information in relation to themselves this is exempt from FOIA/EIR. This type of request is known as a Subject Access Request and should be handled in line with the Data Protection Requests for Information Policy. These requests should be passed immediately to the Improvement and Information Team

Multi Service Area Requests – Managed by the Improvement & Information Team and assisted by the relevant service directorate officers.

Any such request for information will need to be logged and managed as a formal request where any of the following apply:

- Officers in receipt of the request anticipate for any reason that we may not, or cannot, answer the request in full.
- The request for information specifically mentions FOI or EIR.
- There is doubt about how to respond and advice from Improvement & Information about the implications of FOI, EIR or DPA is required.
- The effort expended in retrieving the information is estimated to incur costs (calculating staff time at £25 per hour) above the prescribed level (£450) i.e. more than 18 man hours work will be required to identify, locate and retrieve the information.
- The information cannot easily be provided in the form requested.

Decisions to exempt information from disclosure may be made primarily by Service Area FOI Officers and accompanied by required evidence to support the engagement of an exemption, but the ultimate decision on disclosure would be made by the Improvement & Information Operational Manager with the exception of the engagement of Section 36 exemption decisions which must be referred to the Council's qualified person.

Release and Refusal Process

The Improvement & Information team will be responsible for the release process and ensuring that any documents are correctly redacted as necessary in accordance with the decision made and that formal notices comply with legislative requirements concerning complaints and reviews – however the redacting process is the responsibility of officers within the relevant Service Area where the information had been obtained from.

The Improvement and Information team will quality assure all responses before they are

released. This is to ensure that exemptions are correctly applied and that redaction has been undertaken correctly.

The Improvement & Information team are responsible for ensuring consideration is given to the inclusion of a copyright warning either in the release letter or as a separate note if appropriate to the information disclosed.

The Improvement & Information team will also be responsible for issuing the appropriate notice in those cases where there is a refusal to confirm or deny holding information.

Yellow Paper Exempt Information

It is important to note that information exempt from disclosure at Council/Committees under the Local Government Regulations does not in itself exempt the material from disclosure under the FOI/EIR access regimes.

Such information must be supplied in respect of any requests submitted covering such information, and the Improvement & Information Team will seek the views of the Monitoring Officer when considering a request which covers such material.

Contracts

The Council is required under its Publication Scheme requirements, amended to reflect the requirements of the Protection of Freedoms Act 2012, to routinely publish dataset information, including information relating to contracts awarded by the Council.

All contracts should contain FOI/EIR clauses setting out the process of an information request being received, and third parties should be contacted and asked for their views on potential disclosure of information requested under FOI/EIR.

In line with the Ministry of Justice Guidance, authorities are strongly advised not to accept confidentiality clauses in procurement contracts that conflict with their obligations under the Freedom of Information Act and Protection of Freedoms Act.

Under the terms of the Freedom of Information Act the decision whether to withhold, or disclose the information, is ultimately a matter for the Council. This is regardless of whether the information was originally supplied by a third party. The fact that a disclosure would be in breach of contract cannot be used as the primary factor in determining not to disclose the information under the Act (as there is no absolute exemption provided for this)"

Timescales

The 20 working day limit for processing requests means that all involved will have to work to very tight timescales. The timescales shown are a maximum and where one stage can be completed earlier, the next stage should be commenced immediately.

Compliance with requests will be reported in the Council's Quarterly Performance Reports, and failure to comply with requests within 20 working days can result in Enforcement Action being taken against the Council.

Reviews & Complaints

Cardiff Council operates an Internal Review procedure for FOI and EIR requests which aims to comply with the Section 45 FOIA Code of Practice and the Information Commissioners Office's Code of Practice on Internal Reviews. This procedure will be followed with any complaints regarding the handling of FOI/EIR requests

Responsibilities

The Council has a responsibility to make its recorded information available in accordance with the Data Protection Act. Corporate responsibility for ensuring compliance with this policy lies with the Senior Information Risk owner.

Day to day responsibility for co-ordinating the Council's Freedom of Information function lies with the Operational Manager, Improvement & Information.

All Members and Officers should familiarise themselves with this policy and the Freedom of Information Act and Environmental Information Regulations guidance which is available on the intranet.

Requests for personal information must be dealt with in line with the Council's Data Protection Requests for Information Policy.

Failure to comply with this policy could have serious consequences for the Council. It is important to seek advice if in doubt.

Publication Scheme

In addition to answering individual requests for information the Council has adopted, as required by the Freedom of Information Act, a legal publication scheme which sets out the type of information which it will make routinely make available. The Council has adopted the Information Commissioner's amended 2013 model scheme without modification which takes into account the requirements of publishing data sets in line with the Protection of Freedoms Act.

Related Policies

This policy should not be read in isolation. In particular this policy should be read in conjunction with the Council's:

- a) Records Management Policy
- b) Data Protection Policy & Procedure
- c) Information Governance Strategy
- d) Data Protection Requests for Information Policy
- e) Information Management Strategy

If approved, anticipated go live date:

Privacy Impact Assessment Procedure

What is a PIA? A PIA helps assess privacy the risks around the privacy of individuals in the collection, use and disclosure of information and foresee any problems and assist in bringing forward solutions. A PIA will also identify risks to individuals' privacy together with DP compliance liabilities for the Council. This is important as there is a need to ensure that we protect the reputation of the Council and build public trust and confidence in what the Council proposes to do.

What are the risks of not carrying out a PIA?

The risks are:

- Need for re-design all or major parts of the system, which could be particularly costly if the risks are realised late in the development stage
- Collapse of the project or the completed system as a result of adverse publicity and/or withdrawal of support by key participating organisations
- Loss of credibility as the public perception is that the system does not protect their personal data adequately and safeguard their privacy
- Subsequent imposition of regulatory conditions as a response to public concerns, with the inevitable cost that entails
- Breach of privacy law, with the possibility of litigation and substantial financial penalties being issued against the Council.

When should a PIA be conducted?

A PIA must be completed at an early stage of a project, when: the project is being designed; you know what you want to do; you know how you want to do it; and you know who else is involved. However ideally it should be started before: decisions are set in stone; you have procured systems; you have signed contracts/agreements with any third parties

How should I do it?

If the PIA is being run as part of a project, every attempt should be made to integrate the PIA within that project. Privacy risks should not be considered in isolation from other types of risks – when determining priorities you need to weigh all risks against one another.

It is important to remember that a PIA is a process to ensure privacy risks are addressed throughout the lifecycle of the project – it is not about ticking boxes and producing documentation. Nevertheless, you also need

to have a record – usually in the form of a PIA Report - of the measures that were taken to address the privacy issues in the project. This is so that there is:

- accountability and transparency – the report is likely to be published under the Council's Freedom of Information Publication Scheme
- a basis for the post implementation review
- a basis for audit
- a record to be called up for future PIAs . PIA's can be re-used subject to appropriate review for subsequent substantially similar projects.

Who should do it?

Whoever is in a position to manage the risks and influence design decisions. For projects that is likely to be the project manager; for data sharing it is likely to be the Service Information Owner

The role of Improvement & Information Management

The Improvement & Information Management Team are corporately responsible for ensuring the Council's complies with privacy laws, including:

- The Data Protection Act,
- Privacy & Electronic Communication Regulations,
- Article 8 of the Human Rights Act,
- Freedom of Information Act & Environmental Information Regulations, and
- Links to Records Management requirements

The Improvement & Information Management Team will not approve the use of any new systems or processing of data without the completion of a Privacy Impact Assessment and formal record of the decision in respect of a project.

All Privacy Impact Assessments must be completed and returned to DataProtection@cardiff.gov.uk

What are the outcomes of an effective PIA?

The outcomes of an effective PIA will be:

- identification of a project's privacy impacts
- an appreciation of those impacts from the point of view of each group of stakeholders
- understanding of the acceptability of the project from those affected by it
- identification of ways to avoid negative impacts on privacy
- identification and assessment of less privacy-invasive alternatives
- where negative impacts on privacy are unavoidable, clarification of the business needs that justify them
- documented and published outcomes

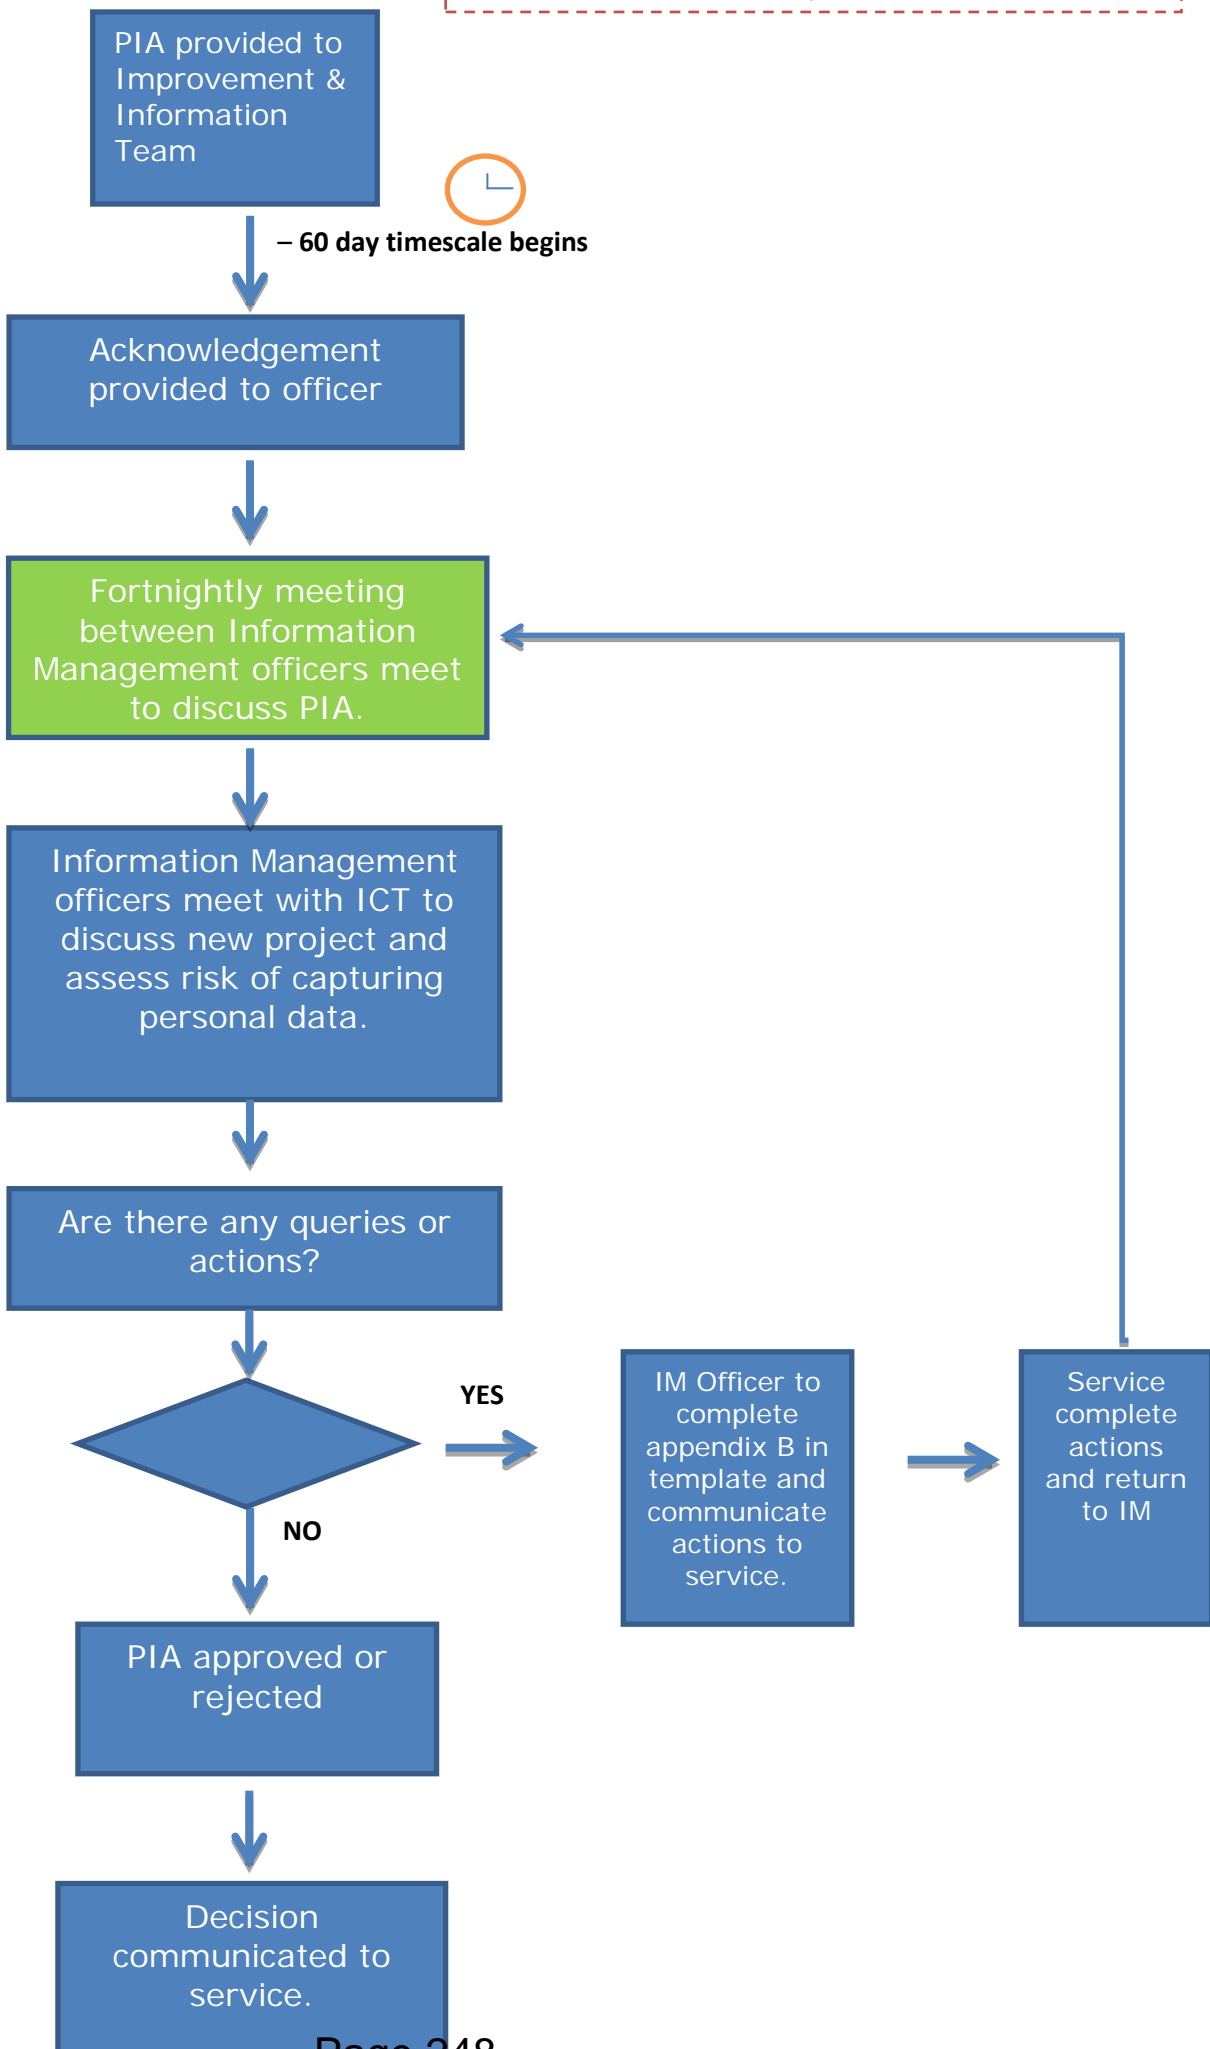

What do I do next?

Consider Appendix A – Privacy impact assessment screening questions. Complete Section 1 of the PIA (Appendix B).

Sections 2 and 4 are to be completed by the Information Management Team.

Section 3 is for ICT Security Team to complete.

A process map for Privacy Impact Assessments is overleaf. This will evidence the steps taken during the procedure.

Privacy impact assessment screening questions (appendix a)

These questions are intended to help you decide whether a PIA is necessary. Answering 'yes' to any of these questions is an indication that a PIA would be a useful exercise. You can expand on your answers as the project/business changes develops if you need to.

Will the project/business change involve the collection of new information about individuals?

Will the project/business change compel individuals to provide information about themselves?

Will information about individuals be disclosed to organisations or people who have not previously had routine access to the information?

Are you using information about individuals for a purpose it is not currently used for, or in a way it is not currently used?

Does the project/business change involve you using new technology that might be perceived as being privacy intrusive? For example, the use of biometrics or facial recognition.

Is the information about individuals of a kind particularly likely to raise privacy concerns or expectations? For example, health records, criminal records or other information that people would consider to be private.

The completion of the PIA will help the Improvement & Information Management Team address any relevant risks associated to your project/business change.

Section 1 of the PIA must be completed by the project team or service change lead, and submitted onto Improvement & Information Management Team to advise further.

The Improvement & Information Team need a minimum of 60 working days to consider section 1 of the PIA and may need further information in order to make a full determination of any privacy/data protection risks.

Please note, A PIA is not required where the service is simply contracting out with a data processor to process personal data within systems, but only in cases where the data processor will be conducting further services on behalf of the Council. You should consider the PIA in conjunction with the Council's Data Processor and Data Processing Guidance for staff.

Privacy impact assessment template (appendix b)

Section 1

Identify the need for a PIA

Explain what the project aims to achieve, what the benefits will be to the Council, to individuals and to other parties.

Please include the scope of the project and particular emphasise on how such data is intended to be processed. If a Project paper or Mandate already exists please also provide this as background.

If personal data is not involved in the Project/Business Change, a PIA is not required.

Using Technical systems or devices

If this Privacy Impact Assessment involves a technical/IT system, it is important to examine the ICT security risks involved in its application.

Please identify what system will be used and how it is managed and monitored.

Describe the information flows

Please advise where the data collected is obtained from. Does the project involve the use of existing personal data and will additional data be collected? Fully explain if how the data collated and processed at present.

To provide enough information to allow the Improvement & Information Team to consider this in full, please answer the following:

Please outline the types of personal/sensitive data which will be processed:

Who will have access to it?

[This includes both internally and externally. Describe any sharing arrangements and what the level of access is. It may help to produce a diagram to show the data flows.]

How will it be transmitted to third parties?

[If data is already been transmitted to third parties please describe how this is currently occurring and explain what if any agreements are already in place allowing for data to be transferred to such parties]

How will it be stored, kept up to date and disposed of when no longer required?

[This refers to all parties who have access to the information. How will the Council keep the information up to date, and ensure it is disposed of when no longer required. How will third parties if applicable also comply with this? Please detail the agreed retention details of such information.]

How are individuals whose data will be processed advised of the Council's potential processing of their data?

[This refers to data which the Council is the owner of. Does the Council have Fair Processing Notices/Disclaimers or information online which is provided to individuals' whose data may be processed in line with this project/business change advising of how the Council may process their information.]

Consultation requirements

Please provide a list of all individuals involved in the project and those that may be affected by it. At this stage you want to have as broad a list of groups as possible- this can be edited down at a later stage for more focused consultation.

Section 2 – (For Information Management to complete)

Identify the privacy and related risks

Identify the key privacy risks and the associated compliance and corporate risks. Any risks identified within this section should also be referenced on the service area Information Risk Return. Please consult with your service Information Asset Owner for further details.

Privacy issue	Risk to individuals	Preliminary assessment of Risk H/M/L

Identify privacy solutions

Describe the actions to be taken to reduce the risks, and any future steps which would be necessary (eg the production of new guidance or future security testing for systems).

Risk	Solution(s)

Section 3 – (For ICT to complete)

ICT Security

If the project involves a new or existing technical system it is important to identify any risks to ICT security that may arise as a result of the implemented business change. Describe the risks to the organisation and to the individual whose data is being processed.

It is also important to indicate at this stage whether the solution requires sign off at ART. Please state **YES** or **NO** giving a full explanation for either answer.

Security Issue	Solution(s)	Preliminary Assessment of Risk H/M/L

Section 4 – (For Information Management to complete)

Sign off and record the PIA outcomes

Who has approved the privacy risks involved in the project? What solutions need to be implemented?

Risk	Approved solution	Approved by

Action Monitoring

Please state the date on which the project was referred to the Information Management and ICT panel.

Who is responsible for the PIA actions?

Action to be taken	Date for completion of actions	Responsibility for action

--	--	--

Appendix C

Linking the PIA to the data protection principles

Answering these questions during the PIA process will help you to identify where there is a risk that the project will fail to comply with the DPA or other relevant legislation, for example the Human Rights Act.

Principle 1

Personal data shall be processed fairly and lawfully and, in particular, shall not be processed unless:

- a) at least one of the conditions in Schedule 2 is met, and**
- b) in the case of sensitive personal data, at least one of the conditions in Schedule 3 is also met.**

Have you identified the purpose of the project?

How will you tell individuals about the use of their personal data?

Do you need to amend your privacy notices?

Have you established which conditions for processing apply?

If you are relying on consent to process personal data, how will this be collected and what will you do if it is withheld or withdrawn?

If your organisation is subject to the Human Rights Act, you also need to consider:

Will your actions interfere with the right to privacy under Article 8?

Have you identified the social need and aims of the project?

Are your actions a proportionate response to the social need?

Principle 2

Personal data shall be obtained only for one or more specified and lawful purposes, and shall not be further processed in any manner incompatible with that purpose or those purposes.

Does your project plan cover all of the purposes for processing personal data?

Have you identified potential new purposes as the scope of the project expands?

Principle 3

Personal data shall be adequate, relevant and not excessive in relation to the purpose or purposes for which they are processed.

Is the quality of the information good enough for the purposes it is used?

Which personal data could you not use, without compromising the needs of the project?

Principle 4

Personal data shall be accurate and, where necessary, kept up to date.

If you are procuring new software does it allow you to amend data when necessary?

How are you ensuring that personal data obtained from individuals or other organisations is accurate?

Principle 5

Personal data processed for any purpose or purposes shall not be kept for longer than necessary for that purpose or those purposes.

What retention periods are suitable for the personal data you will be processing?

Are you procuring software that will allow you to delete information in line with your retention periods?

Principle 6

Personal data shall be processed in accordance with the rights of data subjects under this Act.

Will the systems you are putting in place allow you to respond to subject access requests more easily?

If the project involves marketing, have you got a procedure for individuals to opt out of their information being used for that purpose?

Principle 7

Appropriate technical and organisational measures shall be taken against unauthorised or unlawful processing of personal data and against accidental loss or destruction of, or damage to, personal data.

Do any new systems provide protection against the security risks you have identified?

What training and instructions are necessary to ensure that staff know how to operate a new system securely?

Principle 8

Personal data shall not be transferred to a country or territory outside the European Economic Area unless that country or territory ensures an adequate level of protection for the rights and freedoms of data subjects in relation to the processing of personal data.

Will the project require you to transfer data outside of the EEA?

If you will be making transfers, how will you ensure that the data is adequately protected?

Use of Body Cameras for Civil Enforcement Officers

Background

Improvement & Information have been approached by the Network Management Team within City Management and provided with an initial Officer Decision report on the potential use of Body Cameras for Civil Enforcement Officers.

The contents of this report have been put together on the same basis as a report produced regarding the potential use of Body Cameras for Waste Enforcement Officers in August 2012.

In order to use such devices the Council has to be able to demonstrate that data processing would be valid under the Schedule 2 and Schedule 3 Conditions of the Data Protection Act and ensure that the use of the devices comply with the Information Commissioners Office CCTV Code of Practice and article 8 of the Human Rights Act.

The likely conditions fall under Schedule 3 are in bold in the following list:

- Explicit consent has been given by the data subject
- Necessary for the purpose of Employment rights/obligations
- **Necessary to protect the vital interest of the data subject or another person**
- Processing is carried out in the course of its legitimate activities
- Information contained in the personal data has been made public as a result of steps taken by the data subject
- Processing is necessary in connection with Public functions
- Necessary for compliance with any legal obligation
- Necessary for medical purposes

The officers have been asked to provide justification on how processing would meet any of the Schedule 3 conditions and as a result it has become apparent that the use of such devices would be for the Prevention and Detection of Crime and for the Health and Safety of the Civil Enforcement Officers. However if the Council was to use these as reasons for implementing this type of technology this would need to be backed up with sufficient evidence to demonstrate how the use would be proportionate.

The evidence provided by the Network Management Team and considered under the Data Protection Act – Schedule 3:

- (i) Necessary to protect the vital interest of the data subject or another person

During the course of their duties, civil enforcement officers are presented on an almost daily basis with verbal abuse from motorists and the

general public. In most cases they accept this as a consequence of the role they carry out on behalf of the Council in enforcing parking contraventions. However, from time to time motorists can become angry and potentially violent and in such circumstance body worn CCTV cameras could be activated. It has been reported from other parties that the activation of these devices together with a verbal warning that recording is taking place has been shown to calm the situation down and protect the officer from attack.

Actual examples of serious physical assaults/ threats in the past four months include:

- (a) On November 5th 2012 two CEOs were reporting a vehicle in May Street Cathays and had affixed the penalty charge notice to the vehicle. The owner arrived and immediately became aggressive, after which he leaned into the car and took out a metal bar/ torque wrench. He proceeded to chase one officer around the cars with the intention of causing grievous bodily harm. The Police were called and attended swiftly and apprehended the aggressor. This incident has been logged in the Council's dangerous occurrences records, and both officers took time off work to recover from the shock of the incident.
- (b) On 11th November 2012 a CEO was physically assaulted in Charles Street and was struck to the ground, suffering a fractured elbow, cuts and bruises, and of course suffering shock afterwards. She is currently on extended sick leave and it is not known yet whether she will be able to return to work due to fear of repetition. The Police again attended rapidly and the aggressor was arrested and will face prosecution.

Although most incidents are accepted as "part of the job", a further 8 incidents have been deemed of sufficient gravity to be recorded on the corporate Health and Safety records over the period April 2011 to December 2012. In addition to these incidents there are many more lower level incidents that are not recorded and these occur on a daily basis.

Further information supplied:

For most of the time the camera would be switched off and it is only in cases of perceived aggression that the unit would be activated and recording would begin. The unit would be switched off again after the event to reduce unnecessary filming. The recordings should be linked to a potentially violent persons database (PACD) (justifying the recording) and stored securely on the Council's computer network and if not required would be deleted or over-written after say one month. Therefore, personal data would not be retained for longer than absolutely necessary.

Devices will be used to record incidents which can be used in Court proceedings. Additionally, it provides protection for the officers as it is a visible deterrent to any potential assailant, making a clear statement that their actions will be recorded, and records the actions of the officer, thereby reducing the

scope for false allegations. These issues are particularly relevant to officers required to work alone and uncorroborated in isolated areas. Whilst some areas of the County are covered by existing CCTV cameras, it should be stressed that not all of the areas of the County have such cameras, and also where there are cameras in some locations, the image recordings are not of a quality which would assist with any incidents/investigations.

Officers have also asked that such devices are equipped with the use of audio, and have agreed clear parameters in regard to perceived aggression as which point devices would either be switched on, or where practical the Enforcement Officer will advise the member of the public that they are going to switch on the device.

The definition of Perceived Aggression:

- An individual threatening an Officer with a weapon
- An individual threatening an Officer with the intention of causing bodily harm
- An individual encroaching within an arms length of an Officer (within their personal space)
- An individual making physical contact with an Officer

It should also be noted that Civil Enforcement Officers would use their training provided (City & Guilds) to ensure that situations are calmed to their best of their ability without the need to switch on the actual device.

Analysis

Upon looking into the justification provided a number of factors have been considered:

1. The use of CCTV has to be proportionate to the purpose and there is enough evidence to back up how this could be justified. Based on the information provided this would in my view would be justified by the Information Commissioners Office.

2. The Information Commissioners' Office has recently provided guidance on the potential use of such devices which in line with the evidence supplied to us back up the potential use of such devices:

http://www.ico.org.uk/conference2013/~/_media/documents/dpoc2013_documents/DPOC2013_Upholding_information_rights_in_the_world_of_surveillance.ashx

3. The devices could be potentially operated subject to a number of provisions which will ensure compliance with the Data Protection Principles:

Principle 1 (Fair Processing)

Clear and visible signs or audio announcements would be given to a member of the public that to inform them that devices would be switched on or being operated.

The devices would be clearly visible as demonstrated in appendix 1. There would also be notice given in the capital times, website and other media that officers were now equipped with such devices.

In most cases an Enforcement Officer would give a clear announcement that they intend to switch on the device, however it such be noted that in some cases it might not be possible for officers in certain situations to give a clear announcement before switching on the device.

Principle 5 (Retention of information)

Retention periods should reflect the Council's own purposes for recording images. Such images would be kept for no longer than 31 days in line with the Council's CCTV Policy and Code of Practice, and measures would be put in place to ensure permanent deletion through secure methods

Principle 6 (Individuals Rights)

The Council will need to ensure that it produces a clear Body Worn Cameras Policy to ensure that members of the public are aware of the reasons for processing and their rights to access.

Members of the public will have rights to request any recordings held under the subject access provisions of the Act, which would need to be in line with the Council's corporate Policy on access to information.

There may also be occasions with other parties (such as the Police) may request such information, and in any such cases the Council's Section 29/35 non disclosure provisions procedures must be followed.

Principle 7 (Security of Information)

The Council must ensure that such images are kept secure. Liaison will be required with ICT to ensure that the most appropriate secure systems are used for operation of such devices and that all images are downloaded directly onto the Council's secure network.

All Enforcement Officers will have to be provided with training (in line with the Council's requirements for under the CCTV Policy). Enforcement Officers will be provided with detailed Data Protection Training on the use of such devices, and a number of officers will need to be identified with the section to handle access requests for information (such officers would be required to obtain a Security Industry Licence).

Audit procedures will need to be put in place to ensure that devices are being used in line with the requirements set out in the Body Worn Camera Policy. An

annual review will be conducted with compliance with the system, however for the first 6 month period of the system being operated full audits will be conducted every 4-6 weeks between the Improvement & Information Team and Internal Audit to ensure devices are being correctly operated.

4. The key consideration for the Council is to ensure that:

- there is a pressing need to capture images of people in this way,
- give people appropriate information that such a system is in use,
- cameras should only be 'switched on' during incidents which warrant a recording being made.

5 The risk to the Council of using devices for recording audio as well as footage creates additional risks. The ICO has raised concerns about a trend for attaching microphones and sound recording equipment to cameras. The ICO has said that there are limited circumstances in which audio could be used, and given the particular purposes in this case I believe that this would also be justified, however Civil Enforcement Officers must inform members of the public of this, apart from where an incident occurs where the Civil Enforcement Officer does not feel that they are in a position/situation to be able to provide a clear message to the member of the public due to risk of harm being caused to themselves.

Findings/ Recommendation

The use of body worn cameras for Civil Enforcement Officers is in my view justified, subject to the provisions set out in this report being implemented:

1. A clear Policy being implemented to ensure compliance with the Data Protection Principles
2. Specific Data Protection training for the officers using the devices
3. A full audit programme is in place to ensure the devices are not misused

Evidence supplied backs up the potential use of such devices under the Schedule 2 and 3 Conditions of the Data Protection Act.

The ICO have previously advised that there may be safety issues in that by wearing these devices, officers may become targets for attack, and this also needs to be taken into consideration.

The Council does need to take extra care in consideration of any potential uses of such devices as the approval of the use of such devices could create an influx of officers who are more at risk of attack wishing to use such devices, the governance of which would be very difficult for the Council to control. Therefore it should be stressed that the fact that such officers lone work is not the key reason behind any decision to approve the use of such devices.

Recommendation

This recommendation was passed onto the Senior Information Risk Owner (Christine Salter) to make the final decision regarding the use of body worn cameras within the Network Management Team.

Decision

Based on advice contained within this report, I am content that the use of body worn cameras be supported within the Network management Team. However I would suggest that it reviewed after twelve months operation and I would wish to receive an update report at that stage in order to confirm outcomes were as expected.

Christine Salter (SIRO) 15 April 2013

Report Complied by: Dave Parsons, Information Officer

Agreed by: Vivienne Pearson, Operational Manager, Improvement & Information

Date: 12th April 2013

Agreed by SIRO: Yes

Appendices

Appendix 2.1 – Image of potential device*

Appendix 2.2 – Initial Officer Decision Report provided to Improvement & Information

Appendix 2.3 – Impact Assessment conducted into the potential use of such devices

* For clarity the images within Appendix 2.1 are different to that of the initial Officer Decision Report (Appendix 2.2) as the potential devices to be used changed from the date of the initial report.

Appendix 2.2

OFFICER DECISION : REPORT

ADDRESSED TO: Operational Manager (Network Management)

PREPARED BY OR ON BEHALF OF: Steve Carrel

The delegation to be exercised is in accordance with **4D1.1** of the Council Scheme of Delegations(Part 3 - Responsibility for Functions) and with paragraph 1.2 of the Service Area Business Plan

TITLE OF REPORT: Civil Enforcement Officers – Use of body worn CCTV cameras

PROPOSAL:

The recommended decision is:

1. That the principle of using body worn cameras for personal protection purposes only be approved, and
2. a process be commenced to acquire these devices via competitive tender.

The reason for the recommended decision is:

To offer personal protection to the civil enforcement officers when confronted with situations where the motorist is becoming aggressive and potential violence could arise.

1 STATEMENT

This report complies with the following general delegation in accordance with the Executive Scheme of Delegations.

The Corporate Director, Director, Operational Manager, shall be authorised:-

1.1 To make any decisions relating to any matter within their area of responsibility, provided always that the decision is:

- a) within budget
- b) in accordance with the Council's policy framework
- c) in accordance with Council's Financial and Land Procedure Rules and Contracts Procedure Rules
- d) in accordance with their Service Area Business Plan

e) not a matter specifically reserved for Full Council, a Committee of the Council, the Executive or a Statutory Officer.

1.2 To take appropriate action, which is necessary, to ensure the efficient, equitable and effective delivery of services.

1.3 To exercise the following Delegations: 4D1.1 – to make any decision within the Operational Manager’s area of responsibility.

2 BACKGROUND

2.1 During the course of their duties, civil enforcement officers are presented on an almost daily basis with verbal abuse from motorists and the general public. In most cases they accept this as a consequence of the role they carry out on behalf of the Council in enforcing parking contraventions. However, from time to time motorists can become angry and potentially violent and in such circumstance body worn CCTV cameras could be activated. It has been reported from other parties that the activation of these devices together with a verbal warning that recording is taking place has been shown to calm the situation down and protect the officer from attack.

3 ISSUES

3.1 These cameras would be attached to the outside of the CEO’s uniform and could either display the Council ID card of the officer or more likely the CCTV wording on the yellow background, as illustrated below. The one showing the CCTV wording might be preferable because it displays the potential for recording even while dormant and so could act as a deterrent without the need for activation. In the event of an aggressive incident the device would be activated by sliding the badge or lens cover downwards to reveal the lens and the message in yellow.

VideoBadge

- ✓ Protecting Staff
- ✓ Recording Evidence
- ✓ Managing Data

(these images are from a specific supplier's web-site and are used to illustrate the general product only)

- 3.2 For most of the time the camera would be switched off and it is only in cases of perceived aggression that the unit would be activated and recording would begin. The unit would be switched off again after the event to reduce unnecessary filming. The recordings would be stored securely on the Council's computer network and if not required would be deleted or over-written after say one month. Therefore, personal data would not be retained for longer than absolutely necessary.
- 3.3 Actual examples of serious physical assaults/ threats in the past four months include:
- (a) On November 5th 2012 two CEOs were reporting a vehicle in May Street Cathays and had affixed the penalty charge notice to the vehicle. The owner arrived and immediately became aggressive, after which he leaned into the car and took out a metal bar/ torque wrench. He proceeded to chase one officer around the cars with the intention of causing grievous bodily harm. The Police were called and attended swiftly and apprehended the aggressor. This incident has been logged in the Council's dangerous occurrences records, and both officers took time off work to recover from the shock of the incident.
 - (b) On 11th November 2012 a CEO was physically assaulted in Charles Street and was struck to the ground, suffering a fractured elbow, cuts and bruises, and of course suffering shock afterwards. She is currently on extended sick leave and it is not known yet whether she will be able to return to work due to fear of repetition. The Police again attended rapidly and the aggressor was arrested and will face prosecution.
- 3.4 Although most incidents are accepted as "part of the job", a further 8 incidents have been deemed of sufficient gravity to be recorded on the corporate Health and Safety records over the period April 2011 to December 2012. In addition to these incidents there are many more lower level incidents that are not recorded and these occur on a daily basis.
- 3.5 It is the view of the managers of this area and the Health and Safety advisors that the use of these camera badges will assist in reducing serious verbal abuse and an escalation to violence and would show clearly to the officers that the Council values their safety. In such cases, the evidence collected by the device could be used by the Police in potential prosecutions and this would again send the appropriate messages to staff and the public.
- 3.6 If approved, setting up the devices would require liaison with ICT, the Data Protection Officer and possibly other services within the Council.

- 3.7 The CCTV camera units cost around £500 each, including the badge, software and charging equipment, but the tendering process would highlight whether cost reduction could be achieved by sourcing 50 units. Against this cost, it should be considered that the value of lost time in case (b) above will be significantly greater (current 3 months absence) than the cost of the CCTV unit which the CEO could have been carrying.

BACKGROUND PAPERS

The following are the background papers: None

I agree the report and submit it for formal approval of the recommendation/s

Name: [S.L. Carrel](#)

Signature:  (inserted electronically)

Designation: Team Leader (CPE)

Appendix 3

Cardiff Council Recording Devices Impact Assessment

Section 1.

1.1 CCTV Ownership & Operation

Who is the designated owner of the CCTV device(s)?

Steve Carrel, Network Management Team

Who are the designated operators of the device(s)?

Civil Enforcement Officers

1.2 CCTV Purpose

What is the proposed purpose for using CCTV? For example, the ICO CCTV Code of Practice identifies three main purposes for the use of CCTV which are Public Safety, Crime Prevention and National Security.

Prevention and Detection of Crime
Health & Safety of Civil Enforcement Officers

Do you need images of identifiable individuals, or could the system use other images not capable for identifying the individual? E.g. this is dependant on purpose; however it should be noted that traffic cameras monitoring the traffic flow would not need to produce identifiable images of individuals.

Yes, images need to be personally identifiable, which could be used in legal proceedings

1.3 Benefits

What are the benefits to be gained from the use of CCTV?

Devices will be used to record incidents which can be used in legal proceedings. Additionally, it provides protection for the officers as it is a visible deterrent to any potential assailant, making a clear statement that their actions will be recorded, and records the actions of the officer, thereby reducing the scope for false allegations. These issues are particularly relevant to officers required to work alone and uncorroborated in isolated areas. Whilst some areas of the County are covered by existing CCTV cameras, it should be stressed that not all of the areas of the County have such cameras, and also where there are cameras in some locations, the image recordings are not of a quality which would assist with any incidents/investigations.

Can CCTV realistically deliver these benefits?

Yes, as outlined in 1.3

Can less privacy intrusive solutions, e.g. improved lighting achieve the same benefits?

No, as outlined in 1.3 whilst there are existing cameras within the County in some areas, such devices are not fitted in every location of the County, and some of those devices operated by the Council are for traffic flow purposes and therefore do not provide adequate quality footage

1.4 Suitability

Will the particular equipment / system deliver the desired benefits now and remain suitable in the future?

Such devices would be annually reviewed to ensure continued suitability

What future demands may arise for the use of images and how will these be addressed?

These will be addressed through Corporate Procedures for handling subject access requests or requests under the non disclosure provisions of the Act, and will be outlined within a new Body Worn Camera Policy

1.5 Sustainability

Will/or does the particular equipment / system of work being considered deliver the desired benefits and remain suitable in the future? e.g., the cameras must be sited and the system must have the necessary technical specification to ensure the images are of the appropriate quality for each cameras stated purpose.

As outlined in 1.4

1.6 Mitigation

What are the views of those who are under surveillance? Has any consultation been sought on this?

Consultation is not required with members of the public on the use of such devices. In this case consultation has taken place between the Council Officers within Network Management and Improvement & Information, and also between the Council and Information Commissioners' Office

What could you do to minimise intrusion for those that may be monitored, particularly if specific concerns have been expressed? For example, permanent and moveable cameras should be cited and image capture restricted to ensure they do not view areas that are not of interest and are not identified to be the subject of surveillance.

N/A

Do you have clear signage in place to let people know they are in an area where CCTV is in operation?

Such devices are clearly labelled as CCTV devices.
Members of the public will also be informed of the use of such devices through various communications (website, capital times)

Does the signage contain details of the organisation operating the system, the purpose for using CCTV and who to contact about the scheme?

The device will not be able to display this information, however officers will be aware of the reasons for recording and advise members of the public.
Communications of the use of such devices will clearly stipulate this.

1.7 Legal

Is there a proper legal basis for the use of the system and is it operated in accordance with the Law? i.e. The Information Commissioners Office sets out a CCTV Code of Practice to ensure organisations comply with legal requirements of the Data Protection Act.

Yes, under Schedule 3 of the Data Protection Act - Necessary to protect the vital interest of the data subject or another person

Do the current devices capture the necessary quality of images that could be used for legal proceedings?

The intention is that such devices will capture images which could be used in legal proceedings

Section 2

2.1 Compliance with Privacy Laws

Note: The Data Protection Act (DPA) is relevant to any PIA, and a DPA compliance check should always be carried out.

2.2 Data Protection Act (DPA)

The template to use for the DPA compliance check is based on the one in Appendix 2 of the ICO's CCTV Code of Practice Revised Edition 2008 and can be found in Appendix A of this document.

A Data Protection compliance check has been carried out as part of this PIA, the details of which are in Appendix A. From this we have concluded (provide details)

2.3 Human Rights Act (Article 8) (HRA)

Note: In most cases HRA considerations will be covered by the other work on this PIA, including the DPA compliance check. If that is the case, you can simply record here that there are no special considerations that are not covered by other aspects of the PIA.

Section 3

3.1 Approval

Recommendation: Drawing on your analysis of the privacy risks, explain which option presents the best way forward. If significant risk remains, you should explain what the problem is and why the stakeholder consultation failed to resolve this.

Recommendations on the potential use of such devices will be outlined in a report to the Senior Information Risk Owner

Approval: Please record below who has approved the recommendation at 8.1 and the terms of that approval

Section 4

4.1 Review or audit

Note: Indicate below how and when an audit or review will be carried out.

Completed by: D.Parsons/A.Lane Improvement and Information Team
Date: 28/3/13

**CITY OF CARDIFF COUNCIL
CYNGOR DINAS CAERDYDD**

CABINET MEETING: 21 JANUARY 2016

THE PERFORMANCE OF CARDIFF SCHOOLS IN 2014/15

**REPORT OF DIRECTOR OF EDUCATION & LIFELONG
LEARNING**

AGENDA ITEM: 7

PORTFOLIO: EDUCATION (COUNCILLOR SARAH MERRY)

Reason for this Report

1. To update Cabinet on the performance of schools in 2014/15.

Background

2. Following a previous pattern of unacceptably low standards in too many Cardiff schools, and an overall picture of attainment in the city which had not improved at a sufficient rate over a number of years, results in 2014-2015 demonstrated acceleration in the rate of improvement on most measures, building on the improvements seen in 2013-2014.
3. Estyn inspected Cardiff Local Authority in 2011 and whilst judging provision to be 'adequate' placed the authority in Estyn monitoring. In the February 2014 monitoring visit Estyn judged that Cardiff Local Authority required 'significant improvement'. Estyn noted the limited rate of improvement in attainment at age 16 over the previous three years, the marked variation between schools in similar contexts, an unacceptably wide gap between the attainment of pupils eligible for free schools meals and the rest, and the need for improved provision, including performance management, partnership working and the support and challenge provided to schools.
4. The Central South Consortium had been established from September 2012 with the remit to deliver, through the role of professional advisers, support and challenge to schools, and to deliver programmes of development to improve teaching and leadership in schools. Against the picture of 2013 attainment Estyn added a specific recommendation to strengthen support and challenge to schools in February 2014. Since then there has been significant reshaping of the focus and consistency of the work of the consortium with Cardiff schools, alongside the development of a peer to peer, 'schools led', improvement strategy, the Central South Wales Challenge.

5. In response, the local authority set out in its Education Development Plan, and an Estyn Action Plan, a programme of improvement action, focusing on improving standards, provision and leadership in schools, and addressing the six recommendations made by Estyn in February 2014.
6. In the monitoring visits in March 2015, Estyn reported that since February 2014 the authority has begun to strengthen its capacity in delivering school improvement services and made improvements to its performance management processes and its scrutiny arrangements for education services for children and young people. However they reported that these improvements are still relatively recent and the local authority still faces many significant challenges, in improving educational performance, particularly in a minority of its secondary schools.
7. In October 2015 they reported that overall, improvements in partnership working were contributing to better outcomes in schools. However, they also commented that the authority has been less effective in working with partners to reduce exclusions and increase the proportion of young people who are engaged in education, employment or training.
8. This report provides an initial analysis of educational outcomes for the academic year 2014-2015 and identifies the main strengths and shortcomings in performance. Overall results are final, based upon actual performance data published by Welsh Government. Results in all phases for FSM pupils are also provisional, pending publication of final FSM outcomes by Welsh Government in December 2015.

Commentary

9. The results for the 2014-2015 academic year build on the improvements seen last year. They indicate that the actions put in place to address longstanding shortcomings in provision are now having a positive impact on improving outcomes for learners. Standards of attainment continue to improve in all key stages and in many indicators at a faster rate than across Wales as a whole. Despite this strengthening picture, outcomes at the end of each key stage are not yet high enough.
10. There has been positive improvement in a number of areas:
 - In the primary phase, at the end of the Foundation Phase and Key Stage 2, improvements have continued at a faster rate than across Wales as a whole. The proportion of pupils achieving the Foundation Phase Indicator (FPI) and Core Subject Indicator (CSI) is in line with national averages;
 - The outcomes for pupils eligible for free school meals (eFSM) are improving at a faster rate than their peers in the primary phase and at Key Stage 3;

- At Key Stage 4 there has been further significant improvement (4.9 ppt) in the Level 2 inclusive threshold to 60%. This has halved the number of secondary schools where less than 40% of pupils achieve five GCSEs grades A*-C including English or Welsh and mathematics from six to three;
- The 4.5ppt increase in the outcomes of eFSM pupils in the Level 2 inclusive threshold is greater than the 3.5ppt improvement across Wales as a whole. Cardiff's eFSM pupils' performance at this key stage is now slightly higher than the national average;
- Minority ethnic pupils as a whole at Key Stage 4 perform at least in line with White UK pupils following further increases in their attainment overall; and
- An increase in the number of schools in the highest benchmarking quarter (top 25%) and a reduction in the number of schools in the lowest benchmarking quarter.

11. Aspects of continuing concern:

- The variation in standards achieved by schools with comparable pupil populations in both the primary and secondary sectors;
- The markedly low performance in three secondary schools which has had a negative impact on the city's overall attainment, attendance and exclusion figures;
- The continuing impact of poverty on standards of attainment; despite the improvements in performance of pupils eligible for free school meals, the gap remains too wide;
- The underachievement of some groups of learners, in particular some Minority Ethnic groups, White UK pupils in schools in deprived areas of the city and looked after children;
- The proportion of pupils who are NEET and the related under achievement of vulnerable pupils, particularly at Key Stage 4 in the Level 1 threshold; and
- Leadership, including governance, in a number of schools where progress has been limited.

Performance continues to improve but there remains too much variation between schools, particularly in the secondary sector.

12. In the Foundation Phase and Key Stage 2 the rate of improvement has increased in Cardiff in each of the past three years, whilst across Wales the rate of improvement has slowed. Cardiff is now at least in line with the national average in all the main indicators in the primary phase.
13. At Key Stage 3 performance is still improving albeit the rate of improvement has slowed. At this key stage, in the CSI, Cardiff's performance continues to be above the modelled expectations – the expected performance at any given FSM level based on the statistical relationship between FSM and achievement.

14. At Key Stage 4, outcomes improved in nearly all the main indicators. In the level 2+ threshold Cardiff's performance increased again, making a 9 percentage point (ppt) improvement over the last two years. Whilst there has also been improvement in the wider level 2 measure, the rate of improvement on this and on the level 1 measure, which decreased slightly overall in 2015, are of continuing concern in a number of secondary schools.
15. Action to address weaknesses in poorly performing schools, through the work of challenge advisers, the systematic review of progress where standards are low, and where appropriate by the use of formal warnings from the local authority, are now being delivered at an earlier stage but there is a need for continued rigour in identifying causal factors in underperformance and acting promptly to ensure that these are addressed.
16. There remain concerns around some lower attaining schools in challenging contexts where results have fallen, or where outcomes continue to place the school in the lowest benchmarking quarter. Four primary schools still have fewer than 70% of their pupils attaining the core subject indicator at the end of Key Stage 2. In the secondary sector, eight schools still have fewer than 50% of their pupils achieving the level 2 inclusive threshold.

17. The significant difference between the highest and lowest performing secondary schools in the level 2 inclusive threshold is shown in the scatter graph below. The performance of each individual school in this measure is plotted against the school's proportion of pupils eligible for free school meals. The graph clearly illustrates the variation in performance between schools with similar FSM figures.

18. Action is being taken to support secondary schools in developing the new curriculum to ensure that potential decreases in outcomes resulting from these changes are minimised. The current performance indicators at Key Stage 4 are due to change in 2017, and a much more restrictive range of qualifications will be eligible for inclusion in the new measures. The extent of the challenge for schools depends upon the extent to which vocationally-based, inclusive qualifications, such as BTECs, have formed part of the curriculum offer in the past.
19. Weaknesses in standards, provision and leadership persist in mathematics, particularly in the secondary phase. Plans to strengthen leadership and its impact on provision and standards are being implemented by the consortium through a core training programme, in school support and network meetings.

The performance of primary schools overall is relatively stronger than secondary schools overall.

School Performance

20. The profile of examination, test results and teacher assessments, taken together with inspection judgements and the benchmark comparison of Cardiff schools with similar schools across Wales suggests that the quality of provision in Cardiff schools is improving and becoming more consistent in the primary sector at a faster rate than in the secondary sector. This is reflected in the national categorisation of schools where a greater proportion of the city's primary schools are in standards groups 1 and 2 than is the case in Cardiff secondary schools.

	2014-2015	2015-2016
Primary Sector	48.4%	70.5%
Secondary Sector	44.4%	55.6%

21. However, in the secondary sector, benchmark comparisons show that there are currently not enough schools with the highest quality of provision, judged to be excellent. There is a greater difference in performance between groups of pupils vulnerable to underachievement and their peers in secondary schools than in primary schools. In the secondary sector, at the level 2+ threshold, the average difference in performance between eFSM pupils and non-FSM pupils in schools is 21.8ppt.
22. The performance of three secondary schools at the end of key stage 4 is significantly lower than the performance of the other schools in the secondary sector. The local authority has taken formal intervention action in these schools which has resulted in strengthened leadership and governance and clear indications are that standards in 2015-16 are improving.

Categorisation 2014-2015

23. In the primary sector, the proportion of schools in the categories requiring least support (green and yellow), is in line with both the Consortium and Wales figures with around a third of schools in these two support categories. Cardiff has a greater proportion in the green category which means that a greater proportion of schools have the capacity to support other schools and are playing a significant part in developing school to school work.
24. In the secondary sector, the proportion of schools in the green and yellow categories is below both the Consortium and Wales figures with just under one half of Cardiff schools in these two support categories.

Support Category	Primary 2014-2015	Secondary 2014-2015
Green	25.3% 24 out of 95 schools	11.1% 2 out of 18 schools
Yellow	38.9% 37 out of 95 schools	33.3% 6 out of 18 schools
Amber	25.3% 24 out of 95 schools	22.2% 4 out of 18 schools
Red	10.5% 10 out of 95 schools	33.3% 6 out of 18 schools

Inspection Outcomes

25. The Estyn inspection outcomes of Cardiff's primary schools are stronger than across the secondary sector. The table below shows the comparative outcomes of school inspections requiring follow up activity over the last five years in Cardiff with Wales 2014-2015.

	Primary	Secondary
Cardiff	50%	72%
Wales	65%	69%

26. Of the 76 primary schools inspected in Cardiff, whose reports have been published, thirty eight (50%) have required a follow-up activity; fourteen (18%) have required Estyn follow-up monitoring; two schools required special measures and six significant improvements. Nine schools received a judgment of excellent in one or both of the overall indicators, sixteen (21%) schools required local authority monitoring.
27. Of the 18 secondary schools inspected 13 (72%) have required follow-up monitoring. Three of these required special measure and three significant improvement. Four schools required Estyn monitoring and three schools required local authority monitoring. Two schools received a judgement of excellent on one or both of the overall indicators.
28. Inspection grades show that there are currently not enough schools with the highest quality of provision, judged to be excellent. There remain a small, but significant, number of schools where standards are too low, the quality of provision is inadequate and leadership is unsatisfactory. The largest proportion of these schools is in the secondary sector.

Attendance

29. Attendance in primary schools continues to improve. The primary figure for 2014/15 was 95.1% which was a 0.2ppt improvement on the previous year. Performance is above the average primary attendance for Wales of 94.9% and Cardiff is now 6th out of the 22 local authorities in Wales. However, despite the improving picture, Cardiff's primary attendance figure is the lowest out of the ten core cities and emphasises the need to raise levels of attendance further. Overall, 51.5% of primary schools

achieved an attendance rate over 95% and 27.4% of schools achieved attendance of 96% or above.

30. The 2014-2015 overall attendance figure for secondary schools remained the same as in the last academic year at 93.8%, which is identical to the Welsh average. This places Cardiff 11th out of the 22 local authorities in Wales for secondary school attendance and 7th out of the ten core cities. Seven schools achieved attendance above 95% compared to five last year. Notably poor attendance in two schools impacted significantly on the overall city data.

Exclusions

31. Good progress has been made in maintaining low permanent exclusions. In 2013/14 the overall figure for Cardiff was 0.1 per 1000 pupils which was half the Welsh average of 0.2 per 1000 pupils. In 2014/15 there were 4 permanent exclusions in the secondary phase and none in the primary phase.
32. Good progress has also been made in reducing fixed term exclusions and in 2013/14 the rate for longer fixed term exclusions (1.1 per 1000 pupils) was below the Welsh average (1.6 per 1000 pupils). However, the figure for shorter term exclusions (34.3 per 1000 pupils) was well above the national average (26.7 per 1000 pupils).
33. In 2014/15 there were fixed term exclusions in around one third of primary schools and in all secondary schools. Primary rates reduced and are the same as available national averages. However, whilst showing a significant reduction, secondary rates continue to be above national figures due to relatively high exclusion rates in eight schools. Of these eight schools, three schools were very high excluders and five more had exclusion rates considerably above Wales and Cardiff's averages. This had a negative effect on progress towards targets.
34. Since September 2015 two of the secondary schools have significantly reduced exclusions and are in-line with the other twelve schools, with low exclusions. A further four schools have been successful in reducing exclusions this term. Only two secondary schools continue to be very high excluders.

Improvements in challenge and support are making a difference overall but there are still a minority of schools causing concern

35. A more robust working relationship between the local authority and the consortium is ensuring that schools receive the appropriate degree of challenge and more effective support. Brokered school to school working is increasing the range of effective support available to meet schools' needs, in particular enabling improving schools to gain first hand access to good practice which they can replicate or adapt in their own context.

36. Over the last two years there has been a concerted effort to focus on increasing the transparency of data and strengthening the performance culture. Individual school data is shared in order to raise expectations across all areas of the city, and enable meaningful comparison of schools' performance.
37. Outcomes in schools where headline figures have been relatively high, but significant levels of underachievement existed (higher attaining but lower achieving), have been increased, some significantly so, through improved challenge and support.
38. These strengthened arrangements to identify and intervene in underperforming schools are impacting on leadership capacity, standards of attainment and the quality of provision in schools. Outcomes improved in ten out of the fifteen schools that received a warning notice, letter of concern or where formal intervention actions were taken.
39. In 2013-14, fourteen schools were inspected by Estyn, two of which were placed in a formal monitoring category. As a result of improvements in challenge and support these schools were judged to have made good progress when revisited by Estyn in 2014-2015.
40. In 2014-2015, there were ten primary schools and six secondary schools categorised as requiring the most intensive (red) level of support. The increased challenge has led to changes in leadership in five of these schools. The implementation of bespoke needs led support has reduced the number of schools requiring red level of support in 2015-2016 provisionally to 6 primary schools and 4 secondary schools.
41. However, in 2014-2015, from the twenty one schools that were inspected, two secondary and four primary schools were placed in formal monitoring categories by Estyn. This highlights the continuing need for early and robust intervention in schools causing concern.

Leadership and Governance are key

42. Good leadership is key to ensuring that good or better teaching takes place in every lesson in every school. Overall the quality of leadership, including governance, in primary schools is stronger than that in the secondary schools. Since September 2010, Estyn inspections have judged that 75% of leadership and management in primary schools was good or excellent compared to 55% in secondary schools.
43. In good or excellent schools, headteachers know their staff and pupils well. The quality of teaching and its impact on pupil progress is closely monitored and the dissemination of best practice throughout the school is strategically planned. Governors oversee the performance of their school effectively and demonstrate a sound understanding of their school's data. They engage with senior leaders in a structured and professional manner.

44. Where schools in Cardiff are judged to be unsatisfactory, inspections always identify weaknesses in leadership. Frequent features are that: self-evaluation and planning for improvement are not robust enough and have not had enough impact on raising standards and improving the quality of teaching; performance management is weak; staff development programmes are ineffective; and governors do not challenge the school's leaders rigorously enough or hold them to account fully for the standards that pupils achieve.
45. In secondary schools where outcomes at the end of key stage 4 are relatively low, systems for tracking pupils' progress are not robust enough and support for those pupils at risk of underachievement is ineffective. Leaders are unable to ensure that the quality of teaching is consistent across all subject areas. In some schools, strengths in one subject area are undermined by shortcomings in another. Such inconsistencies point to weaknesses in quality assurance and performance management processes.
46. In 2015 in schools where the capacity to improve is judged to be good or better a system of "Peer Review" has been introduced. Eligible schools are grouped into threes and the headteachers work together to carry out a school review with a previously agreed focus. This allows good practice to be shared but also builds the skills of the headteachers involved.
47. The local authority has commissioned a range of leadership development programmes that are arranged by the consortium and delivered by experienced leaders and practitioners.

These include:

- Aspiring middle leaders
- Aspiring senior leaders
- Aspiring headteachers
- New to headship
- Strategic headship (refresher course for heads in post 5 or more years and for those that need to make rapid improvement)
- Consultant Leaders-for experienced high achievers who have the commitment and capacity to support other schools
- Executive headship, for headteachers running more than one school.

The feedback from participants in these programmes has been positive and the programmes are contributing towards the building of leadership capacity within schools.

48. Governance has been strengthened through the provision of both generic mandatory training and bespoke training particularly in red and amber schools. The council has revised the process for appointing local authority governors and it has brokered a wide range of partnerships with businesses in the city to identify and place strong governors.

49. However, there remains a minority of schools where weak governance is hindering progress as governors have an overly positive view of the school's performance and consequently there is insufficient challenge and holding of the school leadership to account. The consortium has recruited a number of experienced governors to act as consultant governors in schools where there is a need to further develop the role of the governing body.

Performance of Minority Ethnic Pupils is improving in secondary schools at a faster rate than White UK pupils

50. The attainment gap between Minority Ethnic pupils and White UK pupils reduces with each key stage from Foundation Phase through to Key Stage 4. There has been improvement over a three year period in the performance of Minority Ethnic groups as a whole in all phases.
51. For the first time the performance of all Minority Ethnic groups in the Key Stage 4 Level 2+ indicator is in line with White UK pupils. Currently the pupils most at risk of underachievement are White UK pupils living in the more deprived areas of the city.
52. In contrast, at Key Stage 2, the difference in performance of Minority Ethnic pupils and White UK pupils increased slightly in the CSI in 2015. This is partly due to the fall in overall outcomes of Black Caribbean, Chinese and White European pupils.
53. In the main indicator at each key stage, the highest performing groups as such as Chinese, Asian, and Pakistani are now mainly second and third generation. The parents have a good understanding of the British education system, are aspirational for their children and support them to achieve and attain well.
54. The lowest performing Minority Ethnic groups are Traveller/Romany and White European. The attendance at school and behaviour issues when in school of some learners belonging to both these groups impedes their attainment at all key stages but particularly in Key Stage 3 and Key Stage 4.
55. EU Roma pupils' progress is often impeded by complex pastoral issues and this group often need bespoke packages in the secondary phase to maintain engagement with education and to achieve their potential. Parents' experiences of education in their home countries have not always been positive and this often has a negative impact on the value and importance that they give to the education of their children.

Whilst performance overall is improving the outcomes of some vulnerable groups needs strengthening

56. By the end of their primary education, 87.8% of pupils achieve the expected levels in the three core subjects of English/Welsh, mathematics

and science. The proportion of pupils at key stage 2 attaining a level 5 in at least one core subject has risen from 34% in 2013 to 42%. These improvements suggest that primary schools are getting better at identifying the more able pupils and developing their potential.

57. Against this overall improving picture there is evidence that some pupil groups have lower outcomes, with the attainment of looked after children (LAC), those on free school meals (FSM), some minority ethnic groups, learners with English as an Additional Language (EAL), learners with Special Educational Needs (SEN) and some groups of boys being of particular concern. More needs to be done to narrow the gap in outcomes between disadvantaged pupils and their peers.
58. In 2015, in the primary phase, the difference in performance between minority ethnic pupils and White UK pupils increased slightly. In a number of primary schools, particular those with high levels of EAL learners and significant pupil mobility there is a need to address more effectively the underlying factors that impact negatively on pupils' outcomes in English, and to secure even closer collaboration between central teams, and the consortium to support schools in addressing this.
59. The extensive programme of Flying Start provision in designated areas of Cardiff is enabling more young children to be ready to make a successful start to statutory education.
60. The difference in performance of pupils who are eligible for free school meals (eFSM) and those not eligible (nFSM) is reducing in the primary phase. Leaders of primary schools understand that the first few years of education, particularly for those children from deprived backgrounds are crucial to future success. They know which pupils need help, track their progress carefully and use the pupil deprivation grant to fund additional support. Primary teachers focus more sharply on the importance of teaching good literacy and numeracy from the early years through to the end of key stage 2.
61. In the secondary sector outcomes of eFSM pupils are still lagging far behind outcomes of non eFSM pupils. In 2014, the gap in GCSE attainment at the level 2+ threshold was 33.3 ppt. In 2015 it had slightly widened at 34.4ppt. The Welsh Government have put a greater focus on the attainment of eFSM pupils, factoring their performance into the national categorisation system. Provisional results for 2015 report that in Cardiff 31.9% of eFSM pupils attained the level 2+ threshold compared to 31.3% of eFSM pupils across Wales.
62. The performance of Looked After Children at the end of each key stage and particularly at Key Stage 4 are still far too low and lower than their peers at each key stage. The difference is smallest in the Foundation Phase and widest at Key Stage 4.

63. In 2015 the proportion of SEN pupils attaining level 2 and level 2 inclusive, increased for all groups and there was also an 8 ppt increase in the proportion of statemented pupils achieving level 1. However, the proportion of school action plus and school action pupils achieving level 1 fell, by 7 ppts and 1.7 ppts respectively. This has led to the overall fall in level 1 threshold for all Cardiff pupils.
64. The numbers of young people who are not engaged in education, employment or training (NEET) in Cardiff have continued to reduce and since 2010 fell from 8.8% to 4.26% in 2014. This percentage represents 151 pupils out of a cohort of 3546 pupils. Of these 151 pupils, 36 young people (1.02%) could not or were unable to enter education, employment or training due to reasons including pregnancy, health related issues or custodial sentences.
65. However despite this improvement, the proportion of young people in Cardiff who are NEET remains one of the highest in Wales. In 2014 only Newport had a greater percentage of year 11 school leavers not in education, employment or training than Cardiff. Not all schools are ensuring that all their pupils leave schools with the knowledge and skills that employees seek. Performance at the wider Key Stage 4 level 2 measure and the level 1 measure, is still of continuing concern in a number of secondary schools.
66. Pupils who leave education without the necessary literacy and numeracy skills and with poor attitudes and motivation to enter further education or employer based training such as apprenticeships are more likely to become NEET. The three secondary schools where pupil outcomes continue to cause most concern are the same schools that have yielded higher numbers of young people leaving at year 11, without a positive pathway to education, employment or training.

Girls' outcomes are higher than boys in most indicators but the performance of girls does not compare as well with national figures.

67. In Cardiff, girls continue to outperform boys at all key stages and in nearly all indicators. The lower performance of boys relative to girls in the Foundation Phase and at Key Stage 2 is most noticeable in English. That said, from Key Stage 2, the performance of girls across Cardiff is lower than the performance of girls nationally in most areas.
68. This is also the case at the higher levels in the primary phase, where there is a greater underachievement in the performance of girls relative to the national averages in the Foundation Phase in Language, Literacy and Communication – English and in English and science at Key Stage 2.
69. In the secondary sector, girls' performance is stronger than boys in all the core subjects at Key Stage 3 and in the main performance indicators,

with the exception of mathematics, at Key Stage 4. However, compared to the national outcomes for girls and boys there is noticeable underperformance in the attainment of girls at the expected level in English at Key Stage 3 and mathematics and science at Key Stage 4.

70. At level 6+ and level 7+ in Key Stage 3, there is a greater difference in the performance of girls and boys than there is at the expected level and the outcomes of both boys and girls are above the national averages.

Priority Areas for Further Improvement

Ensure greater consistency in the quality of schools' provision

71. Whilst there has been a marked reduction in the variation between schools, in terms of the quality of provision and learner outcomes, further action is needed to ensure that weaker provision is addressed earlier and that stronger leadership arrangements, including, where appropriate, through the active development of federations between schools, are put in place.

Improve outcomes for some vulnerable learners

72. Outcomes overall are improving at an accelerating rate, but some groups of learners are not making sufficient progress, or successfully moving into education, employment or training after leaving statutory schooling. There is a continuing need to strengthen tracking and intervention for pupils at risk of underachievement and to develop appropriate curriculum pathways to secure successful progression.

Developing a self-improving school system

73. The consortium wide approach to develop "schools led" improvement has taken root and is having a positive impact. It now needs to be further developed through: the active brokering role of Challenge Advisers; more formal mechanisms for commissioning and empowering strong schools and practitioners and through the transfer of resources to drive improvement into the strongest schools, coupled with more explicit accountability for impact and value for money.

Consistently high quality teaching

74. The quality of teaching in every classroom, in every lesson, is central to ensuring that learners achieve well, raising standards further and accelerating progress for all pupils. It is essential that teachers' pedagogy is continually developed, the highest quality teachers are recruited and retained, against a framework of raised expectations, and robust performance management.

The best leaders in well governed schools

75. Strong and effective leadership is key to ensuring that teaching throughout the school is consistently good or better. Further joint work with local authorities across the consortium is needed to recruit, retain and develop the best school leaders to work in Cardiff schools and to ensure that their work is effectively supported and challenged by strong governing bodies.
76. These improvement priorities are aligned to the priorities set out in the Central South Consortium Business Plan which includes the shared priorities for educational improvement across the five constituent local authorities.
77. In addition Cardiff Local Authority is developing, with headteachers, governors and other partners, a distinct strategy for educational improvement in Cardiff. We recognise that excellent education is a key priority for the prosperity and social cohesion of the city. The economy of Cardiff is changing rapidly and old industries are being replaced by a much more dynamic and more fluid economy. Young people currently in our schools will face a future which is guaranteed to be different from whatever we may predict now.
78. “Cardiff 2020 - Aiming for Excellence” will set out a renewed vision for education in Cardiff. It will build on the improvements made to date and will outline ambitious goals for excellence in education in Cardiff. The strategy is currently being developed and will be launched in Spring 2016.

Summary Headline Results Across All Key Stages

Indicator	Cardiff			Wales			Cardiff Ranking	
	2012/13	2013/14	2014/15	2012/13	2013/14	2014/15	2012/13	2014/15
Foundation Phase Indicator % achieving FPOI	80.85%	83.70%	86.73%	82.96%	85.15%	86.80%	18	12
Foundation Phase LLC in English % achieving FPO5+	83.39%	85.20%	87.94%	85.25%	86.62%	88.00%	17	11
Foundation Phase LLC in Welsh % achieving FPO5+	86.86%	90.45%	92.76%	86.73%	89.82%	91.30%	11	8
Foundation Phase Maths % achieving FPO5+	85.32%	87.44%	89.44%	87.36%	88.70%	89.70%	20	13
Foundation Phase PSD % achieving FPO5+	91.50%	93.52%	94.04%	93.02%	94.17%	94.80%	18	20
Foundation Phase LLC in English % achieving FPO6+	27.70%	29.23%	32.07%	29.47%	32.16%	34.20%		
Foundation Phase LLC in Welsh % achieving FPO6+	25.94%	27.67%	38.16%	29.27%	32.50%	36.90%		
Foundation Phase Maths % achieving FPO6+	27.77%	28.70%	33.22%	28.21%	30.28%	34.30%		
Foundation Phase PSD % achieving FPO6+	42.82%	48.79%	53.03%	45.90%	51.46%	56.00%		
Key Stage 2 CSI	82.61%	85.11%	87.76%	84.33%	86.13%	87.70%	17	13
Key Stage 2 English L4+	86.00%	87.27%	89.87%	87.13%	88.42%	89.60%	18	12
Key Stage 2 Welsh L4+	89.55%	90.11%	93.74%	86.71%	88.10%	90.50%	10	6

Reasons for Recommendations

79. The report provides an overview for Cabinet of performance concerning the Council's key responsibilities with regard to promoting high standards of achievement.

Legal Implications

80. This is an information report and as such has no direct legal implications. All decisions taken by or on behalf the Council must (a) be within the

legal powers of the Council; (b) comply with any procedural requirement imposed by law; (c) be within the powers of the body or person exercising powers of behalf of the Council; (d) be undertaken in accordance with the procedural requirements imposed by the Council e.g. standing orders and financial regulations; (e) be fully and properly informed; (f) be properly motivated; (g) be taken having regard to the Council's fiduciary duty to its taxpayers; and (h) be reasonable and proper in all the circumstances.

Financial Implications

81. There are no financial implications arising directly from this report. Schools achieve these results from within the resources that are allocated to them on an annual basis and through the services provided to schools from centrally retained budgets.

RECOMMENDATION

Cabinet is recommended to note the performance of Cardiff schools in the academic year 2014/2015.

NICK BATCHELAR

Director

15 January, 2016

The following Appendices are attached:

- Appendix 1 Explanation of Frequently Used Terms
- Appendix 2 Summary Overview – Primary
- Appendix 3 Performance in the Foundation Phase
- Appendix 4 Performance at Key Stage 2
- Appendix 5 Summary Overview – Secondary
- Appendix 6 Performance at Key Stage 3
- Appendix 7 Performance at Key Stage 4
- Appendix 8 Performance at Key Stage 5
- Appendix 9 Attendance at school
- Appendix 10 Exclusions
- Appendix 11 Not in Education, Employment or Training (NEET)
- Appendix 12 Outcomes of Inspections

Explanation of Frequently Used Terms

Foundation Phase (FP)	This covers pupils aged 3-7 (nursery, reception, year 1 and year 2)
Key Stage 2 (KS2)	Years 3 – 6 of primary schools, pupils aged 7 – 11
Key Stage 3 (KS3)	Years 7 – 9 of secondary schools, pupils aged 11 – 14
Key Stage 4 (KS4)	Years 10 – 11 of secondary schools, pupils aged 14 – 16
Post 16	Years 12 and 13
SEN	Special Educational Needs
MAT	More Able and Talented
EAL	English as an Additional language
LAC	Looked After Children
eFSM	Eligible for free school meals
nFSM	Not eligible for free school meals

Foundation Phase Outcome Indicator – the percentage of pupils achieving the expected outcomes in each of language, literacy and communication – English (LCE) or Welsh (LCW), mathematical development (MDT) and personal, social cultural diversity and well-being development (PSD).

Core Subjects - In the National Curriculum, the core subjects are, in English-medium schools, English, mathematics and science. In Welsh-medium schools there is an additional core subject of Welsh (first language).

Core Subject Indicator - The core subject indicator is the percentage of pupils achieving the expected level of attainment in each of the core subjects in combination (English or Welsh, mathematics and science).

Expected Outcome – There are expected levels of attainment that the majority of children will reach at the end of each key stage - Foundation Phase outcome 5, Key Stage 2 level 4, Key Stage 3 level 5.

Threshold Indicators - The level 2 threshold indicator including English or Welsh and mathematics is 5 grades A*-C including these subjects, the level 2 threshold is 5 grades A*-C and the level 1 threshold indicator is 5 grades A*-G. The threshold indicators include all approved qualifications not just GCSE that are the equivalent of: level 1: grades D-G; level 2: grades A*-C.

Level 3 threshold - Equivalent to the volume of 2 A levels at grade A-E.

Benchmarking Quarter – The Welsh Government places schools into five groups based on proportions of FSM pupils. Each group is then divided into four quarters based on the performance of schools within each group.

Modelled Expectations – There is a strong relationship between FSM and achievement; this is modelled each year to show the “expected “ performance at any given FSM level based on the statistical relationship.

FFT estimates – Fischer Family Trust is an organisation that uses a range of available data to provide estimates of the most likely outcomes for a pupil given their prior attainment.

Average Capped Wider Points Score - The calculation is based on the eight best GCSE grade/ approved vocational courses per pupil.

EAL Categories

A = New to English

- May use first language for learning and other purposes.
- May remain completely silent in the classroom.
- May be copying / repeating some words or phrases.
- May understand some everyday expressions in English but may have minimal or no literacy in English.

B = Early Acquisition

- May follow day to day social communication in English and participate in learning activities with support.
- Beginning to use spoken English for social purposes and may understand simple instructions and can follow narrative / accounts with visual support.
- May have developed some skills in reading and writing.
- May have become familiar with some subject specific vocabulary.
- Still needs a significant amount of EAL support to access the curriculum.

C = Developing competence

- May participate in learning activities with increasing independence.
- Able to express self orally in English, but structural inaccuracies are still apparent and literacy will require ongoing support, particularly for understanding text and writing.
- May be able to follow abstract concepts and more complex written English.

D = Competent

- Oral English will be developing well, enabling successful engagement in activities across the curriculum.
- Can read and understand a wide variety of texts but written English may lack complexity and contain occasional evidence of errors in structure.
- Needs some support to access subtle nuances of meaning, to refine English usage, and to develop abstract vocabulary.

E = Fluent

- Can operate across the curriculum to a level of competence equivalent to that of a pupil who uses English as his/her first language.
- Operates without EAL support across the curriculum.

Summary Overview - Primary

1. There has been a positive trend of improvement since 2013 in all the performance measures in the primary phase. The rate of improvement in the main performance indicators is greater in Cardiff than across Wales as a whole.

Increase since 2013	Cardiff	Wales
FPOI	5.88ppt	3.84ppt
CSI	5.15ppt	3.41ppt

2. Alongside the overall improvements in the headline figures there has been a reduction in the variation of school outcomes with a smaller number of primary schools in the lowest benchmark quarter. However variation in the performance of schools is still a notable feature. The range in outcomes in the Foundation Phase is between 59.6% and 100% in the FPOI, whilst in the CSI at Key Stage 2 it is from 55.9% to 100%. This presents a strong case for federation or joint leadership where schools serving very similar communities are achieving such different outcomes.
3. Over the same time period the performance of eFSM pupils has increased by a larger amount than the performance of non FSM pupils reducing the difference in performance between the two groups. However the performance of eFSM pupils remains below that of nFSM pupils and the impact of poverty on attainment is still significant.

Increase since 2013	eFSM	nFSM
FPOI	14.78ppt	6.65ppt
CSI	9.04ppt	3.88ppt

4. Girls' performance exceeds that of boys across the primary phase. In the Foundation phase girls' performance is in line with the national performance of girls, but by the end of Key Stage 2 girls' performance is relatively weaker. In contrast, boys' performance in Cardiff is lower than the national average in the Foundation Phase but exceeds the national average by the end of Key Stage 2.

	Cardiff Girls	Wales Girls	Cardiff Boys	Wales Boys
FPOI	90.85	90.75	82.73	83.03
CSI	89.53	90.75	86.03	84.90

5. Schools in the city are becoming increasingly ethnically and linguistically diverse. In general they are adapting well to the changing communities they serve. Some Minority Ethnic groups, such as Chinese in the Foundation Phase and Bangladeshi at Key Stage 2 are outperforming the White UK pupil group. In contrast, the White European and Traveller/Romany groups continue to perform below the White UK pupil group and the performance of minority ethnic pupils as a whole is below the Cardiff average in the primary phase.

6. The rising trend in attendance continued in 2014-2015, leading to an overall figure of 95.1% (Wales 94.9%), and an improvement in the city's ranking when compared to other local authorities across Wales from 7th to 6th.

Performance in the Foundation Phase

Trend in Outcomes

1. The proportion of pupils achieving the Foundation Phase Outcome Indicator (FPOI) is 86.7% (2015 target 85.8%). The improvement in the FPOI is 3 ppt which is greater than the national improvement (1.6ppt) and brings the local authority in line with the Wales average (86.8%) for this indicator. This degree of improvement has been achieved against a background of increasing numbers of English as an additional language (EAL) learners.

2. Just over two thirds of primary schools (68 out of 95) maintained or improved the FPOI in 2015 compared to 2014. In the remaining third (27 out of 95) the proportion of pupils achieving the FPOI fell by an average of 4.25 ppt. In twelve schools, the decrease is less than 3ppt. Four schools are categorised as red or amber and action is already being taken to raise standards. In the remaining schools the challenge adviser has scrutinised each school's data analysis and agreed with the school appropriate actions in response to the decrease in outcomes.

Foundation Phase (O5+)					
	PSD	LCE	LCW	MDT	FPOI
2012	89.55	81.40	89.57	84.59	78.66
2013	91.50	83.39	86.86	85.32	80.85
2014	93.52	85.20	90.45	87.44	83.70
2015	94.04	87.94	92.76	89.44	86.73

3. The strongest area of learning continues to be Personal and Social Development Wellbeing and Cultural Diversity (PSDWCD) and the weakest area Language, Literacy and Communication - English (LLCE). This is the case for both outcome 5 (the expected level) and outcome 6. In all areas of learning at least one third of pupils attain the higher level.

Performance of More Able and Talented (MAT) pupils

4. Cardiff is in line with the national averages at outcome 5+ and the proportion of pupils reaching outcome 6 (O6+) or above continue to improve each year in each area of learning but remain below the Welsh averages in all areas of learning except Language, Literacy and Communication – Welsh.

O6+	2012	Wales 2012	2013	Wales 2013	2014	Wales 2014	2015	Wales 2015
LCE	24.80%	25.60%	27.70%	29.50%	29.20%	32.20%	32.07%	34.24%
LCW	23.20%	24.80%	25.90%	29.30%	27.70%	32.50%	38.16%	36.88%
MDT	24.50%	24.20%	27.80%	28.20%	28.70%	30.30%	32.50%	34.30%
PSD	37.50%	38.60%	42.80%	45.90%	48.80%	51.50%	53.03%	56.03%

5. This lower performance is most noticeable in the performance of girls in Language, Literacy and Communication – English and in the performance of boys and girls in Personal and Social Development, Well-Being and Cultural Diversity.

Gender Gap

6. In the Foundation Phase, at outcome 5+, the performances of boys and girls are similar to the national averages, but the performance of boys is around 8 ppt lower than the performance of girls. Girls' performance is stronger than boys in all the areas of learning, but the greatest difference of nearly 9 ppt is in Language, Literacy and Communication – English.

	2012	2013	2014	2015	Wales 2015 Actual
FPI Boys	73.57	77.95	79.72	82.73	83.03
FPI Girls	83.83	83.93	87.79	90.85	90.75
FPI Total	78.66	80.85	83.70	86.73	86.80
Boys Vs Girls	-10.26	-5.98	-8.07	-8.12	-7.72

7. At the higher outcome 6+ the girls' outcomes exceed the outcomes for boys by more than 10 ppt in all areas of learning with the exception of mathematical development where the difference is only 1.4 ppt. The performances of both boys and girls are lower than the national averages with the exception of girls in Welsh.

Ethnicity Gap

8. Overall performance for Minority Ethnic pupils' attainment in the FPI in 2015 (82.3%) remains below White UK (88.9%) by 6.6 ppt and all Cardiff pupils by 5.8 ppt. The achievement gap reduced for Minority Ethnic pupils from 2013 to 2014 by 3.3 ppt but the widened again to 6.6 ppt in 2015.
9. The proportion of Minority Ethnic pupils achieving the FPI as a whole has improved by 6ppt in the years between 2013 and 2015. Within this overall improvement, the performance of Chinese/Chinese British (92.3%), Mixed (88.6%) and Pakistani (88.3%) groups of pupils are attaining above the Welsh average of 87% and the average of all Cardiff pupils of 86.7%. The lowest performing group is Traveller/Romany.

Foundation Phase	FPOI 2013	FPOI 2014	FPOI 2015
Any other ethnic background	100.0%	81.08	73.5
Arab	70.7%	79.20	79.1
Bangladeshi	79.8%	78.52	82.9
Black Caribbean	88.9%	70.00	75.0
Chinese or Chinese British	86.7%	70.00	92.3
Mixed	80.7%	83.84	88.6
Not known	68.9%	63.04	66.7
Other Asian	88.2%	92.86	89.0
Other Black	73.5%	87.18	81.9
Pakistani	74.5%	80.99	88.3
Somali	70.7%	78.82	85.7
Traveller/Romany	56.0%	68.97	59.3
White European	66.7%	76.54	71.1
ALL EM	76.3%	81.62	82.3
White UK	83.0%	84.97	88.9
All Pupils	80.9%	83.70	86.7

10. The performance of Traveller/Romani and White European has varied over the same 3-year period and remain the least attaining Minority Ethnic groups.

English as an Additional Language (EAL)

11. In 2015 there were improvements in performance of pupils in nearly all categories of language acquisition. Over the last two years there have been improvements in the proportion of pupils achieving the FPI in all categories, some significantly so.

	2013	2014	2015
EAL (Code A-E)	77.72%	81.93%	82.79%
No EAL	84.15%	84.54%	88.11%
All Pupils	80.85%	83.70%	86.73%

	2013	2014	2015
New to English (A)	41.97%	50.23%	48.06%
Early Acquisition (B)	77.05%	85.98%	93.75%
Developing competence (C)	95.09%	96.98%	97.36%
Competent (D)	96.49%	100.00%	100.00%
Fluent (E)	82.33%	87.86%	89.13%

Performance of Looked After Children (LAC)

12. The proportion of pupils achieving the Foundation Phase Outcome Indicator (FPOI) is 75% (15 out of the 20 LAC in Year 2). This is a similar proportion to that achieved in 2014 for this group of pupils. This compares to the figure of 86.7% of all pupils in Cardiff.
13. The Cardiff Looked After Children's attainment 2015 figure is substantially above the latest published Wales Looked After Child figure 2014 of 58%. The Looked After Education Team continue to work with all partners including specialist teacher teams to promote the early identification of, and support for, children in care who are at risk of underachievement.

Comparative Performance of Pupils Eligible for Free School Meals (eFSM)

14. The attainment gap between those pupils in the Foundation Phase who are eligible for free school meals and those not eligible has narrowed again in 2015.

15. The difference in performance between eFSM pupils and nFSM pupils has been reduced from 15.3 ppt to 13.3 ppt. The performance of eFSM pupils has improved by 4.4 ppt compared to an improvement for nFSM pupils of 2.4ppt. These outcomes suggest that overall schools are using their pupil deprivation grant effectively to improve outcomes for the most disadvantaged pupils.

	Cardiff eFSM 2015	Cardiff nFSM 2015	Wales eFSM 2014	Cardiff All Pupils 2015
Foundation Phase Outcome Indicator	76.7%	90%	72.4%	86.7%

Performance of SEN pupils

16. There continues to be a wide gap between the attainment of pupils having special educational needs (SEN) and non-SEN pupils in mainstream settings in the Foundation Phase. As would be expected, the gap is widest for statemented pupils, and the gap narrows for those at school action plus and school action.

Foundation Phase - Percentage achieving outcome 5 or above

2015	FPI	LCE	LCW	MDT	PSD
Statemented	16.04%	19.42%	0.00%	19.81%	21.70%
School Action Plus	41.75%	50.54%	36.36%	49.51%	66.50%
School Action	69.82%	73.71%	82.14%	78.98%	90.84%
No SEN	95.60%	96.42%	97.29%	96.63%	98.94%
Not matched	50.00%	63.64%	0.00%	50.00%	75.00%
Total	86.73%	87.94%	92.76%	89.44%	94.04%

2014	FPI	LCE	LCW	MDT	PSD
Statemented	11.10%	19.40%	33.30%	19.20%	20.20%
School Action Plus	29.10%	33.30%	43.80%	41.20%	62.30%
School Action	63.50%	68.80%	66.30%	73.30%	90.40%
No SEN	94.50%	95.50%	97.20%	96.10%	98.80%
Not matched	54.80%	57.10%	66.70%	64.50%	77.40%
Total	83.70%	85.20%	90.50%	87.40%	93.50%

17. In 2015 the gaps narrowed for all groups of SEN pupils in Foundation Phase, most notably for those at school action plus. The FPI improved by 5 ppts for statemented pupils, by 12 ppts for pupils at school action plus and by 6 ppts for pupils at school action. The closing gap reflects the impact on outcomes of early intervention strategies such as STARS, SAIL, Maths Factor and Speech and Language Links.

Comparative performance with other local authorities and cities

18. Schools are grouped into FSM bands and ordered nationally to give four quarters – the top performing 25% of schools fall in Quarter 1 (upper quarter) and the bottom performing 25% of schools fall in Quarter 4 (lower quarter). The improvements in performance in the majority of schools have led to an increase

in the number of schools in the top benchmarking quarter from 14 in 2014 to 21 in 2015 and a reduction in the number of schools in the lowest quarter from 17 to 9.

	No of schools	% of schools
Quarter 1	14	14.74
Quarter 2	32	33.68
Quarter 3	32	33.68
Quarter 4	17	17.89
Total	95	100.00

	No of schools	% of schools
Quarter 1	21	22.11
Quarter 2	32	33.68
Quarter 3	33	34.74
Quarter 4	9	9.47
Total	95	100.00

19. In 2015 in the Foundation Phase Indicator, Cardiff has the smallest proportion of schools in the lowest quarter of any of the 22 local authorities across Wales.

20. Comparing Cardiff with other local authorities across Wales it can be seen in the table below that the city's rank position has improved in 2015.

Foundation Phase - FPI	2014/15		2013/14		2012/13	
	Result	Rank	Result	Rank	Result	Rank
Cardiff	86.7%	12	83.7%	18	80.9%	18

Performance at Key Stage 2

Trend in Outcomes

1. There has been a similar improvement in the percentage of pupils reaching the expected level at Key Stage 2 to that seen in the Foundation Phase. In 2015 the improvement in the core subject indicator (CSI) is 2.7ppt which is greater than the national improvement (1.6ppt). The proportion of pupils achieving the CSI is now 87.8% which is in line with the national figure of 87.7%.

2. Two thirds of primary schools (62 out of 93) maintained or improved their Key Stage 2 CSI in 2015 compared to the previous year. In the remaining third (31 out of 93) the proportion of pupils achieving the CSI fell by an average of 6.5 ppt. In nine schools, the decrease is less than 3ppt. Eight schools are categorised as red or amber and action is already being taken to raise standards.
3. Schools are becoming increasingly accurate in their teacher assessments and regional moderation has taken place. They plan and implement interventions to accelerate the progress of pupils who are attaining below their age related expectations. These interventions impact positively on the rate of progress for the majority of pupils.
4. The highest performance is in Welsh first language with mathematics and English having the lowest performance at this key stage. At level 5 performance is highest in Welsh and lowest in English. At least four out of every ten pupils attain the higher level in all subjects which is at least in line with the proportion of pupils across wales as a whole.

Key Stage 2 – Expected Level (4+)				
	English TA	Cymraeg TA	Maths TA	Science TA
2010	82.04	83.21	82.38	85.32
2011	84.12	86.90	83.38	86.20
2012	84.61	85.68	84.12	86.45
2013	86.00	89.55	86.24	88.59
2014	87.27	90.11	87.67	89.02
2015	89.87	93.74	89.87	90.83

Levels of Progress between the Foundation Phase and Key Stage 2

5. The tables below show the proportion of pupils making 0, 1, 2 and 3+ levels of progress from the Foundation Phase (Key Stage 1) to Key Stage 2 in each of the core subjects*.

Cardiff

Subject	0 levels	1 level	2 levels	3+ levels
English	0.00%	4.89%	62.86%	32.25%
Welsh	0.00%	7.02%	70.25%	22.73%
Mathematics	0.29%	4.68%	64.18%	30.84%
Science	0.26%	7.63%	66.79%	25.29%

Central South Consortium

Subject	0 levels	1 level	2 levels	3+ levels
English	0.11%	5.09%	63.76%	31.01%
Welsh	0.08%	8.75%	70.43%	20.74%
Mathematics	0.25%	5.31%	64.28%	30.14%
Science	0.27%	7.69%	66.73%	25.29%

*excluding pupils with no values/previous information

6. By the end of Key Stage 2 it is expected that all pupils will make at least two levels of progress. In all subject areas there are a significant minority of pupils who are not making expected progress and consequently falling below age related expectations and/or underachieving. The proportions are slightly below the figures for the consortium. Equivalent data is not collected nationally.

Performance of More Able and Talented Pupils

7. Cardiff is at least in line with the national averages at the higher level 5+ in all core subjects. Performance at this level in Welsh first language is particularly strong being 7.5ppt above the national average. At the higher levels there are weaknesses in the comparative performance of girls with the national averages in English and science.

	2012	Wales 2012	2013	Wales 2013	2014	Wales 2014	2015	Wales 2015
English	30.70%	32.30%	34.00%	35.70%	36.80%	38.00%	40.89%	40.76%
Welsh	30.10%	26.60%	30.90%	30.40%	37.10%	33.90%	45.66%	37.97%
Maths	31.80%	32.90%	35.90%	35.70%	37.80%	38.00%	42.39%	41.24%
Science	31.90%	33.10%	35.10%	36.10%	37.60%	38.40%	41.15%	41.14%

Gender Gap

8. At Key Stage 2, at the expected level, the performance of boys is 3.5 ppt lower than the performance of girls. Girls' performance is stronger than boys in all of the core subjects but the greatest difference of nearly 5 ppt is in English. However, compared to the national outcomes for girls and boys there is underperformance in the attainment of girls.

	2012	2013	2014	2015	Wales 2015 Actual
CSI Boys	78.27	80.99	82.01	86.03	84.90
CSI Girls	83.36	84.43	88.34	89.53	90.75
CSI Total	80.71	82.61	85.11	87.76	87.74
Boys vs. Girls	-5.10	-3.44	-6.33	-3.49	-5.85

9. At both the expected and higher levels, the gender gap is smaller than the national gender gap in all three core subjects. At the higher levels, the outcomes for boys exceed the national averages, significantly so in Welsh. The outcomes for girls are slightly lower than the national averages in English and science.

Ethnicity Gap

10. As a whole, the proportion of minority ethnic pupils achieving the CSI at Key Stage 2 has improved by 3.9 ppt in the years between 2013 and 2015. However, this is a smaller increase than that for White UK pupils (5.6 ppt) and the gap in performance between the two groups has widened slightly.

11. Performance of minority ethnic pupils in 2015 (84.3%) remains below White UK (89.3%) by 5 ppt and all Cardiff pupils (87.8%) by 3.5ppt. The performance of minority ethnic pupils in Key Stage 2 improved from 2013 to 2014 by 3.2ppt. This was greater than the improvement made by White UK pupils (2.3ppt). However, the level of improvement in the CSI of minority ethnic pupils from 2014 to 2015, was only 1.3%.

Key Stage 2	CSI 2013	CSI 2014	CSI 2015
Any other ethnic background	94.4	87.10	85.7
Arab	82.2	84.47	87.6
Bangladeshi	86.2	90.98	93.6
Black Caribbean	100	75.00	33.3
Chinese or Chinese British	91.7	80.00	69.2
Mixed	80.6	85.99	87.9
Not known	80.0	79.31	76.2
Other Asian	84.9	92.42	89.5
Other Black	82.1	78.21	84.6
Pakistani	85.2	81.62	86.2
Somali	81.3	81.93	87.3
Traveller/Romany	54.2	52.17	72.2
White European	59.2	74.80	71.3
All EM	79.8	83.00	84.3
White UK	83.7	86.03	89.3
All Cardiff pupils	82.6	85.11	87.8

12. Minority Ethnic pupils are not a homogenous group. Some ethnic groups, such as Bangladeshi, have a higher than average proportion of pupils achieving the core subject indicator. By far the lowest performing group at this key stage is Black Caribbean pupils followed by White European pupils. The performance of Traveller/Romany pupils increased significantly in 2015 (72.2%) by 20ppt from 2014 (52.2%) but outcomes are still relatively low.

13. A new project has been created to look at the achievement of Black Caribbean pupils to ensure that attainment improves. The EMTAS Black Caribbean Project has improved the analysis of data to ensure improvements in the targeting of provision for these pupils.

English as an Additional Language

	2013	2014	2015
EAL (Code A-E)	81.25%	83.70%	83.59%
No EAL	83.26%	85.65%	89.03%
All Pupils	82.61%	85.11%	87.76%

	2013	2014	2015
New to English (A)	16.67%	16.67%	36.36%
Early Acquisition (B)	54.40%	59.69%	67.43%
Developing competence (C)	94.21%	95.16%	95.93%
Competent (D)	97.56%	95.83%	98.29%
Fluent (E)	83.43%	89.80%	91.40%

14. The proportion of pupils with English as an Additional Language (EAL Categories A – E) achieving the Key Stage 2 Core Subject Indicator (CSI) is 83.6%. This compares with 87.8% of all pupils in Cardiff. The EAL 2015 attainment figure is a small decrease of 0.1% from the 2014 EAL figure of 83.7%, but an increase of 2.3% from 2013.

Performance of Looked After Children

15. In 2015 there has been a small improvement in the percentage of pupils reaching the expected level at Key Stage 2 compared to the percentage in 2014. The proportion of pupils achieving the CSI was 56%, (9 out of 16 LAC in the cohort). This is well below the Cardiff figure for all pupils which is 87.8% and just below the Wales figure 2014 for LAC of 59%. 7 out of 16 (44%) of this cohort were on the Special Educational Needs (SEN) register.

Comparative Performance of Pupils Eligible for Free School Meals

16. The difference in performance between eFSM pupils and nFSM pupils has been reduced again this year from 17.5 ppt to 14.3 ppt. The gap has continued to reduce over the last four years as eFSM pupils' performance is improving at a faster rate than the performance of nFSM pupils.

17. The performance of eFSM pupils has improved by just over 5 ppt compared to nFSM pupils which have improved by 1.9ppt. The national figures for 2015 are not yet available but the performance of the city's eFSM pupils is nearly 5ppt ahead of the national figures for 2014.

	Cardiff eFSM 2015	Cardiff nFSM 2015	Wales FSM 2014	Cardiff All Pupils 2015
Key Stage 2 Core Subject Indicator	76.7%	91.0%	71.9%	87.8%

Performance of SEN pupils

18. There continues to be a wide gap between the attainment of pupils having special educational needs (SEN) and non-SEN pupils in mainstream settings at Key Stage 2. As in the Foundation Phase the gap is widest for statemented pupils, and the gap narrows for those at school action plus and school action.

Key Stage 2 - Percentage achieving Level 4 or above

2015	English	Welsh	Maths	Science	CSI
Statemented	26.61%	0.00%	24.19%	25.81%	21.77%
School Action Plus	53.73%	55.56%	55.97%	60.07%	47.39%
School Action	82.64%	86.90%	83.51%	85.07%	76.91%
No SEN	98.71%	99.73%	98.39%	98.83%	98.02%
Not matched	70.00%	-	70.00%	70.00%	70.00%
Total	89.87%	93.74%	89.87%	90.83%	87.76%

2014	English	Welsh	Maths	Science	CSI
Statemented	20.17%	40.00%	22.69%	21.85%	17.65%
School Action Plus	45.02%	51.61%	47.97%	53.14%	39.11%
School Action	75.61%	64.71%	76.31%	80.14%	70.38%
No SEN	97.87%	98.65%	97.79%	98.32%	96.83%
Not matched	64.30%	-	71.40%	64.30%	64.30%
Total	87.27%	90.11%	87.67%	89.02%	85.11%

19. In 2015 the gaps narrowed for all groups of SEN pupils, most notably for those at school action plus. The CSI improved by 4 ppts for statemented pupils, by 8 ppts for pupils at school action plus and by 6 ppts for pupils at school action. The closing gap reflects the effectiveness of early intervention strategies such as STARS, SAIL, Maths Factor, Speech and Language Links, Rainbow Readers.

Comparative Performance with Other Local Authorities and Cities

20. The improvements in performance in the majority of schools have led to an increase in the number of schools in the top national benchmarking group from 15 in 2014 to 21 in 2015 and a reduction in the number of schools in the lowest group from 15 to 14. In 9 of these 14 schools there has been persistent low achievement and focused action is being taken. Larger numbers of SEN pupils in the year 6 cohorts in the other five schools have led to the reduction in performance.

	No of schools	% of schools
Quarter 1	15	16.13
Quarter 2	28	30.11
Quarter 3	35	37.63
Quarter 4	15	16.13
Total	93	100.00

	No of schools	% of schools
Quarter 1	21	22.58
Quarter 2	28	30.11
Quarter 3	30	32.26
Quarter 4	14	15.05
Total	93	100.00

21. Cardiff is the newest member of the Core Cities UK, having joined in 2014. The Core Cities Group promotes the role of cities in driving economic growth. They are Birmingham, Bristol, Cardiff, Glasgow, Leeds, Liverpool, Manchester, Nottingham, Newcastle and Sheffield. Membership will help the council to better benchmark its performance against other major UK cities.

22. Performance is at the top of the rankings at Key Stage 2 for the second consecutive year compared with the English authorities but lower against the Welsh authorities.

	English Level 4+	Mathematics Level 4+	Science Level 4+
	2015	2015	2015
Key Stage 2	1 st	1 st	1 st

23. Comparisons between school results in England and Wales need to be treated with some caution because of the growing differences in curriculum and assessment. Bearing this in mind it can be noted that Cardiff's relative performance is at the top of the rankings at Key Stage 2 compared with the English Core Cities.

24. The positive relative improvement in the core subject indicator in 2015 is reflected in Cardiff's rank position compared to the other Welsh local authorities.

Key Stage 2 CSI	2014/15		2013/14		2012/13	
	Result	Rank	Result	Rank	Result	Rank
Cardiff	87.8	13	84.5	16	82.6	17

Summary Overview - Secondary

1. The proportion of pupils that make at least two levels of progress from the end of Key Stage 2 to the end of Key Stage 3 continues to improve. The figures compare positively with the equivalent figures for the consortium (they are not collected nationally). However, between 3.65% and 6.45% of pupils made less than one level of progress and are potentially underachieving. Overall, around 10% of pupils are still not achieving the expected level at Key Stage 3 (level 5) and in a few schools this figure increases to around 30%, which points to ongoing inconsistencies in the quality of provision across the city.
2. There has been a positive trend of improvement since 2013 in all the performance measures in the secondary phase. The rate of improvement in the main performance indicators is greater in Cardiff than across Wales at Key Stage 4, but slower at Key Stage 3. Performance at the level 2 inclusive threshold compares favourably with performance nationally, but further improvement is still needed in the level 1 and level 2 threshold indicators.

Increase since 2013	Cardiff	Wales
KS3 CSI	5.60ppt	6.86ppt
KS4 Level 2+	9.44ppt	5.17ppt

3. More than half the cohort of pupils achieved the higher levels (level 6+) in the core subjects at Key Stage 3 which, in nearly all subjects, is a greater than the equivalent figures nationally. These outcomes provide a firm foundation from which pupils can begin their GCSE courses at Key Stage 4.
4. At Key Stage 4 raised expectations and improved tracking and intervention have led to a clear improvement in the level 2 inclusive measure. In particular, outcomes improved in three higher attaining secondary schools which had been underperforming (based on modelled expectations) for several years.
5. Outcomes for vulnerable learners such as eFSM pupils, looked after children and minority ethnic pupils have also improved, but are still significantly below the average.
6. The performance of eFSM pupils has improved at a faster rate over the last two years than the performance of nFSM pupils. In schools where the performance of eFSM pupils has considerably improved there is a clear focus on the outcomes for eFSM pupils and effective use of the pupil deprivation grant to develop high quality provision. However, the differences in performance continue to vary considerably between schools.

Increase since 2013	eFSM	nFSM
CSI	11.32ppt	4.16ppt
Level 2+	11.05ppt	9.24ppt

7. Some minority ethnic groups such as Bangladeshi and Pakistani have higher outcomes at this key stage than White UK pupils, whilst other groups such as

White European, Black Caribbean and Traveller/Romany continue to be low achieving.

8. A greater proportion of looked after children achieved level 2 qualifications in 2015 than in previous years as a result of closer monitoring of their progress and attainment by schools. Yet the difference in performance between looked after children and their peers remains too large.
9. Cardiff has six secondary schools which are part of the Welsh Government's "Schools Challenge Cymru" programme. In 2015 at Key Stage 4, one school improved its performance and one school maintained the increases in performance achieved in 2014 but outcomes decreased in the other four schools. In three of these schools where there are a high proportion of White UK and eFSM pupils, the local authority has taken intervention action and leadership capacity has been increased. Although progress is now being made, standards remain unacceptably low. In the fourth school, there was a slight dip in outcomes but performance remains significantly above modelled expectations and further improvements are expected this year.
10. The overall attendance figure for secondary schools remained the same in 2014-2015 as in the previous academic year at 93.8%, which is identical to the Welsh average. The attendance figures in three secondary schools had a negative effect on the city's overall figures.
11. A large percentage of year 11 pupils continue their education by entering level 3 provision in schools or colleges across Cardiff. These learners generally do well progressing onto university courses. An additional number of learners follow level 2 or vocational courses. However a minority of year 11 and year 13 pupils are not making a successful transition into education, employment or training.

Performance at Key Stage 3

Trend in Outcomes

1. The proportion of pupils reaching the expected level at this key stage also continues to increase although the rate of improvement has slowed. In 2015 the proportion of pupils achieving the CSI was 83.4%, an improvement of 1.9ppt on the 2014 figure. The improvement was smaller than the national improvement (2.9ppt).

2. Two thirds of secondary schools (14 out of 19) maintained or improved their Key Stage 3 CSI in 2015 compared to the previous year. In the remaining third the proportion of pupils achieving the CSI fell by up to 5 ppt (with the exception of one secondary school which fell by nearly 19ppt).
3. The highest performance is in Welsh first language and the weakest performance is in English. At the higher levels (level 6+ and level 7+) there have been significant improvements in each of the core subjects.

Core Subjects	Cardiff					Wales
	2011	2012	2013	2014	2015	2015
Level 5+						
English	76.2	80.5	84.0	86.0	86.7	87.9
Welsh First Language	89.0	88.2	88.5	94.0	92.8	90.9
Mathematics	79.0	82.7	84.3	87.6	89.3	88.7
Science	80.2	84.6	86.7	90.6	91.5	91.8

4. The range in performance in the non-core subjects is similar to that seen in the core subjects. However, performance in each of the non-core subjects is below the national average.

Non-Core Subjects	Cardiff					Wales
	2011	2012	2013	2014	2015	2015
Level 5+						
Art	80.4	85.6	88.6	92.2	90.1	92.0
Design and Technology	78.3	84.4	87.7	90.1	90.7	92.1
Geography	75.5	79.6	85.9	86.7	87.3	89.9
History	77.1	80.1	84.9	87.1	86.8	89.6

MFL	65.9	70.7	80.0	81.6	80.9	84.1
Music	76.2	83.8	85.4	90.9	88.7	91.6
Physical Education	75.0	78.9	84.1	88.5	90.8	91.4
Welsh Second Language	62.6	66.0	73.0	76.7	80.0	81.2

Levels of Progress between Key Stage 2 and Key Stage 3

5. The tables below show the proportion of pupils making 0, 1, 2 and 3+ levels of progress from Key Stage 2 to Key Stage 3 in each of the core subjects*.

Cardiff

Subject	0 levels	1 level	2 levels	3+ levels
English	6.45%	40.40%	45.99%	6.42%
Welsh	3.65%	45.31%	48.18%	2.86%
Mathematics	4.29%	31.44%	53.51%	10.26%
Science	4.09%	33.04%	53.83%	8.37%

Central South Consortium

Subject	0 levels	1 level	2 levels	3+ levels
English	6.52%	45.38%	42.54%	4.95%
Welsh	3.44%	42.41%	50.81%	3.35%
Mathematics	5.51%	36.67%	47.94%	9.47%
Science	4.29%	36.92%	50.35%	7.90%

*excluding pupils with no values/previous information

6. It is expected that all pupils will make between one and two levels of progress. With the exception of Welsh, more pupils in Cardiff make at least two levels of progress in all core subjects across Key Stage 3 than they do across the consortium as a whole.
7. In all subject areas there are a significant minority of pupils who are not making expected progress and consequently falling below age related expectations and/or underachieving. The proportions of these pupils are slightly below the figures for the consortium with the exception of Welsh. Equivalent data is not collected nationally.

Performance of More Able and Talented Pupils

8. There continues to be a strong upward trend in performance at the higher levels. Cardiff is above the national averages at level 6+ and level 7+ for all the main indicators except Welsh First Language at level 6+. The lower performance in this area is caused by boys' under attainment at this level.

2015 Key Stage 3		Level 6	Level 7	Level 8+	Level 6+
English TA	Cardiff	36.49	18.17	1.66	56.32
	Wales	36.00	15.28	1.34	52.62
Cymraeg TA	Cardiff	35.04	19.69	-	54.73
	Wales	38.77	15.79	1.56	56.12
Maths TA	Cardiff	33.93	25.84	2.78	62.54
	Wales	33.19	22.92	3.41	59.52
Science TA	Cardiff	41.05	22.43	1.15	64.62
	Wales	37.88	19.28	1.37	58.53

Gender Gap

9. At Key Stage 3, at the expected level, the performance of boys is approximately 6 ppt lower than the performance of girls. Girls' performance is stronger than boys in all of the core subjects but the greatest differences of around 7 ppt are in English and Welsh. However, compared to the national outcomes for girls and boys there is noticeable underperformance in the attainment of girls in English.

	2012	2013	2014	2015	Wales 2015 Actual
CSI Boys	70.33	74.24	77.50	80.45	80.33
CSI Girls	78.34	81.38	85.71	86.70	87.70
CSI Total	74.24	77.80	81.51	83.40	83.90
Boys vs. Girls	-8.02	-7.14	-8.21	-6.25	-7.37

10. At the higher levels the gender gap is larger than it is at the expected level, significantly so in both languages at level 6+ where it is 15.8 ppt in English and 26.0 ppt in Welsh. The outcomes of girls and boys are higher than the national figures. The greatest difference is for girls in science at level 6+ where the performance is nearly 7ppt ahead of the national average.

Ethnicity Gap

11. The proportion of minority ethnic pupils achieving the Key Stage 3 Core Subject Indicator as a whole in 2015 (81.25%) improved by 3.14 ppt from 2014 (78.11%). This remains 2.95 ppt below White UK pupils.
12. The rate of improvement for minority ethnic pupils in Key Stage 3 from 2014 to 2015 (3.1ppt). This was greater than the improvement made by White UK pupils (1.5ppt).

Key Stage 3	CSI 2013	CSI 2014	CSI 2015
Any other ethnic background	85.7%	92.86	88.89
Arab	70.8%	81.58	73.49
Bangladeshi	83.5%	81.90	89.62
Black Caribbean	50.0%	100.00	83.33
Chinese or Chinese British	100.0%	93.33	100.00
Mixed	81.3%	74.74	83.89
Not Known	78.6%	83.33	86.11
Other Asian	84.6%	88.89	97.37
Other Black	72.4%	71.43	71.67
Pakistani	82.8%	84.78	91.00
Somali	77.6%	87.65	85.37
Traveller/Romany	20.0%	40.00	38.46
White European	56.1%	62.31	62.81
All EM Groups	75.2%	78.11	81.25
White UK Pupils	78.6%	82.71	84.20
All Cardiff Pupils	77.8%	81.51	83.40

13. The performance of Traveller/Romany pupils is significantly lower than the other minority ethnic groups. There was very little improvement in the outcomes of White European pupils and these are the second lowest performing group.

English as an Additional Language

	2013	2014	2015
EAL (Code A-E)	75.49%	77.91%	83.82%
No EAL	78.60%	82.38%	83.39%
All Pupils	77.80%	81.50%	83.40%

	2013	2014	2015
New to English (A)	8.33%	0.00%	0.00%
Early Acquisition (B)	11.36%	14.29%	14.75%
Developing Competence (C)	69.75%	71.50%	77.27%
Competent (D)	91.54%	91.78%	95.29%
Fluent (E)	83.97%	93.28%	94.60%

14. The proportion of Key Stage 3 pupils with English as an Additional Language (EAL Categories A – E) achieving the Core Subject Indicator (CSI) is 83.8%. This compares with 83.4% of all pupils in Cardiff. The EAL 2015 attainment figure is a significant increase of 5.9% from the 2014 EAL figure of 77.9% and a larger increase than that achieved in the previous year (2.4%) from the 2013 EAL figure. These increases are larger than those seen in either of the previous key stages.

Performance of Looked After Children

15. The proportion of Looked After Children reaching the expected level at Key Stage 3 (KS3) also continues to increase but remains below that of all pupils at this key stage. In 2015 the proportion of pupils achieving the CSI was 38% (9 out of 24 LAC in the cohort). This is well below the 83.4% of all pupils achieving the CSI in Cardiff and a lower performance than that achieved in 2014. It is also below the Wales Looked After Children figure for 2014 of 45%.

Performance of SEN pupils

16. There continues to be a wide gap between the attainment of pupils having special educational needs (SEN) and non-SEN pupils in mainstream settings at Key Stage 3. As would be expected, the gap is widest for statemented pupils, and the gap narrows for those at school action plus and school action.

Key Stage 3 - Percentage achieving level 5 or above

2015	English	Welsh	Maths	Science	CSI
Statemented	34.11%	0.00%	37.98%	42.64%	28.68%
School Action Plus	53.87%	64.00%	63.73%	67.96%	46.48%
School Action	74.62%	77.19%	79.89%	87.97%	66.73%
No SEN	96.35%	98.38%	97.37%	97.88%	94.74%
Not matched	63.64%	-	72.73%	81.82%	54.55%
Total	86.69%	92.84%	86.69%	91.52%	83.40%

2014	English	Welsh	Maths	Science	CSI
Statemented	19.80%	0.00%	32.20%	33.10%	15.70%
School Action Plus	45.60%	44.40%	49.40%	60.30%	33.80%
School Action	71.80%	79.30%	73.20%	82.80%	58.30%
No SEN	96.10%	99.00%	96.90%	98.00%	94.10%
Not matched	70.00%	-	70.00%	70.00%	70.00%
Total	86.00%	94.00%	87.60%	90.60%	81.50%

17. In 2015 the gaps narrowed for all groups of SEN pupils in Key Stage 3. The CSI improved by 13 pts for statemented pupils, by 13 pts for pupils at school action plus and by 12 pts for pupils at school action. The closing gap reflects the effectiveness of capacity building work to address the needs of vulnerable learners, including work to support BESD pupils at steps 3 and 4 of the graduated response and the roll out of secondary speech and language links.

Comparative performance with other local authorities and cities

18. The slowdown in improvement at this key stage has lowered Cardiff's rank position compared to the other local authorities across Wales as shown in the table below.

Key Stage 3 CSI	2014/15		2013/14		2012/13	
Authority	Result	Rank	Result	Rank	Result	Rank
Cardiff	83.4	13	81.5	12	77.8	12

19. The improvements in performance in the majority of schools have led to an increase in the number of schools in the top benchmarking group from 5 in 2014 to 8 in 2015 and a reduction in the number of schools in the lowest group from 6 to 3.

	No of schools	% of schools
Quarter 1	5	27.78
Quarter 2	5	27.78
Quarter 3	2	11.11
Quarter 4	6	33.33
Total	18	100.00

	No of schools	% of schools
Quarter 1	8	42.11
Quarter 2	4	21.05
Quarter 3	4	21.05
Quarter 4	3	15.79
Total	19	100.00

Comparative Performance of Pupils Eligible for Free School Meals

20. The difference in performance, at this key stage, between eFSM pupils and nFSM pupils has been reduced again this year from 22.4 ppt to 21.6 ppt. However the gap is significantly wider than in the primary phase.

21. The performance of eFSM pupils has improved by 3 ppt compared to nFSM pupils which have improved by 2.2 ppt.

	Cardiff eFSM 2015	Cardiff nFSM 2015	Wales FSM 2014	Cardiff All Pupils 2015
Key Stage 3 Core Subject Indicator	66.5%	88.1%	61.3%	83.4%

Performance at Key Stage 4

Trend in Outcomes

1. The improvements seen in Key Stage 3 over the last few years have been translated, in the last two years, into noticeable improvements at Key Stage 4. At the level 2+ threshold performance is above modelled expectations. There has been an improvement of 4.9 ppt to 58.9%, which is the biggest improvement in the consortium and 1 ppt greater than the improvement in 2014. However, in order to be in the top 25% performing authorities based on FFT estimates Cardiff's performance in this indicator would need to be 62.3%.

2. 8 out of 18 secondary schools met or exceeded their expected performance for the level 2+ threshold. In the 10 schools where performance was below expectation, 4 schools had outcomes below expectation by more than 5 percentage points.
3. However, four out of every ten pupils still end their compulsory education without having achieved five good GCSEs including English/ Welsh and mathematics. In five schools more than half of the pupils failed to reach the level 2+ threshold, and in three schools it was more than seven out of every ten pupils.
4. In 2015 a similar improvement was made in the level 2 threshold and capped points score, but in these wider measures, performance remains below where it should be given the very low standards previously and below modelled expectations.

5. Based on the provisional data there is a worrying decrease of approximately 1 ppt in the level 1 threshold, caused predominantly by the 2ppt decrease in the performance of boys. There continues to be little correlation between school outcomes in these measures and the proportion of FSM pupils. This strongly suggests that any differences reflect the variation in provision within schools, in terms of a suitable curriculum offer and rigour in tracking the progress of all pupils, not just those near the level 2+ threshold.

Key Stage 4 Results

	2011	2012	2013	2014	2015	Cardiff 2015 Target*	Wales 2015 Actual
Achieved the Level 2 threshold including E/W/M	48.4%	49.3%	49.9%	54.0%	59.3%	63.0%	57.90%
Achieved the Level 2 threshold	63.9%	68.3%	73.0%	76.0%	81.6%	81.1%	84.10%
Achieved the Level 1 threshold	89.3%	91.2%	91.7%	93.2%	92.1%	95.4%	94.40%
Percentage achieving the Core Subject Indicator	47.3%	47.9%	46.7%	51.2%	56.5%	61.8%	54.80%
Average capped wider points score	306.0	317.0	322.0	331.0	336.9	-	343.5
Pupils entered for at least one exam	99.0%	n/a	100.0%	99.0%	99.0%	-	99.0%

6. There were also improvements in outcomes in the individual subjects of mathematics, English, Welsh and science at level 2. These improvements were smaller than that achieved in the level 2+ threshold which suggests that schools are becoming more effective at reducing the number of pupils that achieve level 2 in only one of mathematics or English/Welsh but not both. The improvements in schools' pupil tracking processes, in combination with successful intervention have improved schools' effectiveness in this area. Challenge advisers have also been more robust in testing the validity of the data.

Subject	2010	2015	Percentage Point Improvement
English	62.00%	71.63%	9.63%
Welsh	85.00%	84.14%	-0.86%
Mathematics	52.00%	63.21%	11.21%
Science	62.00%	80.69%	18.69%

7. In nine secondary schools, the results in the level 2+ threshold were less than expected. In all but one of these schools this stems from lower than expected performance in mathematics. In this subject particularly, the accuracy of teacher assessment is still not secure.

Pupils finishing statutory age education with no recognised qualification

8. From 2014 onwards, there has been an improvement in the method for matching of pupils aged 15 who achieved no recognised qualification to PLASC. The data from 2011 onwards has been recalibrated which has resulted in an improvement in the figures for Cardiff and the local authority's comparison with Wales as a whole.
9. The percentage of pupils not achieving a recognised qualification has been identical to the national figure for the last two years. Prior to 2014 the figures are not comparable as the proportion of pupils not achieving a recognised qualification was reported differently.

Achieving No Qualification	2014	2015
Cardiff	1.1%	1.2%
Wales	1.1%	1.2%
Difference	0	0

Gender Gap

10. At the level 2+ threshold boys' performance compares well with the national average but girls continue to underperform relative to the performance of girls across Wales. The proportion of boys in Cardiff achieving the level 2+ threshold is approximately 3 ppt greater than the equivalent national figure, but the proportion of girls is almost 1 ppt lower. This is as a result of the relatively lower performance in mathematics. In the level 2 and level 1 threshold measures, both boys and girls performance is below the national average by around 2.5 ppt.
11. In English and Welsh at level 2, the performance of boys and girls is above the national averages but in mathematics and science they are below. In mathematics, weaknesses in the quality of teaching and the impact of leadership have led to the shortcomings in the results. In science, the lower performance is caused by the limited use of BTEC science in some schools.

Cardiff 2015

Key Stage 4	Achieved the Level 1 threshold	Achieved the Level 2 threshold	Achieved the Level 2 threshold incl. GCSE grade A*- C in English or Welsh and Maths	Core Subject Indicator	Capped points score
Boys	90.56%	78.24%	57.68%	55.29%	324.93
Girls	93.76%	84.98%	60.93%	57.78%	349.07
Difference	-3.21%	-6.74%	-3.25%	-2.49%	-24.14

Wales 2015

Key Stage 4	Achieved the Level 1 threshold	Achieved the Level 2 threshold	Achieved the Level 2 threshold incl. GCSE grade A*-C in English or Welsh and Maths	Core Subject Indicator	Capped points score
Boys	93.20%	80.90%	54.30%	51.70%	332.30
Girls	95.70%	87.50%	61.80%	58.00%	355.20
Difference	-2.50%	-6.60%	-7.50%	-6.30%	-22.90

Performance of Pupils Eligible for Free School Meals

- The performance of eFSM pupils has improved in most of the main indicators and core subjects. The exceptions are at the level 1 threshold, capped points score and in science. In comparison, the performance of non-FSM pupils improved in all the main indicators with the exception of the level 1 threshold.
- Provisional results for 2015 report that in Cardiff 31.9% of eFSM pupils attained the level 2+ threshold compared to 31.3% of eFSM pupils across Wales. However, the gap in performance between the two groups has not reduced significantly in any of the main measures and core subjects.

Ethnicity Gap

Level 2+ threshold

- In 2015, minority ethnic pupils' performance improved by 9.5ppt, while White UK pupils' improvement was more moderate at 4.1 ppt. This increase has brought the percentage of minority ethnic pupils attainment to a figure of 59.2%, while White UK is 59.3%. For the first time minority ethnic pupils are at a level equal to that of White UK pupils.
- At the level 2 inclusive threshold the greatest positive changes were for the following ethnic groups – Black Caribbean (16.7%), Pakistani (22.2%) and Somali (18.0%). These groups have relatively stable populations in Cardiff and on the needs assessment survey pupils are typically categorised as 'Developing competence' or 'Competent' in English.
- The lowest performing groups in this measure are Traveller/Romany, White European and Black Caribbean.

LEVEL 2 INCLUSIVE THRESHOLD	2013	2014	2015
Any other ethnic background	76.90	77.78	82.1
Arab	38.50	48.00	56.6
Bangladeshi	48.40	56.76	60.0
Black Caribbean	14.30	33.33	50.0
Chinese or Chinese British	68.40	94.12	100.0
Mixed	46.00	50.82	57.4
Other Asian	66.70	64.81	76.3
Other Black	54.30	41.51	51.6
Pakistani	47.70	50.96	73.1
Somali	36.70	38.71	56.7
Traveller/Romany	0.00	14.29	0.0
White European	41.30	37.10	49.6
All EM	46.40	49.62	59.2
White UK	50.80	55.25	59.3
Not known	55.20	48.94	80.0
All Cardiff pupils	49.90	53.90	59.4

English as an Additional Language

17. The following data needs to be viewed with a degree of caution. It has been ascertained by the local authority's officers (EMAS) that some minority ethnic pupils are being recorded as EAL and given a category of acquisition when they should not be included in the EAL cohort. This has led to concerns over the reliability of the data. Local authority officers are working closely with schools to improve the accuracy of the data collected.

Percentage achieving threshold measures

2015 (Provisional from second SSSP)	Cohort	Level 1 threshold	Level 2 threshold	Level 2 threshold incl. E/W & M
New to English (A)	7	57.14%	57.14%	0.00%
Early Acquisition (B)	26	69.23%	65.38%	7.69%
Developing competence (C)	128	95.31%	82.81%	39.06%
Competent (D)	184	98.37%	91.30%	61.96%
Fluent (E)	228	98.68%	91.67%	76.32%
Not matched	14	14.29%	0.00%	0.00%
All Pupils	3305	92.68%	82.06%	59.64%

2014	Cohort	Level 1 threshold	Level 2 threshold	Level 2 threshold incl. E/W & M
New to English (A)	7	42.86%	28.57%	0.00%
Early Acquisition (B)	28	67.86%	42.86%	3.57%
Developing competence (C)	198	94.44%	72.22%	22.22%
Competent (D)	168	98.81%	89.29%	64.88%
Fluent (E)	168	98.21%	86.90%	69.64%
Not matched	16	12.50%	0.00%	0.00%
All Pupils	3525	93.19%	76.03%	54.04%

18. The tables above show that the performance of EAL learners has improved for nearly all categories in all performance indicators. Not surprisingly, the level of language acquisition affects the level 2 inclusive indicator due to the lower performance in English.

Level 2 threshold

19. Outcomes at the Level 2 threshold increased by 8.7 ppt from the previous year (from 78.2% to 86.9%) for all Minority Ethnic groups combined. This meant that they outperformed the White UK ethnic group for the second consecutive year at this threshold. The All Minority Ethnic group performed 5.4ppt above All Cardiff pupils as a whole. Within the whole Minority Ethnic population the lowest achievement groups were Traveller/Romany and the White European.

LEVEL 2 THRESHOLD	2013	2014	2015
Any other ethnic background	84.60	88.89	100.00
Arab	62.50	85.33	94.7
Bangladeshi	65.10	90.54	91.3
Black Caribbean	66.70	83.33	75.0
Chinese or Chinese British	90.90	100.00	100.0
Mixed	60.40	78.14	85.1
Other Asian	65.00	85.19	92.1
Other Black	68.30	81.13	83.9
Pakistani	80.90	76.92	92.5
Somali	63.90	85.48	94.0
Traveller/Romany	16.70	28.57	45.5
White European	65.30	56.45	74.8
All EM	66.30	78.16	86.9
White UK	63.30	74.76	79.7
Not known	66.70	68.09	90.0
All Cardiff pupils	64.00	75.43	81.5

Level 1 threshold

LEVEL 1 THRESHOLD	2015	2014	2013
Any other ethnic background	100.0%	100.0%	100.00%
Arab	98.7%	97.3%	88.46%
Bangladeshi	100.0%	100.0%	97.89%
Black Caribbean	87.5%	91.7%	75.00%
Chinese or Chinese British	100.0%	100.0%	100.00%
Mixed	93.8%	95.6%	92.00%
Other Asian	100.0%	96.3%	100.00%
Other Black	90.3%	98.1%	93.48%
Pakistani	100.0%	96.2%	93.18%
Somali	100.0%	95.2%	98.33%
Traveller/Romany	70.0%	71.4%	33.33%
White European	87.0%	81.5%	83.96%
ALL EM	95.1%	94.2%	92.08%
White UK	92.3%	93.1%	91.52%
Not known	64.7%	80.4%	96.67%
All Cardiff pupils	92.1%	93.19%	91.74%

20. Over the past 3 years Minority Ethnic pupils have always had a higher proportion of pupils achieving the Level 1 than White UK pupils. The gap has increased year on year since 2013.

21. Six Minority Ethnic groups attained 100% Level 1, and the Arabic group attained 98.7%. Many of these groups include children who come from well-established communities in Cardiff (Bangladeshi, Chinese, Asian, Pakistani and Somali). These children are likely to have passed through the whole education system (from Nursery up), while cohorts from other groups such as Other Black, White European and Arabic may include mid-phase arrivals. Travellers/Romany is the lowest achieving group with 70% attaining Level 1.

Performance of Looked After Children

22. The cohort in Cardiff schools in 2015 increased in size from the previous year from 28 pupils to 35 pupils. 6 of the 35 pupils (17.1%) achieved level 2+ threshold compared to the previous year when only 3 pupils (10.3%) achieved this threshold. This matches the percentage of Looked After Children achieving this indicator in 2014 across Wales.

Key Stage 4 – Level 2+ threshold

Year	Total Pupils	L2 +	Wales LAC L2+	All Pupils Cardiff
2013	33	2 (6%)	13%	49.9%
2014	28	3 (10.3%)	17%	53.9%
2015 Provisional	35	6 (17.1%)		59.4%

Key Stage 4 – Level 2 threshold

23. In 2015, 48.6% of Looked After Children attained 5A* -C, compared with 27.6% in 2014. The gap between Looked After Children and their peers is 10.8 ppts, compared to 26.3 ppts in 2014.

Year	Total Pupils	L2	All Pupils Cardiff
2013	33	12 (36.4%)	73.0%
2014	28	8 (27.6%)	76.0%
2015 Provisional	35	17 (48.6%)	81.0%

Key Stage 4 – Level 1

24. In 2015, 77.1% of Looked After Children attained 5 A* - G, compared with 58.6% in 2014.

Year	Total Pupils	L1	All Pupils Cardiff
2013	33	21 (63.6%)	91.7%
2014	28	17 (58.6%)	93.2%
2015 Provisional	35	27 (77.1%)	92.1%

Performance of SEN pupils

25. There continues to be a wide gap between the attainment of pupils having special educational needs (SEN) and non-SEN pupils in mainstream settings at Key Stage 4. As would be expected, the gap is widest for statemented pupils, and the gap narrows for those at school action plus and school action.

Key Stage 4 - Percentage achieving threshold measures

2015 (Provisional from second SSSP)	Level 1 threshold	Level 2 threshold	Level 2 threshold incl. E/W & M
Statemented	59.56%	36.76%	13.24%
School Action Plus	67.66%	45.96%	11.91%
School Action	89.15%	67.46%	22.56%
No SEN	98.01%	91.22%	74.05%
Not matched	14.29%	0.00%	0.00%
Total	92.68%	82.06%	59.64%

2014	Level 1 threshold	Level 2 threshold	Level 2 threshold incl. E/W & M
Statemented	51.40%	24.80%	6.70%
School Action Plus	74.50%	35.00%	9.90%
School Action	90.90%	59.00%	20.40%
No SEN	96.80%	84.40%	66.20%
Not matched	-	-	-
Total	93.00%	75.40%	53.90%

26. In 2015 the proportion of SEN pupils attaining level 2 and level 2 inclusive, increased for all groups. There was also an 8 ppt increase in the proportion of statemented pupils achieving level 1.

27. However, the proportion of school action plus and school action pupils achieving level 1 fell, by 7 ppts and 1.7 ppts respectively. This has led to the overall fall in level 1 threshold for all Cardiff pupils.

Comparative Performance with Other Local Authorities and Cities

28. At Key Stage 4 there has been a slight improvement in the relative benchmarking positions of schools in 2015 when compared to 2014.

2015 Key Stage 4 – Percentage of Cardiff schools in upper and lower quarters

Performance Measure	Key Stage 4	
	Lower Q	Upper Q
Level 1 threshold	50.00%	16.67%
Level 2 threshold	44.44%	22.22%
Level 2 inc Eng/Wel & Maths	22.22%	44.44%

2014 Key Stage 4 – Percentage of Cardiff schools in upper and lower quarters

Performance Measure	Key Stage 4	
	Lower Q	Upper Q
Level 1 threshold	42.1%	15.8%
Level 2 threshold	52.6%	10.5%
Level 2 inc Eng/Wel & Maths	26.3%	26.3%

29. At the level 2+ threshold Cardiff's performance in 2015 compares favourably with other Welsh local authorities. Cardiff has moved into the top ten local authorities and the performance in this indicator is 4.23ppts above modelled expectations based on the proportion of eFSM pupils.

Key Stage 4 L2+	2014/15		2013/14		2012/13	
	Result	Rank	Result	Rank	Result	Rank
Cardiff	59.3	10	54.0	13	49.9	17

30. In contrast, at the level 2 threshold Cardiff's performance in 2015 is 18th out of the 22 other Welsh local authorities and 21st at the level 1 threshold.

31. At Key Stage 4 comparisons with England and the core cities are no longer meaningful because the qualifications that contribute to the performance measures are now different in Wales and England. This is illustrated in the table below where the closest equivalent figures for England are now much lower.

2015	Level 2 threshold/ 5 A*-C with E/W/M	Level 2 threshold/ 5 A*-C	Level 1 threshold/ 5 A*-G
Cardiff	59.3%	81.6%	92.1%
Wales	57.9%	84.1%	94.4%
England	52.8%	64.2%	90.8%

Comparative Performance of Pupils Eligible for Free School Meals

32. At the level 2+ threshold the performance of both eFSM pupils and nFSM pupils has continued to increase

33. However, the difference in performance between eFSM pupils and nFSM pupils increased in Key Stage 4 in the three main performance indicators. There continues to be marked variations between schools in the attainment of eFSM pupils.

	Level 2+ Cardiff	Wales 2015	Level 2 Cardiff	Level 2 Wales	Level 1 Cardiff	Level 1 Wales
2014/15 eFSM	31.9%	31.3%	64.5%	68.2%	81.3%	89.3%
2014/15 nFSM	66.3%	63.7%	86.0%	88.3%	95.7%	97.5%
Difference 2015	34.4%	32.4%	21.5%	20.1%	14.4%	8.3%
Difference 2014	33.3%	33.8%	20.2%	22.1%	11.3%	9.5%

Performance at Key Stage 5

Trend in Outcomes

1. The proportion of subject entries at A* or A was 31.1% and at A*-C the proportion was 78.4%. These figures represent increases of 3.7 and 1.3 ppt respectively on the figures for 2014. At A*-E, considered the 'pass rate', the proportion of subject entries was 98.1%. The proportion of students achieving the level 3 threshold was 97.0%. Both figures are similar to those achieved in 2014.
2. The results achieved at Key Stage 5 compare positively with the national figures for both Wales and England. The proportion of subject entries at A* or A was 23.1% in Wales and 25.9% across England. At A*-C the corresponding national figures were 74.3% and 77.2% respectively. The national pass rate in Wales was 97.3% whereas in England it was 98.1%.
3. The overall trend in performance at the level 3 threshold and average wider points score is shown in the table below.

A Level Results 2015

YEAR 13	RESULTS					Wales
	2011	2012	2013	2014	2015	2015
Entering a volume equivalent to 2 A level who achieved the Level 3 threshold	96%	97%	96.0%	97.0%	96.9%	97.0%
Average wider points score for pupils aged 17	808	845	865.5	833	866	799.7

Percentage achieving A*/A at A Level

4. The proportion of entries achieving a grade A*/A has been around 30% for the last five years but showed further improvement in 2015. This outcome was considerably above the Welsh average, the same as in previous years.

A level

	2010	2011	2012	2013	2014	2015
	A*/A	A*/A	A*/A	A*/A	A*/A	A*/A
Cardiff	28.8%	29.8%	29.5%	29.0%	29.7%	31.0%
Wales	24.4%	23.9%	23.6%	22.9%	23.2%	23.0%

Report on Value-added in Cardiff 6th Forms utilising the Alps system

5. Cardiff uses the Alps tools for identifying the added value schools bring to student achievements. This is the second full year of use and strongly welcomed by schools. It is anticipated that the impact of its use will increase in the years ahead.

6. Using this information it has been found that:
- Over a third of A level teaching in Cardiff is excellent or outstanding
 - 2 schools have sustained excellent overall performance from 2012 to 2015
 - A further 3 schools have sustained good performance
 - 5 schools can be considered satisfactory in their overall performance
 - 2 schools are in the lowest grades of performance but one of these is showing signs of improvement
7. The value-added performance of subjects shows significant variation both within and across schools. Cardiff has a number of high performing subjects across a range of centres that are placed in the top 25% of performance and in some cases in the top 10%.

Subjects performing strongly are:-

Applied Art, Geology, History, Mathematics, Music and Religious Studies

There are also a number of subjects causing concern including, for example, Applied ICT, aspects of D&T.

8. Greater consistency is now needed across schools and a drive towards the higher grades of performance. Using the Alps data as evidence of quality of delivery a system of school to school support will be piloted in 2015-16 using on-line tools to assist the sharing of best practice in the planning and delivery of lessons.

Attendance at School

1. Having improved significantly year on year since 2011, the 2014-2015 overall attendance figure for secondary schools remained the same as in the last academic year at 93.8%, which is identical to the Welsh average. This places Cardiff 11th out of the 22 local authorities in Wales for secondary school attendance. Seven schools achieved attendance above 95% compared to five last year. Notably poor attendance in three schools impacted significantly on the overall city data.

2. The attendance of eFSM pupils in secondary schools was slightly lower in 2015 than in 2014. This is a cause for concern as it is likely to have a negative impact on the academic achievement of these pupils at the end of year 11.
3. The proportion of pupils who are persistent absentees (attendance of 80% or below) has reduced for two years running in three of the cities secondary schools but increased for two years running in six others.
4. Attendance in primary schools continues to improve. The 2015 figures showed attendance of 95.1% which is 0.2 percentage points up on the 2014 figure of 94.9%. Overall, 56% of primary schools look to have achieved an attendance rate over 95% and 29% of schools achieved attendance of at least 96%.

5. The proportion of days missed, especially by secondary school age pupils, remains too high and in some cases clearly impacts on the standards attained by individual pupils and their schools. While there is clear evidence of the positive impact of the 5 step strategy which has been in place for a number of years now, improving attendance in schools at all phases remains a priority.

**Primary and Secondary Attendance 2015
Comparison of Cardiff to the Core Cities**

	Primary		Secondary	
2015	Attendance	Rank	Attendance	Rank
Wales Average	94.9%		93.8%	
England Average	96.0%		94.8%	
Cardiff	95.1%	10	93.9%	7
Birmingham	95.9%	3	95.1%	1
Bristol, city of	95.7%	4	94.3%	5
Leeds	96.2%	1	94.5%	3
Liverpool	95.5%	8	93.7%	8
Manchester	96.0%	2	93.7%	8
Newcastle Upon Tyne	95.7%	4	94.8%	2
Nottingham	95.7%	4	94.5%	3
Sheffield	95.5%	7	94.3%	5
Glasgow	95.1%	9	91.9%	10

Exclusions

1. The exclusion data shows an overall improvement. Cardiff's exclusion rates continue to fall overall against key performance indicators, with significant reductions in the fixed term exclusions per 1000 pupils in both secondary and primary phases. There were four permanent exclusions in 2014/15.
2. Progress has been made in reducing fixed term exclusions and maintaining low permanent exclusions. Since the introduction of the 5 step approach the majority of schools have implemented the model appropriately. This has led to schools providing alternatives to exclusion and improving practice which has consequently led to a significant reduction in exclusion rates over the last five years.
3. Exclusion data is used to target support and share good practice between schools. Stronger inclusion models have been implemented with a more proactive approach to behaviour management. Working relationships between schools and the local authority and between schools and other schools are generally effective in securing alternatives to exclusion.

Primary Phase

4. Progress has been made in reducing short fixed term exclusions in primary schools with the exclusions per 1000 pupils now at 9.16 close to the Welsh average of 9.1 (2012/13). Longer fixed term exclusions have remained low at 0.3 per 1000 pupils and are below the Welsh average of 0.7 per 1000 pupils.
5. The average days lost to short exclusions has fallen from 1.55 (2013/14) to 1.43 (2014/15). Whilst the average length of longer exclusions in this phase has risen, this relates to 7 incidents of exclusion in 2014/15 which is down from 13 in 2012/13. This reflects the serious nature of a small number of incidents which have occurred in primary schools.

Exclusion category	12/13	13/14	14/15	Wales average (12/13)	14/15 target
Fixed term exclusions per 1000 pupils(5 days or fewer)	11.03	13.19	9.16	9.1	8.5
Fixed term exclusions per 1000 pupils(6 days or more)	0.59	0.3	0.3	0.7	0.25
Average days lost (FTE 5 days or fewer)	1.99	1.55	1.43	n/a	n/a
Average days lost (FTE 6 days or more)	8.65	8.07	9.07	n/a	n/a

Secondary Phase

1. Good progress overall has been made in reducing short fixed term exclusions in this phase with a five year downward trend. The majority of secondary schools have low exclusions figures. The number of incidents of exclusion has been reduced considerably from 135 in 2012/13 to 78 in 2014/15. Improvements have also been made in reducing the average days lost to both short and longer exclusions.
2. However, rates of exclusion have still been high in eight secondary schools, resulting in the overall secondary data not reducing further. Of these, two are now making good progress in reducing exclusions following challenge and support and work is ongoing with another two to embed consistency in the 5 step approach.
3. The remaining four schools have been subject to local authority intervention leading to changes in leadership and governance. Stronger inclusion models have now been implemented with a more proactive approach to behaviour management. As a result exclusions have fallen significantly in two out of the four schools.
4. Longer fixed term exclusions have risen this year due to the high rates at two schools which account for one third of all exclusions. The number of incidents of exclusion has been reduced considerably from 135 in 2012/13 to 78 in 2014/15. In all schools with comparatively high numbers of exclusions, more needs to be done to ensure that interventions short of exclusion are used effectively wherever possible.

Secondary Phase Exclusion Data

Exclusion category	12/13	13/14	14/15	Welsh average (12/13)	14/15 target
Fixed term exclusions per 1000 pupils(5 days or fewer)	107.8	95.9	76.7	56.5	55
Fixed term exclusions per 1000 pupils(6 days or more)	7.9	3.7	4.7	3.9	3.3
Average days lost (FTE 5 days or fewer)	1.89	1.77	1.74	n/a	n/a
Average days lost (FTE 6 days or more)	9.98	9.96	9.37	n/a	n/a

Not In Education, Employment or Training (NEET)

1. Significant progress has been made over the last 5 years in reducing the number of young people who leave school and do not make a positive transition to Education Employment, Training in Cardiff. There has been a significant reduction in the numbers of year 11 leavers designated as NEET, from 8.8% in 2010, to 4.26% in 2014. In 2014, the number of year 11 school leavers that did not progress into EET was 151 pupils of a cohort of 3,546 pupils (4.26%).

Source: Careers Wales Pupil Destinations from Schools in Wales. This indicator is based on a snapshot taken at the end of October each year and data relates to whether a young person was engaged in EET on the day of the count.

Year 11 Leavers known to be not in education, employment or training					
	2010	2011	2012	2013	2014
Cardiff	8.8	7.7	6.7	4.9	4.3
Wales	5.4	4.4	4.2	3.7	3.1

2. Despite this improvement being at a faster rate than other local authorities, further reductions are required. Cardiff's position relative to that of the 21 other local authorities in Wales was 20th compared with 21st in 2013. In relation to similar authorities Cardiff's performance at 4.26% is ahead of Newport 4.7% but behind Swansea 3.5%.
3. The local authority has strong partnership arrangements with Careers Wales and robust data sharing and processes have been developed to support the operation of post 16 neighbourhood panels and the destinations process. Youth Service Lead Workers and Youth Mentors have arrangements in place to refer into Careers Advisors when they identify year 10 and 11 pupils or post 16 learners that require career support.

4. The local authority is also working as part of a regional consortium to progress an European Social Fund application - Aspire to Achieve. Careers Wales are included as a partner in the application and should this be successful will deliver 'Activate', a targeted career support intervention with pupils identified through the Vulnerability Assessment Profile.

Outcomes of Inspections

The Outcomes of School Inspections

1. At the time of writing this report, 3 nursery schools, 76 primary schools, 5 special schools, 18 secondary schools and the Pupil Referral Unit (PRU) have been inspected since September 2010 when Estyn introduced a revised framework for inspections. The Annual Report of Her Majesty's Chief Inspector of Education and Training in Wales 2013-2014 cited that 65% (approximately two thirds) of primary schools and 69% of secondary schools are in some form of follow-up monitoring.
2. During the 2014-2015 academic year:
 - Five schools were judged as requiring significant improvement: Fairwater Primary, St. Cuthbert's RC Primary, Adamsdown Primary, Christ the King RC Primary and Cantonian High;
 - Two schools were judged as requiring special measures: Eastern High and Trelai Primary.
3. In the two secondary schools the local authority has taken intervention action:
 - Cantonian High, the proportion of pupils achieving the level 2+ threshold improved in 2015. The school is receiving support for leadership, learning and teaching from a high performing school and the school is also involved in the Schools Challenge Cymru programme.
 - Eastern High, the school has made progress over the last year in some areas such as improving behaviour and leadership. Improving the quality of teaching is now the main focus in order to improve outcomes for pupils in 2016.
4. In the primary schools, poor performance at the end of each key stage and shortcomings in leadership were the main contributory factors. The local authority intervened in Fairwater Primary and this school has now made good progress and been removed from Estyn's list of schools requiring significant improvement. In the other primary schools leadership issues are being addressed.
5. Over the same period:
 - Two schools were removed from requiring significant improvement, namely Holy Family RC Primary and Allensbank Primary; and
 - St. Illtyds was removed from special measures.

Main Themes in Inspection Reports

6. Estyn's Annual Report 2013-2014 highlights that in primary schools where standards are excellent, pupils make very good progress in their learning, often from low starting points. They apply their literacy, numeracy, thinking and problem-solving skills well across the curriculum. Pupils eligible for free school meals generally perform as well as their peers and there tends to be little difference between the performance of boys and girls.

7. Where inspections judge standards to be only adequate, their report notes that there is no trend of improvement, numeracy skills are weaker than literacy skills and girls tend to perform better than boys, particularly at the higher-than-expected levels and in literacy. The quality and consistency of feedback pupils receive and how effective this is in helping pupils to improve their work are weak. Leaders do not hold senior and middle leaders to account for the standards pupils achieve and do not place an appropriate focus on improving standards.
8. In relation to secondary schools, Estyn's annual report 2013-2014 identifies that in the very few schools where standards are excellent, examination results are very good and consistently compare well with those of similar schools. Nearly all pupils display high levels of achievement and progress in their learning.
9. The report also documents that where standards are only adequate, there are weaknesses in mathematics, at the level 2+ indicator, and in the provision for more able and talented pupils. Leaders at all levels do not have enough impact on standards and the quality of teaching. Governors do not hold leaders to account well enough for their responsibilities or challenge the school enough on areas for improvement. Recommendations highlighting the need to take action to improve in these areas have also been made in reports on Cardiff schools.
10. Where schools in Cardiff are judged to be unsatisfactory, there are low standards and weaknesses in leadership. Self-evaluation and planning for improvement have not had enough impact on raising standards and improving the quality of teaching. Governors do not challenge the school's leaders rigorously enough or hold them to account fully for the standards that pupils achieve.

Inspection Report Analysis - Outcomes from September 2010 - August 2015

In the tables below KQ refers to the key questions against which judgements are made.

KQ1 – How good are the outcomes?

KQ2 – How good is provision?

KQ3 – How good are leadership and management?

**CITY OF CARDIFF COUNCIL
CYNGOR DINAS CAERDYDD**

CABINET MEETING: 21 JANUARY 2015

CARDIFF COMMITMENT TO YOUTH ENGAGEMENT AND PROGRESSION

REPORT OF DIRECTOR OF EDUCATION & LIFELONG LEARNING and DIRECTOR OF ECONOMIC DEVELOPMENT

AGENDA ITEM: 8

PORTFOLIO: LEADER (ECONOMIC DEVELOPMENT & PARTNERSHIPS) (COUNCILLOR PHIL BALE) AND EDUCATION (COUNCILLOR SARAH MERRY)

Reason for this Report

1. To seek Cabinet approval to proceed with the development of a comprehensive, integrated, Cardiff Commitment to Youth Engagement and Progression Strategy for the city.
2. The proposed strategy will set out how Cardiff Council, together with a wide range of partners in the public, private and third sectors, will seek to ensure a positive destination for every young person in Cardiff after statutory schooling, into employment, education or training.

Background and context

3. Vibrant, cohesive communities and a prosperous economy and society are founded on a strong education system. Cardiff, the capital city of Wales, is one of the fastest growing cities in the UK. It has long been an international city, trading with the world, welcoming people, ideas and innovation from elsewhere. Its economy has changed radically and is developing in new ways. Its population is increasingly diverse, with over 100 languages spoken. It is a proudly bilingual city, committed to the development of the Welsh language.
4. Cardiff's education system has been responding to these changes. With a strong university sector, and major employers in the region, Cardiff has a high proportion of citizens educated to graduate level, attracting and retaining a highly skilled workforce. But in the past some aspects of the statutory schooling system have been underperforming, with stark differences in outcomes for learners, and life chances in different parts of the city. This has been changing in recent years and improvements are

clear. But more remains to be done to ensure that Cardiff has consistently excellent education.

5. The Council's Single Integrated Plan, 'What Matters' sets out ambitions to deliver a thriving and prosperous economy and to enable 'people in Cardiff to achieve their full potential'. These ambitions transfer into the Council's Corporate Plan and the four key priorities:

- Education and skills for people of all ages;
- Supporting people in vulnerable situations;
- Sustainable economic development as the engine for growth and jobs;
- Working with people and partners to design, deliver and improve services.

Better education and employment outcomes for young people, are clearly critical success factors to achieving improved economic growth and are integral to the Council's current ambitions and plans. The refreshed strategy for youth employment and progression proposed in this report, taken together with the development of "Cardiff 2020", the educational improvement strategy for Cardiff to 2020, will set out how the Council, with its partners in the city, will secure these objectives.

6. Current data shows that Cardiff is growing faster than other cities in the UK, with a skilled and competitive workforce, high quality of life rating, and significant investment in business infrastructure. It is expected to continue growing faster than any other U.K. city over the next 20 years. A flexible, highly skilled workforce is an essential component of this future growth, both in terms of economic development and social cohesion in the city and wider region.
7. However, against this background of dynamic growth, Cardiff currently has a disproportionate number of young people who do not make a successful transition into Education, Employment or Training (EET).
8. Welsh Government set out in the Youth Engagement and Progression Framework (2013), the expectation that all Councils in Wales take a leading role in driving the comprehensive co-ordination, alignment and integration of activity across a range of delivery stakeholders to ensure that young people make a successful transition into EET.
9. In monitoring educational provision in Cardiff one of Estyn's six recommendations from 2014 requires action to further reduce numbers of young people who are not in EET. In their monitoring visit of October 2015, they noted progress in reducing numbers, but pointed to the need for a single overarching strategy to improve youth engagement and progression.

Current Position

Youth employment in Cardiff

10. Youth employment in Cardiff has improved in recent years, with the percentage of young people unemployed in the age groups 16 -18 and 20 -24, now below the Wales averages. However, statistics indicate that 2,000 young people aged 16 – 19 and 2,800 young people aged 20 – 24, within the City of Cardiff are unemployed.

Unemployment rate – Young People aged 16-19

Date	Cardiff			Wales		
	Unemployed	Economically active	%	Unemployed	Economically active	%
Jan 2012-Dec 2012	3,200	8,700	36.4	20,600	71,300	28.8
Jan 2013-Dec 2013	3,300	9,600	34.5	20,800	68,800	30.3
Jan 2014-Dec 2014	2,100	9,400	21.9	16,800	68,400	24.5
Jul 2014-Jun 2015	2,000	9,200	22.0	17,900	69,400	25.8

Unemployment rate – Young People aged 20 -24

Date	Cardiff			Wales		
	Unemployed	Economically active	%	Unemployed	Economically active	%
Jan 2012-Dec 2012	5,900	20,900	28.2	30,500	145,900	20.9

Labour Market Analysis

11. A recent labour market demand and supply report by the South East Wales Learning Skills and Innovation Partnership (LSKIP) states that the region is entering an extremely challenging five year period. Opportunities arising from government infrastructure and private industry investment plans have the potential to significantly change the current economic landscape. A City Deal for the Cardiff Capital Region, accelerated development across the three South East Wales Enterprise Zones including Cardiff Airport, and the establishing of close ties between the Great Western Cities, as well as £10 billion of planned infrastructure investment, represent a huge opportunity but also a challenge. Even if only some of the potential developments occur, the potential of this time can only be exploited with the support and growth of skills in the region's workforce.
12. The LSKIP report further stated that it believes that traditional learning, training models and qualifications need radical change to refocus on outcomes. Training the workforce across the age range to deliver the skills industry needs will require the development of new, relevant and

progressive qualifications, approaches and pathways. Delivering key essential skills in numeracy, literacy, ICT and employability for people across the age range who are NEET or lack qualifications will help to build an employee pool/register particularly focussed on areas of high unemployment. Attention also needs to be paid to skills shortages in areas such as manufacturing, tourism, financial services, education and public administration, where employers have expressed difficulties in recruiting. Manufacturing bridges a number of sectors from medical and pharmaceuticals, food and drink manufacturing, electronics, automotive and aerospace.

13. Significantly, the city's growth plans are supported by a high number of graduates, many of whom are drawn to employment locally via the three universities. Cardiff is a popular university destination and many students stay on in the city.

Workforce Skills – Core City Comparisons 2013

	With degree or equivalent and above – aged 16 – 64
Bristol	42.8
Manchester	38.8
Cardiff	38.6
Sheffield	35.9
Great Britain	35.2
Leeds	35.1
Newcastle Upon Tyne	34.6
Nottingham	29.3
Liverpool	27.2
Birmingham	25.8

School Leavers

14. Significant progress has been made over the last 5 years in reducing the number of young people who leave school and do not make a positive transition to Education Employment, Training in Cardiff.
15. There has been a significant reduction in the numbers of year 11 leavers designated as NEET, from 8.8% in 2010, to 4.26% in 2014. In 2014, the number of year 11 school leavers that did not progress into EET was 151 pupils of a cohort of 3,546 pupils (4.26%).

Year 11 Leavers known to be not in education, employment or training					
	2010	2011	2012	2013	2014
Cardiff	8.8	7.7	6.7	4.9	4.3
Wales	5.4	4.4	4.2	3.7	3.1
Source: Careers Wales Pupil Destinations from Schools in Wales					

16. There has also been a reduction in the numbers of Year 13 leavers designated as NEET from 6.2% in 2010, to 4.4% in 2014. In 2014, the number of year 13 school leavers that did not progress into EET was 62 pupils of a cohort of 1,402 pupils.

Year 13 Leavers known to be not in education, employment or training					
	2010	2011	2012	2013	2014
Cardiff	6.2	8.4	4.9	4.2	4.4
Wales	6.6	6.4	5.1	4.7	4.9
Source: Careers Wales Pupil Destinations from Schools in Wales					

17. However despite this improvement, the proportion of young people in Cardiff who are not in education, employment or training remains one of the highest in Wales. In 2014 only Newport had a greater percentage of Y11 school leavers not in education, employment or training than Cardiff.
18. It is important to note that as at October 2015, 563 16-18 year olds were registered by Careers Wales as not in education, training or employment. This compares favourably with the 629 reported by Careers at the same point last year (October 2014).

School Qualification Outcomes

19. A major contributory factor to the progression and future life chances of young people is their academic attainment. The results for the 2014-2015 academic year build on the improvements seen last year. Standards of attainment continue to improve in all key stages and in many indicators at a faster rate than across Wales as a whole. However, despite this strengthening picture, outcomes at the end of each key stage are not yet high enough.
20. At Key Stage 4 there has been further significant improvement in the Level 2 inclusive threshold to 59.3%. This has halved the number of secondary schools where less than 40% of pupils achieve five GCSEs grades A*-C including English or Welsh and mathematics from six to three. The three schools that continue to cause concern are also those schools that have yielded higher numbers of young people leaving at year 11, without a positive pathway to education, employment or training.
21. Performance at the wider Key Stage 4 level 2 measure (5 GCSEs grades A*-C), and the level 1 measure (5 GCSEs grades A*-G or equivalent), is still of continuing concern in a number of secondary schools. This indicates scope to improve the adequacy and breadth of the curriculum offer to respond to the needs of all pupils. Leaving school without these foundations is a significant barrier to progression and future success.

Cardiff Key Stage 4 Results

Key Stage 4 Performance Indicator	Cardiff					Wales
	2011 Actual	2012 Actual	2013 Actual	2014 Actual	2015 Actual	2015 Actual
Achieved the Level 2 threshold including E/W/M	48.4%	49.3%	49.9%	54.0%	59.3%	57.90%
Achieved the Level 2 threshold	63.9%	68.3%	73.0%	76.0%	81.6%	84.10%
Achieved the Level 1 threshold	89.3%	91.2%	91.7%	93.2%	92.1%	94.40%

Current Arrangements

22. The Welsh Government has allocated lead partners with particular responsibility for young people who do not progress or are at risk of not progressing into Education, Employment or Training. In Cardiff at present, these lead agencies report to the Education, Employment and Training (EET) Strategy Group and are:

- Cardiff Education Service (young people aged pre 16)
- Careers Wales Cardiff and Vale (young people aged 16-18)
- Job Centre Plus (young people aged 18+).

23. To date, the EET Strategy Group has fulfilled a leadership and co-ordination role, enabling the development of key building blocks to meet local and national expectations regarding the progression of young people. Reports are regularly provided to the Education Development Board. However, this group has not been able to secure the commitment of all stakeholders to fully realise the benefit of effective partnerships at all levels, which have an important role to play in supporting young people into the world of work. Much of the work to date has been driven and delivered by the Education Directorate, in particular the Youth Service, and Careers Wales.

24. Achievements to date include:

- The implementation of the Vulnerability Assessment Profile in all secondary schools in Cardiff, to enable early identification, tracking and support to young people in school at risk of not making a positive progression to education, employment or training.
- Strong partnership arrangements for the post 16 Neighbourhood panels have been developed and lead workers from range of partner organisations track and support young people at risk in the 16 – 18 year old group.

- Progression of the Council's commitment to the Welsh Government's expected Youth Guarantee through partnership planning between education, schools, FE, Work Based Learning providers and Careers Wales.
25. Further examples of the Council's wider commitment to supporting the transition of young people into education, employment and training include:
- Children's Services have created a post to support young people into EET who are within LAC services. Working with a number of partners including Careers Wales, Cardiff and Vale College, and the GMB Union, a traineeship scheme has been developed for Looked After Children to gain new skills, qualifications and employment.
 - The recruitment of Student Mentors to support Care Leavers.
 - Incorporation of a communities benefits clause into the Council's Building Maintenance Contract Framework which has resulted in apprentices being recruited either by companies themselves or via their supply chains.
 - The Council's Into Work Services supports job seekers through the provision of a wide range of free courses and job search support.
 - Delivery of a Schools Governors Programme to help address the need to strengthen the Governance of some of our secondary schools and primary schools and build sustainable, long-term partnerships between business and schools.

Proposed Way Forward

26. Further action is now needed to consolidate the range of current actions, and for the Council to use to greater effect its role as a major employer, and its influence through partnerships, to ensure that Cardiff is able to deliver outstanding choices and opportunities for all young people which secures their full engagement in the social and economic life of the city and city region.
27. It is proposed that the Cardiff Commitment to Youth Engagement and Progression Strategy is scoped and developed, sponsored by the Council and the Cardiff Partnership Board. It is recommended that we draw upon the experience and best practice exhibited in other City regions such as Edinburgh, Leeds and Oxford, who have all created innovative and inspirational Youth Engagement and Employability Strategies.
28. Business and employers throughout the city and region are key to securing the Cardiff Commitment to young people's futures. It is proposed that the Council develops its already strong engagement with employers by seeking the specific commitment of every employer to developing their youth offer, whether through establishing an apprenticeship, work experience opportunities, or bespoke partnering with schools and young people.

29. The Council is already working with its contractors to secure community benefits from its construction and maintenance contracts. These aim to benefit young people by providing apprenticeships, graduate and NVQ training programmes, work experience/internship opportunities and employing long term unemployed. The Council is committed to maximising the community benefits derived from all appropriate contracts by identifying opportunities to deliver community benefits from other types of contracts.
30. The Council is also actively looking at the potential to introduce a Social Responsibility Charter. The Charter would be a set of guiding principles for the Council and which the Council's contracted suppliers would be invited to adopt. The Charter could cover a range of issues including employment, training, buy Cardiff first, ethical procurement and being a good employer.
31. It is further proposed that whilst the strategy is being refreshed that the Council acts proactively to deliver 'quick wins' where possible. An immediate opportunity to consider is a pilot of a 'Junior Apprenticeship Scheme' with Cardiff and Vale College, for 14 – 16 year olds. This proposition would involve joint arrangements for education, training and experience between the college and the Council, whereby young people would access job related training at the Council and English/Maths GCSE and basic skills training at the College.
32. This opportunity would provide the option to extend and modify the Council's Corporate Framework for Work Experience, Work Placements, Traineeships, Apprenticeships and Graduates (report to Cabinet 7 November 2013). The Apprenticeship scheme within this Framework had some success, in placing young people in administration and IT roles attracting young apprentices with Level 2 qualifications. However, it has had little impact to date on those at risk of becoming NEET, with qualifications at level 1 only.

Reason for Recommendations

33. The strategy for Youth Engagement and Progression proposed here will enable the Council to progress its commitments to young people of Cardiff within the context of the wider ambitions for the future social and economic prosperity of Cardiff and the region which are set out in the What Matters partnership plan and in the Corporate Plan.

Financial Implications

34. The Strategy for Youth Engagement and Progression proposed here will result in the Council identifying appropriate apprenticeships across Directorates. The funding for this will need to be found from within existing financial resources through a combination of workforce planning by using funding for previously held posts or identifying other sources of funding such as earmarked reserves for apprenticeships

35. Where the use is made of earmarked reserves then consideration should be given as to the sustainability of the funding looking forward into the future.

Legal Implications

36. At present there is no statutory guidance re the Youth Engagement and Progression Framework 2015. On the 15th July 2015, the Welsh Government published a “Formative evaluation of the youth engagement and progression framework”. The evaluation was in respect of all Local Authorities in Wales. In the conclusions of the executive summary it states “Since many of the barriers to progress appear to be related to the extent that LA’s and their partners had prioritised and taken forward activities that would implement the YEPF, additional pressure may be more effective than turning the YEPF into a statutory requirement when changes to the accountability framework for schools and colleges (the use of destination outcomes) may make some difference to motivations. At a later point when there is less government focus on the programme and no grant funding for EPC’s for example, statutory guidance might secure the progress made.

HR Implications

37. The age profile of the Council indicates that currently less than 5% of the Council’s workforce are in the 16 to 24 age group (excluding reliefs and casuals). Alongside the positive impact and benefits to young people, the proposals set out in this report will assist in encouraging young people to consider the Council as a prospective employer and contribute to the need to improve the age profile of the workforce. The specific HR implications arising from the proposed pilot ‘Junior Apprenticeship Scheme’ with the Cardiff and Vale College will be assessed as the pilot is developed.

RECOMMENDATIONS

Cabinet is recommended to:

1. Agree the implementation of ‘The Cardiff Commitment’ - ensuring positive destinations for all young people in Cardiff – The Cardiff Youth Engagement and Progression Strategy 2015 – 2018 (Appendix 1), and raise its profile to a new Corporate commitment in the 2016/17 Corporate Plan.
2. Agree the approach to employer and business engagement in delivering the Cardiff Commitment as set out in paragraph 28 of this report.
3. Support the development of a pilot ‘Junior Apprenticeships Scheme’ with Cardiff & Vale College.
4. Agree that the Council continues to develop its Community Benefits approach to maximise opportunities for young people and raise awareness of this Strategy within its supply chain.

5. Delegate to the Chief Executive, in consultation with the Leader and Cabinet Member (Education) and relevant senior officers, authority to ensure that the necessary resources to achieve the above recommendations are identified.

Foreword

Over the past 20 years, Cardiff has transformed itself into a thriving and vibrant city. As one of the UK's Core Cities, with a population of 351,700, Cardiff is the largest city in Wales and the ninth largest city in the United Kingdom. The city is also one of the most rapidly growing in the UK, with faster job growth than any of the UK Core Cities between 2000 and 2010.

The ongoing success and growth of the city presents opportune conditions to refocus and re-energise our commitment to young people.

Through this strategy, we aim to ensure that all young people in Cardiff are provided with the support, choices and opportunities to become personally successful, economically productive and actively engaged citizens. We recognise that some young people are faced with significant challenges and barriers to progression. We are determined to create the environment in which our most vulnerable young people can break through these difficulties and make a successful transition into adulthood and the world of work.

We recognise the contribution that the full participation of young people in education and training can make to ensuring Cardiff has a skilled and effective workforce and to raising the aspirations of young people in the county. It forms a key strand of our corporate plan for a thriving capital and the development of a world class economy.

Whilst we have a great deal of work ahead of us to achieve our ambitions, we are already making great strides forward to ensure the very best for our young people and we will continue to work in partnership to make Cardiff one of Europe's top capital cities for young people to reach their potential.

Councillor Phil Bale, Leader Cardiff Council

Paul Orders Chief Executive

Introduction

Cardiff Council is committed to increasing the engagement and progression of young people in education, training and employment. It is a key part of the work of our schools, colleges and training providers to improve outcomes for young people and break the link between poverty and attainment.

There has been a steady improvement year on year in the proportion of young people who are engaged in education, employment or training at age 16 but there remains scope to increase the numbers who secure a positive destination after leaving school.

We recognise that there will always be young people age 16+ who struggle with the transition to adulthood and who will require high quality support to enable them to make that transition a positive one. Hence, our strategy to increase the numbers of young people progressing to ongoing education, employment or training includes the provision of highly personalised packages of support. It also recognises that the journey to successful progression from school to the world of work begins way before the young person is 16. Thus intervention at school before disengagement and disaffection set in is an essential part of this strategy.

This strategy also aligns to the wider preventative agenda, including early years, parenting and family support and the Council's Early Help Strategy.

Cardiff Council is determined to build on good practice already embedded, learn from other areas, create opportunities and improve the participation rates for young people in the county and in particular for our most vulnerable groups.

The key to successful implementation of Cardiff's Youth Engagement and Progression Strategy will be strong leadership and a whole system approach in which roles and responsibilities are clearly defined and all stakeholders collaborate to deliver better outcomes for young people.

Context

In Wales, this strategy sits within the context of a number of key national strategies and plans.

- The *Youth Engagement and Progression Framework* (YEPP) which sets out a delivery model centred on the needs of young people, with clear roles and responsibilities between the range of organisations working with young people and strong local leadership by local authorities and their partners.
- *Communities First and Families First*, which aim to achieve positive outcomes for more deprived communities and needy families in Wales.
- The *Tackling Poverty Action Plan 2012–2016* which prioritises a commitment to reduce the number of young people who are not in education, employment and training (NEET).
- The *Improving Schools Plan* which aims to improve literacy and numeracy and break the link between poverty and attainment.
- The Policy Statement on Skills 2014 which sets out 4 key priorities, which are vital for progression and sustainable employment.
 - Skills for jobs and growth
 - Skills that respond to local needs
 - Skills that employer's value
 - Skills for employment.
- The new Post-16 planning and funding system and the recommendations from the Review of 14–19 Qualifications.
- Welsh Government's wider work to boost youth employment, post 18, via Jobs Growth Wales, traineeships and apprenticeships.

Locally, this strategy makes a significant contribution to the desired outcomes within the Council's *Single Integrated Plan "What Matters"*, which aims to make Cardiff Europe's 'most liveable capital city'. It is also central to the priorities of the Council's *Corporate Plan*, which are:

- Education and Skills for people of all ages
- Supporting people in vulnerable situations
- Sustainable economic development as the engine for growth and jobs
- Working with people and partners to design, deliver and improve services.

Vision

All young people in Cardiff make a successful transition from school to ongoing education, training and the world of work and are enabled to reach their full potential.

Desired Outcomes

- An increased number of year 11 school leavers securing a positive, sustainable destination in education, employment or training.
- An increased number of year 13/14 school leavers securing a positive, sustainable destination in education, employment or training.
- A reduction in the % of young people (16-18 year olds) who are not in employment, education or training.
- An increased number of young people and adults entering post-18 learning opportunities
- More young people in vulnerable groups, at risk of becoming NEET, making a successful transition from school to future education, employment or training.
- A higher overall number of young people aged 16 – 25 economically active.
- Strong partnerships effectively operating throughout Cardiff to improve support, choices and opportunities for young people.
- An increased number of young people achieving Level 2 qualifications and a reduction in the numbers of young people leaving school with no or level 1 qualifications.
- All young people at risk of becoming NEET are identified early and appropriate intervention and support is allocated to support transition at Key Stage 3, 4 and post 16.
- Sufficient breadth of opportunities available at appropriate levels which reflect needs of economy. Fewer young people revolving through the system.
- Assessment and Planning Pathways in place (joint assessment framework embedded).
- Responsive employer engagement in education leading to increased employability of school leavers.
- Young people directly influence service planning and delivery and ensure ownership and relevance.

Strategic Priorities and Key Objectives

This strategy will be delivered through a focus on six priority areas to realise better outcomes for young people. These key areas align with the Welsh Government Youth Engagement and Progression Framework. The strategy is underpinned by a concise action plan.

Priority 1: Shared accountability and commitment to action

Objectives:

- Clear leadership and partnership arrangements, which secure a city wide commitment to securing the successful progression of all young people.
- Strong engagement and commitment from the business community and wider institutions in Cardiff.
- Accountability of school leaders to ensure the progression of their learners when they leave school
- A transparent performance management framework which enables the comparison of learner outcomes and destinations across the city.

Priority 2: Early identification of young people most at risk of disengagement

An effective long-term strategy for reducing the size of the NEET group must stem the flows into the group. To ensure that all young people can participate in EET requires a specific focus on those who are most vulnerable. Early identification and support is crucial to ensuring that these young people can go on to achieve and participate.

Objectives:

- Intervening early with families at risk of poor outcomes – ensure that children and young people are identified and receive help and intervention at the earliest opportunity.
- Develop an early intervention focus, in particular focusing on transitions to primary school and on early skills development
- Joint Assessment Framework implemented across schools and services in line with the Council's Early Help Strategy.

Priority 3: Better brokerage and co-ordination of support

Improving and supporting the transition of learners between key stages is crucial to ensuring that young people continue to be engaged in education and can progress successfully.

Objectives:

- Sufficient, targeted and effective 'lead worker role' model implemented across Cardiff, enhanced by European Social Fund grant, to support young people most at risk of disengagement.
- Appropriate and secure information sharing arrangements in place across all relevant agencies.
- Young people fully engaged in reviewing and improving the quality of services they receive.

Priority 4: Stronger tracking systems pre and post 16

In order to support transitions and ensure appropriate services are in place good tracking information is needed about where learners are, to identify those who need more support and quickly re-engage those who do not sustain EET.

Objectives:

- Quality tracking systems in place covering the transition process from pre to post 16, to ensure that young people leaving all pre 16 learning provision (schools and other) are given appropriate support and choices, including introduction of the Common Application System.
- Careers Wales destinations data and tier data for 16 to 18 year old young people is timely and reliable. Mechanisms to report and re-engage young people who leave 16-18 education and are robust.
- Transition support is in place for targeted vulnerable groups e.g.: Looked After Children, disabled children, children with additional learning needs and behavioural difficulties, children with english as an additional language.
- Post 16 Neighbourhood panels in each of Cardiff's 6 Neighbourhood Management Areas enhanced through extended memberships, to include further third sector and other partners.

Priority 5: Ensuring provision meets the needs of young people

There must be sufficient breadth of opportunities available at appropriate levels, which regardless of where they take place, must be of the highest possible quality, and that learning and achievement is accredited or formally recognised.

Objectives:

- A comprehensive, up to date picture of provision is available which identifies gaps, unmet needs or duplication in existing provision.
- Cardiff Youth Guarantee implemented, to ensure appropriate progression routes for all learners by 2016.
- Post 16 provision and funding model revised.
- Appropriate pathways and alternative curriculum for 14 to 16 year old learners at risk of disengagement, in particular at Level 1 developed.
- Issues of retention and early leavers from Further Education and Work Based Learning addressed, to counter the ongoing issues with 'churn' in the system.

Priority 6: Strengthening employability skills and opportunities for employment

We recognise the contribution that full participation of young people in education and training can make to ensuring Cardiff has a competent and effective workforce and to raising the aspirations of young people in the county.

Objectives:

- Schools/business engagement framework developed and implemented, to enable more focused and productive working relationships.
- Comprehensive labour market analysis for the Cardiff sub region complete, drawing upon existing studies available within the city.
- New models of schools and business partnerships developed, to exploit opportunities for co-ordinated learning and economic growth.
- Best practice approaches to Careers advice & guidance and work experience for key stage 4 pupils.
- Council's apprenticeship and training programmes extended, to increase the range of opportunities available to young people, particularly those in vulnerable groups.

Story behind the baseline

Definition of NEET

The term NEET refers to young people who are not engaged in education, employment or training. It is often used to describe young people who are disengaged from learning or employment and have become marginalised from society.

Attempts have been made to estimate the financial costs of extended periods of NEET status. A study by the DfES estimated that the additional resource cost associated with being NEET amounted to £97,000 over a lifetime. The additional resource cost represents the cost to the economy as a whole of failing to help a 16 to 18 year old out of the NEET group over their lifetime. The estimate attempts to place a value on additional costs of unemployment, under employment, crime, poor health, substance abuse, premature death and early motherhood. So, in Wales, the costs of failing to help one cohort of NEET young people aged 16-18 out of NEET status over their lifetime would amount to well over £1 billion.

Why do young people become NEET?

Young People can become NEET due to a variety of reasons and circumstances. Progressing to post 16 is a major transitional point in all young people's lives. The management of this transitional point is crucial to ensure the risk of young people becoming NEET is reduced or removed.

For some young people being NEET is a finite, transitional phase, ending in a positive outcome. For others, NEET is both a symptom of disadvantage and disengagement in earlier years and indicates a lifelong disengagement from actively participating in and benefiting from a prosperous society.

Research by Cordis Bright commissioned by Cardiff Council in 2007 concluded that NEET young people are not a homogeneous group but that they are more likely to experience multiple barriers or problems to engagement. They are more likely than the general population to:

- be male
- have a history of not attending school
- have "looked after children" status (LAC)
- have a history of fixed term exclusions
- have an "educated other" status
- have a special educational needs statement
- have experience of more frequent episodes of unemployment and for longer periods if they are not long term NEET
- have lower qualification attainment levels
- have been in contact with the Youth Offending Service.

Baseline

Cardiff's Current Position

The total NEET group is made up of young people who are not participating in EET but who are available to the labour market and also those young people who are not currently available to the labour market (because of illness, caring responsibilities, pregnancy or parenting responsibilities, for example).

School Leavers

Since 2010, there has been a significant reduction in the numbers of year 11 leavers designated as NEET in Cardiff, from 8.8% to 4.3% in 2014. (4.3% is 151 young people). Despite this improvement being at a faster rate than other local authorities, further reductions are required. Cardiff's relative position in 2014 is 21st out of 22 local authorities in Wales in terms of its NEET figures. In relation to similar authorities Cardiff's performance was ahead of Newport 4.7% but behind Swansea 3.5%.

Welsh Government statistics on young people who are NEET are for the academic year 2014 show the NEET position for Wales is 3.1% compared to 5.4% in 2010. These figures are produced on a Welsh basis. The statistics are based on annual Destinations Survey undertaken in October each year by Careers Wales. 2015 statistics are yet to be published.

Year 11 Leavers known to be not in education, employment or training					
	2010	2011	2012	2013	2014
Cardiff	8.8	7.7	6.7	4.9	4.3
Wales	5.4	4.4	4.2	3.7	3.1
Source: Careers Wales Pupil Destinations from Schools in Wales					

Year 13 Leavers known to be not in education, employment or training					
	2010	2011	2012	2013	2014
Cardiff	6.2	8.4	4.9	4.2	4.4
Wales	6.6	6.4	5.1	4.7	4.9
Source: Careers Wales Pupil Destinations from Schools in Wales					

2014 – Year 11 NEET Profile

In 2014, the number of year 11 school leavers that did not progress into EET was 4.26% or 151 pupils of a cohort of 3546 pupils. Of these, 115 young people or 3.24% did not progress into EET and 36 young people or 1.02% could not or were unable to enter EET due to illness or custodial sentence.

An analysis of the characteristics of the 151 pupils identified as not in EET (including the 133 pupils identified by the VAP process) in October 2014 indicates the following:

	Male	Female
SEN	1	3
FSM	22	24
EAL who require support with written and/or spoken English	3	4
Multiple fixed term exclusions	23	17
LAC	2	6
Neighbourhood Area		
Cardiff North	10	2
Cardiff East	9	6
Cardiff South West	16	11
Cardiff West	8	6
Cardiff City and South	3	6
Cardiff South East	20	14
Other (in care or out of county)	10	12

Vulnerability Assessment Profile

To support the early identification of vulnerable pupils Cardiff Council has led on the implementation of a Vulnerability Assessment Profile (VAP). Beginning in year 8, the VAP tool identifies those pupils whose attendance falls below 85%. The VAP data is discussed on a termly basis at a school led agency panel meeting and this informs the targeting by Careers Wales and Cardiff Council of additional support and or advice and guidance to identified pupils.

In April 2014, 1677 pupils across years 9 to 11 were identified by the Vulnerability Assessment Profile process. 682 of this identified cohort were in year 11.

Year 11 pupils VAP RAG Status as at April 2014	
<i>Status</i>	<i>Number of pupils</i>
RED	304
AMBER	146
GREEN	232
Total	682

On leaving school in July 2014, 80.5% of the identified year 11 VAP cohort (549 pupils) made a successful transition into EET, whilst 133 pupils were recorded not in EET. These 133 pupils form part of the total 151 NEET recorded by Careers Wales in October 2014 which indicates that our approach to identification is robust.

Figure 2: Percentage of Year 11 School Leavers that are NEET by Neighbourhood Partnership Area 2012/13 to 2013-14

NB. NPA figures only include maintained schools.
 Cardiff North figures exclude Ysgol Gymraeg Bro Edern due to the current absence of a year 11 leaver cohort.
 No. schools in each NPA are in brackets after the area name.

School Qualification Outcomes

A major contributory factor to the progression and future life chances of young people is their academic attainment. The results for the 2014-2015 academic year build on the improvements seen last year. Standards of attainment continue to improve in all key stages and in many indicators at a faster rate than across Wales as a whole. However, despite this strengthening picture, outcomes at the end of each key stage are not yet high enough.

At Key Stage 4 there has been further significant improvement in the Level 2 inclusive threshold to 59.3%. This has halved the number of secondary schools where less than 40% of pupils achieve five GCSEs grades A*-C including English or Welsh and mathematics from six to three. The three schools that continue to cause concern are the same schools that have yielded higher numbers of young people leaving at year 11, without a positive pathway to education, employment or training.

Performance at the wider Key Stage 4 level 2 measure (5 GCSEs grades A*-C), and the level 1 measure (5 GCSEs grades A* – G or equivalent), is still of continuing concern in a number of secondary schools. This indicates scope to improve the adequacy and breadth of the curriculum offer to respond to the needs of all pupils. Leaving school without these foundations is a significant barrier to progression and future success.

Cardiff Key Stage 4 Results

	2011	2012	2013	2014	2015	Wales 2015 Actual
Achieved the Level 2 threshold including E/W/M	48.4%	49.3%	49.9%	54.0%	59.3%	57.90%
Achieved the Level 2 threshold	63.9%	68.3%	73.0%	76.0%	81.6%	84.10%
Achieved the Level 1 threshold	89.3%	91.2%	91.7%	93.2%	92.1%	94.40%

16 to 18 year olds (post school)

The NEET data for 16-18 year olds is provided by Careers Wales to the LA on a monthly basis. The data is broken down by geographic area and reports the numbers in each tier as well as the movement of young people through the tiers of Careers Wales 5 tier model.

As at October 2015, 563 16-18 year olds (tiers 1, 2 and 3 below), were registered by Careers Wales as not in education training or employment. This compares favourably with the 629 reported by Careers at the same point last year (Oct 14).

Cohort / Age	Tier 1	Tier 2	Tier 3	Tier 4	Tier 5	Grand Total
Left Year 11 in 2015	34	24	112	359	2756	3285
16	31	21	93	306	2281	2732
17	3	3	19	53	475	553
Left Year 11 in 2014	125	76	192	186	3289	3868
17	98	64	155	165	2727	3209
18	27	12	37	21	562	659
Grand Total	159	100	304	545	6051	7161

This information will be shared more widely so that all partners are clear about the picture in each Neighbourhood Partnership area.

Summary of Careers Wales 5 tier model

Tier	Status	Lead responsibility
Tier 5	Young People Engaged in Further Education, Employment or Training	FE and WBLA providers responsible for this tier
Tier 4	Young People at Risk of dropping out	Careers Wales responsible for this tier
Tier 3	Young People on Careers Wales register accessing and requiring further support to enter into EET	Careers Wales responsible for this tier
Tier 2	Young People who are unemployed and not with Careers Wales requiring personal engagement to overcome barriers	LA responsible for this tier via Lead Workers and the Neighbourhood Panel
Tier 1	Unknown status or cannot be contacted	LA responsible for this tier via Lead Workers and the Neighbourhood Panel
Tier 0	No ratified status but have left Wales	LA responsible for ensuring data is cleansed and any young person who has left Cardiff/Wales is moved from tier 1 into tier 0 to prevent time and resource being wasted in follow up.

Youth employment in Cardiff – 16 - 24 year olds

Youth employment in Cardiff has improved in recent years, with the percentage of young people unemployed in the age groups 16 -18 and 20-24, now below the Wales averages. However, statistics indicate that 2,000 young people aged 16 – 19 and 2,800 young people aged 20 – 24, within the City of Cardiff are unemployed.

Unemployment rate – Young People aged 16-19

Date	Cardiff			Wales		
	unemployed	Economically active	%	unemployed	Economically active	%
Jan 2012-Dec 2012	3,200	8,700	36.4	20,600	71,300	28.8
Jan 2013-Dec 2013	3,300	9,600	34.5	20,800	68,800	30.3
Jan 2014-Dec 2014	2,100	9,400	21.9	16,800	68,400	24.5
Jul 2014-Jun 2015	2,000	9,200	22.0	17,900	69,400	25.8

Unemployment rate – Young People aged 20 -24

Date	Cardiff			Wales		
	unemployed	Economically active	%	unemployed	Economically active	%
Jan 2012-Dec 2012	5,900	20,900	28.2	30,500	145,900	20.9
Jan 2013-Dec 2013	4,700	25,400	18.7	26,500	156,200	17.0
Jan 2014-Dec 2014	2,700	24,000	11.4	21,900	154,500	14.2
Jul 2014-Jun 2015	2,800	23,200	12.0	24,200	153,300	15.8

**CITY OF CARDIFF COUNCIL
CYNGOR DINAS CAERDYDD**

CABINET MEETING: 21 JANUARY 2015

**GYPSY AND TRAVELLER ACCOMMODATION ASSESSMENT
AND SITE ASSESSMENT CRITERIA**

**REPORT OF DIRECTOR OF COMMUNITIES, HOUSING &
CUSTOMER SERVICES and DIRECTOR OF CITY OPERATIONS**

AGENDA ITEM: 9

**PORTFOLIO: HEALTH HOUSING AND WELLBEING (COUNCILLOR SUSAN
ELSMORE)
TRANSPORT, PLANNING AND SUSTAINABILITY
(COUNCILLOR RAMESH PATEL)**

Reason for this Report

1. To seek the Council's approval to submit the Gypsy and Traveller Accommodation Assessment to Welsh Ministers for approval and to endorse the proposed Gypsy and Traveller Site Assessment Criteria which will be used to assess potential sites for meeting the need identified in the Gypsy and Traveller Accommodation Assessment.

Background

2. The Council is required, under Part 3 of the Housing (Wales) Act 2014 to undertake a Gypsy and Traveller Accommodation Assessment and to make provision for sites where the assessment identifies an unmet need for Gypsy and Traveller pitches. All Local Authorities in Wales are required to submit the Accommodation Assessment to Welsh Ministers for approval by 21st February 2016 and in order to meet this deadline a Gypsy and Traveller Accommodation Assessment was undertaken in autumn 2015 in accordance with Welsh Government guidance.
3. In preparing the Accommodation Assessment the Council commissioned Gypsy & Traveller Wales to carry out the required interviews in addition to using Travellers Education and Save the Children to try to reach as many people as possible. The Council also has worked closely with the Gypsy and Traveller community, adjoining Local Authorities and Welsh Government. For project management purposes a Steering Group was established at the beginning of the process. This Steering Group helped ensure the GTAA was informed by all available expertise and included representatives from the Council's Housing and Planning Sections, representatives of the Gypsy and Traveller community, Gypsies and

Travellers Wales and Health and Education Gypsy and Traveller Liaison Officers.

4. A total of 172 survey forms were completed and respondents included Gypsy and Travellers living on Council operated and private sites, those currently living in bricks and mortar housing and those residing on unauthorised transit sites at the time of the survey. Analysis of these responses identified an additional need for 87 permanent pitches up to 2026, with 64 in the short term. The consultation also identified the need for a regional transit site. The full findings are set out in the Report included at Appendix 1.
5. These findings are subject to the approval of Welsh Ministers who will assess the Gypsy and Traveller Accommodation Assessment to ensure its robustness in terms of compliance with this guidance, quality of engagement with relevant individuals and calculation of needs. Welsh Ministers may approve the assessment as submitted, approve the assessment with modifications, or reject the assessment and require a new assessment be undertaken. If reports are not approved as submitted, the Welsh Government will consult with the Council in relation to the necessary changes required.
6. This new Assessment will update the findings of the previous study undertaken in April 2013 by Opinion Research Services on behalf of the Council. This found a need for 108 (43 short term) permanent pitches and 10 transit pitches up to 2026 and formed part of the evidence base for the Local Development Plan (LDP) which is nearing adoption following examination last year.
7. As set out above the Housing (Wales) Act 2014 also introduces a statutory requirement on the Council to meet the need for Gypsy and Traveller Accommodation as identified in the Accommodation Assessment. The Deposit LDP proposed a new Gypsy and Traveller site of 65 permanent pitches at Seawall Road, Tremorfa to meet the short term need identified in this April 2013 study. However due to concerns raised in relation to flood risk the LDP Inspectors appointed to examine the Plan instructed the Council to remove the site from the Plan and to prepare position statement setting how the Council intended to meet this unmet need.
8. The position statement submitted to the Inspectors sets out a comprehensive and inclusive process to address the need for additional pitches over the next two years. The first phase is the identification of suitable sites to meet both identified short and long term need by July 2016. Importantly this exercise also provides an opportunity for the Council to revisit and refine the methodology which was previously employed to identify sites in July 2013 during the sites study undertaken by Peter Brett Associates and also to take account of the revised figures relating to need in the new Accommodation Assessment.

9. The table below sets out the key outputs and the associated timescales for delivery. Progress will also be monitored through an indicator in the LDP Annual Monitoring Report.

Mechanisms	Timescale
Agree project management arrangements including reporting structure and representatives	July 2015
Agree methodology for undertaking site search and assessment	December 2015
Update Gypsy and Traveller Needs Assessment for both permanent and transit pitches in accordance with Housing (Wales) Act 2014	February 2016
Undertake a site search and assessment and secure approval of findings – (i.e. Identify required sites to meet short and long term need)	July 2016
Secure planning permission and funding (including any grant funding from Welsh Government) for identified sites(s) required to meet short term	May 2017
Secure planning permission and funding (including any grant funding from Welsh Government) for identified(s) required to meet long term need	May 2021

10. Project Management techniques are being used to deliver these outputs and a Steering Group comprising senior Officers and Cabinet Members and an Officer Working Group comprising Officers from relevant service areas across the Council has been established to progress the work. Where necessary the working group draws on advice from other stakeholders such as the Welsh Government and the Gypsy and Traveller community.
11. In addition to the completion of the new Accommodation Assessment, work has also been progressed on undertaking a thorough review of the previous site selection criteria used to identify sites. This review has had regard to good practice from other authorities, national planning guidance including Welsh Government Circular 30/2007 and latest guidance produced by the Welsh Government relating to the design and management of Gypsy and Traveller sites. The views of the Gypsy and Traveller community have also been sought in revisiting the Site Selection Criteria.
12. A proposed Site Selection Criteria is included as Appendix 2 to this report and set outs assessment criteria around three main headings relating to

availability, site suitability and achievability. Availability considerations include whether the site is genuinely available long term and there are no legal issues. Site suitability considerations include a comprehensive list of policy and physical constraints and deliverability considerations relate to the consideration of abnormal costs. In order to provide an overview a summary of the suitability of each potential site against each of the criteria will be entered into a table together with an overall conclusion for each site. This will allow a transparent and considered assessment to take place with an overall conclusion stating the preferred option and the reasoning behind it.

13. The proposed Site Assessment Criteria was also considered by Communities and Adult Services Scrutiny Committee on 6^t January 2016 and a copy of the scrutiny letter and the response from the Cabinet Member is attached at Appendix 3.

Next Steps

14. The next steps following Cabinet endorsement of the Site Selection Criteria will be finalisation of a list of potential Gypsy and Traveller sites and application of the Site Selection Criteria. This process will take place over the next six months and further report will be brought to Cabinet in July 2016 with the findings of the assessment and recommendations on preferred sites.

Reason for Recommendations

15. To seek Cabinet's approval to submit the Gypsy and Traveller Accommodation Assessment (GTAA) to Welsh Ministers for approval and to endorse the proposed Gypsy and Traveller site Selection Criteria which will be used to assess potential sites.

Financial Implications

16. The report considers a needs assessment for Gypsy and traveller accommodation. Creating new pitches will have financial implications in both operational costs of sites as well as capital expenditure implications, which will need to be accurately identified. For any implementation and operating costs to be affordable, it is essential that external grant funding is available to meet need. Where land is not already in council ownership, it may need to be purchased or transferred from other public sector bodies. It is essential that the site selection criteria also considers the whole life cost of individual sites / options, with this to be reported back at a future Cabinet.

Legal Implications

17. All decisions taken by or on behalf of the Council must (a) be within the legal powers of the Council; (b) comply with any procedural requirement imposed by law; (c) be within the powers of the body or person exercising powers on behalf of the Council; (d) be undertaken in accordance with the procedural requirements imposed by the Council eg.

- standing orders and financial regulations; (e) be fully and properly informed; (f) be properly motivated; (g) be taken having regard to the Council's fiduciary duty to its taxpayers; and (h) be reasonable and proper in all the circumstances.
18. The Council have a legal duty under the Housing (Wales) Act 2014 to carry out an assessment of the accommodation needs of Gypsies and travellers residing in or resorting to its area. The Council has a duty to consult such persons as it considers appropriate.
 19. Following the assessment the Council must prepare a report which contains details of how the assessment was carried out, details of the consultation and details of the accommodation needs identified by the assessment. The Council must submit the report to the Welsh Ministers for approval of their assessment.
 20. If the approved assessment identifies needs within the Council's area with respect to the provision of sites on which mobile homes may be stationed the Council must exercise its powers under section 56 of the Mobile Homes (Wales) Act 2013 so far as may be necessary to meet those needs.
 21. The Council has to satisfy its public sector duties under the Equalities Act 2010 (including specific Welsh public sector duties). Pursuant to these legal duties Councils must in making decisions have due regard to the need to (1) eliminate unlawful discrimination, (2) advance equality of opportunity and (3) foster good relations on the basis of protected characteristics.
 22. Protected characteristics are:
 - Age
 - Gender reassignment
 - Sex
 - Race – including ethnic or national origin, colour or nationality
 - Disability
 - Pregnancy and maternity
 - Marriage and civil partnership
 - Sexual orientation
 - Religion or belief – including lack of belief
 23. As such a decision to implement the proposal has to be made in the context of the Council's equality act public sector duties.
 24. The report identifies that an Equality Impact Assessment has been carried out and is appended at Appendix 4. The purpose of the Equality Impact Assessment is to ensure that the Council has understood the potential impacts of the proposal in terms of equality so that it can ensure that it is making proportionate and rational decisions having due regard to its public sector equality duty.

25. The decision maker must have due regard to the Equality Impact Assessment in making its decision.
26. The decision maker must also have regard to certain other matters when making its decision as outlined in the Statutory Screening tool.

RECOMMENDATION

Cabinet is recommended to

1. Approve the Gypsy and Traveller Accommodation Assessment for submission to Welsh Ministers for approval (Appendix 1)
2. Endorse the proposed Gypsy and Traveller Site Selection Criteria which will be used to assess potential sites (Appendix 2)
3. Agree that a further report be brought to Cabinet setting out the findings of the site assessment process and recommendations on preferred sites.

Gypsy and Traveller Accommodation Assessment Report 2015

Chapter One: Policy Context

1.1 Legislation and Guidance

Housing (Wales) Act 2014

Part 3 of the Housing Act (Wales) 2014 places a duty on the Local Authority to undertake an assessment of the accommodation needs of Gypsies and Travellers residing in or resorting to its area within 1 year of the legislation coming into force and then every 5 years. The current assessment must be submitted to Welsh Government for ministerial approval in February 2016. A failure to gain approval will result in either having to revise and resubmit or undertake a new assessment. The Act also places a duty on the Local Authority to meet the assessed needs.

Mobile Homes (Wales) Act 2013

Section 56 of the Mobile Homes (Wales) Act 2013 provides the powers required for the Local Authority to deliver Gypsy and Traveller accommodation in accordance with the assessed need.

Planning circular 30/2007

Guidance on Planning for Gypsy & Traveller sites was published in the Welsh Government Circular 30/2007. The guidance focuses on finding sustainable sites and emphasising the need for local authorities to adopt an inclusive approach with Gypsies and Travellers to achieve this. This guidance remains valid.

Planning circular 78/91

This circular sets out the need for a realistic assessment of the amount of accommodation required for Travelling Showpeople and provides advice and guidance to local authorities about planning where a need is identified.

Welsh Government Guidance

The Welsh Government published the following guidance in May 2015:

- Undertaking Gypsy and Traveller Accommodation Assessments
- Designing Gypsy and Traveller Sites in Wales
- Managing Gypsy and Traveller Sites in Wales

The purpose of the guidance is to ensure a comprehensive assessment of need and that the

accommodation is delivered in culturally appropriate ways and provides a good standard of living. Cardiff has sought to ensure that the process it has put in place has and will continue to adhere to these documents throughout.

1.2 Local Development Plan Policies

The Cardiff Local Development Plan does not contain a policy which allocates any land for a Gypsy and Traveller site. However, a working group made up of Council officers from Planning and Housing has been set up with the responsibility for making arrangements for the Gypsy and Traveller Accommodation Assessment and for finding potential locations for both permanent and transit pitches to meet the required need. The working group is being led by the Director of Communities, Housing & Customer Services and is following the timetable set out in the LDP Monitoring Framework which is shown below.

Timetable for meeting the needs for permanent Gypsy and Traveller accommodation - LDP Monitoring Indicator OB2 S08

- i) Agree project management arrangements including reporting structure and representatives - July 15
- ii) Agree methodology for undertaking site search and assessment – December 2015
- iii) Undertake Gypsy and Traveller Needs Assessment for both permanent and transit pitches in accordance with Housing (Wales) Act 2014 – February 2016
- iv) Undertake a site search and assessment and secure approval of findings – July 2016
- v) Secure planning permission and funding (including any grant funding from Welsh Government) for identified sites(s) required to meet the short term need for 43 pitches by May 2017
- vi) Secure planning permission and funding (including any grant funding from Welsh Government) for identified(s) required to meet the long term need for 65 pitches by May 2021

Timetable for meeting the needs for transit Gypsy and Traveller accommodation - LDP Monitoring Indicator OB2 S09

- i) Agree project management arrangements including reporting structure and representatives - July 15
- ii) Agree methodology for undertaking site search and assessment – December 2015
- iii) Undertake Gypsy and Traveller Needs Assessment for both permanent and transit pitches in accordance with Housing (Wales) Act 2014 – February 2016
- iv) Undertake a site search and assessment and secure approval of findings – July 2016
- v) Secure planning permission and funding (including any grant funding from Welsh Government) for identified sites(s) required to meet short term – May 2017
- vi) Secure planning permission and funding (including any grant funding from Welsh Government) for identified(s) required to meet long term need – May 2021

In addition to the above timescales, Cardiff Council is keeping a potential site located at Seawall Road (Tremorfa) 'under review' as part of the Monitoring Framework, indicator OB2 S07. It is

currently located within a C2 Flood Risk Area, but should circumstances change this site will be reconsidered for use as a permanent Gypsy and Traveller site. A further indicator included in the LDP Monitoring Framework (OB2 S010) sets out to ensure that the existing supply of Gypsy and Traveller pitches is maintained and where existing pitches are no longer available, alternative pitches will be sought. The Cardiff LDP includes a criteria based policy (H8 New Sites for Gypsy and Traveller Caravans) which provides a framework for assessing proposals for both new and extensions to existing sites, whether for permanent or transit uses. The policy wording is set out below for information.

H8: Sites for Gypsy and Traveller Caravans

New sites and extensions to existing sites will be permitted where:

- i. Necessary physical, transport and social infrastructure are accessible or can be readily provided;
- ii. Environmental factors including flood risk, ground stability, land contamination and proximity of hazardous installations do not make the site inappropriate for residential development;
- iii. The site is designed with reference to both the Welsh Government Good Practice Guide in Designing Gypsy Traveller Sites and the views of local Gypsies and Travellers;
- iv. There would be no unreasonable impact on the character and appearance of the surrounding areas including impact on residential amenity of neighbouring occupiers or the operation conditions of existing businesses; and
- v. In the case of a transit or touring site, it has good access to the primary highway network.

1.3 Definition of key terms

The Local Authority is in agreement with the recommendation to use the common definitions included in the Welsh Government Guidance: Undertaking Gypsy and Traveller Accommodation Assessments (May 2015). These are set out below.

Gypsies and Travellers	<p>(a) Persons of a nomadic habit of life, whatever their race or origin, including:</p> <p style="padding-left: 40px;">(1) Persons who, on grounds only of their own or their family’s or dependant’s educational or health needs or old age, have ceased to travel temporarily or permanently, and</p> <p style="padding-left: 40px;">(2) Members of an organized group of travelling show people or circus people (whether or not travelling together as such); and</p> <p>(b) All other persons with a cultural tradition of nomadism or of living in a mobile home.</p> <p>Source: Section 108, Housing (Wales) Act 2014</p>
Residential site	<p>A permanent residential site can be privately owned or owned by the Local Authority. This site will be designated for use as a Gypsy and Traveller site indefinitely. Residents on these sites can expect to occupy their pitches for as long as they abide by the terms of their pitch agreements, under the Mobile Homes (Wales) Act 2013.</p> <p>Working space may also be provided on, or near, sites for activities carried out by community members.</p>

Temporary residential site	These sites are residential sites which only have planning permission or a site licence for a limited period. Residents on these sites can expect to occupy their pitches for the duration of the planning permission or site licence (or as long as they abide by the terms of their pitch agreements, under the Mobile Homes (Wales) Act 2013 – whichever is sooner).
Transit site	<p>Transit sites are permanent facilities designed for temporary use by occupiers. These sites must be designated as such and provide a route for Gypsies and Travellers to maintain a nomadic way of life. Individual occupiers are permitted to reside on the site for a maximum of 3 months at a time.</p> <p>Specific terms under the Mobile Homes (Wales) Act 2013 apply on these sites. Working space may also be provided on, or near, sites for activities carried out by community members.</p>
Temporary Stopping Place	<p>Also known as a 'stopping place', 'Atchin Tan', or 'green lane', amongst other names. These are intended to be short-term in nature to assist Local Authorities where a need for pitches is accepted, however, none are currently available. Pro-actively identified temporary stopping places can be used to relocate inappropriately located encampments, whilst alternative sites are progressed.</p> <p>Temporary stopping places must make provision for waste disposal, water supply and sanitation at a minimum.</p>
Residential pitch	Land on a mobile home site where occupiers are entitled to station their mobile homes indefinitely (unless stated in their pitch agreement). Typically includes an amenity block, space for a static caravan and touring caravan and parking.
Transit pitch	<p>Land on a mobile home site where occupiers are entitled to station their mobile homes for a maximum of 3 months.</p> <p>Transit pitches can exist on permanent residential sites, however, this is not recommended.</p>
Unauthorised encampment	Land occupied without the permission of the owner or without the correct land use planning permission. Encampments may be tolerated by the Local Authority, whilst alternative sites are developed.
Unauthorised development	Land occupied by the owner without the necessary land use planning permission.
Current residential supply	The number of authorised pitches which are available and occupied within the Local Authority or partnership area. This includes pitches on Local Authority or private sites.
Current residential demand	<p>Those with a need for authorised pitches for a range of reasons, including:</p> <ul style="list-style-type: none"> • an inability to secure an authorised pitch leading to occupation of unauthorised encampments; • an inability to secure correct planning permission for an unauthorised development; • households living in overcrowded conditions and want a pitch; • households in conventional housing demonstrating cultural aversion; • new households expected to arrive from elsewhere.

Future residential demand	The expected level of new household formation which will generate additional demand within the 5 year period of the accommodation assessment and longer LDP period.
Overall residential pitch need	The ultimate calculation of unmet accommodation need, which must be identified through the Gypsy and Traveller accommodation assessment process. This figure can be found by adding the immediate residential need to the future residential demand. The overall residential need will capture the needs across the 5 year period within which the accommodation assessment is considered to be robust.
Planned residential pitch supply	The number of authorised pitches which are vacant and available to rent on Local Authority or private sites. It also includes pitches which will be vacated in the near future by households moving to conventional housing or in other circumstances. Additional pitches which are due to open or private sites likely to achieve planning permission shortly should be included as planned residential supply.
Household	In this guidance this refers to individuals from the same family who live together on a single pitch / house / encampment.
Concealed or 'doubled-up' household	This refers to households which are unable to achieve their own authorised accommodation and are instead living within authorised accommodation (houses or pitches) assigned to another household. This may include adult children who have been unable to move home or different households occupying a single pitch.
Household growth	In this guidance household growth is defined by the number of new households arising from households which are already accommodated in the area.

Chapter Two: Background and analysis of existing data

2.1 Previous Gypsy and Traveller Accommodation Assessment findings

Cardiff Council commissioned two consultants to undertake an independent Gypsy and Traveller Accommodation Assessment in 2013. The first stage was to establish the level of need for the LDP plan period and was carried out by Opinion Research Services. The study used 60 completed interviews and identified a need for an additional 108 pitches in Cardiff up to 2026 and this was broken down into 43 short-term and 65 long-term. It also identified an additional need for a transit site of around 10 pitches to be located near to the M4 and not necessarily within the boundaries of Cardiff County Council.

The second stage was prepared by Peter Brett Associates and provided advice to the Council on potential sites required to respond to the needs identified in the first study. The Peter Brett Study followed criteria set out in national guidance and looked at the availability, suitability and achievability of 32 potential sites. One of the sites at Seawall Road was allocated for a permanent site for 65 pitches in the Deposit LDP. However, following the LDP Examination the site was removed due to it being located within a C2 Flood Risk Area. Therefore, to date, no additional provision has been made to meet the previously identified need.

2.2 Identified need to be met and progress to date

The Census includes an estimate of residents classified by ethnic group according to their own perceived ethnic group and cultural background. The 2011 survey introduced an ethnicity category for ‘White: Gypsy and Irish Traveller’. Data from 2011 suggests a total of 521 Gypsy and Irish Travellers¹ in Cardiff on Census day (27th March 2011), representing approximately 0.15% of the total population of Cardiff at the time – 346,090. As noted by Welsh Government guidance², this number may not include Travelling Showpeople or New Travellers and may also exclude members of communities who declined to self-ascribe their ethnicity for fear of discrimination, stronger affiliation with other ethnicity categories (e.g. White Welsh; White Irish) and/or other reasons.

The 2011 Census also provides an estimate of residents classified by ethnic group and by accommodation type³. In Cardiff, a total of 260 Gypsy or Irish Travellers were recorded as living within a house or bungalow (see breakdown below). An additional 246 were recorded as living within either a flat, maisonette or apartment, or mobile/temporary accommodation. However, there is no breakdown of this category and so it is not possible to disaggregate the precise number living in caravans or bricks and mortar accommodation.

Extract of Table DC2121EW:

Ethnic Group:	Gypsy or Irish Traveller
Accommodation type	
Whole house or bungalow: Total	260
Whole house or bungalow: Detached	42
Whole house or bungalow: Semi-detached	109
Whole house or bungalow: Terraced (including end-terrace)	109
Flat, maisonette or apartment, or mobile/temporary accommodation	246

Source: ONS Census 2011

Census Table QS401EW “Accommodation type – People” does however provide some additional detail and context in relation to the total population living in a caravan. In Cardiff, 243 people were recorded as living within a ‘Caravan or other mobile or temporary structure’ as shown in the extract below:

Extract of Table QS401EW

Dwelling Type	People
All categories: Accommodation type	334,551
Whole house or bungalow: Total	274,883
Detached	52,472
Semi-detached	107,782
Terraced (including end-terrace)	114,629
Flat, maisonette or apartment: Total	58,536
Purpose-built block of flats or tenement	43,983
Part of a converted or shared house (including bed-sits)	12,156
In commercial building	2,397
Caravan or other mobile or temporary structure	243

Source: ONS Census 2011

¹ Source: ONS Census 2011, Table QS211EW - Ethnic group (detailed)

² Undertaking Gypsy and Traveller Accommodation Assessments, Welsh Government (2015)

³ Source: ONS Census 2011, Table DC2121EW - Ethnic group by accommodation type

In addition to this, Travellers Education Services currently have 273 families recorded on their database and Gypsy and Traveller Wales have provided advice and support to 150 households over the last 2 years. It will be seen later in the report how these families formed the basis of the study's attempt to engage as widely as possible with Gypsies and Travellers who do not reside on the Local Authority sites. Health Services were unable to provide figures but were represented on the Gypsy and Traveller Accommodation Assessment Steering Group and provided direct assistance through helping to inform and encourage engagement during the period in which the surveys were being carried out.

2.3 Caravan Count and Current Accommodation Provision

The Welsh Government produce a biannual statistical report on Gypsy and Traveller caravans on both authorised and unauthorised sites in Wales using data collected and submitted by each local authority. The figures provided by Cardiff since January 2014 are shown below:

Survey Date	Authorised Sites	Unauthorised Sites	Number of Caravans on Authorised Sites	Number of Caravans on Unauthorised Sites
January 2014	4	3	158	29
July 2014	4	5	131	35
January 2015	4	7	146	31
July 2015	4	4	137	32

A further breakdown of the July 2015 result showed the following:

	Authorised Local Authority Sites	Authorised Private Sites	Number of Caravans on Gypsies and Travellers own land	Number of Caravans on Gypsies and Travellers own land	Number of Caravans on land not owned by Gypsies and Travellers	Number of Caravans on land not owned by Gypsies and Travellers
			Tolerated	Not Tolerated	Tolerated	Not Tolerated
Number of Caravans	130	7	0	25	0	7

The total number of caravans has remained reasonably stable over this period. However, it should be noted that the current data would now show a change. There are now 3 authorised private sites with 12 caravans in total and 1 unauthorised private site containing 12 caravans which is now at the final stages of gaining planning permission.

There are currently 80 residential pitches on Local Authority sites made up of 59 at Shirenewton and 21 at Rover Way. The total count of 130 caravans on these sites provides an indication of a measure of over-occupation.

2.4 Unauthorised Encampments

The Local Authority has a policy for responding to unauthorised encampments within its boundaries. The policy was developed over a number of years and more recently reviewed to ensure that it adhered to the principles set out in the Welsh Government Guidance on Managing Unauthorised Camping (2013). The 2015/16 figures to date can be seen in the table below.

Unauthorised Encampments in Cardiff 2015/16				
Date Reported	Location	Number of Vehicles	Date Ended	Total Days
26/03/2015	Nettlefold Road	1	09/04/2015	9
05/06/2015	Hendre lake	12	09/06/2015	4
17/06/2015	Capel Gwilym Road	10	20/06/2015	3
14/07/2015	Willowbrook Drive	17	22/07/2015	8
06/08/2015	Pen y Bryn	37	08/08/2015	2
07/08/2015	Nettlefold Road	4	18/08/2015	11
10/08/2015	Hendre Lake	30	13/08/2015	3
25/09/2015	Trowbridge Green	4	30/09/2015	5
05/10/2015	Community Centre St Melons	8	09/10/2015	4
09/11/2015	Cardiff East Park and Ride	24	13/11/2015	4
19/11/2015	Cardiff East Park and Ride	24	26/11/2015	7
23/11/2015	Nettlefold Road	2	02/12/2015	9
02/12/2015	Ocean Park	2	13/12/2015	11

There has been an increase in frequency this year and even more significantly on the number of vehicles contained within some of these encampments, both of which support the need for transit provision.

Chapter Three: Methodology

3.1 Project Steering Group

A Gypsy and Traveller Accommodation Steering Group was established in the lead up to the survey period which then met on a monthly basis throughout. At the last meeting in December 2015, it was agreed that the group would reform in early 2016 to allow further consultation with stakeholders and develop effective community engagement during the critical period of the site search and assessment process.

Having agreed that all appropriate agencies had been invited to take part, the main objective for the Steering Group was to publicise the study to as many people as possible using all established contact with Gypsies and Travellers in Cardiff. In doing this, it was agreed that, to encourage full participation, it was very important to stress to people the duty that now fell on the Local Authority to meet the assessed need as part of the Housing (Wales) Act 2014. The Group then oversaw the process during the survey period, monitoring the level of engagement and continuing to look at ways to maximise this (both at the meetings and in ongoing individual dialogue between partners as the survey progressed).

The Steering Group also approved the recommendation to use the Research Unit within Cardiff Council to carry out the analysis of the surveys to ensure both consistency and accuracy.

The membership of the Steering Group contained representation from a number of different organisations which are shown below.

- Cardiff Council – Housing
- Cardiff Council – Strategic Planning
- Cardiff Council – Travellers Education
- Cardiff Council – Flying Start (including Health Visitors)
- Cardiff & The Vale – Community Cohesion
- STAR – Communities First
- South Wales Police – Community Engagement
- Gypsy and Traveller Wales
- Save the Children – Travelling Ahead
- Romani Arts (unable to attend meetings but minutes provided for comment and suggestion)

3.2 Study Methodology and Participating Organisations

The Council's Working Group gave consideration to different methods of undertaking the assessment, which included using internal staff and the use of a tendering process, before deciding on extending the existing Service Level Agreement with Gypsy and Traveller Wales to allow them to carry out the surveys with the Council's Research Unit then completing the analysis. The main reasons for this was that it was anticipated that Gypsy and Traveller Wales would be in a strong position to achieve a high level of participation and the welcomed clarity of the Welsh Government's guidance which now gave a more prescriptive process that would allow it to be carried out in-house.. The Local Authority was confident that this methodology would considerably increase the participation level that had gained only 60 respondents in 2013. The survey period was set for 1st September 2015 to 4th December 2015.

The terms agreed with Gypsy and Traveller Wales were that they would ensure a direct approach was made with all those residing on the Local Authority sites (with assistance from Cardiff Council staff), households living on private sites, all households not occupying residential pitches that had accessed their services over the previous 2 years and all unauthorised encampments in Cardiff during the survey period. The survey would be undertaken using the standard questionnaire contained within the Welsh Government guidance.

In addition to this, whilst unable to share their records with Gypsy and Traveller Wales, Travellers Education would send letters to all households on their database inviting people to take part. This also extended to speaking to people directly 'at the school gates' to encourage participation and to ask that they help spread the word to any family members and other associates. Those that wanted to participate could either be referred to Gypsy and Traveller Wales or complete the survey with Travellers Education staff (allowing confirmation of their participation to be passed on to Gypsy and Traveller Wales to avoid duplication as their records would inevitably contain replication).

The other organisations represented on the Steering Group volunteered to make sure that they

publicised the study directly with people during all of their day to day contact throughout the survey period. Finally, towards the later stages of the survey period, Travelling Ahead agreed to undertake sessions on the Local Authority sites where they would speak with residents to ensure they had fully understood the purpose of the study so that they might want to urge family members and / or other associates to complete a survey where they thought it would be in their interest.

In the lead up and throughout the survey period opportunities were taken to publicise the assessment. This included playing the DVD prepared by the Welsh Government at events such as the Macmillan Coffee Morning arranged by residents of Shirenewton.

The Local Authority made contact with the South Wales branch of the Showmen's Guild of Great Britain. They had placed an advert in The World's Fair newspaper which they reported was very widely read amongst travelling showpeople. The advert advised people to contact them or the local authority directly but no approach was made in relation to Cardiff. The Guild reported that they would be interested to hear of progress in relation to transit provision but stated their main concern was the availability of Winter Quarters, which was not covered under this assessment. They may make contact again to discuss this issue separately.

Cardiff's General Housing Waiting List, the list of homeless families in temporary accommodation during the survey period and the Local Authority Gypsy and Traveller Waiting List were all used to identify people who had self-ascribed their ethnicity as 'Gypsy Traveller'. Due to the same confidentiality issues, the letters distributed to the families on the Travellers Education database were also sent to households on the General Housing Waiting List and to those on the Local Authority Gypsy and Traveller Waiting List who did not reside on the sites. The Council staff were able to approach each of the households on the Gypsy and Traveller Waiting List currently residing on the sites, all of whom agreed to take part. The council were aware of 2 families who had left the sites to live on other sites away from Cardiff but who still wished to remain on the waiting list. After contact with these families had been unsuccessful in the survey period, it was decided that both families should be included in the identified need. No families were found to be in homeless temporary accommodation.

Contact has been maintained with neighbouring local authorities in relation to the Gypsy and Traveller Accommodation Assessment to ensure effective information sharing. This included matters such as people who were residing within one local authority but reported that they owed land in another on which they wished to develop a private site and liaison to identify the exact location of a reported encampment close to the boundary. Perhaps most importantly, formal discussion has started on a regional response to transit provision and a first meeting of Housing and Planning officers from the membership of the South East Wales Strategic Planning Group has been arranged in January 2016.

3.3 Engagement Checklist

The Local Authority and Steering Group paid particular attention to the engagement checklist contained in the Welsh Government guidance to make sure that a robust system was in place. The measures taken can be described against each heading.

<p>Visit every Gypsy and Traveller household identified through the data analysis process up to 3 times, if necessary.</p>	<p>Gypsy and Traveller Wales made a direct approach to all households on the Local Authority sites, all private sites and each household that had accessed its services within the last 2 years. This continued until the survey was completed; the household declined to take part; it was evident that the family were no longer at that address; or that 3 visits had been carried out without success.</p> <p>In addition to this, because the information could not be shared directly with Gypsy and Traveller Wales for reasons of confidentiality, letters were sent out to every family on the Travellers Education database (where the address could be verified). Together with discussion 'at the school gates' this ensured that opportunity to engage was widened as far as possible from the known records that were held. This measure led directly to a number of the completed interviews that were conducted.</p> <p>The interview logs are shown in the background papers.</p>
<p>Publish details of the GTAA process, including contact details to allow community members to request an interview, on the Local Authority website, Travellers' Times website and World's Fair publication</p>	<p>Direct contact from the community was invited through Welsh Government adverts placed in the Travellers' Times and The World's Fair (which the Showmen's Guild had also used) and Local Authority publicity. No approach was received.</p>
<p>Consult relevant community support organisations.</p>	<p>As shown from the Steering Group and the methodology used, the Local Authority sought and gained the involvement of all agencies that have direct contact with the community in Cardiff in addition to an approach to external providers who may have knowledge of people in Cardiff.</p>
<p>Develop a Local Authority waiting list for both pitches and housing, which is accessible and communicated to community members.</p>	<p>The Local Authority have accessible General and Gypsy and Traveller waiting lists in place. All those identifying as 'Gypsy Traveller' were included in the invitations to take part in the survey.</p>
<p>Endeavour to include Gypsies and Travellers on the GTAA project steering group</p>	<p>The approach adopted in Cardiff was to make a direct approach to everyone included in the records held by each organisation and that through this contact invitation would be made for them to identify further family members or associates who may want to get involved. Travelling Ahead also followed up with sessions at both Local Authority sites to ensure residents</p>

	fully understood the purpose of the study so that they might want to identify more people they thought it would be in their interest to take part. A number of interviews were included as a direct result of this measure. Consultation was undertaken on the methodology and representation from Gypsies and Travellers is now being arranged for the forthcoming site selection process.
Ensure contact details provided to the Local Authority by community members through the survey process are followed up and needs assessed.	As stated, all information provided to the Council, Travellers Education and Travelling Ahead were followed up and the assessment form was completed in each case.
Consider holding on-site (or nearby) GTAA information events to explain why community members should participate and encourage site residents to bring others who may not be known to the Local Authority.	The Welsh Government DVD was played at events on site and a direct approach was made to all households on the sites, both agreement holders and those on the waiting list. As described, methods were in place to ask community members taking part in the survey to publicise it to others that might want to participate.

Chapter Four: Survey Findings

All completed questionnaires were submitted to the Research Unit within the Local Authority to carry out a full analysis. Due to the high number of people engaging with each organisation and Gypsies and Travellers themselves spreading the word, more than 400 households were approached to take part in the assessment from which 172 completed the survey. This is very nearly three times the number that participated in the 2013 study. The only difficulty encountered by Gypsy and Traveller Wales and Travellers Education was that some addresses could not be recognised or that the families had moved but not updated the organisation. There was a 100% completion level on the Local Authority sites (although 1 family who had stated a preference to complete the survey with a Social Worker rather than the Council or Gypsy and Traveller Wales later decided that they did not wish to submit the form). With 45.2% of all respondents living off the Local Authority sites (in either bricks and mortar, private sites or unauthorised encampments) it can be seen that the survey successfully engaged with a wide cross-section of the community. The results of the survey are as follows:

Note – Where figures do not add up to the expected 172 respondents this is explained by different sections of the form not being completed in all cases.

4.1 Section A – Your Home

A1. Where do you live now?

Over a half (54.8%) of respondents to the survey claimed to live on a Local Authority (council) residential site. Almost one in five (19.0%) of respondents claimed to live in Bricks and Mortar socially rented accommodation, whilst over one in ten (11.9%) stated that they lived on an unauthorised encampment.

	No.	%
Local authority ("Council") residential site	92	54.8
Bricks and Mortar Socially Rented	32	19.0
Unauthorised encampment	20	11.9
Private site with planning permission	10	6.0
Bricks and Mortar - Privately Rented	8	4.8
Bricks and Mortar - Owner Occupied	4	2.4
Private site currently without planning permission	2	1.2
Council transit site	0	0.0
Total	168	100.0

A2. Are you satisfied with your current accommodation?

Over seven in ten (71.9%) suggested that they were happy with their current living accommodation, whilst over a quarter (26.3%) claimed to be unhappy.

	No.	%
Yes	123	71.9
No	45	26.3
Prefer not to say	3	1.8
Total	171	100.0

Respondents who stated they were not happy with their accommodation and of whom left a valid reason why have been categorised below:

	No.	%
Repairs	13	19.4
Need own plot /Would prefer to live on a site	16	23.9
Access to transit site & Waste disposal or collection facilities	20	29.9
Pitch Unsafe	13	19.4
Awaiting Planning permission	2	3.0
Miscellaneous	8	11.9
Total Respondents	67	-

N.B. Total respondents here are higher than total respondents that indicated they weren't happy with current accommodation due to people who were happy highlighting improvements.

The level of respondents unhappy with their current accommodation would be expected in relation to some overcrowding on Local Authority sites, people in bricks and mortar stating they would want to live on a site if pitches were available, the known issues at Rover Way and households in unauthorised encampments expressing the need for transit provision.

A3. Can you tell me why you live here?

Local connection (family or work) was the stand out reason why people chose to live in their current accommodation with two thirds (66.1%) of respondents citing this option. This was followed by almost three in ten (28.7%) of respondents who stated that no alternative authorised pitch was the reason they live where they do.

Almost a fifth of respondents indicated 'Other' as their reason for their current accommodation, these have been categorised and can be seen below:

	No.
Nowhere else to go	15
Family Reasons	8
Miscellaneous	4
Fled Domestic Violence	2

A4. How long have you lived here?

Three fifths (59.6%) of people interviewed stated that they'd been in their current accommodation for over 5 years, while almost a quarter (24.1%) had been there for 1 – 5 years. In contrast one in eight (12.7%) had only been in their current accommodation for less than a month.

A5. If you have moved in the last year, was your last home in the Local Authority?

Respondents who cited that they'd moved within the last year were then asked if their last home was within the Local Authority. Over eight in ten (82.1%) claimed that their last home was outside the Local Authority.

	No	%
Yes	10	17.9
No	46	82.1
Total	56	100.0

With the ten respondents who had previously lived in the local authority the subject of the following questions, responses were low.

Type of Accommodation

Of the 8 respondents who had moved in the last year there was a fairly even split between accommodation types with Private Rent, Encampment and Caravan all scoring 25.0%.

Type of Accommodation	No.	%
Private Rent	2	25
Encampment	2	25
Caravan	2	25
Socially rented Bricks & Mortar	1	12.5
House	1	12.5
Total	8	100.0

Did it have planning permission?

Of the 3 respondents to this section of the question, only a third (33.3%) of respondents who had moved in the last year had planning permission.

Did it have planning permission?	No.	%
Yes	1	33.3
No	2	66.7
Total	3	100.0

Which Local Authority was it in?

Only 6 interviewees left a valid response to this question, of those whom did over eight in ten (83.3%) stated that if they'd moved in the last year it was in the Cardiff Local Authority.

Which Local Authority was it in?	No.	%
Cardiff	5	83.3
Coventry	1	16.7
Total	6	100.0

Why did you leave?

7 Respondents left a reason as to why they left, reasons for leaving were fairly evenly split with 'Overcrowding', 'Domestic violence' and 'Couldn't stay on encampment' all scoring 28.6%

Why did you leave?	No.	%
Overcrowded	2	28.6
Domestic Violence	2	28.6
Couldn't Stay On Encampment	2	28.6
Wasn't permanent	1	14.3
Total	7	100.0

A6. How long do you think you'll stay here?

When interviewees were asked how long they intended to stay, three fifths (59.6%) stated that had no intention of moving, whilst just under a third (32.5%) claimed they didn't know how long they'd be there for. This was largely due to the fact that most of these were illegally camped and were at risk of potentially being moved on.

	No	%
1 or 2 days	0	0.0
3-28 days	8	4.8
1-3 months	0	0.0
3 months - 2 years	0	0.0
2-5 years	0	0.0
Over 5 years	5	3.0
Do not intend to move	99	59.6
Don't know	54	32.5
Total	166	100.0

A7. Would you stay longer if changes were made to your current accommodation?

Over three quarters (77.2%) of respondents claimed they would stay longer if changes were made to their current accommodation.

The two main reasons that would encourage respondents to stay longer in their current accommodation were repairs being carried out and an enlargement of the site (both 54.0%). These were closely followed by the accommodation being made safer, which was highlighted by over two in five (44.0%) respondents.

Reason	No	%
Repairs needed	27	54.0
Site made bigger	27	54.0
Accommodation made safer	22	44.0
Adaptions needed	8	16.0
Planning permission granted	2	4.0
Total Respondents	50	-

Totals do not sum to 100% as respondents could give more than one answer

Over two-fifths (44.1%) of respondents claimed that living in a caravan was their main reason for not staying longer if changes or improvements were made to their current accommodation, whilst just over one in nine (11.8%) cited broken down relationships.

Reason	No	%
Prefer living in caravan	15	44.1
Just passing through	10	29.4
Want to move into housing	6	17.6
Want authorised pitch in other area	5	14.7
Relationships broken down	4	11.8
Total Respondents	34	-

Totals do not sum to 100% as respondents could give more than one answer

4.2 Section B – Your Family

Profile of Agreement Holders

Over a half (51.0%) of agreement holders were aged between 25 – 44, whilst only one in eight (12.0%) were aged 65 and above.

Over eight tenths (83.1%) of agreement holders were female.

	No.	%
Male	13	16.9
Female	64	83.1
Total	77	100.0

A third (32.9%) of agreement holders were Romani Gypsy, this was followed by a quarter (25.0%) that were Welsh Travellers, whilst less than one in six (17.1%) were Irish Travellers.

B1. Do you live in caravans?

An overwhelming proportion (96.6%) of interviewees who responded to question stated that they lived in caravans.

	No.	%
Yes	112	96.6
No	4	3.4
Total	116	100.0

B2. If living in Caravans, are there enough sleeping areas for all residents?

Respondents who claimed to live in a caravan were then asked if they believed there were enough sleeping areas for all residents. Three quarters (74.0%) of respondents stated that there were sufficient areas.

B3. Is there room on the pitch for additional trailers to prevent overcrowding?

There was a fairly even split between respondents who claimed there was room for additional trailers to prevent overcrowding (53.6%) and those that stated there was insufficient space (46.4%).

	No.	%
Yes	37	53.6
No	32	46.4
Total	69	100.0

If yes, how many additional sleeping areas can be added?

Respondents who claimed there was room on the pitch for additional trailers were then asked to state how many sleeping areas they felt could be added. Over two in five (41.7%) suggested there was room for another 4 sleeping areas, whilst a quarter (25.0%) claimed there was only room for one more sleeping area to be added to their site.

B4. Would anyone in your family like to join the Local Authority waiting list for pitches or housing?

Almost three-tenths (28.8%) of respondents claimed that somebody in their family would like to join the Local Authority waiting list for pitches or housing.

	No.	%
Yes	46	28.8
No	114	71.3
Total	160	100.0

4.3 Section C – Your Plans

C1. Are you planning to move into other accommodation?

Over a quarter (26.2%) of respondents suggested they were planning to move into other accommodation, whilst almost three-quarters (73.2%) claimed they had no plans to move.

	No.	%
Yes	44	26.2
No	123	73.2
Prefer not to say	1	0.6
Total	168	100.0

C2. Where are you planning to move to?

Interviewees who claimed they were planning to move were then asked to indicate where they planned to move, two thirds (66.7%) planned to move within the Local Authority, whilst three in ten (30.8%) were planning to move somewhere else in the UK, reflecting the responses received from unauthorised transit encampments during the survey .

	No.	%
Within the Local Authority	26	66.7
Another Local Authority in Wales – Please state which	1	2.6
Somewhere else in the UK	12	30.8
Total	39	100.0

C3. Why are you planning to move?

The two main reasons respondents gave for planning to move were that they needed more space and because of a local connection (family or work) with 21.2% and 18.2% of responses respectively.

Respondents who indicated 'Other' as the reason they were planning to leave have been categorised and can be seen below.	No.
Family Reasons / Fleeing domestic violence	6
Feel Isolated	3
Can't stay on Encampment	7
Want own pitch	7
Have somewhere else to go	3
Total Respondents	26

C4. What type of accommodation are you planning to move to?

Seven in ten (70.7%) of respondents indicated that they would like to move into a site, whilst three in ten (29.3%) give Bricks & Mortar as their chosen accommodation preference.

	No.	%
Site	29	70.7
Bricks & Mortar	12	29.3
Total	41	100.0

Of the respondents who indicated a 'Site' as the type of accommodation they were planning to move to, it can be seen that four in five (80.0%) chose Council / Social rented accommodation.

Of the respondents who indicated Bricks & Mortar as the type of accommodation they were planning to move to, over nine in ten (92.0%) chose 'Rented from Council / Housing Association', whilst just under one in ten (8.0%) highlighted 'Rented from private landlord'.

C5. Do you own land in the Local Authority which you would like to be considered as a possible future site?

Only 2 respondents claimed to own land in the Local Authority which they would like to be considered as a possible future site.

	No.	%
Yes	2	4.4
No	43	95.6
Prefer not to say	0	0.0
Total	45	100.0

C6. If you are looking for an authorised pitch, would you live on a site managed by the Local Authority?

Over three quarters (77.5%) of respondents looking for an authorised pitch would be happy to live on a site managed by the Local Authority.

	No.	%
Yes	31	77.5
No	9	22.5
Total	40	100

C7. If an authorised pitch was available in another Local Authority, would you consider moving there?

There was an even split of respondent who would or wouldn't consider moving to another Local Authority, with 51.5% agreeable to a move and 48.5% against a move.

	No.	%
Yes	17	51.5
No	16	48.5
Total	33	100.0

Respondents who would consider moving to another Local Authority were asked to indicate where they'd consider moving, these have been categorised and can be seen below.

Location	No.
Any	4
With Irish Travellers	3
Newport	1
Transit Site	3
Swindon	1
Total Respondents	10

4.4 Section D – Family Growth

D1. Is anyone in your household likely to want to move to their own home in the next 5 years?

Of the 163 interviewees of whom left a response to this question, 46 respondents (28.2%) claimed that someone within their household was likely to want to move into their own home in the next 5 years, whilst almost seven in ten (112 respondents; 68.7%) stated that there was nobody in their house that would want to move in that time period.

D2. Will this be in this Local Authority?

Of the respondents that suggested someone in their household is likely to want to move to their own home in the next 5 years, eight in ten (79.2%) suggested they would want to remain within this Local Authority.

	No.	%
Yes	38	79.2
No	6	12.5
Prefer not to say	4	8.3
Total	48	100.0

D3. How many new households will there be and when will they be needed?

The direct responses to this question were as follows:

From careful analysis of each form, taking into account the combination of responses provided to all the questions, the following need for residential pitches was identified:

	Identified Accommodation Need				
	Now	1 Year	1 – 2 Years	2-5 Years	Total
Overcrowded Pitches	10	1	1	5	17
Conventional Housing	1	0	5	1	7
New Households to arrive	5	0	8	10	23
					Overall Total 47

Overcrowding issues could be determined from the ability to accommodate the overall household size and the ability to add to their current provision which meant that it could be measured without a respondent stating the need for more pitch provision. Family growth could be easily measured from current household size against the stated need for increased current and future need.

The issue of cultural aversion to bricks and mortar needed to be assessed on a combination of a number of different factors. These included the length of time in their current accommodation, the desire to move to a Local Authority and/or private site, the expression that people were only occupying bricks and mortar due to the unavailability of a pitch, satisfaction with their accommodation, why people left their previous accommodation, supporting information such as reported harassment where they were living now and people stating that they did not know how long they would stay at their current address where it was apparent that this was due to being unhappy there.

The assessment of people on private sites could only be carried for those who took part in the survey. All residents on these sites were approached and invited to take part but many declined. This made it impossible to fully assess current circumstances and future needs for those families.

D4. Do you have family members living outside this area who camp in this Local Authority?

Over a quarter (27.8%) claimed to have family members living outside the area who camp within this Local Authority, whilst almost seven in ten (69.0%) did not.

	No.	%
Yes	44	27.8
No	109	69.0
Don't know	5	3.2
Prefer not to say	0	0.0
Total	158	100.0

4.5 Section E – Transit Sites

E1. Have you camped by the roadside / on an unauthorised encampment / on a transit site in Wales while travelling in the past year?

	No.	%
Yes	49	30.4
No	112	69.6
Prefer not to say	0	0.0
Total	161	100.0

E2. In which Local Authority areas have you camped?

Respondents who claimed to have camped by the roadside / on an unauthorised encampment / on a transit site in Wales whilst travelling in the last year were asked to indicate where they'd stayed, these locations have been categorised and can be seen below.

Totals do not sum to 100% as respondents could give more than one answer

E3. How long would you usually stay in one place whilst travelling?

Over two fifths (43.1%) of respondents claimed they would usually stay in one place between 2 weeks and 3 months, whilst over three in ten (31.9%) would usually stay between a day and a week.

E4. Do you think there is a need for more transit sites in Wales?

	No.	%
Yes	152	93.8
No	7	4.3
Prefer not to say	3	1.9
Total	162	100.0

Respondents who indicated there was need for more transit sites were asked to specify an area where they deemed there was a greater need for these sites. Two fifths (40.4%) of respondents felt there was need for more transit sites in Cardiff.

Totals do not sum to 100% as respondents could give more than one answer

Chapter Five: Assessing accommodation needs

5.1 Residential Unmet Need

The overall outcome of the assessment is shown in the table below:

Cardiff GTAA - An estimate of need for residential site pitches -

Current Residential Supply		Number of Pitches	
Occupied Local Authority pitches		80	
Occupied authorised private pitches		12	
Total		92	
Planned Residential Supply		Number of Pitches	
Vacant Local Authority pitches and available vacant private pitches		0	
Pitches expected to become vacant in near future		0	
New local authority and private pitches with planning permission		0	
Total		0	
Current Residential Demand		Number of Pitches	
Unauthorised encampments		1	
		1 household identified that they were NFA because of a lack of residential pitches in Cardiff and had strong local connections. The other responses related only to the provision of transit sites in Cardiff.	
Unauthorised developments		0	
Overcrowded pitches		17	
Conventional housing		7	
New households to arrive		23	
Total		48	
Current Households	Future Households (at year 5)	Future Households (at 2026)	
140	156	179	
Additional household pitch need	16	39	
Unmet Need	Need Arising		
Current residential demand	48		
Future residential demand (5 year)	16		
Future residential demand (to 2026)	39		
Planned residential supply			
Unmet need (5 year)	64 pitches		
Unmet need (to 2026)	87 pitches		

Current Residential Supply

There are currently 80 residential pitches on Local Authority sites made up of 59 at Shirenewton and 21 at Rover Way and 12 pitches on three private sites. There are currently no vacant spaces on these sites which would contribute to meeting need for pitches in Cardiff.

Planned Residential Supply

There are currently no new local authority pitches with planning permission and no outstanding planning applications on private sites.

Unauthorised Encampments

As indicated in the table 1 household identified that they were NFA because of a lack of residential pitches in Cardiff and had strong local connection. The other responses related only to the provision of transit sites in Cardiff. There are currently also no unauthorised developments within Cardiff.

Overcrowded Pitches

In terms of overcrowded pitches Welsh Government guidance states that overcrowding exists where family numbers have grown to the extent that there is now insufficient space for the family within its mobile home accommodation and insufficient space on the pitch or site for a mobile home. Questions B2 and B3 of the survey form address this issue and ask respondents whether there enough sleeping areas for all residents and is there room on the pitch to safely station additional trailers to prevent overcrowding. Where respondents answered no to both of these questions they were included in the 17 overcrowded pitches identified in the assessment. In a separate measurement the Local Authority has assessed that there are 15 over-occupied pitches across Shirenewton and Rover Way and there are currently 13 households on the waiting list. These figures would support the **17** overcrowded pitches identified in the assessment.

Conventional Housing

A need for **7** new pitches was identified from Gypsy and Travellers currently living in conventional housing. In accordance with Welsh Government guidance this need was derived from an analysis of the survey forms and included those stating a cultural aversion to conventional housing, those experiencing overcrowding, and those whom have reached adulthood and want to live on a site. Of the requirement for 7 new pitches identified 2 respondents reported they had been the victims of harassment in their current accommodation, 2 respondents reported they were of no fixed abode (sofa surfing) and 3 respondents were living in caravans on private property in overcrowded conditions.

New Households to arrive

A need for **23** new pitches was identified from new households expected to arrive over the next five years (see breakdown on page 29). In accordance with Welsh Government guidance this was identified through information contained in the questionnaire responses, through the waiting list, caravan count and partnership working with Local Authorities in the region.

Total Planned Residential Supply

A total need for **48** new pitches was identified over the next five years. This comprised of all households on local authority and private sites who demonstrated overcrowding and/or family growth, the 7 in conventional housing and 1 who was on an unauthorised encampment who had

local connections and expressed that they wanted a residential pitch. Also included were 2 pitches that were added for households on the waiting list but who could not be interviewed during the survey period. These households had previously resided on Local Authority sites but had moved away from the area due to overcrowding.

Analysis of Preference and Need

The figures for need are shown above. Of the respondents where no need was identified 59 lived on private or Local Authority sites who reported no issues of overcrowding, no plans to move into other accommodation and no family growth where a household would require a move into their own accommodation in the next 5 years. Also on private and Local Authority sites 7 respondents stated that if they were to move it would be into bricks and mortar or away from the area. These households were currently not overcrowded or with members of the family who will require their own accommodation over the next 5 years.

Of the 20 responses from unauthorised encampments during the survey period, 19 states that they were not seeking a residential pitch in Cardiff. They all expressed that there was a need for a transit site within the region. The respondent that did state they were seeking a residential pitch is included within the need (see above).

Of the 40 respondents currently in bricks and mortar, 20 stated that they do not intend to move from their current accommodation. Although some had stated they would live on a site they had also stated they were happy to continue living bricks and mortar. A further 10 stated a preference for bricks and mortar and 3 stated they were moving away from the area. Finally, 7 respondents had stated they were unsure of future accommodation preferences. Of these, 4 had been living in bricks and mortar for over 5 years, 2 for 2 to 5 years and 1 who did not state how long they had been at their current address. None had reported any problems at their present accommodation.

Additional household Need

In addition to this Welsh Government guidance requires a calculation of additional pitch need over the next 5 years and until the end of the Local Development Plan period in 2026 to be included in the assessment. This additional growth is then added to the identified current residential demand to give total pitch need to the end of the Plan period in 2026. Welsh Government guidance sets out how this is calculated and an additional pitch need of 16 new households over the next five years and 39 up to the end of the Local Development period in 2026 was identified.

Cardiff's 2013 Accommodation Needs Study identified a need for 108 pitches up to 2026. This study had only 60 respondents in comparison with 172 respondents to the current assessment. In addition to this, the 2013 Study had no respondents from bricks and mortar accommodation or unauthorised encampments. The Local Authority believes that the very significant difference in the participation rate, together with the new guidance from Welsh Government make this study far more robust.

The 2013 Study used a family growth rate of 3% based on studies at that time which assumed this net growth in the population. It did not have evidence that the local growth rate would reflect this figure. The Welsh Government guidance now anticipates a growth rate of between 1.5 to 3%. There is no comparable figure in the 2001 Census that could assist with identifying growth through comparison with the 2011 Census results. This study found a need for 2 new pitches per annum in the next 2-5 years which is equivalent to a 2.17% per annum growth in pitches ($2/92*100$). In the absence of other information, the Local Authority considers that this figure supports the use of the mid-point anticipated growth rate of 2.25%.

As described in paragraph 1.2 above, the Local Development Plan has set out a timetable to meet the short term need in 2017/18 and the long term need in 2021/22.

Rover Way

The lifetime of the existing Rover Way site is currently being reviewed. The Local Authority is undertaking a feasibility study of the coastal defences along the Pengam Green stretch of the coastline which includes the Rover Way site. It is anticipated that this report will be completed in 2017. If the report concludes that the Rover Way site is no longer viable the Local Authority will add the existing 21 pitches to the overall need. The need arising from overcrowding and family growth at Rover Way are already included within this assessment.

5.2 Transit Unmet Need

The figures contained within the caravan count, the record of unauthorised encampments in 2015/16 and the GTAA itself clearly show an identified need for transit provision. The Local Development Plan has set out a timetable to develop transit provision from 2017. In addition to this, Housing and Planning officers from the local authorities that make up the South East Wales Strategic Planning Group will be meeting in January 2016 to discuss a regional response.

Chapter Six: Conclusions and Recommendations

6.1 Next Steps

1. It is evident from the assessment findings that there is a clear need in Cardiff for the provision of additional permanent and transit socially rented Gypsy and Traveller Accommodation. As set out above in paragraph 1.2 the Council has established a working group made up of Council officers from Planning and Housing with the responsibility for finding locations for both permanent and transit pitches to meet this need.
2. The timetable for meeting this is included in the LDP Annual Monitoring Report and a site search and assessment of potential sites is due to commence in early 2016 with the findings and recommendations due to be considered by the Council's Cabinet in July 2016. Sites suggested as part of this assessment will also be included in the list of potential sites and as noted in paragraph 3.1 above the Project Steering Group will reform early in 2016 to allow further consultation with stakeholders and develop effective community engagement during this site search and assessment process.
3. Following this process it envisaged that planning permission and funding will be secured for the identified site(s) required to meet short term need for permanent pitches by May 2017 and for identified site (s) required to meet long term need for permanent pitches by May 2021.
4. This assessment gives an indication of the likely demand for new pitches up to 2026. When planning any new accommodation provision it is important to distinguish between demand and need. "Need" refers to households who are unable to access suitable accommodation without some financial assistance and "demand" to the quantity of housing that households are willing and able to buy or rent.
5. In Cardiff we will do this by using the established common housing register as the mechanism for allocating pitches on any socially rented site that is provided. Prospective residents are required to complete the standard housing application form which then allows the local authority to make an assessment of both their need and eligibility for a pitch.
6. In terms of transit provision the Cardiff Local Development Plan contains a target to identify a transit site by July 2016. The new site should have received planning permission by May 2017.

Potential sites will be assessed to meet this need in parallel with the permanent site assessment process identified above. However, it may be appropriate for a regional approach to be taken with regard to providing a site or sites for transit need. This approach would require regional collaboration between authorities in South East Wales and is something that needs to be considered in more detail, particularly given the assessment findings which show that 50% of respondents camped by the roadside/on an unauthorised encampment in South East Wales in the last year while travelling.

7. The South East Wales Strategic Planning Group (SEWSPG), of which the local authority is a member, has already started to address this issue. SEWSPG consists of 10 local planning authorities, plus the Brecon Beacons national park authority. The Group meets every 2 months in order to discuss planning issues that impact on the region. With the introduction of the Planning (Wales) Act in July 2015, changes to regional planning and the creation of a strategic planning area are very much on the agenda.
8. SEWSPG officers have agreed to discuss their respective Gypsy/Traveller Accommodation Assessments and consider them in a regional context at future meeting in January 2016. Although this is simply an agreement to discuss initial findings, there are clear benefits to a regional approach for this type of work as opposed to each authority working in isolation.

Background Papers

1. Gypsy and Traveller Accommodation Assessment letters that were sent out to families on the Travellers Education database
 2. Interview Log – Record of contact for families on the Travellers Education database
 3. Interview Log – Record of contact with families on the Gypsy and Traveller Wales database residing in bricks & mortar and private sites
 4. Interview Log – Record of contact with families on the Gypsy and Traveller Wales database residing on the Local Authority sites
-

Appendix 2: Gypsy and Traveller Site Selection Criteria

1. Availability

- Council owned or landowner (public or private) is willing to sell to Council
- Site will be available for use as a Gypsy and Traveller site long term (at least 21 years)
- No **legal or ownership problems** such as:
 - i. Multiple ownerships
 - ii. Ransom strips
 - iii. Tenancies
 - iv. Operational requirements

2. Site Suitability

Policy Constraints

- Not within an **international designation** (SPA, SAC, Ramsar)
- Does not compromise the objectives of **nationally or locally recognised designations** (SSSI, SINC, LNR, RIGS, SLA,, Ancient Monuments, Listed Buildings, Conservation Areas, Archaeologically Sensitive Areas, Registered Historic Parks and Gardens and locally listed buildings).

Physical Constraints

- Acceptable and safe access to
 - the **road, footpath and public transport network** (in case of transit site would need to be the primary highway network)
 - **local services and facilities** (education, health services, shops, employment, leisure, recreation, churches and other religious establishments) including consideration of the views of the Gypsy and Traveller community.
 - **utilities** (water, drainage sewerage, waste collection, electricity, gas, telecoms, etc.)
- **Air quality** and **noise** levels are acceptable
- Not in a C2 **flood** zone or in a C1 flood zone that cannot be mitigated
- Not located on **unstable land**
- Not located on **land contamination** which cannot be mitigated
- Not located in close proximity to **hazardous installations** or **water bodies** such as docks, rivers and canals unless effective mitigation in place
- Not located on high quality **agricultural land** (1, 2 3a)
- Unacceptable impact on **landscape, biodiversity** or **historic environment**
- **Noise** levels are acceptable
- Can meet other planning requirements

3. Achievability

- **Physical Constraints** identified are capable of being overcome
- **Total cost** (including any abnormal costs) does not prejudice the ability of the site to be developed.

Overall assessment

A summary of the suitability of each potential site against each of the criteria will be entered into a table together with an overall conclusion for each site. This will allow a transparent and considered assessment to take place with an overall conclusion stating the preferred option and the reasoning behind it

My Ref: Scrutiny/Correspondence/Cllr McGarry

8 January 2016

Councillors Susan Elsmore & Ramesh Patel
Cabinet Members
c/o Room 520
County Hall
Cardiff
CF10 4UW

Dear Susan and Ramesh

Community & Adult Services Scrutiny Committee – 6 January 2016

On behalf of the Members of the Community & Adult Services Scrutiny Committee, I would like to thank you and the officers for attending our Committee on 6 January 2016 for the pre-decision scrutiny of the Gypsy and Traveller Accommodation Assessment and Site Assessment Criteria.

With regard to the Accommodation Assessment, it is pleasing to see the high rate of engagement with Gypsies and Travellers in Cardiff resulting in 172 survey forms being completed. Members were very interested to read the results of the survey and the insights these give and were pleased to hear assurances that the survey met the Welsh Government requirements with regards to Gypsy & Traveller Accommodation Assessments. However, Members believe the report would benefit from more explanation regarding the reasoning used to arrive at some of the figures in the table at Point 5.1, specifically those relating to overcrowded pitches and new households (page 32 of the Accommodation Assessment report).

Members therefore recommend that further explanation be provided in the body of the report regarding how the number of overcrowded pitches is determined. Page 9 of the report provides the caravan count figures for authorised local authority sites in July 2015. This shows that 130 caravans were on 80 pitches. Members believe it would be useful to include further wording to explain why not all of the 50 additional caravans on the sites would need to be counted towards an overcrowding figure and how the figure of 17 overcrowded pitches was determined.

Members also recommend that further explanation be provided in the body of the report regarding how the number of new households is determined. Members recognise that the Welsh Government guidance recommends using 2.25% as the anticipated growth rate to project future households; Members can see that this has been used to calculate the need for 16 pitches at year 5 and 39 pitches at 2026. However, the table at Point 5.1 also includes a figure of 23 new households, which has been taken from the table at D3, page 29, over the next five years. Members believe it would be helpful to include further wording to explain why both the 23 new

households and the 16 new households are being counted towards the total unmet need, as the current wording could lead to concerns that there is double counting of new households emerging over the next five years.

To assist our understanding of these issues, Members would like to receive clarification on the occupation levels allowed on the local authority site pitches and the difference between overcrowding and over-occupancy, referred to at the meeting.

With regard to transit site provision, Members note that the report (at point 5.2) states that there is a clear need for transit provision. Members are grateful for the clarification that, following Hearing Session 11, the Planning Inspector required assessment of the need for transit sites in Cardiff but that the actual provision to meet this need can happen at a regional level. Members note that meetings are being held with neighbouring local authorities to discuss a regional response to transit site provision. Members are pleased to hear that powers exist to ensure that those who use the transit sites move on, in order to ensure that transit sites do not become permanent sites by default. However, Members note that the Accommodation Assessment does not specify the number of pitches needed for transit provision and we are surprised at this, as it should be possible to determine the number required from the information available.

With regard to the Site Assessment Criteria, Members note these have been updated to take into account good practice from other local authorities, national planning guidance and the latest guidance from the Welsh Government relating to the design and management of sites. As mentioned at the meeting, Members recommend that the wording 'contaminated land' be checked, given the previous comments of the Planning Inspector at Hearing Session 11 requiring this wording to change to 'land contamination'. Members think this may be due to the sentence construction used in the original policy which may not apply in this case but think it would be wise to check this, in case the wording would need to change.

Members wish to receive an indication of the weighting that will be applied to the various site assessment criteria when determining site suitability. Members also wish to receive an explanation of how the views of statutory providers will be included in the assessment of sites, for example with regard to acceptable and safe access to local services and facilities,.

With regard to the financial aspect of providing new sites, Members note the answer provided at the meeting that the costs will be covered 100% by Welsh Government grant, with no capital funding required by the Council.

Members note that a further report is scheduled to come to Cabinet in July 2016 with details of the site assessment and proposed sites. Members of this Committee would like to carry out pre-decision scrutiny of this report and therefore request that officers liaise in good time with Scrutiny Services to enable this to happen at our scheduled meeting on 6 July 2016.

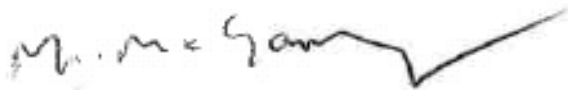

As raised at the meeting, Members are very interested to know what the process will be for consulting with ward councillors and local communities on proposed sites and would be grateful to receive details of this in your response to this letter.

Finally, regarding the Rover Way local authority site, Members understand the coastal erosion report has been received and that work is underway to address issues raised in the report. Members would be grateful to receive details of the issues and actions being taken to address these, in your response to this letter.

To summarise, I look forward to hearing back from you on the following:

- Recommendation – to include additional wording to explain the reasoning behind concluding there are 17 overcrowded pitches
- Recommendation – to include additional wording to explain the reasoning behind including both 16 new households over the next five years and 23 new households over the next five years in the total for unmet need
- Recommendation – to check use of the wording ‘contaminated land’ in the site assessment criteria and whether the Planning Inspector would require this to be changed to ‘land contamination’.
- Request for information – clarification on the occupation levels allowed on the local authority site pitches and the difference between overcrowding and over-occupancy
- Request for information - indication of the weighting that will be applied to the various site assessment criteria when determining site suitability
- Request for information - an explanation of how the views of statutory providers will be included in the assessment of sites.
- Request for information – details of the consultation process that will be followed with ward councillors and local communities regarding proposed sites
- Request for information – details of the issues identified by the Rover Way coastal erosion report and the actions being taken to address these.

Yours sincerely,

COUNTY COUNCILLOR MARY M^CGARRY

Cllr McGarry

Dyddiad / Date: 14 January 2016

Councillor Mary McGarry
Chair, Community & Adult Scrutiny Committee
Scrutiny Services
Room 263
County Hall
Cardiff
CF10 4UW

Annwyl / Dear Mary

**Pre-Decision Scrutiny of the Gypsy and Traveller Accommodation
Assessment and Site Assessment Criteria**

We are writing in response to your letter dated 08 January 2016, concerning the above.

Thank you for your comments. We have set out below a response to each of your recommendations and requests for information:

Recommendation – to include additional wording to explain the reasoning behind concluding there are 17 overcrowded pitches

This conclusion takes into account advice contained in paragraphs 194 to 200 of Welsh Government guidance on “Undertaking Gypsy and Traveller Accommodation Assessments” and is derived from an analysis of the survey forms. This guidance states that overcrowding exists where family numbers have grown to the extent that there is now insufficient space for the family within its mobile home accommodation and insufficient space on the pitch or site for a mobile home. Questions B2 and B3 of the survey form address this issue and ask respondents whether is there enough sleeping areas for all residents and is there room on the pitch to safely station additional trailers to prevent overcrowding. Where respondents answered no to both of these questions they were included in the 17 overcrowded pitches identified in the assessment. As recommended we confirm this explanation will be included in the final assessment report.

ATEBWCH I / PLEASE REPLY TO: Swyddfa Cymorth Y Cabinet / Cabinet Support Office,
Ystafell / Room 514, Neuadd y Sir / County Hall,
Glanfa'r Iwerydd / Atlantic Wharf, Caerdydd / Cardiff,
CF10 4UW Ffon / Tel (029) 2087 2479

Recommendation – to include additional wording to explain the reasoning behind including both 16 new households over the next five years and 23 new households over the next five years in the total unmet need

These conclusions take into account advice contained in paragraphs 201 to 210 of Welsh Government guidance on “Undertaking Gypsy and Traveller Accommodation Assessments”. The figure of 23 new households over the next five years is the current known demand identified through information contained in the questionnaire responses, through the waiting list, caravan count and partnership working with Local Authorities in the region. The figure of 16 new households over the next five years is a calculation as per the Welsh Government guideline that assumes a 2.25% rise per year. It is the following calculation:

Current Residential Supply	= 92
Current residential demand	= 48
Total	= 140

2.25% accumulative rise for 5 years = 11.77%

140 * 11.77% = **156 (an increase of 16)**

Given this the figures relate to different sources of growth in this five year period and as set out in Welsh Government guidance it is appropriate to include them both within that period. As recommended we confirm this explanation will be included in the final assessment report.

Recommendation – to check use of wording ‘contaminated land’ in the site assessment criteria and whether the Planning Inspector would require this to be changed to ‘land contamination’

In order to accord with the LDP Inspectors recommendation we confirm that the wording in the site assessment criteria will be changed from ‘contaminated land’ to ‘land contamination’ as recommended.

Request for information – clarification on the occupation levels allowed on the local authority site pitches and the difference between overcrowding and over occupancy

The methodology for calculating overcrowding on pitches is set out in our response to the first recommendation above and we confirm this explanation will be included in the assessment report. For the purposes of the assessment over occupancy relates more to the number of vehicles on the pitch which can be safely accommodated as some pitches are big enough for more than one caravan and some are not, whereas overcrowding relates to the bed spaces within the pitch.

Request of information – indication of the weighting that will be applied to the various site assessment criteria when determining site suitability

In terms of weightings we consider that it is better to look at the findings of the assessment in the round rather than saying some criteria are more important than others. In this respect it is important to note that Welsh Government do not suggest weightings in their guidance and such weightings could also lead to the methodology being challenged.

Request for information – an explanation of how the views of statutory providers will be included in the assessment of sites

The assessment process over the next 6 months will be guided by a Steering Group which will include representatives from education and health and their input will be sought when assessing the sites and making appropriate recommendations to Cabinet.

Request for information – details of the consultation process that will be followed with ward councillors and local communities regarding proposed sites

As set out at the meeting in the first instance the findings and recommendations of the assessment process will need to be considered by Cabinet in July 2016. Prior to Cabinet local ward Councillors will be consulted on the contents of the report. Formal consultations as part of the planning application process will include local communities with the precise details to be confirmed as part of the cabinet process in July.

Request for information – details of the issues identified by the Rover Way coastal erosion report and the actions being taken to address these.

The issue of coastal erosion and the Rover Way site is recognised. In order to identify appropriate coastal defence solutions for the wider Pengam Green area the Council is undertaking a feasibility study of the coastal defences along the Pengam Green stretch of the coastline which includes the Rover Way site. It is anticipated that this report will take 18 months to complete and when complete the Council will need to review how the findings affect the existing Rover Way site

I trust this information is of assistance.

Yn gwyir,
Yours sincerely,

**Councillor / Y Cynghorydd Susan Elsmore
Cabinet Member for Health, Housing & Wellbeing
Aelod Cabinet dros lechyd, Tai a Lles**

**Councillor / Y Cynghorydd Ramesh Patel

CARDIFF COUNCIL
Appendix 4: Equality Impact Assessment
Corporate Assessment Template

Policy/Strategy/Project/Procedure/Service/Function Title: Gypsy & Traveller Accommodation Assessment
New/Existing/Updating/Amending: New

Who is responsible for developing and implementing the Project?	
Name: Sarah McGill	Job Title: Director for Communities, Housing & Customer Services
Service Team: Policy & Development	Service Area: Communities - HANR
Assessment Date: 1 st September 2015	

1. What are the objectives of the Project?

<p>To carry out a Gypsy & Traveller Accommodation Assessment in accordance with the Welsh Government guidance document <i>Undertaking Gypsy and Traveller Accommodation Assessments (May 2015)</i>.</p> <p>To maximise the participation level of the study to ensure that it provides a comprehensive appraisal of the level of need in Cardiff. This will be achieved by commissioning Gypsy & Traveller Wales to make contact and carry out the interviews. In addition to known households on Council and private sites, this will include the use of their database to identify all those that have accessed their service within the last 2 years so indicating possible housing need (which will reach many more people than would be likely by using an external consultant). A steering group will also be set up with representation from Travellers Education, Communities First, Save the Children, Gypsy & Traveller Wales and Community Cohesion providing increased opportunity to engage with the community. The interview period will run from 1st September 2015 to 4th December 2015 and will include the opportunity to participate for all unauthorised encampments during that period. The Research Unit will then collate the results and produce a final report by 18th December 2015.</p> <p>To evaluate the outcome against the previous study carried out in 2013, which informed the current Local Development Plan.</p> <p>To encourage all those who aspire to have a pitch on a Council site to submit applications so the planned growth of available pitches can be assessed and allocated on housing need.</p>

2. Please provide background information on the Policy / Strategy / Project / Procedure / Service / Function and any research done [e.g. service users data against demographic statistics, similar EIAs done etc.]

<p>Part 3 of the Housing Act (Wales) 2014 places a duty on the Local Authority to undertake, in each 5 year review period, an assessment of the accommodation needs of Gypsies and Travellers residing in or resorting to its area. The current review must be submitted to Welsh Government for ministerial approval in February 2016.</p> <p>The Gypsy and Traveller Accommodation Assessment commissioned in 2013 found a need for 108 additional permanent pitches (43 short / medium term, 65 medium / long term) and a 10 pitch transit site in Cardiff. A time table to meet this need forms part of the current Local Development Plan. This new assessment will determine if this target is still valid.</p>

CARDIFF COUNCIL
Appendix 4: Equality Impact Assessment
Corporate Assessment Template

3 Assess Impact on the Protected Characteristics

3.1 Age

Will this Policy / Strategy / Project / Procedure / Service / Function have a **differential impact [positive / negative]** on younger / older people?

	Yes	No	N/A
Up to 18 years		✓	
18 - 65 years		✓	
Over 65 years		✓	

Please give details/consequences of the differential impact, and provide supporting evidence, if any.

Applications for a permanent pitch are considered from any person aged 16 or over. The application method for all ages is the same and support is available for any person requiring support or assistance with their application. Vacant pitches are offered to the person who is highest on the Waiting List for whom it is suitable.

What action(s) can you take to address the differential impact?

The survey will incorporate all identified households from the Council's sites and those on the waiting lists, all those that have sought advice from the Gypsy & Traveller Wales database over the last 2 years, the Travellers Education database and direct contact with members of the community through Communities First and Save the Children. The final report will include the immediate and future accommodation needs of the Gypsy & Traveller community.

3.2 Disability

Will this Policy / Strategy / Project / Procedure / Service / Function have a **differential impact [negative]** on disabled people?

	Yes	No	N/A
Hearing Impairment		✓	
Physical Impairment		✓	
Visual Impairment		✓	
Learning Disability		✓	
Long-Standing Illness or Health Condition		✓	
Mental Health		✓	
Substance Misuse		✓	
Other (Literacy)		✓	

Please give details/consequences of the differential impact, and provide supporting evidence, if any.

Levels of literacy are a known issue within the Gypsy & Traveller population. The study must take this into account because it is imperative that Gypsy & Travellers are aware of the study and that their participation will determine the number of extra pitches that Cardiff will aim to deliver. All contact and interviews will be carried out by people already working directly with the community.

CARDIFF COUNCIL
Appendix 4: Equality Impact Assessment
Corporate Assessment Template

What action(s) can you take to address the differential impact?

The invitation to take part in the study will use easy-to-read letters, telephone contact, direct contact and the use of word of mouth to inform family members / associates who may not be known to services.

The interviews will be carried out at the home or at another agreed location for those wishing to take part. Arrangements will be put in place if anyone requires specific provision due to impairment, disability and / or health issues. Advocates may also be present during meetings.

3.3 Gender Reassignment

Will this Policy / Strategy / Project / Procedure / Service / Function have a **differential impact [positive]** on transgender people?

	Yes	No	N/A
Transgender People (People who are proposing to undergo, are undergoing, or have undergone a process [or part of a process] to reassign their sex by changing physiological or other attributes of sex)		✓	

Please give details/consequences of the differential impact, and provide supporting evidence, if any.

Information regarding gender re-assignment is collected via the Equal Opportunities Monitoring section of the Housing Application Form though this section is not obligatory.

What action(s) can you take to address the differential impact?

Any specific requirement / request by a transgender person will be noted and taken into account during the process.

3.4. Marriage and Civil Partnership

Will this Policy / Strategy / Project / Procedure / Service / Function have a **differential impact [positive / negative]** on marriage and civil partnership?

	Yes	No	N/A
Marriage		✓	
Civil Partnership		✓	

Please give details/consequences of the differential impact, and provide supporting evidence, if any.

Information regarding marital status / civil partnership is collected via the Equal Opportunities Monitoring section of the Housing Application Form though this section is not obligatory.

What action(s) can you take to address the differential impact?

Applications to join the Waiting List are not influenced by marital / civil partnership status and so all identified households will be able to take part in the study. This includes overcrowding on the current sites where each household on the pitch will be able to access a separate assessment.

CARDIFF COUNCIL
Appendix 4: Equality Impact Assessment
Corporate Assessment Template

3.5 Pregnancy and Maternity

Will this Policy / Strategy / Project / Procedure / Service / Function have a **differential impact [positive / negative]** on pregnancy and maternity?

	Yes	No	N/A
Pregnancy		✓	
Maternity		✓	

Please give details/consequences of the differential impact, and provide supporting evidence, if any.

Where an applicant or their partner is expecting a child, this needs to be included in household make-up for the purpose of the determination of future accommodation needs.

What action(s) can you take to address the differential impact?

If a participant or their partner is expecting a child, that child will be included as a member of the household.

3.6 Race

Will this Policy / Strategy / Project / Procedure / Service / Function have a **differential impact [positive / negative]** on the following groups?

	Yes	No	N/A
White		✓	
Mixed / Multiple Ethnic Groups		✓	
Asian / Asian British		✓	
Black / African / Caribbean / Black British		✓	
Other Ethnic Groups		✓	

Please give details/consequences of the differential impact, and provide supporting evidence, if any.

Information regarding race is collected via the Equal Opportunities Monitoring section of the Housing Application Form.

Pitches on the 2 Council-run Gypsy & Traveller sites in Cardiff are allocated under its own Allocation Scheme. Gypsies & Travellers may also apply for mainstream housing under the General Housing Allocation Scheme and are treated equally with other applicants.

What action(s) can you take to address the differential impact?

All applicants known to identify as Gypsy Traveller (on the databases already stated) will be invited to take part in the assessment. In addition, a Welsh Government advert was placed in a number of publications to invite people to contact them if they wished to participate in their local assessment which would then be passed on to the relevant Local Authority). Policies are in place to allow families to be located together within sites which would be applied to any new site. Participants will be made aware of this.

CARDIFF COUNCIL
Appendix 4: Equality Impact Assessment
Corporate Assessment Template

3.7 Religion, Belief or Non-Belief

Will this Policy / Strategy / Project / Procedure / Service / Function have a **differential impact [negative]** on people with different religions, beliefs or non-beliefs?

	Yes	No	N/A
Buddhist		✓	
Christian		✓	
Hindu		✓	
Humanist		✓	
Jewish		✓	
Muslim		✓	
Sikh		✓	
Other		✓	

Please give details/consequences of the differential impact, and provide supporting evidence, if any.

This information is collected via the Equal Opportunities Monitoring section of the Housing Application Form though it is not obligatory.

What action(s) can you take to address the differential impact?

Applications will not be determined on this information and it will not impact on those wishing to take part in the survey.

3.8 Sex

Will this Policy / Strategy / Project / Procedure / Service / Function have a **differential impact [positive / negative]** on men and/or women?

	Yes	No	N/A
Men		✓	
Women		✓	

Please give details/consequences of the differential impact, and provide supporting evidence, if any.

Housing applications are assessed on the basis of housing need, regardless of gender. Similarly gender does not influence the allocation of pitches. Pitches are allocated based on need, which includes the number of couples, other adults and children in the household.

What action(s) can you take to address the differential impact?

The survey will include an approach to all identified households and participation invited from any or all adult/s within the family make-up.

CARDIFF COUNCIL
Appendix 4: Equality Impact Assessment
Corporate Assessment Template

3.9 Sexual Orientation

Will this Policy / Strategy / Project / Procedure / Service / Function have a **differential impact [positive]** on the following groups?

	Yes	No	N/A
Bisexual		✓	
Gay Men		✓	
Gay Women/Lesbians		✓	
Heterosexual/Straight		✓	

Please give details/consequences of the differential impact, and provide supporting evidence, if any.

Information regarding sexual orientation is collected via the Equal Opportunities Monitoring section of the Housing Application Form though the section is not obligatory.

What action(s) can you take to address the differential impact?

Participation will be invited from all those included on the databases already mentioned which will incorporate all those accessing services.

3.10 Welsh Language

Will this Policy / Strategy / Project / Procedure / Service / Function have a **differential impact [positive / negative]** on Welsh Language?

	Yes	No	N/A
Welsh Language		✓	

Please give details/consequences of the differential impact, and provide supporting evidence, if any.

In accordance with the Welsh Language Measure 2011, some people will prefer to make their application in the Welsh language, and to receive subsequent communication in Welsh.

What action(s) can you take to address the differential impact?

The Council will ensure that statutory requirements are met. Gypsy & Traveller Wales who are conducting the interviews have arrangements in place for communicating in Welsh.

4. Consultation and Engagement

What arrangements have been made to consult/engage with the various Equalities Groups?

A steering group is in place comprising of representation from the Council, Gypsy & Traveller Wales, Travellers Education, Communities First, Community Cohesion, Save the Children and South Wales Police Community Engagement.

The survey aims to communicate with all known community members in Cardiff through use of extensive lists of those in contact with services and a wider advert to any other people wishing to take part.

Cardiff will be meeting with all members of the South East Wales regional Planning Group to discuss a regional approach to transit provision.

CARDIFF COUNCIL

Corporate Assessment Template

5. Summary of Actions [Listed in the Sections above]

Groups	Actions
Age	None – Action has already been taken.
Disability	None – Action has already been taken.
Gender Reassignment	None – Action has already been taken.
Marriage & Civil Partnership	None – Action has already been taken.
Pregnancy & Maternity	None – Action has already been taken.
Race	None – Action has already been taken.
Religion/Belief	None – Action has already been taken.
Sex	None – Action has already been taken.
Sexual Orientation	None – Action has already been taken.
Welsh Language	None – Action has already been taken.
Generic Over-Arching [applicable to all the above groups]	Participation will be invited from all persons known to services and appropriate assistance will be given to anyone with specific needs. Meetings can take place at the home of the participants or at another agreed location. Support Workers and other professionals can be involved in the process where necessary or desired.

6. Further Action

Any recommendations for action that you plan to take as a result of this Equality Impact Assessment (listed in Summary of Actions) should be included as part of your Service Area's Business Plan to be monitored on a regular basis.

7. Authorisation

The Template should be completed by the Lead Officer of the identified Policy/Strategy/Project/Function and approved by the appropriate Manager in each Service Area.

Completed By : Ian Ephraim	Date: 01/09/15
Designation: Supported Accommodation and Outreach Manager	
Approved By: Sarah McGill	
Designation: Director of Communities, Housing and Customer Services	
Service Area: Communities	

7.1 On completion of this Assessment, please ensure that the Form is posted on your Directorate's Page on CIS - *Council Wide/Management Systems/Equality Impact Assessments* - so that there is a record of all assessments undertaken in the Council.

For further information or assistance, please contact the Citizen Focus Team on 029 2087 3059 or email citizenfocus@cardiff.gov.uk

**CITY OF CARDIFF COUNCIL
CYNGOR DINAS CAERDYDD**

CABINET MEETING: 21 JANUARY 2016

ADOPTION OF THE CARDIFF LOCAL DEVELOPMENT PLAN

REPORT OF DIRECTOR OF CITY OPERATIONS

AGENDA ITEM: 10

**PORTFOLIO: TRANSPORT, PLANNING AND SUSTAINABILITY
(COUNCILLOR RAMESH PATEL)**

Reason for this Report

1. To seek the Council's approval to:
 - Adopt the Local Development Plan (LDP) and to endorse the Inspector's Report, Adoption Statement, Final Sustainability Appraisal Report and Habitats Regulation Assessment; and
 - Endorse the preparation of a programme of Supplementary Planning Guidance (SPG) over the next 18 months to amplify policies in the LDP.

Background

2. This report represents the culmination of over 9 years work in seeking to secure an adopted LDP for Cardiff. As the Council has now recently received the Inspectors Report, it has a duty to adopt the LDP within 8 weeks of receipt. The Inspectors Report is binding so there is no opportunity to request changes at this stage.
3. The first attempt at preparing a new LDP resulted in the Plan being withdrawn by the previous administration in 2010 following significant concerns raised by the Inspectors. Work commenced on the current Plan in 2010 and has followed a complex statutory process to reach the current position.
4. As existing Development Plans are out of date, it is crucial that a new Plan is adopted in order to provide an up to date framework which gives the certainty to effectively guide future development. This also fulfils the Council's duties under the Planning and Compulsory Purchase Act (2004) to prepare and keep under review a LDP for its area.
5. The LDP, once adopted, will be used by the Council to guide and manage development, providing a basis by which planning applications

will be determined and will supersede the existing adopted development plan framework for Cardiff comprising the Cardiff Deposit Unitary Development Plan (2003), South Glamorgan (Cardiff Area) Replacement Structure Plan, Mid Glamorgan County Structure Plan, South Glamorgan (Cardiff Area) Minerals Local Plan and City of Cardiff Local Plan.

6. In the course of preparation, the LDP has progressed through the following stages:
 - Delivery Agreement Consultation (June/July 2010)
 - Call for candidate sites (October/December 2010)
 - Vision and Objectives Consultation (November/December 2010)
 - Strategic Options and Sites Consultation (May/June 2011)
 - Preferred Strategy Consultation (October/November 2012)
 - Masterplanning Consultation (March 2013)
 - Deposit Plan Consultation (October/November 2013)
 - Alternative Sites Consultation (February/March 2014)
 - Submission to Welsh Government (August 2014)
 - Examination by Independent Inspectors (August 2014 to November 2015)
 - Inspectors Report (December 2015)

Examination

7. In order to determine whether the Plan satisfied the tests of soundness contained in national policy, the Deposit LDP, Sustainability Appraisal (SA) and Habitat Regulations Assessment (HRA) were submitted to the Welsh Government and in turn the Planning Inspectorate for examination on 14th August 2014.
8. Two Inspectors were appointed by Welsh Government Ministers to examine the soundness of the Plan: Mrs Rebecca Phillips BA (Hons) MSc DipM MCIM MRTPI as lead Planning Inspector and Mr Richard Jenkins BA (Hons) MSc MRTPI as assistant Planning Inspector.
9. The Pre-hearing meeting was held on 4th December 2014 and the first round of 19 hearing sessions commenced on 13th January 2015 covering a wide range of topics relating to all aspects of the Plan.
10. Following the final first round of examination sessions, the Council published for public consultation a Schedule of Matters Arising Changes (MACs). These changes sought to ensure the Plan met the “tests of soundness” and responded to the need to comply with national policy and primary legislation. They also addressed action points raised by the Inspectors, policy matters emerging post LDP submission and, where appropriate, to respond to representations submitted in respect of the Plan.
11. The MACs were published for formal consultation between the 11th June and 23rd July 2015 with some 74 duly made responses received. All responses received were (in accordance with procedural requirements) forwarded to the Inspectors for consideration. Following consideration of

these responses the Inspectors held a second round of 7 hearing sessions on 28th and 29th September, 2015 covering focused topics including the Green Belt, minerals, transport/infrastructure and monitoring arrangements.

12. Following this second round of examination sessions, the Council published for public consultation an additional Schedule of Matters Arising Changes between 15th October and 26th November 2015 with some 49 duly made responses received. Again, all responses received were forwarded to the Inspectors for consideration in the formulation of the Inspectors Report.

Inspector's Report

13. The Council received the Inspector's Report on 5 January 2016. The LDP Regulations place the Council under a duty to adopt the Plan within 8 weeks of receipt of the Inspectors Report.
14. In accordance with Regulations, the Inspector's Report has been placed in the public domain with participants, consultees, and other interested parties involved in the LDP process informed accordingly. The Inspector's Report is available for inspection at County Hall, all local libraries and is available on the Council's website.
15. The Report concludes that, subject to the recommended changes, the Cardiff LDP 2006 to 2026 satisfies the requirements of section 64(5) of the 2004 Act and meets the procedural, consistency, and coherence and effectiveness tests of soundness contained in LDP Wales: Policy on Preparation of LDPs. The Inspectors consider that the Council has sufficient evidence to support the LDP Strategy and has shown that it has a realistic prospect of being delivered.
16. The Inspectors Report is contained with Appendix 1 of this report and contains a number of recommended binding changes in order to meet legal and statutory requirements and ensure the Plan to meets the Tests of Soundness. A summary of the Report is contained in Appendix 2.
17. A tracked changes version and composite version of the LDP, incorporating the changes recommended and endorsed by the Inspectors, is attached as Appendix 4 and 5 to this report. These also include the consequential changes required in terms of policy and paragraph numbering.
18. As highlighted above, the Council is required by statutory regulations to adopt the LDP, as amended by the Inspectors binding report, by a resolution of Council. This must be carried out within 8 weeks of receipt of the final Inspector's Report (which was received on 5 January 2016). The LDP will become operative on the date it is adopted by the Council. Should the Council not agree to adopt the LDP, the Welsh Government does have the power to intervene and approve the LDP on the Council's behalf.

19. In accordance with the LDP Regulations, when a Local Planning Authority adopts its LDP, it is required to produce and publish an Adoption Statement which also incorporates a statement relating to Sustainability Appraisal and Strategic Environmental Assessment (SA/SEA). This document is attached as Appendix 3 to this report.
20. The final SA/SEA and Habitats Regulations Assessment (HRA) are also required to be published alongside the Adopted LDP. The final SA/SEA and HRA Reports have been updated to take account of the Inspector's recommended changes and are attached as Appendix 6 and 7 to this report.

Next Steps

21. Subject to a resolution from Council to formally adopt the LDP, and in accordance with the LDP Regulations, notification of the Adopted LDP and its supporting documentation will be published by means of a statutory notice and advertisement in the local press. Notification and/or documentation will also be sent to interested parties, stakeholders and consultees who have been involved in, or requested to be kept informed of the plan preparation process. The Adopted LDP and supporting documentation will also be made available at the County Hall, all public libraries and on the Council's website. The Plan is then subject to a six-week challenge period to the High Court provided by section 113 of the 2004 Planning and Compulsory Purchase Act.
22. Upon adoption, the LDP will become the statutory development plan for Cardiff at which time all existing adopted development plans will be cancelled.
23. Member briefings will be arranged following Council to outline the main policies and provisions of the LDP.
24. The Council has a number of Supplementary Planning Guidance (SPGs) which were prepared to supplement the policies contained in previous adopted plans listed in paragraph 5. In order to ensure conformity with LDP policies, a review of these will be carried out as soon as is practicable following adoption of the LDP to assess which of these can continue be used in development management decisions pending preparation of new SPG to supplement the LDP. A programme of SPG to support and amplify the policies in the LDP will also be produced over the next 18 months, All SPG will be subject to Council approval and a full schedule of SPG, together with an indicative timetable for their production, is set out in Appendix 8 of this report. Additional SPGs will also be prepared as and when required following adoption of the LDP.

LDP Monitoring and Implementation

25. Following adoption, the Council has a statutory requirement to prepare and submit an Annual Monitoring Report (AMR) on the LDP to the Welsh Government. The AMR will examine whether the LDP's policies are being properly implemented, land-use allocation are being delivered and

whether any policies need to be reviewed. The AMR was developed during the examination process and contains over 100 indicators which must be formally reported on each autumn, with the first Report due in October 2017. The Council will also be required to undertake a full review of the LDP 4 years after adoption.

Reason for Recommendations

26. In accordance with Regulations, to seek the Council's approval to adopt the Local Development Plan (LDP) and to endorse the Inspector's Report, Adoption Statement, Final Sustainability Appraisal Report and Habitats Regulation Assessment and to endorse the preparation of a programme of Supplementary Planning Guidance (SPG) over the next 18 months to amplify policies in the LDP.

Financial Implications

27. The costs associated with adopting the Cardiff Local Development Plan and undertaking the next steps i.e. carrying out a public consultation and preparing a programme of Supplementary Planning Guidance (SPG), can be met from within existing resources allocated for this purpose.

Legal Implications

28. The Council has a statutory duty under the Planning and Compulsory Purchase Act 2004 to prepare and keep under review a Local Development Plan for its area, to provide the key policy framework for the determination of future planning applications and the provision of sustainable development.
29. The Council has now received the Inspectors Report which has concluded that, subject to a number of recommended binding changes in order to meet legal and statutory requirements, the Cardiff Local Development Plan 2006 to 2026 (LDP) is sound and deliverable. In accordance with the Town and Country Planning (Local Development Plan) (Wales) Regulations 2005, the Council is now required to adopt the LDP as amended by the Inspector's binding report by resolution of the Council within 8 weeks of receipt of the Inspectors report. If the Council failed to adopt the LDP at this stage, then it would be difficult to control future development and there would also be a risk of the Welsh Government intervening and approving the LDP on the Council's behalf.
30. In accordance with the above regulations when the Council adopts its LDP it is required to prepare and publish an Adoption Statement and to make this available together with the Inspectors Report, the Adopted LDP, Final Sustainability Appraisal Report and Habitats Regulation Assessment. Notification and/or documentation will also be sent to interested parties, and made available as detailed in paragraph 21 above
31. An Equality Impact Assessment Screening on the LDP has been undertaken and is available as a separate document on the Council's website at the following link:

32. Whilst the final version of the Plan has sought to pick up all the agreed Matters Arising Changes (MACS) and recommended Inspectors Matter Arising Changes (IMACs), there may be some outstanding typographical or factual errors such as altered policy cross-references and paragraph numbering which are identified during the final publication of the document . It is therefore recommended that officers be authorised to correct these.

RECOMMENDATION

Cabinet is recommended to recommend that:

1. Council adopt the Cardiff Local Development Plan 2006 to 2026 and endorse the Inspectors Report, Adoption Statement, Final Sustainability Appraisal Report and Habitats Regulation Assessment
2. Council endorse the preparation of the programme of Supplementary Planning Guidance (SPG) as set out in Appendix 8 and authorise the Director of City Operations to issue SPG for public consultation prior to it being considered by Cabinet and Council for final approval.
3. The Director of City Operations be authorised to correct any typographical and factual errors together with any other necessary presentational matters and consequential changes prior to the final publication of the Cardiff Local Development Plan.

ANDREW GREGORY

Director
15 January 2016

SECTION 64

**REPORT ON THE EXAMINATION INTO THE
CARDIFF LOCAL DEVELOPMENT PLAN
2006 - 2026**

Plan submitted for examination on 14th August 2014

Examination Hearings held between 13th January and 27th February 2015
and on 28th and 29th September 2015

Cyf ffeil/File ref: LDP/Z6815/14/515993

Non-Technical Summary

This report concludes that, subject to the recommended Matters Arising Changes (MACs) set out in Appendices A and B, the Cardiff Local Development Plan 2006 - 2026 (LDP) provides an appropriate basis for the planning of the City up to 2026. The Council has sufficient evidence to support the strategy and has shown that it has a realistic prospect of being delivered. A number of changes are needed to meet legal and statutory requirements and to ensure that the Plan is sound. These do not alter the thrust of the Council’s overall strategy and do not undermine the Sustainability Appraisal carried out by the Council. The main changes are summarised as:

- Revised housing requirement to reflect consideration of Welsh Government (WG) 2011-based population and household projections and inclusion of the flexibility allowance figure within the overall housing target;
- Improved clarity on how and when the required housing – together with any required flexibility allowance - will come forward;
- Extend non-strategic housing allocation H1.3 and delete non-strategic health employment site;
- Delete the Gypsy & Traveller allocation and include a timetable to identify and deliver a new site or sites within the Plan and the monitoring framework;
- Provide new policies for each of the strategic sites to include infrastructure requirements and master planning principles;
- Set out the affordable housing requirement in the Plan including the tenure mix;
- Clarify that affordable housing provision should be provided on site unless there are exceptional circumstances;
- Provide more clarity on the timing and phasing of infrastructure for the strategic sites by including categories of infrastructure in the policies and more detail in the Infrastructure Plan;
- State that planning obligations will be sought where they satisfy WG Circular 13/97 and the Community Infrastructure Levy Regulation 122(2);
- Improved clarity that development will need to show that it has maximised achievement towards the 50:50 modal transport split target;
- Provide more details of the bus corridor enhancements and rapid transit corridors in the Plan and greater clarity about the distinction between them;
- Provide a new policy for the planned Metro to ensure development won’t prejudice this regionally important project by safeguarding land where routes are known;
- Include a new policy setting out criteria for employment proposals to come forward on unallocated land;
- Inclusion of the hierarchy of retail centres in the Plan;
- Change the Green Belt designation to Green Wedge;
- Include a statement in the Plan of how the needs and interests of the Welsh language have been taken into account;
- Changes to settlement boundaries to more closely follow defined physical features;
- Changes to Minerals policies including a new comprehensive policy relating to mineral safeguarding;
- Deletion of the site proposed to be allocated for Waste;
- Changes to policy wording to reflect national planning policy more closely and ensure their effectiveness; and
- Changes to the monitoring framework developing the targets and indicators in more detail to improve monitoring.

Almost all of the recommended changes have been put forward by the Council in response to matters discussed during the examination. With the recommended changes the Plan satisfies the requirements of section 64(5) of the 2004 Act and meets the tests of soundness.

Appendix A: The Council’s proposed changes recommended by the Inspectors

Appendix B: Inspector Matters Arising Changes

1 Introduction

- 1.1. Under the terms of Section 64(5) of the Planning & Compulsory Purchase Act 2004, the purpose of the independent examination of a Local Development Plan is to determine:
 - a) whether it satisfies the requirements of sections 62 and 63 of the Act and of regulations under section 77, and
 - b) whether it is sound.
- 1.2. This report contains the assessment of the Cardiff Local Development Plan 2006 - 2026 (from here referred to as “the LDP” or “the Plan”) in terms of the above matters, along with recommendations and the reasons for them, as required by section 64(7) of the Act. The submitted LDP has been prepared pursuant to the Act and the Town and Country Planning (Local Development Plan) (Wales) Regulations 2005. The Town and Country Planning (Local Development Plan) (Wales) (Amendment) Regulations 2015 came into force in August 2015. These amend the 2005 regulations and, as the changes relate primarily to plan revision procedures and the alternative sites stage, they have no bearing on this examination.
- 1.3. Chapter 2 of Planning Policy Wales (PPW) has been updated in the light of the new regulations and a new LDP Manual has been published. The new Manual includes revised soundness tests, which have been reduced from ten to three although the principles underpinning them remain the same. The LDP has been prepared on the basis of the previous tests, but as the principles remain unchanged, there was no need to seek views from the participants on the impact of the new tests on the soundness of the Plan. Subject to the changes set out in the Appendices, we are satisfied that the LDP accords with national policy.
- 1.4. Since the purpose of the examination is to determine whether the Plan is sound we recommend changes in this report only where there is a clear need to amend the Plan in the light of the legal requirements and/or the tests of soundness. These binding changes are numbered in **bold** and are highlighted in Appendices A and B of this report, where they are highlighted. We are satisfied that these changes are in line with the substance of the overall Plan and its policies, and do not undermine the Sustainability Appraisal (SA) and participatory processes that have been undertaken.
- 1.5. All duly made representations and the matters raised at the examination Hearings have been considered. Given the focus of the examination on soundness, our report does not refer specifically to the individual representations made in each case. Matters raised by individual representations are referred to only where it is considered that they raise substantive issues concerning the Plan’s soundness. Plan changes sought by any representor are the subject of a recommended change only where we have found, on the basis of the evidence, that such a change is required to make the Plan sound.

Post-Deposit Changes

- 1.6. Prior to submission of the LDP for examination the Council considered the representations received and determined that no substantive changes to the deposit Plan were required. It did, however, identify minor changes which it wished to make to the deposit Plan. We have reviewed these minor changes and are satisfied that none would alter the Plan in any substantive manner and that they are not related to soundness. It is for the Council to determine whether or not to incorporate these changes into the final version of the Plan. This report does not consider these minor changes.

Recommended Changes

- 1.7. The Council has prepared a range of Matters Arising Changes (MACs) following the discussions at the Hearing sessions¹. These MACs were subject to public consultation for a period of 6 weeks and publicised on the examination website. At the same time the Council reassessed the SA of the Plan in the light of the changes. We considered the consultation responses and held additional Hearings where we required further information or clarity in respect of some aspects of the Plan and the MACs. Further consequential amendments were considered necessary and the Council carried out SA² and a further 6 week consultation on the additional MACs³. We have taken into account all the representations made in coming to our conclusions in this report.
- 1.8. Almost all of the MACs put forward by the Council are needed as the Plan would be unsound without them. However, in a small minority of cases MACs have been put forward which, although providing helpful additional clarity and precision, are not strictly required to make the Plan sound. Accordingly these are not the subject of a binding recommendation, although we understand the Council’s wish to incorporate them. The MACs numbered in **bold type** in this report and highlighted in Appendix A are changes put forward that are required to make the Plan sound. These are all addressed in this report, where the relevant MAC number is similarly identified in bold type.
- 1.9. Appendix B sets out the additional changes (Inspector Matters Arising Changes) (IMACs) not proposed by the Council, but which we have concluded on the evidence are also needed to make the Plan sound. None of the changes undermine the SA, Strategic Environment Assessment (SEA) and Habitats Regulations Assessment (HRA) or the overall strategy or policy thrust within the Plan.
- 1.10. The Council has also identified some outstanding typographical or factual errors in the submitted Plan that it wishes to correct. We authorise any final editorial changes of this nature, together with any other presentational matters and consequential changes flowing from agreed MACs and the recommended IMACs such as altered policy cross-references, map title amendments, site area or numerical changes and paragraph numberings.

¹ City of Cardiff Council Draft Matters Arising Changes Schedule: May 2015

² Final SA Report revised reflecting May and October 2015 Draft MAC Schedule

³ Additional Matters Arising Schedule Final Version October 2015

2 Procedural Tests

- 2.1. The LDP has been prepared in accordance with the Delivery Agreement (as revised by agreement with the WG)⁴ and the Community Involvement Scheme as demonstrated in the Consultation Report. Concern was expressed that no substantive changes were proposed to the Plan by the Council as a result of the deposit stage public consultation. However, the Council are not obliged to make such changes. The Council engaged with a wide range of organisations and the general public on the generation of alternative strategies and options and identifying key issues. A number of conferences for consultees and public events were also held. We are satisfied that the requirements of the Community Involvement Scheme have been met.
- 2.2. All proposed changes made to the deposit Plan have been advertised and consulted on. The Plan thus complies with the requirements of the Town and Country Planning (Local Development Plan) (Wales) Regulations 2005 (as amended) in this respect, including in relation to consultation, advertisement and the publication and availability of prescribed documents.
- 2.3. The Plan has been subject to SA including Strategic Environmental Assessment (SEA)⁵. The SA provides a summary of the strategic alternatives considered and a brief summary of reasons why they were not selected. Further changes put forward by the Council as part of the examination process have likewise been tested where necessary for any impacts they have upon the SA and SEA⁶. We are satisfied that the SA/SEA process undertaken is robust and satisfies procedural and legal requirements.
- 2.4. In accordance with the Habitats Directive⁷ a Habitats Regulations Assessment (HRA) of the Plan has been undertaken⁸, and reviewed as necessary in the light of changes put forward during the examination⁹. We are satisfied that the results of the HRA Screening demonstrate that an Appropriate Assessment is not required. It can therefore be concluded that no significant effects upon the integrity of the European sites¹⁰ within the plan area or in adjacent areas are likely to occur (either alone or in combination with other plans or projects) as a result of implementing the Plan.
- 2.5. The Public Sector Equality Duty requires the Council to have due regard to the need to eliminate discrimination, promote equality of opportunity and foster good relations between different communities. The Council has undertaken and publicised an Equality Impact Assessment of the LDP¹¹ to ensure that equality issues have been taken into account throughout the Plan preparation process. This has been an iterative process to ensure that the LDP promotes equality and diversity and does not adversely affect or discriminate against any people who are protected under the Equality Act 2010.

⁴ Revised Delivery Agreement approved by Welsh Government dated 5 December 2011

⁵ Cardiff LDP Final Sustainability Appraisal Report (September 2013)

⁶ Final SA Report revised reflecting May and October 2015 Draft MAC Schedule

⁷ European Union Habitats Directive (92/43/EEC)

⁸ Deposit Plan HRA Report (September 2013)

⁹ HRA revised reflecting May and October 2015 Draft MAC Schedule

¹⁰ As defined in PPW paragraph 2.3.13

¹¹ Background Technical Paper 3: Equality Impact Assessment Report (September 2013)

- 2.6. Changes to the Plan Introduction as proposed in **MAC1** would improve the Plan’s clarity by setting out the up-to-date position in respect of the additional assessments undertaken.

Conclusion

- 2.7. Accordingly, the relevant procedural and legal requirements have been complied with.

3 The Overall Plan Strategy

The Vision, Objectives and Principles of the Strategy

- 3.1. The LDP Vision reflects the priorities for Cardiff and the Capital Region in the Wales Spatial Plan (WSP), which recognises that the success of the region relies on Cardiff developing its capital functions in order for the area to work as a networked city region, to provide an appropriate quality of life for all and to be able to compete with comparable areas in the UK and EU for investment and growth. The vision recognises the key role that Cardiff plays. The LDP objectives seek to respond in spatial terms to the identified economic and social needs in a co-ordinated way that sets out a framework for delivering the sustainable neighbourhoods of the future as part of a connected, sustainable city.

Greenfield Development and the Loss of Agricultural Land

- 3.2. In assessing the appropriate level of growth required to satisfy the evidenced economic and social needs, the Council considered the extent of development that could realistically be delivered over the Plan period as well as the environmental impact upon Cardiff and the wider area. Opportunities to maximise the re-use of previously-developed land were sought and an assessment of the availability of brownfield land for residential development and potential housing land within the urban areas was undertaken¹².
- 3.3. Whilst brownfield sites have made the biggest contribution to dwelling completions in recent years, this has narrowed the range and choice of provision with a focus on high density developments, mostly apartments in Cardiff Bay. The regeneration of Cardiff Bay has reduced large-scale brownfield development opportunities. In preparing the strategy, the Council recognised that whilst brownfield sites would be likely to form a significant source of supply, in order to meet housing growth aspirations and deliver a range and choice of housing, greenfield housing sites would also be required. Several spatial options were explored but given the levels of growth set out in each of the alternatives considered by the Council; together with the finite capacity of brownfield sites to deliver the requisite amount of homes and jobs; it was recognised that all options would necessitate significant release of greenfield land.

¹² Background Technical Paper 2: Urban Capacity Study (Updated May 2014)

- 3.4. In the assessment of sites, the Council considered a number of factors including whether development of the site would be likely to have an impact on natural resources such as agricultural land. The Council says that there is no definitive map of agricultural land quality in Cardiff but the Welsh Government (WG) Agricultural Land Classification maps were used as a starting point. These indicate that the best and most versatile (BMV) agricultural land exists in parts of the west, north and east of Cardiff. Further information provided by the WG on the strategic candidate sites indicated the high, moderate or low probability of there being BMV agricultural land on these sites. This, together with submitted information in support of candidate sites and local surveys, was used to inform the site selection process.
- 3.5. Development of large-scale greenfield strategic sites would lead to the loss of BMV agricultural land. However, this has to be weighed against the need to provide a range and choice of new jobs and homes to meet evidenced need¹³. The Council acknowledges that there is insufficient brownfield or lower grade agricultural land within the area to accommodate the scale of development necessary for the Plan period. The evidence has shown the difficulties in achieving agriculture potential in those areas which lie adjacent to the urban fringe. The Council also recognises that much of the lower grade agricultural land in Cardiff correlates with areas of high landscape value such as the Garth Mountain and the Caerphilly Mountain Ridge which provide a strategically significant landscape setting and backdrop to Cardiff and are generally poor locations for development given their topography. Overall, we consider that the benefits of retaining the land in agricultural use would not outweigh the advantages of providing the identified requirement for housing and employment development on these sites.
- 3.6. Opportunities for the LDP to provide a mechanism to manage impacts and effectively mitigate potential harm have also been explored. The provision of new infrastructure is an important element of the strategy. The Council acknowledged that new greenfield releases, and the scale of strategic sites proposed to be allocated, would enable more comprehensive solutions and significant improvements to be delivered. It would also facilitate contributions towards the wider provision of strategic infrastructure, including infrastructure linked to the implementation of the sustainable transport strategy, thereby bringing wide-ranging benefits to the City as a whole. Notwithstanding the scale of existing housing commitments, there remains a need to identify significant amounts of additional housing land to meet overall requirements up to 2026 and provide flexibility and choice to provide for a 5-year supply of deliverable sites. We are satisfied that the Council has considered reasonable alternatives in terms of the level of growth to be accommodated during the Plan period. There is a limited supply of potential housing land within existing built up areas and the allocation of strategic sites and significant extensions to existing settlements are inevitable if sufficient housing is to be delivered.

The Distribution of Development Growth

- 3.7. One of the Plan’s key priorities is to make provision for new homes and jobs. Key strategic sites are defined in the LDP as being sites of 500 homes or more

¹³ City of Cardiff Response to Action Point 6, Hearing 1 (Examination Document AP1.6)

and/or with significant employment/mixed-uses and which have the potential to deliver significant benefits to the City. Two brownfield and 6 greenfield strategic sites are proposed to be allocated:

Strategic Site A: Cardiff Central Enterprise Zone & Regional Transport Hub

3.8. The proposed allocation of this City centre strategic mixed-use site represents an employment-led initiative at Cardiff Central Enterprise Zone to deliver major employment opportunities focussed on financial and business services and to maximise the advantages of its location adjacent to the Central Rail Station and Bus Station through development of a Regional Transport Hub.

Strategic Site B: Former Gas Works, Ferry Road

3.9. The allocation of this centrally-located strategic brownfield site would provide an opportunity to develop approximately 500 dwellings over the Plan period as well as to improve existing pedestrian and cycling links.

Strategic Site C: North West Cardiff

3.10. The largest of the strategic sites, Strategic Site C is approximately 346 ha located to the west of Radyr, Fairwater and Pentrebanne and north of St Fagans. A development of approximately 5,000 new homes is proposed within the Plan period at this strategic site together with a number of other uses including education, community, recreation and primary health care facilities, employment and retail/commercial use as part of the development of District and Local Centres. It would also provide for bus-based Rapid Transit Corridors through the site and a new Transport Hub.

Strategic Site D: North of Junction 33 on M4

3.11. A mixed-use allocation of approximately 2,000 dwellings, employment and associated community uses is proposed at this strategic site together with bus-based Rapid Transit Corridors through the site and a park and ride facility.

Strategic Site E: South of Creigiau

3.12. It is proposed to allocate this site for approximately 650 dwellings. Strategic Sites D and E are adjacent to one another, separated by Llantrisant Road. It is proposed to develop an overall Master Plan for both sites which would reflect site-specific requirements for each site whilst ensuring a comprehensive approach is taken to development.

Strategic Site F: North East Cardiff (West of Pontprennau)

3.13. A mixed-use allocation of approximately 4,500 new homes, employment and education uses and District and Local Centres to include community and leisure facilities is proposed together with bus-based Rapid Transit Corridors through the site.

Strategic Site G: East of Pontprennau Link Road

- 3.14. It is proposed to allocate the site for approximately 1,300 new dwellings together with associated education and community uses including a Local Centre and provision of bus-based Rapid Transit Corridors through the site.

Strategic Site H: South of St Mellons Business Park (Employment only)

- 3.15. The site is adjacent to the St Mellons Business Park and would offer an opportunity to provide appropriate accommodation for high value and knowledge-based employment sectors, such as advanced manufacturing, research and development as well as the growth of indigenous businesses. It is outside the City centre but close to the strategic highway network and would afford an opportunity to provide additional bus services, a park and ride facility, a transport hub including a new rail station as well as improved walking and cycling facilities to maximise access from neighbouring communities. It would be immediately accessible to a large residential population with high unemployment.
- 3.16. The concentration of new housing and development growth on these strategic sites partly reflects their clear potential to deliver significant numbers of new homes and jobs in a relatively short timescale, alongside the provision of necessary new infrastructure, services and facilities to support growth and to help achieve the Plan’s aims and objectives. Together, these allocations would be able to provide an appropriate range of size and types of new housing across the area and provide reasonable choice and some flexibility for the house building industry. The involvement of national house builders in many of the allocated sites in the Plan should also assist early delivery in most cases.

Master Planning Principles

- 3.17. The Master Planning general principles are set out in Policy KP4: ‘Masterplanning Approach’ which seeks to ensure that major development schemes are planned in a comprehensive and integrated manner setting out the phasing of development and provision of supporting infrastructure. The Masterplanning Framework document sets out a broad framework for development of the strategic sites described as “schematic frameworks”. These site-specific frameworks give an indication of land uses, transportation measures and information on the indicative densities, infrastructure and phasing of these sites and are intended to act as a starting point for development of further, more detailed design.
- 3.18. In conjunction with this process, the Council and developers of the strategic sites produced ‘Statements of Common Ground’ for the examination which set out a trajectory of housing provision over the plan period (where relevant), a summary of infrastructure requirements and updated the schematic framework diagrams for each site. It was agreed during the examination that including this level of detail in the Plan itself, rather than in the supporting documentation would provide a greater level of clarity in respect of the infrastructure and master planning requirements of each of the strategic sites and more certainty that they would be delivered as planned. As such, a new key policy for each of the strategic sites is proposed to be included in the Plan to follow KP2: ‘Strategic Sites’ numbered KP2 (A) to KP2 (H) (**MAC5**). The policies would identify the approximate quantum of various key uses and a summary of the main infrastructure requirements together with a cross-reference to the Cardiff

Infrastructure Plan which would be regularly updated and linked to the Plan’s monitoring framework. The policies would retain a degree of flexibility as more details would be provided in future master plans. However, sufficient detail would be provided at the strategic stage to assist in bringing forward the sites.

- 3.19. Key requirements would be set out within these new policies with reasoned justification providing supporting detail and site-specific schematic frameworks. In addition, consequential changes to the reasoned justification to Policy KP2: ‘Strategic Sites’ and Policy KP4: ‘Masterplanning Approach’ are proposed (**MAC5, MAC6**) which would make reference to the new strategic site-specific policies. These changes are considered necessary to ensure that sufficient policy detail is embedded within the Plan to enable all relevant factors which will influence the delivery of the strategic sites to be taken into consideration and to improve the Plan’s clarity and certainty.
- 3.20. Strategic Site A comprises land in numerous ownerships and would be developed by a number of different developers. Proposed new Policy KP2 (A) would provide an overarching master planning and infrastructure planning framework setting out the infrastructure requirements together with indicative densities of development and other master planning requirements such as the need to create destination spaces with active uses which complement the business offer, clearly defined pedestrian routes and addressing potential impacts on Conservation Areas and Listed Buildings within and adjoining the site.
- 3.21. The new policy would also set out the necessary transport and highways infrastructure including the Regional Transport Hub which would link different forms of transport and improvements to existing bus-routes and services and enhanced pedestrian and cycling access. The schematic framework would provide an indication of the walking and cycling routes and bus-based rapid transit corridor as well as the proposed land uses.
- 3.22. Strategic Site B is owned by a single landowner and the new Policy KP2 (B) would assist in ensuring that the site is developed in a comprehensive manner by providing indicative development densities and establishing development principles such as the need to respond to landscape and heritage assets as well as addressing any impacts on biodiversity assets and nature conservation.
- 3.23. New policy KP2 (C) would set out the necessary infrastructure and land-uses for Strategic Site C including employment, District and Local Centres, new schools, transport and highways infrastructure as well as the need to respond to, and address potential impacts on, heritage and nature conservation assets including the St Fagans Conservation Area and Listed Buildings within and adjacent to the site. It would also provide an indication of the densities and phasing of development throughout the site. Development and transport would need to integrate with the adjoining areas of Pentreban, Fairwater and Radyr.
- 3.24. Proposed new Policy KP2 (D & E) would set out that the mixed-use development at Strategic Sites D and E should be undertaken in a comprehensive manner. The layouts of these sites should reflect the inter-relationships between the sites with the initial phases including the provision of the park and ride facility together with public transport enhancement measures. It would include the necessary infrastructure requirements together with an indication of the

location of the Park and Ride facility, a District/Local Centre, employment and other land uses and development densities. Other key master planning requirements would include the need for a landscape buffer between employment and residential uses and the M4 motorway to reduce impact and to effectively respond to landscape, heritage and biodiversity assets.

- 3.25. The second largest site, Strategic Site F, is proposed to be allocated to the west of Pontprennau. The proposed new Policy KP2 (F) would set out the key master planning requirements and land uses to include residential, employment, District/Local Centres and community facilities. It would provide an indication of how development would be phased, how it should proceed in light of constraints such as the C2 Flood Zone area and proximity of the M4 motorway and the range of densities required. The Policy would also set out the necessary transport, highways and other infrastructure required both on-site and off-site together with the need to respond effectively to landscape quality and heritage and biodiversity assets.
- 3.26. The necessary infrastructure and land use components of Strategic Site G, would be set out in the proposed new policy KP2 (G). This would include the provision of education, primary care and community facilities and on-site and off-site transport and highways improvements. The policy would also indicate the required density and indicative phasing of development as well as the need to respond to the landscape, heritage and nature conservation assets of the site.
- 3.27. The requirement for Strategic Site H to be developed in a comprehensive manner, providing a high quality development similar to the existing business park at St Mellons, would be set out in proposed new Policy KP2 (H). It would specify the necessary infrastructure to be provided, including transport improvements and provision of a transport hub that would include a new rail station and park and ride facility. It would also include other master planning key requirements such as flood mitigation, measures to protect nature conservation, biodiversity, heritage and archaeological assets and the need to respond to landscape considerations.

The Effect on the Welsh Language

- 3.28. PPW says that local planning authorities should consider whether they have communities where the use of the Welsh language is part of the social fabric, and that where this is so it should be taken into account in the formulation of land use policies¹⁴. Whilst ways of assessing whether the Welsh language is part of the social fabric of the community is not prescribed, the WG’s National Action Plan for a Bilingual Wales *Iaith Pawb* says that in communities where Welsh is spoken by over 70% of the local population, Welsh is more likely to be spoken in social, leisure and business activities and not just in the home or at school. It is within these areas that Welsh is considered to be a living everyday language and part of the fabric of the community and where LDP policies and proposals could affect the linguistic balance of an area.

¹⁴ Planning Policy Wales paragraph 4.13.2

- 3.29. The 2011 Census shows that 11% of the population of Cardiff speaks Welsh with some electoral divisions recording a higher percentage such as Canton (19.1%), Pentyrch (18.5%) and Creigiau/St Fagan’s (18.2%). These levels are significantly below the 70% threshold identified in Iaith Pawb and are not considered to be sufficiently high for development proposals in the Plan to have a detrimental impact upon the Welsh language in terms of linguistic balance. Furthermore, an Equalities Impact Assessment undertaken as part of the Plan preparation process did not identify any changes required to the Plan in respect of the effect on use of the Welsh language.
- 3.30. However, PPW says that development plans should include a statement on how they have taken the needs and interests of the Welsh language into account in plan preparation. In order to comply with this requirement, the Council propose to include a statement to that effect (**MAC2**). We are satisfied that the potential impact of the LDP on the Welsh language has been adequately considered. Subject to this change, and based on the evidence, the Plan would accord with national planning policy and is considered to be soundly based.

Relevant Plans, Policies and Strategies in Adjoining Areas

- 3.31. In preparing the Plan, the Council has worked with its neighbouring authorities on an individual basis and through regional frameworks to consider cross-boundary and wider contextual issues. The Council set up a working group made up of officers from the 10 south-east Wales local planning authorities and other participating organisations in the South East Wales Strategic Planning Group. A number of workshops were held to discuss the cross-boundary implications of the emerging issues in the preparation of the LDP¹⁵.
- 3.32. The area around Llantrisant and North West Cardiff is identified in the WSP as a Strategic Opportunity Area (SOA). The designation of SOAs is intended to offer potential regional benefits from their sustainable development and to act as a vehicle to promote good cross-boundary working. The WSP says that substantial growth of housing in the City Coastal Zone should be compatible with the health of housing markets in the Heads of the Valleys and Connections Corridor. Neighbouring authorities generally support the growth of the City and recognise its role in helping to spread prosperity within the wider area. It is recognised also that the Council needs to allocate sufficient land for housing and employment to meet the projected needs of the City.
- 3.33. Whilst Rhondda Cynon Taf County Borough Council (RCT) has not objected to the proposed land allocations, or to their scale, it raised concerns about the transportation implications of development of the strategic sites to the North West of Cardiff (Strategic Sites C, D and E). It was confirmed during the examination that the Council is engaged in on-going dialogue with officers in RCT regarding the transport infrastructure requirements for sites in North West Cardiff including measures to secure bus rapid transit connections along the A4119 corridor. This dialogue includes engagement with WG regarding long-term proposals for a rail based transport route extending north-west to Rhondda Cynon Taf and planned collaboration on a joint cross-border strategy designed to deliver improvements along this corridor (see details in the

¹⁵ Summary of Cross-Boundary Working (September 2013)

Transport section below). The joint working is intended to feed into the review of RCT’s LDP and to help strengthen the focus on cross-border linkages through the LDP process.

- 3.34. Where cross-boundary issues are relevant, and subject to the changes recommended in this report, the LDP is compatible with the development plans and relevant strategies prepared by neighbouring authorities.

Conclusion

- 3.35. The development strategy rightly seeks to steer the majority of development during the remaining Plan period to the strategic sites which would provide access to jobs, services and public transport. At the same time it recognises the need for development (albeit on a lesser scale) across numerous suitable locations and provides for a degree of choice and flexibility in terms of potential sites. The distribution of new housing and development proposed is appropriate, given the economies of scale and concentration of new infrastructure that is likely to assist delivery, particularly of the strategic sites. These conclusions are borne out by the conclusions of the SA/SEA work and the same would not apply to a more dispersed pattern of new housing growth, incorporating smaller scale schemes across the City. Accordingly, subject to the proposed changes set out above, the general distribution of housing and development growth put forward in the Plan is soundly based and is consistent with national planning policy and the WSP.

4 Housing Provision, including Allocated Housing Sites

The Level of Housing Growth

- 4.1. The submitted Plan identified a housing requirement of 41,100 dwellings between 2006 and 2026. This was based on the WG’s 2008-based household projections together with recommendations from Edge Analytics whom the Council commissioned to evaluate a range of growth options including a number of migration-led and dwelling-led scenarios. In all scenarios, household growth was assessed using assumptions from the WG 2008-based household projection model. Sensitivity analysis was also undertaken using evidence from the Department of Local Government and Communities (DCLG) 2011-based household model for Local Planning Authorities in England to estimate the likely impact that the WG 2011-based household projections might have.
- 4.2. Ten alternative scenarios were considered, culminating in a recommended housing growth target range of between 42,500 – 43,000 over the Plan period (Scenarios F and G). It was also recommended that the Council consider a reduced rate of household formation on the basis of the sensitivity analysis and a reduced vacancy rate in light of Council targets. The Council considered the report’s findings and chose Scenario G as the preferred option, though reduced the vacancy rate from 3.74% to 3% to reflect the previous rate in the 2001 Census and the Council’s intentions to bring the rate down. The resultant housing requirement identified was 41,100 dwellings. The Council excluded any reduction allowance for “un-attributable population change” into assumptions for future migration or reductions in household formation rates which would

have reduced the housing requirement by 10%¹⁶. In the absence of any data to substantiate the need for any reduction, the Council considered that such an approach would carry significant risks for the soundness of the Plan.

- 4.3. The WG 2011-based household projections were published in February 2014 after the Plan was prepared. These projections indicated that the housing requirement for Cardiff over the Plan period would be 44,400 new dwellings¹⁷, equating at that time to 2,674 units per annum over the remainder of the Plan period (2014 to 2026). Subsequently, the WG’s evidence submitted to the examination indicates that the 2011-based household projections for Cardiff over the Plan period amount to 44,742 dwellings¹⁸. Either figure would represent a significantly higher annual build rate than previous rates, though the Council recognised that the low build rate in part reflected the long absence of an up-to-date development plan and referenced the build-up of latent demand, given the extensive development of brownfield sites for apartments, and a need for new family housing.
- 4.4. In response to the Inspectors’ request for further evidence and clarification during the examination Hearings, the Council reconsidered the implications of excluding the “un-attributable population change” (UPC) component from the growth calculation. Following this more recent analysis, the Council concluded that it would be appropriate to include the UPC at the local level. This is due in part to likely discrepancies in the Census estimates for 2001 or 2011 or in the migration flows. If the discrepancies are in the migration flows then projecting forward based on the estimated past flows will introduce errors into the projections. Whilst the Council originally discounted the un-attributable element, consistent with the approach ONS have taken at the national level, the more recent analysis shows potential implications in neglecting this at the local level. Edge Analytics also reconfirmed their recommendation to include it in the assessment of the future housing requirement for the Plan¹⁹.
- 4.5. The Council also reviewed the 3% vacancy rate and amended it in light of the most up-to-date evidence from the 2011 Census which indicates a vacancy rate of 3.74%²⁰. In addition, the Council reassessed the recommendation by Edge Analytics to apply a 10% sensitivity reduction in household formation rates in light of publication of the WG 2011-based household projections which show a lower rate of household growth when compared to the 2008-based household projections²¹.
- 4.6. The proposed modifications to the analysis of the housing requirement as outlined above would result in a slight increase in the number of dwellings required over the Plan period from 41,100 to 41,415. Consequently, the Council proposes an amendment to Policy KP1: ‘Level of Growth’ to reflect the updated figure as well as changes to the reasoned justification (**MAC4**). The changes set out that the proposed level of growth is based on up-to-date

²⁰ Council Response to Housing Related Action Points: Action Point 3 of Hearing Session 3

²¹ Council Response to Housing Related Action Points: Action Point 2 of Hearing Session 3

evidence and analysis of a number of relevant factors and represents the most appropriate target for the Plan.

- 4.7. Whilst this is still lower than the WG 2011-based household projections, the Council has taken the WG’s 2008-based household projections as the starting point for assessing housing requirements, in accordance with national planning policy²² and has reviewed the figure in light of subsequent population and household projections. It has analysed a range of housing, economic and demographic forecasts and trends to provide the most reliable basis upon which to assess the LDP’s future housing requirement. The LDP provision for housing, as proposed to be amended, is supported by a robust evidence base. It is considered that this figure is in line with the projections and that the Plan’s level of housing growth is soundly based.

Housing Supply

- 4.8. The supporting text to Policy KP1 includes a table (as amended by **MAC4**) which provides a detailed breakdown of how it is intended to provide for the 41,415 new dwellings over the Plan period. This table includes the number of dwelling completions from 2006 to 2014 recorded from Council tax data. This differs from the approach taken by some other local planning authorities who have used data from their Joint Housing Land Availability Studies (JHLAS).
- 4.9. In response to discussions at the relevant Hearing and the Inspectors’ request for justification for the use of Council tax data, the Council submitted additional evidence²³. This cited inaccuracies in Cardiff’s historic JHLAS data such as the number of completions reported annually not reflecting changes to dwelling stock as a result of subdivision of property. Furthermore, JHLAS are concerned with recording and forecasting housing completions for the purpose of monitoring a 5 year housing land supply and do not record wider changes such as those arising from demolitions, residential development resulting in a net loss of dwellings or change of use from residential to non-residential use. There is no prescribed way of calculating the number of completions and in these circumstances we are satisfied that the ONS/Valuation Agency data on changes to Council tax presented in the evidence base provides a more accurate measurement of the change in dwelling stock over the period 2006-14.
- 4.10. An allowance of 20% was factored into the calculation of housing provision for possible reduced dwelling yield on brownfield sites with planning permission and some sites with planning permission subject to a Section 106 planning obligation (S106). In response to the Inspectors’ request for evidence to justify the 20% non-delivery allowance, the Council revisited the analysis of the housing land bank to identify changes to the number of dwellings being proposed on existing sites over the previous two years²⁴. Whilst there has been a reduction in anticipated dwellings on a few large sites, on the whole there has been a general trend for an increase in anticipated dwellings compared to previous years which may be in response to improved market conditions.

²² PPW paragraph 9.2.2

²³ Council Response to Housing Related Action Points: Action Point 5 of Hearing Session 3

²⁴ Council Response to Housing Related Action Points: Action Point 6 of Hearing Session 3

- 4.11. Consequently, the Council propose to reduce this flexibility allowance to 15% which it considers to be more appropriate and realistic in light of the assessment of the most recent data and the evidence of improved market conditions more generally. Given the analysis and consideration of relevant prevailing factors within Cardiff’s housing market, we are satisfied that this is an appropriate adjustment. Furthermore, regular monitoring will ensure that this allowance is accurately reflected in future reviews of the Plan. In revisiting the figures the Council identified that the flexibility allowance had been mistakenly applied to two strategic sites. The flexibility allowance has subsequently been amended so that these sites are now excluded from the calculation of the allowance.
- 4.12. The Council proposes to show key commitments (those strategic housing developments with planning permission for over 500 dwellings) on the Proposals Map. Furthermore, a list of sites with planning permission for 10 or more dwellings would be provided as an Appendix to the Plan. This list would show detailed information relating to the number of dwellings not started, those under construction and those completed (**MAC71** and **MAC PM5**). These changes would provide a greater level of detail and clarity regarding the supply and delivery of housing and are thus supported.
- 4.13. The soundness tests require LDPs to be reasonably flexible to enable them to deal with changing circumstances. The submitted Plan included an overall flexibility allowance of 10% (4,000 dwellings) over the Plan period. Areas for future development were identified by way of arrows on the Proposals Map together with part of Strategic Site C, and it was proposed that any necessary additional land would be brought forward via a review of the Plan should a need be identified through annual monitoring. Further to discussions at the Hearings, the Inspectors requested additional clarity on what level of flexibility should be provided in the Plan, how this would be provided and where, in terms of its spatial distribution, any necessary additional housing would be delivered.
- 4.14. It has generally been accepted that a 10% contingency would provide the required level of flexibility but more or less may be acceptable depending on the circumstances of each case. The Council considers that 10% would be appropriate and would provide the right level of additional land should flexibility be needed to allow for non-delivery of sites and unforeseen issues. It is thus proposed to amend Policy KP1 to make reference to the total provision to be made for 45,415 new dwellings over the Plan period which would include a 4,000 dwelling flexibility allowance (**MAC4**). It is also proposed to replace the arrows with spatial boundaries that would be identified on the Proposals Map (**MAC PM2**).
- 4.15. The sites forming extensions to Strategic Site D, north of Junction 33 of the M4 and Strategic Site C, north of Llantrisant Road have been the subject of SA but are not included within the strategic site allocations. The need for these extensions would only be triggered through monitoring and through future Plan review. Additional explanatory text is also proposed to be included in the reasoned justification to new Policies KP2 (C) and KP2 (D and E) explaining how the release of these further sites would be triggered if required and how they would fit in with the wider master planning of the strategic sites. Proposed changes to the monitoring framework would result in a more precise set of

triggers for additional sites to come forward, thereby providing additional clarity in respect of the timing of the release of the additional sites (**MAC75**).

Five-Year Supply of Land for Housing

- 4.16. PPW is clear that Local Planning Authorities must ensure that sufficient land is genuinely available or will become available to provide a 5-year supply of land for housing²⁵. In response to the Inspectors’ request for information prior to the Hearings, the Council prepared a statement²⁶ to show how a 5-year supply of land for housing would be provided once the LDP was adopted. Agreed data in the JHLAS published in November 2014 was used as a starting point and an analysis was undertaken of factors contributing to the latter years of the 5-year period (2020-21) where no agreed JHLAS data exists. This included data on annual anticipated build rates which were agreed with landowners and developers in the Statements of Common Ground (SCG).
- 4.17. Other contributing factors such as windfalls and minor adjustments reflecting past build rates were also included. Windfall assumptions contained in the background evidence²⁷ were used to estimate the number of units likely to be completed in 2019-20 and 2020-21 on sites of over 10 units and through change of use applications. The study indicates that, using a base date of 1 April 2016, Cardiff would have a 5.1 years supply of housing land. This was calculated using the residual method. Subsequent to this, a revised Technical Advice Note (TAN) 1: ‘Joint Housing Land Availability Studies’²⁸ was published in January 2015. The Council considered the effect of the updated guidance on the calculation of the housing land supply²⁹.
- 4.18. Several changes were introduced in the revised TAN 1 including a new stipulation that for housing to be included in the 5-year housing land supply it must fall within the C3 use class. Cardiff’s 2014 JHLAS contains a number of student developments that fall outside this use class. Removing these developments would result in the loss of 480 units from the housing supply. The Council says that there are other considerations, not least the fact that household projections within the submitted LDP exclude the population “not-in-households” (i.e. the communal/institutional population such as those in prisons, residential care homes and student halls of residence). Any students that live in accommodation not included in the “communal establishment” category, such as private student apartments, are included within the household calculations.
- 4.19. The policy changes occurred during the examination. There are practical difficulties in estimating the number of private householders living in non-C3 accommodation as census/ONS data does not differentiate between use classes. As the change in policy occurred during the examination, and in the absence of any revised guidance on how to distinguish between these components to arrive at an accurate dwelling requirement, it has not been possible for the Council to

²⁵ PPW paragraph 9.2.3

²⁶ Statement indicating how the Plan will meet the 5-year supply of housing land, December 2014

²⁷ Background Technical Paper No 1: Population and Housing (Updated May 2014)

²⁸ PPW Technical Advice Note (TAN) 1: ‘Joint Housing Land Availability Studies’

²⁹ Council Response to Housing Related Action Points: Action Point 1 of Hearing Session 5

develop an updated robust methodology. Nonetheless, for illustrative purposes, the Council considered the impact of removing 480 units from the housing supply. This would result in a total housing land supply of 4.9 years. However, as the Council has included the non-C3 housing component in the dwelling requirement of the submitted Plan, we agree that any reduction made on the supply side would be likely to be balanced by a reduction on the demand side.

- 4.20. The updated TAN 1 also allows for sites with a resolution to grant planning permission subject to the signing of a S106 Agreement to be included within the supply, where there is clear evidence that the S106 will be signed shortly, even if more than 12 months has elapsed since the date of the resolution to grant planning permission. This will need to be considered in agreement of the JHLAS on a case-by-case basis based on the available evidence³⁰. The Council says that more sites would have been included in the housing land supply had this provision been in place at the time of the 2014 JHLAS. The Former Arjo Wiggins Paper Mill Site is the subject of a S106 Agreement signed on 28 July 2014. Site clearance and ground works have commenced and a significant number of pre-commencement conditions have been discharged. Current indications are that this site would be likely to be developed within 5 years. A S106 Agreement was signed in respect of 130 – 132 Bute Street on 17 June 2014. The site is under construction and would have been included in the JHLAS. Phasing for these sites has been taken from the agreed 2014 JHLAS. Collectively they would add 769 units to the 5 year housing land supply.
- 4.21. The Council’s updated table³¹ includes these additional units as well as reflecting the impact of removing student accommodation. This shows a 5.2 year housing land supply. In addition, the Council has shown an amended table to reflect the revised dwelling requirement (41,415) and adjusted to exclude student accommodation and to include 769 units subject to S106 Agreements as referred to above. This indicates that there would be a 5.2 year supply of housing land at 1 April 2016. It is proposed to include these changes in the amended Policy KP1 (**MAC4**). The ‘JHLAS’ exercise undertaken by the Council can only provide an insight and the housing supply estimates have not been tested through a JHLAS process. However, the Council has identified land which it considers will meet housing requirement for the next 5 years and this provides a useful indication of the sources of supply that will assist subsequent monitoring. We are satisfied that current indications are that there would be at least a 5-year supply of housing land upon adoption of the Plan.

Housing Delivery

The Contribution from Strategic and Non-Strategic Allocated Sites

- 4.22. SCG between the Council, developers and landowners or agents of strategic sites B to H were submitted to the examination before the Hearings. The SCG each included a trajectory of housing provision for the remainder of the Plan period (2015 to 2026) as well as setting out infrastructure requirements based on information derived from the LDP Infrastructure Plan (IP). The same information was also provided for Strategic Site A and annual anticipated build

³⁰ PPW Technical Advice Note (TAN) 1: ‘Joint Housing Land Availability Studies’ paragraph 4.3.1

³¹ Council Response to Housing Related Action Points: Action Point 1 of Hearing Session 5

rates have been agreed between developers, landowners, agents and the Council on all non-strategic sites allocated in the Plan. In addition, updated information has been included in the IP to provide a list of infrastructure, estimated costs, potential funding sources and lead delivery body. The timescales for delivery have also been amended to provide a more accurate guideline. The trajectories show that these allocations will provide the level of housing needed over the Plan period and we consider that they take a reasonable approach to the delivery of new homes from these large strategic proposals, including likely start dates and annual rates of completion. Nevertheless, they can only be a broad estimate of likely new housing delivery, and will have to be regularly reviewed through the plan’s monitoring process.

- 4.23. The Council acknowledges that build rates for the remainder of the Plan will need to be higher than in previous years to deliver the required level of housing. A wide range and choice of allocations in terms of brownfield and greenfield sites, strategic and non-strategic sites and in terms of geographical spread is proposed to ensure that the sites can be developed concurrently. The long-term absence of an adopted Plan being in place with allocations that could be developed, particularly greenfield sites, has resulted in a high “pent-up” demand for new homes. This, together with improving market conditions, supports a higher future build rate.
- 4.24. Representors raised concerns that development of the strategic sites could create a “monopoly” whereby developers would control the release of housing to manage/limit supply and increase house prices. In response to the Inspectors’ request at the Hearings, the Council sought the input of the house building industry to demonstrate that complementary delivery could be achieved between different developers on strategic sites without delay for reasons related to competition such as phasing development to influence market demand.
- 4.25. A briefing note was produced by Nathaniel Lichfield & Partners (NLP) on behalf of the landowners of strategic site C and their development partners, Redrow Homes³². The note confirms that the agreed housing trajectory is achievable owing to historic constraint on the release of suitable sites for family housing, the geographical spread of the strategic sites and the range and choice in housing types that will be offered. It is also supported by research conducted by NLP into housing delivery rates on major residential sites based on schemes built over the last 15 years. Strategic site C shares many characteristics with sites analysed in the north of Bristol and East Devon and both of these sites delivered in excess of 450 units per annum when the housing market was still in recovery.
- 4.26. There is little evidence to suggest that developers will phase delivery on an arbitrary basis. We agree it would seem reasonable to assume that build rates of over 500 units per annum can be achieved within 4 years of Plan adoption on sites that are configured to contain several sales outlets and where there is strong market demand. All the available evidence, including the Economic Viability Study³³, indicates that both the timing and total of new housing would

³² Council Response to Housing Related Action Points: Action Point 7 of Hearing Session 3

³³ Community Infrastructure Levy Economic Viability Study: Final Report by PBA (August 2014)

be largely viable and essentially deliverable over the Plan period. Although it is acknowledged that the delivery rates would be challenging, the Council’s proposed updated evidence in the Infrastructure Plan³⁴ (as referred to in **MAC8**) is essentially robust, up-to-date and credible with no insurmountable barriers to development apparent in relation to the strategic sites. Whilst this conclusion is based on the current position, continuing strengthening of the national and local economy would only reinforce this judgement.

- 4.27. The viability evidence is sufficient to demonstrate that the strategic sites should be deliverable with sufficient “critical mass” to support the provision of necessary infrastructure and community facilities/services. The Master Planning approach, as set out in the new policies KP2 (A) to KP2 (H), will set out in detail the necessary infrastructure to ensure the delivery of those sites. Moreover, with a variety of strategic sites identified, the Plan’s overall strategy does not rely on any one or more specific elements of new infrastructure having to be in place before the delivery of the development envisaged by the Plan. Consequently, it provides a reasonable degree of flexibility regarding delivery in the event that one or more of the strategic sites does not come forward as expected for whatever reason. Furthermore, the updated trajectories within the IP linked to infrastructure requirements for each of the strategic sites would provide the necessary certainty with regard to delivery to ensure a continuous supply of housing throughout the Plan period.
- 4.28. In most cases, the allocated sites have active developer interest. There is nothing to suggest that there are any insurmountable barriers to the development of the strategic sites. Some have planning permission or Council resolutions to permit, subject to legal agreements. Planning applications have also been submitted on a number of sites which shows the commitment from developers to deliver homes as soon as possible. This also indicates that the allocations have been subject to detailed viability and deliverability assessments. A significant number of dwellings are currently under construction which would be able to provide for part of the identified housing need in the early stages of the Plan. Moreover, there are no phasing restrictions in the Plan that might hinder an enhanced rate of delivery should that prove viable on any strategic site, or elsewhere. In the light of all the above, there would be no justification for any such measures in any event.
- 4.29. To supplement the housing delivered through the strategic allocations, the Plan allocates nine non-strategic housing sites. These sites have been tabulated in Policy H1: ‘Non-Strategic Housing Sites’, although the contribution each site would make to the supply has been subject to change in response to evidence arising from the Examination. **MAC18** amends Policy H1 to reflect the most up to date information.
- 4.30. Concerns were raised at the Hearings that four of the non-strategic housing sites (H1.1: ‘Land at Areas 9-12 St Mellons; H1.2’: ‘Land Rear of Clive Street’; H1.4: ‘Former Lansdowne Hospital’; and H1.7: ‘Ely Bridge Farm’) are located, at least in part, within the C1 Flood Zone as defined by the most up-to-date Development Advice Maps (DAMs). In response, the Council provided further

³⁴ Cardiff Infrastructure Plan (Working Draft 27th November 2015)

justification for the allocation of these sites³⁵, in accordance with the requirements of PPW and Technical Advice Note (TAN) 15: ‘Development and Flood Risk’.

- 4.31. Site H1.1 is located to the south of St Mellons at the edge of an existing settlement which could be described as being on the urban fringe. It falls within a deprived area described in the context of the Index of Multiple Deprivation 2011 as Cardiff’s ‘Southern Arc of Deprivation’³⁶. It does not constitute previously developed land and as such, the allocation fails to meet all of the tests set out in TAN 15. Nevertheless, a flood consequences assessment has found that the consequences of a flooding event would be acceptable and, given that it would form part of the Council’s Housing Partnership Programme, the development would deliver approximately 150 residential units of which some 40% would be affordable. As such, the allocation would contribute significantly to the identified need for affordable housing in a deprived area, would complement the proposed employment allocations and go some way to sustaining the existing settlement. On this basis, the advantages far outweigh the fact that the site is not previously developed and, for this reason, we are satisfied that it represents a sound allocation.
- 4.32. Site H1.2 comprises a former railway embankment and therefore meets the definition of previously developed land. The site would also make an important contribution to the local housing stock, providing a different offer to that provided through the large greenfield strategic sites, thereby serving to sustain the existing settlement. The consequences of a flooding event have been satisfactorily demonstrated to be acceptable and, for these reasons, the allocation is fully compliant with the provisions of TAN 15. Moreover, with no insurmountable constraints to development, the allocation would be capable of delivering some 80 dwellings within the five year period following the adoption of the Plan.
- 4.33. Site H1.4 meets the definition of previously developed land by virtue of its former use as a hospital and the contribution it would make to the local housing supply would help sustain the existing settlement. Concerns have been raised in relation to whether flood risk on site can be mitigated in accordance with TAN 15 requirements. However, a Position Statement³⁷ has been agreed by the Council, the site proponent and Natural Resources Wales (NRW), identifying two potential means of alleviating flood risk within the plan period. Flood mitigation measures would be funded within the overall viability of the scheme and, given that the intention is now for the site to be developed as apartments, the estimate of 75 units remains realistic and deliverable within the plan period. As the site can be delivered in accordance with national policy requirements, it represents a sound allocation.
- 4.34. Site H1.7 comprises previously developed land by virtue of the buildings on site and a flood consequences assessment has been submitted to demonstrate that the consequences of a flooding event would be acceptable. The site benefits from a relatively recent grant of planning permission for 41 affordable homes

³⁵ Council Response to Action Point 2 of Hearing Session 9

³⁶ Final SA Report revised reflecting May and October 2015 Draft MAC Schedule

³⁷ Position Statement in Response to Action Point 3 of Hearing Session 20 (October 2015)

and would help sustain the existing settlement. As there are few constraints to development, it is anticipated that the site could be delivered within the early years of the plan. Such information has been reflected in the proposed revisions to Policy H1 (**MAC18**) and, on this basis, the allocation is demonstrated to be soundly based.

- 4.35. Site H1.3: ‘Rookwood Hospital’ is currently occupied by health care facilities and was allocated within the deposit LDP for some 80 residential units. Alternative site AS (B) 1 proposed a modest extension to the allocation to better reflect the extent of the area likely to become surplus to requirements by the NHS. In light of this evidence, the Council proposes, through **MAC18** and **MAC PM3**, to extend the allocation from approximately 2.9 ha to 3.4 ha, effectively increasing the capacity to some 90 units. This proposed change would provide greater certainty and would ensure consistency between the allocation and any subsequent proposal submitted through the development management process. The proposed change has been subject to the necessary SA and preparatory processes, including necessary public consultations, and we are satisfied that it would not undermine the outcomes of the original SA.
- 4.36. Concerns were raised through representations that the development of site H1.3 would have adverse consequences for the site’s natural and built heritage assets. However, nothing has been submitted to suggest that such matters could not be adequately addressed through the development management process. Meanwhile, nothing has been submitted to demonstrate that concerns relating to localised traffic congestion would be materially different from existing or other permissible uses. Accordingly, the allocation, as amended by **MAC18** and **MAC PM3**, complies with the tests of soundness.
- 4.37. The contribution H1.5: ‘Land at Dan-y-Garth, Pentyrch’ would make to the housing provision has been amended through **MAC18** to 47 units. This reflects a relatively recent grant of planning permission. The site abuts the existing built form of Pentyrch and does not have any insurmountable constraints to development. The site is therefore capable of contributing to the immediate five year land supply and is soundly based. Likewise, **MAC18** also amends Policy H1 to reflect the grant of planning permission for 64 residential units at site H1.6: ‘Land at Former St John’s College’. There are no significant barriers to the development of the site and, for this reason its allocation is considered sound.
- 4.38. Site H1.8: ‘Electrocoin Automatics Ltd, Caerphilly Road’ would result in the loss of a former industrial site. However, the site is currently vacant and not considered an important site within the context of the LDP’s employment strategy. Moreover, given the adjacent residential uses, the site would be suitable for housing development and capable of delivering approximately 20 units within the 5 years following the adoption of the Plan. Likewise, whilst H1.9: ‘Land at Mill Road, Tongwynlais’ is only allocated for approximately 5 residential units, it would be capable of providing a modest level of growth in the village of Tongwynlais immediately after the adoption of the Plan. Nothing has been submitted to indicate that a change is necessary with respect to these allocations.
- 4.39. For these reasons, we are satisfied that the non-strategic housing allocations would provide for a range and choice of housing sites that are capable of being

delivered within the plan period. They provide for a different offer to that provided through the allocation of the strategic sites and would provide for some 572 dwellings over the Plan period.

- 4.40. The Council produced a composite table showing housing provision for the remainder of the Plan period to include anticipated contributions from windfalls, changes of use and commitments as well as anticipated rates of delivery for the allocated sites. It is proposed that the table would be included in the supporting text to Policy KP1 (**MAC4**). This change would offer additional clarification and would provide an accurate basis upon which to plan to meet the identified housing requirement. A housing trajectory would be included within the revised monitoring framework (**MAC75**) which would enable regular monitoring of housing completions on the allocated sites as well as the rate of small sites and windfalls coming forward. This would indicate when sites were not delivering dwellings as anticipated and would trigger a review of the Plan.

The Contribution from Windfalls

- 4.41. The Plan makes an allowance for 4,807 dwellings to come forward from windfall sites which would represent approximately 11% of the total housing supply. To place this in context, the allocations would comprise approximately 35% of the new dwelling requirement with existing consents comprising approximately 26% of the total and the remainder anticipated from new household formation and dwellings delivered from the start of the Plan period. The reliance on windfalls would thus not be disproportionate.
- 4.42. The windfall allowance is based on the rate of windfalls that have come forward in the past 10 years, but reduced by a rate of 40% to reflect the constrained housing land supply over this period and in recognition that the potential for windfalls to be achieved at the same rate will be diminished over time. However, it is anticipated that the opportunities for windfall development would continue over the Plan period and the Council point to the potential for windfalls arising from the likely review of education sites and institutions as well as the redevelopment of existing buildings. For example, some 460 homes are the subject of windfall applications received since the Plan was submitted including the BBC site at Llandaff, Caerau Nurseries and the Hamadryad Centre. Other potential sources of future windfalls have also been identified in the Council’s Urban Capacity Study³⁸. There is thus a strong likelihood that windfall sites in Cardiff will continue to come forward.

Alternative Sites

- 4.43. A number of representors propose alternative sites to those allocated in the Plan, most notably for housing development. Some may consider that the allocations in the Plan do not present the best solution but we are limited by statute and can only recommend a change to make the Plan sound. We cannot seek to make a sound Plan better. The Council considers that it has produced a strategy, policies and allocations that are sound. The Plan makes satisfactory provision for the delivery of housing in a manner consistent with the development strategy. Subject to the recommended changes set out above,

³⁸ Background Technical Paper 2: Urban Capacity Study (Updated May 2014)

the Plan is thus sound in respect of its general housing provisions without inclusion of further sites.

Conclusion

4.44. There will be sufficient land allocated to ensure the delivery of 41,415 homes within the Plan period. A significant proportion of the housing allocations are the subject of planning applications and in some cases, benefit either from planning permission or a resolution to grant planning permission, subject to the signing of a S106 Agreement. Whilst the delivery rate would be challenging, there is a high level of demand and interest from major house builders. Sufficient land is proposed to be allocated and current indications are that a 5-year supply of housing land would be provided. There is adequate evidence to support the Council’s assessment of the potential supply of housing land. A robust and thorough assessment has been undertaken using reasonable assumptions in terms of whether sites are deliverable and over what timescale. The Council, together with landowners and developers, have shown that the allocations can be delivered and there is confidence that the Plan can provide the number of houses required. Furthermore, additional flexibility could be delivered, as set out in Policy KP1, through a future review of the Plan.

5 Affordable Housing Provision

Affordable Housing Need

- 5.1. A Local Housing Market Assessment (LHMA) was published in 2008 and updated in 2013³⁹ to take account of amendments to the requirements of LHMA as set out in PPW⁴⁰. The updated calculations of the affordable housing requirement as set out in this assessment indicate that there is an annual requirement for 3,989 affordable dwellings from 2013 to 2018. The likely tenure profile required by households resident in Cardiff in 13 years’ time in comparison to the tenure profile recorded currently indicates that 62.4% of new dwellings should be market properties, with 4.6% intermediate housing and 33% social rented accommodation⁴¹. It is proposed to include a new paragraph in the Plan which would set out the level of affordable housing required (**MAC13**). This would improve the Plan’s clarity.
- 5.2. Following discussions at the Hearings, the Council was asked to determine whether there was a backlog of need for affordable dwellings from the start of the Plan period 2006 to 2013 and to calculate any residual requirement once all sources of supply, including allocations, commitments and windfalls had been taken into account. The updated evidence identifies a backlog of 1,695 units from 2006 to 2014⁴². However, it is evident from the LHMA that any need arising from the start of the Plan period would have been factored into the overall assessment of housing need as set out in the LHMA Guide⁴³. We are thus content that the LHMA findings are based on a robust assessment of need.

³⁹ Local Housing Market Assessment Update (July 2013)

⁴⁰ Planning Policy Wales paragraph 9.1.4

⁴¹ Local Housing Market Assessment Update (July 2013): Table 6.4.

⁴² Council Response to Action Point 1 of Hearing Session 4

⁴³ Local Housing Market Assessment Guide (March 2006)

Provision of Affordable Housing

- 5.3. The submitted Plan set a target to deliver 6,953 affordable dwellings over the remaining Plan period (2013 – 2026) which would equate to 535 units per annum. This figure was based on an estimate of the likely number of affordable homes that would be provided via the LDP housing allocations, windfalls and proposals for change of use based on the Plan’s affordable housing contribution targets in Policy H3: ‘Affordable Housing’. The total affordable housing target also takes into account the current landbank of affordable units, less a 15% flexibility allowance. Some affordable housing may also come forward from other sources, such as on sites or in units acquired by social housing providers.
- 5.4. Policy H3, as submitted for examination, sought a contribution of 20% affordable housing on brownfield sites and a 30% contribution on greenfield sites on proposals that contain 10 or more dwellings or sites of 0.3 ha or above in gross site area. The findings of the LDP Economic Viability Report⁴⁴ informed the affordable housing contribution targets. The findings were based on viability appraisals of a range of different development types and sites across Cardiff with varying levels of affordable housing. The assessments included a calculation for necessary infrastructure which could be achieved through S106 Obligations and/or Community Infrastructure Levy (CIL) charges which would be consistent with Policy KP6: ‘New Infrastructure’.
- 5.5. The report says that the LDP affordable housing contribution targets of 30% on greenfield sites and 20% on brownfield sites would be viable. However, at the Hearings the Inspectors sought clarification that 20% affordable housing would be justified on large brownfield sites. The Council’s response⁴⁵ says that the viability assessment was undertaken at a high level across a representative number of hypothetical development typologies rather than a detailed assessment of individual sites and allocations. Whilst this approach is consistent with the advice in the Harman Report⁴⁶, the Council undertook further viability assessments which were informed by real situations in developments in Cardiff consistent with the scale and location of sites in the Plan⁴⁷. These detailed appraisals show that development remains viable with a 30% affordable housing target on greenfield sites and 20% on brownfield sites with sufficient headroom to make a contribution towards necessary infrastructure.
- 5.6. The Economic Viability Report also confirms that the LHMA recommended tenure split (40% social rented, 40% intermediate rented and 20% low cost home ownership) was used to inform the viability calculations. It is proposed to amend the reasoned justification to Policy H3 to provide a broad tenure mix (**MAC19**) which would help support delivery of the type of housing required.

⁴⁴ Cardiff LDP Viability Testing: Economic Viability Report (September 2013)

⁴⁵ Council Response to Action Point 11 of Hearing Session 4

⁴⁶ Viability Testing Local Plans: Advice for Planning Practitioners (June 2012)

⁴⁷ Council Response to Action Point 11 of Hearing Session 4

- 5.7. At the Hearings the Inspectors requested additional clarification⁴⁸ on some of the data in the Economic Viability Report, including any differences in assumptions between that report and the CIL Economic Viability Study published in 2014⁴⁹. The Council provided additional clarification including a table to show the differences between the 2013 and 2014 studies, to explain why values have changed for some assumptions and to identify any implications for viability. Both studies generally took a high level approach to viability testing in line with CIL Regulations and guidance offered by Harman⁵⁰. The lower land values in the 2014 report would be expected to improve viability. However, the Council response showed that a combination of changes to other assumptions, such as build costs, resulted in only a marginal difference.
- 5.8. In light of the identified level of affordable housing required, it was explored at the Hearings whether all policy options had been adequately pursued in order to maximise the provision of affordable homes. The Council was asked to provide a rationale for its approach to achieving affordable housing targets rather than pursuing a more spatial approach based on market values. The Council says that the viability appraisals have been undertaken across a range of site typologies across Cardiff. Additional testing on sites consistent in scale and location to those identified in the LDP has also been undertaken. This is consistent with advice in Harman which suggests a proportionate approach via testing a range of site typologies reflecting the mix of sites upon which the Plan relies. The purpose is to provide high level assurance that the policies within the Plan are set in a way that is compatible with the likely economic viability of development needed to deliver the Plan.
- 5.9. Whilst different housing market areas were identified for the LHMA the viability assessments undertaken do not conclude that a differential rate applied according to those areas, could be supported. The Council’s evidence shows that whilst viability will vary between locations, the largest factor for sites identified in the Plan are in terms of costs, particularly land values and opening up costs, and the largest differences would be between greenfield and brownfield sites rather than specific locations. The distinction between greenfield and brownfield sites has been made in recognition of the likely site specific infrastructure costs (such as onsite provision of schools on strategic sites) being generally higher on greenfield sites⁵¹.
- 5.10. The Council’s Economic Viability Report indicates that the threshold, for which development schemes could make a contribution to the provision of affordable housing, could be reduced. In seeking to maximise opportunities for affordable housing provision, the Council proposes a number of changes to Policy H3 including reducing the threshold to 5 units and the site size to 0.1 ha. Amendments would be made to criterion iii. seeking to ensure that sites are not developed in a piecemeal way and to maximize affordable housing provision where adjacent sites are being developed. It is also proposed to amend the policy to state that affordable housing will be sought to be delivered on-site unless there are exceptional circumstances (**MAC19**). The requirement for

⁴⁸ Council Response to Action Points 3-18 of Hearing Session 4

⁴⁹ Cardiff Community Infrastructure Levy: Economic Viability Study Final Report (August 2014)

⁵⁰ Viability Testing Local Plans: Advice for Planning Practitioners (June 2012)

⁵¹ Council Response to Action Point 10 of Hearing Session 4

evidence of need is also proposed to be removed as the need for affordable housing has been established through the LHMA. These changes would ensure that the policy more closely aligns with national planning policy⁵².

- 5.11. The supporting text to Policy H3 refers to the requirement for all housing developments of 50 or more dwellings to be accompanied by an independent viability assessment. This is not fully justified in the evidence and in cases where agreement cannot be reached on affordable housing contributions an independent assessment would need to be provided in any case. It is also clear from the preceding text that each proposal’s actual contribution would depend on the scheme’s capacity for provision. Changes proposed by the Council in **MAC19** would remove the requirement for independent assessment on all developments of 50 or more dwellings. It is considered that these changes would improve the Plan’s clarity and consistency of interpretation.
- 5.12. To take these proposed amendments into account, the Council has subsequently provided an updated breakdown of the anticipated residual affordable housing provision when assessed against all sources of supply, including allocations, commitments and windfalls⁵³. This shows the anticipated number of affordable dwellings to be provided over the remainder of the Plan period (2014 – 2026) to be 6,646. Consequential changes to Policy KP13: ‘Responding to Evidenced Social Needs’ and the supporting text are proposed in **MAC13** to reflect this updated position.
- 5.13. Whilst the affordable housing target has slightly reduced from that of the submitted Plan, it is not a significant reduction and the target is more accurate. The Council has considered during the examination ways in which the Plan might realistically increase affordable housing delivery, given the shortfall in the number of affordable dwellings expected to be delivered compared to the level of need identified. The Council has sought to maximise affordable housing provision whilst taking into account the viability of developing potential sites, the anticipated future level of financial assistance in building new affordable homes and the level of developer contribution that can be realistically sought.
- 5.14. Proposed changes to the monitoring framework (**MAC75**) would include an indicator to effectively monitor the delivery of affordable housing over the Plan period. The new paragraph as proposed in **MAC13** would also make clear that the affordable housing target would not meet the total identified need and that the Plan is only one of a variety of means to achieving a supply of affordable housing. The Plan seeks an appropriate balance between the contribution from development to the provision of infrastructure and achieving a viable level of affordable housing. This is consistent with PPW which requires the level of developer contribution that can realistically be sought when setting affordable housing targets to be taken into account⁵⁴. Monitoring would ensure that affordable homes were being delivered in accordance with the strategy and overall the strategy is considered sufficiently flexible to deal with future changes.

⁵² Planning Policy Wales paragraph 9.2.17

⁵³ Council Response to Action Point 1 of Hearing Session 4

⁵⁴ Planning Policy Wales paragraph 9.2.16

Conclusion

- 5.15. We are satisfied that the evidence supports the need to seek affordable housing provision at the level envisaged and the proportions sought on brownfield and greenfield sites reflect available evidence. Policy H3, as proposed to be amended by **MAC19**, would set out a clear yet flexible approach which would take into account the effect on the viability of development along with other site specific factors. Subject to those changes proposed by the Council as set out above, we find the Plan’s approach to affordable housing sound.

6 Gypsy & Traveller Sites

Level of Need for Permanent Sites and Plan Allocation

- 6.1. There are two Council-managed Gypsy and Traveller residential sites in Cardiff at Rover Way and Shirenewton. There are also a few privately run sites, most notably next to the Council’s site at Shirenewton. The sites generate a need for new pitches. The Council commissioned an independent study⁵⁵, carried out in consultation with the Gypsy and Traveller community, to assess the level of need for permanent and transit sites over the Plan period. The level of need identified for the remainder of the Plan period (2013 – 2026) was 108 additional permanent pitches. This comprises a current need for 43 pitches and a future need for 65 pitches.
- 6.2. The submitted Plan allocates land for the provision for Gypsy and Traveller accommodation at Seawall Road via Policy H7: ‘Allocation Policy for Gypsy and Traveller Site’ which would accommodate 65 new pitches. However, the site is within a Zone C2 floodplain, as identified by the TAN 15 Development Advice Maps (DAMs)⁵⁶. This position remains unchanged with the update to the DAMs in January 2015. TAN 15 says that sites in Zone C2 should not be allocated for highly vulnerable development⁵⁷, such as residential premises which includes caravan parks. WG Circular 30/2007 says that Gypsy and Traveller sites should not be located in areas at high risk of flooding given the particular vulnerability of caravans.
- 6.3. The Council’s study into potential sites rejected it on the basis of it being within Flood Zone C2⁵⁸. The allocation was based on the findings of the Phase 2 Strategic Flood Consequences Assessment (SFCA) which indicated that flood risk would be within current guidelines for development conditions but that flooding would become an issue when considering the impact of rising sea levels in future years. However, national planning policy advises that flooding consequence assessments should ensure that the development meets an acceptable standard of flood defence for the design life of the development⁵⁹.
- 6.4. Moreover, national planning policy also requires a sequential approach to the location of development in areas at high risk of flooding. The objective is to

⁵⁵ Gypsy and Traveller Accommodation Needs Study (April 2013)

⁵⁶ PPW Technical Advice Note (TAN) 15: ‘Development and Flood Risk’

⁵⁷ PPW Technical Advice Note (TAN) 15: ‘Development and Flood Risk’ paragraph 10.8

⁵⁸ Gypsy, Traveller and Travelling Showpeople Sites Study: Final Report (July 2013)

⁵⁹ PPW Technical Advice Note (TAN) 15: ‘Development and Flood Risk’ Appendix 1, E) paragraph 8

move away from flood defence and the mitigation of the consequences of new development in areas of flood hazard towards a more positive avoidance of development in those areas⁶⁰. Flood defence enhancement schemes are currently planned as part of a wider scheme that would reduce flood risk on the site. However, in light of the site’s location in Flood Zone C2 the allocation would conflict with TAN 15 and soundness tests.

- 6.5. Consequently, the Council proposes to delete the allocation and Policy H7 (**MAC22, MAC PM4**). However, in line with recommendations in the sites study, the site would be kept under review should satisfactory measures be implemented as part of a wider scheme to mitigate flooding in the area. An indicator is proposed to be included in the revised monitoring framework to that effect (**MAC75**).
- 6.6. The existing site at Rover Way was the subject of a report commissioned by the Council to examine its physical condition⁶¹. The report identified the site as being potentially vulnerable to flooding due to coastal erosion. If this site had to close, there would be a need to find a further 21 replacement pitches. The report recommends that this situation will need to be resolved by 2033. Accordingly, it is proposed to include an indicator in the monitoring framework to ensure that the existing supply of pitches is maintained and a trigger to seek alternative pitches should existing pitches be lost (**MAC75**).

Level of Need for Transit Sites

- 6.7. The Gypsy and Traveller Accommodation Needs Study identified a gap in provision for a suitably located transit site of around 10 pitches near the M4. However, the study says that this does not necessarily fall within Cardiff and could potentially be met by a range of local planning authorities in the area. The study recommends that the needs of Gypsy and Travellers visiting South East Wales should be considered at a strategic level.

Provision of Permanent and Transit Sites

- 6.8. Further to the examination Hearing, and in response to the Inspectors’ request, the Council prepared a position statement setting out clear mechanisms and timescales for delivery of a site or sites to meet the identified need for 108 pitches. It is proposed to undertake a comprehensive review of the site selection process, including revisiting the site selection criteria, to identify suitable sites to meet the identified current need over the next two years and to meet the longer term need by 2021. The review would also identify potential funding sources. Consequential changes to the Plan, as proposed by **MAC23**, would make clear that local authorities are required by the Housing (Wales) Act 2014 to assess the accommodation needs of Gypsy families and to submit the assessment to the WG for approval by February 2016. This assessment would also include an evaluation of the need for transit sites in Cardiff.
- 6.9. The Council proposes to establish a Steering Group to work proactively with its Housing Department and the Gypsy and Traveller community to identify a

⁶⁰ PPW paragraph 13.2.3 and Technical Advice Note (TAN) 15: ‘Development and Flood Risk’

⁶¹ Site Appraisal Report on the Rover Way Gypsy and Traveller Site (May 2013)

permanent site. It is proposed to include the process and timescales for identification and provision of accommodation in the Plan (**MAC23**). Whilst the proposed deletion of the allocation means that a site has not now been allocated, we are satisfied that adequate explanation has been provided and clear procedures would be put in place to ensure that the necessary provision is made. The Council is also well aware of its duty under the Housing (Wales) Act to provide a permanent site where there is evidence of need. The mechanisms and timescales for delivery would also be set out in the revised monitoring framework (**MAC75**) to ensure that a suitable site or sites would be identified and provided to meet the current need by 2017 and the longer term need by 2021; failing this the Plan would be partially reviewed.

- 6.10. In addition, Policy H8: ‘Sites for Gypsy and Traveller Caravans’ provides criteria to allow suitable sites to come forward. Proposed changes to criterion ii (**MAC23**) would ensure that the correct terminology is used in respect of land contamination and would ensure that the policy was coherent. Subject to this change and proposed changes to the reasoned justification, Policy H8 would provide a sufficiently sound basis for meeting the need for Gypsy and Traveller sites.

7 Sustainable Transport and Infrastructure

Sustainable Transport: Modal Split

- 7.1. A key priority of the Plan is to establish Cardiff as a sustainable travel City as part of the wider objective of ensuring that people in Cardiff have a clean, attractive and sustainable environment. A central aim of the transport strategy underpinning the LDP is to achieve a 50:50 split between travel by car and sustainable travel. The modal split would relate to all journeys. The Plan refers to the Council’s modelling assessment which shows that the growth projected in the LDP will result in major increase in transport movements and to accommodate the additional trips on the highway network, it will be necessary for at least 50% of all trips on Cardiff’s transport network to be made by sustainable modes by the end of the Plan period.
- 7.2. The supporting evidence⁶² indicates that traffic flows need to be constrained to 2010 levels for the transport network to accommodate the growth envisaged in a way which avoids unmanageable levels of congestion. In order to achieve this, there needs to be a shift from car use to sustainable modes across all journey purposes from the 64% share identified in 2011 to the 50% share in the 50:50 target. The Plan acknowledges that in order to achieve the 50:50 modal split, development in the LDP would need to be supported by significant new transport infrastructure, improvements to existing transport and measures to manage travel demand and encourage use of sustainable transport both within existing and new communities in Cardiff.
- 7.3. The Council’s evidence points to various data sources to show that there has been a significant increase in sustainable travel to work over the last 10 years, including a corresponding increase in rail use and cycling over the same period. The evidence indicates that a shift to more sustainable travel is already taking

⁶² Background Technical Paper 5: Transportation (September 2013)

place whilst comparisons with other cities suggests that growth can stimulate investment in transport infrastructure and bring about a shift to sustainable modes⁶³. The Council also plans a range of measures to influence and change travel behaviour such as improvements to walking, cycling and public transport infrastructure, route improvements, transport hubs, parking controls and pricing policies.

- 7.4. The position statement⁶⁴ submitted by Vectos on behalf of the parties bringing forward strategic sites C,D, E, F and G refers to joint working between the Council, developers, landowners, Welsh Government, Sustrans, the Design Commission for Wales and public transport operators. The master planning and design for transport is at an advanced stage for these strategic sites and has been based on traffic models that take into account traffic and movement associated with the strategic sites in the north-east and north-west of Cardiff. It sets out 4 key themes of design, choice, behaviour and management. It is proposed to influence the internalisation of movement within the sites through design and to provide an appropriate level of infrastructure at the early stages of development to influence choice and promote behaviour change. The strategic sites would be designed to make sustainable modes more attractive and achieve a better modal share than existing developments⁶⁵.
- 7.5. It was confirmed during the examination that it is not the Councils’ intention to require all development to achieve a 50:50 modal split. Mitigating the transport impacts of development by securing supporting infrastructure or measures which maximise trips by sustainable travel will be crucial to achieving the modal split target. Each development would have to show that it had maximised achievement towards the target in light of specific evidence available⁶⁶. Proposed changes to the reasoned justification to Policy KP8: ‘Sustainable Transport’ (**MAC10**) would provide further clarity in that respect. New development would thus play a role in providing infrastructure or measures that would collectively contribute to achievement of the target.
- 7.6. New Policies KP2 (A) to (H) as proposed by **MAC5** would include details of the specific transport infrastructure to be provided on each of the strategic sites. Furthermore the updated Infrastructure Plan (IP)⁶⁷ provides further clarity in respect of the combination of strategic site investment and other initiatives to achieve the infrastructure necessary to facilitate the modal split. The sites would be planned to encourage residents to walk, cycle and take public transport.
- 7.7. The IP includes two categories of infrastructure. Category 1 is essential/enabling infrastructure which is defined as being required ‘to facilitate development’ and would need to be delivered prior to, or at the commencement of the relevant phases of development (e.g. transportation, utilities and flood mitigation) and Category 2 necessary infrastructure which is described as necessary ‘to make development acceptable’ and would be phased and

⁶³ Cardiff Council Examination Statement Hearing Session 14: Transport Matters

⁶⁴ Hearing Session 2 Position Statement: Transport Infrastructure

⁶⁵ Background Technical Paper 5: Transportation Updated May 2014 provides the potential percentage of journeys that could transfer from car to walking, cycling or public transport

⁶⁶ Cardiff Council’s Examination Statement to Additional Hearing Session 25: Transport & Infrastructure

⁶⁷ Cardiff Infrastructure Plan (Working Draft 27th November 2015)

implemented alongside new development (e.g. schools and open space). Proposed changes (**MAC5**) to include the categories of infrastructure in new policies KP2 (A) to (H) and Policy KP6: ‘New Infrastructure’ (**MAC8**) would help clarify the difference between the infrastructure types and provide greater certainty over the timing of delivery of infrastructure. Furthermore, proposed changes to the reasoned justification to Policy KP8 (**MAC10**) would introduce specific references to the provision of transport infrastructure in the development of the strategic sites. It would also include cross references to other relevant policies, thereby providing a comprehensive policy framework within which to identify necessary transport infrastructure and ensure it is delivered.

- 7.8. The IP includes estimated costs of infrastructure, funding sources as well as anticipated timescales for delivery and would be regularly updated. Proposed changes to the Plan (**MAC5** and **MAC75**) would ensure that the summary of key infrastructure requirements within KP2 (A) to (H) would be cross-referenced to the Infrastructure Plan and directly linked to the Plan’s monitoring framework. Master plans, which would be informed by the new policies and the schematic frameworks forming part of those policies, are intended to play an important part in creating sustainable communities many of which would include retail, employment, community and education facilities on-site. The scale of the sites would make it possible for new housing to be integrated with a range of new facilities. This would help to reduce the need to travel.
- 7.9. The master plans would also provide opportunities to provide connectivity both within the sites and externally to neighbouring areas. They would be designed to maximise the use of public transport, including the provision of new and extension of existing services as well as walking and cycling. Discussions have already taken place between developers and transport operators on some sites and key routes have been identified and costed. Furthermore, cycle networks and pedestrian links have been planned which would be an integral feature of the new communities and would make walking and cycling practical choices for daily trips. Off-site connections would improve the scope for connecting with upgraded cycle routes beyond the sites, including to the Taff Trail and City Centre. Where relevant, these details have been included as ‘Essential’ or Category 1 infrastructure in the proposed new policies KP2 (A) to (H).
- 7.10. It is recognised that achieving the modal shift will require a significant shift from car to other modes for residents. However, we agree with assertions made at the examination that it would be unrealistic to expect traffic to flow unimpeded at peak times or to attempt to build sufficient road capacity to accommodate and prioritise the convenience of car users. PPW aims to extend transport choice, encourage a more efficient and effective transport system and to minimise the need to travel. It expects this to be achieved through improving accessibility, promoting walking, cycling and supporting public transport, traffic management and infrastructure improvements⁶⁸.
- 7.11. It is intended to measure progress in achieving the modal split by including within the IP a time-phased trajectory or timeline of expected progress towards the achievement of the 50:50 modal split target by the end of the Plan period.

⁶⁸ Planning Policy Wales paragraphs 8.1.1 and 8.1.4

Progress would also be measured by surveying the mode of travel by individual journey purposes via the monitoring framework (**MAC75**). This would enable the Council to identify appropriate interventions that may be required to be targeted at specific types of journeys. The monitoring framework would include indicators to measure the mode split for all journeys as well as improvements in journey times and reliability. If a trigger point is activated this would necessitate an assessment to investigate the underlying causes including accessibility mapping, corridor investigations into mode shift, journey time and reliability by mode and pinch points. It would also assess relative journey costs by mode and an assessment of the provision of transportation infrastructure. This information would be used to identify the necessary remedial actions including review of the Plan.

Strategic Rapid Transit and Bus Corridors

- 7.12. The Council’s transport strategy focuses on seeking to reduce car use by encouraging people to use more sustainable modes of transport. To achieve these objectives the Council intends to use a range of measures including infrastructure improvements to the strategic bus corridors by developing bus priority measures, bus lanes, bus gating and junction improvements to reduce bus journey time and improve reliability. It is also working with bus operators to re-configure the network to support development of the strategic sites and take account of proposals for the new bus station, new orbital routes and interchange points. The Council is working with neighbouring authorities to support and encourage sustainable commuting into the City. This includes work with RCTCBC to secure bus rapid transit connections along the A4119 corridor. RCTCBC has submitted a funding bid to WG to develop a park and ride site adjacent to this corridor with supporting junction improvements and bus priority measures⁶⁹. Other measures include newly acquired enforcement powers in respect of moving traffic offences and on-street parking controls. It is also proposed to develop the active travel network through development of comprehensive walking and cycling networks and delivery of new infrastructure to support these networks.
- 7.13. In response to the Inspectors’ request for additional information regarding bus capacity and journey times, the Council provided calculations showing the improvement in highway capacity in terms of ‘total people movement’ if buses replaced private cars on the highway. Also, how increases in bus capacity would result in a reduction in traffic demand and lead to improved journey times for all traffic. Information was also provided on how bus lanes can provide priority over general traffic and encourage modal shift⁷⁰. The graphs show that congestion increases most significantly beyond the 0.8 ratio of flow to capacity and the Council intends to use this ratio to identify what pinch points in the network contribute to the journey times. This information would be used in the analysis of transport data which in turn would be used for any assessment triggered via the monitoring framework and resultant prioritisation of transport interventions. Improvements in infrastructure, services and measures such as those outlined above would be targeted at areas that support the growth in the Plan in a deliverable and phased manner.

⁶⁹ Council Response to Transport Related Action Points: Action Point 6 of Hearing 7

⁷⁰ Council Response to Transport Related Action Points: Action Point 7 of Hearing 14

- 7.14. Proposed changes to Policy T2: ‘Strategic Rapid Transit and Bus Corridors’ (**MAC38, MAC PM13**) would provide more details of the bus corridor enhancements and would ensure that there was consistency with the details shown on the Proposals Map. Changes are also proposed to the reasoned justification to Policy T2. The updated text would refer to 4 Rapid Transit Corridors that have been broadly identified along corridors leading to the City Centre. The mode and precise alignment of rapid transit is not yet known and for this reason we agree with the Council that the routes cannot be defined on the Proposals Map and should not be included. However, provision for Rapid Transit Corridors would be made in the proposed new policies KP2 (A) and KP2 (C) to (H).
- 7.15. Further technical assessment would need to be undertaken, including as part of the master planning of the strategic sites, which would help to inform the precise mode and route alignments. Types of rapid transit are being considered including heavy rail, tram rail, light rail and bus rapid transit. Options for the types of infrastructure required to provide rapid transit serving the strategic sites are set out in the IP together with funding sources. The proposed changes to Policy T2 (**MAC38**) would provide for the development of 4 principal rapid transit corridors that would serve the strategic sites. The bus corridor enhancements would be located largely within these corridors but would be specifically highlighted as such. The proposed changes would thus provide the necessary distinction between the rapid transit corridors and the bus corridors within the Plan. We are also satisfied that the policies in the Plan (as proposed to be amended) would provide an overarching framework with sufficient detail at this stage to guide more detailed master planning for the transport infrastructure required, for both the strategic sites and for links to surrounding areas.

Cardiff City Region ‘Metro’ Network

- 7.16. The WG’s National Transport Finance Plan 2015 was consulted upon and published during the examination. It sets out its priorities for strategic transport over the next 5 years and beyond, the estimated expenditure required to deliver the schemes and the likely sources of funding. It includes a number of short, medium and longer-term schemes which will contribute to the delivery of the ‘Metro’ network. The Council is working with the WG to develop and implement walking, cycling and bus priority improvements. However, as outlined above, until the WG has undertaken technical assessments, details of the modes routes and alignment of the rapid transit are not yet known.
- 7.17. Following discussions at the Hearings, the Council has proposed a number of changes to the Plan, including a new policy, to provide a policy context to ensure commitment to delivery of this key project. It would ensure that the Plan safeguards land required for the ‘Metro’ transport scheme and avoid prejudicing the future development of ‘Metro’ routes. Proposed new Policy T9: ‘Cardiff City Region ‘Metro’ Network’ (**MAC39**) would seek to ensure that development that is required now does not prejudice delivery of this regionally important project. It would set out in the supporting text that any necessary safeguarding of land would be integrated within the design of approved development. The need for the rapid transit corridors is set out in the new

policies proposed for the relevant strategic sites, together with reference to improvements to the strategic public transport network.

- 7.18. The ‘Metro’ project is a longer-term initiative. Delivery of the Plan’s transport strategy is not wholly reliant upon it being in place before development in the Plan can commence. The strategy provides for a number of different transport improvements and measures rather than reliance upon one project. Neither does it rely upon one particular mode – such as a track, tram or rail-based solution. It provides a sound basis to support and help deliver the growth proposed rather than relying solely on initiatives it cannot control. However, the IP would offer an opportunity to provide updated information on potential timescales, costs and sources of funding for the ‘Metro’ which would be regularly updated. This would enable effective monitoring of progress in respect of the ‘Metro’ and other transport infrastructure by linking to the monitoring framework and enabling the Council to take any necessary action if the delivery of infrastructure fails to progress as expected.

Regional Transport Hub

- 7.19. Policy T4: ‘Regional Transport Hub’ seeks to support development of infrastructure and facilities around Cardiff Central railway station. It is proposed to develop a central public transport interchange around the railway station and Central Square. The site is part of a major redevelopment initiative being progressed by the Council and developers with landowners, Network Rail and transport operators. A study providing options to reconfigure the City bus network has been completed together with public consultation on the requirements of a new bus station.
- 7.20. New policy KP2 (A) would provide a policy context within the Plan and set out specific infrastructure requirements including the need for a central, public transport hub providing access to and interchange between the rail network, rapid transit, strategic bus corridors as well as the City-wide bus network and cycle networks. The new policy would also include reference to the potential need to safeguard land for future development of the ‘Metro’ project. Policy T4 would set out the key components and scope of the transport hub which would inform the development of more detailed specifications as part of a comprehensive master plan of the strategic site. We are satisfied that the proposed changes would ensure that sufficient details would be included in the Plan to ensure provision of an accessible interchange which would be integrated with surrounding development and provide connectivity between national, regional and local rail and bus services.

Monitoring and Managing Transport Impacts

- 7.21. The development of the strategic sites would inevitably result in substantial increases in traffic flows. Without adequate mitigation this would place undue pressure on the local road networks leading to significant traffic congestion and potentially impact on air quality. However, the policies in the Plan would require a range of transport mitigation and improvement measures, including capacity improvements and public transport links. The Plan makes clear that implementation of Policy KP8 and other policies in the Plan would help to reduce pollution arising from road traffic.

- 7.22. Policy EN13: ‘Air, Noise, Light Pollution and Land Contamination’ (as proposed to be amended by **MAC35**) would also seek to ensure that development that would generate unacceptable levels of air or other pollution would be appropriately located and controlled in line with national planning policy⁷¹. Furthermore, Air Quality Management Areas (AQMA) would be identified on the constraints map and an indicator would be included in the monitoring framework (via **MAC75**) to monitor the number of AQMAs throughout the Plan period. As the Highway Authority, the Council has undertaken a thorough and robust assessment of the transport implications of developing the strategic sites and is satisfied that adequate mitigation can be put in place. On the basis of evidence available, we share this view.
- 7.23. There would be scope to review transport mitigation measures as the development of the strategic sites progressed. A number of measures have been introduced to effectively monitor progress and take any necessary action to ensure delivery of transport infrastructure. The proposed changes would introduce new policies for each of the strategic sites identifying the necessary infrastructure, including links to the IP and clearer timescales by which it is required. Policy KP6: ‘New Infrastructure’ would require new development to make provision for, or contribute towards, the infrastructure needed as a consequence of the proposed development which would be delivered in a timely manner to meet the needs of existing and planned communities. Proposed changes via **MAC5** and **MAC8** would provide greater certainty over the timing of delivery of infrastructure and would make clear that any essential/enabling categories of infrastructure, such as transport and highways, would be delivered prior to commencement of the relevant phases of development.
- 7.24. Updated information in the IP would identify all the development projected to come forward together with information on the infrastructure requirements, including for each of the strategic sites. This would ensure that there is a benchmark for monitoring the delivery of infrastructure. This is a reasonable approach and avoids the complexity of having to separately identify in the Plan the requirements of a wide range of infrastructure providers. A trajectory or time-based schedule of expected progress towards achievement of the 50:50 modal split target over the Plan period linked to the monitoring framework would provide additional clarity and ensure that necessary infrastructure is delivered at the appropriate stage to reduce car dependency.
- 7.25. This, together with the amended monitoring framework, would provide the Council with a delivery and funding implementation timetable which would inform the master planning process as well as ensure that funding is in place to enable the relevant infrastructure to be provided from the first occupation of the strategic sites (where relevant) or over the medium to longer term. Furthermore, it would provide the basis for the Council to monitor progress by setting out a programme and key progression points for the critical infrastructure and to identify what action would be taken if the delivery of infrastructure fails to progress as expected.
- 7.26. We are satisfied on the basis of the available evidence that the effects of the strategic sites on traffic and transport can be adequately mitigated.

⁷¹ Planning Policy Wales paragraph 13.11

Furthermore, there would be scope to review transport mitigation measures as the development of the strategic sites progress.

The Provision of Infrastructure

- 7.27. As outlined above, proposed changes to include the categories of infrastructure in new policies KP2 (A) to (H) and Policy KP6 (**MAC5, MAC8**) would help clarify the difference between the infrastructure types. Proposed changes to the reasoned justification to Policy KP6 would also clarify that for the strategic sites, the new policies would provide clear guidance on the infrastructure and master planning requirements. There would also be a cross-reference to the IP.
- 7.28. Policy KP7: ‘Planning Obligations’ requires development to provide contributions to fund necessary improvements to infrastructure and community benefits to meet requirements arising from new development. Proposed changes to the policy and the supporting text would clarify that planning obligations would be sought on a case-by-case basis (**MAC9**). Other changes would make clear that contributions would be sought where they are necessary, directly related to the development and fairly and reasonably related in scale and in kind to the development. These changes would bring the Plan in line with the provisions of WG Circular 13/97 ‘Planning Obligations’ and the CIL Regulations 2010 (as amended). The proposed changes would also reflect the possibility of a CIL charging schedule being introduced during the lifetime of the Plan.
- 7.29. The Council’s intention is to introduce a CIL after adoption of the LDP. However, the Council intends to continue to seek necessary infrastructure for the strategic sites via S106 agreements, where appropriate, rather than relying solely on the CIL mechanism. In certain circumstances, S106 contributions would allow for required infrastructure to be delivered in line with the appropriate phases of development via triggered thresholds. This would help to ensure that the necessary infrastructure is in place when required. The IP is intended to support both the LDP and any future CIL charging schedule in this regard. In order to closely monitor the delivery of infrastructure the Council intend to prepare and keep under review an IP Delivery Report which would be included within the monitoring framework.
- 7.30. The IP Delivery Report would include details of S106 agreements that have been entered into, planning permissions granted that are CIL liable (should a CIL be adopted) and details of any grants of other sources of funding that have been secured towards infrastructure provision⁷². This would provide a clear distinction between S106 and CIL and ensure that there would be no ‘double dipping’ where developers pay twice for the same piece of infrastructure. It would also ensure that funding was effectively co-ordinated and could form the basis for priority and inclusion of appropriate infrastructure in the CIL Regulation 123 list.

⁷² Council Response to Action Point 7 of Hearing Session 2

- 7.31. The Council commissioned a Strategic Flood Consequences Assessment (SFCA) which provides a broad level assessment of the flood risk for the sites in the Plan and considers fluvial and tidal influences together with other sources of flood risk such as ordinary watercourses and public sewer networks. It sets out current and future flood risks for each of the sites and an assessment of the ability of the site to comply with acceptance criteria set out in Technical Advice Note (TAN) 15: ‘Development and Flood Risk’. Where mitigation measures would be required to meet the requirements of TAN 15, the SFCA sets out detailed and modelled mitigation measures including estimated costs. These indicative costs, which have been included in the IP, provide a summary of infrastructure requirements related to flood defences and drainage. The Plan makes clear that site specific assessments, including FCA would be required where appropriate and that development would only be permitted where the risks and consequences of flooding could be demonstrated to be managed to an acceptable level in line with national planning policy.
- 7.32. Dŵr Cymru Welsh Water (DCWW) was consulted on the LDP and has provided relevant water, sewerage and waste water comments on the allocations as well as providing assistance with assessing the potential demands for water and sewerage. The IP identifies the relevant waste water treatment works likely to be affected and the fact that some works would need to be upgraded to accommodate the proposed growth. The SCG for each of the strategic sites also acknowledge the necessity for water infrastructure requirements which would be linked with the phasing of development. DCWW has been in detailed discussions with the Council and developers and say that water or sewerage constraints would not be insurmountable barriers to delivery and that there is no reason why a combination of improvements through Asset Management Plan investment, developer contributions and the requisition process would not ensure that the allocated sites are delivered as proposed⁷³.

8 The Economy & Employment, including Retail

Provision of Employment Land and Premises

- 8.1. The Council’s updated Employment Land and Premises Study⁷⁴ assessed the existing employment land supply, the forecast supply of labour for different sectors of the economy and the future requirements for employment land and property. In assessing likely future employment scenarios for the Plan period, an uplift factor was applied to annual employment growth to take account of economic and labour market changes since the 2008 Cardiff Employment Land and Premises Study was undertaken. The employment scenarios were also developed to reflect planned interventions for some sectors identified as high growth prospects, in particular the financial and business services, construction, hotel and restaurant sectors where additional funding had been identified to boost growth rates within the Central Enterprise Zone. The analysis of population and labour market projections aligned to the LDP strategy suggests that Cardiff will need to expand its employment base by 40,000 jobs over the Plan period to sustain a healthy labour market.

⁷³ DCWW Hearing Statement for Hearing 2: Constraints to Development, Provision of Infrastructure, Timing and Delivery

⁷⁴ Cardiff Employment Land Study Update undertaken by DTZ (June 2011)

- 8.2. Further analysis of the labour supply by sector indicates that of those jobs, 23,220 are forecast to be in Non B uses and would not require employment land allocations⁷⁵. There is thus a requirement to accommodate 17,600 jobs on or in employment land and premises. The Council’s Employment Land and Property Study Gap Analysis⁷⁶ assessed the future office requirements, including an allowance for complementary non-B Use Class activities to be accommodated on employment sites such as motor trades/car showrooms as well as an allowance for market churn and stock modernisation. The estimated future requirement for office floorspace is between 413,900 to 501,200 sqm. The identified supply of office floorspace is estimated to be 537,883 sqm⁷⁷. This is based on an up-to-date calculation considering a number of sources of data including vacant premises, existing consents and sites with planning permission granted subject to the signing of S106 Agreements. On the basis of the available evidence we are satisfied that this is an accurate assessment.
- 8.3. The identified requirement for industrial land over the Plan period is between 83 and 125 ha. This estimate makes an allowance for the replacement or refurbishment of some industrial stock. However, the supply of industrial land assessed as part of the Gap Analysis was 69.5 ha. This suggests a potential shortfall of industrial and warehousing land (Use Classes B1 (b), (c), B2 and B8) to meet requirements. Furthermore, a substantial element of forward supply was ruled out due to further evidence on flooding which would prevent some sites coming forward unless effective flood mitigation measures were put in place. The Council provided an up-to-date calculation of supply for the examination Hearings based on the monitoring of completions since 2006 and an element of employment land that is anticipated as coming forward as part of the mixed-use strategic sites. It is anticipated that there would be a total supply of 125.4 ha⁷⁸ of employment land over the Plan period.
- 8.4. The WSP recognises that the Capital Region needs to develop a stronger presence in higher value services and the knowledge economy and acknowledges Cardiff’s pivotal role as a key provider of professional services, focussing on innovation and higher value-added knowledge sectors⁷⁹. The lack of high quality out-of-town office space is accepted as being a significant issue in terms of providing an appropriate range and choice to maintain and improve the competitiveness of the City and to attract expansion and investment in knowledge-based and other identified high-value growth sectors.⁸⁰ The need for start-up premises and ‘grow-on’ space is also acknowledged, as is the need to provide jobs in accessible locations and to create and support sustainable neighbourhoods. Policy KP9: ‘Responding to Evidenced Economic Needs’ sets out how the Plan intends to provide for a range and choice of employment sites in different locations, directing development to the most sustainable locations to deliver the level of growth in the Plan and to create balanced communities.

⁷⁵ Cardiff Council Examination Statement Hearing Session 10: Employment and Retail

⁷⁶ Cardiff Employment Land and Property Study Gap Analysis Final Report (April 2012)

⁷⁷ Erratum to Cardiff Council Examination Statement Hearing Session 10: Employment and Retail

⁷⁸ Not including the Non-Strategic Employment Site for Health Related Employment as outlined below

⁷⁹ WSP paragraphs 19.9 and 19.22

⁸⁰ Background Technical Paper No 4: Economic (September 2013)

- 8.5. High density office development would be concentrated in the Central Enterprise Zone and Cardiff Bay area whilst the mixed-use strategic sites would include employment uses for existing and future residents. The existing employment sites identified in Policy EC1: ‘Existing Employment Land’ are located in long-established business and industrial areas. Many of the sites identified for protection are located in areas to the west and south of the City which have high levels of unemployment.
- 8.6. Whilst the Plan would moderately exceed the forecast need for office floorspace, this would assist in maintaining a supply of employment land and providing some flexibility in the event that actual economic growth is stronger than forecast. This is consistent with TAN 23 which says that land provision targets may exceed anticipated demand to allow for the chance that the assessments are too low and to promote flexibility, competition and choice⁸¹.
- 8.7. Further to the hearings some boundary amendments were proposed to the Proposals Map. Proposed change **MAC PM6** would more accurately reflect Associated British Port’s land ownership on the map showing employment land EC1.2 and the Central Bay Business Area whilst a proposed change to the boundary of Cardiff Business Park via **MAC PM7** would reflect the land where planning permission for housing has been granted. These changes are recommended to improve the Plan’s accuracy and for clarity.

The Strategic Employment Site

- 8.8. Strategic Site H is located within flood risk Zone C1 of the TAN 15 DAMs (January 2015). TAN 15 promotes a precautionary approach which sets out that development can take place subject to justification including the acceptability of the consequences of flooding⁸². Further to the Hearings, at the request of the Inspectors, the Council provided additional information⁸³ to support and justify the allocation in line with the requirement for a sequential approach set out in PPW⁸⁴ and TAN 15⁸⁵. Also, to confirm whether the principle of a sequential test in terms of town centre-related uses had been taken in line with PPW⁸⁶ and TAN 23: ‘Economic Development’⁸⁷.
- 8.9. Focusing first on the matter of a sequential test for town centre-related uses, PPW seeks to promote a broad balance between housing and employment opportunities in order to minimise the need for travel. Major generators of travel demand such as employment should be located within existing urban areas or in other locations which are or can be well served by public transport, or can be reached by walking and cycling⁸⁸. TAN 23 says that local planning authorities should apply judgement depending on the nature of the economic use and its applicability to a particular location. Also, that they should have

⁸¹ Technical Advice Note (TAN) 23: ‘Economic Development’ paragraph 4.5.2

⁸² Technical Advice Note (TAN) 15: ‘Development and Flood Risk’ paragraph 6.2

⁸³ Council Response to Action Point 4 of Hearing Session 5

⁸⁴ Planning Policy Wales paragraphs 9.2.9 and 13.3.1

⁸⁵ Technical Advice Note (TAN) 15: ‘Development and Flood Risk’ paragraphs 3.1 and section 10

⁸⁶ PPW paragraphs 10.2.9 and 10.2.11

⁸⁷ Technical Advice Note (TAN) 23: ‘Economic Development’ paragraph 1.2.7 and 2.1

⁸⁸ Planning Policy Wales paragraph 4.7.4

regard to considerations set out in the TAN in respect of weighing economic benefit i.e. jobs accommodated, alternatives and special merit.

- 8.10. The proposed allocation of this strategic employment site to the east of St Mellons would provide considerable employment opportunities at the edge of an existing settlement in a deprived area which benefits from European Assisted Area status, as well as the potential for a new railway station and park and ride facility given the advantages of its location adjacent to the main line. It is readily accessible by public transport but would provide further opportunities to provide public transport access to the site from other parts of the City as well as improvements to walking and cycling facilities to improve local access to the site and help sustain neighbouring communities including Trowbridge and St Mellons. The site would provide some office space but it would also offer campus style or bespoke accommodation promoted for high value service and knowledge-based sectors as well as potential accommodation for new start-ups or spin-off businesses. It would offer an opportunity to extend the existing St Mellons Business Park which is at capacity.
- 8.11. Strategic Site A would offer City-centre high density B1 Use Class accommodation. However, the evidence indicates that there are few opportunities within the City-centre to offer the type of low-density, bespoke, incubator type of accommodation that would provide floorspace on one level and be capable of being adapted to suit the needs of the business and/or to provide grow on space. The sequential search undertaken by the Council also shows that whilst Cardiff has a number of designated employment sites, these tend to be located in the traditional urban areas characterised by industrial and warehousing activities with very little new floorspace to accommodate the needs of the knowledge-based sectors that require high specification buildings. Furthermore, there is not sufficient vacant land at existing out-of-town business parks such as at Cardiff Gate to accommodate the scale and type of employment site as that proposed at St Mellons.
- 8.12. This is further supported by the findings of the Council-commissioned report on the economic case for St Mellons Business Park extension⁸⁹. The report says that the strategic site would provide the opportunity to create a low-density business park offering more floor space on one level, modern infrastructure and flexibility to the occupiers. It also offers an opportunity to provide facilities valued by businesses as well as shared services such as broadband packages and security. Furthermore, there would be the potential to attract new investment from high growth knowledge-led sectors and even future development of a high tech cluster. This would accord with PPW and TAN 23 which says that the planning system should particularly support the low-carbon economy, innovative business/technology clusters and social enterprises which are defined as businesses that are particularly important in providing opportunities for social groups disadvantaged in the labour market. Developments that will provide space for these categories of businesses count as making special policy contributions⁹⁰.

⁸⁹ St Mellons Business Park Extension 2014 Update: The Economic Case for the Extension Draft Report

⁹⁰ Technical Advice Note (TAN) 23: 'Economic Development' paragraph 2.1.13

- 8.13. Turning to the issue of flood risk, Zone C1 of the TAN 15 DAMs are areas of the floodplain which are developed and served by significant infrastructure, including flood defences. TAN 15 sets out a precautionary framework for flood risk which includes justification for development and the acceptability of potential flooding consequences. Commercial development is defined as less vulnerable development in terms of the justification test and the TAN says that development can only be justified if it can be demonstrated that its location is necessary to assist, or be part of, a local authority regeneration initiative or strategy required to sustain an existing settlement; or its location is necessary to contribute to key employment objectives supported by the local planning authority and other key partners, to sustain an existing settlement or region. Also, that it concurs with the aims of PPW and meets the definition of previously developed land.
- 8.14. The site is not previously developed land. However, as outlined above, the Council consider that the edge of settlement allocation is necessary to contribute to both the LDP economic strategy and to that of the wider City Region. The Council’s sequential approach to identifying land for a strategic employment site has shown that there is no existing brownfield site within the City centre capable of accommodating the proposal. The allocation would provide opportunities for development in those sectors identified in the WG Economic Renewal Programme⁹¹ such as advanced materials and manufacturing, as well as the potential to promote and develop clusters of key sectors and research and development expertise. Key to the success of this would be the correct type of available land and premises in sustainable locations across the City to promote growth and attract inward investment. It would also act as a catalyst to developing a sustainable transport corridor for the wider region. The strategic employment site would thus be a key element of a wider spatial strategy which would align jobs, development and infrastructure in line with TAN 23⁹².
- 8.15. Without the proposed allocation, the supply of industrial land would fall to approximately 97 ha. Whilst this would be within the range identified as a requirement over the Plan period, there would be a reliance on all sites with planning permission and those with permission subject to S106 Agreements, coming forward. Furthermore, the Council says that approximately 15 ha of the industrial supply would be on land without planning consent and identified as having potential for redevelopment. If this land was discounted, the supply would fall to the minimum amount identified as being necessary to deliver the Plan’s strategy⁹³. The LDP economic strategy seeks to support Cardiff’s role set out in the WSP as the key economic driver for the region, at the centre of a strong regional economy which is internationally competitive. In order to do this it needs to provide for a range and choice of employment land and premises to promote opportunities for growth and economic prosperity.
- 8.16. TAN 15 also sets out that it should be demonstrated that the potential consequences of a flooding event for the particular type of development have been considered, and in terms of the criteria contained in sections 5 and 7 and

⁹¹ ‘Economic Renewal: A New Direction’ (Welsh Assembly Government, July 2010)

⁹² Technical Advice Note (TAN) 23: ‘Economic Development’ paragraph 2.1.12

⁹³ Council Response to Action Point 4 of Hearing Session 5

appendix 1, found to be acceptable⁹⁴. The Council’s SFCA included an assessment of the site against these criteria and demonstrated that the flood risk could be effectively mitigated through a combination of raising the sea wall at points most likely to be prone to breaching and raising ground levels at the site⁹⁵. Furthermore, the first sections of necessary work at Tabb’s Gout are in progress⁹⁶.

- 8.17. The SCG agreed between the developer and the Council proposes development north of the railway with the area to the south being used for compensatory flood storage and ecological mitigation. The Council’s consultants also provided a technical note with further clarity on the proposed compensatory storage facilities. This sets out the principles of a multi stem system to provide compensatory fluvial flood storage to mitigate for raising ground within the site⁹⁷. The position statement from NRW confirms that it agrees with the principles illustrated in the technical note, though this would need to be assessed within a more detailed site-specific FCA submitted as part of a planning application. However, for the purposes of the LDP flood risk matters are agreed.
- 8.18. The site is within the Gwent Levels: Rumney and Peterstone Site of Special Scientific Interest (SSSI). PPW says that there is a presumption against development likely to damage a SSSI⁹⁸. NRW object to the proposed allocation on the basis that it will result in a loss of some of the SSSI area. NRW’s view is that such developments cannot be accommodated in such a way as to conserve and enhance the SSSI. This is a general objection based on experience of other large scale developments within the Gwent Levels suite of SSSIs⁹⁹. The SCG agreed between the Council and developer sets out the principles to protect the value of the SSSI and the reen system within the site. These include ensuring there would be a minimum buffer from the main reens and from field ditches. If the infilling of any main reen or field ditch proves to be unavoidable, it would be realigned with at least an equivalent capacity around the perimeter of the development or a compensatory length of ditch would be provided elsewhere in the site.
- 8.19. Other compensatory measures include fluvial flood storage to mitigate for ground raising within the site, as referred to above. In response to issues raised by NRW, the developer’s flood risk consultants have confirmed that the new reens would be connected to the existing reens which would mean that the quantity and quality of water within the new reens would be the same as that in the existing. In this way, the role of reens in supporting special features of the SSSI can be maintained with the new reens complementing retained existing reens. It has also been confirmed that the proposed additional reens to the south of the railway would be a direct replacement for the loss of any existing reens to the north of the railway. This, together with the multi cell system,

⁹⁴ Technical Advice Note (TAN) 15: ‘Development and Flood Risk’ paragraph 6.2

⁹⁵ Cardiff SFCA Phase 3 Study – Area A Wentloog Tidal and Area A Wentloog Fluvial

⁹⁶ Council response to Action Point 4 of Hearing Session 5

⁹⁷ Technical Note ‘Multi Cell Flood Storage Concept LDP Strategic Site H: Atkins (February 2015)

⁹⁸ Planning Policy Wales paragraph 5.5.8

⁹⁹ Council response to Action Point 5 of Hearing Session 5

would either replace or increase flood storage thereby offsetting any loss as a result of the development¹⁰⁰.

- 8.20. On the basis of the evidence available, we are satisfied that the site could be developed in a manner which would ensure that the reed system and biodiversity assets would be adequately protected. This would need to be addressed in detail as part of an environmental assessment supporting a future planning application. Furthermore, proposed new Policy EN7: ‘Priority Habitats and Species’ (**MAC32**) would make clear that developers would be expected to minimise any impact on biodiversity assets and to provide sufficient mitigation.
- 8.21. The site also lies within the Wentlog Levels Landscape of Outstanding Historic Interest and Archaeologically Sensitive Area. The environmental and flood risk constraints have been carefully assessed to ensure that any necessary mitigation and enhancement measures would be embedded within the new Policy KP2 (H). This would provide an appropriate framework within which to address these and other issues. There is little to suggest that the site could not be developed in a manner sympathetic to its environmental and heritage status. Considerations such as impacts on landscape, archaeology and protected species are detailed matters which could be addressed at the planning application stage.
- 8.22. The SA stresses that from an environmental perspective this is a poor site and recommends that it is avoided. However, it is acknowledged in the SA that its allocation would provide land for the kind of jobs that would not easily be accommodated in the City centre and that these might be accessible for residents of Trowbridge and Rumney. Moreover, providing employment land in St Mellons would help address some of the key problems identified in Cardiff’s ‘Southern Arc’ where geographically there is a concentration of deprivation¹⁰¹. The SA recommends providing employment and housing land within this area to help minimise existing deprivation and inequality.
- 8.23. The purpose of the SA is to appraise economic, environment and social effects of the Plan’s strategy and policies to ensure decisions are made that accord with sustainable development. Ultimately, the SA should inform the Plan not determine it. There are still judgements to be made that are essentially qualitative and the Council has emphasised that it needs to strike a reasonable balance in making these judgements, including consideration of mitigation measures. In our view, the Council has provided robust evidence to support the allocation of the site. For this and the above reasons, it is considered that allocation of the site would meet the objectives of national planning policy in terms of delivering additional economic benefits and contribute to all dimensions of sustainability¹⁰². The allocation is thus considered to be sound.

Health Employment Non-Strategic Allocation

- 8.24. Policy C10: ‘Health Employment Non-Strategic Allocation’ sought to allocate land for health related uses at the Government Offices, St Agnes Road, Heath.

¹⁰⁰ Council response to Action Point 5 of Hearing Session 5

¹⁰¹ Final SA Report revised reflecting May and October 2015 Draft MAC Schedule

¹⁰² Technical Advice Note (TAN) 23: ‘Economic Development’ paragraph 2.1.1

However, it was clear at the relevant Hearing that the allocation was largely unsupported by evidence and that the landowner had no intention to bring forward the site for its proposed use. As such, the allocation is proposed to be deleted by **MAC58** and **MAC PM15**. In response to this change, numerous representations have been received in support of the allocation, including significant evidence outlining the strategic opportunity that the allocation would provide. Nevertheless, the allocation remains unsupported by the landowner and, given the importance of deliverability in the examination of LDPs, the deletion of the allocation is necessary for soundness. The site would however remain within the settlement boundary meaning that such a health related use would not be precluded should an agreement be made with the landowner.

Employment and Housing Alignment

8.25. The evidence suggests that the supply of employment land is aligned to economic and labour market forecasts and takes into account Cardiff’s population projections, economic activity and unemployment rates and commuting patterns. As outlined above, the Plan provides for an appropriate geographical correlation between the distribution of employment and housing. Overall, it would provide for an appropriate level of growth in the context of Wales’ Capital City and would be sufficiently flexible to accommodate the level and type of growth forecast. The Plan’s approach is thus considered sound.

Safeguarding Existing Employment Land and Premises

8.26. The evidence points to substantial losses of employment land in some parts of Cardiff as well as a move away from traditional employment to other uses such as residential, retail and sui generis activities including car showrooms. The Employment Land and Commercial Property Strategy¹⁰³ recommends that further losses of employment land should be resisted if the City is to meet economic targets and to achieve a balance between jobs and homes. The Council recognises that there has been growing pressure over recent years for the development of employment land and premises for other uses, particularly housing¹⁰⁴. The Plan strategy thus seeks to protect existing industrial and warehousing land as well as high quality and accessible office accommodation. Policy EC1 identifies and seeks to protect existing employment areas in recognition of the important role they play as part of the employment land portfolio and their distribution across the City.

8.27. Policy EC3: ‘Alternative Use of Employment Land and Premises’ sets out the circumstances where development for other uses would be permitted. Proposed changes setting out the circumstances whereby conversion to alternative uses would be permitted within the policy itself rather than in the supporting text (**MAC24**) would improve clarity and consistency of interpretation.

Support for Business Expansion and Inward Investment

8.28. The Employment Land Study Update undertaken in 2011 anticipated that between 12 and 18 ha of the supply of employment land would come forward

¹⁰³ Employment Land and Commercial Property Strategy: Final Report by GVA Grimley(March 2009)

¹⁰⁴ Background Technical Paper No 4: Economic (September 2013)

from windfalls¹⁰⁵. The Council’s more recent assessment¹⁰⁶ identifies sites with scope for redevelopment or expansion on vacant land in existing employment areas amounting to over 14 ha. However, the absence of a policy framework to enable economic development proposals such as the expansion of existing businesses and inward investment to come forward on land that is not specifically allocated for such use may prevent Cardiff from fulfilling its economic aspirations.

- 8.29. Consequently, the Council propose a new Policy EC7: ‘Employment Proposals on Land not Identified for Employment Use’ (**MAC25**) setting out criteria against which proposals for employment use on unallocated land would be permitted. This would provide additional flexibility by allowing unanticipated opportunities to come forward. It would also ensure that the Plan could respond positively if economic growth is stronger than forecast. The proposed new Policy EC7: would thus be necessary to satisfy the coherence and effectiveness tests of soundness.
- 8.30. In conclusion, the Plan provides adequate opportunity to meet the identified need for employment land and sufficient flexibility to support employment generating development proposals. No further allocations put forward by representors are required to make the Plan sound, nor are suggested changes to the status of some employment sites. Subject to the recommended changes, it meets the tests of soundness.

Retail

- 8.31. Chapter 5 sets out the Council’s approach to retailing. The provisions of this chapter have been amended significantly through the Examination and, to reflect such changes, the Council has proposed the renumbering of the policies through MAC48. However, the proposed renumbering is inconsistent with policy number referencing included in other MACs. As such, and to avoid confusion, MAC48 is neither recommended nor endorsed. Nevertheless, such changes do not relate to the soundness of the plan and, in any event, the Council is authorised to make such final editorial changes, including presentational matters and consequential changes arising from the recommended MACs.
- 8.32. Consistent with national policy set out in PPW and Technical Advice Note (TAN) 4: ‘Retailing and Town Centres’, the Plan, as amended by **MAC40**, sets out a hierarchy of retail centres which establishes a sequential approach to the consideration of new retail developments. This is achieved through the introduction of a new policy entitled ‘Retail Hierarchy’ which places the Central Shopping Area at the head of the hierarchy, supported by a range of district and local centres. Retail proposals outside of these centres would either be assessed against the Policy entitled ‘Retail Development (Out of Centre)’ or that relating to ‘Retail Provision within Strategic Sites’. This approach is consistent with national policy and provides an appropriate framework for the consideration of retail proposals over the plan period.

¹⁰⁵ Cardiff Employment Land Study Update undertaken by DTZ (June 2011)

¹⁰⁶ Cardiff Council Examination Statement Hearing Session 10: Employment and Retail

- 8.33. The Plan is supported by a 2008 Retail Capacity Study and a 2011 based Update. The 2008 Retail Capacity Study concluded that, including commitments, there was not a county wide need for additional convenience, non-bulky comparison or bulky comparison floorspace. This stance was also advocated in the 2011 Update which refers to a material oversupply of floorspace to 2016 and recommends more of a focus on developing the existing retail offer. Despite the country being within the midst of a recession in 2011, the results of the sensitivity testing allow for a boost to the need for convenience and comparison goods floorspace and, on this basis, we are satisfied that the strategy is founded on a robust and credible evidence base.
- 8.34. Policy R1: ‘Retail Provision within Strategic Sites’, as submitted, is proposed to be amended by **MAC41**. This Policy provides the framework for the consideration of retail proposals within the residential-led strategic site allocations. Subject to the proposed changes, the Policy would support retail developments where: they are of an appropriate scale which satisfies an identified need; would not negatively impact on the vitality and viability of the designated centres; would be located along public transport corridors and easily accessible by walking and cycling; and where they would form part of a planned centre. The proposed changes would ensure consistency with national policy and would also ensure that its provisions are sufficiently robust to ensure that retail uses could be successfully integrated into the development of the strategic sites without impacting negatively on designated centres.
- 8.35. Key Policy KP10: ‘Central and Bay Business Areas’ provides the strategic framework for consideration of proposals within the Central and Bay Business Areas, appropriately outlining the range of uses that would be considered acceptable. Policy R2: ‘Development in the Central Shopping Area’ provides a criteria based approach to managing the diversity of uses within the Central Shopping Area identified on the Proposals Map, providing protection for shop uses whilst also recognising that an appropriate mix of complementary non-shopping uses can also contribute to the vitality and viability of shopping areas.
- 8.36. Proposals involving the loss of A1 shop related uses within protected shopping frontages would be assessed against the criteria set out in Policy R3: ‘Protected Shopping Frontages’. Concerns have been raised that the Plan adopts an outdated approach by providing too much protection for A1 uses. However, whilst the Policy does provide for an enhanced level of protection for the City Centre’s most important frontages, it does not preclude complementary uses where they would not undermine the primary shopping role of that frontage. As such, we are satisfied that the policy strikes an appropriate and necessary balance. **MAC42** and **MAC PM14** would ensure that the protected frontages are identified on the Proposals Map. These changes add clarity and certainty to the retail strategy and are therefore recommended.
- 8.37. Policy R5: ‘District Centres’ seeks to promote and protect the shopping role of the District Centres identified on the Proposals Map, whilst Policy R6 provides a similar role for the identified Local Centres. Concerns have been raised in relation to the status of Cardiff Gate Retail Park, most notably in relation to its omission from Policy R5. Specifically, it has been submitted that the presence of a large food store with integral post office and pharmacy on site, means that the retail park, at least in part, appears to function as a District Centre for people living and working in this part of Cardiff, particularly given its distance

from other identified centres. Indeed, it was clarified at the Hearings that a recent grant of planning permission would mean that the retail park would soon benefit from a leisure facility, smaller shops and potential café or restaurant uses typical of a District Centre.

- 8.38. However, in response to a request for further information¹⁰⁷, the Council submitted that the current nature and format of the vast majority of the retail park, including the presence of the large bulky goods retail warehouse units that are restricted by planning condition, remain more akin to an out of centre retail park. Indeed, we were able to appreciate at a site visit that the retail park does not currently possess the physical characteristics of a District Centre. Notwithstanding this, should all or part of the retail park be designated as a District Centre, then the bulky goods units would effectively become edge of centre, which could potentially be a threat to the retail strategy and ‘town centre first’ approach advocated through the Plan. Accordingly, we are satisfied that the Plan’s approach of excluding Cardiff Gate Retail Park from the list of designated District Centres is soundly based.
- 8.39. The proposals relating to both the District and Local Centre designations are sound in all other respects. Indeed, they are based on a robust assessment of the role and function of such areas¹⁰⁸ and have been identified in accordance with the advice contained within national planning policy. **MAC44** and **MAC45** lift elements of the reasoned justification into the policy wording of R5 and R6 respectively and, subject to these changes, the Policies would provide a sound basis for the determination of planning applications affecting such designations.
- 8.40. Subject to **MAC46**, which deletes the requirement for proposals for A3 uses within 400 metres of a school to be considered against Policy C7: ‘Health’, Policy R7: ‘Food and Drink Uses’ provides a robust framework for assessing proposed food and drink related uses. It has been suggested that the test of whether such uses would cause unacceptable harm to the shopping role and character of the designated centres is unnecessarily restrictive. However, we are satisfied that such wording is consistent with national policy and that the aims of the Policy are soundly based.
- 8.41. Policy R8: ‘Protection of Local Shopping Parades’ of the Deposit Plan sought to provide protection for local shopping parades. However, the Policy lacks clarity, with the status of such parades not identified within the retail hierarchy. Moreover, such designations would not be provided with a spatial dimension on the Proposals Map. As such, the Policy is not adequately justified in light of the advice contained within national policy and, for this reason, **MAC47**, which proposes the deletion of the Policy in its entirety, is recommended. However, to reflect national policy, the valuable role of smaller groups of shops and individual ‘corner shops’ would be referenced in the reasoned justification to Policy R6, as amended by **MAC45**.
- 8.42. Policy R4 of the submitted Plan provides the framework for out of centre retail developments. Subject to **MAC43**, which proposes the deletion of those elements of the reasoned justification that go beyond national policy and

¹⁰⁷ Council’s response to Action Point 8 of Hearing Session 10

¹⁰⁸ Background Technical Paper 7: District and Local Centres (September 2013)

established case law, it provides an effective basis for the determination of such planning proposals.

- 8.43. On this basis, and subject to the recommended changes identified, the Plan’s retail strategy is soundly based.

9 Settlement Boundaries and Green Belt

- 9.1. The Plan’s settlement boundaries are clearly defined on the Proposals Map and play an important role in establishing the overarching principles for the strategic management of the spatial growth of Cardiff. Policy KP3(B): ‘Settlement Boundaries’ stipulates that all areas outside of the defined settlement boundaries would be referred to as ‘countryside’, where a corresponding presumption against inappropriate development would prevail. Such provisions are critical to the management of growth within the City and, given that they would be consistent with the approach advocated through national planning policy¹⁰⁹, the approach is soundly based.
- 9.2. The methodology for defining the Plan’s settlement boundaries is clear, logical and appropriate. Wherever possible, the boundaries follow defined physical features and have been drawn to respect the characteristics of specific parcels of land, together with their planning histories. This approach provides the necessary certainty to inform planning processes and is consistent with the strategic aims and objectives of the Plan. **MAC PM1**, amends the settlement boundary at Strategic Site G to follow the River Rhymney. This ensures that the boundary conforms to the general approach described above and is therefore recommended.
- 9.3. Inconsistencies between settlement and allocation boundaries at Strategic Sites C and G were discussed at the respective Hearing sessions. Specifically, the Plan proposes that the settlement boundaries be drawn tighter than the allocation boundaries at both sites to reflect the area that the Council considers to be developable. This approach is consistent with the Schematic Frameworks identified in Policies KP2 (C) and KP2 (G), which identify the parcels of land located outside of the proposed settlement boundary as retained woodland and open space in the case of Site C and as an area of open space in respect of Site G. As this approach would be embedded into the adopted Plan via the Schematic Frameworks¹¹⁰, no change is necessary to make the Plan sound in this respect.
- 9.4. Policy EN1: ‘Countryside Protection’ expands upon the policy framework set by Policy KP3 (B) and, subject to **MAC26**, accurately reflects national policy set out in PPW and Technical Advice Note (TAN) 6: ‘Planning for Sustainable Rural Communities’. **MAC26** would also ensure that the requirement for landscape assessments is elevated into the Policy wording, consistent with the requirements of Policy EN3: ‘Landscape Protection’, whilst superfluous elements of the reasoned justification, including the requirement for Design and Access Statements, would be deleted from the Plan. Such changes add clarity and certainty to the Plan and are therefore recommended.

¹⁰⁹ Planning Policy Wales and PPW Technical Advice Note 6: ‘Planning for Sustainable Communities’

¹¹⁰ MAC5

- 9.5. Policy EN2: ‘Conversion, Extension and Replacement Buildings in the Countryside’ provides a criteria-based policy against which such proposals would be assessed. The submitted version of the policy lacked clarity and included potential inconsistencies in terms of interpretation of the policy. **MAC27** seeks to rectify such concerns by resolving potential tensions within the Plan and ensuring consistency with national policy. Subject to this change, Policy EN2 provides a sound policy basis for use through the development management process.

Green Belt

- 9.6. The Plan proposes the designation of an extensive area of land north of the M4 as Green Belt. This is proposed through Policy KP3(A): ‘Green Belt’ and, together with the proposed approach to settlement boundaries, would seek to strategically manage the future built form of Cardiff’s urban area and protect the setting of the city beyond the period covered by the Plan. PPW¹¹¹ sets the framework within which Green Belts should be designated, specifically stating that the most important attributes are their permanence and their openness¹¹². It also goes on to clarify the purpose of a Green Belt which is to: prevent the coalescence of large towns and cities with other settlements; manage urban form through controlled expansion of urban areas; assist in safeguarding the countryside from encroachment; protect the setting of an urban area; and assist in urban regeneration by encouraging the recycling of derelict and other urban land¹¹³.
- 9.7. In light of the substantial growth envisaged in Cardiff over the Plan period, in particular the extensive greenfield allocations together with significant development pressures within the south east region of Wales, the Council consider that the proposed designation is necessary to effectively manage the urban form, safeguard the countryside from encroachment and protect the green backdrop which is considered to represent a strategically important setting to the city. However, to the west, north and north-east of the proposed Green Belt are defensible borders in the form of steep topography and semi-ancient woodland whilst the M4 motorway lies to the south and nearby settlements are some distance away to the north, north-west and south-west. Given the use of the land beyond the proposed Green Belt and the extensive greenfield allocations proposed within the Plan, it is clear that the threat of urban coalescence is not central to its purpose in this case.
- 9.8. Openness is an important attribute of any Green Belt. Through the examination process, we have sought to establish whether the concept of openness could be applied to the area proposed as Green Belt. In response¹¹⁴, the Council has referred to the Landscape Study for Cardiff¹¹⁵ which lists the positive and negative attributes for the various landscape character areas comprising the proposed Green Belt, including the Garth Hill Uplands, Pentyrch Ridges and Valleys, the Fforest Fawr and Caerphilly Ridge and the Caerphilly Ridge

¹¹¹ Planning Policy Wales, section 4.8

¹¹² Planning Policy Wales, paragraph 4.8.5

¹¹³ Planning Policy Wales, paragraph 4.8.3

¹¹⁴ Council Response to Action Point 2 of Hearing Session 12

¹¹⁵ Landscape Study of Cardiff, Atlantic Consultants, May 1999

Foothills. Specifically, the study highlights that, in terms of landscape and topography, the concept of openness can be applied to the area identified. The presence of specific areas of land that do not command extensive views across the City, including undulations and minor stream valleys, are acknowledged. However, such areas clearly form an integral element of the wider landscape and, for this reason, we are satisfied that it is considered as such.

- 9.9. Consistent with the requirements of national policy, the Council has been required through the examination to demonstrate why it is considered that normal planning and development management policies would not provide the necessary protection. In doing so, it has referred to the significant development pressures within the area and the cumulative harm that has been caused in recent years by incremental developments. The Council has made specific reference to a review of planning applications determined since 2000, which is considered to reveal a marked increase in the number of development proposals approved in this area, particularly for single dwellings and associated residential developments¹¹⁶. However, it became clear through the examination that a high proportion of the applications considered as part of this review related specifically to developments that represent policy exemptions under national policy, including conversions and replacement dwellings. This evidence does not, therefore, unequivocally support the need for Green Belt, particularly given that such developments are excluded from the definition of inappropriate development in Green Belts, as outlined in PPW¹¹⁷. In addition, it remains unclear as to how factors such as the lack of an up-to-date development plan and a limited land supply had impacted upon such historic applications.
- 9.10. Nevertheless, the pressure for development within Cardiff is undeniable, with the undeveloped area proposed as Green Belt no exception. Indeed, such development pressures are reflective of Cardiff’s critical role within the south east region and more widely as the capital city of Wales. Within this context, there is little doubt that incremental developments north of the M4 could have potential to cause cumulative harm to the distinctive green back drop to the City. As such, the additional protection that would be provided by the presumption against inappropriate development in a Green Belt would serve a useful planning purpose. Specifically, it would give priority to maintaining the openness of the area and would, as such, provide a level of protection beyond that offered by other planning and development management policies. Indeed, such a designation would complement the other policies within the Plan by assisting in the wider management of the urban form, safeguarding the countryside from encroachment and protecting the strategically important setting of the city.
- 9.11. A fundamental characteristic of any Green Belt, however, is its permanence. Specifically, PPW states that, when considering a Green Belt designation, local planning authorities should ensure that a sufficient range and choice of development land is available which is suitably located in relation to the existing urban edge and the proposed Green Belt, bearing in mind the longer term need for development land, the effects of development pressures in areas beyond the

¹¹⁶ Council’s Response to Action Point 2 of Hearing Session 12

¹¹⁷ Planning Policy Wales paragraph 4.8.16

Green Belt and the need to minimise travel¹¹⁸. There is little to demonstrate that such longer term implications of a Green Belt designation have been fully explored, particularly given the strategic approach to planning advocated through the Planning (Wales) Act 2015.

- 9.12. We also note that, at deposit stage, there was no cross-boundary support for the designation of areas in Cardiff as either Green Belt or Green Wedge and in discussions as part of the joint working it was agreed that it was necessary to look beyond the period of the LDP when considering what areas needed protective designations to avoid preventing further growth options¹¹⁹. Indeed, there is no doubt that the permanence of a Green Belt designation would have potential to prejudice the conclusions reached through a regional approach to planning, particularly given that evidence submitted to the examination indicates that a Strategic Development Plan for the south east region is likely to be adopted in advance of the end date of the LDP.
- 9.13. Despite this position, the Council has made it clear that it considers that a Green Wedge designation would fail to provide the necessary protection for the setting of the City. There has also been considerable public support for the allocation of a Green Belt, also evidenced through representations made on the consultation following the additional hearings. Nevertheless, PPW is clear that Green Wedges may be justified where land is required to serve the same purpose as a Green Belt, save for the level of permanence. In this respect, replacing the proposed Green Belt designation with a Green Wedge would enable the openness of the area, and the setting of the City, to be appropriately protected during the lifetime of the Plan, with further strategic consideration given to the need, form and function of a Green Belt through any subsequent strategic development plan process.
- 9.14. Considerable weight should be attached to the need to avoid prejudicing the outcomes of any strategic approach to planning and, as such, a change is necessary in the interest of achieving a sound Plan. Accordingly, it is recommended that the proposed Green Belt designation be replaced in its entirety by a Green Wedge designation (**Inspector MAC1**). This change has been subject to consultation and the necessary SA has been undertaken. The SA refers to the change as having the potential to weaken the Council’s ability to deliver the spatial strategy through developers holding back on brownfield regeneration and the risk of the Green Wedge designation being “rolled back” during the Plan period. However, a Green Wedge would have the same policy effect as a Green Belt and there is little evidence that the Green Wedge would be “rolled back” as part of the development plan review process. The change would therefore not undermine the Plan’s Strategy.

10 Natural Environment, Natural Resources & Green Infrastructure

Natural Environment and Green Infrastructure

- 10.1. Changes proposed by **MAC15**, would add clarity to Policy KP16: ‘Green Infrastructure’ by removing the word ‘created’, thereby providing a suitable

¹¹⁸ Planning Policy Wales, paragraph 4.8.8

¹¹⁹ Summary of Cross Boundary Working (September 2013)

framework for the protection, enhancement and management of Cardiff’s distinctive natural heritage assets. Moreover, changes proposed by **MAC31** would address internal tensions in Policy EN6: ‘Ecological Networks and Features of Importance for Biodiversity’, thereby providing sufficient protection for ecological networks and biodiversity features of importance. In addition Policy EN8: ‘Trees, Woodland and Hedgerows’ would adequately protect Cardiff’s trees, woodland and hedgerows of natural heritage or amenity value.

- 10.2. Policy EN5: ‘Local Nature Reserves and Non-statutory Sites of Nature Conservation and Geological Importance’ would provide specific protection for Cardiff’s designated sites. **MAC30** ensures that this Policy would incorporate sites of international and national nature conservation importance. Such amendments are consistent with both the legislative requirements and national policy and therefore render the Policy sound. Due to practicalities of mapping, locally designated sites would be identified on the Constraints Map, along with other higher level designations. **MAC72** adds clarity to the Plan’s proposals by ensuring that all designated sites covered by Policy EN5 are listed in the Plan’s appendices.
- 10.3. Policy EN7: ‘Priority Habitats and Species’ sets out circumstances where development proposals that would have a significant adverse effect on the continued viability of habitats and species identified as priorities in the UK or Local Biodiversity Action Plan would be permitted, including situations where mitigation and compensatory measures would be necessary. **MAC32** rectifies the omission of legally protected species from the submitted version of the policy and, subject to this change, the policy is sound.
- 10.4. Policy EN3: ‘Landscape Protection’ provides protection for the landscape and the setting of the City, with particular priority given to protecting, managing and enhancing the character and quality of five Special Landscape Areas (SLAs)¹²⁰. The SLAs have been designated on the basis of the LANDMAP assessment process as recognised by PPW. Subject to the changes proposed through **MAC28**, which adds greater clarity to the policy, its provisions are soundly based and supported by a robust and credible evidence base.
- 10.5. Policy EN4: ‘River Valleys’ would, amongst other things, specifically protect, promote and enhance the natural heritage, character and other key features of Cardiff’s river corridors. **MAC PM8** proposes to define the boundary and **MAC PM9, MAC PM10, MAC PM11** and **MAC PM12** propose changes to the boundaries of the designation on the Proposals Map. Such changes add clarity and certainty to the Plan’s proposals and are therefore recommended. The Council has proposed, through MAC29, to amend Policy EN4 to refer to Natural Resources Wales (NRW) as opposed to Countryside Council for Wales (CCW). However, as this is not a matter of soundness, it is not recommended in this Report.
- 10.6. On the basis that the Plan should be read as a whole and alongside national policy, the approach to the natural environment and green infrastructure satisfies the tests of soundness.

¹²⁰ As evidenced by Evidence Base documents EBL 01- 04

Natural Resources

- 10.7. Policy KP15: ‘Climate Change’ seeks to mitigate against the effects of climate change and adapt to its impacts. **MAC14** amends this Policy to better reflect national policy in relation to development and flood risk and to ensure consistency with other Policies within the Plan. Policy EN14: ‘Flood Risk’ would also be amended by **MAC36**, which is necessary to adequately reflect the principles set out in national policy¹²¹ and ensure that the Constraints Map is updated to reflect the most up-to-date development advice maps at the time of adoption. The same change would also ensure that relevant requirements for Flood Consequences Assessments (FCA) and Sustainable Urban Drainage Systems (SUDS) are set out in policy wording, as opposed to the reasoned justification.
- 10.8. Policy EN12: ‘Renewable Energy and Low Carbon Technologies’ aims to encourage developers of major and strategic sites to incorporate renewable and low carbon technologies into developments. **MAC34** adds clarity and consistency to the Policy, whilst also specifying that further guidance in relation to energy assessments will be issued in the form of Supplementary Planning Guidance (SPG). Together with Policy KP5: ‘Good Quality and Sustainable Design’ and Policy KP15, the Plan’s approach to combating and adapting to Climate Change and maximising renewable energy is one that is soundly based.
- 10.9. Policy KP18: ‘Natural Resources’ seeks to minimise impacts on the city’s natural resources and minimise pollution, whilst Policy EN13: ‘Air, Noise, Light Pollution and Contaminated Land’ seeks to prevent unacceptable harm caused by air, noise, light pollution or land contamination. **MAC17** and **MAC35** respectively update these policies to better reflect the legislative definition of land contamination. Policy EN10: ‘Water Sensitive Design’ provides a framework for the management of water through planning and urban design and Policy EN11: ‘Protection of Water Resources’ seeks to prevent unacceptable harm to the quality or quantity of waters. Having regard to the presence of separate legislation and the Plan’s monitoring framework, as amended by MAC75, the approach is considered sound.
- 10.10. Therefore, subject to the recommended changes, and on the basis that the Plan should be interpreted as a whole, the proposed approach to natural resources is sound with respect to the tests of soundness.

11 Historic Heritage

- 11.1. Policy KP17: ‘Built Heritage’ seeks to protect, manage and enhance Cardiff’s distinctive heritage assets. **MAC16** proposes an amendment to the Policy to ensure that registered historic landscapes are covered by the provisions of the policy. Subject to this change, the Policy provides a suitable high level framework for the delivery of the Plan’s aims and objectives in respect of heritage assets.
- 11.2. Policy EN9: ‘Conservation of the Historic Environment’ provides a more detailed development management policy in respect of Cardiff’s built heritage assets.

¹²¹ Planning Policy Wales and PPW Technical Advice Note (TAN) 15: ‘Development and Flood Risk’

Representations submitted to the Examination suggested that the Policy should set a higher level of protection. However, the policy is consistent with the statutory tests¹²² and those set out in national policy and is therefore, soundly based. Subject to **MAC33** and **MAC73**, which would add clarity to the Plan by ensuring that each area of protection covered by Policy EN9 is listed in the Plan’s appendices, the Policy would provide a sound and effective framework for the determination of planning applications. The Council has also made a commitment to ensure that the boundaries of the identified areas of protection are up-to-date on the Constraints Map at the time of adoption of the Plan and, whilst this strictly lies outside of the scope of the LDP Examination, such an assurance is supported.

- 11.3. Accordingly, the Plan’s approach to built heritage and the historic environment is soundly based.

12 Minerals

- 12.1. National minerals policy is set out in Minerals Planning Policy Wales (MPPW) (2001) and is supplemented by Minerals Technical Advice Note 1: Aggregates (2004) (MTAN 1) and Minerals Technical Advice Note 2: Coal (2009) (MTAN 2). The South Wales Regional Aggregates Working Party (SW RAWP) prepared a Regional Technical Statement (RTS) dated 2008 and this has now been superseded by the RTS 1st Review, dated 2014. This document outlines the important matter of supply and demand for the South Wales region, specifically setting out the strategy for the provision of aggregates. The position in respect of crushed rock indicates that Cardiff has a surplus of permitted reserves when compared to the requirements set out in the RTS 1st Review and, as such, there is no requirement for an allocation within the LDP. Nevertheless, the Plan adequately recognises that Cardiff is an important provider of minerals within the region.
- 12.2. Policy KP11 provides the strategic framework for crushed rock aggregates and other minerals within Cardiff for the period covered by the Plan. Subject to **MAC11**, the Policy seeks to maintain a steady and adequate supply of minerals and contribute to aggregate supplies by promoting and supporting the efficient use of minerals, protecting existing mineral reserves and safeguarding potential resources from development that would preclude their extraction and maintaining a minimum 10 year land bank of permitted crushed rock aggregate reserves. Moreover, the Policy would safeguard wharves from development that would prevent their use for landing marine dredged sand and gravel and provide support for appropriate applications for sand and gravel extraction. The changes proposed through **MAC11** add clarity to the Policy and ensure consistency with both national policy and the framework set at the regional level. Subject to these changes, the Policy provides a suitable strategic level policy for the Plan period.
- 12.3. Representations from the industry have suggested that the Plan should provide strategic level guidance for industrial limestone and High Specification Aggregate (HSA). However, MPPW¹²³ recognises that high purity limestone is

¹²² Planning (Listed Buildings and Conservation Areas) Act 1990

¹²³ Minerals Planning Policy Wales, paragraph 81

extracted jointly with limestone for aggregate use and that it can be difficult to differentiate between the materials produced for the two different markets until after it has been processed. As such, and bearing in mind that the Plan makes provision for the protection of limestone reserves and potential resources, such an omission does not render the Plan unsound. Moreover, only a small area of Category 1 HSA is identified within Cardiff’s administrative boundaries and, as this is already protected by the Coal Safeguarding Area, it is neither practicable nor necessary to identify the area separately.

- 12.4. Policy M1: ‘Mineral Limestone Reserves and Resources’ seeks to safeguard mineral reserves from development that could cause sterilisation and thereby prevent their extraction. **MAC60** amends this Policy by also identifying the resource areas at Creigiau and Ton Mawr Quarries as ‘Preferred Areas’ of known resource suitable for the future working of limestone. These changes remove ambiguity, reflect national policy and are therefore recommended.
- 12.5. With regards the approach to safeguarding, it was agreed at the Hearings that the three separate policies included in the submitted version of the Plan could be effectively merged into a single criteria based policy, expanding on the framework set by Policy KP11. Accordingly, **MAC64**, **MAC65** and **MAC66** delete Policies M7, M8 and M9 respectively, whilst **MAC67** introduces the new integrated and criteria based safeguarding Policy M7: ‘Safeguarding of Sand and Gravel, Coal and Limestone Resources’. The new Policy M7 has had input from the industry, would provide greater clarity and would enable a more balanced and reasonable assessment of development proposals submitted within the identified safeguarding areas. It also explains the reasoning for not separately identifying the small amount of Category 1 Sandstone HSA resource, as referred above. These changes are necessary for soundness and are therefore recommended.
- 12.6. The general approach to safeguarding reflects that outlined in the British Geological Survey’s (BGS) good practice guidance¹²⁴ insofar as it is consistent with Welsh Policy. Moreover, the safeguarding areas for sand and gravel, coal and limestone are clearly distinguishable on the Proposals Map. However, **MAC PM16**, which excludes international and national designations of environmental and cultural importance from the coal safeguarded area, is necessary to ensure consistency with the requirements of national policy. Likewise, the changes proposed through **MAC PM17** are necessary to correct errors on the Proposals Map and are therefore recommended. On this basis, and subject to the MACs recommended in this report, we are satisfied that the approach to safeguarding is soundly based.
- 12.7. Notwithstanding the fact that Cardiff’s existing minerals landbank means it is unlikely to be necessary to grant further permissions for mineral resource release within the Plan period, Policy M2: ‘Preferred Order of Mineral Resource Release’ sets out the sequential approach that would be adopted to assess such needs should it become necessary. This, alongside **MAC75**, which enables the monitoring framework to effectively monitor the landbank situation, would ensure that the Plan’s approach is reasonably flexible to enable it to deal with changing circumstances. Moreover, subject to **MAC61**, which improves the

¹²⁴ BGS Mineral Safeguarding in England: Good Practice Advice 2011

coherence and effectiveness of the Policy, whilst also ensuring consistency with national policy¹²⁵, the RTS 1st Review and the other Policies in the Plan, Policy M2 and its reasoned justification represents a sound basis for considering such proposals.

- 12.8. Concerns have been raised in relation to the potential for lateral extensions at Creigiau Quarry. However, Policy M2, as amended, is clear that any such extension or deepening application would only be considered acceptable where it would involve the swap of reserves for those considered to be environmentally sensitive. Given that the historic permission at Creigiau Quarry remains extant, this represents a pragmatic proposal that is soundly based.
- 12.9. Policy M5 aims to ensure that all proposals for mineral working or related development are accompanied by plans for restoration and suitable after-use of the site, in accordance with MPPW and MTAN1. Meanwhile, Policy M3: ‘Quarry Closures and Extension Limits’ identifies those areas where measures to prevent further mineral working will be sought in accordance with the provisions of MPPW. This Policy, as amended by **MAC62**, states that, to eliminate any doubt over possible re-working at the identified sites, measures to prevent further extraction and secure restoration and landscaping works will be pursued. Such measures will include the use of Prohibition Orders, consistent with the advice contained within MPPW.
- 12.10. Concerns have been raised regarding the status of the sites included in Policy M3, particularly whether they are in fact inactive. In this respect, the Council has clarified that Cefn Garw and Creigiau Quarries are in fact classified as ‘inactive sites’ in the RTS 1st Review (2014)¹²⁶. However, in recognition that only parts of the Creigiau Quarry are no longer considered appropriate for mineral working, only the southern and western parts of the quarry have been identified under Policy M3, consistent with the approach advocated through Policies M1 and M2. Highland Park and West End Brickworks do not meet the definition of aggregate quarries and are not, therefore, listed as ‘inactive sites’ at Appendix B of the RTS 1st Review (2014). However, it is common ground that they are in fact dormant and, as they are unlikely to be reactivated in the foreseeable future, their inclusion within the Policy is consistent with the general thrust of national policy.
- 12.11. Blaengwynlais Quarry was included within the submitted version of Policy M3, reflecting the Council’s concerns relating to its sensitive location and access constraints. However, as it does not comprise a formally inactive site, **MAC62** proposes its omission from the Policy, with any subsequent applications to be considered on their merits under the criteria provided by Policy M2. This approach rectifies any conflict with national policy¹²⁷ and, given the improvements to Policy M2 proposed under **MAC61**, any concerns regarding the environmental sensitivities of the site or indeed the access arrangements can be adequately addressed at the development management stage. **MAC61** and **MAC62** are therefore recommended.

¹²⁵ Policy Clarification letter CL-05-14

¹²⁶ RTS 1st Review (2014), Appendix B, Table 4: Inactive Aggregate Quarries in South Wales (2013)

¹²⁷ Minerals Planning Policy Wales, paragraph 19

- 12.12. Within the context set by MPPW¹²⁸, Policy M4: ‘Minerals Buffer Zones’ seeks to protect permitted mineral reserves and those resources identified as potentially suitable for future working from incompatible development. MTAN1¹²⁹ sets out minimum distances for buffer zones which should be adopted unless there are clear and justifiable reasons for reducing distances. In this respect, the Council has proposed bespoke buffer zones for each individual quarry, all of which are more extensive than the minimum distances set out in national policy. The buffer zones proposed are based on extensive research that measured the actual impacts of the blasting at each site¹³⁰. Based on this cogent evidence, the approach advocated is sound.
- 12.13. New Policy M8: ‘Areas where coal working will not be acceptable’ is proposed through **MAC68**. This policy identifies the areas within which coal working would not be considered acceptable, unless exceptional circumstances indicate otherwise. The aim of the Policy is to protect the amenity of existing residential properties and international and national designations of environmental and cultural importance. This approach is consistent with the advice contained within MPPW¹³¹ and MTAN 2¹³² and represents a sufficiently flexible and sound proposal.
- 12.14. The Plan acknowledges that there is a reliance on marine dredged sand and gravel which provides for an adequate supply to meet the majority of demand in Cardiff. Longer term solutions are being considered and the resource areas identified on the Proposals Map are adequately protected should they comprise a strategic solution in future. Policy M6: ‘Dredged Aggregate Landing and Distribution Facilities’ provides a framework for marine dredged operations, protecting existing wharves and providing assessment criteria for new or improved sand and gravel wharves and related facilities. The changes proposed through **MAC63** ensure that proposals for the provision and improvement of landing and distribution facilities for marine dredged aggregates within the sand wharves identified on the Proposals Map are not prejudiced. Such changes improve the clarity and certainty of the policy whilst also ensuring consistency with national policy. As such **MAC63** is recommended.
- 12.15. Therefore, subject to the changes recommended in this report, the Plan’s approach to minerals is soundly based.

13 Waste

- 13.1. The planning policy framework for waste in Wales changed significantly following the publication of the revised Technical Advice Note (TAN) 21: ‘Waste’ in 2014 and the more recent updates to PPW. Specifically, the new TAN 21 replaced the previous requirement for plans to provide for the land use requirements of the Regional Waste Plan (RWP), with monitoring arrangements to assess the capacity of the region against the Collections, Infrastructure and Markets Sector Plan (CIM Sector Plan) tonnage figures. The CIM Sector Plan approach is based on providing for likely future capacity across the region,

¹²⁸ Minerals Planning Policy Wales, Paragraph 40

¹²⁹ Minerals Technical Advice Note (MTAN), 1 Paragraph 71

¹³⁰ Background Technical Paper No 9: Minerals (September 2013)

¹³¹ Minerals Planning Policy Wales, Paragraph 15

¹³² Minerals Technical Advice Note (MTAN) 2, Paragraph 26-31 and 49-54

although regional monitoring and working arrangements have yet to be formalised and the first waste monitoring report introduced by TAN 21 yet to be issued.

- 13.2. Policy KP12: ‘Waste’ provides a strategic framework for the management of waste over the Plan period and, subject to **MAC12**, it is consistent with the approach advocated through the amendments to TAN 21. Specifically, the changes make reference to the CIM Sector Plan approach and delete references to the estimated land take requirement of 20.9 hectares identified through the now revoked RWP process. The proposed changes have full regard to the changes to national policy and are therefore necessary for soundness.
- 13.3. Policy W1: ‘Land for Waste Management’ allocates land at Lamby Way for the purposes of waste management. However, existing landfilling was due to cease at the site in September 2015¹³³ and the Council has confirmed that there are no plans currently to provide any additional waste landfill facilities on site. The Council has clarified that the site was initially included as an allocation within the context of the land take requirements set by the RWP and, in light of the number of waste management facilities that have relatively recently been granted planning permission¹³⁴, as well as the suitability of B2 industrial sites for such purposes, the allocation is now proposed for deletion under **MAC69** and **MAC PM18**. Notwithstanding such matters, the site would be located within a C1 flood zone, a SSSI designation and within the confines of the River Valley designation proposed under LDP Policy EN4. Accordingly, the allocation conflicts with both national planning policy and the wider objectives of the LDP and, for this reason, the deletion of the site is recommended.
- 13.4. The Council clarified at the Hearing session the important role on-going waste projects such as Prosiect Gwyrdd and the Cardiff Organic Treatment Project will have in meeting the ambitious waste and recycling targets set at the European and national levels¹³⁵. Moreover, the robust indicators and triggers included in the monitoring framework, as amended by **MAC75**, would complement the new regional monitoring arrangements set out in TAN 21 and would be sufficiently robust to ensure that waste capacity requirements for the region, as set out in the CIM Sector Plan (2012), are met.
- 13.5. Policy W2: ‘Sites for Waste Management Facilities’ seeks to provide a framework for the assessment of planning applications for waste management facilities. **MAC70** would amend this policy to ensure consistency with the CIM Sector approach and the requirements of TAN 21¹³⁶, whilst also affording policy status to requirements previously set out in the reasoned justification. This change adds greater clarity and consistency to the Policy and is therefore recommended. The Policy also clarifies that facilities for the handling, treatment and transfer of waste will generally be encouraged towards existing use class B2 general industrial land which provides for a range and choice of sites within the Plan period¹³⁷. This conforms to national policy¹³⁸ and, given

¹³³ Council’s Response to Action Point 14 of Hearing Session 15

¹³⁴ Council’s Response to Action Point 15 of Hearing Session 15

¹³⁵ Council’s Statement, Hearing Session 15, page 10

¹³⁶ PPW Technical Advice Note (TAN) 21 ‘Waste’, Paragraph 4.2

¹³⁷ Council’s Response to Action point 15 of Hearing Session 15

¹³⁸ PPW Technical Advice Note (TAN) 21 ‘Waste’, Paragraph 3.22

the industrial land supply figures for the area¹³⁹, would not adversely affect the Plan’s employment strategy.

- 13.6. Policy W3: ‘Provision for Waste Management Facilities in Development’ would require new developments to provide facilities for the storage, recycling and management of waste. This is consistent with national planning policy and would assist in meeting the challenging waste and recycling targets. Concern was raised at the Hearings regarding the provision for hazardous waste. However, this is not a requirement of national policy and, in any event, I am satisfied that the policy framework provided is sufficiently flexible and robust to deal with such proposals should they arise, with on-going monitoring providing an opportunity to adapt to any unforeseen circumstances.
- 13.7. The Waste section of the Plan, as amended by those MACs recommended below, has been prepared with due regard to the relevant legislation and national policy, as well as other relevant plans and policies. It would provide an appropriate framework for the assessment of waste management proposals and is, therefore, sound.

14 Other Development Management & Policy Considerations

- 14.1. Policy KP5: ‘Good Quality and Sustainable Design’ establishes the general principles against which the design of new developments would be assessed. Subject to **MAC7**, which amends criterion ix) to make reference to land contamination, the policy provides an effective basis for the determination of planning applications.
- 14.2. Policy H2: ‘Conversion to Residential Use’ provides an appropriate policy framework for the conversion of suitable space above commercial premises to residential use, whilst Policy H4: ‘Change of Use of Residential Land or Properties’ identifies the circumstances in which proposals for the conversion or redevelopment of residential properties to other uses outside of the Central and Bay Business Areas and District and Local Centres would be permitted. **MAC20** amends Policy H4 to ensure that any such change of use would not have an unacceptable impact on residential amenity.
- 14.3. Policy H5: ‘Sub-division or conversion of residential properties’ is proposed to be amended by **MAC21**. This change amends criterion i) by deleting the reference to proposed extensions to properties. As an extension may be considered acceptable in principle, this change is necessary to ensure that the policy is not unduly restrictive. Meanwhile, Policy H6: ‘Change of use or redevelopment to residential use’ strikes an appropriate balance in relation to proposals for the change of use, conversion or redevelopment of redundant premises, reflecting a particular localised issue. For this reason, it is soundly based.
- 14.4. Policy C1: ‘Community Facilities’ provides the policy context for new and improved community, health and religious facilities. **MAC49** adds clarity to this Policy and is therefore recommended. **MAC51** proposes a New Policy entitled

¹³⁹ Council Statement to Hearing Session 10: Erratum Tables

‘Protection of Existing Community Facilities’, with the purpose of rectifying an omission in the submitted version of the Plan. However, whilst the principles behind the policy are supported, the requirement to satisfy both criteria renders the policy ineffective. As such, MAC51 is not recommended. Nevertheless, simply replacing the word ‘and’ following criterion i with the word ‘or’ would enable the policy to function as intended. Indeed, such a change would rectify the omission in the submitted version of the Plan and would be consistent with the general thrust of the policy proposed by the Council. This change is necessary for soundness, would not undermine the SA process and is therefore recommended via **Inspector MAC2**.

- 14.5. Chapter 6 of the Plan provides a suite of policies relating to Open Space. Policy C3: ‘Protection of Open Space’ relates to the protection of existing Open Space, whilst Policy C4: ‘Provision for Open Space, Outdoor Recreation and Sport’ relates to the provision of new space. Policy C4 is amended by **MAC52**, which incorporates children’s play into the provision of the Policy. This change enables Policy C6: ‘Provision for Children’s Play’ to be deleted by **MAC54**. These changes avoid any unnecessary duplication and add clarity to the suite of policies and are therefore recommended. On this basis, and subject to the Council’s response to the matters raised at the Hearing¹⁴⁰, the Plan’s open space policies are consistent with national policy and are soundly based.
- 14.6. Policy C5: ‘Provision for Allotments and Community Growing’ proposed to seek provision of land for allotments on developments over 46 units. The Policy lacked clarity and was not justified by robust evidence. Therefore, in response to concerns raised at the Hearing, the Council proposes to delete the Policy in its entirety through **MAC53**. This change is necessary to ensure a sound Plan and is therefore recommended.
- 14.7. Policy C7: ‘Health’ is amended by **MAC55**. This change is necessary to delete reference to the location of fast food takeaways to ensure consistency with other Plan policies. It also makes the policy more focussed and is sound in all other respects.
- 14.8. Policy C8: ‘Planning for Schools’ and Policy C9: ‘New Education Facilities’ would be deleted by **MAC56** and **MAC57** respectively. However, a new Policy, which following the renumbering of the policies within the chapter would become New Policy C7: ‘Planning for Schools’, is proposed through **MAC59**. This approach avoids unnecessary repetition and provides an appropriate framework for the consideration of such proposals. Concerns have been made in relation to the proposed phasing. However, this adds necessary certainty to the delivery of such facilities which is particularly important given the scale of the sites allocated for development through the Plan process. Moreover, the Policy wording is suitably flexible to ensure that contributions would only be sought where a need has been identified and contributions will be negotiated and fairly and reasonably related in scale and kind to the development proposed.
- 14.9. Representations have suggested that a Policy is necessary to support the on-going expansion of Cardiff’s universities. However, no tangible evidence has been submitted to the Examination to demonstrate the growth anticipated and,

¹⁴⁰ Council Response to Action Point 8 of Hearing Session 16

in any event, concerns relating to the amenity of existing communities could be adequately dealt with under the provisions of the other policies within the plan and that set out in national policy. It was also submitted at the Hearings that the Plan should make provision for ‘Place Plans’. However, this has not been submitted as a proposal within the Plan and its omission does not render the Plan unsound. Notwithstanding this, should this be something the Council wish to progress, it could be a matter dealt with as SPG, outside of the scope of this examination.

15 Plan Monitoring, Implementation & Review

- 15.1. The Council accepted during the examination that Appendix 9, as submitted, did not set out a sufficiently clear and effective monitoring framework. Intervention strategies to address any delay were unclear and there was a lack of site specific targets and dates to monitor the delivery of development. A number of measures have been introduced to effectively monitor progress and take any necessary action to ensure delivery of the housing target. Firstly, the proposed changes would introduce new policies identifying the necessary infrastructure, including links to the IP for each strategic site and clearer timescales by which it is required. The monitoring framework, as proposed to be amended by **MAC75** would measure achievement of the 50:50 modal split target for all journeys over the Plan period; it would set out a programme for monitoring delivery of key infrastructure so that progress can be examined and it would identify what action would be taken if the delivery of infrastructure fails to progress as expected.
- 15.2. Secondly, a revised comprehensive trajectory would identify all the housing projected to come forward and identify the anticipated delivery rates, including for each of the strategic sites, against a delivery target sufficient to meet the housing requirement. Finally, the amended monitoring framework would link a commitment to take action if critical infrastructure does not come forward as expected and identify measures to be undertaken if the housing falls behind the projected target. We are satisfied that this is a proactive and flexible approach and the changes are necessary to ensure that there is always a forward looking monitoring process to identify problems with the delivery of necessary infrastructure long in advance of any difficulties arising and appropriate action being taken to ensure targets are met.
- 15.3. During the examination process the Council has developed in greater detail the targets and indicators for monitoring delivery of policies in the Plan. Other changes proposed by **MAC75** would enable more responsive monitoring over shorter time periods and reflect other proposed changes set out above. The Plan would also include an appendix listing proposed SPG to support the Plan and a timetable for preparation (**MAC74**). With these changes the Plan provides a robust mechanism for monitoring delivery, implementation and to establish when the Plan or individual policies need to be reviewed. It is also sufficiently flexible to deal with changing circumstances. The changes would ensure that the Plan satisfies the coherence and effectiveness soundness tests.

16 Overall Conclusions

16.1. We conclude that, with the binding recommended changes identified in this report and set out in Appendices A and B, the Cardiff Local Development Plan 2006 - 2026 satisfies the requirements of section 64(5) of the 2004 Act and meets the procedural, consistency and coherence and effectiveness tests of soundness in LDP Wales.

MAC Number	Chapter	Deposit Policy / Para No	HS/A P or other source	Proposed Change
Chapter 1:Introduction				
MAC1	1	1.1 – 1.19	1.4	<p>Update and amend paragraphs 1.1 – 1.19</p> <p>1. Introduction</p> <p><u>The purpose of and status of the need for a new adopted Local Development Plan (LDP)</u></p> <p>1.1 Cities change. Cardiff is no exception and has grown year on year for generations. This has seen Cardiff become the Capital City of Wales and centre of a wider city-region providing an important source of jobs and services for the whole of South East Wales.</p> <p>1.2 New homes, jobs, supporting transportation and other facilities <u>are</u> will be required to meet the needs of future generations. These needs must be carefully balanced against environmental and quality of life factors.</p> <p>1.3 The <u>adopted</u> Cardiff Local Development Plan (LDP) is the tool to address these issues. It represents a 'plan-led' approach to meeting future needs. All Local Authorities in Wales must prepare a LDP. Many have now been adopted, with others reaching advanced stages.</p> <p>1.4 Without a Plan in place, there would be an unplanned, piecemeal, 'free for all' which would not be desirable. In Cardiff, the need for a new</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>Plan is more acute than elsewhere for a number of reasons:</p> <ul style="list-style-type: none"> • The existing Development Plan framework is seriously outdated with the Structure Plans and Local Plan being over 16 years old; • In Cardiff, unlike most other Local Authorities in Wales, a Unitary Development Plan designed to replace the old Structure and Local Plans was never adopted; The first attempted LDP had to be withdrawn due to the Inspector's significant concerns (particularly critical of a 'brownfield-only' Strategy). The delay has caused the Plan period to be extended by 5 years, significantly raising the level of development required in this Plan and lengthening the period of time without an adopted Plan in place; • There is currently an insufficient housing land supply which has resulted in the Council losing planning appeals for development in the open countryside; • This is the first time in generations that Cardiff has no significant urban extensions taking place. Evidenced need for new homes is therefore not currently being met resulting in a build up of latent demand; and <ul style="list-style-type: none"> • Cardiff experiences significantly higher development pressures than many other parts of Wales. Many greenfield planning applications have recently been submitted underlining the need for a new, up to date framework to be put in place. <p>The Local Development Plan (LDP) process</p> <p>1.45 The <u>adopted</u> LDP will <u>provide</u> the statutory framework for the development and use of land within Cardiff over the Plan period (2006-2026). This fulfils the requirements of The Planning and Compulsory</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>Purchase Act 2004 which requires the Council to prepare a LDP. Once adopted, it will <u>It</u> replaces existing Structure Plans and Local Plans relating to Cardiff which are now outdated as explained above. <u>It and</u> will be used by the Council to guide and control development and provide the statutory local policy context for determining planning applications.</p> <p>1.56 The Plan <u>has been</u> must be prepared in accordance with formal regulations <u>and the</u> and involves numerous stages of preparation together with associated consultation and engagement. A document called the, 'LDP Delivery Agreement' <u>which</u> sets out a timetable for <u>its</u> preparation along with details of consultation as the Plan progressess. This was agreed with the Welsh Government on 5th December, 2011. Progress to date has fully accorded with the agreed timetable.</p> <p>The Deposit LDP</p> <p>1.7 The Deposit LDP is an important stage of the plan preparation process. It contains an overall Strategy together with land use allocations and detailed policies. The Plan aims to deliver the Council's overall vision as set out in the 10 year, 'What Matters' Strategy (2010-2020) and also takes account of the national and regional policy framework (summarised in Appendix 3). Furthermore, a wide range of evidence has been collected to inform the plan along with collaborative working, and findings from consultation and engagement processes.</p> <p>1.8 Importantly, the Deposit LDP is the next stage of the LDP preparation process following the Preferred Strategy which was approved by Council in October 2012. The Preferred Strategy set out the proposed strategic approach to meeting development needs over the Plan period and was subject to a six week</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>consultation period. The Deposit LDP therefore takes full account of the Preferred Strategy, the consultation findings, analysis of up to date evidence together with all other relevant material factors.</p> <p>1.69-The Plan contains the following sections:</p> <p>Foreword; Summary; Introduction; LDP Vision & Objectives; Strategy, Key Policies and Key Diagram; Detailed Policies; Monitoring and Implementation; How to make comments; Proposals Map and Constraints Map; <u>Appendices.</u></p> <p>1.10 Numerous Appendices and Supporting Documents have also been prepared which contain relevant background work underpinning the Plan. These have been placed in the public domain to assist readers in gaining a full understanding of the evidence informing Plan content. This also allows the Deposit LDP to be a more succinct and user friendly document without being over cluttered with technical material. A full list of Supporting Documents is provided in the contents section of this document.</p> <p>Deposit LDP and Alternative Sites consultation</p> <p>1.11 The Deposit LDP will be subject to 6 weeks consultation. Full details of how to make comments are provided in Section 7. The Council will acknowledge and</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>carefully consider all comments made. Following the Deposit LDP consultation process, the Council must also consult on 'alternative sites' which will involve seeking views on alternative sites for development which have been put forward by parties commenting on the Deposit LDP.</p> <p>1.12 The Council will then consider all comments made and prepare any proposed, 'focussed changes' to the Deposit LDP which depending on timing is either before or after it is submitted for a process of formal examination. A series of Supporting Documents will also be submitted including an updated version of the Initial Consultation Report summarising representations made along with the Council's response.</p> <p>Independent examination</p> <p>1.13 Ultimately, approval for the Plan rests with an independent Inspector who will decide if the Plan is fit for purpose by assessing it against ten, 'tests of soundness'. These are listed in Appendix 8 together with an explanation of how the Council considers the document contents and preparation process accord with these tests.</p> <p>1.14 The examination process will commence once the Council formally submits the plan to the Welsh Government. The process will be co-ordinated by the independent Inspector and include examination sessions to explore issues. Further evidence may be provided by the Council and others to assist the independent Inspector fully explore any relevant matters. Once the examination process is completed, the independent Inspector will issue a binding report including any changes required to the Plan.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>Adoption, Monitoring and Review</p> <p>1.7<u>15</u> The Council must formally adopt the LDP within 8 weeks of the receipt of the independent Inspector's Report. Following this, <u>the</u> Council will work with others to implement the Plan and take decisions within the new adopted policy framework.</p> <p>1.8<u>16</u> In order to assess how effectively the Plan is being implemented, the Council must prepare an Annual Monitoring Report (AMR). The report will be based on the indicators as set out in Appendix 9 to this document. This is an important aspect of the LDP process since evidence collected through annual monitoring can be used to inform LDP review which takes place every 4 years.</p> <p>Supplementary Planning Guidance (SPG)</p> <p>1.9<u>17</u> These are non-statutory documents intended to provide useful advice and guidance which expand on policies set out in the <u>adopted</u> Deposit LDP. They must be subject to public consultation. but are not documents to be assessed by the LDP independent Inspector. Appendix 5 of this document lists all proposed new and/or updated SPG which are intended to be prepared together with timescales. and at which stage of the LDP process. In this respect, it should be noted that a phased programme of preparation is proposed.</p> <p><u>Other Assessment processes that have informed the adopted Plan</u></p> <p>1.10<u>8</u> In addition to the overall independent examination of the LDP, the Plan <u>has</u> must also <u>been</u> subject to two further formal assessment</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>processes as described below: The Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA) processes - these are required by the Planning and Compulsory Purchase Act 2004 and the SEA Regulations to ensure that the LDP policies reflect sustainability principles and take into account impacts upon the environment. The Final SA Report forms Supporting Document 11; and The Habitat Regulations Assessment (HRA) - this process is required to determine the likely significant effects of the Plan on European Sites of nature conservation importance. The HRA forms Supporting Document 12.</p> <p>1.119 Furthermore, the <u>adopted</u> Deposit-LDP has been subject to the following additional internal assessments designed to further scrutinise the Plan contents: Health Impact Assessment - a process involving relevant stakeholders in assessing the health implications of the Plan. A summary forms Supporting Document 13; and Equality Impact Assessment - a process involving relevant stakeholders in assessing the equality implications of the Plan. A summary forms Supporting Document 14.</p>
MAC2	1	New paragraph	1.8, 7.5	<p>Insert new paragraph in the Introduction after existing paragraph 1.19 Other Assessment Processes.</p> <p><u>The importance of Welsh culture and heritage is recognised in the Plan however having assessed the densities of Welsh language use across the City it is not considered to be an issue which requires addressing in the Plan. As a result the proposals contained in the LDP are not considered to have a detrimental impact on the Welsh language and culture or materially affect the linguistic balance of Cardiff or communities within Cardiff.</u></p>

Chapter 2: The Cardiff Context and Key Issues the Plan must Address				
MAC3		2.1 (page 21)	Schedule of Minor Changes	<p>Key Environmental trends and issues</p> <ul style="list-style-type: none"> The countryside and urban area contains a wealth of natural and historic interests. For example, there are almost 1,000 Listed Buildings, 27 Conservation Areas, 2 4 sites noted for their international biodiversity (Cardiff Beechwoods SAC and Severn Estuary SAC/SPA/RAMSAR)
Chapter 4: Strategy, Key Policies and Key Diagram				
MAC4	4	KP1: Level of Growth	1.2, 2.1, 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7, 5.1	<p>Replace existing Policy KP 1: Level of Growth with revised KP1</p> <p>Please see Appendix One of this schedule for amended KP 1</p>
MAC5	4	Policy KP2 Strategic Sites KP2 New Key Policies, KP2(A) to KP2(H)	2.2, 6.2, 7.1, 7.3, 8.1, 8.3, 10.13, 12.1, 13.16, 16.2	<p>Amend Policy KP2:Strategic Sites and reasoned justification and insert new policies KP2A to H after existing KP2</p> <p>Please see Appendix Two of this schedule</p>
MAC6	4	KP4: Master planning Approach Paragraphs 4.84 - 4.85	2.2, 6.2, 7.1, 7.3, 8.1, 8.3, 10.13, 12.1, 13.16, 16.2	<p>Amend reasoned justification of KP4: Masterplanning approach</p> <p>Retain existing paragraph 4.84 but delete existing paragraph 4.85: 4.85 The outputs of this approach are set out in Supporting Document</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>No. 16 which includes:</p> <p>General Principles: 10 General Principles based on different themes considered essential to create new sustainable neighbourhoods. These principles have been agreed by the Cabinet Meeting of 16th May, 2013 and relate to all sites, strategic or non strategic, greenfield or brownfield;</p> <p>Strategic Schematic Framework: To provide a link between the General Principles and Site Specific Principles, 3 county wide plans together with supporting text will provide a spatial context relating to landscape, movement and neighbourhood factors;</p> <p>Site-Specific Framework: Working within the context of the first 2 outputs, this output will not be overly prescriptive but give a spatial indication of land uses, transportation measures and key open space corridors together with information on proposed densities, infrastructure and phasing of the strategic sites allocated in the Deposit LDP. It is intended that following consideration of consultation responses, that the site specific framework will be drafted into SPG and follow the normal SPG consultation process prior to the LDP examination; and</p> <p>Area-Based Masterplans: Detailed Masterplans will be worked up by the landowners/developers with the context of the framework prepared by the Council as set out in the Deposit LDP supporting information. These will contain a greater level of detail than the over arching framework and can assist in the examination of the LDP together with providing a context for the phased submission of planning applications for development sites.</p> <p>New paragraphs to be inserted after existing paragraph 4.84 to replace deleted paragraph 4.85 reflecting changes with regard to embedding</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>more masterplanning details for Strategic Sites into the Plan:</p> <p><u>With regard to Strategic Sites, policies KP2(A) to KP2(H) set out the infrastructure and masterplanning requirements for each of the sites which are shown indicatively, where appropriate, on Schematic Frameworks. To avoid repetition and unnecessarily long policies, only site-specific and not generic requirements have been articulated and embedded in the policy relating to each Strategic Site.</u></p> <p><u>The infrastructure requirements contained within policies KP2(A) to KP2(H) reflect the level of detailed information known. Future updates to the Infrastructure Plan will allow such information to be regularly updated to reflect prevailing circumstances and show more detail when it is known. It would be premature and unhelpful to include overly prescriptive directions in the Plan where detailed matters are more appropriately considered through the Development Management process but within the context of the framework embedded within the Plan. In this way, the maximum possible certainty can be given without setting out unsupported aspirations.</u></p> <p><u>This policy, in conjunction with other relevant policies, will provide the masterplanning framework for landowners and developers to prepare Parameter Plans and Master Plans for major new development proposals, which will inform the Development Management process.</u></p>
MAC7	4	KP5: Good Quality and Sustainable Design	11.6, 13.9, 16.1	<p>Amend criterion (ix) of Policy KP5: Good Quality and Sustainable Design</p> <p>(ix) "Promoting the efficient use of land, developing at highest practicable densities and where appropriate achieving the remediation of contaminated land <u>contamination</u>;"</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
MAC8	4	Policy KP6: New Infrastructure	2.4, 2.5	<p>Amend Policy KP 6 and reasoned justification</p> <p>KP6: NEW INFRASTRUCTURE</p> <p>New development will make appropriate provision for, or contribute towards, the <u>all essential, enabling and necessary infrastructure required as a consequence of the proposed development in accordance with Planning Policy Guidance.</u> Such infrastructure will be delivered in a timely manner to meet the needs of existing and planned communities and includes the following aspects which may be required <u>subject having regard to the nature, scale and location and details of the proposed development:</u></p> <p><u>Essential / Enabling Infrastructure:</u></p> <ul style="list-style-type: none"> • Transportation and highways including access, circulation, parking, public transport provision, walking and cycling; • Utility services; • <u>Flood mitigation / defences;</u> <p><u>Necessary Infrastructure:</u></p> <ul style="list-style-type: none"> • Affordable Housing; • Schools and education; • Health and social care; • Community buildings and facilities including District and Local Centre improvements; • Local employment and training including replacement employment opportunities where relevant; • Community safety initiatives;

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<ul style="list-style-type: none"> • Open space, recreational facilities, playgrounds, allotments; • Protection, management, enhancement and mitigation measures relating to the natural and built environment; • Public realm improvements and public art; • Waste management facilities including recycling and services; • District heating and sustainable energy infrastructure; and • Other requirements • Other facilities and services considered necessary. <p>Retain existing paragraphs 4.89-4.90. Amend paragraph 4.89</p> <p>Policy KP6 seeks to ensure that new developments, irrespective of their size, location, or land use, make appropriate provision for infrastructure. Specific infrastructure requirements will vary in different locations and be dependent upon the scale and nature of proposed development. Infrastructure may be required to facilitate development (<u>essential / enabling such as highways or utilities</u>) or can be required to make a development acceptable (<u>necessary such as schools, community facilities, open space</u>). For example, it may include elements from the list contained as part of the Policy, which is not exhaustive, but gives an indication of the potential scope of infrastructure which may be required.</p> <ul style="list-style-type: none"> ▪ <u>Category 1: Essential / Enabling Infrastructure (to facilitate development) - Those items which will need to be delivered prior to, or from the commencement of the relevant phases of development (e.g. transportation / highways infrastructure, utility services and flood mitigation / defences).</u> ▪ <u>Category 2: Necessary Infrastructure (to make development acceptable) - Items which need to be phased and implemented alongside new</u>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>development, to ensure that areas are served with appropriate facilities over time (e.g. schools and recreational open space)'. </u></p> <p>New paragraph to be inserted after existing paragraph 4.90:</p> <p><u>With regard to Strategic Sites, policies KP2(A)-KP2(H) provide clear guidance on the Council's infrastructure and masterplanning requirements. This information will be cross-referenced to the Cardiff Infrastructure Plan which is a 'living document' sitting alongside the LDP. The Infrastructure Plan is directly linked to the LDP Monitoring Framework and will be regularly updated, so as more details are established they can be incorporated into the document.</u></p> <p>4.91 Further work has therefore been undertaken to supplement the Policy and is included in Supporting Document 6 (Infrastructure Plan) which provides details and evidence of the infrastructure that is required to support the planned level of growth. The Infrastructure Plan also identifies the potential costs of such infrastructure provision, potential funding mechanisms and / sources of funding and provides an indication of phasing requirements. The diagram set out below shows some of the potential funding sources for infrastructure provision. However, at this stage it It is important to note that there are numerous potential funding sources and that the potential sources those shown on the diagram raise peripheral issues which require further discussion and work to investigate the feasibility of securing funding through these means.</p> <p>Retain diagram at Page 68 and paragraph 4.92</p> <p>4.93 The provision of flexible, multi-functional buildings and places will</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>allow for essential services to be provided, whilst allowing communities to define and re-define their infrastructure requirements over time. A strong commitment to shared community buildings, services, their management and maintenance will ensure that facilities are at the heart of the community, whilst reducing overall costs to both developers and service providers. The principle of community buildings integrated within multi-function "hubs" (for example, the new @Loudoun development in Butetown) is a trend which is set to continue. The Infrastructure Plan (Supporting Document 6) provides further information regarding potential opportunities for shared premises as well as an indication of compatible uses and services.</p> <p>Retain paragraph 4.94</p> <p>4.95 There may also be additional requirements depending on the scale, nature, location and phasing of proposed developments to support the future needs of infrastructure providers and the communities they serve. Further detailed work will be undertaken following consultation on the Deposit LDP to fine tune requirements and delivery sources. This will include identifying in more detail the different ways in which infrastructure can be provided.</p>
MAC9	4	Policy KP7 Planning Obligations Paragraphs 4.98 and 4.101	2.3	<p>Amend KP 7 and paragraph reasoned justification</p> <p>KP7: PLANNING OBLIGATIONS</p> <p>Planning obligations will be sought to mitigate any impacts directly related to the development and will be assessed on a case by case basis in line with Planning Policy Guidance.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>4.98 The legislative and policy framework governing the use of planning obligations is provided in PPW, Community Infrastructure Levy Regulations 2010 (<u>as amended</u>) and Welsh Office Circular 13/97 'Planning Obligations' (<u>or subsequent versions</u>).</p> <p>4.101 They will be sought where they are:</p> <ul style="list-style-type: none"> • Necessary to make a proposal acceptable in land use planning terms; • Relevant to planning; and • Directly related to the proposed development. • <u>Necessary to make the development acceptable in planning terms</u> • <u>Directly related to the development; and</u> • <u>Fairly and reasonably related in scale and kind to the development</u>
MAC10	4	Policy KP8 new paragraph and amendments to 4.117	14.3	<p>Insert new paragraph after existing paragraph 4.105 and amend paragraph 4.117 of Policy KP8.</p> <p>New paragraph after existing paragraph 4.105:</p> <p><u>In order to mitigate transport impacts and achieve the 50:50 modal split target, the development of strategic sites will be integrated with provision of transport and highways infrastructure referred to in Policy KP6 (New Infrastructure). Such infrastructure will include:</u></p> <ul style="list-style-type: none"> • <u>the walking and cycling infrastructure supported by Policy T1;</u> • <u>the strategic rapid transit, bus corridor enhancements and wider</u>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>improvements to the city's bus network supported by Policy T2;</u></p> <ul style="list-style-type: none"> • <u>Transport Interchanges supported by Policy T3; and</u> • <u>the Regional Transport Hub supported by Policy T4.</u> <p><u>Policies KP2 (A) to KP2 (H) list the 'Essential' and 'Enabling infrastructure' required to support the development of each strategic site s contribution to and the delivery of the county-wide 50:50 modal split target.</u></p> <p><u>Policies KP2 (A) to KP2 (H) list the 'Essential' and 'Enabling infrastructure' required to support the development of each strategic site and the delivery of the 50:50 modal split target.</u></p> <p>4.117 For planning applications relating to the LDP strategic sites, the Council will seek to secure the on-site and off-site transport infrastructure identified within the schematic master plans and site specific principles for each site <u>Policy KP2.</u> Implementation of this Policy will help to reduce pollution arising from road traffic. This will counteract increases in atmospheric pollution as a result of the Plan, thereby avoiding significant effects upon internationally designated sites.</p>
MAC11	4	KP11: Minerals And Aggregates Paragraph 4.141	15.1, 15.2, 15.3, 15.4, 15.9, 15.10, 15.12	<p>Amend Policy KP11 and the reasoned justification</p> <p><u>KP11: MINERALS AND CRUSHED ROCK AGGREGATES AND OTHER MINERALS</u></p> <p>Cardiff will <u>maintain a steady and adequate supply of minerals and contribute to regional aggregate supplies by:</u></p> <p>i Promoting and supporting the efficient use of minerals and use</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>of alternatives to naturally occurring minerals including the re-use of secondary aggregates;</p> <p>ii. Protecting existing mineral reserves and safeguarding potential resources <u>of limestone, coal and sand and gravel</u> from development that would preclude their future extraction; and</p> <p>iii. Maintaining a minimum 10 year land bank of permitted <u>crushed rock aggregate reserves in line with national guidance</u>;</p> <p><u>iv. Supporting appropriate applications for sand and gravel extraction; and</u></p> <p><u>v. Safeguarding wharves from development that would prevent their use for landing marine dredged sand and gravel.</u></p> <p>4.141 Crushed rock production in the past has averaged 1 million tonnes (mt.) per annum, broadly similar to the County's consumption. In addition approximately 0.3 mt. of sea dredged sand is landed at Cardiff Docks every year. The majority of natural mineral production is used in the construction industry as <u>crushed rock aggregates</u>. Secondary materials, such as construction and demolition waste, are also used as substitutes for natural aggregates. <u>Cardiff is also an important source of dolomitic and high purity limestone for industrial use in the local steelmaking process.</u> Existing permitted reserves of hard rock minerals (41 mt.) represent over 69 years' supply at current output rates, sufficient to meet need well beyond the Plan period. Regionally, Cardiff contributes around 10% of South Wales' annual crushed rock aggregate production and its reserves represent 8% of the regional total, sufficient to maintain this contribution during the Plan period. <u>The Regional Technical Statement 1st Review (August 2014) produced by the north and South Wales Regional Aggregates Working Parties states that Cardiff should make provision for 0.86 million tonnes of crushed rock aggregates per year up to 2036, resulting is a total apportionment of 21.5 million tonnes. This requirement</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>is based on average annual production for the period 2001 to 2010 and compares with the existing landbank of 41 million tonnes (as at 31st December 2010) of crushed rock reserves meaning Cardiff based on current information has a surplus of permitted reserves when compared to the requirements set out in the Regional Technical Statement 1st Review. This Policy recognises that Cardiff is an important regional provider of minerals and provides for the continuation of its present contribution to regional demand.</p>
MAC12	4	Policy KP12 Waste Paragraphs 4.144, 4.145	15.13, 15.16	<p>Amend Policy KP 12 and the reasoned justification</p> <p>KP12 WASTE</p> <p>Waste arisings from Cardiff will be managed by:</p> <p>i. Promoting and supporting additional sustainable waste management facilities, measures and strategies in accordance with the <u>Collections, Infrastructure and Markets Sector Plan (2012) and TAN 21 (2014) Regional Waste Plan</u> and in a manner that follows the waste hierarchy which seeks to maximise the reduction of waste in the first place and thereafter reusing, recovering and recycling options before disposal of waste and the <u>principles of an integrated and adequate network of waste installations; nearest appropriate installation; self-sufficiency and protection of human health and the environment;</u></p> <p>ii. Encouraging the provision of in-building treatment facilities on existing and allocated areas of general industry;</p> <p>iii. Supporting the provision and maintenance of sustainable</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>waste management storage and collection arrangements in all appropriate new developments; and</p> <p>iv. Supporting waste minimisation prevention and reuse and the provision of facilities that use recycled or composted products.</p> <p>4.144 Cardiff produces around a million tonnes of waste each year, varying from harmless inert materials to highly toxic chemical by-products and residues. It is important for the Council to manage the land use implications of this waste in an environmentally acceptable and sustainable way. The Council is moving towards more sustainable waste management practices in line with European and national guidance, by increasing the amount of municipal waste recycled or composted and reducing the amount of biodegradable waste sent to landfill. Additional treatment facilities are likely to be required within the Plan period in order to achieve these aims.</p> <p>4.415 The South East Wales Regional Waste Plan indicates that a maximum of 20.9 hectares of land will be required for waste management facilities within the county. New waste management facilities will generally be favoured on B2 land for general industry, in line with national guidance. In this respect the 1st Review of the Regional Waste Plan endorsed by the Council in July 2008 identifies a range of potential sites for waste management purposes on vacant general industrial land. TAN 21 (2014) sets a framework for the delivery of sustainable waste management infrastructure through the planning process. The Collections, Infrastructure and Markets Sector Plan (2012) is intended to deliver the sustainable development outcomes set out in 'Towards Zero Waste' the overarching waste strategy document for Wales. The Council will work with others within the South East Wales region to monitor waste arisings and capacity requirements and respond to identified needs by</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<u>providing an integrated and adequate network of waste management facilities across the region. Additional treatment and recovery facilities are likely to be required within Cardiff during the Plan period in order to achieve the targets set out in the CIM Sector Plan and the policy principles established in TAN 21 (2014).</u>
MAC13	4	Policy KP13: Responding to Evidenced Social Needs	4.1, 4.2, 4.19	<p>Amend Policy KP13 and reasoned justification</p> <p>KP13: RESPONDING TO EVIDENCED SOCIAL NEEDS</p> <p>A key part of the successful progression of the city will be to develop sustainable neighbourhoods, tackle deprivation, and improve the quality of life for all. This will be achieved through:</p> <p>i. Providing a range of dwelling sizes, types and affordability including seeking to provide a target of 6,953 6,646 affordable dwellings over the remaining 13 12 years of Plan period;</p> <p>ii. Supporting the vitality, viability and attractiveness of existing District and Local Centres and their regeneration, including retail and other commercial development and housing of an appropriate scale;</p> <p>iii. Encouraging the provision of a full range of social, health, leisure and education facilities and community infrastructure for both existing and new communities that are accessible to all by walking and cycling and public transport;</p> <p>iv. Supporting the regeneration of deprived communities within the city and maximising the additional benefits that new communities can bring to adjoining or surrounding communities;</p> <p>v. Encouraging the enhancement of communities through better equality of access to services for all, promoting cultural and wider</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>diversity for all groups in society, and creating places that encourage social interaction and cohesion; vi. Developing new cultural and sporting facilities to build upon Cardiff’s role as a major tourist, cultural and sporting destination for visitors and residents alike; and vii. Designing out crime and creating communities which are safer and feel safer.</p> <p>4.149 The affordable housing target (6,953 <u>6,646</u> or 535 units per annum) identifies the number of affordable housing units that it is anticipated will be provided over the remainder of the Plan period 2013 <u>2014</u> to 2026. The target takes into account the current landbank of affordable units (less an allowance for flexibility) and expected contributions from strategic and non-strategic sites, windfall sites and change of use schemes based on the affordable housing target percentages (30% for greenfield sites and 20% for brownfield sites) outlined in Policy H3.. It is also likely that some affordable housing will also come forward from sources other than by the use of planning obligations, for example on sites or in dwellings acquired by social housing providers.</p> <p>Insert new paragraph after existing paragraph 4.149</p> <p><u>The Cardiff LHMA assessment sets a requirement over the period 2013-2018 of 3,989 affordable units per year or a total of 19,945. Clearly, the affordable housing target over the Plan period will not meet the need figure as set out in the LHMA and it is not expected to as it is only one of a variety of means to achieving a supply of affordable housing.</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
MAC14	4	KP15 Climate Change Paragraph 4.167	1.7, 13.3	<p>Amend Policy KP15 and paragraph 4.167 of the reasoned justification</p> <p>KP15: CLIMATE CHANGE</p> <p>To mitigate against the effects of climate change and adapt to its impacts, development proposals should take into account the following factors:</p> <ul style="list-style-type: none"> i. Reducing carbon emissions; ii. Protecting and increasing carbon sinks; iii. Adapting to the implications of climate change at both a strategic and detailed design level; iv. Promoting energy efficiency and increasing the supply of renewable energy; and v. Avoiding unnecessary flood risk by assessing the implications of development proposals within areas susceptible to flooding and preventing development that unacceptably increases risk. Avoiding areas susceptible to flood risk in the first instance in accordance with the sequential approach set out in national guidance; and <p><u>(vi) Preventing development that increases flood risk.</u></p> <p>4.167 Avoiding unnecessary flood risk will be achieved by strictly assessing the flood risk implications of development proposals within areas susceptible to tidal or fluvial flooding and preventing development that unacceptably increases risk. <u>In accordance with TAN15: Development and Flood Risk no highly vulnerable development will be permitted in</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				development advice zone C2. Development will only be considered in other areas at high risk of flooding where it can be demonstrated that the site can comply with the justification and assessment requirements of TAN15 (2004 – Section 6, 7 and Appendix 1). Policy EN14 relating to Flood Risk sets out a range of criterion which will be considered when assessing development proposals in areas of high risk of flooding. Information is provided to demonstrate that a proposal satisfies the Flood Consequence Assessment tests set out in TAN15: Development and Flood Risk.
MAC15	4	Policy KP16 Green Infrastructure	13.6	<p>Amend Policy KP16</p> <p>KP16: GREEN INFRASTRUCTURE</p> <p>Cardiff’s distinctive natural heritage provides a network of green infrastructure which will be protected, enhanced, created, and managed to ensure the integrity and connectivity of this multi-functional green resource is maintained.</p> <p>Protection and conservation of natural heritage network needs to be reconciled with the benefits of development. Proposed development should therefore demonstrate how green infrastructure has been considered and integrated into the proposals. If development results in overall loss of green infrastructure, appropriate compensation will be required.</p> <p>Natural heritage assets are key to Cardiff’s character, value, distinctiveness and sense of place. They include the City’s:</p> <p>i.Undeveloped countryside and coastline (EN1 and EN2);</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>ii. Landscape, geological and heritage features which contribute to the City's setting (EN3);</p> <p>iii. Strategically important river valleys of the Ely, Taff, Nant Fawr and Rhymney (EN4);</p> <p>iv. Biodiversity interests including designated sites and the connectivity of priority habitats and species (EN5, EN6 and EN7);</p> <p>v. Trees (including street trees), woodlands and hedgerows (EN8);</p> <p>vi. Strategic recreational routes, cycleways and the public rights of way network (T5, T6 and T8);</p> <p>vii. Parks, playing fields, green play areas and open spaces (C3, C4 and C6);</p> <p>viii. Growing spaces including allotments, community orchards and larger gardens (C5); and</p> <p>ix. Holistic integrated surface water management systems (EN10).</p>
MAC16	4	Policy KP17 Built Heritage	13.1	<p>Amend Policy KP17</p> <p>Policy KP17: BUILT HERITAGE</p> <p>Cardiff's distinctive heritage assets will be protected, managed and enhanced, in particular the character and setting of its Scheduled Ancient Monuments; Listed Buildings; <u>Registered</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
		Paragraphs 4.174, 4.176, 4.178, 4.179		<p>Historic <u>Landscapes</u>, Parks and Gardens; Conservation Areas; Locally Listed Buildings and other features of local interest that positively contribute to the distinctiveness of the city.</p> <p>Amend paragraphs 4.174, 4.176, 4.178, 4.179 of KP 17</p> <p>4.174 There are currently 28 s<u>Scheduled</u> a<u>Ancient</u> m<u>Monuments</u> in Cardiff. This Policy affords appropriate protection to these ancient monuments and others that may be scheduled over the Plan period, as well as other important archaeological remains identified within the Historic Environment Record. The SPG on Archaeologically Sensitive Areas provides further guidance on four areas of the city where significant finds have been recorded.</p> <p>4.176 The Council also holds a Local List of Buildings of Merit. This Policy identifies the significance of these locally listed buildings (and others that may be added to the list by the Council over the Plan period) have in forming the character of the area. <u>Welsh Office</u> Circular 61/96 identifies the weight their designation may have in the assessment of development proposals.</p> <p>4.178 Finally, there are currently 19 historic parks and gardens and 1 historic landscape (the Wentloog Levels) included on the Cadw/ICOMOS 'Register of Historic <u>Landscapes</u> Parks, <u>and</u> Gardens and Landscapes'. This Policy affords appropriate protection to these and other historic parks, gardens and landscapes that may be added to the register by Cadw/ICOMOS over the Plan period.</p> <p>4.179 In seeking to respond to the presence of heritage assets, developers are encouraged to follow a sequence of investigation and</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change																									
				assessment to identify the cultural and historic significance of a place before developing proposals for change or alteration. In this way appropriate approaches can be developed to preserve and enhance the historic environment through proposals that respond to and complement their context. The process is commended within Welsh Office Circular 61/96 and advice within BS Standard 7913, <u>20131998</u> .

MAC19	5	Policy H3 Affordable Housing Paragraphs 5.11, 5.12, 5.13	4.3 to 4.18	<p>Amend Policy H3 and paragraphs 5.11, 5.12 and 5.13 of the reasoned justification.</p> <p>Policy H3: AFFORDABLE HOUSING</p> <p>Where there is evidence of need The Council will seek 20% affordable housing on Brownfield sites and 30% affordable housing on Greenfield sites in all residential proposals that:</p> <p>i. Contain 10-5 or more dwellings; or</p> <p>ii. Sites of or exceeding 0.13 hectares in gross site area; or</p> <p>iii. Sites of or exceeding the thresholds in (i) or (ii) above for adjacent sites.</p> <p><u>Where adjacent and related residential proposals result in combined numbers or site size areas exceeding the above thresholds, the Council will seek affordable housing based on the</u></p>																								

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>affordable housing target percentages set out above</u></p> <p><u>Affordable housing will be sought to be delivered on-site in all instances unless there are exceptional circumstances.</u></p> <p>5.11 The LDP target for affordable housing for the Plan period is detailed in Policy KP13. During the remaining Plan period from 2013 to 2026 the target amounts to 535 units per annum.</p> <p>5.12 The targets set out in the Policy are derived from the findings of an affordable housing viability study undertaken by Peter Brett Associates. This study assessed the viability of a range of housing scenarios (including a calculation for necessary infrastructure which could be achieved through Sn106 and/or CIL, consistent with Policy KP6: New Infrastructure and the LDP Background Paper: Infrastructure Plan) for different development types with varying levels of affordable housing. In order to demonstrate viability, and take account of the higher costs associated with the development of brownfield sites the study recommended a two tiered affordable housing target. The Report confirms that affordable housing is viable at 30% on greenfield sites and at 20% on brownfield sites (<u>based on indicative tenure mixes of 40% social rented, 40% intermediate rented and 20% Low Cost Home Ownership</u>). This is consistent with the recommendations of the Cardiff Local Housing Market Assessment and the <u>Economic Viability Reports of 2013 and 2014</u> in seeking an appropriate mix of tenures to address evidenced housing need over the Plan period. The full findings of the Viability Study, including the methodology and assumptions made are set out in supporting document 20</p> <p>5.13 In negotiating affordable housing, each proposal's actual contribution will depend on that scheme's capacity for provision. This will ensure that</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change	
				the affordable housing contribution in itself will not make the scheme unviable. The Council will work with developers to agree a contribution in an open and transparent manner. In cases where agreement cannot be reached, an independent assessment will be commissioned to be paid for by the applicant/developer. Notwithstanding this, in order to determine an appropriate level of contribution all housing developments of 50 or more dwellings will be expected to provide an independent assessment paid for by the applicant/developer. The assessment should include details and costs of the necessary infrastructure to be delivered either wholly or in part to support the delivery of sustainable neighbourhoods.	
MAC20	5	Policy Change Use Residential Land Or Properties Paragraph 5.18	H4: Of Of Or	16.3	<p>Amend Policy H4 and paragraph 5.18 of the reasoned justification.</p> <p>H4: CHANGE OF USE OF RESIDENTIAL LAND OR PROPERTIES</p> <p>Outside the Central and Bay Business Areas and District and Local Centres, identified on the Proposals Map, conversion or redevelopment of residential properties to other uses will only be permitted where:</p> <p>i. The premises or their location are no longer suitable for residential use; or</p> <p>ii. The proposal is for a community use necessary within a residential area.</p> <p>iv. The proposal is for a use that could contribute to the creation of sustainable communities.</p> <p><u>iii. There would be no unacceptable impact on residential amenity.</u></p> <p>5.18 There is a range of community uses that are appropriate and necessary, in principle, within residential areas. These include doctors' and dentists' surgeries, residential homes and child-care facilities.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				Similarly there are other uses such as local shops and other commercial uses, of an appropriate scale, that could contribute to the creation of sustainable communities. Such uses will be permitted where there would be no unacceptable impact on residential amenity or to an area's character. Subsequent conversion from such uses to other non-residential uses will not normally be permitted. Further guidance on the conversion of residential properties to childcare facilities will be set out in SPG.
MAC21	5	Policy H5 Sub-Division or Conversion of Residential Properties	16.4	<p>Amend Policy H5</p> <p>H5: SUB-DIVISION OR CONVERSION OF RESIDENTIAL PROPERTIES</p> <p>Proposals for any conversion to flats or Houses in Multiple Occupation will be permitted where:</p> <p>i. The existing property is of a size (without being extended for the proposed use), whereby the layout, room sizes, range of facilities and external amenity space of the resulting property would ensure an adequate standard of residential amenity for future occupiers.</p> <p>ii. There would be no material harm to the amenity of existing, nearby residents by virtue of general disturbance, noise or overlooking.</p> <p>iii. The cumulative impact of such conversions will not adversely affect the amenity and/or the character of the area.</p> <p>iv. Does not have an adverse effect on local parking provision</p>
MAC22	5	Policy H7:Allocation Policy for	11.1 to 11.5, 11.7	<p>Delete Policy H7 and reasoned justification</p> <p>H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
		Gypsy and Traveller Site Paragraphs 5.34 - 5.50		<p>Land is allocated for the provision of Gypsies and Travellers accommodation at Seawall Road as defined on the Proposals Map.</p> <p>5.34 Currently, there are two Council managed Gypsy and Traveller residential sites in Cardiff: at Rover Way and Shirenewton which were developed in the 1970's and 1980's. These sites provide 80 pitches between them; 59 at Shirenewton and 21 at Rover Way. In addition there are a few privately run facilities, most notably a site next to the Council's residential site at Shirenewton. Collectively these sites generate a future need for new pitches which the Council has a statutory duty to provide for with the LDP providing the tool to formally identify appropriate land to meet this need.</p> <p>5.35 In order to fully inform considerations, the Council has recently commissioned 3 independent studies carried out in consultation with the Gypsy and Traveller community to assess the relevant aspects of this matter. The first independent study, by Opinion Research Services, was to identify the level of need over the LDP plan period. It identifies a need to provide for an additional 108 pitches in the city up to 2026 together with an additional need for a transit site of around ten pitches, which should be located near the M4 to meet the needs of Gypsy and Travellers who are visiting the area or travelling through it. The study concludes that a transit site need not necessarily fall within the boundaries of the County of Cardiff and recommends entering a cross boundary process with neighbouring Councils and across South East Wales to identify a suitable site within the region.</p> <p>5.36 The second independent study carried out by Atkins examined the physical condition of the Rover Way site. It outlined some significant and</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>challenging issues which would require resolution in future years. Therefore, in the event that this site could be replaced at some point in the future, this could add to the level of need to be provided for in the LDP (21 pitches).</p> <p>5.37 The third independent study was prepared by Peter Brett Associates and provides advice to the Council on potential sites required to respond to the needs identified in the first study. It contains an assessment of potential sites for the Council to consider which is further discussed in the following paragraphs.</p> <p>5.38 The Peter Brett study followed criteria set out in national guidance and looked at the availability, suitability and achievability of potential sites. The process resulted in a long list of 32 sites with 5 sites being identified as potentially suitable to contribute additional pitches. However, it is noted that the sites recommended would only deliver 92 pitches which falls short of the required number. The Council has placed the study in the public domain and received feedback on its contents. Work has been undertaken to examine the study in considerable detail. As a result of recent analysis, there are significant concerns with the suitability of all 5 recommended sites having regard to a wide range of material factors including the role of potential sites for other uses.</p> <p>5.39 Consideration of the study has also included addressing all 32 sites on 'the long list' of sites assessed by the consultants. In this respect, further work has been undertaken with regard to the large area of unused land at Pengam Green bounded by Seawall Road to the west, and Rover Way to the south, (opposite the existing Gypsy and Traveller site at Rover Way). The study concluded that the land was not considered suitable due to flood risk but added, "However should satisfactory flood mitigation</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>measures be identified as part of a wider scheme to mitigate flood risk in the area it is considered the site could have the potential for Gypsy and Traveller use. The Council should keep this under review”.</p> <p>5.40 Dialogue with Natural Resources Wales (NRW) undertaken since the Peter Brett study has revealed that NRW are proposing to carry out 2 flood defence enhancement schemes in relation to the River Rhymney and Roath Brook. These schemes are currently programmed for implementation in 2015/16 as part of the Severn Estuary Flood Risk Management Strategy and will reduce flood risk in part of the flood plain contiguous with land south of the railway line.</p> <p>5.41 Whilst the schemes do not remove flood risk from the unused land north of Rover Way, they provide an important stage in delivering significant measures to address flood risk in the wider area. If complemented by further measures closer to the mouth of the River Rhymney and existing tidal defences, a comprehensive solution may be feasible which significantly reduces flood risk for the whole local area including a large number of existing properties and premises in the locality. Flood defence enhancements would also be fully consistent with the Severn Estuary Shoreline Management Plan 2 which supports, ‘holding the line’ of sea defences in this area.</p> <p>5.42 Detailed analysis of the land east of Seawall Road and north of Rover Way reveals different degrees of flood risk within the site. A Phase 2 Strategic Flood Consequences Assessment (SFCA) undertaken for the Council by Atkins in 2011 indicates that flood risk is within guidelines for development for conditions today but becomes an issue when considering the impact of rising sea levels in future years and guidance states regard must be had to, ‘lifetime of development’ rather than assessing purely current conditions. The western corner of the site adjacent to Seawall</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>Road is unused with no extant planning consents and contains two large raised areas of land including access roads which removes flood risk according to national guidance criteria until 2110 flood extents whilst lower surrounding developed and unused land triggers flood risk in 2085 flood extents.</p> <p>5.43 In order to fully assess the precise nature of flood risk and explore effective mitigation measures in relation to the lifetime of development, a Phase 3 Flood Consequence Assessment will need to be undertaken. Initial dialogue has taken place with NRW in this respect and the Council will commission independent consultants to work to a brief agreed with NRW and in accordance with national guidelines. Given the fact that flood risk does not become an issue until 2110 on this part of the unused land plus the fact that the Severn Estuary Strategy Management Plan is proposing sea defence improvements before this time, an allocation on this land is not unreasonable at this juncture. However, the Phase 3 study will be progressed as a priority to allow the Council time to consider its findings and update details as appropriate prior to formally agreeing the LDP submission and focussed changes in May 2014.</p> <p>5.44 Having regard to other factors, there are strong reasons to support this allocation. This has the benefits of building upon the strong existing links with the existing community and facilities provided. Indeed, the site would benefit from far safer access to Willows High School and local services, overcome existing coastal erosion concerns and provide a more satisfactory living environment in a well screened site not directly adjacent to the busy Rover Way.</p> <p>5.45 In terms of potential capacity, the area of raised land adjacent to</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>Seawall Road is approximately 3.2 hectares in size. It could be developed for Gypsy and Travellers in a phased manner utilising existing access roads together with room for new internal landscaping to compliment strong and mature boundary planting forming the western site boundary which extends to the north and east providing a distinctive feature in the local landscape. Based on existing pitch densities, the site can deliver around 65 pitches.</p> <p>5.46 The site would be of a large scale in a Wales context and above recommended site size in national guidance. However this guidance also states local authorities may consider it necessary to be flexible by allowing more pitches on a site when taking into account local circumstances and the current level of need. Furthermore, the council's experience in operating the Shirenewton site of 59 pitches has demonstrated that large sites can be very effectively managed providing both benefits for the Gypsy and Traveller community and enabling the effective delivery of supporting services. The site allows for a logical phased development where pitches can be provided in a managed and orderly manner together with integrating the provision of supporting facilities. Developing a larger site at this location is not considered a viable or sustainable solution. It would go well beyond the recommended size of sites in national guidance and well beyond the Council's ability to demonstrate that such a model could effectively operate in practice.</p> <p>5.47 The allocation of a new site for 65 pitches at Seawall Road represents a major provision in a national context and demonstrates the Council's continued commitment to responding to the needs of a large Gypsy and Traveller community. This represents meeting more than the immediate needs in Cardiff (43 pitches) as identified in the ORS needs</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>assessment. However, it does not satisfy the overall level of need identified in the ORS needs assessment. This is a reflection of the unprecedented level of need to be addressed in a Wales context together with the limited suitability of other potential sites as shown through consideration of the Peter Brett Study. There has been insufficient time since the consideration of the Peter Brett study to identify additional sites prior to progressing the Deposit LDP in strict accordance with the Delivery Agreement approved by the Welsh Government.</p> <p>5.48 The progression of the LDP through to examination allows this issue to be more thoroughly explored including an analysis of consultation responses on the Deposit Plan. Discussions have already been initiated with the Welsh Government to progress a balanced approach to addressing needs for the South East Wales region. Furthermore, it should be noted that policy H8 provides a criteria-based policy to assess any future sites which may come forward over the plan period so the plan clearly has mechanisms to effectively consider future sites.</p> <p>5.49 The consideration of the provision for Gypsy and Traveller needs on a South East Wales scale may contribute to future deliberations. A continuation of the current situation would result in future provision limited to those Authorities who have catered for needs in the past whilst other (and often adjoining) Authorities technically will have no future needs to meet at all as there is currently no provision. This is considered an unreasonable and unsustainable approach. Future dialogue regarding strategic planning options for South East Wales including the upcoming consultation from the Wales Government on the Draft Planning Reform Bill and Consultation Paper may offer an opportunity to further explore this matter. The future consideration of a more reasonable, sustainable and strategic approach may well have implications on how provision is</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>addressed in Cardiff.</p> <p>5.50 With regard to the provision of a transit site which could accommodate about ten pitches, it is noted that the independent consultants recommended that this site should be located near to the M4 and that its location should not be limited to Cardiff. The Council has therefore made initial contact with relevant local authorities along the M4 in South East Wales with regard to exploring suitable potential opportunities to meet this element of need. Given the limited time since the studies have been completed, further work and dialogue will continue to identify a suitable transit site within the region which will then be progressed accordingly by the local authority concerned. Should the site ultimately be identified within Cardiff (although the Peter Brett study did not identify a suitable site), it would be progressed as part of the material submitted for the LDP independent examination.</p>
MAC23	5	Policy H8 Sites for Gypsy and Traveller Caravans Paragraphs 5.52 and 5.53	<p>11.6, 13.9, 16.1</p> <p>11.1 to 11.5, 11.7</p>	<p>Amend criterion (ii) and paragraphs 5.52 and 5.53 of the reasoned justification to Policy H8</p> <p>(ii) "Environmental factors including flood risk, ground stability, contaminated land <u>contamination</u> and proximity of hazardous installations do not make the site inappropriate for residential development;"</p> <p>5.52 <u>Cardiff currently has two Gypsy and Traveller sites, at Rover Way and Shirenewton, providing a total of 80 permanent pitches. To date these two sites have accommodated natural population growth, with some overcrowding.. The latest Gypsy and Traveller Needs Assessment was undertaken in April 2013 and showed a need for 108 permanent Gypsy</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>and Traveller pitches. Local authorities are required to assess the accommodation needs of Gypsy families (Housing (Wales) Act 20014 S.225 & 226) .—and submit the assessment to the Welsh Government for approval by March 2016. PPW says that it is important for LDPs to have policies for the provision of sites. Welsh Government Circular 30/2007 indicates that where there is an assessment of unmet need for Gypsy and Traveller accommodation, sufficient sites should be allocated in the LDP to meet needs. A criteria based Policy for Gypsy and Traveller sites must also be included in order to meet future need.</p> <p>5.53 This updated assessment will inform a wider site selection process which will progress over the next two years to meet the short and long term need for Gypsy and Traveller pitches. This process is referenced in the Monitoring Framework and includes the following key outputs and timescales. Sites that come forward through this process, together with any other proposals will be assessed against this policy.</p> <ul style="list-style-type: none"> • <u>Agree methodology and project management arrangements by end of 2015</u> • <u>Undertake Gypsy and Traveller Needs Assessment for both permanent and transit pitches in accordance with Housing (Wales) Act 2014 by February 2016</u> • <u>Undertake a site search and assessment and secure approval of findings by October 2016</u> • <u>Secure planning permission and funding (including any grant funding from Welsh Government) for identified sites(s) required to meet the short term need for 43 pitches by May 2017</u> • <u>Secure planning permission and funding (including any grant funding from Welsh Government) for identified(s) required to meet the long term need for 65 pitches by May 2021</u>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>5.53 Cardiff currently has two Gypsy and Traveller sites, at Rover Way and Shirenewton, providing a total of 80 permanent pitches. To date these two sites have accommodated natural population growth, with some overcrowding. Policy H7 allocates land specifically for the provision of Gypsy and Travellers but This policy provides further scope for considering any additional proposals which may arise over the plan period.</p>
MAC24	5	Policy EC3: Alternative Use Of Employment Land And Premises Paragraphs 5.68 and 5.69	10.2, 10.3, 10.4	<p>Amend Policy EC3 and paragraphs 5.68 and 5.69 of the reasoned justification</p> <p>EC3: ALTERNATIVE USE OF EMPLOYMENT LAND AND PREMISES</p> <p>Development of business, industrial and warehousing land and premises for other uses will only be permitted if:</p> <p>i. The land or premises are no longer well located for business, industrial and warehousing use; or</p> <p>ii. <u>There is no realistic prospect of employment use on the site and/or the property is physically unsuitable for employment use, even after adaption/refurbishment or redevelopment; or</u></p> <p>iii. There is no need to retain the land or premises for business, industrial or warehousing use, having regard to the demand for such land and premises and the requirement to provide for a range and choice of sites available for such use; and</p> <p>iv. There will be no unacceptable impact on the operating</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>conditions of existing businesses.</p> <p>5.68 Provision might be made for conversion to alternative uses but only if there were compelling and exceptional circumstances, for example:</p> <ul style="list-style-type: none"> • Robust evidence that there is no realistic prospect of employment use on the site; and/or • The property is physically unsuitable for employment use, even after adaptation/refurbishment or redevelopment. <p>5.69 The 'robust evidence' for assessing the need to retain land and premises for business, industrial and warehousing use include the following criteria:</p> <ul style="list-style-type: none"> • Whether and for how long land or premises have been vacant and actively marketed and the expressions of interest during this period; • Whether the site offers particular benefits not generally available within the overall land bank; • Whether the site is within an area of high unemployment and offers realistic prospects of use for appropriate employment purposes; • Whether the relocation of existing occupiers to other suitable accommodation will be facilitated; • Whether the proposed development would retain an element of industrial, office or warehousing floorspace; and • Whether the proposed use need to be accommodated on business, industrial or warehousing land (e.g. transport depots). • <u>Other priorities, such as housing need, override more narrowly focussed economic considerations.</u>
MAC25	5	New Policy	10.2, 10.3,	Insert new policy and reasoned justification after paragraph 5.85 new

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
			10.4	<p>policy to be referenced EC7</p> <p><u>EC7 EMPLOYMENT PROPOSALS ON LAND NOT IDENTIFIED FOR EMPLOYMENT USE</u></p> <p><u>Proposals for employment use (B Use Class) on unallocated sites will be permitted provided that:-</u></p> <ul style="list-style-type: none"> <u>i. The proposal cannot reasonably be accommodated on existing employment land and in the case of offices in the Central Enterprise Zone (Policy KP2) and the Central and Bay Business Areas (Policy EC4);</u> <u>ii. The site falls within the settlement boundary and has no specific policy designation;</u> <u>iii. The use is compatible with uses in the surrounding area and;</u> <u>iv. The proposal is well related to the primary highway network and accessible to sustainable modes of transport</u> <p><u>Policy EC7 provides guidance on how the Council will determine applications for employment development on sites not identified for employment and ensure a sequential approach to site selection is followed, thereby steering employment allocations to the most appropriate locations consistent with national policy (PPW para. 10.2.9 and 10.2.11). This policy is intended to support the economy by allowing for future economic growth which sustains and provides job opportunities within Cardiff which is considered essential in responding to economic uncertainty and fulfils the LDP economic evidenced needs.</u></p> <p><u>The LPA is not able to fully predict all potential business and operator requirements over the Plan period. Therefore it is important for the policy framework to allow an element of flexibility to enable businesses to locate within the County.</u></p>

MAC26	5	Policy EN: Countryside Protection	13.4, 13.5	<p>Amend Policy EN1 and the reasoned justification</p> <p>Policy EN1: COUNTRYSIDE PROTECTION</p> <p>There will be a presumption against development in the countryside, beyond the settlement boundaries identified on the Proposals Map, except where it can be justified for agricultural and forestry needs or it is essential for facilitating sustainable access to and enjoyment of the countryside including appropriate outdoor recreation and tourism uses.</p> <p>Appropriate development in the countryside should be in harmony with, and not cause unacceptable harm to, the character and quality of the surrounding countryside and landscape demonstrating:</p> <p>The need for the development to be located in the countryside;</p> <p>ii. That alternative locations have been considered, where appropriate;</p> <p>iii. That the need cannot be accommodated through the conversion, extension or demolition and replacement of an existing building;</p> <p>iv. That farm diversification schemes are ancillary to, and do not prejudice, the operation of the existing business;</p> <p>v. That the proposed development respects the character of the surrounding area and is of appropriate scale, and design including both soft and hard landscaping and access;</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>vi. That any new buildings are grouped and designed in harmony with existing buildings wherever possible and;</p> <p>vii. Appropriate measures are in place to protect, maintain, manage or improve the features of the surrounding countryside and landscape.</p> <p><u>Development in the countryside, beyond the settlement boundaries identified on the Proposals Map, will only be permitted where the use is appropriate in the countryside, respects the landscape character and quality and biodiversity of the site and surrounding area and where it is appropriate in scale and design. A landscape assessment and landscaping scheme will be required for significant development proposals. Proposals for new housing, rural diversification and rural enterprise, will only be permitted where they comply with National Planning Policy.</u></p> <p>5.88 Although farming and forestry comprise a relatively small part of Cardiff's economy, the economic viability of the countryside around Cardiff remains crucial, with agriculture and forestry playing an important role in both the management and conservation of the countryside. As such, the Council will adopt a positive approach to supporting the rural economy. Development proposals relating to agriculture and forestry, including farm rural diversification and enterprise will be assessed against the above criteria, (PPW 2014)(2012, Para 7.3.3) and TAN 6: Planning for Sustainable Rural Communities. Farm diversification schemes should remain linked to the existing farm business and maybe subject to planning obligations in accordance with TAN 6: Planning for Sustainable</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>Rural Communities (2010 Para 3.7) and Policy KP7.</p> <p>5.89 Close proximity to a large urban population brings many pressures to Cardiff's countryside, including outdoor recreation. Whilst its importance for local recreational purposes and tourism is accepted, it is essential to ensure that both these uses, and any built development associated with them, do not cause unacceptable harm to the character and quality of the countryside. Small scale, low impact development associated with activities which need to be located in the countryside, or encourage access to and enjoyment of the countryside, may be acceptable subject to the tests set out above <u>in national guidance</u>..</p> <p>5.90 Planning permission is normally required for the use of land for keeping horses and for equestrian activities, unless they are kept as "livestock" or the land is used for "grazing. The keeping of horses in Cardiff is very widespread, so that land used for grazing, recreation and associated development such as stabling, ménages, fencing, lighting, and car parking is already having a considerable impact on the character of Cardiff's countryside. Whilst it is accepted that these horse related uses can only be accommodated in the countryside, not all locations within the countryside are necessarily appropriate. The overall impact of such proposals will be assessed against the criteria above <u>set out in national guidance</u>.</p> <p>5.91 Additionally there has been an increase in the number of applications for kennels and catteries. Applications for the siting of kennels and catteries outside the curtilage of a dwelling house i.e. in a separate field or paddock will also be subject to the tests set out above <u>in national guidance</u>.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>5.92 There is continuing pressure on the countryside in terms of residential development; however the LDP has identified sufficient land to meet the foreseeable residential need over the Plan period. As such, new residential development will not normally be permitted in the countryside unless it is justified for agricultural or forestry purposes or other rural enterprises. In these instances, applicants should refer to PPW (2012), 2014 and TAN 6: Planning for Sustainable Rural Communities (4.3 – 4.4).</p> <p>5.93 Any new development in the countryside should be designed and located to minimise their impact, usually within existing clusters of buildings or farm complexes and/or close to existing infrastructure and public transport. The use of outdoor space associated with development including hard and soft landscaping, means of access, car parking and the treatment of boundaries can all have a significant detrimental effect on the character and quality of the countryside and will therefore be strictly controlled. In these instances a Design and Access Statement will be required.</p>
MAC27	5	Policy EN2 Conversion, Extension and Replacement Buildings in the Countryside Paragraph 5.96	16.6	<p>Amend Policy EN2 by deleting criterion v and to include criterion vi within an amended criterion ii remaining parts of the policy stays the same. Amend paragraph 5.96</p> <p>EN2: CONVERSION, EXTENSION AND REPLACEMENT BUILDINGS IN THE COUNTRYSIDE</p> <p>There will be a presumption against conversion, extension and replacement of buildings in Cardiff’s countryside except where:</p> <p>a. The proposed conversion is demonstrated to:</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
			Schedule of Minor Changes	<p>i. be structurally sound and capable of being made so without major alterations, reconstructing or extensions; ii. be possible without materially changing the existing character of the building <u>or have a harmful effect on the countryside</u>; iii. Not give rise to a demand for additional buildings; and iv. Be suitable for the proposed re-use.</p> <p>With particular regard to the proposed conversion to residential use in addition to the above, control similar to that of new house building in the open countryside will be applied where:</p> <p>v. the building is unsuitable for conversion without extensive alteration, rebuilding or extension or if vi. the creation of a residential curtilage would have a harmful effect on the countryside.</p> <p>5.96 The Policy contributes towards Plan objectives and PPW (2012, Para 7.6.8) which supports the re-use and adaption of existing rural buildings to help meet the needs of commercial and industrial development, as well as for tourism sport and recreation. It further accords with PPW (2012, Para 7.6.9 and 7.6.10) which supports the inclusion of polices within the development plan which do not allow residential re-use which would have a harmful effect on the character of the countryside. Reference should also be made to KP3A with regard to the consideration of proposals in the Green Belt area.</p>
MAC28	5	Policy EN3 : Landscape Protection	13.10, 13.11	<p>Amend Policy EN3 and reasoned justification</p> <p>EN3: LANDSCAPE PROTECTION</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
		Paragraph 5.106		<p>Development will not be permitted that would cause unacceptable harm to the character and quality of the landscape and setting of the city, with</p> <p>Particular priority <u>will be</u> given to protecting, managing and enhancing the character and quality of the following Special Landscape Areas:</p> <ul style="list-style-type: none"> i. St Fagans Lowlands and the Ely Valley; ii. Garth Hill and Pentyrch Ridges; iii. Fforest Fawr and Caerphilly Ridge; iv. Wentloog Levels; and v. Flat Holm. <p><u>A landscape assessment and landscaping scheme will be required for significant development proposals.</u></p> <p>5.106 Where landscape assessments or landscaping schemes are required they should set out the impact of the development on key features, of the <u>landscape character and qualities and should explain how the design solution proposed addresses both its positive and negative attributes and associated landscape and visual impacts effects, including cumulative effects where appropriate. Assessments and schemes should include the landscape baseline information from all five LANDMAP* layers and should focus on the relevant aspect areas, their descriptions, and evaluations. using the LANDMAP approach (as described below).</u> Design solutions should clearly demonstrate how the strategic landscape assessment and site appraisal have informed the detailed design and location of the development and planting proposals. Schemes should generally be</p>

				<p>implemented prior to all or part of the site coming into beneficial use. The management of landscape features of importance will also be encouraged.</p> <p>*Further information can be found at http://www.ccw.gov.uk/landscape--wildlife/protecting-our-landscape/landmap.aspx</p>
MAC29		Policy EN4 River Valleys	Schedule of Minor Changes	<p>Amend paragraph 5.118 of Policy EN4</p> <p>5.118 This Policy provides a planning framework within which the Council can protect, promote and enhance the river corridors. It will be used as a mechanism to implement the council's aims with regards to the river corridors and will be used in conjunction with the River Valleys Initiative that was established in 2004/ 05 in order to develop a more joined up approach to the planning and management of Cardiff's river valleys. The River Valleys Initiative brings together a wide range of organisations who have roles to undertake within the river valleys. One of the key outcomes of this process to date is an agreement to develop Action Plans for each of the three main river valleys. Action Plans have been prepared and are implemented, monitored and reviewed in partnership with a wide range of organisations, overseen by a steering group. There are River Corridor Action Plans for the Ely Valley, Taff Corridor and Rhymney Valley and Nant Fawr Corridor. Projects that implement the objectives set out in the Action Plans, and Cardiff's Countryside Strategy are undertaken by a variety of organisations, individually and in partnership using funding from a range of sources, including the partnership programme with the <u>Natural Resources Wales Countryside Council for Wales</u>, other Cardiff Council funding and planning obligations.</p>
MAC30	5	Policy EN5:	9.5, 10.1,	Rename and amend Policy EN5 and reasoned justification

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
		Local Nature Reserves And Non-Statutory Sites Of Nature Conservation And Geological Importance	13.12, 13.13, 13.14	<p>EN5: LOCAL NATURE RESERVES AND NON-STATUTORY SITES OF NATURE CONSERVATION AND GEOLOGICAL IMPORTANCE</p> <p><u>Designated Sites</u></p> <p><u>Development will not be permitted that would cause unacceptable harm to sites of international or national nature conservation importance.</u></p> <p>Development proposals that would affect locally designated sites of nature conservation and geological importance should maintain or enhance the nature conservation and/or geological importance of the designation. Where this is not the case and the need for the development outweighs the nature conservation importance of the site, it should be demonstrated that there is no satisfactory alternative location for the development which avoids nature conservation impacts, and compensation measures designed to ensure that there is no reduction in the overall nature conservation value of the area or feature.</p> <p><u>The purpose of Policy is to ensure that the Council fulfils its obligations in respect of protecting sites of nature conservation importance from harmful development.</u></p> <p><u>Where development is proposed which may have an effect on a site of international or national importance for nature conservation, sufficient information will be required of all applicants to enable a full assessment of the proposal to be carried out. The need for such assessments will not be limited to development located within the</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>designated areas as, depending on the nature of the development and of the nature conservation interest, significant effects may occur even if the development is some distance away.</u></p> <p><u>Assessment of unacceptable harm will be in accordance the criteria set out in the legislation which establishes the sites of international or national importance for nature conservation, and which are expanded upon in Chapter 5 of Planning Policy Wales (2012) and Sections 5.3, 5.4 and Annex 3 of Technical Advice Note (Wales) 5: Nature Conservation and Planning (2009).</u></p> <p><u>In the case of developments required to be assessed under the Conservation of Habitats & Species Regulations 2010 (as amended), where an initial determination of likely significance has indicated that the proposal may be likely to have a significant effect, or the decision as to whether or not the development would have a significant effect on the designated site is inconclusive, an appropriate assessment under Regulation 61(1) will be required and further information may be required from the applicant or other parties.</u></p> <p><u>Where development proposals may be likely to result in disturbance or harm to a European or UK protected species or its habitat, additional information will be requested of applicants</u></p> <p><u>If planning permission is granted it may be the subject of appropriate conditions, or management agreements or planning obligations will be sought, to secure appropriate protection, monitoring, mitigation or compensation and favourable management.</u></p> <p>5.121 The network of SSSIs/SACs/SPAs <u>and Ramsar Sites</u> alone is not</p>

MAC Number	Chapter	Deposit Policy /Para No	<i>HS/A P or other source</i>	Proposed Change
				<p>sufficient to maintain the biodiversity of Cardiff. It is therefore important to identify other locally designated wildlife sites such as Sites of Importance for Nature Conservation (SINC's) and Local Nature Reserves (LNR's). Cardiff currently has 177 SINC's and 6 LNR's.</p> <p>5.122 Cardiff's LNR's are shown on the Proposals Map and SINC's are illustrated in the Biodiversity SPG.</p> <p>5.123 Geological and geomorphological sites of importance that do not merit notification as a SSSI may also be designated as a SINC or Regionally Important Geological Site (RIGS). Such sites define the most important places for geology and geomorphology outside those that are statutorily protected. Geological sites within Cardiff will be designated during the Plan period. The aim of this Policy is to protect the LNRs, SINC's and RIGS referred to above.</p> <p>5.124 The Policy will contribute to the protection and enhancement of Biodiversity interests in accordance with Policy EN6 and will work towards delivering the Plan's objective of protecting and enhancing features of Cardiff's natural environment and heritage.</p> <p>5.125 The current SPG on Biodiversity covers the protection of non-statutory and locally designated sites. This document will be updated and made available as SPG to the LDP.</p> <p>5.126 Chapter 5 of PPW and TAN 5 provide guidance on planning policies to protect biodiversity interests. In accordance with this guidance, the Council will carefully assess proposals for development affecting non-statutory and locally designated sites by evaluating whether:</p>

MAC Number	Chapter	Deposit Policy /Para No	<i>HS/A P or other source</i>	Proposed Change
				<ul style="list-style-type: none"> • the need for the proposed development is considered to outweigh the importance of the particular nature conservation interest and any harm likely to be caused to it; • the proposed development can be more satisfactorily accommodated elsewhere; and • appropriate mitigation or compensation measures are proposed. <p>5.127 Where development is proposed which may have an effect on a non-statutory or locally designated site, sufficient information will be required from all applicants to enable a full assessment of the proposals to be carried out. The need for such assessments will not be limited to development located within the designated areas as, depending on the nature of the development and the nature conservation interest, significant effects may occur even if the proposed development is located some distance from the conservation interest. The required assessments, including ecological surveys, will need to be undertaken at the appropriate time of the year, in accordance with the Council's Biodiversity SPG.</p> <p>5.128 Where planning permission is granted, it may be the subject of appropriate conditions or management agreements to ensure suitable protection, monitoring, mitigation or compensation and favourable management. Where compensatory provision is required, it should be of the same standard and size to that lost as a result of the development. In such cases, details of the type and level of provision will be provided, and agreed by the case officer, prior to determination of the planning application. This may also be required for outline planning applications where appropriate. Where necessary, planning obligations may be sought in accordance with Policy KP7.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>5.129 Where the conservation interest cannot be protected by planning conditions or obligations, it may be necessary to refuse development proposals.</p> <p>5.130 SINCs will be measured in accordance with the annual review of SINCs and additionally reported on in the LDP Annual Monitoring Report.</p> <p><u>New paragraph: The Designated Sites identified in this Policy are defined on the Constraints Map and listed in Appendix (tbc). (It should be noted that although this information is accurate at the time of adoption, potential changes to designated areas are possible over the plan period. The Council will keep an up to date record of the boundaries of all designated sites which can be accessed via the Council website.</u></p>
MAC31	5	Policy EN6 Ecological Networks and Features of Importance for Biodiversity Paragraph 5.137	13.7	<p>Delete paragraph 5.137 of Policy EN6 Ecological Networks and Features of Importance for Biodiversity</p> <p>5.137 Where the ecological networks or landscape features of importance for biodiversity cannot be adequately protected by planning conditions or obligations, it may be necessary to refuse development proposals.</p>
MAC32	5	Policy EN7: Priority Habitats And Species	13.15	<p>Amend Policy EN7 and reasoned justification</p> <p>EN7: PRIORITY HABITATS AND SPECIES</p> <p>Development proposals that would have a significant adverse</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>effect on the continued viability of habitats and species <u>which are legally protected or which are identified as priorities in the UK or Local Biodiversity Action Plan will only be permitted where:</u></p> <ul style="list-style-type: none"> i. The need for development outweighs the nature conservation importance of the site; ii. The developer demonstrates that there is no satisfactory alternative location for the development which avoids nature conservation impacts; and iii. Effective mitigation measures are provided by the developer. <p>Where harm is unavoidable it should be minimised by effective mitigation to ensure that there is no reduction in the overall nature conservation value of the area. Where this is not possible, compensation measures designed to conserve, enhance, manage and, where appropriate, restore natural habitats and species should be provided.</p> <p>5.138 This Policy is in accordance with the aims and objectives of the Plan by protecting and enhancing the features of Cardiff's natural heritage, including its biodiversity and abundance of wildlife habitats and native species. More specifically, it will help protect the current Priority Habitats and Species as defined in the Local Biodiversity Action Plan 2008. The Policy also helps to deliver Policy KP16.</p> <p><u>The presence of a species protected under European or UK legislation is a material consideration in considering development proposals which would be likely to result in disturbance or harm to the species or its habitat. Appropriate surveys to confirm if a protected species is present and an assessment of the likely impact of the development on a protected</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>species may therefore be required from applicants. Thereafter the development proposals will be assessed in accordance with criteria set out in sections 5.5.11 and 5.5.12 of Planning Policy Wales 2012 and Chapter 6 of Technical Advice Note (Wales) 5: Nature Conservation and Planning (2009).</u></p>
MAC33	5	Policy EN9: Conservation of the Historic Environment: paragraphs 5.152, 5.153, 5.155, 5.159	13.2	<p>Amend paragraphs 5.152, 5.153, 5.155 and 5.159 of the reasoned justification to Policy EN9:</p> <p>5.152 This Policy aims to set out the criteria against which proposals affecting Cardiff's heritage assets will be assessed. <u>The Heritage assets identified in this Policy are defined on the Constraints Map and in Appendix (tbc) with the exception of Statutory Listed Buildings and Locally Listed Buildings of Merit which can be viewed on the Council website *</u> *http://ishare.cardiff.gov.uk/mycardiff.aspx?layers=ListedBuildings&startEasting=315000&startNorthing=179000&startZoom=50000 <u>It should be noted that although this information is accurate at the time of adoption, potential changes to designated areas are possible over the plan period. The Council will keep an up to date record of the boundaries of all designated sites which can be accessed via the Council website.</u> Occasionally built heritage will be a constraint, the need for preservation outweighing the benefit of development. More often, a heritage asset will be an opportunity for retaining local identity through the repair and reuse of historic assets and strengthening this through respect for local characteristics of design, for the interpretation of hidden heritage assets, or for the enhancement of the characteristic natural environment. All new developments within historic areas should be designed in such a way as to preserve or enhance their special character.</p> <p>Scheduled Ancient Monuments</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>5.153 PPW, Chapter 3 <i>Conserving the Historic Environment</i> and <u>Welsh Office Circular 60/96: Planning and the Historic Environment: Archaeology (scheduled to be replaced by a Technical Advice Note within the plan period)</u> set out clear statements of national development management policy for archaeological remains and should be referred to accordingly.</p> <p>Listed Buildings</p> <p>5.155 Listed building control is subject to the provisions of the Planning (Listed Buildings & Conservation Areas) Act 1990. Advice is set out in Circular 61/96 <u>(scheduled to be replaced by a Technical Advice Note within the plan period)</u>. There is no statutory requirement to have regard to the provisions of the development plan when considering an application for listed building consent. It is strongly recommended, however, that owners or developers seek early advice from the Council prior to undertaking any works or making an application for listed building consent.</p> <p>Conservation Areas</p> <p>5.159 The adopted series of Conservation Area Appraisal (CAA) documents seek to provide a sound basis for managing development proposals and for progressing initiatives to preserve and enhance each conservation area, in line with advice in PPW and Welsh Office Circular 61/96. The documents were adopted following extensive local consultation and provide a clear and agreed definition of those elements which contribute to the special character and historic interest of the area.</p>
MAC34	5	EN12: Renewable	16.2	Amend Policy EN12 and reasoned justification

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
		Energy And Low Carbon Technologies Paragraphs 5.184, 5.186, 5.187		<p>EN12: RENEWABLE ENERGY AND LOW CARBON TECHNOLOGIES</p> <p><u>Development proposals are required to maximise the potential for renewable energy.</u></p> <p>The Council will encourage developers of major and strategic sites to incorporate schemes which generate energy from renewable and low carbon technologies. This includes opportunities to minimise carbon emissions associated with the heating, cooling and power systems for new development.</p> <p><u>An independent energy assessment investigating the financial viability and technical feasibility of incorporating such schemes will be required to support applications.</u></p> <p>5.184 In preparing the LDP, Cardiff Council has undertaken a Renewable Energy Assessment (REA). The REA aims to identify the potential energy capacity of renewable and low carbon technologies in the local authority area and consider the contribution these can make towards Cardiff's future heat and electricity energy requirements. The REA was prepared in accordance with the Welsh Government Practice Guidance "Planning for Renewable and Low Carbon Energy – A Toolkit for Planners". Findings within the REA suggest that by 2020 the percentage of Cardiff's electricity and heat met by renewable energy sources is likely to be 24% and 6% respectively. Both of these figures are below the guide targets in the UK Renewable Energy Strategy. <u>The REA (and future updates) can assist in identifying which renewable energy technologies may be appropriate in</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>particular locations.</u></p> <p>5.186 Developers are expected to submit an independent energy assessment investigating the financial viability and technical feasibility of incorporating such schemes. Statements should be submitted at the planning application stage to ensure that any viability assessment reflects technological developments and economic circumstances. Developers should refer to the <u>Council's</u> REA and Preliminary Heat Opportunities Plan in undertaking their energy assessments to identify possible opportunities for renewable and low carbon technologies. In implementing this Policy it is expected that developers follow the energy hierarchy as advocated by national policy (TAN 12 & TAN 22). <u>Further guidance in relation to energy assessments will be issued in the form of SPG. This will specify what is expected of developers to meet the requirement of Policy EN12.</u></p> <p>5.187 PPW contains national policy relating to climate responsive development and specifies the current sustainable building standards in Wales[i]. Section 12.10.1 contains national development management policy in relation to planning applications for renewable and low carbon energy development and associated infrastructure. Accordingly, developers should refer to this Policy and TAN 22 <u>Planning for Sustainable Buildings</u> for further guidance. Implementation of this Policy, which promotes incorporation of renewable energy generation, will also reduce emission of aerial pollutants, thereby offsetting increases in aerial emissions arising from implementation of other policies in the Plan. This would contribute to avoiding significant effects upon European Sites.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				Consequential amendment: Amend OB4 SN23 of the Monitoring Framework to include new SPG
MAC35	5	EN13 Air, Noise, Light Pollution and Contaminated Land, Paragraph 5.208	11.6, 13.9, 16.1	Amend title of Policy EN13 and paragraph 5.208 of the reasoned justification EN13 Air, Noise, Light Pollution and Contaminated Land Contamination 5.208 The onus will remain with the developer to ensure that the development of the site will not result in designation as <u>a site with contaminated land contamination</u> under Part 2A of the Environmental Protection Act 1990, thus ensuring the land is suitable for its proposed use.
MAC36	5	EN14: Flood Risk Paragraph 5.211	1.7, 13.3	Amend Policy EN14 and paragraph 5.211 of the reasoned justification EN14: Flood Risk Development will not be permitted: i. <u>Within tidal or fluvial flood plains unless it can be demonstrated that the site is justified in line with national guidance and an appropriate detailed technical assessment has been undertaken to ensure that the development is designed to alleviate the threat and consequences of flooding over its lifetime; existing or proposed flood prevention and/or protection measures are acceptable; or</u> ii. <u>Where it would increase the risk of flooding from fluvial and/or tidal flooding or from additional run-off from the development in</u>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>any location; or iii. Where it would hinder future maintenance or improvement schemes of flood defences and watercourses; or iv. Where it would cause adverse effects on the integrity of tidal or fluvial defences; or v. Where ground floor bedrooms are proposed in areas at high risk of flooding; or <u>Where appropriate the developer should demonstrate that they have considered the need to incorporate environmentally sympathetic flood risk mitigation measures such as Sustainable Urban Drainage Systems (SUDS).</u></p> <p>5.211 TAN15 states that the development advice maps are based on the best available information considered sufficient to determine when flood risk issues need to be taken into account in planning future development. Development advice zones C1 and C2 of the maps show high flood risk areas and are based on Natural Resources Wales extreme flood outlines for tidal and fluvial flooding. These areas are shown on the Constraints Map based on information from the latest development advice maps (2015) Areas of Cardiff identified by Natural Resources Wales to be at risk from tidal or river flooding through surveys undertaken under Section 105(2) of the Water Resources Act 1991 are shown on the Constraints Map.</p>
MAC37	5	Policy T1: Walking and Cycling Paragraph 5.221	Minor amendment	<p>Amend paragraph 5.221 of Policy T1</p> <p>5.221 The purpose of this Policy is to exploit this potential by favouring developments which include design features and facilities that make it easy for people to walk and cycle for everyday journeys instead of travelling by car. Encouraging 'active travel' will help to minimise car use</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				and support the Council in fulfilling its legal duty under the (emerging) Active Travel (Wales) Bill <u>Act 2013</u> to develop, improve and maintain local walking and cycling networks.
MAC38	5	Policy T2: Strategic Rapid Transit And Bus Corridors	14.5	<p>Amend Policy T2 and reasoned justification</p> <p>T2: STRATEGIC RAPID TRANSIT AND BUS CORRIDORS</p> <p>BUS CORRIDOR ENHANCEMENTS</p> <p>i. City Centre Bus Routes;</p> <p>ii. Eastern Bus Corridor (A48, <u>A4232 from the A48 to Junction 30 of the M4 Motorway, A48M Trunk Road, Southern Way and A4161 Newport Road</u>);</p> <p>iii. Northern Bus Corridor (A470 North Road/ Manor Way and A469 Caerphilly Road/<u>A470 Trunk Road to the County Boundary</u>); and</p> <p>iv. Western Bus Corridor (A4161 Lansdowne Road, Cowbridge Road, A48, <u>A4055 Cardiff Road; A4119 Llantrisant Road from the County Boundary to Cowbridge Road and A4232 Trunk Road from Culverhouse Cross to Junction 33 of the M4 Motorway</u>)</p> <p>v. <u>Southern Bus Corridor (Lloyd George Avenue, Lloyd George Avenue to the County Boundary via A4232 and Cogan Spur and via the Cardiff Barrage).</u></p> <p>Provision will be made to facilitate the functional integration of these corridors and associated services with the wider transport network including the bus network and local walking and cycling routes. <u>The trunk road sections of the Bus Corridor Enhancements are the responsibility of the Welsh Government. Cardiff Council</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>will work with the Welsh Government to identify appropriate measures on the trunk road sections of these routes.</u></p> <p>Improvements to the city's wider bus network, including the provision of new infrastructure and the introduction of new routes and services will be supported where these are necessary to provide sustainable travel options and address the movement impacts of new development.</p> <p>5.227 This Policy requires development to be served by effective public transport through the development of new rapid transit routes, key strategic bus corridors and improvements to the wider city bus network.</p> <p>Rapid Transit Corridors</p> <p>5.228 Rapid transit corridors will connect neighbourhoods to the city centre with high frequency services which will run along on road and off road infrastructure and offer shorter journey times than conventional bus services <u>Four Rapid Transit Corridors have been identified based on four broad geographical channels feeding in towards the city centre. The Rapid Transit Corridors can be defined as the collection of high frequency public transport services which will run along on-road and off-road infrastructure linking neighbourhoods to the city centre and wider public transport network offering shorter journey times than conventional bus services. The Bus Corridor Enhancements referenced in paragraph 5.230 are largely located within the Rapid Transit Corridors but are specifically highlighted as the key bus-based corridors with important cross-boundary linkages and will therefore be a focus for future enhancements. Each corridor</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>will include improvements that give rapid transit and bus services increased priority over general traffic and improved accessibility to a wider range of destinations.</u></p> <p>5.229 This Policy provides for the development of four principal rapid transit corridors that will serve the main LDP strategic sites. The form of rapid transit (heavy rail, light rail, tram train, bus rapid transit etc.) which can be accommodated on each corridor will be determined through further technical assessment work and as part of the detailed master planning of the strategic sites. The Rapid Transit Corridors are shown on the Constraints Map with further detailed work informing the precise mode, alignments and land take requirements. This Policy provides for the development of four principal rapid transit corridors that will serve the main LDP strategic sites. The mode of rapid transit could take one of the following forms or another form of technology that provides for the same purpose:</p> <ul style="list-style-type: none"> • <u>heavy rail;</u> • <u>light rail;</u> • <u>tram;</u> • <u>tram/train running on segregated rails;</u> • <u>tram/train combining running on segregated rails and on-street running;</u> • <u>conventional buses operating a limited stop express service using carriageway space on the public highway used by general traffic;</u> • <u>conventional buses using dedicated buses lanes and assisted by other bus priority measures in combination with use of other carriageway space on the public highway; or</u> • <u>conventional buses or guided buses using busways completely segregated from the main highway along their entire length or for short sections in combination with use of the public highway/bus</u>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>priority measures on the public highway.</u></p> <p><u>Some elements of the rapid transit corridors will be provided within the strategic sites. However, the alignment and mode of rapid transit and how they connect to and interchange with the public transport network is not yet known and cannot be defined precisely on a map. The need for the rapid transit corridors is included in the key policies on Strategic Sites. The mode of rapid transit that can be accommodated on each corridor will be determined through further technical assessment work including work undertaken as part of the detailed master planning of the strategic sites and in support of planning applications. This will help inform the precise mode, route alignments and land take requirements. Therefore, for these reasons the rapid transit routes are not shown on the Proposals Map.</u></p> <p>Bus Corridor Enhancements</p> <p>5.230 The city's key strategic bus corridors form a central element of the city's strategic public transport network. Around 80% of daily inbound commuter journeys are by car. These movements create congestion on the city's strategic highway network which makes bus journeys longer and services less reliable. This Policy seeks to address these issues by providing for improvements to maximise the efficiency and attractiveness of bus services on each of the city's key bus corridors. Such measures will include provision of bus lanes (including timed bus lanes operating at peak times only), bus priority measures at key junctions and improved passenger waiting and information facilities. The Bus Corridors referred to in this policy are shown on the Constraints Map.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>5.230 <u>The Bus Corridor Enhancements listed in Policy T2 are defined as the strategic bus routes that connect Cardiff to the Region. These corridors form a central element of the city’s strategic public transport network. Around 80% of daily inbound commuter journeys to Cardiff from the Region are by car. These movements create congestion on the city’s strategic highway network which makes bus journeys longer and services less reliable. This Policy seeks to address these issues by making provision for improvements to maximise the efficiency and attractiveness of bus services through reducing journey times and improving journey time reliability. The corridors are shown on the Proposals Map.</u></p> <p><u>Sufficient carriageway space will be required to facilitate the expeditious passage of buses (including express services with limited stops), minimising journey times and maximising journey time reliability. Where necessary to meet these requirements, the Council will seek to remove pinch points and to remove and/or relocate on street parking. The Council will also use a range of tools and measures to change travel behaviour by helping to make sustainable travel an attractive choice, managing the network and influencing travel demand. Some of these measures include for example, providing high quality walking, cycling and public transport infrastructure, improvements associated with development, reallocating road space, route improvements serving key destinations and developments, interchange/transport hub facilities, bus stops, cycle stands, improvements in accessibility, parking controls and policies, parking pricing, parking enforcement, moving traffic offences, bus priority, bus gates, junction controls, traffic signal control, managing road speed limits, high quality signage and road markings, designing for active travel, shared cycling and walking routes, partnership working with transport providers (e.g. encouraging new,</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>express and cross-city bus routes), travel information, promotional initiatives, personalised travel planning, road safety initiatives, collaborative working cross-boundary with other authorities and with key transport stakeholders, road safety and transport infrastructure maintenance.</u></p> <p>Local Bus Network</p> <p>5.231 Ensuring the bus is a more attractive and practical travel option is crucial to reducing car dependency and improving accessibility. Cardiff has an extensive local bus network serving most parts of the city. However, the bus is not an attractive travel option for many journeys in Cardiff. For example, most routes on the network are radial and converge on the city centre. This means that people have to travel into the city centre in order to access bus services to another part of the city. Consequently, the car is the preferred mode of travel for many relatively short journeys. To address this problem this Policy supports the expansion and improvement of Cardiff's local bus network, in conjunction with the development of rapid transit routes and the strategic bus corridors.</p> <p>5.232 The alignments of the strategic rapid transit corridors, strategic bus corridors and other bus routes are likely to overlap in some locations offering the opportunity for interchange between services. Therefore, the Council will seek to ensure that the routes, services and supporting facilities which make up the rapid transit and bus networks are fully integrated in their design and operation.</p> <p><u>Improvements to the Wider City Bus Network</u></p> <p><u>5.231 Ensuring the bus is a more attractive and practical travel option is</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>crucial to reducing car dependency, improving accessibility and effecting modal shift. Cardiff has an extensive local bus network serving most parts of the city. However, the bus is not an attractive travel option for many journeys in Cardiff. For example, most routes on the network are radial and converge on the city centre. This means that people have to travel into the city centre in order to access bus services to another part of the city. Consequently, the car is the preferred mode of travel for many relatively short journeys. To address this problem this Policy supports the expansion and improvement of Cardiff's local bus network, in conjunction with the development of Rapid Transit Corridors and Bus Corridor Enhancements. Technical work carried out by the Council indicates that re-configuring the network and introducing new orbital routes and points of interchange between routes and services would enable a much wider range of journeys within Cardiff to be undertaken by bus, thus reducing reliance upon the car.</u></p> <p><u>5.232 Routes forming part of rapid transit corridors, strategic bus corridors and the wider city bus network will be connected in many locations across the public transport network. This offers the opportunity for interchange between services. Facilitating interchange with high quality passenger facilities and travel information will form an important element of enhancements to the to the city bus network.</u></p>
MAC39	5	New Policy and reasoned justification	14.4	<p>Insert new policy to be referenced T9 after existing paragraph 5.259</p> <p><u>Policy T9 Cardiff City Region 'Metro' network</u></p> <p><u>The Council will seek to facilitate the development of a future regional 'Metro' network of integrated public transport routes and</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>services within Cardiff and connecting the city with the wider south east Wales region, including the development and/or enhancement of the following on-highway and off-highway infrastructure components:</u></p> <ul style="list-style-type: none"> <u>i. Existing and new heavy rail routes</u> <u>ii. New light rail routes</u> <u>iii. Tram</u> <u>iv. Tram/train on segregated rails and/or running on street</u> <u>v. conventional buses, or guided buses using busways completely segregated from the main highway along their entire length or for short sections, in combination with use of the public highway/bus priority measures on the public highway.</u> <u>vi. conventional buses using dedicated buses lanes and assisted by other bus priority measures, in combination with use of other carriageway space on the public highway; and</u> <u>vii. conventional buses using carriageway space on the public highway used by general traffic.</u> <p><u>Where the alignment of a future route which is likely to form part of a 'Metro' network falls within any part of a development site, the Council will, through the development management process,</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>seek either to secure provision of the necessary infrastructure as part of the development, or otherwise, safeguard the land and space required to accommodate the route and potential mode options in the future. This will include requiring a development to be designed in a way which does not prejudice the future development of the 'Metro' route and would enable it to be incorporated within the development at a later date.</u></p> <p><u>Reasoned justification:</u> The Cardiff City Region Metro is a proposal for a metropolitan-style, integrated public transport network extending across Cardiff and South East Wales. The 'Metro' is likely to be developed in phases over a number of years. Its purpose is to significantly enhance public transport accessibility across the region. This would be achieved by the physical and operational integration of routes for different public modes (rail-based and bus-based) and enabling provision of frequent, fast and efficient public transport services connecting principal settlements and trip destinations in the region. A 'Metro' network would include points of interchange and be supported by integrated timetables and ticketing with a common branding. In combination, these elements would enable people to make daily journeys and reach key trip destinations without the need for a car. This enhanced connectivity would have significant economic benefits for Cardiff and the wider City Region, as well as easing pressures on key strategic transport corridors within and beyond Cardiff boundaries.</p> <p><u>Potential routes/corridors which would make up the 'Metro' network have been identified in a series of investigative studies in recent years. Future</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>technical work will be led by the Welsh Government in consultation with local authorities, land owners, communities and the transport industry. Welsh Government's National Transport Plan 2015 – Consultation Draft (December 2014) National Transport Finance Plan 2015 (July 2015) includes a commitment to progress this work which will determine the form of the network and the mix of public transport modes on each corridor/route.</u></p> <p><u>It is important that development that takes place within the plan period does not prejudice the delivery of this regionally important future asset.</u></p> <p><u>Policies KP2 (A) to KP2(H) include references to improvements to the strategic public transport network within the supporting lists of 'Essential' and 'Enabling' transport infrastructure for the individual LDP strategic sites. 				<p><u>previous use.</u></p> <p>Insert new paragraph after paragraph 5.295</p> <p><u>In addition to local centres identified on the proposals Map, there are numerous smaller groups of shops and individual 'corner shops' across the county that provide valuable shopping facilities to surrounding communities. Proposals that could lead to the loss of such local shops will be assessed having regard to the role of those shops in meeting local shopping needs and the viability of the premises for continued shopping use. Planning Policy Wales recognises the important economic and social role of such local shopping facilities to communities.</u></p>
MAC46	5	Policy R7: Food and Drink Uses Paragraphs 5.299, 5.303,	10.5. 10.6. 10.7. 10.8. 10.9, 10.10, 10.11, 10.12, 10.14	<p>Amend paragraph 5.299 and delete paragraph 5.303 of Policy R7</p> <p>5.299 Food and drink uses are also complementary, in principle, to the main shopping role of District and Local Centres, so long as they do not adversely affect the living environment of nearby residents, or with other non-shopping uses, reach such a level that they undermine the shopping character of the area in accordance with Policies R5 <u>4</u> District Centres and R6 <u>5</u> Local Centres.</p> <p>5.303 Proposals for A3 uses within 400 metres of a school will be considered against Policy C7 Health and the related Health SPG.</p>
MAC47	5	Policy R8 Protection Of Local Shopping Parades	10.5. 10.6. 10.7. 10.8. 10.9, 10.10, 10.11, 10.12, 10.14	<p>Delete Policy R8 and reasoned justification</p> <p>Policy R8 PROTECTION OF LOCAL SHOPPING PARADES</p> <p>Proposals that would lead to the loss of local shops outside of identified centres will be assessed having regard to the role of</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>those shops in meeting local shopping needs and the viability of the premises for continued retail use</p> <p>5.305 In addition to the District and Local Centres identified on the Proposals Map there are numerous smaller local shopping parades across the County. Although these have a smaller more limited retail offer, they provide easily accessible valuable shopping provision to surrounding communities.</p> <p>5.306 For the purpose of this Policy the definition of a local parade is a cluster of 3 or more A1 retail units (i.e. newsagents, convenience store, off-licence) with supporting A2, A3, or D1 uses that function as a group of units capable of serving the needs of the local resident catchment population.</p> <p>5.307 In such areas the Policy will seek to protect and retain local convenience shops, because of the importance of these uses for meeting the everyday needs of those living locally. Proposals for development within such areas must relate to the scale, role and function of the local shopping parade and will be determined on individual merit. Individual 'corner shops', have an important role in areas which are relatively remote from other shops particularly convenience retail. This is especially important for residents who are less mobile or do not have access to private transport.</p> <p>5.308 It should be noted that many shops within a local shopping parade are independently run and can therefore become vacant as a result of retirement by the proprietor rather than a fall in business sales or patronage.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>5.309 In terms of assessing the viability of the premises for continued retail use, the applicant will need to provide evidence of active marketing if a retail unit is vacant, taking into consideration the fact that a recently vacated unit may have the potential to attract an A1 use.</p> <p>5.310 The role and function of local shopping parades should be protected from out of centre retail development that could potentially harm their vitality and viability. Such schemes will need to be considered against Policy R4.</p>
MAC48	5	All Retail Policies	10.5. 10.6. 10.7. 10.8. 10.9, 10.10, 10.11, 10.12, 10.14	<p>Re-order and renumber retail policies</p> <p>R1 RETAIL PROVISION WITHIN STRATEGIC SITES</p> <p><u>R1 RETAIL HIERARCHY</u></p> <p>R2 DEVELOPMENT IN THE CENTRAL SHOPPING AREA</p> <p>R3 PROTECTED SHOPPING FRONTAGES</p> <p>R4 RETAIL DEVELOPMENT (OUT OF CENTRE)</p> <p>R4 DISTRICT CENTRES</p> <p>R5 DISTRICT CENTRES</p> <p><u>R5 LOCAL CENTRES</u></p> <p>R6 LOCAL CENTRES</p>

				<p><u>permitted if:</u> <u>i) An alternative facility of at least equal quality and scale to meet community needs is available or will be provided within the vicinity and;</u> <u>ii) It can be demonstrated that the existing provision is surplus to the needs of the community.</u></p> <p><u>Existing community facilities are widely available throughout the City. Ensuring an adequate provision is maintained, is very important in order to encourage social interaction, improve health and well-being and reduce inequalities between different communities. The retention of existing facilities will therefore be sought unless it can be demonstrated that the above criteria can be met.</u></p> <p><u>Whilst this policy will apply to both commercial and non-commercial uses which provide a social or welfare benefit to the community, community land and buildings are of particular importance. This includes land and buildings that are managed and used primarily by the voluntary and community sector for community-led activities.</u></p> <p><u>In order to satisfy criterion ii) of the policy it will be necessary to demonstrate that continued use as community facility is no longer viable giving consideration to; appropriate marketing, and local need and demand for the existing community facility.</u></p>
MAC52	5	Policy C4: Provision For Open Space, Outdoor	16.8	<p>Amend Policy C4 and reasoned justification</p> <p><u>C4: PROVISION FOR OPEN SPACE, OUTDOOR RECREATION, CHILDREN'S PLAY AND SPORT</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
		Recreation, And Sport Paragraph 5.340		<p>Provision for open space, outdoor recreation, <u>children's play</u> and sport will be sought in conjunction with all new residential developments. This policy is aimed at securing the provision or improvement of open space and other appropriate outdoor recreation and sport in conjunction with all new residential developments over 8 units and on site provision of functional open space in conjunction with all new residential developments over 14 units. The appropriate amount of multi functional green space is based on a minimum of 2.43 hectares of functional open space per 1,000 projected population. All other open space provision will be in addition to the provision of multi functional green space.</p> <p>5.340 The Open Space SPG sets out detailed guidance on how the provision of functional open space, outdoor recreation, <u>children's play</u> and sport from new residential developments will be assessed and managed. It explains that the amount of open space provision generated by a housing proposal will be assessed in relation to its type and density. Consideration will also be given to the availability and adequacy of existing functional open space within the surrounding area. The Council will therefore seek to secure a range of improvements for accessible, high quality open space, sport and outdoor recreation provision, as appropriate to the particular site and development proposal.</p>
MAC53	5	Policy C5: Provision For Allotments And Community	9.16	<p>Delete Policy C5 and reasoned justification</p> <p>C5: PROVISION FOR ALLOTMENTS AND COMMUNITY GROWING</p> <p>Provision for allotments and/or community growing areas will be</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
		Growing		<p>sought on new residential developments over 46 units and on all developments over 1800, provision of a 40 plot allotment site will be sought, increasing on a pro-rata basis for larger sites.</p> <p>5.346 Where the provision of land for allotments is not possible, provision will be sought for land for community growing. This would include such uses as community spaces, community farms, communal gardens, orchards and community harvesting schemes.</p> <p>5.347 The role of allotments and community growing areas in contributing towards sustainable communities, healthy living and improved interaction between different social and age groups is recognised in PPW and TAN 16: Open Space (2008). Further information is set out in the Cardiff Allotment Strategy and Open Space SPG.</p> <p>5.348 Allotments and community growing areas play an important open space function particularly in urban areas and can help enhance biodiversity, provide opportunities for recreation and improve the quality of life.</p> <p>5.349 Provision for allotments and community growing areas helps work towards delivering Plan Objectives and key policies.</p> <p>5.350 For developments over 46 units, the Council will seek to secure financial contributions towards off site provision of increased allotment or community growing space or improving and enhancing existing allotments or community growing areas.</p> <p>5.351 For developments over 1800 units, the Council will seek to secure</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>the provision of a new 40 plot allotment site, increasing on a pro-rata basis for developments over 1800 units. The developer would be required to provide and fence the land and provide a financial contribution to lay out the allotments site and all associated infrastructure. The Council would then subsequently adopt the allotments and provide for future management and maintenance, including the designation of the site as a statutory allotment area.</p> <p>5.352 The required standard for allotment size and the calculation for off-site contributions towards allotments and community growing areas are covered in greater detail in the Open Space SPG.</p>
MAC54	5	Policy C6: Provision of Children's Play	16.8	<p>Delete Policy C6 and reasoned justification</p> <p>C6: PROVISION FOR CHILDREN'S PLAY Provision for children's play should be an essential element of the layout of new developments. Access to at least three different types of outdoor play provision as indicated below shall be provided within 400m of family homes within new developments.</p> <p>5.353 This Policy and the associated model for play provision seeks to ensure that that the developmental needs of children to access varied play opportunities are properly provided for in new developments and do not rely exclusively on the provision of a limited number of fixed equipment play areas.</p> <p>5.354 The inclusion of private gardens as a location for play will ensure that those developments that do not have access to private gardens will require a greater level of alternative provision for play, which could include child friendly streets and safe access to good quality open space</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				as well as the provision of accessible playgrounds in accordance with Policy T1.
MAC55	5	Policy C7 Health Paragraphs 5.355, 5.350, 5.362	16.10	<p>Amend Policy C7 and reasoned justification</p> <p>C7: HEALTH Priority in new developments will be given to reducing health inequalities and encouraging healthy lifestyles through:</p> <ul style="list-style-type: none"> i. Identifying sites for new health facilities, reflecting the spatial distribution of need, ensuring they are accessible and have the potential to be shared by different service providers; and ii. Ensuring that they provide a physical and built environment that supports interconnectivity, active travel choices, promotes healthy lifestyles and enhances road safety; and iii. Managing the location of fast food takeaways to appropriate locations; and in all cases; iv. Demonstrating that the effect of new developments on health is taken into account. <p>5.355 This Policy aims to improve the health of Cardiff’s population by seeking to secure new health facilities in areas most at need, requiring that the built environment fosters healthy lifestyles, managing the location of fast food takeaways and ensuring that health is a key consideration in new developments.</p> <p>5.360 In order to support the aims of this Policy, it is recommended that the Welsh Health Impact Assessment Unit document ‘Health Impact Assessment: A Practical Guide’ (2012) is used in screening large planning</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>applications to assess whether a Health Impact Assessment is required. It is recommended that all large developments including housing, health care, retail, waste and schools undertake a Health Impact Assessment.</p> <p>5.362 Further details on this Policy will be set out in <u>an</u> Health SPG to accompany the LDP. regarding new or enhanced health facilities and on managing the location of fast food takeaways (see Policy R7), in particular when they are near a residential area or a school and when a Health Impact Assessment may be required.</p>
MAC56	5	C8 Planning for Schools	16.12	<p>Delete Policy C8 and reasoned justification</p> <p>C8: PLANNING FOR SCHOOLS New and improved school facilities will be provided to meet existing and future educational needs.</p> <p>5.363 — The Council has a statutory duty as local education authority to ensure that there is a sufficient number and variety of school places at primary and secondary level, available to meet the needs of the population of the County.</p> <p>5.364 Although the supply and demand for school places varies by area, it is anticipated that there will be no overall surplus school places at entry to the primary sector in 2015, nor in the secondary sector in 2019. This takes account of existing school investment proposal and projections based upon health service (GP) and school roll data. Additional primary and secondary education provision will therefore be required to serve the new pupils generated as a result of greenfield or brownfield housing developments that come forward during the Plan Period.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>5.365 The Council will seek financial contributions (See Policy KP7 Planning Obligations), towards the cost of providing additional or improved primary and/or secondary school facilities from developers proposing housing developments that would generate a requirement for school places that cannot be reasonably met by existing schools because:</p> <p>a. the capacity at the school(s) in whose catchment area (s) new housing development are proposed would as a result of the development be exceeded by demand; and/or</p> <p>b. there is a surplus capacity in such schools to accommodate some or all of the projected number of pupils generated from the proposed development but investment is required to make it suitable.</p> <p>5.366 The Council will also seek the provision of land and/or premises, depending on scale and location of development. Please refer to Key Policy KP6 'New Infrastructure' and Supporting Document No. 6 Infrastructure Plan for detailed analysis.</p> <p>5.367 It is recognised that the future additional pupils generated from strategic housing allocations (D-H) could not be accommodated in existing schools. The Council requests that developers set aside appropriate sites and provide school facilities in the initial phases of development aligned with the construction process, and additional forms of entry made available where necessary (210 primary school places plus nursery provision, 150 secondary school places plus sixth form provision) following completion of each 700 dwellings.</p> <p>5.368 There will also be a need to address school provision in catchment</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>areas where there is little or no existing capacity to accommodate the additional demand likely to arise from housing development on previously developed land (including strategic sites) or other in-fill sites. With limited exceptions financial contributions will be sought from developers towards the provision of new classroom accommodation, in accordance with the needs which arise from the proposed development.</p> <p>5.369 In the event of the Council being allocated developer contributions to expand existing provision, the phasing of contributions over the period of construction will need to be in line with those set out in SPG, and will require careful consideration to ensure that the supply of school places is aligned with the construction process and occupancy of dwellings. Monitoring of take-up of school places will be a key consideration in order to inform existing and future needs.</p> <p>5.370 Further guidance on the application of this Policy will be set out in SPG.</p>
MAC57	5	Policy C9: New Educational Facilities	16.12	<p>Delete Policy C9 and reasoned justification</p> <p>C9: New Educational Facilities Development of nursery, primary, secondary and sixth form education should: i. Be well designed, well related to neighbourhood services and amenities, and easily accessible by sustainable transport modes; and ii. Include, where appropriate, provision for other appropriate community uses in addition to their educational use.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>5.371 Opportunities should be taken to share school buildings and facilities, or co-locate on shared sites with other Council Service areas and selected external services. This would serve to maximise the use of the land and provide an integrated citizen focused resource for the whole community. Opportunities for shared facilities could include libraries, community centres, leisure centres, indoor recreation facilities, play centres, adult education facilities, integrated childcare facilities, adjoining natural habitat, health care facilities.</p> <p>5.372 Dependant on geographical constraints, opportunities should be taken to explore shared school facilities/playing fields with other schools (e.g. a Primary and Secondary School sharing fields) or continuous ages 3-19 school provision.</p> <p>5.373 Further guidance on the application of this Policy will be set out in SPG.</p>
MAC58	5	Policy C10: Health Employment Non Strategic Allocation	16.11	<p>Delete Policy C10 and reasoned justification</p> <p>C10: HEALTH EMPLOYMENT NON STRATEGIC ALLOCATION</p> <p>Land is allocated for health related uses at Government Offices, St Agnes Road, Heath (4.07ha)</p> <p>5.374 The site provides a good opportunity to allow for the future expansion of health related uses associated with University Hospital Wales.</p> <p>5.375 This non-strategic site was put forward as a candidate site in the LDP process and is considered acceptable for health related uses.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>Dialogue with the University and NHS Trust has indicated the merits of health related uses for this site, which can assist the strategic provision of health care in future years as the city continues to grow, placing further demands on the health service.</p> <p>5.376 There are potential opportunities to develop the site for health related uses in direct conjunction with the existing hospital, offering the potential for comprehensive transport and access solutions.</p> <p>5.377 The allocation of the site for health related uses supports the LDP vision and objectives on health and policies KP14 and C7 which promote the provision of health facilities in accessible locations. The site is directly adjacent to the existing University Hospital and in an accessible location which reduces the need to travel, a key component of developing sustainable communities. The precise nature of health related uses will be subject to further detailed work but could include health related employment and/or include an element of ancillary key health worker accommodation providing accessible accommodation and minimising travel to work distances.</p>
MAC59	5	New Policy and reasoned justification	16.12	<p>Insert new Policy after existing paragraph 5.362 to be referenced as Policy C7</p> <p><u>C7 PLANNING FOR SCHOOLS</u></p> <p><u>Where a need has been identified for new and improved school facilities as a result of development ,the Council will seek contributions towards the cost of additional education provision. Negotiated contributions will be fairly and reasonably related in scale and kind to the proposed development. Where appropriate</u></p>

MAC60	5	Policy M1: Mineral Limestone Reserves And Resources Paragraph 5.380	15.1,2,3,4,9,10	<p>Amend Policy M1 and the reasoned justification</p> <p>M1: MINERAL LIMESTONE RESERVES AND RESOURCES</p> <p>Mineral reserves with planning permission will be safeguarded from development that would prevent their extraction at:</p> <ul style="list-style-type: none"> i. Creigiau Quarry; ii. Taffs Well Quarry; iii. Ton Mawr Quarry; and iv. Blaengwynlais Quarry.

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>Preferred Resource Areas of known resources suitable for the future working of Limestone have been identified –will be safeguarded from development that would prevent their as extensions to at:</u></p> <p>v. Creigiau Quarry; and vi. Ton Mawr Quarry.</p> <p>5.380 Mineral reserves are sites with planning permission for mineral working Cardiff has several mineral reserves, which are identified on the Proposals Map These are limestone quarries which are active at present, or those which have planning permission for the working of limestone. <u>Preferred Mineral Resource Areas of known resources</u> are sites within the County considered suitable for the future working of limestone. Areas of mineral resource <u>These areas</u> are identified on the Proposals Map. The methodology used to identify these areas is set out in Supporting Document No.9 - Minerals.</p>
MAC61	5	Policy M2: Preferred Order Of Mineral Resource Release Paragraphs 5.382, 5.384, 5.384	15.1,2, 3,4,9,10	<p>Amend Policy M2: PREFERRED ORDER OF MINERAL RESOURCE RELEASE and reasoned justification</p> <p>M2: PREFERRED ORDER OF MINERAL RESOURCE RELEASE</p> <p>The extension or deepening of existing mineral workings will be favoured in preference to the release of new sites and, <u>with the exception of the lateral extensions of Creigiau and Ton Mawr Quarries referred to in Policy M1, deepening will be preferred to lateral extension.</u> <u>Applications to extend or deepen mineral workings will be permitted</u> where it can be demonstrated that:</p> <p><u>i. There are environmental improvements at the site which can be</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>justified by the addition of new reserves, or traded off by the giving up of existing reserves, or;</u> <u>ii. The addition of new reserves preserves the productive capacity of Cardiff to meet its sub regional apportionment commitments; or</u> <u>iii. There are operational benefits in permitting further reserves that will lead to more efficient exploitation of the resource;</u> <u>i. There are no suitable alternative materials available;</u> <u>ii. Reserves in the existing site will be exhausted, at existing output levels, within 10 years;</u> <u>iii. Reserves in the extended or deepened site, in combination with those remaining in the existing site, do not provide, at existing output levels, for more than 20 years' reserves; and</u> <u>iii. It should also be demonstrated that such an approach will not cause unacceptable harm to the environment, including consideration of impacts relating to access, noise, air quality, landscape and visual effects, ecology, soil resources, hydrology and hydrogeology, blast vibration and cultural heritage, and in the case of Creigiau Quarry, the objectives of Policy M3 are delivered as part of an extension or deepening application.</u></p> <p>5.382 The extent of Cardiff's existing minerals landbank means it is unlikely that there will be a need to grant any further permissions for mineral resource release within the Plan period. <u>The Regional Technical Statement 1st Review (August 2014) states that based on current information Cardiff has a surplus of permitted reserves and no further allocations are necessary. However, it also notes that the these conclusions do not take into account all factors that may be material to ensuring an adequate and steady supply of aggregates for appropriately located sources including the technical capability of one type of aggregate to interchange for another, the relative environmental cost of substitution</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>of one type of aggregate by another, the relative environmental effects of changing patterns of supply and whether adequate production capacity can be maintained to meet the required level of supply. The purpose of this Policy is to set out the sequential test approach which would be used to guide the future release of mineral resources, should this be necessary.</u></p> <p>5.383 This Policy expands on Policy KP11 and promotes and supports the efficient use of minerals. The Policy accords with guidance contained in MPPW which recognises that extensions to existing minerals workings are often more generally acceptable than new greenfield sites. Minerals Technical Advice Note (Wales) 1: Aggregates (2004) (MTAN1) indicates that a minimum 10 year landbank of crushed rock should be maintained throughout the entire Plan Period, but that new allocations in development plans will not be necessary where landbanks already provide for more than 20 years of aggregates extraction.</p> <p>5.384 Generally, the continuation of quarrying at existing sites is preferable to the environmental and financial upheaval of shifting production to new sites. In addition, the deepening of sites is preferred to lateral extension as it minimises the area of land given over to working and ensures the best use of existing reserves. However, in determining the best option, consideration will need to be given to possible environmental and restoration implications <u>and for this reason an exception is made for Creigiau quarry where the objectives of Policy M3 to swap reserves for less environmentally sensitive reserves will be delivered as part of an extension or deepening application.</u></p>
MAC62	5	Policy M3: Quarry	15.11	Amend Policy M3 and reasoned justification in paragraphs 5.389 and 5.391

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
		Closures And Extension Limits Paragraphs 5.389 and 5.391		<p>M3: QUARRY CLOSURES AND EXTENSION LIMITS</p> <p>Measures to prevent further mineral working and, where appropriate, to secure restoration and landscaping works at the earliest opportunity, will be sought at the following sites:</p> <ul style="list-style-type: none"> i. Cefn Garw Quarry, Tongwynlais; ii. Highland Park Brickworks, Ely; iii. West End Brickworks, Ely; and iv. Southern and western parts of Creigiau Quarry. <p>No further extension to mineral reserves will be permitted at these sites, or at:</p> <ul style="list-style-type: none"> v. Blaengwynlais Quarry, Rhiwbina Hill. <p>5.389 The Policy identifies three mineral sites ((i) to (iii) above) and parts of Creigiau Quarry where mineral working is no longer considered appropriate by modern standards. Additionally, Blaengwynlais Quarry is considered unsuitable for extension in view of its sensitive location and poor access, so further extensions at this site will be resisted.</p> <p>5.391 To eliminate any doubt over possible re-working at the sites outlined in (i) to (iv) above, measures to prevent further extraction and secure restoration and landscaping works will be pursued. Measures <u>will</u> may include the use of Prohibition Orders to ensure that no further working can <u>takes place at Cefn Garw Quarry, Tongwynlais, Highland Park Brickworks, Ely and West End Brickworks, Ely and closure of the southern and western parts of Creigiau quarry through a legal agreement with the site owners to relinquish these areas in favour of a new area set out in Policy M1 of the Plan and identified on the Proposals Map. ,</u> No further extensions will be permitted, except at Creigiau Quarry, in line with Policy</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				M1 on Mineral Limestone Reserves and Resources. Blaengwynlais Quarry is not considered appropriate for extension, and any applications will be determined accordingly.
MAC63	5	Policy M6: Dredged Aggregate Landing And Distribution Facilities Paragraphs 5.405, 5.408	15.1,2, 3,4,9,10	<p>Amend Policy M6 and the reasoned justification</p> <p>Policy M6: DREDGED AGGREGATE LANDING AND DISTRIBUTION FACILITIES</p> <p>The sand wharves shown on the Proposals Map will be protected against development which would prejudice their ability to land marine dredged sand and gravel. Proposals for the provision and improvement of landing and distribution facilities for marine dredged aggregates within <u>the sand wharves shown on the Proposals Map Cardiff Docks</u> will be favoured where there will be no unacceptable harm to the environment, or nearby residential areas or future regeneration prospects of the waterfront area.</p> <p>5.405 This Policy expands on Policy KP11. The Policy accords with guidance contained in Interim Marine Aggregates Dredging Policy (2004) which indicates that the use of marine dredged sand and gravel will continue for the foreseeable future where this remains consistent with the principles of sustainable development. It accords with the South Wales Regional Technical Statement 1st Review for Minerals (2008)14) which requires the protection of existing and potential wharves.</p> <p>5.408 Operations involving the trans-shipment of minerals do not normally need specific planning permission within the operational area of the port. However, secondary processes including the manufacture or</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>treatment of mineral products usually need permission. Where proposals are submitted they will need to demonstrate minimal impact on the environment. and nearby residential areas, and that they will not prejudice any future regeneration proposals in the waterfront area of Cardiff Bay. Where proposals are likely to have significant effects upon the environment, applications may be subject to Environmental Impact Assessment. Additionally, proposals will need to have regard to the <u>Severn Estuary SSSI/SAC/SPA and Ramsar site</u> and where proposals are likely to have a significant effect on an international site, an appropriate assessment of the proposal would be undertaken.</p> <p>In addition there are the following consequential changes needed to the Plan arising out of the proposed changes to the Policy:</p> <ul style="list-style-type: none"> (i) Revision to the legend on the Proposals Map to change the reference to 'Limestone Resource Area M1' to 'Minerals Preferred Area M1. (ii) Paragraph 1.18 of Appendix 3 "National and regional policy framework be amended to read" "1.18 The South Wales Regional Technical Statement 1st Review for Aggregates (RTS) (200814) has been prepared in response to Minerals Technical Advice Note 1: Aggregates (MTAN1), issued by Welsh Government in March 2004. This has a primary objective of seeking to ensure a sustainably managed supply of aggregates that are essential for construction, by striking the best balance between environmental, economic and social costs. To achieve that

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>objective, the RTS has been prepared by <u>consultants on behalf of</u> the South Wales <u>and North Wales</u> Regional Aggregates Working Party (RAWPs) to provide a strategic basis for aggregates supply for LDPs in the south Wales region until 2021<u>36</u>. As appropriate, local planning authorities will then be expected to include allocations for aggregates provision in their area as part of the LDP process. The RTS was endorsed by the <u>Welsh Government and constituent authorities including Cardiff in August 2014</u>July 2007.</p> <p>(iii) <u>Amend Appendix 6: Summary of LDP Process including technical glossary so reference to Regional Technical Statement (RTS) on page 42 reads "The Regional Technical Statement (RTS) 1st Review</u> - The RTS is <u>was produced by consultants on behalf of</u> the South Wales <u>and North Wales</u> Regional</p>
MAC64	5	Policy M7: Safeguarding Of Sand And Gravel Resource	15.6	<p>Delete Policy M7 and the reasoned justification</p> <p>M7: SAFEGUARDING OF SAND AND GRAVEL RESOURCE</p> <p>The sand and gravel safeguarding area shown on the Proposals Map will be protected against all forms of permanent development in order to prevent sterilisation of the resource and to ensure that the sand and gravel within that area will be preserved for the future, should a demonstrable need for the use of those resources arise.</p>

MAC Number	Chapter	Deposit Policy /Para No	<i>HS/A P or other source</i>	Proposed Change
				<p data-bbox="1014 308 2123 443">5.409 The aim of this Policy is to ensure that the area of sand and gravel resource identified on the Proposals Map is protected from development that would cause its sterilisation and safeguarded for the future, should a need for the resource arise.</p> <p data-bbox="1014 483 2123 770">5.410 This Policy expands on Policy KP11 in that it protects potential resources from development. The Policy accords with guidance contained in MPPW which requires Mineral Planning Authorities to safeguard access to mineral deposits which society may need and cautions against continuing to rely on marine dredged materials. MTAN1: Aggregates states that land based sand and gravel resources must be safeguarded for potential use by future generations in view of their relatively limited regional availability.</p> <p data-bbox="1014 810 2123 1345">5.411 At present, marine dredged sources provide the majority of fine aggregate required to meet construction needs within Cardiff. In the short term this supply pattern is unlikely to change significantly. In view of the existing pattern of dredged aggregate supply, it is very unlikely that sand and gravel resources will need to be released for development within the Plan period. However, in light of concerns regarding the sustainability of the current pattern of marine dredged aggregate supplies, it is necessary for land based sand and gravel resources to be safeguarded for potential use in the future. This Policy will be used to resist all forms of permanent development in the sand and gravel resource area shown on the Proposals Map. Land based sand and gravel could only be worked where it is found, so this Policy represents a long term strategy to protect existing resources, as they could become a strategic resource in the future. This Policy will carry more weight than policies favouring development that could be located elsewhere.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				5.412 The designation as a safeguarded area does not indicate an acceptance of sand and gravel working in that area.
MAC65	5	Policy M8: Safeguarding Coal Resources	15.6	<p>Delete Policy M8 and the reasoned justification</p> <p>M8: SAFEGUARDING OF COAL RESOURCES</p> <p>The coal safeguarding area shown on the Proposals Map will be protected against all forms of permanent development in order to prevent sterilisation of the resource and to ensure that the coal within that area will be preserved for the future, should a demonstrable need for the use of those resources arise.</p> <p>5.413 The aim of this Policy is to ensure that the areas of coal resource identified in the County are protected from development that would cause sterilisation and safeguarded for the future, should a need for the resources arise.</p> <p>5.414 This Policy expands on Policy KP11 in that it protects potential resources from development. The Policy accords with MPPW which requires Mineral Planning Authorities to safeguard access to mineral deposits which society may need and MTAN2: Coal which requires the safeguarding of mineral resources.</p> <p>5.415 Current energy supply does not necessitate the working of coal resources within Cardiff, and this situation is highly unlikely to change in the short term.</p> <p>Consequently, it is unlikely that it will be necessary to release coal resources for working to provide for energy needs in the Plan period. However, it is</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>prudent to ensure that the coal resources identified are protected from sterilisation to maintain their potential for use in the future, should this become necessary.</p> <p>5.416 All coal resources up to settlement boundaries are identified on the Proposals Map. Where safeguarded coal resources abut defined settlement boundaries, a 500m buffer has been shown. Although this buffer area includes safeguarded coal resources, it identifies the area of land within which future coal extraction will generally not be acceptable.</p> <p>5.417 Coal could only be worked where it is found, so this Policy represents a long term strategy to protect existing resources as they could become a strategic resource in the future. This Policy will carry more weight than policies favouring development that could be located elsewhere.</p> <p>5.418 The designation as a safeguarded area does not indicate an acceptance of coal working in that area.</p>
MAC66	5	Policy M9: Safeguarding Of Limestone Resources	15.6	<p>Delete Policy M9 and the reasoned justification</p> <p>M9: SAFEGUARDING OF LIMESTONE RESOURCES</p> <p>The limestone safeguarding area shown on the Proposals Map will be protected against all forms of permanent development in order to prevent sterilisation of the resource and to ensure that the limestone within that area will be preserved for the future, should a demonstrable need for the use of those resources arise.</p> <p>5.419 The aim of this Policy is to ensure that the areas of limestone</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>resource identified in the County are protected from development that would cause sterilisation and are safeguarded for the future, should a need for the resources arise.</p> <p>5.420 This Policy expands on Policy KP11 in that it protects potential resources from development. The Policy accords with MPPW which requires Mineral Planning Authorities to safeguard access to mineral deposits which society may need.</p> <p>5.421 Currently there is a sufficient landbank of limestone reserves in the County for the Plan period and, should the landbank not prove sufficient, the limestone resource areas identified in Policy M1 would be considered before any of the safeguarded areas shown on the Proposals Map. Given this, it will not be necessary to release any of the safeguarded areas for working to provide for aggregates needs over the Plan period. However, it is prudent to ensure that the limestone resources identified are protected from sterilisation to maintain their potential for use in the future, should this become necessary.</p> <p>5.422 The designation as a safeguarded area does not indicate an acceptance of limestone working in that area.</p>
MAC67	5	New Policy: Safeguarding Of Sand And Gravel, Coal And	15.6	<p>Insert new policy after existing paragraph 5.408 to be referenced M7</p> <p><u>New Policy M7: SAFEGUARDING OF SAND AND GRAVEL, COAL AND LIMESTONE RESOURCES</u></p>

				<p><u>future, should this become necessary.</u></p> <p><u>In accordance with guidance set out in MTAN2: Coal all international and national designations of environmental and cultural importance have been excluded from the Coal Safeguarding Area and a 200 metre margin has been included to protect the setting of Ancient Monuments. All coal resources outside these designations are identified on the Proposals Map. Where safeguarded coal resources abut defined settlement boundaries, a 500m area where coal working will not be acceptable has been shown. Although this area includes safeguarded coal resources, it identifies the area of land within which future coal extraction will generally not be acceptable, subject to the exceptions in paragraph 49 of MTAN2:Coal. Further details are set out in Policy M8: Areas where Coal Working will not be Acceptable.</u></p> <p><u>Coal could only be worked where it is found, so this Policy represents a long-term strategy to protect existing resources as they could become a strategic resource in the future. This Policy will carry more weight than policies favouring development that could be located elsewhere.</u></p> <p><u>Limestone</u></p> <p><u>Currently there is a sufficient landbank of limestone reserves in the County for the Plan period and, should the landbank not prove sufficient, the limestone resource areas identified in Policy M1 would be considered before any of the safeguarded areas shown on the Proposals Map. Given this, it will not be necessary to release any of the safeguarded areas for working to provide for aggregates needs over the Plan period. However, it is prudent to ensure that the limestone resources identified are protected</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>from sterilisation to maintain their potential for use in the future, should this become necessary.</p> <p>The designation as a safeguarded area does not indicate an acceptance of sand and gravel, coal or limestone working in that area.</p> <p><u>In addition to the resources outlined above the Aggregates Safeguarding Maps of Wales identifies a small amount of Category 1 Sandstone HSA (High Specification Aggregate) resources in the extreme north west of the County. As this area lies wholly within the Coal Safeguarding Area outlined above it is not identified separately on the Proposals Map as it is already protected from sterilisation and safeguarded for the future, should a need for these resources arise.</u></p>
MAC68	5	New Policy: <u>Areas Where Coal Working Will Not Be Acceptable</u>	15.7	<p>Insert new policy to be referenced M8</p> <p><u>New Policy M8: AREAS WHERE COAL WORKING WILL NOT BE ACCEPTABLE</u> <u>Future Coal extraction will not be permitted within the Areas where Coal Working will not be Acceptable shown on the Proposals Map unless exceptional circumstances show a smaller Area is appropriate.</u></p> <p>The aim of this Policy is to protect the amenity of existing residential areas and international and national designations of environmental and cultural importance by ensuring that an appropriate area where coal working will not be acceptable is maintained between future coal working and residential areas and environmental and cultural designations are</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>protected. The Policy accords with guidance contained in MPPW and MTAN2: Coal.</p> <p><u>All coal resources outside international and national designations of environmental and cultural importance up to settlement boundaries are identified on the Proposals Map and the Policy identifies the area of land within which future coal extraction will generally not be acceptable by defining a 500m area where coal working will not be acceptable from existing residential areas. This accords with guidance set out in MTAN2: Coal which states that Coal working will generally not be acceptable within 500 metres of settlements unless there are exceptional circumstances and that an area where coal working will not be acceptable should be shown on the Proposals Map,</u></p> <p><u>MTAN2: Coal sets out factors that could justify exceptional circumstances where a smaller area where coal working will not be acceptable may be appropriate. These include:</u></p> <ul style="list-style-type: none"> • <u>Where coal working provides the most effective solution to prevent risks to health and safety arising from previous mineral working;</u> • <u>To remediate land damaged by shallow coal workings or mine waste, where coal extraction appears to be the most sustainable option;</u> • <u>Where topography, natural features such as woodland, or existing development, would significantly and demonstrably mitigate impacts;</u> • <u>Where major roads or railways lie between the settlement and the proposed operational area and coal working would not result in appreciable cumulative and in-combination effects;</u> • <u>Where the surface expression of underground working does not include the significant handling or storage of the mineral or waste;</u>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<ul style="list-style-type: none"> • <u>When the proposal is of overriding significance for regeneration, employment and economy in the local area; or</u> • <u>Where extraction would be in advance of other, permanent, development which cannot reasonably be located elsewhere.</u> <p><u>In accordance with guidance in MTAN2: Coal where such exceptions justify surface working within 500m of a settlement, the area of working should be restricted to the area reasonably necessary for remediation and the best balance between the scale, working-method and the timing of individual phases, the opportunities for early restoration and aftercare, and hours of working will be sought. In order to justify working within 200 metres of a settlement strong evidence of the necessity for remediation, including the evaluation of options will be required and the social and environmental impacts on the affected settlement must be carefully weighed.</u></p>
MAC69	5	Policy W1: Land for Waste Management	15.14	<p>Delete Policy W1 and reasoned justification</p> <p>W1: LAND FOR WASTE MANAGEMENT</p> <p>Land will be allocated for waste management purposes at Lamby Way as defined on the Proposals Map</p> <p>5.423 The purpose of this Policy is to allocate an area of land at the existing waste management facility at Lamby Way to accommodate waste related development, so that the Council can continue to manage current waste arisings and can accommodate further facilities which will enable it to meet European and national targets.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>5.424 This Policy expands on Policy KP12. The Policy accords with TAN 21: Waste (2001); The National Waste Strategy for Wales: Wise About Waste (2002); Towards Zero Waste (2010) and the South East Wales Regional Waste Plan 1st Review (2008)</p> <p>5.425 Challenging targets set for recycling and composting, and the reduction of waste going to landfill, mean there is a need for further facilities which divert waste away from landfill and increase materials recovery, recycling and composting. The land allocated at Lamby Way, as shown on the Proposals Map, may prove an appropriate location for any new waste management facilities which may be required over the Plan period.</p> <p>5.426 Completion of landfilling at the Lamby Way waste management site is likely to take place early in the Plan period. Upon completion of landfilling, the majority of the land will be utilised for public open space. However, waste management facilities may be retained on a permanent basis and will need to be integrated into the eventual after use of the site.</p> <p>5.427 The five local authorities who make up the Prosiect Gwyrdd regional partnership have agreed that Viridor should be appointed the preferred bidder for a 25 year contract to deal with the residual waste of the region. Viridor's solution is based on an energy from waste facility located at Trident Park. This facility is currently under construction and a permit to operate was granted by Natural Resources Wales in 2010.</p> <p>5.428 The Regional Waste Plan 1st Review identified that Cardiff will need to provide a maximum of 20.9ha of land for waste management purposes. The identified sites will contribute towards this requirement.</p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
MAC70	5	Policy W2: Sites For Waste Management Facilities	15.13, 15.16	<p>Amend Policy W2 and the reasoned justification</p> <p>W2: SITES FOR WASTE MANAGEMENT FACILITIES</p> <p>Proposals for the development of waste management facilities will be permitted where:</p> <p>i. There is a demonstrable need assessed against County and regional requirements;</p> <p>ii. They conform with the <u>principle of the waste hierarchy and the principles contained in the Waste Framework Directive of An Integrated and Adequate Network; Nearest Appropriate Installation; Self Sufficiency and Protection of Human Health and the Environment</u> , the 'proximity principle' and the principle of regional self-sufficiency;</p> <p>iii. They would not cause unacceptable harm to the environment, built heritage or to human health;</p> <p>iv. They include acceptable proposals for restoration, aftercare and after-use, including the beneficial after-use of by-products;</p> <p>v. They would not endanger aviation safety; and</p> <p>vi. They include acceptable proposals for the protection of adjoining and nearby land from landfill gas and leachate migration or contamination;</p> <p><u>vii. They are not located within an area at risk from flooding;</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p><u>viii. They would not cause unacceptable air, noise or light pollution, dust, vibration or odours, or attract excessive vermin;</u> <u>ix They provide safe means of access to the highway and adequate on-site parking and turning facilities; and</u> <u>x. They are accompanied by a Waste Planning Assessment containing sufficient information to enable an assessment of the proposal.</u></p> <p>Facilities for the handling, treatment and transfer of waste will generally be encouraged towards existing use class B2 general industrial land.</p> <p>5.430 This Policy expands on Policy KP12. The Policy accords with <u>TAN 21: Waste (2001); The National Waste Strategy for Wales: Wise About Waste (2002); Towards Zero Waste (2010) and the South East Wales Regional Waste Plan 1st Review (2008). the National Waste Strategy for Wales: Wise About Waste (2002); Towards Zero Waste (2010); The Collections, Infrastructure and Markets Sector Plan (2012) and TAN 21: Waste (2014).</u></p> <p>5.431 It is anticipated that applications will come forward within the Plan period for new waste management facilities. Applications are likely to include waste disposal, processing, recycling and transfer of waste. The need for waste facilities will be assessed against the <u>South East Wales Regional Waste Plan 1st Review (2008). The RWP estimates that, within Cardiff, a maximum of 20.9ha of land will be required for waste management facilities. Collections, Infrastructure and Markets Sector Plan and capacity requirements established through regional monitoring, as set out in TAN 21.</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>5.432 The 'waste hierarchy' advocates a sequential approach to waste management. At the top of the hierarchy is waste prevention <u>and re-use</u>, followed by reduction, re-use, then materials recovery (e.g. recycling and composting), then energy recovery (e.g. incineration to provide energy) and finally (i.e. least favoured) disposal (e.g. landfill or incineration without energy recovery). The 'proximity principle' requires waste to be disposed of as near to its place of production as possible, to reduce the amount of waste transported long distances, and to reflect the 'polluter pays' principle. 'Regional self sufficiency' refers to the aim of minimising the amount of waste exported to other regions or countries. <u>preparation for reuse, recycling, recovery and finally (i.e. least favoured) disposal.</u></p> <p>5.433 Waste facilities will generally be encouraged towards existing general industrial areas (use class B2), unless it can be demonstrated that they could be acceptably located elsewhere, or unless assessment of the proposal indicates that more onerous locational standards should apply. The RWP contains Areas of Search maps for use in identifying potential new sites for in-building and open-air waste management/resource recovery facilities. Developers are encouraged to use the recommendations to assist in the identification of suitable sites. The first Review of the Regional Waste Plan endorsed by the Council in July 2008 identifies a range of potential sites for waste management purposes on vacant general industrial land. <u>The Regional Waste Plan 1st Review (2008) contains Areas of Search Maps which TAN 21 indicates remain relevant for use in identifying potential new sites for in-building and open-air waste management/resource recovery facilities. Developers are encouraged to use the recommendations to assist in the identification of suitable sites.</u></p>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				<p>5.434 In addition to the tests set out in the Policy, all proposals will be assessed against other relevant policies. Notably, they should not be located within an area at risk from flooding, cause unacceptable air, noise or light pollution, dust, vibration or odours, or attract excessive vermin. Proposals should also: Provide safe means of access to the highway and adequate on site parking and turning facilities; Be accompanied by details of the type, quantity and source of waste; and Set out the proposed duration of the development.</p> <p>5.435 Planning applications for waste management facilities should be accompanied by sufficient information to allow the environmental impact of the proposal to be adequately assessed. Such information should include the nature of the waste, the broad technical requirements arising from the type of waste, the amount of waste proposed to be treated or disposed of, access, the timescale of the operations and, where appropriate, restoration and after use proposals. <u>a Waste Planning Assessment containing sufficient information to enable an assessment of the application and its contribution to meeting the requirements set out in the Collections, Infrastructure and Markets Sector Plan. Information to be provided should include:</u></p> <ul style="list-style-type: none"> • <u>Waste Policy Statement (contribution to the CIM Sector Plan, need and locational requirements, demand, identification of markets, current shortfall in treatment capacity, consultation);</u> • <u>Time-scale (lifespan of the operation, days and hours of operation);</u> • <u>Types and quantities of waste to be managed;</u> • <u>Design, layout, buildings and plant;</u> • <u>Amenity and nuisance;</u> • <u>Air pollution;</u> • <u>Energy efficiency.</u>

MAC Number	Chapter	Deposit Policy /Para No	HS/A P or other source	Proposed Change
				Further details are contained in Annex B of TAN 21 (2014). Where appropriate, proposals should be accompanied by a formal environmental assessment and Health Impact Assessment. In assessing such proposals, close consultation will be undertaken with Natural Resources Wales and conditions will be attached to any permissions and/or legal agreements sought to ensure adequate environmental safeguards and controls.

Appendix One : MAC4 KP1: LEVEL OF GROWTH

KP1: LEVEL OF GROWTH

~~The Plan makes provision for **45,415 new dwellings (including a 4,000 dwelling flexibility allowance) to deliver a housing requirement of 41,415 a range and choice of opportunities to deliver 41,100 new dwellings and 40,000 new jobs in Cardiff between 2006-2026. Furthermore, in order to demonstrate that the Plan meets the flexibility test of soundness and to accommodate potentially higher build rates than anticipated, provision has been made to deliver an additional 10% flexibility allowance (for 4,000 dwellings) which can be triggered, if demonstrated as necessary through annual monitoring, in the later phases of the Plan period.**~~

~~4.12 The LDP Preferred Strategy considered the merits of three growth options and set out a reasoned justification for proposing option B which was below the official household projections but higher than long term past build rates. It considered all relevant factors including a report by independent population forecasting experts (Edge Analytics, June 2011) which applied more locally robust data to the official statistics. It was also informed by a process of regional collaborative dialogue involving all local authorities in South East Wales together with other key relevant national and regional bodies.~~

~~4.13 Views have since been gathered through consultation on the Preferred Strategy which took place in November and December, 2012. The formal consultation process collected 1,028 responses and 8 petitions. Additionally, 444 responses were collected from the Citizens Panel representing a wide distribution of ages and geographical locations across the city. This was in sharp contrast to the wider consultation responses which showed a significant geographical 'clustering' of responses generally in proximity to the location of proposed development sites. Responses relating to the proposed level of growth can be summarised as follows:~~

~~Delete table on Citizens Panel LDP Consultation~~

~~Citizens Panel LDP Consultation~~

~~No. % No. %~~

~~Too low 20 4.6 Too low 32 5.2~~

~~About right 209 48.2 About right 34 5.5~~

~~Too high 205 47.2 Too high 553 89.3~~

~~TOTAL 434 100 TOTAL 619 100~~

~~4.14 The consultation findings indicate sharply contrasting views on this matter. This underlines the importance of the level of growth in the Deposit LDP being based on robust and up to date evidence.~~

~~4.15 Therefore, additional independent expert advice has been sought based on the best possible information currently available. Edge Analytics, the independent population forecasting experts providing advice on the Preferred Strategy, have undertaken a further detailed analysis with their report forming Supporting Document No. 18. It is informed by important new information which was not previously available, the 2011 census results and revised back population figures issued by the Office of National Statistics at the end of April, 2013. The material informing this work is of a more detailed and locally robust nature than the official population projections which do not benefit from such a thorough local analysis of relevant data.~~

~~4.16 Overall, the Edge Analytics report has produced compelling, up to date and robust evidence to justify a level of growth lower than the official projections and also lower than that proposed in the Preferred Strategy. The recommendations contained in the report are based on a thorough examination of a number of different growth scenarios.~~

~~4.17 The Edge Analytics Report has reviewed the new evidence, presented an analysis of inter-censal change in Cardiff's demographic profile and developed a revised suite of demographic forecasts for consideration. The analysis of inter-censal change revealed a 35,400 (11.4%) increase in Cardiff's population between 2001 and 2011. The analysis of the 'components of change' underpinning Cardiff's population growth has revealed the critical importance of migration, both internal and international in shaping population growth.~~

~~4.18 Using the updated evidence, a number of 'trend' scenarios were evaluated and compared to the 'starting point' of the official 2008 based projections. The report concluded by drawing attention to the future uncertainties associated with international migration and recommended to the Council that a lower dwelling growth trajectory of 42,500-43,000 (scenarios F & G) over the 2006-26 Plan period might be more appropriate. Furthermore, the report recommended that the Council gives consideration to further reducing the figure due to the potential impact of applying a slightly lower home vacancy rate for 2026 and also considering a 10% further sensitivity reduction due to a potential decrease in household formation rates.~~

~~4.19 The Council recognise that scenarios F and G result in a very similar level of growth which is considered to be consistent with the overall strategic objectives of the Plan. With regard to the potential options to further reduce the dwelling requirement, the Council supports applying a 3% vacancy rate for 2026 as opposed to a figure of 3.74%. This is because 3%~~

was the previous rate in the 2001 census and due to current Council policy and actions to tackle this issue, a rate of 3% in 2026 is considered to represent a sound, robust and reasonable figure backed by supporting policy framework to deliver.

4.20 However, the Council has significant concerns with applying a further 10% reduction in dwelling need due to a potential reduction in household formation rates. The report draws on recent evidence from England and suggests this recent trend could also be taking place in Cardiff. However, at this juncture, prior to the Welsh Government household projections being released in late 2013, no official data or evidence can be used to substantiate any reduction. Therefore, to reduce figures without any firm evidence carries significant risks, since if the figures do not show a decrease, the Plan would be clearly out of line with evidence and run the risk of being deemed unsound. However, as the Welsh Government household projections will be issued before the Council submit the Plan for examination, there will still be an opportunity to consider their impact ahead of the examination but any analysis must also take account of the issues highlighted in the paragraph below.

4.21 Even if the Welsh Government household projections indicate a reduced rate of household formation, it cannot be assumed that the rate would continue over the entire Plan period. Indeed, if there was to be a reduction, this may be explained by a reflection of the current limited supply of greenfield sites together with the challenging economic conditions at that time. The Plan Strategy of providing a range and choice of sites to meet evidenced need is considered a strong and compelling reason not to apply a 10% reduction which is not founded on hard existing evidence and cannot be justified looking ahead, particularly given the Strategy set out in the Plan.

4.22 Moreover, it should be noted that the annual net migration assumption 2011-26 without the 10% sensitivity adjustment is given as 1,268 persons p.a. This compares to the actual annual net migration data 2001-11 for Cardiff of 1,344p.a. (47p.a. internal and 1,297p.a. international), excluding the 320 per annum asylum seekers net flow to Cardiff. Given Cardiff's role as economic driver of South East Wales, it may be considered unsound for the LDP to incorporate assumptions for a significant reduction in net migration whilst at the same time promoting itself as a European Capital City seeking to attract new employment for instance into the proposed Cardiff Central Enterprise Zone.

4.23 Therefore, the Council consider the most robust and sound approach to adopt is to set a level of dwelling growth based on the recommended scenarios F and G incorporating a 3% vacancy rate in 2026 which have a very similar dwelling requirement. Of the two scenarios, the Council considers the logic and reasoning behind scenario G is more robust and represents a sound basis on which to base the future dwelling requirement which has been rounded down to 41,100 dwellings for clarity purposes. This level of dwellings is almost exactly proportionate to delivering the 40,000 jobs proposed in the Preferred Strategy so this figure will be retained in the Deposit LDP. This represents: A rise in population from 323,766 in 2006 to 395,378 in 2026, (an additional population of 71,612, representing an increase of 22.1%); A rise in dwellings

~~from 138,735 in 2006 to 179,835 in 2026, (an additional 41,100 new dwellings, equivalent of an 29.6% increase); An average build rate of 2,055 dwellings per annum over the entire Plan period but due to lower than average completions in early years of Plan period (2006-13), a residual required annual build rate (2013-26) of 2,295 dwellings per annum~~

As the LDP has progressed through its numerous stages of preparation, various level of growth options have been considered, consultations have been carried out and expert advice has been sought. The level of growth set out within this Key Policy is considered to best reflect an analysis of all relevant factors. Importantly, it is based on the most up-to-date information reflecting matters raised during the examination process and makes provision (including the flexibility allowance) to deliver the level originally set out in the Preferred Strategy.

4.24 ~~All other relevant factors, as set out in Planning Policy Wales and summarised below, have also been carefully considered. In this respect, it should be noted that national guidance states that the official projections should form the starting point for setting levels of growth in LDPs and makes it clear that any departure from these figures should be fully justified by demonstrable evidence. These official figures show a 42% rise in Cardiff's population for the period 2008-2033 and a 33% rise for the Plan period 2006-26 for which the Plan makes provision. Other relevant factors include:~~

- ~~• Accordance with Wales Spatial Plan and other key national policy and guidance;~~
- ~~• Cross boundary/city region implications;~~
- ~~• Accordance with 'What Matters', the Community Strategy for Cardiff Council;~~
- ~~• Extent to which evidenced economic needs are delivered;~~
- ~~• Extent to which evidenced social/housing needs are delivered;~~
- ~~• Environmental and climate change implications;~~
- ~~• Deliverability and capacity factors; and~~
- ~~• Consultation and collaborative working findings.~~

4.25 ~~A summary of the consideration of relevant factors is set out below. However, more detailed relevant information is also contained in Supporting Documents including:~~

- ~~• Supporting Document No. 18: Edge Analytics Report (June 2013);~~
- ~~• Supporting Document No. 1: Population & Housing Technical Background Paper;~~
- ~~• Supporting Document No. 2: Urban Capacity Study; and~~
- ~~• Supporting Document No. 16: Masterplanning Framework – General~~

- ~~Principles, Strategic Framework & Site Specific Frameworks for larger sites.~~

~~4.26~~ No other material factors are considered to possess sufficient weight to warrant departure from this level of growth which is considered to:

- Accord with the Wales Spatial Plan aims by supporting Cardiff's role as centre of a networked city-region but not to excessive levels which could prejudice regeneration objectives elsewhere;
- Accord with the Council's vision and LDP objectives;
- Effectively respond to the regional collaborative dialogue which recognised the dangers of artificially restricting growth in Cardiff - there was a clear recognition of the positive 'ripple effects' of providing jobs and homes in Cardiff which improved prosperity in the wider city-region;
- Effectively respond to the clear evidenced need to provide for a significant number of new homes and jobs. ~~Whilst the~~ The Plan makes provision to deliver the level proposed may fall short of official projections, it and is considered to strike the right balance having regard to the full range of factors;
- Deliver necessary homes and jobs, but in a managed and controlled manner protecting key elements of Cardiff's environment;
- Meet deliverability and capacity factors - The Deposit LDP contains proposals and mechanisms which justify how deliverability and capacity matters can be adequately addressed. The wide range and choice of sites contributing to the provision together with the masterplanning approach which includes addressing the deliverability of supporting infrastructure demonstrates how development can be successfully brought forward in a managed way. (A higher level of growth would be considered difficult to justify in terms of deliverability factors and set an artificially high target for the 5 year supply requirements set out in TAN 1; and
- Respond in an evidence-based manner to the divergence of views expressed in ~~the Preferred Strategy~~ consultation processes.

~~4.27~~ The detailed breakdown of how it is intended to provide for the 41,415 new homes over the Plan period is shown in Table 1, below. ~~The masterplanning approach consultation findings and wider work undertaken have informed the number of new homes and jobs proposed for the Strategic Sites which are described in greater detail in Policy KP2 and Supporting Document.~~

Table 1: Housing Provision over the Plan Period			
Row	Topic/Factor	Note/Source	Dwellings

10	Total Supply	41,456
11	Additional 10% flexibility allowance, as referenced in KP1.	4,000

4.28 The Plan deliberately provides an extensive range and choice of opportunities for the creation of new homes and jobs. This is crucial to the overall delivery of homes and jobs by enabling different sites in different locations to be progressed concurrently. It also ensures flexibility as a limited number of sites would carry delivery risks should implementation problems be encountered on specific sites. The masterplanning approach, which also addresses the provision of infrastructure and phasing, puts in place a framework to ensure the orderly development of sites. Key Policies on masterplanning, design and infrastructure, together with supporting documentation, explain this approach in more detail.

4.29 In terms of the provision of new homes, brownfield sites still contribute over half of the provision, but this is supplemented by new greenfield opportunities offering a fuller range and choice. This provides a much needed catalyst to the local housing market which has seen a recent shortage of greenfield sites and can help meet a growing latent demand. Furthermore, greenfield sites can play a key role in bringing forward high levels of affordable and family housing. Evidence has shown that site viability factors make it difficult for brownfield sites to consistently provide high levels of affordable housing.

4.30 It should also be noted that Cardiff has a finite supply of brownfield sites and that the previous LDP was withdrawn due to the Inspector's concerns that it was a, 'brownfield only' Strategy. ~~The last decade has seen significant brownfield developments, the most notable being the successful regeneration of Cardiff Bay. However, brownfield opportunities of this scale no longer exist. Research work has been undertaken to explore the possibilities of maximising the contribution of brownfield land to meet future provision. Supporting Document 2 sets out in detail the findings of this work and demonstrates the different potential opportunities which have been explored.~~

~~4.31 The Plan recognises that there is a limited supply of acceptable brownfield land. It also recognises that not all existing brownfield sites with planning permission will be developed due to changed economic/market conditions. These changed market conditions also mean that delivering previously anticipated levels of affordable housing may prove challenging due to current financial viability factors. This, in part, contributes to the current limited number of sites being brought forward for development from the landbank. Additionally, there are serious policy issues with losing further employment land of strategic or local importance to housing and it is not considered acceptable for the Plan to propose building on river valleys, parks and playing fields.~~

4.32 However, brownfield sites will continue to play an important role and windfall provisions will form part of the provision for new homes as land uses within the city continue to evolve. For example, the Council is currently strategically assessing its land holdings which, over the Plan period, is likely to generate a wide range and choice of brownfield housing opportunities across the city.

~~4.33 The Deposit LDP seeks to respond to need in a way which provides range and choice of land for housing. Maximising the contribution of brownfield sites still forms over half of the provision over the whole Plan period, but this is supplemented by a range of greenfield opportunities offering a range and choice and to provide a catalyst to help kick-start the currently depressed housing market situation. Greenfield sites generally have far lower site development costs/constraints and are therefore widely recognised as providing far higher levels of affordable housing than brownfield sites.~~

4.34 The provision of a full range and choice of housing options also fully supports the delivery of the economic Strategy - new homes and supporting community facilities can help attract new investment to the city and stimulate more movement in the housing market. Associated construction jobs would provide an additional benefit to the local economy.

4.35 New greenfield releases also bring with them the ability to contribute towards the wider provision of strategic infrastructure to the benefit of the city and wider city-region as a whole. For example, the delivery of sustainable transportation solutions will have positive implications for the wider community. In this respect, there are clear benefits of the locations of the strategic sites which offer the opportunity of a joined-up approach to deliver strategically important infrastructure in the North West and East/North East corridors. This assists in prioritising infrastructure provision in a planned and focussed manner.

4.36 In order to deliver the required level of growth over the Plan period, there will be a need for a range and choice of sites to be on stream over the remainder of the Plan period. The masterplanning approach has been adopted to carefully manage this process with Key Policies KP2 (A) to KP2 (H) providing a framework for the delivery of each Strategic Site in this respect.

In this way, each site and each phase of development can bring with it the necessary range of supporting infrastructure. It should be noted that the scale of strategic sites open up the opportunity for delivering significant infrastructure benefits. However, some major elements may take a long period to deliver. Therefore, early phases will need to both deliver the infrastructure which is required for that particular phase along with contributing to the provision of wider strategic infrastructure which may be physically provided at a slightly later date. Detailed provisions will be put in place to secure delivery in such instances.

4.37 The Plan is considered sufficiently flexible to respond to changing conditions. This will be kept under review in the Annual Monitoring Reporting process allowing future reviews to address the need for change. Should demand be lower than anticipated, the sequence of provision will remain in place, thereby controlling development in an orderly manner and linking it in with infrastructure provision. However, this scenario would result in the trajectory being followed over a longer period allowing either Plan review or the next Plan to make appropriate judgement on future provision at that time.

4.38 Consideration also needs to be given to demand being higher than expected. This is considered to be a less likely possibility, ~~based on current evidence of low completion rates and the challenging economic conditions.~~ However, the LDP tests of soundness demand that Plans are sufficiently flexible to be able to positively respond to changes in circumstances. This Policy therefore has a built-in 10% flexibility allowance.

4.39 In this way, if a need is identified in the Annual Monitoring Report before the end of the Plan period, additional land can be brought forward for residential purposes at that point in time in a Plan review. The Plan demonstrates a clear commitment to a long term direction of travel by identifying geographically defined areas which have been subject to SA/SEA analysis and are well positioned to meet such need, if required.

4.40 Work undertaken as part of this process has shown that there is limited scope for further development areas due to the environmental and other constraints around the city together. There is considered merit in focussing potential additional areas based upon proposed Strategic Sites where there is land available to take advantage of the comprehensive provision of new community and transportation infrastructure and minimising impact on areas of higher environmental sensitivity including land proposed for Green Belt designation.

4.41 Three areas have been identified to provide ~~good~~ flexibility as just one option may limit the scope for dwellings being delivered should problems be encountered on a particular site. It should also be noted in this respect that each area offers a large gross area with the combined potential to deliver more than just an additional 10% flexibility. The masterplanning of adjoining Strategic Sites ~~will take account of these potential additional areas in the planning of land uses and supporting~~

~~infrastructure. Other strategic sites have far more fixed boundaries and do not lend themselves to logical extension. will ensure that suitable access is secured and future Plan monitoring will trigger any future detailed consideration of infrastructure and masterplanning requirements should the need for the early release of the identified Search Areas be triggered within the Plan period.~~

4.42 The areas considered most suitable to deliver this potential need are as follows:

- i. Land North of the North West Cardiff Strategic Site - Up to 57 hectares of land located between Llantrisant Road and the M4 Motorway bounded by the edge of Radyr to the East and the recent development on the former Rhydlafer Hospital to the West. This is a gross figure with the net developable area likely to be a significant reduction due to natural and infrastructure constraints within the site. This could provide a minimum of an extra 1,250 dwellings if required in the later phases of the Plan period but further masterplanning addressing long-term capacity is likely to demonstrate a higher figure is possible and the land is indicated ~~by an arrow for potential future development on the Key Diagram; as Search Area A on the Proposals Map;~~
- ii. Land West of the Strategic Site North of Junction 33 - Up to 41 hectares of land represents a logical extension of this site which falls between the M4 Motorway and Llantrisant Road. This could provide a minimum of an extra 1,250 dwellings if required in the later phases of the Plan period but further masterplanning addressing long-term capacity is likely to demonstrate a higher figure is possible. The land is indicated ~~by an arrow for potential future development on the Key Diagram; as Search Area B on the Proposals Map; and~~
- iii. North West Cardiff Strategic Site - ~~As highlighted in Table 1, above,~~ the overall capacity of this site is considered to be in the order of 6,500-7,000 dwellings depending on the precise configuration of land uses and housing densities. Work undertaken to date suggests that a figure of 5,000 dwellings is appropriate for homes being delivered within the Plan period (by 2026). However, should build rates be faster than anticipated, this site represents an ideal opportunity to help meet any additional need within the Plan period and benefits from the comprehensive masterplanning of the area as a whole which is shown as a allocation in its entirety.

~~4.43~~ In a similar way to the provision of new homes, a range and choice of new job opportunities is also proposed. It is important to ensure that a range and choice of employment land and business premises are provided to maintain and improve the competitiveness of the city, promote and protect indigenous business and attract inward investment.

~~4.44~~ This approach responds to Cardiff's role as the main economic driver of the city-region accounting for 32% of total employment in South East Wales. At the heart of this approach is recognition that the Cardiff city-region clearly forms a natural economic area and it has consistently made a major positive contribution to the economic growth of Wales. In core city analysis, Cardiff performs well and there is an opportunity to build further on this through continuing to enhance Cardiff's role and also improve linkages and connectivity within the city-region. It is also recognised (as evidenced in the recent Cardiff LDP regional collaborative working exercise summarised in Supporting Document 17) that there are significant benefits for adjoining areas from Cardiff's success in achieving economic growth.

4.45 The Plan provides a framework for delivering a wide range and choice of employment sites in different locations and for different sectors including the key market sectors of ICT, energy and environmental technologies, advanced materials and manufacturing, creative industries, life sciences and financial and professional services. The range of new sites ensures that Cardiff can deliver the stated level of growth for new jobs. Importantly, different sites will perform different roles in the strategy. For example, Porth Teigr (Roath Basin) has the potential to become an important location for media and creative industries. Other locations may be better suited to small out of centre employment sites, including offices, creative industries, small workshops, and starter units.

4.46 The geographical spread of the 'Cardiff offer' also addresses the need to provide jobs in accessible locations. In this respect, the key strategic proposal relating to the Cardiff Central Enterprise Zone and Regional Transport Hub represents a highly sustainable and accessible location, close to areas of high unemployment in the city but also readily accessible to the wider region via sustainable modes of transport.

~~4.47~~ Further background evidence underpinning the approach to providing the range and choice of new jobs is provided in Supporting Document 4.

Appendix Two: MAC5 New Key Policies, KP2(A) to KP2(H)**Policy KP2**

Amend Policy KP2: Strategic Sites and reasoned justification and insert new policies KP2A to H after existing KP2

New paragraphs to be inserted after existing paragraph 4.54:

A summary of the key infrastructure requirements relating to the Strategic Sites are provided within KP2(A) to KP2(H). This information will be cross-referenced in the Cardiff Infrastructure Plan which is a, 'living document' sitting alongside the LDP. The Infrastructure Plan is directly linked to the LDP Monitoring Framework and regularly updated in order to effectively respond to changes in baseline information, procedures and legislation. Estimated costs of infrastructure provision and details of estimated square footages of facilities are referenced within the Infrastructure Plan based on current considerations, requirements, and information available at a point in time so represent indicative figures. Future updates to the Infrastructure Plan will allow such information to be regularly updated to reflect prevailing circumstances and show more detail when it is known. Policies KP6 and KP7 relating to new infrastructure and planning obligations provide further policy guidance with regard to the delivery of new infrastructure and are also linked to the Infrastructure Plan and Annual Monitoring Framework.

Infrastructure requirements for these sites will primarily be delivered through planning obligations/ Section 106 Agreements with policies KP6 and KP7 providing the policy framework. Policy KP6 also outlines other potential funding sources which may be required in addition to developer contributions. Further details as they emerge will be incorporated into the Infrastructure Plan as it is updated in future years as part of the formal LDP monitoring process.

The masterplanning and good quality & sustainable design principles set out in KP4 and KP5 will be used to provide a framework to consider planning applications relating to all Strategic Sites along with other development as defined in the

policies. In addition, the site-specific masterplanning requirements for each Strategic Site are identified within KP2(A) to KP2(H) and depicted, where appropriate, on the indicative Schematic Frameworks. Although only for illustrative purposes, the Schematic Frameworks should be read in conjunction with relevant policies to provide an over-arching context for the future development of the Strategic Sites.

Delete existing paragraphs 4.55 to 4.67 relating to Strategic Site H as these matters will now be covered by proposed new KP2(H):

~~4.55 In response to issues raised in the Sustainability Appraisal with regard to environmental aspects of the strategic employment site at south of St Mellons Business Park, the following paragraphs explain the rationale for including the site together with how flood risk and other environmental concerns can be addressed as part of the scheme.~~

~~4.56 This is an important employment site which contributes to the necessary range and choice of types of employment opportunities in the city. Its location is particularly well placed to provide accessible job opportunities to areas of known deprivation and its position adjacent to the main rail line offers significant opportunities for a new station together with supporting sustainable transportation infrastructure. This proposal is a long standing proposal in the Regional Transport Plan, is identified in the emerging work on the South Wales Metro concept and has Welsh Government support.~~

~~4.57 However, it is recognised that the area possesses environmental and flood risk constraints. In terms of environmental issues, the majority of the area is a Site of Special Scientific Interest with the reens forming the major interest. Additionally, the adjoining Estuary is a European designated site so run off issues and disturbance will be particularly sensitive. The land also meets the qualifying criteria using the LANDMAP landscape methodology for Special Landscape Area status. Furthermore, there are significant historic interests and the land is designated as a Historic Landscape and Archaeologically Sensitive Area.~~

~~4.58 These environmental and flood risk constraints have been carefully examined so that suitable mitigation and enhancement measures can be put in place to address these issues. Further details are contained in Supporting Document 16 outlining site specific masterplanning framework for the site.~~

~~4.59 Considerable work has been undertaken to evidence the degree of flood risk in line with national guidance. The Strategic Flood Consequence Assessment work (SFCA) has analysed the risks when looking at the lifetime of development. The Phase 3 SFCA report undertaken by Atkins demonstrates that the flood risk can be effectively mitigated for the site. This can be achieved through a combination of raising the Sea Wall at points most prone to breaching together with raising ground levels on the development site. The costs associated with this work are not considered to undermine the financial viability of the proposal.~~

~~4.60 The Environment Agency (EA, now called Natural Resources Wales) has validated the methodology undertaken during this study. Furthermore, the Severn Estuary Flood Risk Management Strategy 2013 consultation proposes sea wall improvements to the area identified by Atkins as a weak section at Tabb's Gout requiring an upgrade so it is consistent with other flood defences along the coast. It is anticipated that the works will be implemented in the near future, probably in 2015/16.~~

~~4.61 It should be stressed that an extensive area of land behind the Sea Wall is exposed to flood risk both in Cardiff, Newport and Monmouthshire, especially in future years when evidence points to sea levels rising. This includes existing properties, the main rail line into South Wales, power lines and undeveloped land, much of which forms part of the far wider Wentloog Levels Site of Special Scientific Interest (SSSI). Any significant flood event could therefore have profound implications (social, economic and environmental) which is why the aim of the Severn Estuary Shoreline Management Plan is to 'hold the line' in terms of flood defences in this area.~~

4.62 The social and economic benefits of delivering a strategic employment site in St Mellons would be profound. In a Cardiff context, it would represent a key strategic site by providing a well accessed and high quality site close to the strategic highway network. With these qualities the site is uniquely placed within the city region and would be capable of attracting inward investment opportunities for high value and knowledge based sectors. The site would also add an extra dimension to the Cardiff offer in terms of office supply by adding to the range and choice of employment locations and providing a degree of flexibility in providing campus style office jobs which address market requirements. Furthermore, its location adjacent to the main line offers the potential to develop direct rail links with a new rail station linked to a park and ride facility.

4.63 The site is located near to residential areas of high unemployment and could be readily integrated with the existing St Mellons Business Park. In particular, this is a high quality site for existing businesses, who are looking to raise their added value, a key requirement for manufacturing companies if they are to grow and embed themselves in the local economy. Research has indicated that a high quality site (like St Mellons) and buildings can attract both low value added users and high value added users. However, a low quality site and buildings can only attract low value added users. Having regard to size, location, proximity to other uses and access, the St Mellons site is particularly well placed in Cardiff to deliver this important role.

4.64 The land is currently used for agricultural purposes but is also designated as an SSSI for the reens together with fields which host invertebrates and bees. Furthermore, the area is noted for its high landscape and historic value. Development of this site can be undertaken in a sensitive manner to minimise harm and include enhancements with considerable scope for large scale mitigation measures south of the rail line and incorporating a design and layout following guidance issued by the Countryside Council for Wales which offers practical guidance on how development can take place in the Wentloog Levels SSSI. In this respect it should be noted that the site forms the western extremity of a far wider landscape unit and in many ways is not a pristine example of the levels environment with a large number of detracting elements together with few reens on large parts of the site.

~~4.65 However, the social and economic benefits are considerable both in a Cardiff context and locally due to the location of the site near areas of high unemployment and could be readily integrated with adjoining uses. Additionally, the provision of a new rail station adjacent to a new employment area opens up considerable wider benefits beyond Cardiff and will help deliver social, economic and sustainable transportation benefits for South East Wales.~~

~~4.66 Furthermore, the development of this site will act as a catalyst to bring about the Sea Wall defence works which will help protect a much wider area. Indeed, the whole SSSI could be lost if inundated with sea water so an appropriate balance must be made. Mitigation measures can be undertaken to reduce impact and in this respect account will be taken of the CCW Guidance Booklet on how to bring forward development in the Wentloog Levels SSSI.~~

~~4.67 In conclusion, taking all evidence and assessments into account, it is considered that the economic and social benefits of this proposal are considered to outweigh environmental concerns and in this respect it is noted that mitigation measures can be delivered to reduce harm.~~

KP2(A): CARDIFF CENTRAL ENTERPRISE ZONE AND REGIONAL TRANSPORT HUB

Land is allocated at Cardiff Central Enterprise Zone, as defined on the Proposals Map, for a major employment-led initiative including a Regional Transport Hub together with other mixed uses in Cardiff City Centre in order to fulfil Cardiff's role as economic driver of the city-region, providing major employment opportunities focused on financial and business services and maximise the advantages of its central location. Supporting essential, enabling and necessary infrastructure will be delivered in a phased manner with specific requirements secured through planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Central, public transport hub providing access to and interchange between rail network, the rapid transit and strategic bus corridors referred to in Policy T2, the city-wide bus network and the strategic cycle network;**
 - **Improving existing bus routes and services including bus priority measures between the site, Cardiff Bay and other parts of the city;**
 - **Rapid Transit- Southern Corridor**
- **Walking and cycling:**
 - **Enhance pedestrian and cycle access between north and south sides of main railway line including enhanced railway underpasses;**
 - **Enhance east and west connections through the area connecting developments;**
 - **Enhanced/ extend Canal Park as a cycling and walking route, creating a new green corridor linking the Bay Waterfront to Callaghan Square, the City Centre and beyond;**
 - **Integrate site with the Strategic Cycle Network Enfys including Routes 1,2,3, 4, 5, 6, 9, 90, 34, 35, 50, the city centre 'hub' routes, the Taff Trail and the Bay Trail;**
 - **Provide a central cycle parking hub with associated facilities as an integral component of the regional public transport hub and of a scale befitting its regional and capital function;**
 - **Provide secure cycle parking and associated facilities in locations which encourage cycling to the city centre and integration with public transport services;**

- **Improve connections to Millennium Stadium including Gate 5;**
- **Create continuous river walk on Taff East bank**

Necessary Infrastructure

- **Education-1 new Primary School and contribution to existing Secondary Schools;**
- **Minimum of approximately 7ha Open Space including approximately 3.5ha of formal recreation, 1 playground, 1 teen facility, 1x 40 plot allotment site;**
- **Contribution to off-site community facility provision;**

Development shall accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Densities will be maximised to make efficient use of city centre land in a highly accessible location. High rise, high density developments at appropriate locations within the site are encouraged and residential densities in excess of 100 dwellings per hectare are not considered unreasonable in principle. Employment densities for B1 office development are expected to be at least 14.5 square metres per employee (gross external area);**
- **Employment provision to include Grade A office accommodation and developing Callaghan Square as Wales' premier business location. The site will also provide a range and choice of opportunities to meet business needs including start-up businesses, creative workshops and incubator units;**
- **Create destination spaces with active uses which complement the business offer including Central Square (new public piazza with active ground floor uses), Southern Gateway (new public space south of Central Station), Callaghan Square (greening of spaces whilst maintaining a 'civic' presence), and Taff East Bank (creating active uses and new leisure destination);**
- **Make improvements to the Arena Area with links to Queen Street Station;**
- **Ensure that development does not prejudice the future delivery of the Metro by keeping free land required for the project once land requirements are known;**
- **Provision of high quality way-finding and clearly defined pedestrian routes to key destinations;**
- **Ensure a consistent approach to the use of high quality street furniture and paving materials;**

- **Improve routes and connections to support the Butetown Regeneration with links to community facilities and services including Loudon Square as a community “hub”;**
- **Maximise linkages to the Taff Trail and Canal Park;**
- **Integrating new development sensitively with new and existing developments and take opportunities for commercial activity along Dumballs Road;**
- **Upgrade site gateways, railway bridges/ underpasses and the public realm;**
- **Effectively responding to landscape and biodiversity assets by:**
 - **Maximising the asset of River Taff frontage;**
 - **Developing opportunities for natural greenspaces to create urban parkland settings;**
- **Effectively respond to heritage assets by:**
 - **Assessing and effectively addressing potential impacts on Conservation Areas and Listed Buildings within and adjoining the site;**
 - **Integrating public art and heritage interpretation as part of proposals;**
- **Investigating opportunities for new developments in Dumballs Road to have a separate drainage system, including running surface water to the river and integrating landscaped areas;**
- **Seek to develop opportunities for SUDS to relate to/ extend the “Greener Grangetown” scheme.**

1. The Cardiff Central Enterprise Zone is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is the largest brownfield site within the Plan (78.8 ha) and occupies a particularly accessible location in the centre of Cardiff including the major transportation hub around Cardiff Central station. Overall, it represents a significant sustainable regeneration opportunity in the heart of the city and is fully consistent with delivering the Plan’s vision and objectives.

2. The land is owned by numerous landowners and will be delivered by a number of different developers operating out of different sites. This policy, together with other relevant policies, will provide the overarching masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process. In this respect it should be noted that different potential projects in the area are operating to different timescales so an over-prescriptive approach would not be appropriate.

4. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision.

5. The site is in a central location with a good level of accessibility by non car-based travel. The transport sustainability of the site will be further enhanced through the development of the regional transport hub linking different sustainable forms of transport and the wider improvements to the strategic public transport network and the walking and cycling networks that will be secured in conjunction with the development of other Strategic Sites and through the Council's own infrastructure programmes.

6. Although details of the mode and potential alignments of the Metro are not yet known it is likely that the project will provide access to this Strategic Site. Work undertaken to date by the Welsh Government has not firmed up detailed proposals and there is no current certainty on any detailed alignments so it would be inappropriate to allocate a precise alignment on the Proposals Map but there is a need to ensure future options are not prejudiced. Therefore, this policy references the potential future need to safeguard land required for the Metro project once any land requirements are known. Future Plan reviews and the annual monitoring framework linked to the 'living' Infrastructure Plan provide mechanisms to ensure the LDP process can be further updated in this respect.

KP2(B): FORMER GAS WORKS, FERRY ROAD

Land is allocated at the former Gas Works, Ferry Road, as defined on the Proposals Map, for a housing-based scheme of 500 homes and other associated community uses, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Walking and cycling:**
- **Improve pedestrian access to public transport facilities in the vicinity of the site;**
- **Provide new and enhance existing pedestrian/cycle links from the site to the Ely Trail, Grangemoor Park, Cardiff Bay Retail Park and other community facilities within the area including Channel View Centre**

Necessary Infrastructure

- **Contribution to off-site community facility provision;**
- **Education- Contribution to existing Primary and Secondary Schools;**
- **Minimum of 1.2ha Open Space including 1 playground, 1 teen facility, plus contributions to formal open space, allotment provision and play provision**

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Densities will be maximised to make efficient use of this brownfield site with high density residential accommodation of at least 50 dwellings per hectare considered appropriate and in keeping with the characteristics of the area;**
- **The density, design, scale and layout at the northern end of the site should respond effectively to the adjacent Ikea building;**
- **The layout should relate effectively to the railway line forming the western boundary of the site including mitigating any acoustic impacts;**

- **Ensure that the cycle trail linking the Ely Trail to Ferry Road is retained and that the layout provides a safe and overlooked solution;**
- **Maximise the relationship between the site, the River Ely and Grangemoor Park including extending the park along the river frontage to create a riverside park with informal play opportunities;**
- **Effectively respond to landscape and biodiversity assets by:**
 - **Mitigating and compensating for reptiles and bats;**
 - **Enhancing the buffer of trees along the railway line;**
 - **Ensuring an adequate buffer from the River Ely Site of Importance for Nature Conservation to protect the river bank and associated vegetation;**
- **Effectively respond to heritage assets by:**
- **Assessing and effectively addressing potential impacts on the character and setting of the Listed Gas Holder and demonstrating how the proposals can successfully integrate this historic asset;**
- **Explore the potential to collect methane gas from Grangemoor Park to create a heat and power system together with exploring other potential opportunities such as biomass to create electricity and to heat the site's buildings.**

1. The former Gas Works, Ferry Road, is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is a brownfield site (9.9 ha) well-located within the urban area adding to the range and choice of housing offer in the Plan.

2. The land is owned by a single landowner and will be delivered in a comprehensive manner. This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

4. The relative scale of the site allows for a maximum of 2 outlets at any time with full delivery of the 500 units anticipated between 2017 and 2024. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

5. Due to the accessible location of the site and proximity to existing social/ community facilities in the area it is considered appropriate to secure developer contributions to improve nearby facilities as outlined in the policy.

KP2(C): NORTH WEST CARDIFF

Land is allocated at North West Cardiff, as defined on the Proposals Map, for a mixed-use comprehensive development including a minimum of 5,000 homes and local employment opportunities, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Provision of new bus-based Rapid Transit Corridors through the site providing links between the District/Local Centres and a new Transport Hub in the Easternmost District/Local Centre;**
 - **Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Western Bus Corridor and other routes within the North West Rapid Transit Corridor;**
 - **Off-site infrastructure including bus priority enhancements on the Western Bus Corridor and measures to improve linkages into Rhondda Cynon Taf;**
 - **Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services**
- **Walking and cycling:**
 - **On and off-site measures to provide a network of high quality, safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including existing local centres and Schools at Fairwater, Pentrebane, Danescourt and Radyr;**
 - **Links to the Taff and Ely Trails;**
 - **Links to off-site public transport destinations including Radyr, Danescourt and Llandaff Rail Stations**

Necessary Infrastructure

- **1 District Centre and 3 Local Centres (including provision of business and local employment uses), Primary Care facility, Multifunctional community leisure facility including library facility, and financial contribution to upgrading of Fairwater Leisure Centre;**
- **Education-1 new Secondary School, 3-4 new Primary Schools located in or adjacent to District/Local Centres, and financial contribution to existing Primary Schools in earlier phases;**
- **Minimum of 30ha Open Space including 15ha of formal recreation, 6 playgrounds including destination play area, 2 teen facilities plus off-site contribution, and 2x 50 plot allotment sites (through on-site/ off-site provision)**

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Provide a range of densities with high density (minimum of 45-50+ dwellings per hectare) mixed-use development within District/Local Centres and medium to high density (35-50+ dwellings per hectare) along the Rapid Transit Corridors;**
- **Initial phases towards the east and along Llantrisant Road, middle phases towards the centre of the site and later to the west;**
- **Ensure that the potential future delivery of the 'Metro' is not precluded by keeping a corridor alongside and including the disused rail line running through the site (as depicted on the schematic framework) safeguarded from development and also ensuring that land uses, densities and layouts respond positively to its potential future provision;**
- **District/ Local Centres to be accessible by walking, cycling and public transport and accommodate a range of services including convenience goods floorspace plus other retail of a scale and nature which accord with Plan retail policies with the anchor food store to be located within the District Centre towards the east of the site;**
- **Employment provision (B1 & B1(b)(c)) to be located in and adjoining the District/Local Centres amounting to approximately 15,000sqm;**
- **New Schools to be located in and adjoining the District/Local Centres;**

- **Provide good land use and transportation integration with the adjoining areas of Pentrebane, Fairwater and Radyr;**
- **Providing an active frontage onto Pentrebane and Llantrisant Roads;**
- **Effectively respond to landscape and biodiversity assets by:**
- **Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:**
 - **Links between retained woodlands at Coed y Trenches, Coed y Gof, Waterhall, Halfwrt and Coedbychan;**
 - **Corridor along the valley through the middle of the site;**
 - **Links to the countryside to the west and south-west;**
 - **Linking corridors where possible between the above to provide a good network**
- **Ensuring that there is no detriment to the maintenance of the favourable conservation status of Great Crested Newts on the site including protection of the existing 2 ponds in the Pentrebane Cottages SINC and provision of a minimum of 2 additional ponds in the locality;**
- **Providing suitable buffers to retained woodlands referred to above and other habitats including hedgerows and streams;**
- **Effectively respond to heritage assets by:**
- **Assessing and effectively addressing potential impacts on the St Fagans Conservation Area (retain woodland/ hedgerow buffers together with provision of new planting) and the Listed Buildings (together with their settings) within and adjacent to the site;**
- **Effectively respond to other constraints including Radyr Golf Course (ensuring no conflict with errant golf balls) and existing easements (overhead pylons and underground infrastructure); and**
- **Ensuring that that development does not adversely affect the water quality of the Nant Rhydlafer.**

1. North West Cardiff is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is the largest Strategic Site within the Plan (346 ha) and relates to countryside to the west of Radyr, Fairwater and Pentrebane, and to the north of the village of St Fagans.

2. The vast majority of the land at North West Cardiff is within the control of the Trustees of St Fagans no. 1 & 2 and no. 3 Trust and will be delivered by a number of different developers operating out of different outlets. This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

4. The scale of the site allows numerous outlets to be operating at any one time in different parts of this large site and will provide a wide range and choice of housing offer and opportunities for a variety of different tenures. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

5. Rapid Transit Corridors within the site will be bus-based and of sufficient width and otherwise designed, including the control of car parking, to allow the safe two-way passing of the largest vehicles. Bus priority measures will be provided at appropriate locations within the site to allow bus rapid transit to avoid queuing traffic. Bus-based Rapid Transit Corridors will link the site to the Western Bus Corridor with off-site bus priority measures provided to assist the flow of buses. Further off-site corridor enhancements will be provided on the Western Bus Corridor as shown on the Proposals Map and consistent with policy T2 in order to support delivery of the increased frequency and reliability of services. The integration of housing and supporting services and community infrastructure provides the opportunity for a high proportion of short, local trips to be made by walking and cycling. This will be made possible by integrating networks of high quality walking and cycling routes within development layouts and ensuring that the design of roads, streets, junctions and public spaces accommodate the natural 'desire lines' of people making trips on foot and by bicycle.

6. Although details of the mode and potential alignments of the Metro have yet to be defined, it is important that the development of this site does not preclude the potential delivery of this strategic project. Work undertaken to date by the Welsh Government suggests that the disused rail line running through the middle of the site forms the most likely option in this locality but there is currently no certainty on the detailed alignment. For example, there is uncertainty of the future mode and whether the route would be based on the existing disused rail line or whether it would be better located either alongside to the north or to the south.

7. Therefore, it would be inappropriate to allocate a precise alignment on the Proposals Map but there is a need to ensure future options are not prejudiced. This policy ensures that land is safeguarded from development along the potential Metro corridor and also that land uses, densities and layouts are developed to take account of the potential delivery of this strategic transportation project.

8. District and Local Centres will be the focus for community uses and activities including Schools in close proximity. The precise number of Primary Schools (3/4) will depend on the outcomes of future monitoring and delivery options relevant when the details of later phases are being assessed through the Development Management process.

9. It should be noted that it is anticipated that the delivery of this large site will extend beyond the plan period (some 1,500 homes are anticipated being delivered post 2026). In this respect, whilst the Schematic Framework relates to the total geographical extent of the overall site area to ensure a high-level consistent approach to addressing site-specific factors, the infrastructure requirements as set out in this policy relate to the number of homes proposed during the plan period (for 5,000 new homes). Future annual monitoring, Plan reviews and ongoing updates to the Infrastructure Plan will ensure that any infrastructure requirements for homes post-2026 are captured at the appropriate juncture and consequently inform any future Development Management activity with regard to homes over and above the 5,000 proposed during the plan period.

10. ~~Search Area A The further future flexibility option~~ (north of Llantrisant Road is not included within the Strategic Site allocation. This would only be triggered if necessary through future Plan review following annual monitoring indicating that the provision of new homes is proceeding beyond anticipated rates and justifies such a release within the last years of the plan period. Therefore, it is considered premature to factor in potential detailed infrastructure and masterplanning matters at this juncture relating to this land. The formal monitoring framework provides an evidence-based process to inform any decisions on potential release in the last years of the plan period.

KP2(D & E): NORTH OF JUNCTION 33 ON M4 AND SOUTH OF CREIGIAU**Land is allocated:**

(i) North of Junction 33 on the M4, as defined on the Proposals Map, for a mixed-use development of approximately 2,000 homes, employment, other associated community uses and a strategic park and ride site; and

(ii) South of Creigiau, as defined on the Proposals Map, for a housing-based scheme of approximately 650 homes representing a southern extension to the village

Essential, enabling and necessary supporting infrastructure will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Provision of new bus-based Rapid Transit Corridors through the site North of Junction 33 linking directly to the Western Bus Corridor;**
 - **Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Western Bus Corridor and other routes within the North West Rapid Transit Corridor;**
 - **Off-site infrastructure including bus priority enhancements on the Western Bus Corridor and measures to improve linkages into Rhondda Cynon Taf;**
 - **Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services;**
 - **Strategic park and ride facility North of Junction 33 linked to the Rapid Transit Corridor and public transport node including Bus Gate to provide priority for public transport and limit unauthorised access by car to Junction 33;**

- **Public transport node in close proximity to the employment uses, Park & Ride facility and Local Centre to the south of the site;**
- **Improve the Llantrisant Road/ Cardiff Road junction**
- **Walking and cycling:**
- **On and off-site measures to provide a network of high quality, safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including the new neighbourhood centre from the north, improved pedestrian/ cycling links to existing and proposed schools;**
- **Provide a safe crossing of Llantrisant Road;**
- **Creating an east-west connection between Public Rights of Way (Footpaths numbered 10 & 18)**

Necessary Infrastructure

- **1 Local Centre within Site D including Primary Care facility and multifunctional community leisure facility including library facility;**
- **Education:1-2 new Primary Schools with 1 located in or adjacent to Local Centre, and financial contribution to existing Secondary Schools;**
- **Minimum of 12ha Open Space including 6ha of formal recreation, 3 playgrounds, 1 teen facility, and 1x 40 plot allotment site;**
- **Improve community facilities in the existing neighbourhood centre in Creigiau to provide new facilities for existing and new residents**

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Provide a range/ gradient of densities across the site with the highest density (minimum of 45-50+ dwellings per hectare) around the Local Centre to the south of the site. Medium density housing (35-45+ dwellings per hectare) will be provided on land close to Llantrisant Road and adjacent to the Rapid Transit Corridors and to the west of the land south of Creigiau. Lower densities will be provided on the elevated land west of Cardiff Road and to the west of the site North of Junction 33;**

- **Layouts on Sites D and E should reflect the interrelationships between the sites with delivery considered acceptable in tandem through different outlets with initial phases including the provision of the park and ride facility together with public transport enhancement measures;**
- **Ensure that the potential future delivery of the 'Metro' is not precluded by keeping a corridor through the sites (as depicted on the schematic framework) safeguarded from development and also ensuring that land uses, densities and layouts respond positively to its potential future provision;**
- **Exclude vehicular access onto the M4 except for part of the park and ride facility and part of the business area situated adjacent to the junction;**
- **Exclude through-traffic between both sites;**
- **Provide future vehicular, walking/ cycling access from the site North of Junction 33 to the 'flexibility allowance land' to the west;**
- **Facilitate interchange between local bus and rapid transit services;**
- **Local Centre to be located north of the business land and adjacent to the rapid transit interchange and Primary School and to include convenience goods floorspace plus other retail use of a scale and nature which accords with Plan retail policies;**
- **High quality business uses to reflect the strategic location of the site (excluding B8 uses) to be located adjacent to Junction 33 and an additional flexible local employment space to be located adjacent to the Motorway to the south west of the site;**
- **Provide a landscape buffer between employment and residential uses and along the boundary of the M4 to reduce impact;**
- **Provide safe and convenient pedestrian/ cycle links between the site and Creigiau village including links with existing Public Rights of Way;**
- **Effectively respond to landscape and biodiversity assets by:**
- **Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:**
 - **Links between retained ancient woodland at Castell y Mynach, marshy area to the north and young woodland buffer strip alongside Llantrisant Road;**
 - **Links from the Nant Henstaff, through Coed Gwenybwla, linking to the disused rail line and Pencoed Wood;**

- **Enhancing the disused rail line as a walking/ cycling and ecological corridor;**
- **Links to the countryside to the west;**
- **Linking corridors where possible between the above to provide a good network**
- **Ensuring that there is no detriment to the maintenance of the favourable conservation status of Great Crested Newts and Dormouse on the site including protection of the existing watercourses and provision of suitable compensatory planting to supplement existing retained habitats;**
- **Providing suitable buffers to retained woodlands and streams referred to above and other habitats including hedgerows within the sites;**
- **Effectively respond to heritage assets by:**
 - **Assessing and effectively addressing potential impacts on known assets including the Listed Buildings of Pencoed House, Church of St Eldeyrn and the Old Forge;**

1. Land North of Junction 33 on the M4 and South of Creigiau are two of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. As the sites are adjacent and separated only by Llantrisant Road, there is considered logic in setting out masterplanning and infrastructure requirements in a comprehensive manner but also including addressing site-specific issues for each site. The sites amounting to 141ha will help bring forward new homes, jobs and supporting infrastructure including a new strategic park and ride facility.

2. The masterplanning process to date has reflected joint-working between parties relating to both sites to ensure a comprehensive approach is taken.

3. This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

4. The scale of the sites allows numerous outlets to be operating at any one time and will provide a wide range and choice of housing offer and opportunities for a variety of different tenures. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

5. Rapid Transit Corridors within the site North of Junction 33 will be bus-based and of sufficient width and otherwise designed, including the control of car parking, to allow the safe two-way passing of the largest vehicles. Bus priority measures will be provided at appropriate locations within the site to allow bus rapid transit to avoid queuing traffic. Bus-based Rapid Transit Corridors will link the site to the Western Bus Corridor with off-site bus priority measures provided to assist the flow of buses. Further off-site corridor enhancements will be provided on the Western Bus Corridor as shown on the Proposals Map and consistent with policy T2 in order to support delivery of the increased frequency and reliability of services. The integration of housing and supporting services and community infrastructure provides the opportunity for a high proportion of short, local trips to be made by walking and cycling. This will be made possible by integrating networks of high quality walking and cycling routes within development layouts and ensuring that the design of roads, streets, junctions and public spaces accommodate the natural 'desire lines' of people making trips on foot and by bicycle.

6. Although details of the mode and potential alignments of the Metro have yet to be defined it is important that the development of these sites does not preclude the potential delivery of this strategic project. Work undertaken to date by the Welsh Government suggests numerous potential options in this area and there is currently no certainty on the detailed alignment. For example, there is uncertainty of the future mode and whether the route would be based on the existing disused rail line or whether it would be better routed elsewhere.

7. Therefore, it would be inappropriate to allocate a precise alignment on the Proposals Map but there is a need to ensure future options are not prejudiced. This policy ensures that land is safeguarded from development along the potential Metro corridor and also that land uses, layouts and densities are developed to take account of the potential delivery of this strategic transportation project.

8. The new Local Centre on Site D and new Primary School to be located within or adjoining it will be a focus for community uses and activities. Facilities will also be improved in the existing neighbourhood centre in Creigiau to provide new facilities for existing and new residents. The precise number of Primary Schools (1/2) will depend on the outcomes of future monitoring and delivery options relevant when the details of later phases are being assessed through the Development Management process. Specifically, consideration will be given to the merits of extending the existing Primary School at Creigiau as an alternative to the provision of a second new school.

9. ~~The further future flexibility option Search Area B (to the west of the site North of Junction 33)~~ is not included within the Strategic Site allocation. This would only be triggered if necessary through future Plan review following annual monitoring indicating that the provision of new homes is proceeding beyond anticipated rates and justifies such a release within the last years of the plan period. Therefore, it is considered premature to factor in potential detailed infrastructure and masterplanning matters at this juncture relating to this land although the schematic framework identifies potential access to the site. However, as a minimum, this policy sets out the need to provide potential future vehicular, walking and cycling access from Site D to the 'flexibility allowance land' to the west. The formal monitoring framework provides an evidence-based process to inform any decisions on potential release in the last years of the plan period.

KP2(F): NORTH EAST CARDIFF (WEST OF PONTPRENNAU)

Land is allocated at North East Cardiff (West of Pontprennau), as defined on the Proposals Map, for a mixed-use comprehensive development of a minimum of 4,500 homes, employment and other associated community uses, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Provision of new bus-based Rapid Transit Corridors through the site providing links between the District/Local Centres including Bus Gates at access point to Cardiff Gate Business Park and St Mellons Road at the eastern edge of the site;**
 - **Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Eastern/Northern Bus Corridors and other routes within the North Eastern Rapid Transit Corridor including services linked to Strategic Site G, facilitating transfer/ improving interchange facilities to Rhymney Line rail services at Llanishen Station and Thornhill Station, and, employment facilities at St Mellons Business Park and Strategic Site H;**
 - **Off-site enhancements including bus priority measures to the Eastern/Northern Bus Corridor;**
 - **Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services;**
- **Walking and cycling:**
 - **On and off-site measures to provide safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including existing local centres and Schools at Pontprennau, Pentwyn, Lisvane and Cardiff Gate Business Park;**
 - **Links to off-site public transport destinations including Llanishen and Thornhill Rail Stations**

Necessary Infrastructure

- **1 centrally located District Centre and 1 Local Centre including Primary Care facility, Multifunctional community leisure facility including library facility, and financial contribution to upgrading of Llanishen and Pontprennau Leisure Centres;**
- **Education-1 new Secondary School, 3 new Primary Schools and financial contribution to existing Primary Schools;**
- **Minimum of 26ha Open Space including 13ha of formal recreation, 6 playgrounds including destination play area, 1 teen facility plus off-site contribution, and 2x 50 plot allotment sites**

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Provide a range of densities with high density (minimum of 45-50+ dwellings per hectare) mixed-use development within District/Local Centres and along rapid transit corridors. Medium density (35-45+ dwellings per hectare) around the edge of Pontprennau and to the north of the site. Lower densities to be provided around the edge of Lisvane;**
- **Initial phases towards the West of the site with middle phases towards the centre and south (including District/ Local Centres) and later phases to the north and east of the site;**
- **Centrally located District/ Local Centres accessed by rapid transit corridors including interchange facilities between sustainable transport modes and accommodating a range of services including convenience goods floorspace plus other retail of a scale and nature which accord with Plan retail policies;**
- **Introduce measures to reduce impact of noise from the M4;**
- **Effectively integrate existing buildings into the design and layout;**
- **Retain and enhance Public Right of Way network within the site and provide safe, convenient and legible links to the countryside North of the M4, Nant Fawr corridor, Cardiff Gate Business Park and Pontprennau;**
- **Employment provision (B1 & B1(b)(c)) to be located in and adjoining the District Centre and adjacent to Cardiff Gate Business Park amounting to approximately 6.5ha;**
- **Provide good land use and transportation integration with the adjoining areas of Lisvane and Pontprennau;**

- **Effectively respond to landscape and biodiversity assets by:**
- **Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:**
 - **Utilising the stream network (particularly the Nant Ty Draw, Nant Glandulais and Nant y Draenog) as core elements of new ecological corridors through the site;**
 - **Links from the Nant Fawr corridor south west of the site ensuring the corridor links to other open space corridors within the site;**
 - ~~**Enhancing the disused rail line as a walking/ cycling and ecological corridor;**~~
 - **Links to access points to the countryside to the north west at Lisvane and underpasses below the M4;**
 - **Linking corridors where possible between the above to provide a good network;**
- **Ensuring that there is no detriment to the maintenance of the favourable conservation status of Dormouse on the site including provision of suitable compensatory planting to supplement existing retained habitats including Malthouse Woods, other woodlands and hedgerows;**
- **Providing suitable buffers to the Llanishen Reservoir SSSI, retained woodlands and streams referred to above and other habitats including hedgerows within the site;**
- **Effectively respond to heritage assets by:**
- **Assessing and effectively addressing potential impacts on known assets including Listed Buildings within and near to the site;**
- **No development to take place within the C2 flood zone area forming part of the Nant Glandulais valley.**

1. North East Cardiff (West of Pontprennau) is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is the second largest Strategic Site (237 ha) within the Plan and relates to countryside located between Lisvane to the west, Pontprennau to the east and the M4 Motorway to the north.

2. ~~Most of the land is owned by two landowners and.~~ The Site will be delivered by a number of different developers operating out of different outlets. This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

3. The scale of the site allows numerous outlets to be operating at any one time in different parts of this large site and will provide a wide range and choice of housing offer and opportunities for a variety of different tenures. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

4. Rapid Transit Corridors within the site will be bus-based and of sufficient width and otherwise designed, including the control of car parking, to allow the safe two-way passing of the largest vehicles. Bus priority measures will be provided at appropriate locations to allow bus rapid transit to avoid queuing traffic. Bus-based Rapid Transit Corridors will link the site to the Northern and Eastern Bus Corridors with off-site bus priority measures provided to assist the flow of buses. Further off-site corridor enhancements will be provided on the Northern and Eastern Bus Corridors as shown on the Proposals Map and consistent with policy T2 in order to support delivery of the increased frequency and reliability of services. The integration of housing and supporting services and community infrastructure provides the opportunity for a high proportion of short, local trips to be made by walking and cycling. This will be made possible by integrating networks of high quality walking and cycling routes within development layouts and ensuring that the design of roads, streets, junctions and public spaces accommodate the natural 'desire lines' of people making trips on foot and by bicycle.

5. District and Local Centres will be the focus for community uses and activities including schools in close proximity. They will be well located in relation to sustainable transportation options and also link into the network of green corridors largely based on the existing stream network.

KP2(G): EAST OF PONTRENNAU LINK ROAD

Land is allocated East of Pontprennau Link Road, as defined on the Proposals Map, for a housing-based scheme of a minimum of 1,300 homes with associated community uses, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Provision of new bus-based Rapid Transit Corridors through the site including links to the Local Centre and provision of Bus Gates at St Mellons Road at the north western edge of the site and Bridge Road to the south east of the site;**
 - **Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Eastern Bus Corridors and other routes within the North Eastern/Eastern Rapid Transit Corridor including services linked to Strategic Site F, facilitating transfer/ improving interchange facilities to Rhymney Line rail services at Llanishen Station and Thornhill Station, and, employment facilities at St Mellons Business Park and Strategic Site H;**
 - **Off-site enhancements including bus priority measures to the Eastern Bus Corridor;**
 - **Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services taking account of links with Strategic Site F;**
 - **Provide a bus-only route along Bridge Road**
- **Walking and cycling:**
 - **On and off-site measures to provide a network of high quality, safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including employment in Pontprennau, Pentwyn and Cardiff Gate Business Park;**
 - **Improve walking/cycling access at junction of Church Road/ A4232/Heol Pontprennau;**
 - **Provide a safe, attractive and convenient link from the site to the Rhymney Trail;**
 - **Enhance subway under A48, south of St Edeyrn's Church;**

- **Provide cycle/pedestrian link between the subway under the A48 and Mill Lane, Llanrumney;**
- **Upgrade Rhymney Trail to provide shared pedestrian/cycle route between subway under A48, south of St Edeyrn's Church and the subway west of Pentwyn interchange**

Necessary Infrastructure

- **1 centrally located Local Centre linked to rapid transit infrastructure and school facilities including Primary Care facility (Branch Surgery linked to Strategic Site F), multifunctional community facility, and financial contribution to upgrading of Pentwyn and Pontprennau Leisure Centres;**
- **Education-1 new Primary School located in or adjacent to the local Centre and financial contribution to provision of Secondary School at Strategic Site F;**
- **Minimum of 7.9ha Open Space including 3.9ha of formal recreation, 2 playgrounds, 1 teen facility, and 1x 26 plot allotment site**

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Provide a range of densities with high density (minimum of 45-50+ dwellings per hectare) alongside rapid transit corridor towards centre of site, medium density (35-45+ dwellings per hectare) towards the north and lower densities alongside the riverside park;**
- **Initial phases in the south, middle phases towards the centre and later phases to the north;**
- **Local Centre to accommodate a range of services including convenience goods floorspace and other retail of a scale and nature which accords with Plan retail policies;**
- **Integrate cluster of low density buildings at St Julian's Manor/ House;**
- **Effectively respond to landscape and biodiversity assets by:**
- **Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:**
 - **Creating a riverside park incorporating the Rhymney Trail and other Public Rights of Way on an extensive area of land to the east of the site with links running west into the site;**
 - **Retaining the green buffer along the A4232 (primarily as an ecological resource and landscape role);**

- **Links from riverside park to countryside to north and Rhymney Valley to south west;**
- **Linking corridors where possible between the above to provide a good network**
- **Ensuring that there is no detriment to the maintenance of the favourable conservation status of Dormouse on the site including provision of suitable compensatory planting to supplement existing retained habitats including compensatory planting on the southern and eastern site boundaries;**
- **Providing suitable buffers to retained habitats, particularly the hedgerows within the site;**
- **Effectively respond to heritage assets by:**
- **Assessing and effectively addressing potential impacts on known assets including Listed Buildings within and near to the site;**
- **Preserving the village character around Llanedeyrn village and effectively integrate existing buildings into layout including protecting view of St Edeyrn's Church from the A48;**
- **Effectively respond to heritage assets by:**
- **Assessing and addressing potential impacts on the Listed Buildings of Unicorn Public House, Church of St Edeyrn, Bridge House Farm, St Julian's Manor House and associated curtilage structures;**
- **Protect water quality of River Rhymney and Nant Mwlan;**
- **Address issues with Japanese Knotweed along the River Rhymney;**
- **No development to take place in C2 flood zone forming part of River Rhymney valley.**

1. Land East of Pontprennau Link Road forms one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It amounts to 80.7 ha and is located in countryside located between the Pontprennau Link Road to the West, River Rhymney valley to the east, the A48 to the south and the M4 Motorway to the north.

2. Most of the land is owned by a single landowner and has the benefit of Outline Planning Permission for 1,020 homes together with supporting infrastructure and facilities. A Section 106 Agreement has been signed and secures the phased delivery of supporting infrastructure and facilities including the provision of a Primary School on site with trigger clauses securing delivery.

3. Other parts of the site not covered by the Outline Planning Consent will be considered in the context of this policy, together with other relevant policies which will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process

KP2(H): SOUTH OF ST MELLONS BUSINESS PARK

Land is allocated South of St Mellons Business Park, as defined on the Proposals Map, for a strategic employment site together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Provision of transport hub including new rail station served by relief line rail services connecting to the city centre and services to Cardiff Airport and London via Cardiff Central;**
 - **Provision of park and ride facility;**
 - **Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Eastern Bus Corridors and other routes within the North Eastern/Eastern Rapid Transit Corridor including services linked to the City Centre and Strategic Sites G and F;**
- **Walking and Cycling:**
 - **Provide high quality on-site and off-site walking and cycling links and facilities to maximise walking and cycling access to the site from neighbouring communities including Trowbridge and St Mellons;**
- **Flood mitigation/ defences:**
 - **Flood mitigation works including raising the development plateaus and providing compensatory flood storage areas south of the rail line**

Necessary Infrastructure

- **Retain the area of land to the east of Cypress Drive and Faendre Reen as green space linked with Hendre Lake Park;**
- **If the infilling of any reen or field ditch proves to be unavoidable at the application stage it should be realigned (with at least an equal capacity) around the perimeter of the development or a compensatory length of ditch should be provided elsewhere within the site**

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Provide 44 ha of business land capable of accommodating up to 90,000 square metres campus style high quality development similar to existing business park at St Mellons in a location which benefits from Assisted Area Status;**
- **Integrate the site with local facilities in the surrounding area;**
- **Effectively respond to landscape and biodiversity assets by:**
 - **Protecting the value of the Gwent Levels SSSI with development being a minimum of 12.5 metres from main reens and 7 metres from field ditches;**
 - **Ensuring that all development accords with the Natural Resources Wales (formerly Countryside Council for Wales) Wentloog Levels guidelines "Nature Conservation and Physical Developments on the Gwent Levels – the current and future implications";**
 - **Integrating any landscape natural features, such as existing reens and hedgerows into the design including provision of suitable buffers;**
 - **Protecting the Marshfield SINC;**
 - **Respecting the intricate reen network and exiting hedgerows;**
 - **Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:**
 - **Links between retained reens and hedgerows;**
 - **Green links to Hendre Lake Park which respond to the natural landscape value of the area;**
 - **Ensuring that there is no detriment to the maintenance of the favourable conservation status of the Shril Carder Bee by carrying out a survey, and if found, provide appropriate compensatory measures;**
 - **Ensuring that there is no detriment to the maintenance of the favourable conservation status of European Protected Species including bats, otters and reptiles including provision of suitable compensatory planting to supplement existing retained habitats;**
- **Effectively respond to heritage assets by:**
 - **Assessing and effectively addressing potential impacts on known assets including the Wentloog Levels Archaeologically Sensitive Area and registered Landscape of Outstanding Historic Interest;**

1. This is an important employment site which contributes to the necessary range and choice of types of employment opportunities in the city. Its location is particularly well placed to provide accessible job opportunities to areas of known deprivation and its position adjacent to the main rail line offers significant opportunities for a new station together with supporting sustainable transportation infrastructure. This proposal is a long-standing proposal in the Regional Transport Plan, is identified in the emerging work on the South Wales Metro concept and has Welsh Government support. However, the precise location of the station is yet to be defined so it would be premature to show a specific allocation for this use on the Proposals Map but it is shown within the Schematic Framework and referenced within the policy.

2. It is recognised that the area possesses environmental and flood risk constraints. In terms of environmental issues, the majority of the area is a Site of Special Scientific Interest with the reens forming the major interest. Run-off will enter the River Severn Estuary, a European designated site so drainage and potential disturbance to birds will need to be suitably addressed. The land also meets the qualifying criteria using the LANDMAP landscape methodology for Special Landscape Area status. Furthermore, there are significant historic interests and the land is designated as a Historic Landscape and Archaeologically Sensitive Area.

3. These environmental and flood risk constraints have been carefully examined so that the mitigation and enhancement measures embedded within this policy provide an appropriate framework at this level to address these issues. These measures will provide a framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process. In this way, the significant social and economic benefits brought forward by this allocation can be delivered whilst carefully responding to and putting in place the policy framework to effectively address the known constraints relating to the site.

Appendix Three: MAC71 New Appendix - Sites over 10 dwellings with planning permission for residential

SITE REF	SITE LOCATION	ELECTORAL DIVISION	TENURE	APPLICATION NUMBER	PERMISSION TYPE	DATE GRANTED	BROWNFIELD GREENFIELD	NOT STARTED (PLOTS)	NOT STARTED (AREA ha)	IN PROGRESS (Plots)	IN PROGRESS (AREA ha)	COMPLETED (PLOTS)	COMPLETED AREA (ha)	TOTAL (PLOTS)	TOTAL (AREA ha)	Completed Plots 2013-14	Completed Area 2013-14
	TOTALS							8,343	5.92	589	0.00	693	0.00	9,625	108	31	0.97

Appendix Four MAC74 New Appendix Supplementary Planning Guidance

New Appendix – Supplementary Planning Guidance (SPG)

The Table below provides a list of SPG to support the Plan with a timetable for preparation. This list will be kept under review in light of changing priorities for preparation and the need for additional SPG. The requirement for preparation/review of SPG is linked to the Monitoring Framework.

Supplementary Planning Guidance	Current Status /Proposed Action	Relevant Plan Policy	Indicative Date for Production
Design and Parking Guidance (incorporating Access, Circulation and Parking Requirements SPG and sustainable design guidance)	Current adopted SPG to the Local Plan To be revised to link to adopted LDP updated and extended. New planning obligations SPG to pick up S106 issues from Transportation SPG	T5	Within 6 months of adoption
Affordable Housing	Current adopted SPG to the Local Plan To be revised to link to adopted LDP New planning obligations SPG to pick up S106 issues	H3	Within 6 months of adoption

Appendix Five MAC75 Monitoring Framework

6. Monitoring and Implementation

6.1 Monitoring the effect of planning policies is the principle way through which the effectiveness of implementing the LDP can be assessed. The monitoring process helps to positively identify key issues and questions such as:

- Which policies are being implemented successfully – i.e. their effectiveness in determining planning applications and in withstanding appeals.
- Whether policies are having their intended output.
- If policies are not working well, what actions are needed to address them?
- What changes to the evidence base has occurred or needs to take place?
- What gaps can be identified that should be addressed by the LDP?
- If an amendment of policies or complete review of the LDP is required.

6.2 The Council is required to submit an Annual Monitoring Report (AMR) to Welsh Government by 31st October each year following adoption of the LDP as set out in Section 37 of the Town and Country Planning (Local Development Plan) Regulations 2005 (the Regulations). Having a clear mechanism for the monitoring of the LDP is one of the 'Tests of Soundness' considered in the Examination of the LDP by the Planning Inspector.

6.3 The LDP Manual explains that the Annual Monitoring Report process should not just be about data collection, but about taking a forward looking action-orientated approach which may raise issues that need to be addressed and will help form the basis for a review of the LDP.

6.4 The LDP is subject to a four year review period with an interim target therefore of Autumn 2019. However, a full ~~review~~ revision of the LDP is only likely to be required in certain circumstances, for example where new legislation or guidance is released, significant changes to forecasts occur or where LDP objectives are not being effectively delivered. It is a combination of all of these factors, together with the issues raised in the AMR which may warrant consideration of a partial or full review. It would not be based solely on whether an individual target was being met or policy having a specific outcome.

6.5 The LDP Manual acknowledges that data cannot be collected for every policy in the Plan; it would lead to an unnecessarily large and complicated document. It suggests that key policy areas are monitored consistently to allow for trends to be recognised. Where possible, use will be made of existing information being collected.

6.6 It is important to recognise that the monitoring process can be a complex task, particularly where there is a lack of consistent data or if there is doubt an outcome can be solely attributed to development plan policies. There may also be difficulties in monitoring certain impacts on an annual basis when some changes take a longer time

to materialise. Therefore, careful attention has been given to gathering the right volume and grain of data.

6.7 A set of indicators have been comprised which will act as a benchmark in measuring performance. Indicators will be noted as either 'Contextual', 'Core' or 'Local'.

- Contextual Indicators – These are broad indicators which help monitor the effectiveness of the LDP at a strategic level and are designed to give an overall picture of how Cardiff as a whole is performing.
- Core Indicators – The Local Development Plan Manual (2006) sets out a number of core output indicators which are considered to be essential for assessing implementation of national policy.
- Local Indicators – The Council has identified local indicators which are more specific to Cardiff and considered important in monitoring the effectiveness of the LDP.

6.8 All indicators are linked to monitoring target which set out the position that needs to be achieved in order to help deliver the LDP Strategy. If monitoring targets are not being met, trigger points are included to assess the extent to which circumstances have diverged from the target. The trigger points will indicate if certain parts of the Plan are not achieving their desired outcomes. If these trigger points are activated then the AMR will consider the necessary action which is required.

6.8 In setting trigger points, the principle adopted has been to set strict activation points rather than building in wide margins of delivery significantly below or above the target based on Plan policies. Therefore, where trigger points are based on numerical delivery rates, a trigger of 10% above or below the target has been adopted. In this way trigger activation enables the understanding of the reasons lying behind and consideration of whether any improvements can be made to make Plan implementation as effective as possible.

6.9 In this respect, careful consideration will be given to the likely underlying reasons for the activation of any trigger points. This will inform whether reasons reflect external factors or national trends largely outside the scope of the effectiveness of LDP policy implementation or whether reasons may be more directly related to the Plan or local factors. In such situations a range of appropriate corrective actions can be considered. Such actions are set out in more detail fully below.

6.10 Options are available to the Council with respect to each indicator, monitoring target and trigger point. The AMR will assess the severity of the situation associated with each indicator and recommend an appropriate response in accordance with the following table:

Continue Monitoring (Green)
Where indicators are suggesting the LDP Policies are being implemented effectively and there is no cause for review
Training Required (Blue)
Where indicators are suggesting that LDP policies are not being implemented as intended and further officer or Member training is required.
Supplementary Planning Guidance Required (Purple)
Indicators may suggest the need for further guidance to be provided in addition to those already in the Plan.
Further Research (Yellow)
Where indicators are suggesting the LDP policies are not being as effective as they should, further research and investigation is required.
Policy Review (Orange)
Where indicators are suggesting the LDP policies are failing to implement the strategy a formal review of the Policy is required. Further investigation and research may be required before a decision to formally review is confirmed/.
Plan Review (Red)
Where indicators are suggesting the LDP strategy is failing and a formal review of the Plan is required. This option to fully review the Plan will need to be fully investigated and undertaken following serious consideration.

CONTEXTUAL INDICATORS	TARGET	TRIGGER	SOURCE
Annual unemployment rate	The annual unemployment rate decreases	The annual unemployment rate increases for two or more consecutive years.	Regional Labour Market Statistics (ONS) and Stats Wales

Appendix Six: MAC77 List of Key and Detailed Policies

KEY POLICIES

KP1: LEVEL OF GROWTH

KP2: STRATEGIC SITES

KP2 (A): CARDIFF CENTRAL ENTERPRISE ZONE AND REGIONAL TRANSPORT HUB

KP2 (B): FORMER GAS WORKS, FERRY ROAD

KP2 (C): NORTH WEST CARDIFF

KP2 (D & E): NORTH OF JUNCTION 33 ON M4 AND SOUTH OF CREIGIAU

KP2 (F): NORTH EAST CARDIFF (WEST OF PONTPRENNAU)

KP2 (G): EAST OF PONTPRENNAU LINK ROAD

KP2 (H): SOUTH OF ST MELLONS BUSINESS PARK

KP3 (A): GREEN WEDGE

KP3 (B): SETTLEMENT BOUNDARIES

KP4: MASTERPLANNING APPROACH

KP5: GOOD QUALITY AND SUSTAINABLE DESIGN

KP6: NEW INFRASTRUCTURE

KP7: PLANNING OBLIGATIONS

KP8: SUSTAINABLE TRANSPORT

KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS

KP10: CENTRAL AND BAY BUSINESS AREAS

KP11: ~~MINERALS AND~~ CRUSHED ROCK AGGREGATES AND OTHER MINERALS

KP12: WASTE

KP13: RESPONDING TO EVIDENCED SOCIAL NEEDS

KP14: HEALTHY LIVING

KP15: CLIMATE CHANGE

KP16: GREEN INFRASTRUCTURE

KP17: BUILT HERITAGE

KP18: NATURAL RESOURCES

DETAILED POLICIES

HOUSING

H1: NON-STRATEGIC HOUSING SITES

H2: CONVERSION TO RESIDENTIAL USE

H3: AFFORDABLE HOUSING

H4: CHANGE OF USE OF RESIDENTIAL LAND OR PROPERTIES

H5: SUB-DIVISION OR CONVERSION OF RESIDENTIAL PROPERTIES

H6: CHANGE OF USE OR REDEVELOPMENT TO RESIDENTIAL USE

~~H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S)~~

~~H8~~7: SITES FOR GYPSY AND TRAVELLER CARAVANS

ECONOMY

EC1: EXISTING EMPLOYMENT LAND

EC2: PROVISION OF COMPLEMENTARY FACILITIES FOR EMPLOYEES IN
BUSINESS, INDUSTRIAL AND WAREHOUSING DEVELOPMENTS

EC3: ALTERNATIVE USE OF EMPLOYMENT LAND AND PREMISES

EC4: PROTECTING OFFICES IN THE CENTRAL AND BAY BUSINESS
AREAS

Inspector Matters Arising Changes

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
Inspector MAC1	4	Policy KP3 (A): Green Belt	<p>Hearing Session 20: Green Belt</p> <p>Action Point 1 – note this MAC has been requested by the Inspectors and the Council’s response is set out in its formal reply to this Action Point.</p>	<p>Delete Policy KP3 (A) and reasoned justification and replace with new KP3(A) Green Wedge</p> <p>KP3(A): GREEN BELT</p> <p>In order to strategically manage the urban form of Cardiff and to protect the setting of the urban area, a Green Belt is proposed on land North of the M4 as shown on the Proposals Map. Within this area development which prejudices the open nature of this land will not be permitted. Positive biodiversity, landscape, climate change mitigation and informal recreational management and enhancement measures will be encouraged in this area to further enhance the long term role of the area as a key natural resource benefiting the city.</p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<p>4.69 Together with Key Policy KP3(B), this Policy seeks to strategically manage the future built form of Cardiff's urban area. Supporting Document 3 evidences the assessment of the potential for a Green Belt in Cardiff. It concludes that designation is considered appropriate for Cardiff and would accord with national guidance relating to Green Belts as set out in Planning Policy Wales (PPW).</p> <p>4.70 Importantly, given that the Plan proposes some significant greenfield releases, this Policy provides some longer term certainty as to the future urban form of the city. In this respect, it should be noted that land within a Green Belt should be protected for a longer period than the Plan period. This is also a reason why a Green Belt policy is required rather than a Green Wedge policy which would not give the long-term protection considered necessary to effectively manage urban form.</p> <p>4.71 The designated area forms land North of the M4 in Cardiff as shown on the Proposals</p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<p>Map. This land unquestionably forms a distinctive, prominent and well known green backdrop to the city forming a strategically important setting to the urban area. The land is also generally well contained by the strong physical boundary of the M4 Motorway to the south which is an important requirement of any designated Green Belt area.</p> <p>4.72 With regard to land immediately to the North of the proposed Green Belt within Caerphilly and Rhondda Cynon Taff, it is noted that policies set out in adopted LDPs very much support development restraint. For example, within Caerphilly, the Caerphilly Mountain Area is all outside the settlement boundaries and a combination of Special Landscape Area and Visually Important Local Landscape designations apply across the whole area. Within Rhondda Cynon Taff, land to the North of the proposed Green Belt carries a Special Landscape Area designation. Future LDP Reviews for these areas or any strategic planning measures which may be introduced in future years could consider an identifying extension of the Green Belt area in</p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<p>accordance with national guidance. However, at this juncture, it is considered that Green Belt designation in Cardiff creates no obvious cross-boundary anomalies or direct policy conflicts.</p> <p>4.73 The tightness of Cardiff’s administrative boundaries to the urban area to parts of the West and East, limits scope for a Green Belt designation in these locations. For example, the visually prominent Leckwith Escarpment is located in the Vale of Glamorgan but is protected by a Special Landscape Area designation in the Vale of Glamorgan Development Plan. In fact, most of the land within the Vale of Glamorgan immediately adjacent to Cardiff carries with it either Special Landscape Area or Green Wedge (around Culverhouse Cross) status. This provides an element of protection to Cardiff’s setting to the West.</p> <p>4.74 With regard to Newport, it is noteworthy that Newport’s adopted Unitary Development Plan includes a Green Belt designation on land</p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<p>immediately East of Cardiff's boundary. This puts in place measures to prevent the coalescence of Cardiff and Newport. It extends from the M4 to the coast running as far East as Castleton and Marshfield providing long term protection for this large area. In places, the edge of Cardiff's urban area runs right up to the administrative boundary and Green Belt designation within Newport but pockets of countryside remain in Cardiff around Old St Mellons and North of the sea wall.</p> <p>4.75 Green Belt designation is not considered appropriate for either of these areas as it is important that there remains a sufficient range of potential development land available in the longer term. Including such areas runs a significant risk of not taking full account of national guidance in this respect and undermining the Policy. The Green Belt designation in Newport is considered sufficient to prevent settlement coalescence between Cardiff and Newport and there is no demonstrable evidence supporting a wider designated area to support this objective. However, there are clear</p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<p>and compelling other reasons for a Green Belt in other areas within Cardiff and for other reasons which are enlarged upon below.</p> <p>4.76 The proposed designated Green Belt is considered essential to protect the strategically significant rising land North of the M4 which is critical to the overall identity of Cardiff and much cherished by its residents. It should also be noted that existing policies are not sufficient to protect the open nature of this land.</p> <p>4.77 Significant development pressures exert on this area. This has been evidenced through planning applications for dwelling conversions, rebuilds and related structures which are having a cumulative impact on landscape quality. Furthermore, numerous applications have been submitted for equine related activities and other uses which are again beginning to have a cumulative impact on this highly visible and sensitive area. Significant Candidate Sites have also been submitted within the area.</p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<p>4.78 The designation of a Green Belt with its associated strict policy to preserve the open nature of this land is the only policy tool available to the Council to prevent the long term deterioration of this visually prominent land providing a strategic setting to the city. It is very much recognised by the public as being a key distinctive element which helps defines the very nature of Cardiff in the same way that other readily recognised areas are perceived and valued such as Cardiff Bay and the City Centre.</p> <p>4.79 Although Green Belts are not intended to be a tool to protect areas of high intrinsic value, the land is of high environmental value and also a popular area for informal recreation. The Policy therefore also has a positive aspect to build upon the long term certainty of protection by putting in place support for management and enhancement measures. For example, the long term protection can act as a stimulus to consider landscape scale initiatives addressing such matters as carbon sinks, habitat creation and</p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<p>management initiatives and wider green infrastructure-related projects where long-term certainty would support planning and delivery.</p> <p>4.80 PPW provides specific guidance on the consideration of planning applications within the Green Belt. It provides a presumption against inappropriate development and outlines the very exceptional circumstances where other considerations may clearly outweigh the harm to protecting the openness of the Green Belt.</p> <p>Insert new KP3(A) Green Wedge to replace existing KP3 (A)</p> <p><u>KP3(A): GREEN WEDGE</u></p> <p><u>In order to strategically manage the urban form of Cardiff and to protect the setting of the urban area, a Green Wedge is proposed on land North of the M4 as shown on the Proposals Map. Within this area development which prejudices the open</u></p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<p><u>nature of this land will not be permitted. Positive biodiversity, landscape, climate change mitigation and informal recreational management and enhancement measures will be encouraged in this area to further enhance the long term role of the area as a key natural resource benefiting the city.</u></p> <p><u>Together with Key Policy KP3(B), this Policy seeks to strategically manage the future built form of Cardiff’s urban area. The designated area forms land North of the M4 in Cardiff as shown on the Proposals Map. This land unquestionably forms a distinctive, prominent and well known green backdrop to the city forming a strategically important setting to the urban area. The land is also generally well contained by the strong physical boundary of the M4 Motorway to the south.</u></p> <p><u>PPW provides specific guidance on the consideration of planning applications within the Green Wedge designation.</u></p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<p><u>Consequential amendments:</u></p> <p><u>Consequential Changes of the Deletion of KP3 (A) Green Belt and Replacement with new KP3 (A) Green Wedge Policy</u></p> <ul style="list-style-type: none"> • Amend Paragraph 4.4 and 4.11 of the Strategy: <p>4.4 However, the Strategy sets out clear policies and mechanisms which provide a framework designed to effectively manage future growth and encourage high quality and sustainable design. This includes adopting a masterplanning approach based on the sustainable neighbourhood objectives to the development of new sites supported by more detailed design guidance. Additionally, the approach strategically manages growth by proposing the designation of a Green Belt</p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<p><u>Wedge</u> and tight settlement boundaries policy to protect large areas of countryside. In this way, new development can be planned for in a phased manner and designed in a more sustainable way to minimise negative impacts.</p> <p>4.11 Cardiff possesses a unique and particularly distinctive natural and built heritage. The Strategy delivers sustainable development by meeting social and economic needs, but in a managed way which retains, manages and enhances important features of natural and built heritage. Central to this approach is the designation of a Green <u>Belt Wedge</u> to the North of the M4 Motorway, <u>a</u> strict settlement boundaries policy together with protection to the river valleys and open spaces. In this way, Cardiff's distinctive environmental qualities can be successfully maintained with further opportunities to enhance their management and increase public enjoyment.</p> <ul style="list-style-type: none"> • Amend Key Diagram: delete reference to Green Belt and replace with Green Wedge.

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<ul style="list-style-type: none"> <li data-bbox="1310 375 1870 443">• Amend KP1: LEVEL OF GROWTH paragraph 4.40: <p data-bbox="1310 515 2042 1002">4.40 Work undertaken as part of this process has shown that there is limited scope for further development areas due to the environmental and other constraints around the city together. There is considered merit in focussing potential additional areas based upon proposed Strategic Sites where there is land available to take advantage of the comprehensive provision of new community and transportation infrastructure and minimising impact on areas of higher environmental sensitivity including land proposed for Green Belt-Wedge designation.</p> <ul style="list-style-type: none"> <li data-bbox="1310 1106 2042 1174">• Amend Policy KP3(B): SETTLEMENT BOUNDARIES paragraph 4.81 <p data-bbox="1310 1246 2042 1361">4.81 Cardiff's settlement boundaries are a key mechanism for helping to manage growth by defining the area within which development</p>

MAC Number	Chapter	Deposit Policy /Para No	Hearing Session	Proposed Change June 2015
				<p>would normally be permitted, subject to material planning considerations. This Policy compliments the Green Belt <u>Wedge</u> Key Policy (KP3(A)) set out above. Unlike the Green Belt, The this policy will not extend beyond the Plan period but it will impose a strict control on development of all countryside in Cardiff outside the identified settlement boundaries as shown on the Proposals Map. Detailed Policy EN1 provides more guidance on the interpretation of this Policy approach.</p> <ul style="list-style-type: none"> <p>Amend Policy EN1: COUNTRYSIDE PROTECTION paragraph 5.87:</p> <p>It should be read in conjunction with Policy KP3A and KP3B and aims to ensure that those uses that do not need to be located in the countryside will be resisted. Whilst KP3A provides strict controls in the Green Belt <u>Wedge</u> area for the reasons given, this policy provides further guidance on uses appropriate in the countryside as a whole.</p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<ul style="list-style-type: none"> • Amend Policy EN2: CONVERSION, EXTENSION AND REPLACEMENT BUILDINGS IN THE COUNTRYSIDE paragraph 5.56 <p>As proposed for amendment by MAC27 (June 2015 Schedule)</p> <p>5.96 The Policy contributes towards Plan objectives and PPW (2012, Para 7.6.8) which supports the re-use and adaption of existing rural buildings to help meet the needs of commercial and industrial development, as well as for tourism sport and recreation. It further accords with PPW (2012, Para 7.6.9 and 7.6.10) which supports the inclusion of polices within the development plan which do not allow residential re-use which would have a harmful effect on the character of the countryside. Reference should also be made to KP3A with regard to the consideration of proposals in the Green Belt <u>Wedge</u> area.</p>

MAC Number	Chapter	Deposit Policy /Para No	Hearing Session	Proposed Change June 2015
				<ul style="list-style-type: none"> • Amend Policy EN3: LANDSCAPE PROTECTION paragraph 5.104 5.104 Wherever possible, development will be expected to maintain and strengthen positive attributes of the landscape and seek to mitigate or remove, rather than compound negative influences. Reference should also be made to KP3A with regard to the consideration of proposals in the Green Belt <u>Wedge</u> area. • Amend the Proposals Map Key to delete reference Green Belt and replace with Green Wedge • Amend Summary: 3. Putting in place a framework to manage future growth and encourage high quality, sustainable design <p>Policies and mechanisms have been put in place</p>

MAC Number	Chapter	Deposit Policy / Para No	Hearing Session	Proposed Change June 2015
				<p>to provide a framework to effectively manage future growth. Areas to be kept free from development are made explicit avoiding the current climate of uncertainty created by not having an adopted Plan in place. Protected areas include the designation of Green Belt Wedge North of the M4 Motorway together with tight settlement boundaries policy county-wide and protection of river valleys and open spaces. Collectively, these policies protect vast tracts of Cardiff's valued countryside, river valleys and open spaces. The master planning approach provides an over-arching framework for the development of new areas setting out key requirements relating to land use, densities, facilities, transportation, open spaces and phasing. Further work on the detailed master planning of areas will be carried out within this over-arching context. Design policies and guidance set out expectations encouraging more sustainable forms of development.</p> <p>8. Respecting Cardiff's environment and</p>

Appendix 2: Non-Technical Summary of LDP Inspectors Report

The Inspectors Report concludes that, subject to the recommended Matters Arising Changes (MACs) set out in Appendices A and B of the Inspectors Report, the Cardiff Local Development Plan 2006 - 2026 (LDP) provides an appropriate basis for the planning of the City up to 2026. The Inspectors state that the Council has sufficient evidence to support the strategy and has shown that it has a realistic prospect of being delivered. The Inspectors note a number of changes are needed to meet legal and statutory requirements and to ensure that the Plan is sound. They also note that these do not alter the thrust of the Council's overall strategy and do not undermine the Sustainability Appraisal carried out by the Council. The main changes are summarised as:

- Revised housing requirement to reflect consideration of Welsh Government (WG) 2011-based population and household projections and inclusion of the flexibility allowance figure within the overall housing target;
- Improved clarity on how and when the required housing – together with any required flexibility allowance - will come forward;
- Extend non-strategic housing allocation H1.3 and delete non-strategic health employment site;
- Delete the Gypsy & Traveller allocation and include a timetable to identify and deliver a new site or sites within the Plan and the monitoring framework;
- Provide new policies for each of the strategic sites to include infrastructure requirements and master planning principles;
- Set out the affordable housing requirement in the Plan including the tenure mix;
- Clarify that affordable housing provision should be provided on site unless there are exceptional circumstances;
- Provide more clarity on the timing and phasing of infrastructure for the strategic sites by including categories of infrastructure in the policies and more detail in the Infrastructure Plan;
- State that planning obligations will be sought where they satisfy WG Circular 13/97 and the Community Infrastructure Levy Regulation 122(2);
- Improved clarity that development will need to show that it has maximised achievement towards the 50:50 modal transport split target;
- Provide more details of the bus corridor enhancements and rapid transit corridors in the Plan and greater clarity about the distinction between them;
- Provide a new policy for the planned Metro to ensure development won't prejudice this regionally important project by safeguarding land where routes are known;
- Include a new policy setting out criteria for employment proposals to come forward on unallocated land;
- Inclusion of the hierarchy of retail centres in the Plan;
- Change the Green Belt designation to Green Wedge;
- Include a statement in the Plan of how the needs and interests of the Welsh language have been taken into account;
- Changes to settlement boundaries to more closely follow defined physical features;
- Changes to Minerals policies including a new comprehensive policy relating to mineral safeguarding;
- Deletion of the site proposed to be allocated for Waste;
- Changes to policy wording to reflect national planning policy more closely and

- ensure their effectiveness; and
- Changes to the monitoring framework developing the targets and indicators in more detail to improve monitoring.

Almost all of the recommended changes have been put forward by the Council in response to matters discussed during the examination. The Inspectors conclude that with the recommended changes the Plan satisfies the requirements of section 64(5) of the 2004 Act and meets the tests of soundness.

Appendix 3

Cardiff Local Development Plan 2006 to 2026

Adoption Statement

January 2016

Background

In accordance with the requirements of Regulations 25 (2) of the Town & Country Planning (Local Development Plan) (Wales) Regulations 2005 and Regulation 16 of the Environmental Assessment of Plans and Programmes (Wales) Regulations 2004, the Council is required to prepare an Adoption Statement for the Cardiff Local Development Plan. Part 1 of the statement addresses the requirements of the Town & Country Planning (Local Development Plan) (Wales) Regulations 2005 and Part 2 accords with the requirements of the Environmental Assessment of Plans and Programmes (Wales) Regulations 2004.

Part 1: LDP Statement of Adoption

- 1.1 The Cardiff Local Development Plan (LDP) was adopted on the 28th January 2016. The LDP became operative on its adoption. The Cardiff LDP is the planning policy document for the City and County of Cardiff. It sets out key policies and land use allocations that will shape the future of the city and guide development up to 2026. The Cardiff LDP replaces the existing adopted development plans for the city comprising the South Glamorgan (Cardiff Area) Replacement Structure Plan 1991 to 2011, South Glamorgan (Cardiff Area) Minerals Local Plan, City of Cardiff Local Plan and Mid Glamorgan County Structure Plan incorporating Proposed Alterations No. 1 (1981 to 1996).
- 1.2 Copies of the adopted LDP, the report of the Planning Inspectors appointed to hold the independent examination, the Sustainability Appraisal (SA) report (incorporating the Strategic Environmental Assessment SEA) and Habitats Regulations Assessment together with this Adoption Statement are available for inspection at County Hall, Atlantic Wharf, Cardiff CF10 4UW between the hours of 9.00am and 4.30pm Monday to Fridays, at all Public Libraries during normal opening hours and on the Council's website at:

www.cardiff.gov.uk/localdevelopmentplan
- 1.3 A person aggrieved by the LDP who desires to question its validity on the ground that it is not within the powers conferred by Part 6 of the Planning and Compulsory Purchase Act 2004 or that any requirement of that Act or any regulation made under it has not been complied with in relation to the adoption of the LDP, may, within six weeks from the date specified on the adoption notice make an application to the High Court under Section 113 of the 2004 Act.

Part 2 – Environmental Assessment of Plans and Programmes (Wales) Regulations 2004

Introduction

- 2.1 The LDP provides a spatial framework which is underpinned by the principles of sustainable development. The LDP provides a policy framework that integrates social, environmental and economic issues that are relevant to the people who live, work and visit the City and County of Cardiff. This section of the Adoption Statement describes how the SA/SEA process has influenced the progression of the LDP and how environmental considerations and consultation responses have been taken into account during the development of the Plan. It also notes why the Deposit LDP was progressed in the light of other reasonable alternatives and highlights the measures that have been developed to track the effects of the Plan. The SEA Regulations require that a 'statement' be made available to accompany the adopted plan or programme. The Regulations require that this post 'Adoption Statement' provides the following information:
- How environmental considerations have been integrated into the LDP;
 - How the Environmental Report (the SA/SEA Report) has been taken into account;
 - How opinions expressed in relation to the consultations on the plan and Environmental Report (the SA/SEA) have been taken into account;
 - How the results of any transboundary consultation have been taken into account;
 - The reasons for choosing the plan as adopted, in the light of the other reasonable alternatives dealt with; and
 - The measures that are to be taken to monitor the significant environmental effects of the implementation of the Plan.
- 2.2 Each of these requirements, set out in paragraph 2.1 above, is dealt with in turn below. It should be noted that a substantial amount of information relating to these matters is contained within existing documents such as the final SA/SEA Report, Consultation Report (submitted document LDP.052) and the Inspectors Report. In accordance with paragraph 8.4.2.3 of the Local Development Plan Manual (Edition 2, August 2015), rather than duplicate this material, appropriate cross references are made to relevant documents within this statement.
- 2.3 The LDP was also subject to a Habitats Regulations Assessment (HRA) which was carried out in parallel to the SA/ SEA process. The HRA assessed the impacts of LDP in combination with the effects of other plans and projects on European sites designated for their ecological status. This assessment also accompanied the Deposit LDP and adopted Plan and was reported separately.

How environmental considerations have been integrated into the Local Development Plan

- 2.4 The LDP has been subject to a Strategic Environmental Assessment (SEA) in order to consider the potential impact of the Plan on the environment and to improve the LDP's environmental performance. The SEA and Sustainability Appraisal (SA) processes have been undertaken in parallel and integrated within the Sustainability Appraisal Report and other SA/SEA related documents. A Habitats Regulations Screening Assessment has also been undertaken, which concluded that the LDP will not have a significant effect on European sites, alone or in-combination with any other plans or projects. The SA (incorporating SEA) has been prepared by the Council in conjunction with Levett Therivel Sustainability Consultants. The SA process is intended to assist in the implementation of the LDP with a view to delivering sustainable development in Cardiff. The SA has gone through several stages. A Scoping Report to provide the background to the SA process was finalised in January 2011. This was made available for public consultation in 2010. The Scoping Report sets out a baseline along with the SA objectives. A table appraising the SA Scoping Report consultation responses received, and the actions required for the SA Stage B Environmental Report, was included as an appendix in the initial SA report was published for consultation in October 2012 alongside the pre deposit Preferred Strategy documents.
- 2.5 This Initial SA reviewed 3 growth options and 8 spatial scenarios to deliver this growth. This formed part of an iterative approach to Plan making. The SA report went to Council on 26th September 2013 along with the deposit LDP. The deposit LDP, SA/SEA report, the Non Technical Summary along with 8 appendices, was placed on Deposit for consultation alongside the LDP in mid October 2013. Guidance for proponents for alternative sites in relation to SA requirements was also published by the Council.
- 2.6 The SA Report was submitted in August 2014 ahead of the LDP Examination. In response to agreed actions at the LDP Examination, the Council published two rounds of Matters Arising Changes (MACs) for consultation in June 2015 and October 2015 respectively. An update to the Sustainability Appraisal and Habitats Regulations Assessment reports taking into account the implications of these changes were also made available to accompany each of the consultations.
- 2.7 The outcome of the Inspector's assessment of the LDP, along with recommendations and reasons for them have also been subject to due consideration and been incorporated into the final SA/SEA and HRA reports.

How the environmental report has been taken into account

- 2.8 The SA/SEA and LDP were developed in parallel, with each stage of the SA/SEA informing and influencing the preparation and progression of the LDP.

SA Scoping

- 2.9 The first stage of the SA was a scoping exercise to identify the main sustainability issues in the plan area, to set out the approach to SA and the sustainability framework (i.e. the objectives). This stage was finalised in January 2011 and was made available for public consultation in 2010.
- 2.10 It is a statutory requirement in the SEA Directive for named environmental consultation bodies (Natural Resources Wales and CADW) to be consulted at this scoping stage. This was the case for the SA for the LDP, however it was decided to widen this to a full public consultation. The SA was also utilised in the formulation of the LDP issues, vision and Strategic Objectives.

Initial SA Report – Pre deposit stage

- 2.11 At this stage, an Initial SA Report was produced to consider the relative sustainability impacts of implementing alternative strategic growth and spatial options. As well as the sustainability impacts of the chosen approach, the LDP at this stage contained policies for implementing the Preferred Strategy. Each policy was appraised against the sustainability objectives using a standardised matrix to ensure a systematic appraisal. This document was published alongside the Preferred Strategy for consultation in 2012. An assessment of growth and spatial options was undertaken. This formed part of an iterative approach to Plan making.

The Assessment and Selection of Sites

- 2.12 The assessment and identification of sites was undertaken in accordance with a detailed site assessment methodology and appraisal criteria. This process allowed for the review of a range of issues, including a site's contribution to sustainable development and other matters such as environmental factors, flood risk factors, transportation factors, neighbourhood, community and place making factors and infrastructure and deliverability factors.
- 2.13 In determining where housing and employment growth could be directed spatially, the planning team considered the existing land bank of housing and employment land, scheduled completions, windfall sites and information received from landowners and developers on potential candidate sites. This resulted in 112 possible development sites.
- 2.14 Various combinations of sites were also considered:

- North west transport corridor- Candidate sites south of Creigiau, north of Junction 33 of the M4, sites to west of Fairwater and Radyr
- North east- Several candidate sites located between Lisvane and Pontprennau plus the site located east of the Pentwyn Link Road
- St Mellons Village- A collection of relatively small candidate sites in a well-defined area around the fringes of St Mellons Village which collectively cover about 57 hectares
- Land north of Junction 33 of M4 / south of Creigiau
- Land south of St Mellons Business Park.

2.15 The following enlarged sites were also appraised:

- North west Cardiff submission extended slightly to the west up to Croft Y Genau Road
- North west Cardiff extended north towards M4
- North west Cardiff extension to the west
- Land north of Junction 33
- Cardiff Central Enterprise Zone – Since the candidate sites were submitted, the Welsh Government have designated the Cardiff Central Enterprise Zone in April 2012. This covers a much larger geographical area than the 3 small candidate sites previously submitted.

2.16 A modified approach was taken to the appraisal of individual candidate development sites. It is not possible, at the plan-making stage, to know precisely what kind of development will go on each site, for instance what combination of housing, employment and infrastructure a developer will propose when they make a planning application; or what site layout and development design they will propose. For other aspects of sustainability, like waste management, the choice of development sites will not affect the impact. As a result these topics were not assessed for individual sites. On the other hand, detailed information is available on some other sustainability topics: for instance, whether they are near sites of nature conservation importance or in areas of flood risk.

2.17 To ensure full integration between the plan-making and SA processes, one joint planning/SA pro forma was agreed by the SA and planning teams, and was filled in by the planning team for each candidate development site. The pro forma took into account the feasibility and applicability of potential mitigation measures. More detail on the assessment and selection of sites and the SA/SEA recommendations is provided in the SA/SEA documentation.

SA of the Deposit LDP

2.18 The SA report went to Council on 26th September 2013 along with the deposit LDP. The deposit LDP SA report, the non technical summary along with an annex containing the SA assessment of sites, was placed on Deposit for consultation alongside the LDP in mid October 2013. Guidance for proponents for alternative sites in relation to SA requirements was also published by the Authority. As part of the formulation of the deposit LDP, the

SA provided an iterative and dynamic sounding board which allowed for the development of a robust Plan and policy framework. Such an input allowed for the consideration of matters relating to site selection and policy formulation.

Matters Arising Changes

- 2.19 In response to agreed actions at the Examination, the Council published two rounds of Matters Arising Changes (MACs) for consultation in June 2015 and October 2015. A Schedule of Implications for Sustainability Appraisal and Habitats Regulations Assessment report was made available to inform/support these consultations. Within the Inspector's report, it states that: *"We are satisfied that these changes are in line with the substance of the overall Plan and its policies, and do not undermine the Sustainability Appraisal (SA) and participatory processes that have been undertaken"*.

Adopted LDP

- 2.20 The SA of the Adopted Plan is the final stage of the process. It is available for viewing alongside the other statutory documents, including the Inspector's Report. The integration of environmental considerations into the LDP has, therefore, been undertaken progressively and iteratively as the Plan has developed. The Scoping Report ensured that the sustainability issues most relevant to the Plan area were identified; and the Strategy and individual policies have been appraised against this framework of Sustainability Objectives. The Inspector's Report states that: *"The Plan has been subject to SA including Strategic Environmental Assessment (SEA). The SA provides a summary of the strategic alternatives considered and a brief summary of reasons why they were not selected. Further changes put forward by the Council as part of the examination process have likewise been tested where necessary for any impacts they have upon the SA and SEA. We are satisfied that the SA/SEA process undertaken is robust and satisfies procedural and legal requirements"*. Furthermore, the Inspectors states that *"In accordance with the Habitats Directive a Habitats Regulations Assessment (HRA) of the Plan has been undertaken⁸, and reviewed as necessary in the light of changes put forward during the examination. We are satisfied that the results of the HRA Screening demonstrate that an Appropriate Assessment is not required. It can therefore be concluded that no significant effects upon the integrity of the European sites within the plan area or in adjacent areas are likely to occur (either alone or in combination with other plans or projects) as a result of implementing the Plan"*.

How opinions expressed in relation to the consultations on the Plan and environmental report have been taken into account

- 2.21 The SA/SEA process and has been undertaken in accordance with: Article 6 of the EU Directive 2001/42/EC; the Environmental Assessment of Plans and Programmes Regulations 2004; and the Council's Community Involvement Scheme (CIS). There is a statutory requirement to consult with the relevant named bodies. In addition consultation should be undertaken with the public

and a wider range of interested stakeholders. Consultation with the full range of stakeholders was undertaken at the following key stages:

- SA/SEA Scoping (2010);
- SA/SEA Pre Deposit Proposals (2012); and,
- SA/SEA of Deposit LDP (2013)
- SA/SEA of MACs (2015).

How the results of any transboundary consultation have been taken into account

2.22 No transboundary issues were raised through the SA process.

2.23 The habitats Regulations Assessment of the LDP considered the effects of the LDP beyond the Cardiff administrative boundary in respect of the impacts on European sites of nature conservation importance. It was concluded that with the mitigation measures incorporated into the Plan, the implementation of the LDP would not result in a likely significant effect on any European Site either alone or in combination with other plans and projects.

The reasons for choosing the Plan as adopted in the light of the other reasonable alternatives dealt with

2.24 As part of the development of the LDP, the Council considered a range of spatial and policy options. Three growth options and eight spatial growth options to deliver this growth were considered through the Pre-Deposit Proposals (which incorporated the Preferred Strategy) and were subject to SA/SEA (2012). In order to achieve the Vision and Objectives of the LDP, the Council chose to implement growth option B –Medium growth which proposed 41,100 homes and 40,000 jobs and 5 out the 8 spatial growth options were chosen to deliver the growth comprising dispersed brownfield sites, greenfield sites west of Pentrebane, greenfield sites south of Creigiau/north of junction 33, greenfield sites west and east of Pontprennau and greenfield sites in the east. More detail on the consideration of options and the SA/SEA recommendations is provided in the SA/SEA documentation.

The measures that are to be taken to monitor the significant environmental effects of the implementation of the Plan

2.25 LDP Regulation 37 requires the Council to prepare, and subsequently submit to Welsh Government, an Annual Monitoring Report (AMR). This is required to monitor specific items, as well as identifying where and why policies of the Plan are not being implemented. Regulation 17 of the SEA regulations requires that the Council must monitor the most significant effects of the Plan. Therefore, monitoring the Plan and its significant environmental effects are statutory requirements and will be undertaken through the AMR. The Monitoring Framework, as set out within Appendix 9 of the Adopted LDP, provides the basis for measuring policy performance. In this respect, the

implementation of the LDP will be monitored with appropriate regard to the objectives and outcomes of the SA/SEA.

- 2.26 Monitoring the Plan and its significant environmental effects are statutory requirements that will be undertaken through the AMR. The first AMR will be submitted to Welsh Government by 31st October 2017.

Further Information

- 2.27 If you have any queries or would like further information please contact a member of the LDP team on 029 2233 0983 or by emailing LDP@cardiff.gov.uk.

Cardiff Local Development Plan 2006 – 2026

The LDP Inspectors have authorised the Council to make outstanding typographical and factual errors, together with any other presentational matters and consequential changes flowing from agreed Matters Arising Changes (MACs) and recommended Inspectors Matters Arising Changes (IMACs) such as altered policy cross-references, map title amendments, site area or numerical changes and paragraph numberings. Whilst this final version of the Plan has sought to pick up all such changes there may be others identified and corresponding changes made during final publication of the document

Foreword

As the one of the fastest growing cities in UK, it is vital that new development is guided by an up-to-date Development Plan. The LDP provides the necessary framework and certainty to bring forward the new homes (especially affordable/family housing) and jobs which are required in a managed manner.

A new Plan for Cardiff is all the more vital given the fact that the previous Local Plan was approved in 1996- some 19 years ago. The lack of an up-to-date Plan has had serious negative consequences with insufficient land being brought forward to meet urgent housing needs.

Put quite simply, not having a plan in place does not stop development. All that happens is that development still takes place, but in a policy vacuum where the Council and its residents have limited control. Appeals have been lost for development in the open countryside and also left the Council on the back foot in terms of securing supporting infrastructure and community facilities. A plan-led approach is the only way forward where the Council sets out a clear strategy for the future.

This administration has shown strong leadership by progressing the LDP through a complex preparation process in strict accordance with the approved timetable. This process has involved numerous stages of consultation and in addition a lengthy formal examination process over the past year and a half. Can I take this opportunity of thanking all who have engaged in this exercise which is so important for the future of our city.

It has also responded to issues raised during the process and embedded a strong masterplanning framework within the Plan. In this way, new development will bring with it the phased provision of necessary supporting infrastructure including schools, health facilities and other community benefits. The importance of transportation infrastructure is also recognised with the Plan setting out a new strategic sustainable

transportation approach so our city can keep moving and improve links with surrounding areas.

Overall, the Plan provides a balanced response to meeting social and economic needs, but in a manner which best protects our valued open spaces, river corridors and countryside backdrop.

An exciting new era in Cardiff's development unquestionably lies ahead. In coming years we will see the new BBC headquarters and transport interchange in the heart of our city. Other brownfield regeneration schemes continue to come forward including council-led affordable housing projects alongside new greenfield opportunities set out in the Plan. On a city-region scale, there are significant opportunities ahead through the Metro and City Deal.

The adoption of the LDP is therefore not only timely but vital in helping to provide the necessary certainty to attract and sustain new investments. In this way, Cardiff can continue to bring forward the new homes and jobs it needs and further enhance its role as one of the most liveable capital cities in Europe.

Councillor Ramesh Patel
Cabinet Member Transport, Planning & Sustainability

Summary

Cardiff urgently requires a new Plan to guide future development. This section provides a brief summary of the Deposit Local Development Plan (LDP) and also highlights the main changes since the Preferred Strategy was approved in October, 2012.

1. Adopting a new Plan for Cardiff which is urgently required

- Existing Development Plans in Cardiff are out of date.
- There is currently an insufficient supply of housing land in Cardiff.
- For the first time in generations, there are currently no significant urban extensions underway.
- Recent appeals have been lost for development in the open countryside and the submission of new greenfield planning applications continues.
- There is a real danger of an unplanned 'free for all'.
- The need to have a new plan in place is therefore acute.

2-1 . Making provision for new homes and jobs

- Cardiff has a significant need for new homes including family homes, affordable homes together with catering for the whole range of needs.
- Cardiff also plays a key role as economic driver of the wider city-region, providing much needed jobs for the whole region.
- The Plan aims to respond to these evidenced social and economic needs in a balanced way - respecting environmental qualities, providing a framework to manage delivery and provide new infrastructure together with carefully managing impacts.
- Independent population forecasting experts have recently assessed future growth scenarios and recommended to the Council that a lower dwelling growth rate than that proposed in the official projections and Preferred Strategy is used for the Deposit LDP.
- The overall level of growth is considered to represent the most robust, balanced and appropriate approach taking into account all relevant factors and the advice of independent population forecasting experts.
- It sets out a Strategy to deliver 41,100 new dwellings and 40,000 new jobs over the Plan period including ways to provide flexibility should build rates be higher than anticipated.
- This level of growth is considered appropriate to deliver Wales Spatial Plan objectives, the Council's overall vision and the LDP objectives.
- New homes, jobs and supporting facilities will be provided from numerous sources including:

- Those already built since the start of the Plan period in 2006;
 - Minor adjustments to existing housing stock- taking account of anticipated demolitions and changes of use based on past rates;
 - Commitments- Sites with the benefit of an existing planning consent or resolution to grant subject to the signing of a legal agreement;
 - Anticipated windfall provision- Those sites likely to come forward over the Plan period through natural change in an urban area the size of Cardiff; and
 - New allocations including brownfield sites, greenfield sites of different scales and land use combinations.
- Overall, for the whole Plan period, this represents approximately 65% of all new homes being provided on brownfield sites and 35% provided on greenfield sites.
 - The provision of a genuine range and choice of new sites is crucial in effectively delivering the required level of growth, delivering LDP objectives, providing flexibility and the ability to meet a wide range of evidenced need for new homes and jobs.
 - Key strategic sites to deliver this need are proposed at:
 - Cardiff Central Enterprise Zone
 - Former Gas Works, Ferry Road
 - North West Cardiff
 - North of Junction 33
 - South of Creigiau
 - North East Cardiff (West of Pontprennau)
 - East of Pontprennau Link Road
 - South of St Mellons Business Park

3 2. Putting in place a framework to manage future growth and encourage high quality, sustainable design

Policies and mechanisms have been put in place to provide a framework to effectively manage future growth. Areas to be kept free from development are made explicit avoiding the current climate of uncertainty created by not having an adopted Plan in place. Protected areas include the designation of Green ~~Belt-Wedge~~ North of the M4 Motorway together with tight settlement boundaries policy county-wide and protection of river valleys and open spaces. Collectively, these policies protect vast tracts of Cardiff's valued countryside, river valleys and open spaces. The master planning approach provides an over-arching framework for the development of new areas setting out key requirements relating to land use, densities, facilities, transportation, open spaces and phasing. Further work on the detailed master planning of areas will

be carried out within this over-arching context. Design policies and guidance set out expectations encouraging more sustainable forms of development.

4 3. Bringing forward new infrastructure

New development will clearly create the need for new infrastructure. The Plan sets out an approach which requires the timely provision of new infrastructure including community facilities, transportation and other services. Whilst it is recognised that some significant elements of infrastructure may take many years to complete, the Strategy seeks to ensure that each phase of new development is tied to the provision of necessary infrastructure with each stage of development being able to demonstrate an acceptable level of supporting facilities. ~~An~~ The Infrastructure Plan ~~is contained as a Supporting Document~~ setting s out future requirements. Further dialogue and consultation findings will help further develop a detailed list of required infrastructure along with funding opportunities including the roles of Community Infrastructure Levy (CIL) contributions for strategic projects to Section 106 Agreement contributions for local priorities together with other potential funding streams from the public and private sectors.

5-4 . Delivering sustainable transportation solutions

The overall approach seeks to minimise travel demand and provide a range of measures and opportunities which reduce reliance on the car. New development in Cardiff must be integrated with the provision of new transport infrastructure which can help contribute to this objective by putting in place sustainable transport solutions which also provide improved travel choices for the wider community. This approach is fully consistent with on-going work at a city-region scale which seeks to develop a more effective public transport network across the region as a whole, helping people travel from where they live to work and thereby helping to spread prosperity around the entire city-region.

6 5. Responding to evidenced economic needs

The key economic role performed by Cardiff must be maintained and enhanced for benefits to Cardiff, the city-region and Wales. Evidence demonstrates that Cardiff has consistently delivered a high proportion of jobs in the city-region. The Strategy responds to this by ensuring a full range and choice of economic opportunities across all relevant sectors. The Cardiff Central Enterprise Zone will be a key element of the approach but there is also a need to maintain the roles of the City Centre, Cardiff Bay, existing employment sites together with providing a range and choice of sites to cater for demand across sectors.

7 6 . Responding to evidenced social needs

Cardiff experiences some significant social needs, with particularly high housing demand projected to continue over the Plan period. The Strategy aims to positively respond to these needs by providing a wide range and choice of sites to respond to the full diversity of needs, including those from the Gypsy and Traveller community as required in national policy and guidance. Overall, the Plan promotes more sustainable communities where emphasis is placed on supporting District & Local Centres, encouraging the full range of accessible social, health and educational facilities, together with supporting regeneration initiatives and utilising the potential positive benefits which new developments can bring to adjoining areas.

8 7 . Respecting Cardiff's environment and responding to climate change

Cardiff possesses a unique and particularly distinctive natural and built heritage. The Plan delivers sustainable development by meeting social and economic needs, but in a managed way which retains, manages and enhances important features of natural and built heritage. Central to this approach is the designation of a Green ~~Belt-Wedge~~ to the North of the M4 Motorway, strict settlement boundaries policy together with protection to the river valleys and open spaces. In this way, Cardiff's distinctive environmental qualities can be successfully maintained with further opportunities to enhance their management and increase public enjoyment. Detailed policies provide clear guidance relating to important elements of Cardiff's biodiversity, landscape and built heritage.

~~9. Main changes since Preferred Strategy~~

~~In response to consultation responses and on-going evidence base work, the following main changes/updates have been made to the Plan from that set out in the Preferred Strategy:~~

- ~~• Inclusion of a Green Belt for long term protection of land north of the M4 motorway;~~
- ~~• Reduction in the overall level of housing growth from 45,400 in the Preferred Strategy to 41,100 dwellings to reflect the findings of independent population forecasting experts Edge Analytics Ltd;~~
- ~~• Provision for a flexibility allowance of 10 per cent to ensure the plan can accommodate potentially higher build rates than anticipated, if it is demonstrated~~
- ~~• Reduced overall number of new dwellings proposed on some Strategic Sites responding to issues raised in consultation together with work and dialogue as part of developing the masterplanning framework on potential sites;~~

- More detail on the masterplanning framework for Strategic Sites including more detail on transportation solutions, community facilities and infrastructure;
- Further detail will be provided to inform the LDP examination through the preparation of site specific Master Plans along with other technical material;
- Inclusion of Eastern Bay Link as a strategic transport proposal following Welsh Government support for the scheme;
- Amending the affordable housing target where there evidence of need to 30% on greenfield sites and 20% on brownfield sites to reflect new evidence and consultation responses relating to the viability of affordable housing schemes;
- Allocation of a new Gypsy and Travellers site at Pengam Green; and
- Allocation of land for health-related uses adjacent to Heath Hospital and for employment use (research/ higher education-related) at Maindy Park

Introduction

The purpose of and status of the adopted Local Development Plan (LDP)

The purpose of and status of the ~~need for a new~~ adopted Local Development Plan (LDP)

1.1 Cities change. Cardiff is no exception and has grown year on year for generations. This has seen Cardiff become the Capital City of Wales and centre of a wider city-region providing an important source of jobs and services for the whole of South East Wales.

1.2 New homes, jobs, supporting transportation and other facilities are ~~will be~~ required to meet the needs of future generations. These needs must be carefully balanced against environmental and quality of life factors.

1.3 The adopted Cardiff Local Development Plan (LDP) is the tool to address these issues. It represents a 'plan-led' approach to meeting future needs. ~~All Local Authorities in Wales must prepare a LDP. Many have now been adopted, with others reaching advanced stages.~~

~~1.4 Without a Plan in place, there would be an unplanned, piecemeal, 'free for all' which would not be desirable. In Cardiff, the need for a new Plan is more acute than elsewhere for a number of reasons:~~

- ~~• The existing Development Plan framework is seriously outdated with the Structure Plans and Local Plan being over 16 years old;~~
- ~~• In Cardiff, unlike most other Local Authorities in Wales, a Unitary Development Plan designed to replace the old Structure and Local Plans was never adopted; The first attempted LDP had to be withdrawn due to the Inspector's significant concerns (particularly critical of a 'brownfield-only' Strategy). The delay has caused the Plan period to be extended by 5 years, significantly raising the level of development required in this Plan and lengthening the period of time without an adopted Plan in place;~~

- ~~There is currently an insufficient housing land supply which has resulted in the Council losing planning appeals for development in the open countryside;~~
- ~~This is the first time in generations that Cardiff has no significant urban extensions taking place. Evidenced need for new homes is therefore not currently being met resulting in a build-up of latent demand; and~~
 - ~~Cardiff experiences significantly higher development pressures than many other parts of Wales. Many greenfield planning applications have recently been submitted underlining the need for a new, up to date framework to be put in place.~~

~~The Local Development Plan (LDP) process~~

~~1.45 The adopted LDP will provides the statutory framework for the development and use of land within Cardiff over the Plan period (2006-2026). This fulfils the requirements of The Planning and Compulsory Purchase Act 2004 which requires the Council to prepare a LDP. ~~Once adopted, it will~~ It replaces existing Structure Plans and Local Plans relating to Cardiff ~~which are now outdated as explained above.~~ It ~~and~~ will be used by the Council to guide and control development and provide the statutory local policy context for determining planning applications.~~

~~1.56 The Plan has been ~~must be~~ prepared in accordance with formal regulations and the ~~and~~ involves numerous stages of preparation together with associated consultation and engagement. A document called ~~the~~, 'LDP Delivery Agreement' which sets out a timetable for its preparation along with details of consultation as the Plan progressess. This was agreed with the Welsh Government on 5th December, 2011. ~~Progress to date has fully accorded with the agreed timetable.~~~~

~~The Deposit LDP~~

~~1.7 The Deposit LDP is an important stage of the plan preparation process. It contains an overall Strategy together with land use allocations and detailed policies. The Plan aims to deliver the Council's overall vision as set out in the 10 year, 'What Matters' Strategy (2010-2020) and also takes account of the national and regional policy framework (summarised in Appendix 3). Furthermore, a wide range of evidence has been collected to inform the plan along with collaborative working, and findings from consultation and engagement processes.~~

~~1.8 Importantly, the Deposit LDP is the next stage of the LDP preparation process following the Preferred Strategy which was approved by Council in October 2012. The Preferred Strategy set out the proposed strategic approach to meeting development needs over the Plan period and was subject to a six week~~

~~consultation period. The Deposit LDP therefore takes full account of the Preferred Strategy, the consultation findings, analysis of up to date evidence together with all other relevant material factors.~~

~~1.69-The Plan contains the following sections:~~

~~Foreword;~~

~~Summary;~~

~~Introduction;~~

~~LDP Vision & Objectives;~~

~~Strategy, Key Policies and Key Diagram;~~

~~Detailed Policies;~~

~~Monitoring and Implementation;~~

~~How to make comments;~~

~~Proposals Map and Constraints Map;~~

~~Appendices.~~

~~1.10-Numerous Appendices and Supporting Documents have also been prepared which contain relevant background work underpinning the Plan. These have been placed in the public domain to assist readers in gaining a full understanding of the evidence informing Plan content. This also allows the Deposit LDP to be a more succinct and user-friendly document without being over-cluttered with technical material. A full list of Supporting Documents is provided in the contents section of this document.~~

~~**Deposit LDP and Alternative Sites consultation**~~

~~1.11 The Deposit LDP will be subject to 6 weeks consultation. Full details of how to make comments are provided in Section 7. The Council will acknowledge and carefully consider all comments made. Following the Deposit LDP consultation process, the Council must also consult on 'alternative sites' which will involve seeking views on alternative sites for development which have been put forward by parties commenting on the Deposit LDP.~~

~~1.12 The Council will then consider all comments made and prepare any proposed, 'focussed changes' to the Deposit LDP which depending on timing is either before or after it is submitted for a process of formal examination. A series of Supporting Documents will also be submitted including an updated version of the Initial Consultation Report summarising representations made along with the Council's response.~~

Independent examination

~~1.13 Ultimately, approval for the Plan rests with an independent Inspector who will decide if the Plan is fit for purpose by assessing it against ten, 'tests of soundness'. These are listed in Appendix 8 together with an explanation of how the Council considers the document contents and preparation process accord with these tests.~~

~~1.14 The examination process will commence once the Council formally submits the plan to the Welsh Government. The process will be co-ordinated by the independent Inspector and include examination sessions to explore issues. Further evidence may be provided by the Council and~~

~~others to assist the independent Inspector fully explore any relevant matters. Once the examination~~

~~process is completed, the independent Inspector will issue a binding report including any changes required to the Plan.~~

Adoption, Monitoring and Review

~~1.15 The Council must formally adopt the LDP within 8 weeks of the receipt of the independent Inspector's Report. Following this, the Council will work with others to implement the Plan and take decisions within the new adopted policy framework.~~

~~1.16 In order to assess how effectively the Plan is being implemented, the Council must prepare an Annual Monitoring Report (AMR). The report will be based on the indicators Monitoring Framework as set out in Appendix 9 to this document. This is an important aspect of the LDP process since evidence collected through annual monitoring can be used to inform LDP review which takes place every 4 years.~~

Supplementary Planning Guidance (SPG)

~~1.17 These are non-statutory documents intended to provide useful advice and guidance which expand on policies set out in the adopted Deposit LDP. They must be subject to public consultation. ~~but are not documents to be assessed by the LDP independent Inspector.~~ Appendix 5 4 of this document lists all proposed new and/or updated SPG which are intended to be prepared together~~

with timescales. ~~and at which stage of the LDP process. In this respect, it should be noted that a phased programme of preparation is proposed.~~

~~Other~~ Assessment processes that have informed the adopted Plan

1.108 In addition to the overall independent examination of the LDP, the Plan ~~has~~ must also been subject to two further formal assessment processes as ~~described below.~~ The Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA) processes - these are required by the Planning and Compulsory Purchase Act 2004 and the SEA Regulations to ensure that the LDP policies reflect sustainability principles and take into account impacts upon the

~~environment. The Final SA Report forms Supporting Document 11; and The Habitat Regulations Assessment (HRA) - this process is required to determine the likely significant effects of the Plan on European Sites of nature conservation importance. The HRA forms Supporting Document 12.~~

1.119 Furthermore, the adopted ~~Deposit~~-LDP has been subject to the following additional ~~internal~~ assessments designed to further scrutinise the Plan contents: Health Impact Assessment - a process involving relevant stakeholders in assessing the health implications of the Plan. ~~A summary forms Supporting Document 13;~~ and Equality Impact Assessment - a process involving relevant stakeholders in assessing the equality implications of the Plan. ~~A summary forms Supporting Document 14.~~

The importance of Welsh culture and heritage is recognised in the Plan however having assessed the densities of Welsh language use across the City it is not considered to be an issue which requires addressing in the Plan. As a result the proposals contained in the LDP are not considered to have a detrimental impact on the Welsh language and culture or materially affect the linguistic balance of Cardiff or communities within Cardiff.

The Cardiff Context and Key Issues the Plan must address

2.1 This section provides a summary of the Cardiff context and some of the key issues which have informed the Plan. A fuller version is contained in Appendix 4 3 of this document along with a summary of the national and regional policy framework together with reference to the existing Development Plan framework in Cardiff.

The Cardiff Context

- Largest urban area in Wales with a population of 345,400.
- Key driver of city-region economy in South East Wales.
- 1.4 million live within 45 minutes drive time of the city.
- Capital city of Wales, seat of Welsh Government.

Key social trends and issues

- Cardiff's population has risen steadily over past 20 years - over 3,500 each year since 2001.
- Official projections indicate continued population growth over the Plan period.
- Significant need for affordable housing- 9,710 people currently on combined housing waiting list.
- Local Housing Market Assessment (2013) indicates a need for over 3,989 affordable dwellings for each of the next 5 years to address need. In addressing this need the Council will need to have regard to the latest welfare reforms and the need to provide smaller dwellings.
- Family housing is a key need.
- A need for 108 permanent Gypsy and Traveller pitches and a regional need for a 10 pitch transit site have been identified over the Plan period to 2026.
- Students comprise approximately 10.8% of Cardiff's population.
- Ethnic minorities comprise 15.5% of Cardiff's population, higher than the Wales average but similar to the England/Wales average.
- Welsh speakers are less than the Wales average but there are considerable variations within communities.
- The city experiences substantial health inequalities.
- Whilst Cardiff possesses a generally high quality of life, there are areas of deprivation geographically mostly concentrated in, 'the southern arc'.
- Community safety is a key issue emerging from residents' surveys.
- Cardiff performs well compared to Wales and the UK average in attaining high-level skills and 39% of its workforce educated to degree level or above.

Key economic trends and issues

- Cardiff accounts for 32% of total employment in South East Wales and its economy is generally strong and buoyant.
- Cardiff's employment workforce totals nearly 189,000 with 88% of jobs being in the service sector.
- Cardiff & the Vale of Glamorgan generate 22% of the Welsh GVA (Gross Value Added).
- Unemployment in Cardiff was 4.5% in March 2013.
- The recession has caused the loss of approximately 4,700 jobs between 2008-2010.
- Cardiff has one of the highest percentages of high growth firms in the UK between 2002-2010.
- Inward investment trends are improving but continue to trail other leading core cities.
- The City Centre and Cardiff Bay remain the principal office locations complemented by out of centre sites but Cardiff lacks a large supply of Grade
- A office space and the Plan supports the on-going regeneration of the Bay Business Area, including Mount Stuart Square.
- The total industrial stock in Cardiff is approximately 19.2 million square feet and mainly concentrated in the south/eastern area of the city but only 6.1% of the stock is less than 5 years old.
- Cardiff City Centre is the main shopping centre for South East Wales and is ranked the 6th top retail centre in the UK.
- The leisure and tourism sector generates significant economic and cultural benefits for the city.

Key transportation trends and issues

- Traffic on Cardiff's roads grew by 9% between 2002-2012.
- 56% of Cardiff's residents travel to work by car.
- Nearly 77,900 people commute into Cardiff each day by all modes (37% of Cardiff's workforce). The 2001 Census indicates that approximately 80% of commuters travel to Cardiff by car.
- Travel on rail services has increased considerably - the use of Cardiff Central and Queen Street Stations has risen by 82% between 2001-2011.
- Cycle use has increased 10% between 2001-2011 but bus use has fallen slightly over the same period.
- Cardiff International Airport is located within the Vale of Glamorgan providing the closest international links to Cardiff.
- The operational port in Cardiff performs an important role in terms of freight movement.

Key environmental trends and issues

- Cardiff is located within a well defined landscape setting with prominent ridges to the west and north and Severn Estuary to the south.
- The countryside and urban area contains a wealth of natural and historic interests. For example, there are almost 1,000 Listed Buildings, 27 Conservation Areas, 2 4-sites noted for their international biodiversity (Cardiff Beechwoods SAC and Severn Estuary SAC/SPA/RAMSAR)
- The city has a particularly rich Victorian and Edwardian legacy.
- Cardiff has over 400 hectares of recreational open space and 2000 hectares of amenity space. The four river valleys of the Ely, Taff, Rhymney and Nant Fawr provide extensive and continuous corridors running from the countryside and through the urban area.
- Good quality agricultural land is known to exist in some areas.
- Flooding is known to pose a risk in relation to fluvial, tidal and surface water.
- Detailed studies have been undertaken to assess the extent of this risk and inform the Plan.
- The main source of CO₂ emissions in Cardiff are from industry (45%) with domestic sources contributing 30%.
- The main source of emissions affecting air quality is road traffic (nitrogen oxide the main pollutant).
- Current production of renewable energy in Cardiff is low.
- Over the past 10 years, recycling rates in Cardiff have risen from 4% to 55%.
- Cardiff possesses a significant and good quality of mineral reserves.
- Water quality in the main rivers is improving but still falls below the requirements of the Water Framework Directive.

LDP Vision and Objectives

Background

3.1 The vision and objectives provide an over-arching context for the Plan that shows how economic, social and environmental considerations can be balanced to deliver the sustainable development of Cardiff up to 2026. They take full account of the strategic issues relevant to Cardiff and policy context provided by the Council's, 'What Matters' Strategy (2010-2020) which brings together the Community Strategy; Children & Young People's Plan; Health, Social Care & Wellbeing Strategy and the Community Safety Strategic Assessment into one document. The Council has worked together with partners from the public, private and voluntary sectors in Cardiff to set out the collective vision for the city contained in this document. Furthermore, the vision and objectives also take account of the Council's Strategic Equality Plan which sets out the Council's strategic equality objectives and the Wales Spatial Plan (WSP) that recognises the role played by Cardiff in helping to spread prosperity in the area and delivering a high quality of life.

Vision

3.2 The LDP vision is as set out in the 10 year, 'What Matters' Strategy (2010-2020) which is that:

“By 2020...Cardiff will be a world class European capital city with an exceptional quality of life and at the heart of a thriving city-region”.

3.3 Partners have agreed seven strategic outcomes that, if achieved would represent ultimate success and the realisation of the vision. The outcomes are that:

- **People in Cardiff are healthy;**
- **People in Cardiff have a clean, attractive and sustainable environment;**
- **People in Cardiff are safe and feel safe;**
- **Cardiff has a thriving and prosperous economy;**
- **People in Cardiff achieve their full potential;**
- **Cardiff is a great place to live work and play; and**
- **Cardiff is a fair, just and inclusive society.**

3.4 It is important to recognise that the LDP cannot deliver all of these outcomes alone as many issues extend beyond land use planning matters and the remit of the document. However, the LDP is a crucial strategic

document that must create the right conditions which both directly and indirectly assist and support the delivery of these outcomes.

3.5 Key priorities have been identified for each of the outcomes. These are:

- **People in Cardiff are healthy**
 - Reduce inequalities in health and address the differentials in life expectancy across the city;
 - Promote healthy lifestyles and prevent ill health; and
 - Improve effectiveness of our service delivery to vulnerable adults and children and young people.

- **People in Cardiff have a clean, attractive and sustainable environment**
 - Establish Cardiff as a sustainable 'Carbon Lite' city;
 - Improve the quality of Cardiff's environment; and
 - Establish Cardiff as a sustainable travel city.

- **People in Cardiff are safe and feel safe**
 - Ensure people are safe from harm, abuse and exploitation;
 - Develop communities and neighbourhoods in Cardiff which are cohesive;
 - Ensure people are free from crime and the effects of crime; and
 - Ensure people are safe in their environment.

- **Cardiff has a thriving and prosperous economy**
 - Build strong futures for children and young people by focusing on education, training and employment opportunities;
 - Improve opportunities for the creation of quality and sustainable employment; and
 - Create an environment that develops, attracts and retains skilled workers, businesses and entrepreneurs to Cardiff.

- **People in Cardiff achieve their full potential**
 - Encourage active citizenship and participation in all aspects of life;
 - Support vulnerable families and individuals to achieve and maintain their independence and ambition; and
 - Support and provide access to appropriate learning and training provision for all.

- **Cardiff is a great place to live, work and play**
 - Provide the level of urban design infrastructure and connectivity required to make Cardiff a great place to work and do business;

- Support and maintain strong safe and sustainable neighbourhoods;
- Ensure the provision of high quality sustainable and affordable housing; and
- Develop world-class leisure, cultural and sporting facilities – that reflect the wants of citizens and visitors.
- Cardiff is a fair, just and inclusive society
- Enable all people in Cardiff to meaningfully engage and participate in decision making processes;
- Mainstream equality issues at strategic and operational levels; and
- Reduce inequalities through a joined-up, targeted approach.

Objectives

3.6 The LDP objectives set out in more detail how the LDP vision can be addressed through the planning system. They respond to spatial elements contained in the vision together with the economic, social and environmental strands set out in the strategic outcomes.

3.7 In spatial terms, the vision recognises the key role that Cardiff plays as being the heart of a thriving city-region. Nearly 77,900 people commute into the city each day which demonstrates the important economic and social role Cardiff plays in relation to the wider region.

3.8 The vision fully recognises economic, social, environmental, as well as sustainability issues. It is the aim of the LDP objectives to respond to the evidenced economic and social needs but in a way that is co-ordinated, respects and enhances Cardiff's environment and sets out a framework for delivering the sustainable neighbourhoods of the future. This is delivering sustainable development locally and improving the long term economic, social and environmental wellbeing of people and communities in Cardiff. In this way, the LDP can help create sustainable neighbourhoods that form part of a sustainable city that lies at the heart of a sustainable city-region.

3.9 The objectives are set out under 4 main headings:

1. **To respond to evidenced economic needs and provide the necessary infrastructure to deliver development;**
2. **To respond to evidenced social needs;**
3. **To deliver economic and social needs in a co-ordinated way that respects and enhances Cardiff's environment; and**
4. **To create sustainable neighbourhoods that form part of a sustainable city.**

1. To respond to evidenced economic needs and provide the necessary infrastructure to deliver development.

- a. To effectively respond to Cardiff's role as capital city for Wales, seat of the National Government and centre of the city-region in terms of providing a range and choice of economic opportunities that will drive the prosperity of the region.
- b. To maximise the economic potential of the city centre of Cardiff as a major financial and service sector opportunity that builds upon its position next to a transport hub of national and regional significance and is readily accessible from all areas within the city and well connected to other UK cities.
- c. To maintain and enhance the vitality, attractiveness and viability of the city centre as a major retail and cultural destination and as a place to work, visit and live.
- d. To continue the successful regeneration of the Cardiff Bay area, maximising opportunities for quality commercial buildings and further development, particularly water and river frontage developments that can provide attractive and distinctive environments.
- e. To promote clusters of specialist sectors and research & development expertise including the following key sectors:
 - o ICT;
 - o Energy and environment;
 - o Advanced materials and manufacturing;
 - o Creative industries;
 - o Life sciences; and
 - o Financial and professional services.
- f. To ensure a range and choice of employment land and business premises at sustainable locations across the city is provided to assist economic competitiveness, encourage entrepreneurship, promote the growth of indigenous businesses of all types and size and attract inward investment.
- g. To assist the promotion of Cardiff as a major tourist destination including the provision of the development of a variety of high quality tourist facilities and visitor accommodation.
- h. To create a physical and economic environment that develops, attracts and retains skilled workers, businesses and entrepreneurs to Cardiff together with maximising links with Universities and supporting indigenous skills and enterprises.

- i. To quantify critical strategic infrastructure required to realise development aspirations and set out clear mechanisms for delivery including sustainable transport solutions for strategic sites.
- j. To establish Cardiff as a sustainable travel city by reducing the need to travel, increasing the use of sustainable travel modes and networks (particularly walking and cycling), decreasing private car use and improving the city's key transport hub based at the adjacent central bus and train stations.
- k. To protect existing mineral resources and ensure an adequate supply of limestone aggregates in the north west of the city for the construction industry and to promote their efficient and appropriate usage, including the use of recycled aggregates where possible.
- l. To support sustainable collection and recycling methods for Municipal Waste by maintaining and improving an integrated network of facilities in Cardiff.
- m. To lead and participate in securing regional facilities for the sustainable treatment and disposal of Municipal Waste in accordance with the Regional Waste Plan and in a manner that follows the waste hierarchy which seeks to maximise the reduction of waste in the first place and thereafter reusing, recovering and recycling options before the disposal of waste material is considered.
- n. To facilitate an integrated network of commercial and industrial sustainable waste management facilities consistent with the needs of the South East Wales area and in a manner that follows the waste hierarchy which seeks to maximise the reduction of waste in the first place and thereafter reusing, recovering and recycling options before the disposal of waste material is considered.

2. To respond to evidenced social needs.

- a. To provide new homes required to support the economic progression of the city and to respond to population change, continued in-migration and evidenced demand for affordable and family housing so that social needs can be addressed.
- b. To provide a range and choice of new homes of different tenure, type and location that meets specific needs such as the provision of affordable housing, family accommodation, housing for the elderly, the disabled and students and pitches for the gypsy and traveller community.
- c. To maximise the use of the existing building stock through refurbishment, retro-fitting and empty homes initiatives.
- d. To bring about changes to Cardiff's environment and neighbourhoods that help to tackle health inequalities, promote good health and enable healthier lifestyles to be led by the city's population in line with Cardiff's status as a World Health Organisation, 'Healthy City'.

- e. To bring about changes to Cardiff's environment that create a safer city and reduce the likelihood, fear and consequences of crime.
- f. To create an environment that is made more accessible to all groups in society so that the employment opportunities, facilities and services of the city can be more readily used and enjoyed by all.
- g. To maximise the multi-functional role played by Cardiff's parks, open spaces and allotments together with improving their accessibility for the whole community.
- h. To recognise, support and enhance the key role played by existing District, Local and Neighbourhood Centres as accessible local hubs providing community services, local shops, healthy food choices, businesses, employment and access to public transport.
- i. To support the regeneration of local neighbourhoods including reducing inequalities, particularly areas experiencing high levels of deprivation, areas vulnerable to decline and areas with opportunities for change.
- j. To ensure that the necessary education and training facilities are provided and are accessible to all: to build strong futures for children, provide a diverse range of learning opportunities for all and assist economic progress through the development of required skills.
- k. To develop new cultural, leisure and sporting facilities to meet needs and enhance Cardiff's role as a premier cultural and sporting destination.
- l. To ensure that the necessary community and cultural facilities (community centres, shops with healthy food choices, youth facilities, child care, faith buildings, health centres, etc.) are provided that are accessible to all, especially in areas that are deprived.
- m. To address rising unemployment and provide accessible local job opportunities, particularly in areas of greatest need.
- n. To promote social inclusion, equality of opportunity and access for all.

3. To deliver economic and social needs in a co-ordinated way that respects Cardiff's environment and responds to the challenges of climate change.

- a. To mitigate the effects of climate change through reducing energy demand and increasing the supply of renewable energy.
- b. To ensure that Cardiff adapts to the full anticipated impacts of climate change and that new development and infrastructure is designed to be resilient to possible consequences.
- c. To protect, manage and enhance Cardiff's natural environmental assets, including:
 - o The parks, open spaces and allotments in the city that are highly valued by local communities and an important component of Cardiff's quality of life;
 - o The strategically important river valleys of the Ely, Taff, Nant Fawr and

- Rhymney that link the city to the countryside and provide a valuable recreational, biodiversity and amenity resource;
 - Cardiff's countryside, particularly its areas of high landscape value and the coast that provide an important setting to the urban area, provide an agricultural resource and opportunity for recreation;
 - The city's biodiversity, its internationally, nationally and locally designated sites, wildlife habitats and features that contain important species and networks that link together areas of value;
 - Natural resources including geodiversity, the best soils, water and air quality including, the reduction of pollution; and
 - The role that vegetation plays in combating climate change by providing shading, cooling and carbon sinks.
- d. To conserve and enhance Cardiff's built and historic assets that define distinctive character and reflect its past development including:
- The city's 27 Conservation Areas;
 - Its Listed Buildings and Ancient Monuments;
 - Registered Historic Landscapes and areas of archaeological importance; and
 - Other valued public places and spaces, including parks and amenity spaces, that provide local distinctiveness.
- e. In identifying new sites to meet economic/social needs, to follow a sequence of firstly maximising the contribution of brownfield sites, then identifying greenfield sites that are considered to represent the most appropriate and sustainable locations to accommodate new development.
- f. To have full regard to flood risk when considering the acceptability of development proposals and considering mitigation and adaptation measures.
- g. To maximise opportunities to create a cleaner and more attractive environment that enhances the quality of life and helps Cardiff to become a world-class European capital city.

4. To create sustainable neighbourhoods that form part of a sustainable city.

- a. To ensure that all new development areas (whether greenfield or brownfield) create sustainable neighbourhoods that follow the following principles:
1. Minimise energy demand and maximise renewable solutions - to deliver more energy-efficient neighbourhoods that utilise existing best practice and embrace new renewable technologies and concepts;
 2. Minimise car travel, maximise sustainable transport use and decrease air pollution by creating accessible, permeable and legible places, preventing predominantly car-based developments and focusing new development in accessible locations which are linked

to the strategic cycle network and can be served mainly by effective networks of sustainable transport - walking and cycling and fast and frequent public transport around and beyond the city;

3. Maximise recycling - to optimise the overall value of waste as a resource, to effectively plan for how new developments can sort and store waste for collection for onward productive use and minimise material needing treatment and final landfill;

4. Minimise water usage and maximise sustainable drainage - to carefully manage the consumption and drainage of water to avoid unnecessary wastage and minimise rapid run-off. To seek opportunities to maximise the positive amenity and biodiversity benefits that sustainable drainage solutions can offer;

5. Maximise the early provision of a full range of social facilities and community infrastructure - to provide the full range of necessary facilities that are accessible to all members of society and can be reached within a 15 minute walk. To include the range of social, health, leisure, education necessary for the scale of development proposed and also taking into account other needs within the wider locality;

6. Maximise the additional benefits that new communities can bring to adjoining or surrounding existing communities and minimise any potential negative impacts - to carefully identify positive contributions that can be made and involve local communities in this process;

7. Maximise the diversity of land uses within new development areas – to create more balanced communities offering non-car based options to fully participate in community life. To ensure a range and choice of housing tenures together with local employment opportunities and the full range of community infrastructure;

8. Maximise the contribution of networks of multi-functional and connected open spaces to strategically design networks of open space that are rich in biodiversity and provide safe routes between key locations to encourage healthier lifestyles through promoting walking and cycling. To further encourage healthy lifestyles by providing allotments together with the wider promotion of healthy eating;

9. Maximise the principles of good design - to create places that look good, are of an appropriate and efficient density, fully respect their local context and are successfully integrated with adjoining areas. To design buildings that are resilient and can easily adapt to changing future needs. To design clean and attractive areas where people feel safe and have a sense of ownership; and

10. Maximise community involvement in the planning, design and future management/maintenance of new neighbourhoods. To use the master planning process to establish robust design principles

but to also recognise the need to allow some flexibility and managed capacity for change, particularly in larger development areas.

b. To take opportunities to apply the above principles to existing neighbourhoods in order to create a more sustainable city.

Strategy, Key Policies and Key Diagram

Overview

4.1 This section sets out the overall LDP Strategy to deliver the Plan's vision and objectives. The Strategy contains the 7 elements described below together with a Key Diagram summarising the main spatial components of the Strategy. Collectively, these elements deliver the overarching Plan vision and objectives set out in the previous section. They provide a coherent and evidence-based approach to meeting economic and social needs in a manner which respects Cardiff's environmental qualities and encourages the development of sustainable neighbourhoods as part of a sustainable city.

4.2 Main elements of Strategy:

1. Making provision for new homes and jobs.
2. Putting in place a framework to manage future growth and encourage high quality, sustainable design.
3. Bringing forward new infrastructure.
4. Delivering sustainable transportation solutions.
5. Responding to evidenced economic needs.
6. Responding to evidenced social needs.
7. Respecting Cardiff's environment and responding to climate change.

4.3 Overall, the LDP Strategy responds to the clear evidenced need to make provision for new homes and jobs. It sets a level of growth considered to represent the most robust, balanced and appropriate approach taking into account all relevant factors including the recommendations made by independent population forecasting experts. This approach directly responds to needs from within Cardiff but the delivery of new jobs also helps spread prosperity beyond administrative boundaries. In this respect, the Strategy aims to build upon Cardiff's key role as centre of the city-region which evidence shows is of critical importance to the wider well-being of South East Wales.

4.4 However, the Strategy sets out clear policies and mechanisms which provide a framework designed to effectively manage future growth and encourage high quality and sustainable design. This includes adopting a masterplanning approach based on the sustainable neighbourhood

objectives to the development of new sites supported by more detailed design guidance. Additionally, the approach strategically manages growth by designating a Green Wedge and tight settlement boundaries policy to protect large areas of countryside. In this way, new development can be planned for in a phased manner and designed in a more sustainable way to minimise negative impacts.

4.5 The provision of new infrastructure is an important element of the Strategy as it is recognised that new development must bring with it the timely provision of new supporting community facilities and necessary services. Whilst it is recognised that some significant elements of infrastructure may take many years to complete, the Strategy seeks to ensure that each phase of new development is tied to the provision of necessary infrastructure with each stage of development being able to demonstrate an acceptable level of supporting facilities. This may include the early provision of new facilities along with maximising the potential contribution of existing nearby facilities providing there is capacity and acceptable accessibility.

4.6 ~~An~~ The Infrastructure Plan ~~is contained as a Supporting Document~~ settings out future requirements. Further dialogue and consultation findings will help further develop a detailed list of required infrastructure along with funding opportunities including the roles of Community Infrastructure Levy (CIL) contributions for strategic projects, Section 106 Agreement contributions for local priorities together with identifying other potential funding streams from the public and private sectors.

4.7 Putting in place a Strategy to enable the delivery of more sustainable transportation solutions is also integral to the overall approach. This recognises that development in Cardiff must be integrated with transport infrastructure, that travel demand must be minimised along with providing a range of measures and opportunities which reduce reliance on the car. This approach is fully consistent with on-going work at a city-region scale which seeks to develop a more effective public transport network across the region as a whole. This approach will bring with it significant social benefits by reducing current barriers between homes, jobs and other trips and help spread prosperity around the entire city-region.

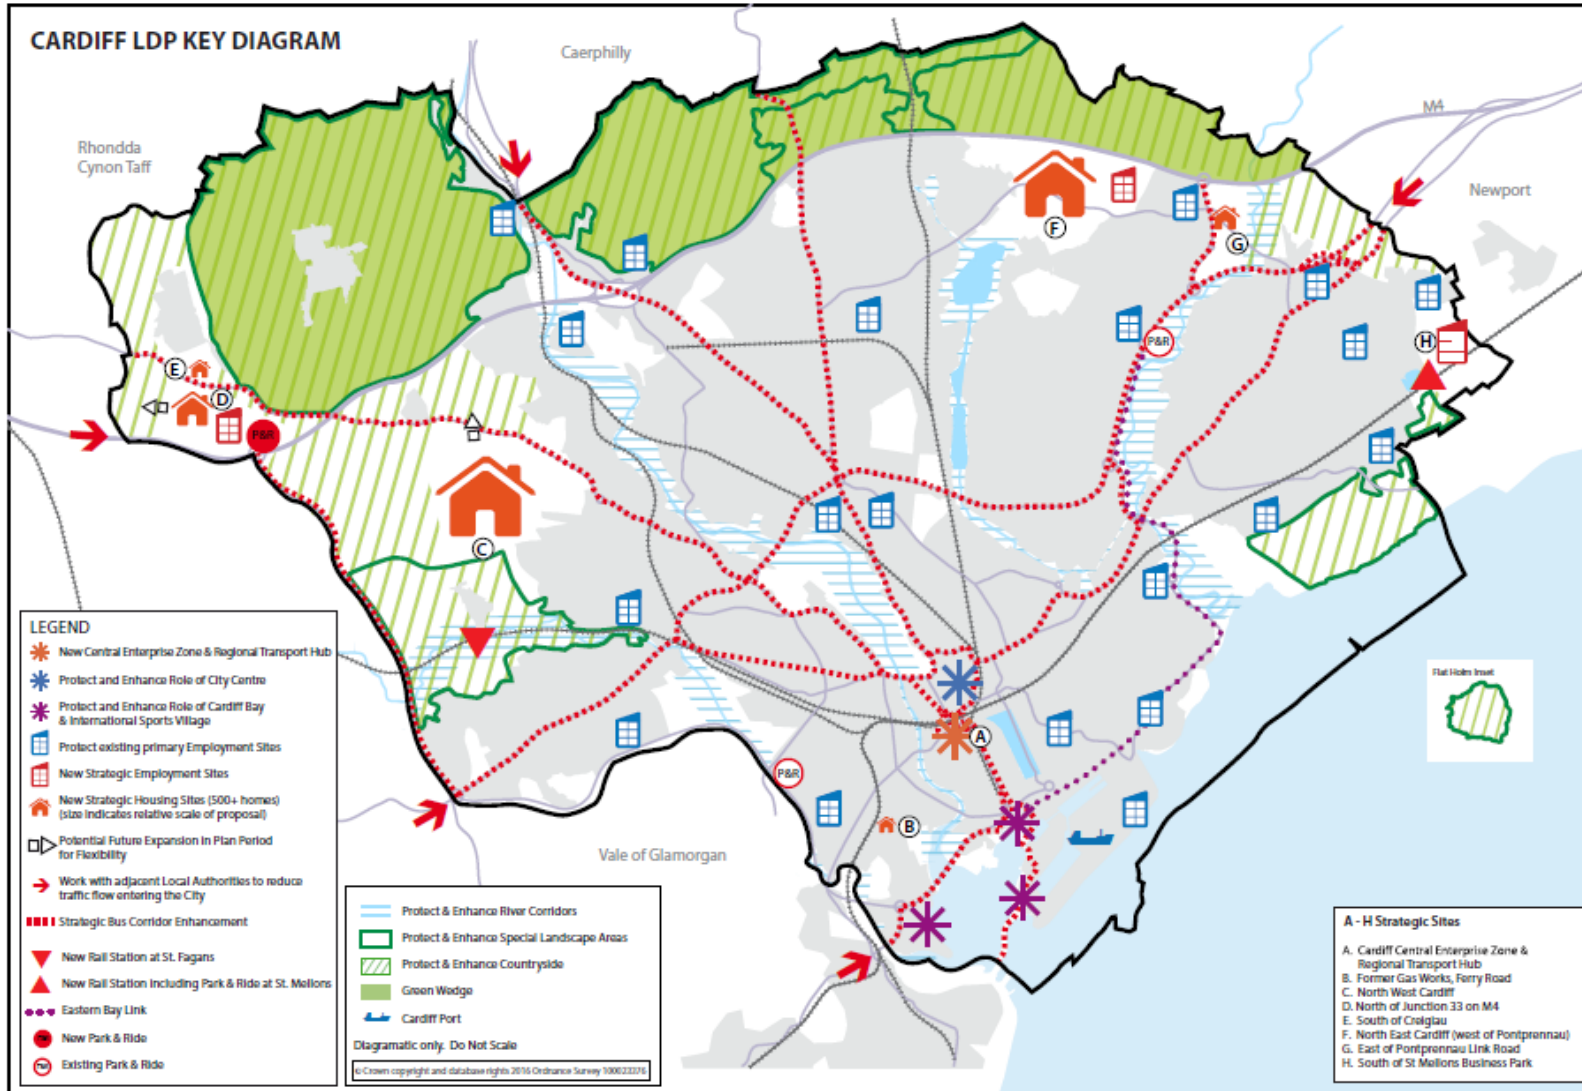

4.8 The key economic role performed by Cardiff must be maintained and enhanced for benefits to Cardiff, the city-region and Wales. Evidence demonstrates that Cardiff has consistently delivered a high proportion of jobs in the city-region. The Strategy responds to this by ensuring a full range and choice of economic opportunities across all relevant sectors. The Cardiff Central Enterprise Zone will be a key element of the approach but there is also a need to maintain the roles of the City Centre, Cardiff Bay, existing employment sites together with providing a range and choice of sites to cater for demand across sectors.

4.9 Cardiff experiences some significant social needs, with high housing demand projected to continue over the Plan period. The Strategy aims to positively respond to these needs by providing a wide range and choice of sites. Importantly, the approach looks to cater for specific needs so targets have been set for the provision of affordable housing, different locations help provide diversity of offer and the needs of the Gypsy and Traveller community are also directly addressed in accordance with national policy and guidance.

4.10 The Strategy also addresses wider social issues and has benefited from the Health and Equality Impact Assessments into the Plan. The approach is very much about promoting more sustainable communities where emphasis is placed on supporting District & Local Centres, encouraging the full range of accessible social, health and educational facilities, together with supporting regeneration initiatives, utilising the potential positive benefits which new developments can bring to adjoining areas.

4.11 Cardiff possesses a unique and particularly distinctive natural and built heritage. The Strategy delivers sustainable development by meeting social and economic needs, but in a managed way which retains, manages and enhances important features of natural and built heritage. Central to this approach is the designation of a Green Wedge to the North of the M4 Motorway, a strict settlement boundaries policy together with protection to the river valleys and open spaces. In this way, Cardiff's distinctive environmental qualities can be successfully maintained with further opportunities to enhance their management and increase public enjoyment.

CARDIFF LDP KEY DIAGRAM

Key Policies

1. Making provision for new homes and jobs

KP1: LEVEL OF GROWTH

The Plan makes provision for 45,415 new dwellings (including a 4,000 dwelling flexibility allowance) to deliver a housing requirement of 41,415 a range and choice of opportunities to deliver 41,100 new dwellings and 40,000 new jobs in Cardiff between 2006-2026. Furthermore, in order to demonstrate that the Plan meets the flexibility test of soundness and to accommodate potentially higher build rates than anticipated, provision has been made to deliver an additional 10% flexibility allowance (for 4,000 dwellings) which can be triggered, if demonstrated as necessary through annual monitoring, in the later phases of the Plan period.

4.12 The LDP Preferred Strategy considered the merits of three growth options and set out a reasoned justification for proposing option B which was below the official household projections but higher than long term past build rates. It considered all relevant factors including a report by independent population forecasting experts (Edge Analytics, June 2011) which applied more locally robust data to the official statistics. It was also informed by a process of regional collaborative dialogue involving all local authorities in South East Wales together with other key relevant national and regional bodies.

4.13 Views have since been gathered through consultation on the Preferred Strategy which took place in November and December, 2012. The formal consultation process collected 1,028 responses and 8 petitions. Additionally, 444 responses were collected from the Citizens Panel representing a wide distribution of ages and geographical locations across the city. This was in sharp contrast to the wider consultation responses which showed a significant geographical 'clustering' of responses generally in proximity to the location of proposed development sites. Responses relating to the proposed level of growth can be summarised as follows:

Delete table on Citizens Panel LDP Consultation

~~Citizens Panel LDP Consultation~~

~~No. % No. %~~

~~Too low 20 4.6 Too low 32 5.2~~

~~About right 209 48.2 About right 34 5.5~~

~~Too high 205 47.2 Too high 553 89.3~~

~~TOTAL 434 100 TOTAL 619 100~~

4.14 The consultation findings indicate sharply contrasting views on this matter. This underlines the importance of the level of growth in the Deposit LDP being based on robust and up to date evidence.

4.15 Therefore, additional independent expert advice has been sought based on the best possible information currently available. Edge Analytics, the independent population forecasting experts providing advice on the Preferred Strategy, have undertaken a further detailed analysis with their report forming Supporting Document No. 18. It is informed by important new information which was not previously available, the 2011 census results and revised back population figures issued by the Office of National Statistics at the end of April, 2013. The material informing this work is of a more detailed and locally robust nature than the official population projections which do not benefit from such a thorough local analysis of relevant data.

4.16 Overall, the Edge Analytics report has produced compelling, up to date and robust evidence to justify a level of growth lower than the official projections and also lower than that proposed in the Preferred Strategy. The recommendations contained in the report are based on a thorough examination of a number of different growth scenarios.

4.17 The Edge Analytics Report has reviewed the new evidence, presented an analysis of inter-censal change in Cardiff's demographic profile and developed a revised suite of demographic forecasts for consideration. The analysis of inter-censal change revealed a 35,400 (11.4%) increase in Cardiff's population between 2001 and 2011. The analysis of the 'components of change' underpinning Cardiff's population growth has revealed the critical importance of migration, both internal and international in shaping population growth.

4.18 Using the updated evidence, a number of 'trend' scenarios were evaluated and compared to the 'starting point' of the official 2008-based projections. The report concluded by drawing attention to the future uncertainties associated with international migration and recommended to the Council that a lower dwelling growth trajectory of 42,500-43,000 (scenarios F & G) over the 2006-26 Plan period might be more appropriate. Furthermore, the report recommended that the Council gives consideration to further reducing the figure due to the potential impact of applying a slightly lower home vacancy rate for 2026 and also considering a 10% further sensitivity reduction due to a potential decrease in household formation rates.

4.19 The Council recognise that scenarios F and G result in a very similar level of growth which is considered to be consistent with the overall strategic objectives of the Plan. With regard to the potential options to further reduce the dwelling requirement, the Council supports applying a 3% vacancy rate for 2026 as opposed to a figure of 3.74%. This is because 3% was the previous rate in the 2001 census and due to current Council policy and actions to tackle this issue, a rate of 3% in 2026 is considered to represent a sound, robust and reasonable figure backed by supporting policy framework to deliver.

4.20 However, the Council has significant concerns with applying a further 10% reduction in dwelling need due to a potential reduction in household formation rates. The report draws on recent evidence from England and suggests this recent trend could also be taking place in Cardiff. However, at this juncture, prior to the Welsh Government household projections being released in late 2013, no official data or evidence can be used to substantiate any reduction.

~~Therefore, to reduce figures without any firm evidence carries significant risks, since if the figures do not show a decrease, the Plan would be clearly out of line with evidence and run the risk of being deemed unsound. However, as the Welsh Government household projections will be issued before the Council submit the Plan for examination, there will still be an opportunity to consider their impact ahead of the examination but any analysis must also take account of the issues highlighted in the paragraph below.~~

~~4.21 Even if the Welsh Government household projections indicate a reduced rate of household formation, it cannot be assumed that the rate would continue over the entire Plan period. Indeed, if there was to be a reduction, this may be explained by a reflection of the current limited supply of greenfield sites together with the challenging economic conditions at that time. The Plan Strategy of providing a range and choice of sites to meet evidenced need is considered a strong and compelling reason not to apply a 10% reduction which is not founded on hard existing evidence and cannot be justified looking ahead, particularly given the Strategy set out in the Plan.~~

~~4.22 Moreover, it should be noted that the annual net migration assumption 2011-26 without the 10% sensitivity adjustment is given as 1,268 persons p.a. This compares to the actual annual net migration data 2001-11 for Cardiff of 1,344p.a. (47p.a. internal and 1,297p.a. international), excluding the 320 per annum asylum seekers net flow to Cardiff. Given Cardiff's role as economic driver of South East Wales, it may be considered unsound for the LDP to incorporate assumptions for a significant reduction in net migration whilst at the same time promoting itself as a European Capital City seeking to attract new employment for instance into the proposed Cardiff Central Enterprise Zone.~~

~~4.23 Therefore, the Council consider the most robust and sound approach to adopt is to set a level of dwelling growth based on the recommended scenarios F and G incorporating a 3% vacancy rate in 2026 which have a very similar dwelling requirement. Of the two scenarios, the Council considers the logic and reasoning behind scenario G is more robust and represents a sound basis on which to base the future dwelling requirement which has been rounded down to 41,100 dwellings for clarity purposes. This level of dwellings is almost exactly proportionate to delivering the 40,000 jobs proposed in the Preferred Strategy so this figure will be retained in the Deposit LDP. This represents: A rise in population from 323,766 in 2006 to 395,378 in 2026, (an additional population of 71,612, representing an increase of 22.1%); A rise in~~

~~dwellings from 138,735 in 2006 to 179,835 in 2026, (an additional 41,100 new dwellings, equivalent of an 29.6% increase); An average build rate of 2,055 dwellings per annum over the entire Plan period but due to lower than average completions in early years of Plan period (2006-13), a residual required annual build rate (2013-26) of 2,295 dwellings per annum~~

4.12 As the LDP has progressed through its numerous stages of preparation, various level of growth options have been considered, consultations have been carried out and expert advice has been sought. The level of growth set out within this Key Policy is considered to best reflect an analysis of all relevant factors. Importantly, it is based on the most up-to-date information reflecting matters raised during the examination process and makes provision (including the flexibility allowance) to deliver the level originally set out in the Preferred Strategy.

~~4.24~~ 13 All other relevant factors, as set out in Planning Policy Wales and summarised below, have also been carefully considered. In this respect, it should be noted that national guidance states that the official projections should form the starting point for setting levels of growth in LDPs and makes it clear that any departure from these figures should be fully justified by demonstrable evidence. These official figures show a 42% rise in Cardiff's population for the period 2008-2033 and a 33% rise for the Plan period 2006-26 for which the Plan makes provision. Other relevant factors include:

- ~~• Accordance with Wales Spatial Plan and other key national policy and guidance;~~
- ~~• Cross-boundary/city-region implications;~~
- ~~• Accordance with 'What Matters', the Community Strategy for Cardiff Council;~~
- ~~• Extent to which evidenced economic needs are delivered;~~
- ~~• Extent to which evidenced social/housing needs are delivered;~~
- ~~• Environmental and climate change implications;~~
- ~~• Deliverability and capacity factors; and~~
- ~~• Consultation and collaborative working findings.~~

~~4.25~~ A summary of the consideration of relevant factors is set out below. However, more detailed relevant information is also contained in Supporting Documents including:

- ~~• Supporting Document No. 18: Edge Analytics Report (June 2013);~~

- ~~Supporting Document No. 1: Population & Housing Technical Background~~
- ~~Paper;~~
- ~~Supporting Document No. 2: Urban Capacity Study; and~~
- ~~Supporting Document No. 16: Masterplanning Framework – General Principles, Strategic Framework & Site Specific Frameworks for larger sites.~~

~~4.26~~ 14 No other material factors are considered to possess sufficient weight to warrant departure from this level of growth which is considered to:

- Accord with the Wales Spatial Plan aims by supporting Cardiff's role as centre of a networked city-region but not to excessive levels which could prejudice regeneration objectives elsewhere;
- Accord with the Council's vision and LDP objectives;
- Effectively respond to the regional collaborative dialogue which recognised the dangers of artificially restricting growth in Cardiff - there was a clear recognition of the positive 'ripple effects' of providing jobs and homes in Cardiff which improved prosperity in the wider city-region;
- Effectively respond to the clear evidenced need to provide for a significant number of new homes and jobs. Whilst the The Plan makes provision to deliver the level proposed may fall short of official projections, it and is considered to strike the right balance having regard to the full range of factors;
- Deliver necessary homes and jobs, but in a managed and controlled manner protecting key elements of Cardiff's environment;
- Meet deliverability and capacity factors - The Deposit LDP contains proposals and mechanisms which justify how deliverability and capacity matters can be adequately addressed. The wide range and choice of sites contributing to the provision together with the masterplanning approach which includes addressing the deliverability of supporting infrastructure demonstrates how development can be successfully brought forward in a managed way. (A higher level of growth would be considered difficult to justify in terms of deliverability factors and set an artificially high target for the 5 year supply requirements set out in TAN 1; and
- Respond in an evidence-based manner to the divergence of views expressed in ~~the Preferred Strategy~~ consultation processes.

~~4.27~~ 15 The detailed breakdown of how it is intended to provide for the 41,415 new homes over the Plan period is shown in Table 1, below. ~~The masterplanning approach consultation findings and wider work undertaken have informed the number of new homes and jobs proposed for the Strategic Sites which are described in greater detail in Policy KP2 and Supporting Document.~~

Table 1: Housing Provision over the Plan Period			
Row	Topic/Factor	Note/Source	Dwellings
NEW DWELLING REQUIREMENT 2006 - 2026			
1	2006-2026 Dwelling Requirement	As referenced in Policy KP1	41,415

LDP STRATEGIC SITES*			
8	Units on LDP Strategic Sites	Excludes Strategic Site A - existing commitment in the landbank	13,950
LDP NON-STRATEGIC SITES*			
9	Units on LDP Non-Strategic Sites		572
	*Allowance to avoid double counting on Strategic and Non-Strategic sites in the landbank at 31st March 2014:		-1,256
10	Total Supply		41,456
11	Additional 10% flexibility allowance, as referenced in KP1.		4,000

4.28 16 The Plan deliberately provides an extensive range and choice of opportunities for the creation of new homes and jobs. This is crucial to the overall delivery of homes and jobs by enabling different sites in different locations to be progressed concurrently. It also ensures flexibility as a limited number of sites would carry delivery risks should implementation problems be encountered on specific sites. The masterplanning approach, which also addresses the provision of infrastructure and phasing, puts in place a framework to ensure the orderly development of sites. Key Policies on masterplanning, design and infrastructure, together with supporting documentation, explain this approach in more detail.

4.29 17 In terms of the provision of new homes, brownfield sites still contribute over half of the provision, but this is supplemented by new greenfield opportunities offering a fuller range and choice. This provides a much needed catalyst to the local housing market which has seen a recent shortage of greenfield sites and can help meet a growing latent

demand. Furthermore, greenfield sites can play a key role in bringing forward high levels of affordable and family housing. Evidence has shown that site viability factors make it difficult for brownfield sites to consistently provide high levels of affordable housing.

~~4.30 18~~ It should also be noted that Cardiff has a finite supply of brownfield sites and that the previous LDP was withdrawn due to the Inspector's concerns that it was a, 'brownfield only' Strategy. ~~The last decade has seen significant brownfield developments, the most notable being the successful regeneration of Cardiff Bay. However, brownfield opportunities of this scale no longer exist. Research work has been undertaken to explore the possibilities of maximising the contribution of brownfield land to meet future provision. Supporting Document 2 sets out in detail the findings of this work and demonstrates the different potential opportunities which have been explored.~~

~~4.31 19~~ The Plan recognises that there is a limited supply of acceptable brownfield land. It also recognises that not all existing brownfield sites with planning permission will be developed due to changed economic/market conditions. ~~These changed market conditions also mean that delivering previously anticipated levels of affordable housing may prove challenging due to current financial viability factors. This, in part, contributes to the current limited number of sites being brought forward for development from the landbank. Additionally, there are serious policy issues with losing further employment land of strategic or local importance to housing and it is not considered acceptable for the Plan to propose building on river valleys, parks and playing fields.~~

~~4.32 20~~ However, brownfield sites will continue to play an important role and windfall provisions will form part of the provision for new homes as land uses within the city continue to evolve. For example, the Council is currently strategically assessing its land holdings which, over the Plan period, is likely to generate a wide range and choice of brownfield housing opportunities across the city.

~~4.33~~ The Deposit LDP seeks to respond to need in a way which provides range and choice of land for housing. ~~Maximising the contribution of brownfield sites still forms over half of the provision over the whole Plan period, but this is supplemented by a range of greenfield opportunities offering a range and choice and to provide a catalyst to help kick-start the~~

~~currently depressed housing market situation. Greenfield sites generally have far lower site development costs/constraints and are therefore widely recognised as providing far higher levels of affordable housing than brownfield sites.~~

4.34 21 The provision of a full range and choice of housing options also fully supports the delivery of the economic Strategy - new homes and supporting community facilities can help attract new investment to the city and stimulate more movement in the housing market. Associated construction jobs would provide an additional benefit to the local economy.

4.35 22 New greenfield releases also bring with them the ability to contribute towards the wider provision of strategic infrastructure to the benefit of the city and wider city-region as a whole. For example, the delivery of sustainable transportation solutions will have positive implications for the wider community. In this respect, there are clear benefits of the locations of the strategic sites which offer the opportunity of a joined-up approach to deliver strategically important infrastructure in the North West and East/North East corridors. This assists in prioritising infrastructure provision in a planned and focussed manner.

4.36 23 In order to deliver the required level of growth over the Plan period, there will be a need for a range and choice of sites to be on stream over the remainder of the Plan period. The masterplanning approach has been adopted to carefully manage this process with Key Policies KP2 (A) to KP2 (H) providing a framework for the delivery of each Strategic Site in this respect. In this way, each site and each phase of development can bring with it the necessary range of supporting infrastructure. It should be noted that the scale of strategic sites open up the opportunity for delivering significant infrastructure benefits. However, some major elements may take a long period to deliver. Therefore, early phases will need to both deliver the infrastructure which is required for that particular phase along with contributing to the provision of wider strategic infrastructure which may be physically provided at a slightly later date. Detailed provisions will be put in place to secure delivery in such instances.

4.37 24 The Plan is considered sufficiently flexible to respond to changing conditions. This will be kept under review in the Annual Monitoring Reporting process allowing future reviews to address the need for change.

Should demand be lower than anticipated, the sequence of provision will remain in place, thereby controlling development in an orderly manner and linking it in with infrastructure provision. However, this scenario would result in the trajectory being followed over a longer period allowing either Plan review or the next Plan to make appropriate judgement on future provision at that time.

~~4.38-25~~ Consideration also needs to be given to demand being higher than expected. This is considered to be a less likely possibility, ~~based on current evidence of low completion rates and the challenging economic conditions.~~ However, the LDP tests of soundness demand that Plans are sufficiently flexible to be able to positively respond to changes in circumstances. This Policy therefore has a built-in 10% flexibility allowance.

~~4.39~~ 26 In this way, if a need is identified in the Annual Monitoring Report before the end of the Plan period, additional land can be brought forward for residential purposes at that point in time in a Plan review. The Plan demonstrates a clear commitment to a long term direction of travel by identifying geographically defined areas which have been subject to SA/SEA analysis and are well positioned to meet such need, if required.

~~4.40-27~~ Work undertaken as part of this process has shown that there is limited scope for further development areas due to the environmental and other constraints around the city together. There is considered merit in focussing potential additional areas based upon proposed Strategic Sites where there is land available to take advantage of the comprehensive provision of new community and transportation infrastructure and minimising impact on areas of higher environmental sensitivity including land proposed for Green Belt Wedge designation.

~~4.41~~ 28 Three areas have been identified to provide ~~good~~ flexibility as just one option may limit the scope for dwellings being delivered should problems be encountered on a particular site. It should also be noted in this respect that each area offers a large gross area with the combined potential to deliver more than just an additional 10% flexibility. The masterplanning of adjoining Strategic Sites ~~will take account of these potential additional areas in the planning of land uses and supporting infrastructure. Other strategic sites have far more fixed boundaries and do not lend themselves to logical extension.~~ will ensure that suitable access is secured and future Plan monitoring will trigger any future

detailed consideration of infrastructure and masterplanning requirements should the need for the early release of the identified Search Areas be triggered within the Plan period.

4.42 29 The areas considered most suitable to deliver this potential need are as follows:

- i. Land North of the North West Cardiff Strategic Site - Up to 57 hectares of land located between Llantrisant Road and the M4 Motorway bounded by the edge of Radyr to the East and the recent development on the former Rhydlafer Hospital to the West. This is a gross figure with the net developable area likely to be a significant reduction due to natural and infrastructure constraints within the site. This could provide a minimum of an extra 1,250 dwellings if required in the later phases of the Plan period but further masterplanning addressing long-term capacity is likely to demonstrate a higher figure is possible and the land is indicated ~~by an arrow for potential future development on the Key Diagram;~~ as Search Area A on the Proposals Map;
- ii. Land West of the Strategic Site North of Junction 33 - Up to 41 hectares of land represents a logical extension of this site which falls between the M4 Motorway and Llantrisant Road. This could provide a minimum of an extra 1,250 dwellings if required in the later phases of the Plan period but further masterplanning addressing long-term capacity is likely to demonstrate a higher figure is possible. The land is indicated ~~by an arrow for potential future development on the Key Diagram;~~ as Search Area B on the Proposals Map; and
- iii. North West Cardiff Strategic Site - ~~As highlighted in Table 1, above,~~ the overall capacity of this site is considered to be in the order of 6,500-7,000 dwellings depending on the precise configuration of land uses and housing densities. Work undertaken to date suggests that a figure of 5,000 dwellings is appropriate for homes being delivered within the Plan period (by 2026). However, should build rates be faster than anticipated, this site represents an ideal opportunity to help meet any additional need within the Plan period and benefits from the comprehensive masterplanning of the area as a whole which is shown as a allocation in its entirety.

~~4.43~~ 30 In a similar way to the provision of new homes, a range and choice of new job opportunities is also proposed. It is important to ensure that a range and choice of employment land and business premises are provided to maintain and improve the competitiveness of the city, promote and protect indigenous business and attract inward investment.

~~4.44~~ 31 This approach responds to Cardiff's role as the main economic driver of the city-region accounting for 32% of total employment in South East Wales. At the heart of this approach is recognition that the Cardiff city-region clearly forms a natural economic area and it has consistently made a major positive contribution to the economic growth of Wales. In core city analysis, Cardiff performs well and there is an opportunity to build further on this through continuing to enhance Cardiff's role and also improve linkages and connectivity within the city-region. It is also recognised (as evidenced in the recent Cardiff LDP regional collaborative working exercise summarised in Supporting Document 17) that there are significant benefits for adjoining areas from Cardiff's success in achieving economic growth.

~~4.45~~ 32 The Plan provides a framework for delivering a wide range and choice of employment sites in different locations and for different sectors including the key market sectors of ICT, energy and environmental technologies, advanced materials and manufacturing, creative industries, life sciences and financial and professional services. The range of new sites ensures that Cardiff can deliver the stated level of growth for new jobs. Importantly, different sites will perform different roles in the strategy. For example, Porth Teigr (Roath Basin) has the potential to become an important location for media and creative industries. Other locations may be better suited to small out of centre employment sites, including offices, creative industries, small workshops, and starter units.

~~4.46~~ 33 The geographical spread of the 'Cardiff offer' also addresses the need to provide jobs in accessible locations. In this respect, the key strategic proposal relating to the Cardiff Central Enterprise Zone and Regional Transport Hub represents a highly sustainable and accessible location, close to areas of high unemployment in the city but also readily accessible to the wider region via sustainable modes of transport.

~~4.47~~ Further background evidence underpinning the approach to providing the range and choice of new jobs is provided in Supporting Document 4.

KP2: STRATEGIC SITES

Strategic Sites are allocated as set out below to help meet the need for new dwellings and jobs:

Brownfield Strategic Sites:

(A) Cardiff Central Enterprise Zone and Regional Transport Hub;

(B) Former Gas Works, Ferry Road;

Greenfield Strategic Sites:

(C) North West Cardiff;

(D) North of Junction 33 on M4;

(E) South of Creigiau;

(F) North East Cardiff (West of Pontprennau);

(G) East of Pontprennau Link Road; and

(H) South of St Mellons Business Park - Employment only.

4.48 ~~34~~ Strategic sites are defined as being sites of 500 homes or more and/or with significant employment/mixed uses and which have the potential to deliver significant benefits to the city.

4.49 ~~35~~ The purpose of this Policy is to help bring forward appropriate land in sustainable locations to satisfy the identified need for housing, employment and other uses. ~~The Preferred Strategy set out the detailed consideration of candidate sites and explained the analysis of spatial options resulting in the identification of strategic sites in that document.~~

4.50 ~~Full consideration has been given to consultation feedback including alternative approaches to meeting evidenced needs. However, taking full account of the LDP 'tests of soundness' and other material relevant factors, other approaches are not considered to provide compelling and demonstrable reasons for an alternative approach to allocating the proposed strategic sites.~~

4.51 ~~36~~ ~~The Deposit LDP has therefore retained the same~~ This range and choice of strategic sites as those identified in the Preferred Strategy. This brings significant benefits of providing a genuine range and choice, critical to overall Plan delivery. Furthermore, the scale of sites enables more comprehensive solutions to be delivered which can bring about significant infrastructure improvements for the wider city and city-region.

4.52 ~~38~~ ~~However, many consultation responses on the Preferred Strategy and focussed engagement on the masterplanning approach highlighted concerns from local residents and landowner/developers on the densities proposed in the Preferred Strategy for strategic sites. Further detailed work on the masterplanning of sites~~

has taken account of these concerns and has also looked in far more detail at potential land required for community facilities, open spaces and safeguarding existing natural features. This work has been undertaken in the context of the masterplanning general principles (set out in Supporting Document 16) which highlight the importance of achieving higher densities in the most suitable locations but recognises a wide overall range and choice of densities.

4.53-37 As a result of this more detailed work, the number of dwellings proposed on some strategic sites has changed from the proposed number of units referred to in the Preferred Strategy. However, it must be stressed that different sites pose different issues and have a different local context so each site has been carefully considered on its own merits. The anticipated number of dwellings capable of being delivered from each strategic site is summarised in Table 1 (paragraph 4.27 15) together with Table 2, below. Further details relating to the masterplanning framework for these sites are set out in Supporting Document 16.

Table 2: SUMMARY OF STRATEGIC SITES		
Ref	Site	Proposed Use
A	Cardiff Central Enterprise Zone and Regional Transport Hub	Major employment-led initiative including a Regional Transport Hub together with other mixed uses in Cardiff city centre in order to fulfil Cardiff's role as economic driver of the city-region, provide major employment opportunities focused on financial and business services and maximise the advantages of its location adjacent to the Central Station and Cardiff Bus Station. Due to existing commitments which new proposals will update, current evidence suggests no net gain in units to avoid double counting. However any additional units over and above commitments will count as windfalls
B	Former Gas Works,	Housing-based scheme of 500

	Ferry Road	homes and other associated community uses
C	North-West Cardiff	Comprehensive development of approximately 5,000 homes within the Plan period including employment and other associated community uses
D	North of Junction 33 on M4	Mixed use of approximately 2,000 homes, employment, other associated community uses and a strategic park and ride site
E	South of Creigiau	Housing-based scheme of approximately 650 homes representing a southern extension of the existing village
F	North-East Cardiff (West of Pontprennau)	Comprehensive development of approximately 4,500 homes, employment and other associated community uses
G	East of Pontprennau Link Road	Housing-based scheme of approximately 1,300 with associated community uses
H	South of St Mellons Business Park	Strategic employment site

4.54 38 The combination of development on these sites will result in the delivery of approximately 13,950 new dwellings together with a range and choice of employment opportunities and a significant amount of supporting infrastructure and community facilities.

4.39 A summary of the key infrastructure requirements relating to the Strategic Sites are provided within KP2(A) to KP2(H). This information will be cross-referenced in the Cardiff Infrastructure Plan which is a, 'living document' sitting alongside the LDP. The Infrastructure Plan is directly linked to the LDP Monitoring Framework and regularly updated in order to effectively respond to changes in baseline information, procedures and legislation. Estimated costs of infrastructure provision and details of estimated square footages of facilities are referenced within the Infrastructure Plan based on current considerations, requirements, and

information available at a point in time so represent indicative figures. Future updates to the Infrastructure Plan will allow such information to be regularly updated to reflect prevailing circumstances and show more detail when it is known. Policies KP6 and KP7 relating to new infrastructure and planning obligations provide further policy guidance with regard to the delivery of new infrastructure and are also linked to the Infrastructure Plan and Annual Monitoring Framework.

4.40 Infrastructure requirements for these sites will primarily be delivered through planning obligations/ Section 106 Agreements with policies KP6 and KP7 providing the policy framework. Policy KP6 also outlines other potential funding sources which may be required in addition to developer contributions. Further details as they emerge will be incorporated into the Infrastructure Plan as it is updated in future years as part of the formal LDP monitoring process.

4.41 The masterplanning and good quality & sustainable design principles set out in KP4 and KP5 will be used to provide a framework to consider planning applications relating to all Strategic Sites along with other development as defined in the policies. In addition, the site-specific masterplanning requirements for each Strategic Site are identified within KP2(A) to KP2(H) and depicted, where appropriate, on the indicative Schematic Frameworks. Although only for illustrative purposes, the Schematic Frameworks should be read in conjunction with relevant policies to provide an over-arching context for the future development of the Strategic Sites.

Delete existing paragraphs 4.55 to 4.67 relating to Strategic Site H as these matters will now be covered by proposed new KP2(H):

~~4.55 In response to issues raised in the Sustainability Appraisal with regard to environmental aspects of the strategic employment site at south of St Mellons Business Park, the following paragraphs explain the rationale for including the site together with how flood risk and other environmental concerns can be addressed as part of the scheme.~~

~~4.56 This is an important employment site which contributes to the necessary range and choice of types of employment opportunities in the city. Its location is particularly well placed to provide accessible job opportunities to areas of known deprivation and its position~~

adjacent to the main rail line offers significant opportunities for a new station together with supporting sustainable transportation infrastructure. This proposal is a long-standing proposal in the Regional Transport Plan, is identified in the emerging work on the South Wales Metro concept and has Welsh Government support.

4.57 However, it is recognised that the area possesses environmental and flood risk constraints. In terms of environmental issues, the majority of the area is a Site of Special Scientific Interest with the reens forming the major interest. Additionally, the adjoining Estuary is a European designated site so run-off issues and disturbance will be particularly sensitive. The land also meets the qualifying criteria using the LANDMAP landscape methodology for Special Landscape Area status. Furthermore, there are significant historic interests and the land is designated as a Historic Landscape and Archaeologically Sensitive Area.

4.58 These environmental and flood risk constraints have been carefully examined so that suitable mitigation and enhancement measures can be put in place to address these issues. Further details are contained in Supporting Document 16 outlining site specific masterplanning framework for the site.

4.59 Considerable work has been undertaken to evidence the degree of flood risk in line with national guidance. The Strategic Flood Consequence Assessment work (SFCA) has analysed the risks when looking at the lifetime of development. The Phase 3 SFCA report undertaken by Atkins demonstrates that the flood risk can be effectively mitigated for the site. This can be achieved through a combination of raising the Sea Wall at points most prone to breaching together with raising ground levels on the development site. The costs associated with this work are not considered to undermine the financial viability of the proposal.

4.60 The Environment Agency (EA, now called Natural Resources Wales) has validated the methodology undertaken during this study. Furthermore, the Severn Estuary Flood Risk Management Strategy 2013 consultation proposes sea wall improvements to the area identified by Atkins as a weak section at Tabb's Gout requiring an upgrade so it is consistent with other flood defences along the coast. It is anticipated that the works will be implemented in the near future, probably in 2015/16.

4.61 It should be stressed that an extensive area of land behind the Sea Wall is exposed to flood risk both in Cardiff, Newport and Monmouthshire, especially in future years when evidence points to sea levels rising. This includes existing properties, the main rail line into South Wales, power lines and undeveloped land, much of which forms part of the far wider Wentloog Levels Site of Special Scientific Interest (SSSI). Any significant flood event could therefore have profound implications (social, economic and environmental) which is why the aim of the Severn Estuary Shoreline Management Plan is to 'hold the line' in terms of flood defences in this area.

4.62 The social and economic benefits of delivering a strategic employment site in St Mellons would be profound. In a Cardiff context, it would represent a key strategic site by providing a well accessed and high quality site close to the strategic highway network. With these qualities the site is uniquely placed within the city region and would be capable of attracting inward investment opportunities for high value and knowledge-based sectors. The site would also add an extra dimension to the Cardiff offer in terms of office supply by adding to the range and choice of employment locations and providing a degree of flexibility in providing campus-style office jobs which address market requirements. Furthermore, its location adjacent to the main line offers the potential to develop direct rail links with a new rail station linked to a park and ride facility.

4.63 The site is located near to residential areas of high unemployment and could be readily integrated with the existing St Mellons Business Park. In particular, this is a high quality site for existing businesses, who are looking to raise their added value, a key requirement for manufacturing companies if they are to grow and embed themselves in the local economy. Research has indicated that a high quality site (like St Mellons) and buildings can attract both low value added users and high value added users. However, a low quality site and buildings can only attract low value added users. Having regard to size, location, proximity to other uses and access, the St Mellons site is particularly well placed in Cardiff to deliver this important role.

4.64 The land is currently used for agricultural purposes but is also designated as an SSSI for the reens together with fields which host

invertebrates and bees. Furthermore, the area is noted for its high landscape and historic value. Development of this site can be undertaken in a sensitive manner to minimise harm and include enhancements with considerable scope for large scale mitigation measures south of the rail line and incorporating a design and layout following guidance issued by the Countryside Council for Wales which offers practical guidance on how development can take place in the Wentloog Levels SSSI. In this respect it should be noted that the site forms the western extremity of a far wider landscape unit and in many ways is not a pristine example of the levels environment with a large number of detracting elements together with few reens on large parts of the site.

4.65 However, the social and economic benefits are considerable both in a Cardiff context and locally due to the location of the site near areas of high unemployment and could be readily integrated with adjoining uses. Additionally, the provision of a new rail station adjacent to a new employment area opens up considerable wider benefits beyond Cardiff and will help deliver social, economic and sustainable transportation benefits for South East Wales.

4.66 Furthermore, the development of this site will act as a catalyst to bring about the Sea Wall defence works which will help protect a much wider area. Indeed, the whole SSSI could be lost if inundated with sea water so an appropriate balance must be made. Mitigation measures can be undertaken to reduce impact and in this respect account will be taken of the CCW Guidance Booklet on how to bring forward development in the Wentloog Levels SSSI.

4.67 In conclusion, taking all evidence and assessments into account, it is considered that the economic and social benefits of this proposal are considered to outweigh environmental concerns and in this respect it is noted that mitigation measures can be delivered to reduce harm.

KP2(A): CARDIFF CENTRAL ENTERPRISE ZONE AND REGIONAL TRANSPORT HUB

Land is allocated at Cardiff Central Enterprise Zone, as defined on the Proposals Map, for a major employment-led initiative including a Regional Transport Hub together with other mixed uses in Cardiff City Centre in order to fulfil Cardiff's role as economic driver of the city-region, providing major employment opportunities focused on financial and business services and maximise the advantages of its central location. Supporting essential, enabling and necessary infrastructure will be delivered in a phased manner with specific requirements secured through planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Central, public transport hub providing access to and interchange between rail network, the rapid transit and strategic bus corridors referred to in Policy T2, the city-wide bus network and the strategic cycle network;**
 - **Improving existing bus routes and services including bus priority measures between the site, Cardiff Bay and other parts of the city;**
 - **Rapid Transit- Southern Corridor**
- **Walking and cycling:**
 - **Enhance pedestrian and cycle access between north and south sides of main railway line including enhanced railway underpasses;**
 - **Enhance east and west connections through the area connecting developments;**
 - **Enhanced/ extend Canal Park as a cycling and walking route, creating a new green corridor linking the Bay Waterfront to Callaghan Square, the City Centre and beyond;**
 - **Integrate site with the Strategic Cycle Network Enfys including Routes 1,2,3, 4, 5, 6, 9, 90, 34, 35, 50, the city centre 'hub' routes, the Taff Trail and the Bay Trail;**
 - **Provide a central cycle parking hub with associated facilities as an integral component of the regional public transport hub and of a scale befitting its regional and capital function;**
 - **Provide secure cycle parking and associated facilities in locations which encourage cycling to the city centre and integration with public transport services;**

- Improve connections to Millennium Stadium including Gate 5;
- Create continuous river walk on Taff East bank

Necessary Infrastructure

- Education-1 new Primary School and contribution to existing Secondary Schools;
- Minimum of approximately 7ha Open Space including approximately 3.5ha of formal recreation, 1 playground, 1 teen facility, 1x 40 plot allotment site;
- Contribution to off-site community facility provision;

Development shall accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- Densities will be maximised to make efficient use of city centre land in a highly accessible location. High rise, high density developments at appropriate locations within the site are encouraged and residential densities in excess of 100 dwellings per hectare are not considered unreasonable in principle. Employment densities for B1 office development are expected to be at least 14.5 square metres per employee (gross external area);
- Employment provision to include Grade A office accommodation and developing Callaghan Square as Wales' premier business location. The site will also provide a range and choice of opportunities to meet business needs including start-up businesses, creative workshops and incubator units;
- Create destination spaces with active uses which complement the business offer including Central Square (new public piazza with active ground floor uses), Southern Gateway (new public space south of Central Station), Callaghan Square (greening of spaces whilst maintaining a 'civic' presence), and Taff East Bank (creating active uses and new leisure destination);
- Make improvements to the Arena Area with links to Queen Street Station;
- Ensure that development does not prejudice the future delivery of the Metro by keeping free land required for the project once land requirements are known;
- Provision of high quality way-finding and clearly defined pedestrian routes to key destinations;

- Ensure a consistent approach to the use of high quality street furniture and paving materials;
- Improve routes and connections to support the Butetown Regeneration with links to community facilities and services including Loudon Square as a community “hub”;
- Maximise linkages to the Taff Trail and Canal Park;
- Integrating new development sensitively with new and existing developments and take opportunities for commercial activity along Dumballs Road;
- Upgrade site gateways, railway bridges/ underpasses and the public realm;
- Effectively responding to landscape and biodiversity assets by:
 - Maximising the asset of River Taff frontage;
 - Developing opportunities for natural greenspaces to create urban parkland settings;
- Effectively respond to heritage assets by:
 - Assessing and effectively addressing potential impacts on Conservation Areas and Listed Buildings within and adjoining the site;
 - Integrating public art and heritage interpretation as part of proposals;
- Investigating opportunities for new developments in Dumballs Road to have a separate drainage system, including running surface water to the river and integrating landscaped areas;
- Seek to develop opportunities for SUDS to relate to/ extend the “Greener Grangetown” scheme.

1.4.42 The Cardiff Central Enterprise Zone is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is the largest brownfield site within the Plan (78.8 ha) and occupies a particularly accessible location in the centre of Cardiff including the major transportation hub around Cardiff Central station. Overall, it represents a significant sustainable regeneration opportunity in the heart of the city and is fully consistent with delivering the Plan’s vision and objectives.

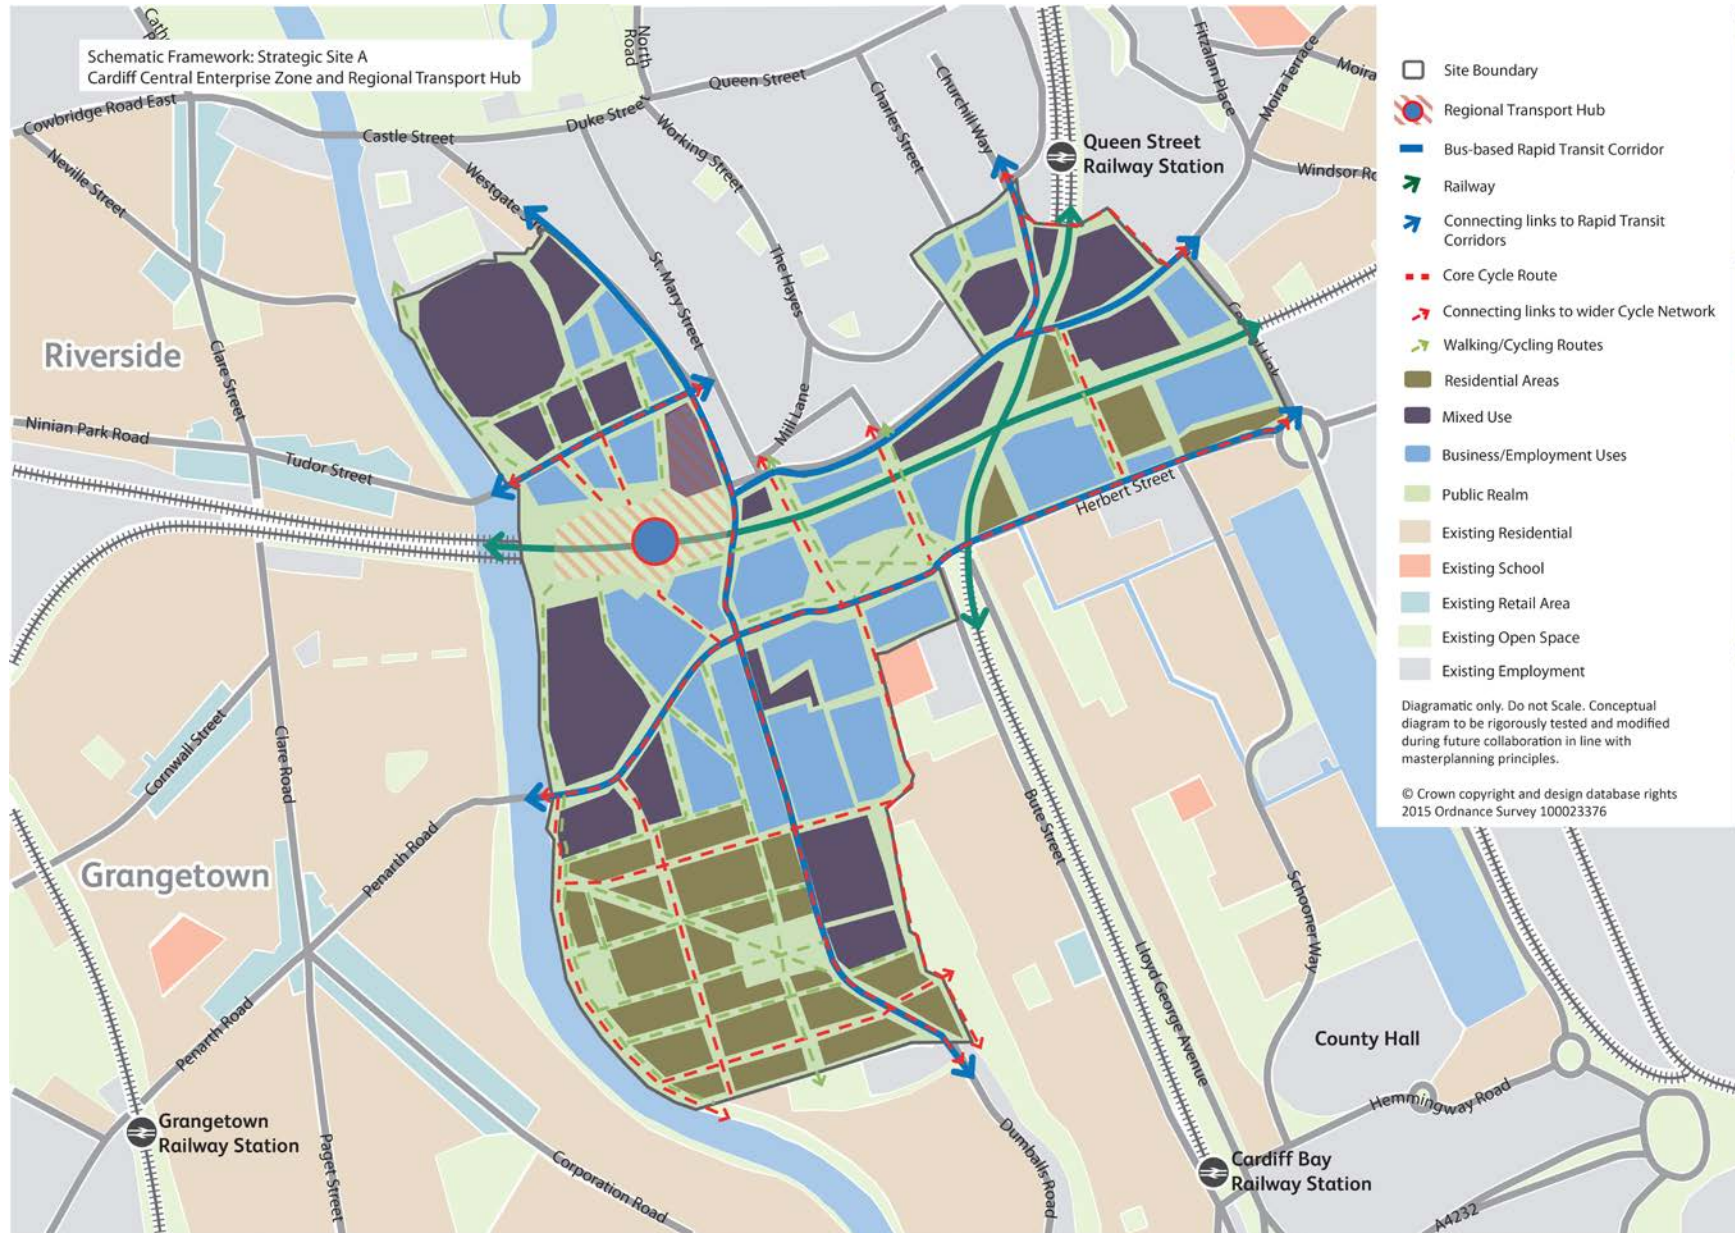

2. 4.43 The land is owned by numerous landowners and will be delivered by a number of different developers operating out of different sites. This policy, together with other relevant policies, will provide the overarching masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will

inform the Development Management process. In this respect it should be noted that different potential projects in the area are operating to different timescales so an over-prescriptive approach would not be appropriate.

4. 4.44 Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision.

5. 4.45 The site is in a central location with a good level of accessibility by non car-based travel. The transport sustainability of the site will be further enhanced through the development of the regional transport hub linking different sustainable forms of transport and the wider improvements to the strategic public transport network and the walking and cycling networks that will be secured in conjunction with the development of other Strategic Sites and through the Council's own infrastructure programmes.

6. 4.46 Although details of the mode and potential alignments of the Metro are not yet known it is likely that the project will provide access to this Strategic Site. Work undertaken to date by the Welsh Government has not firmed up detailed proposals and there is no current certainty on any detailed alignments so it would be inappropriate to allocate a precise alignment on the Proposals Map but there is a need to ensure future options are not prejudiced. Therefore, this policy references the potential future need to safeguard land required for the Metro project once any land requirements are known. Future Plan reviews and the annual monitoring framework linked to the 'living' Infrastructure Plan provide mechanisms to ensure the LDP process can be further updated in this respect.

KP2(B): FORMER GAS WORKS, FERRY ROAD

Land is allocated at the former Gas Works, Ferry Road, as defined on the Proposals Map, for a housing-based scheme of 500 homes and other associated community uses, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Walking and cycling:**
- **Improve pedestrian access to public transport facilities in the vicinity of the site;**
- **Provide new and enhance existing pedestrian/cycle links from the site to the Ely Trail, Grangemoor Park, Cardiff Bay Retail Park and other community facilities within the area including Channel View Centre**

Necessary Infrastructure

- **Contribution to off-site community facility provision;**
- **Education- Contribution to existing Primary and Secondary Schools;**
- **Minimum of 1.2ha Open Space including 1 playground, 1 teen facility, plus contributions to formal open space, allotment provision and play provision**

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Densities will be maximised to make efficient use of this brownfield site with high density residential accommodation of at least 50 dwellings per hectare considered appropriate and in keeping with the characteristics of the area;**
- **The density, design, scale and layout at the northern end of the site should respond effectively to the adjacent Ikea building;**
- **The layout should relate effectively to the railway line forming the western boundary of the site including mitigating any acoustic impacts;**
- **Ensure that the cycle trail linking the Ely Trail to Ferry Road is retained and that the layout provides a safe and overlooked solution;**
- **Maximise the relationship between the site, the River Ely and Grangemoor Park including extending the park along the**

river frontage to create a riverside park with informal play opportunities;

- **Effectively respond to landscape and biodiversity assets by:**
 - **Mitigating and compensating for reptiles and bats;**
 - **Enhancing the buffer of trees along the railway line;**
 - **Ensuring an adequate buffer from the River Ely Site of Importance for Nature Conservation to protect the river bank and associated vegetation;**
- **Effectively respond to heritage assets by:**
- **Assessing and effectively addressing potential impacts on the character and setting of the Listed Gas Holder and demonstrating how the proposals can successfully integrate this historic asset;**
- **Explore the potential to collect methane gas from Grangemoor Park to create a heat and power system together with exploring other potential opportunities such as biomass to create electricity and to heat the site's buildings.**

1- 4.47 The former Gas Works, Ferry Road, is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is a brownfield site (9.9 ha) well-located within the urban area adding to the range and choice of housing offer in the Plan.

2- 4.48 The land is owned by a single landowner and will be delivered in a comprehensive manner. This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

3- 4.49 The relative scale of the site allows for a maximum of 2 outlets at any time with full delivery of the 500 units anticipated between 2017 and 2024. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

4-4.50 Due to the accessible location of the site and proximity to existing social/ community facilities in the area it is considered appropriate to secure developer contributions to improve nearby facilities as outlined in the policy.

P2(C): NORTH WEST CARDIFF

Land is allocated at North West Cardiff, as defined on the Proposals Map, for a mixed-use comprehensive development including a minimum of 5,000 homes and local employment opportunities, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Provision of new bus-based Rapid Transit Corridors through the site providing links between the District/Local Centres and a new Transport Hub in the Easternmost District/Local Centre;**
 - **Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Western Bus Corridor and other routes within the North West Rapid Transit Corridor;**
 - **Off-site infrastructure including bus priority enhancements on the Western Bus Corridor and measures to improve linkages into Rhondda Cynon Taf;**
 - **Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services**
- **Walking and cycling:**
 - **On and off-site measures to provide a network of high quality, safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including existing local centres and Schools at Fairwater, Pentrebane, Danescourt and Radyr;**
 - **Links to the Taff and Ely Trails;**
 - **Links to off-site public transport destinations including Radyr, Danescourt and Llandaff Rail Stations**

Necessary Infrastructure

- 1 District Centre and 3 Local Centres (including provision of business and local employment uses), Primary Care facility, Multifunctional community leisure facility including library facility, and financial contribution to upgrading of Fairwater Leisure Centre;
- Education-1 new Secondary School, 3-4 new Primary Schools located in or adjacent to District/Local Centres, and financial contribution to existing Primary Schools in earlier phases;
- Minimum of 30ha Open Space including 15ha of formal recreation, 6 playgrounds including destination play area, 2 teen facilities plus off-site contribution, and 2x 50 plot allotment sites (through on-site/ off-site provision)

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- Provide a range of densities with high density (minimum of 45-50+ dwellings per hectare) mixed-use development within District/Local Centres and medium to high density (35-50+ dwellings per hectare) along the Rapid Transit Corridors;
- Initial phases towards the east and along Llantrisant Road, middle phases towards the centre of the site and later to the west;
- Ensure that the potential future delivery of the 'Metro' is not precluded by keeping a corridor alongside and including the disused rail line running through the site (as depicted on the schematic framework) safeguarded from development and also ensuring that land uses, densities and layouts respond positively to its potential future provision;
- District/ Local Centres to be accessible by walking, cycling and public transport and accommodate a range of services including convenience goods floorspace plus other retail of a scale and nature which accord with Plan retail policies with the anchor food store to be located within the District Centre towards the east of the site;
- Employment provision (B1 & B1(b)(c)) to be located in and adjoining the District/Local Centres amounting to approximately 15,000sqm;

- New Schools to be located in and adjoining the District/Local Centres;
- Provide good land use and transportation integration with the adjoining areas of Pentrebane, Fairwater and Radyr;
- Providing an active frontage onto Pentrebane and Llantrisant Roads;
- Effectively respond to landscape and biodiversity assets by:
 - Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:
 - Links between retained woodlands at Coed y Trenches, Coed y Gof, Waterhall, Halfwrt and Coedbychan;
 - Corridor along the valley through the middle of the site;
 - Links to the countryside to the west and south-west;
 - Linking corridors where possible between the above to provide a good network
 - Ensuring that there is no detriment to the maintenance of the favourable conservation status of Great Crested Newts on the site including protection of the existing 2 ponds in the Pentrebane Cottages SINIC and provision of a minimum of 2 additional ponds in the locality;
 - Providing suitable buffers to retained woodlands referred to above and other habitats including hedgerows and streams;
- Effectively respond to heritage assets by:
 - Assessing and effectively addressing potential impacts on the St Fagans Conservation Area (retain woodland/ hedgerow buffers together with provision of new planting) and the Listed Buildings (together with their settings) within and adjacent to the site;
- Effectively respond to other constraints including Radyr Golf Course (ensuring no conflict with errant golf balls) and existing easements (overhead pylons and underground infrastructure); and
- Ensuring that that development does not adversely affect the water quality of the Nant Rhydlafar.

4. 4.51 North West Cardiff is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is the largest Strategic Site within the Plan (346 ha) and relates to countryside

to the west of Radyr, Fairwater and Pentrebane, and to the north of the village of St Fagans.

2. 4.52 The vast majority of the land at North West Cardiff is within the control of the Trustees of St Fagans no. 1 & 2 and no. 3 Trust and will be delivered by a number of different developers operating out of different outlets. This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

4. 4.53 The scale of the site allows numerous outlets to be operating at any one time in different parts of this large site and will provide a wide range and choice of housing offer and opportunities for a variety of different tenures. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

5. 4.54 Rapid Transit Corridors within the site will be bus-based and of sufficient width and otherwise designed, including the control of car parking, to allow the safe two-way passing of the largest vehicles. Bus priority measures will be provided at appropriate locations within the site to allow bus rapid transit to avoid queuing traffic. Bus-based Rapid Transit Corridors will link the site to the Western Bus Corridor with off-site bus priority measures provided to assist the flow of buses. Further off-site corridor enhancements will be provided on the Western Bus Corridor as shown on the Proposals Map and consistent with policy T2 in order to support delivery of the increased frequency and reliability of services. The integration of housing and supporting services and community infrastructure provides the opportunity for a high proportion of short, local trips to be made by walking and cycling. This will be made possible by integrating networks of high quality walking and cycling routes within development layouts and ensuring that the design of roads, streets, junctions and public spaces accommodate the natural 'desire lines' of people making trips on foot and by bicycle.

6. 4.55 Although details of the mode and potential alignments of the Metro have yet to be defined, it is important that the development of this site does not preclude the potential delivery of this strategic project. Work undertaken to date by the Welsh Government suggests that the disused rail line running through the middle of the site forms the most likely option in this locality but there is currently no certainty on the detailed alignment. For example, there is uncertainty of the future mode and

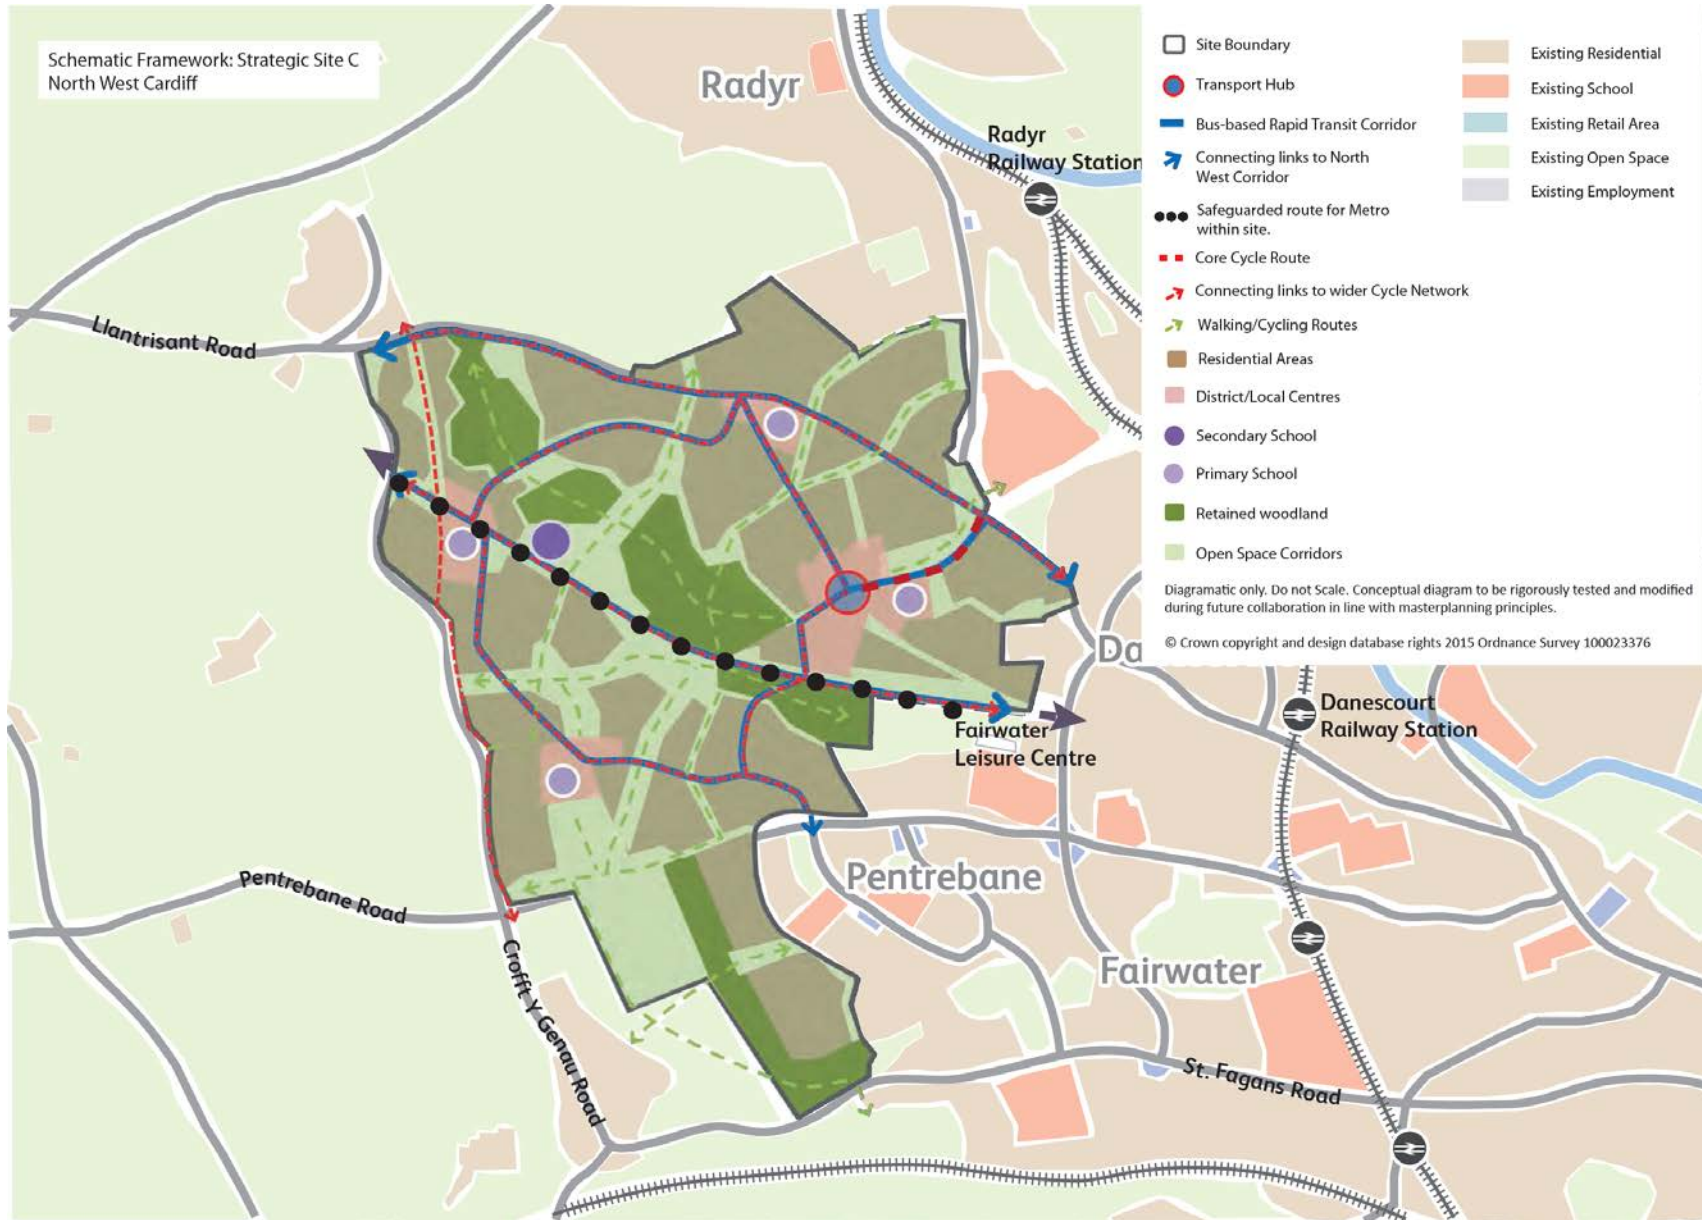

whether the route would be based on the existing disused rail line or whether it would be better located either alongside to the north or to the south.

7. 4.56 Therefore, it would be inappropriate to allocate a precise alignment on the Proposals Map but there is a need to ensure future options are not prejudiced. This policy ensures that land is safeguarded from development along the potential Metro corridor and also that land uses, densities and layouts are developed to take account of the potential delivery of this strategic transportation project.

8. 4.57 District and Local Centres will be the focus for community uses and activities including Schools in close proximity. The precise number of Primary Schools (3/4) will depend on the outcomes of future monitoring and delivery options relevant when the details of later phases are being assessed through the Development Management process.

9. 4.58 It should be noted that it is anticipated that the delivery of this large site will extend beyond the plan period (some 1,500 homes are anticipated being delivered post 2026). In this respect, whilst the Schematic Framework relates to the total geographical extent of the overall site area to ensure a high-level consistent approach to addressing site-specific factors, the infrastructure requirements as set out in this policy relate to the number of homes proposed during the plan period (for 5,000 new homes). Future annual monitoring, Plan reviews and ongoing updates to the Infrastructure Plan will ensure that any infrastructure requirements for homes post-2026 are captured at the appropriate juncture and consequently inform any future Development Management activity with regard to homes over and above the 5,000 proposed during the plan period.

10. 4.59 ~~Search Area A The further future flexibility option~~ (north of Llantrisant Road is not included within the Strategic Site allocation. This would only be triggered if necessary through future Plan review following annual monitoring indicating that the provision of new homes is proceeding beyond anticipated rates and justifies such a release within the last years of the plan period. Therefore, it is considered premature to factor in potential detailed infrastructure and masterplanning matters at this juncture relating to this land. The formal monitoring framework provides an evidence-based process to inform any decisions on potential release in the last years of the plan period.

KP2(D & E): NORTH OF JUNCTION 33 ON M4 AND SOUTH OF CREIGIAU

Land is allocated:

(i) North of Junction 33 on the M4, as defined on the Proposals Map, for a mixed-use development of approximately 2,000 homes, employment, other associated community uses and a strategic park and ride site; and

(ii) South of Creigiau, as defined on the Proposals Map, for a housing-based scheme of approximately 650 homes representing a southern extension to the village

Essential, enabling and necessary supporting infrastructure will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Provision of new bus-based Rapid Transit Corridors through the site North of Junction 33 linking directly to the Western Bus Corridor;**
 - **Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Western Bus Corridor and other routes within the North West Rapid Transit Corridor;**
 - **Off-site infrastructure including bus priority enhancements on the Western Bus Corridor and measures to improve linkages into Rhondda Cynon Taf;**
 - **Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services;**
 - **Strategic park and ride facility North of Junction 33 linked to the Rapid Transit Corridor and public transport node including Bus Gate to provide priority for public transport and limit unauthorised access by car to Junction 33;**
 - **Public transport node in close proximity to the employment uses, Park & Ride facility and Local Centre to the south of the site;**
 - **Improve the Llantrisant Road/ Cardiff Road junction**
- **Walking and cycling:**

- On and off-site measures to provide a network of high quality, safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including the new neighbourhood centre from the north, improved pedestrian/ cycling links to existing and proposed schools;
- Provide a safe crossing of Llantrisant Road;
- Creating an east-west connection between Public Rights of Way (Footpaths numbered 10 & 18)

Necessary Infrastructure

- 1 Local Centre within Site D including Primary Care facility and multifunctional community leisure facility including library facility;
- Education:1-2 new Primary Schools with 1 located in or adjacent to Local Centre, and financial contribution to existing Secondary Schools;
- Minimum of 12ha Open Space including 6ha of formal recreation, 3 playgrounds, 1 teen facility, and 1x 40 plot allotment site;
- Improve community facilities in the existing neighbourhood centre in Creigiau to provide new facilities for existing and new residents

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- Provide a range/ gradient of densities across the site with the highest density (minimum of 45-50+ dwellings per hectare) around the Local Centre to the south of the site. Medium density housing (35-45+ dwellings per hectare) will be provided on land close to Llantrisant Road and adjacent to the Rapid Transit Corridors and to the west of the land south of Creigiau. Lower densities will be provided on the elevated land west of Cardiff Road and to the west of the site North of Junction 33;
- Layouts on Sites D and E should reflect the interrelationships between the sites with delivery considered acceptable in tandem through different outlets with initial phases including the provision of the park and ride facility together with public transport enhancement measures;

- Ensure that the potential future delivery of the 'Metro' is not precluded by keeping a corridor through the sites (as depicted on the schematic framework) safeguarded from development and also ensuring that land uses, densities and layouts respond positively to its potential future provision;
- Exclude vehicular access onto the M4 except for part of the park and ride facility and part of the business area situated adjacent to the junction;
- Exclude through-traffic between both sites;
- Provide future vehicular, walking/ cycling access from the site North of Junction 33 to the 'flexibility allowance land' to the west;
- Facilitate interchange between local bus and rapid transit services;
- Local Centre to be located north of the business land and adjacent to the rapid transit interchange and Primary School and to include convenience goods floorspace plus other retail use of a scale and nature which accords with Plan retail policies;
- High quality business uses to reflect the strategic location of the site (excluding B8 uses) to be located adjacent to Junction 33 and an additional flexible local employment space to be located adjacent to the Motorway to the south west of the site;
- Provide a landscape buffer between employment and residential uses and along the boundary of the M4 to reduce impact;
- Provide safe and convenient pedestrian/ cycle links between the site and Creigiau village including links with existing Public Rights of Way;
- Effectively respond to landscape and biodiversity assets by:
 - Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:
 - Links between retained ancient woodland at Castell y Mynach, marshy area to the north and young woodland buffer strip alongside Llantrisant Road;
 - Links from the Nant Henstaff, through Coed Gwenybwllau, linking to the disused rail line and Pencoed Wood;

- Enhancing the disused rail line as a walking/ cycling and ecological corridor;
- Links to the countryside to the west;
- Linking corridors where possible between the above to provide a good network
- Ensuring that there is no detriment to the maintenance of the favourable conservation status of Great Crested Newts and Dormouse on the site including protection of the existing watercourses and provision of suitable compensatory planting to supplement existing retained habitats;
- Providing suitable buffers to retained woodlands and streams referred to above and other habitats including hedgerows within the sites;
- Effectively respond to heritage assets by:
 - Assessing and effectively addressing potential impacts on known assets including the Listed Buildings of Pencoed House, Church of St Elldeyrn and the Old Forge;

1. 4.60 Land North of Junction 33 on the M4 and South of Creigiau are two of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. As the sites are adjacent and separated only by Llantrisant Road, there is considered logic in setting out masterplanning and infrastructure requirements in a comprehensive manner but also including addressing site-specific issues for each site. The sites amounting to 141ha will help bring forward new homes, jobs and supporting infrastructure including a new strategic park and ride facility.

2. 4.61 The masterplanning process to date has reflected joint-working between parties relating to both sites to ensure a comprehensive approach is taken.

3. 4.62 This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

4. 4.63 The scale of the sites allows numerous outlets to be operating at any one time and will provide a wide range and choice of housing offer and opportunities for a variety of different tenures. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

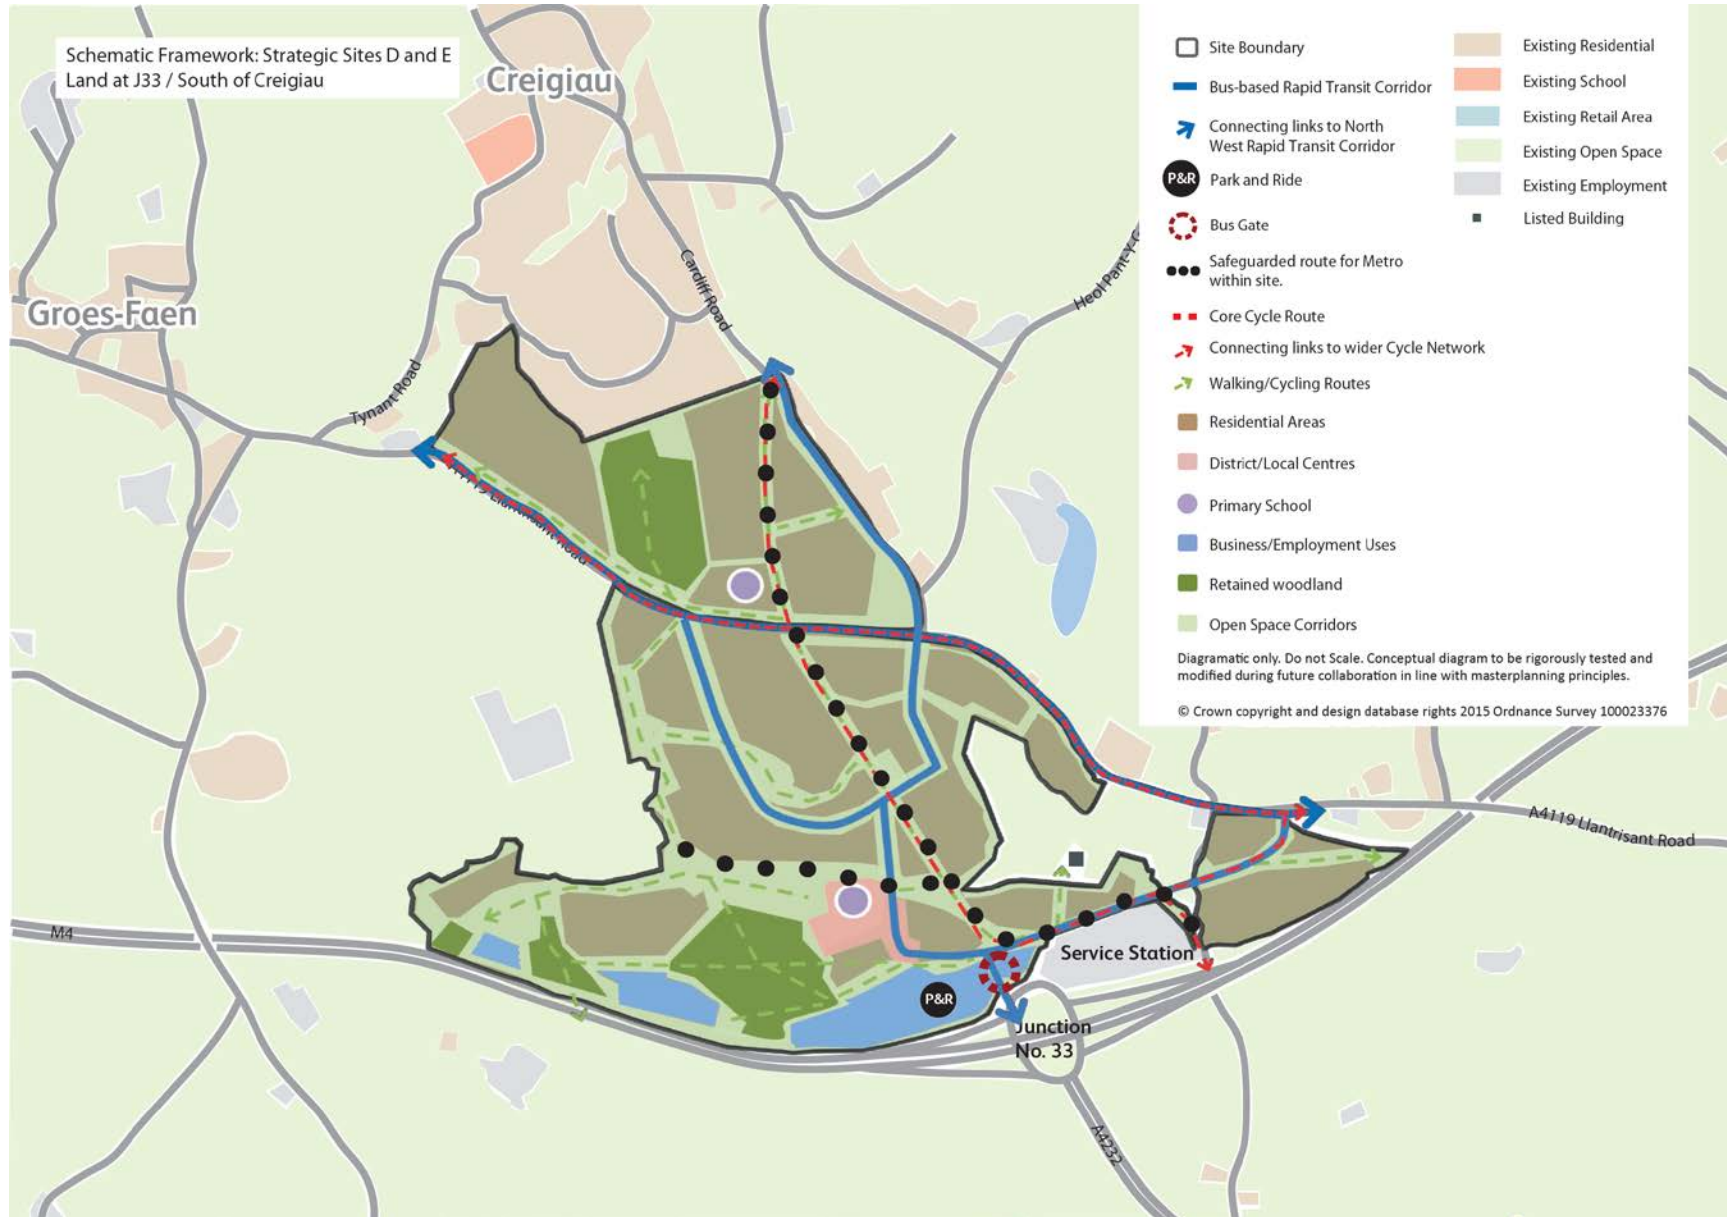

5- 4.64 Rapid Transit Corridors within the site North of Junction 33 will be bus-based and of sufficient width and otherwise designed, including the control of car parking, to allow the safe two-way passing of the largest vehicles. Bus priority measures will be provided at appropriate locations within the site to allow bus rapid transit to avoid queuing traffic. Bus-based Rapid Transit Corridors will link the site to the Western Bus Corridor with off-site bus priority measures provided to assist the flow of buses. Further off-site corridor enhancements will be provided on the Western Bus Corridor as shown on the Proposals Map and consistent with policy T2 in order to support delivery of the increased frequency and reliability of services. The integration of housing and supporting services and community infrastructure provides the opportunity for a high proportion of short, local trips to be made by walking and cycling. This will be made possible by integrating networks of high quality walking and cycling routes within development layouts and ensuring that the design of roads, streets, junctions and public spaces accommodate the natural 'desire lines' of people making trips on foot and by bicycle.

6. 4.65 Although details of the mode and potential alignments of the Metro have yet to be defined it is important that the development of these sites does not preclude the potential delivery of this strategic project. Work undertaken to date by the Welsh Government suggests numerous potential options in this area and there is currently no certainty on the detailed alignment. For example, there is uncertainty of the future mode and whether the route would be based on the existing disused rail line or whether it would be better routed elsewhere.

7- 4.66 Therefore, it would be inappropriate to allocate a precise alignment on the Proposals Map but there is a need to ensure future options are not prejudiced. This policy ensures that land is safeguarded from development along the potential Metro corridor and also that land uses, layouts and densities are developed to take account of the potential delivery of this strategic transportation project.

8. 4.67 The new Local Centre on Site D and new Primary School to be located within or adjoining it will be a focus for community uses and activities. Facilities will also be improved in the existing neighbourhood centre in Creigiau to provide new facilities for existing and new residents. The precise number of Primary Schools (1/2) will depend on the outcomes of future monitoring and delivery options relevant when the details of later phases are being assessed through the Development Management process. Specifically, consideration will be given to the merits of extending the existing Primary School at Creigiau as an alternative to the provision of a second new school.

9. 4.68 ~~The further future flexibility option Search Area B (to the west of the site North of Junction 33)~~ is not included within the Strategic Site allocation. This would only be triggered if necessary through future Plan review following annual monitoring indicating that the provision of new homes is proceeding beyond anticipated rates and justifies such a release within the last years of the plan period. Therefore, it is considered premature to factor in potential detailed infrastructure and masterplanning matters at this juncture relating to this land although the schematic framework identifies potential access to the site. However, as a minimum, this policy sets out the need to provide potential future vehicular, walking and cycling access from Site D to the 'flexibility allowance land' to the west. The formal monitoring framework provides an evidence-based process to inform any decisions on potential release in the last years of the plan period.

KP2(F): NORTH EAST CARDIFF (WEST OF PONTPRENNAU)

Land is allocated at North East Cardiff (West of Pontprennau), as defined on the Proposals Map, for a mixed-use comprehensive development of a minimum of 4,500 homes, employment and other associated community uses, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Provision of new bus-based Rapid Transit Corridors through the site providing links between the District/Local Centres including Bus Gates at access point to Cardiff Gate Business Park and St Mellons Road at the eastern edge of the site;**
 - **Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Eastern/Northern Bus Corridors and other routes within the North Eastern Rapid Transit Corridor including services linked to Strategic Site G, facilitating transfer/ improving interchange facilities to Rhymney Line rail services at Llanishen Station and Thornhill Station, and, employment facilities at St Mellons Business Park and Strategic Site H;**
 - **Off-site enhancements including bus priority measures to the Eastern/Northern Bus Corridor;**
 - **Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services;**
- **Walking and cycling:**
 - **On and off-site measures to provide safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including existing local centres and Schools at Pontprennau, Pentwyn, Lisvane and Cardiff Gate Business Park;**
 - **Links to off-site public transport destinations including Llanishen and Thornhill Rail Stations**

Necessary Infrastructure

- 1 centrally located District Centre and 1 Local Centre including Primary Care facility, Multifunctional community leisure facility including library facility, and financial contribution to upgrading of Llanishen and Pontprennau Leisure Centres;
- Education-1 new Secondary School, 3 new Primary Schools and financial contribution to existing Primary Schools;
- Minimum of 26ha Open Space including 13ha of formal recreation, 6 playgrounds including destination play area, 1 teen facility plus off-site contribution, and 2x 50 plot allotment sites

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- Provide a range of densities with high density (minimum of 45-50+ dwellings per hectare) mixed-use development within District/Local Centres and along rapid transit corridors. Medium density (35-45+ dwellings per hectare) around the edge of Pontprennau and to the north of the site. Lower densities to be provided around the edge of Lisvane;
- Initial phases towards the West of the site with middle phases towards the centre and south (including District/Local Centres) and later phases to the north and east of the site;
- Centrally located District/ Local Centres accessed by rapid transit corridors including interchange facilities between sustainable transport modes and accommodating a range of services including convenience goods floorspace plus other retail of a scale and nature which accord with Plan retail policies;
- Introduce measures to reduce impact of noise from the M4;
- Effectively integrate existing buildings into the design and layout;
- Retain and enhance Public Right of Way network within the site and provide safe, convenient and legible links to the countryside North of the M4, Nant Fawr corridor, Cardiff Gate Business Park and Pontprennau;
- Employment provision (B1 & B1(b)(c)) to be located in and adjoining the District Centre and adjacent to Cardiff Gate Business Park amounting to approximately 6.5ha;

- Provide good land use and transportation integration with the adjoining areas of Lisvane and Pontprennau;
- Effectively respond to landscape and biodiversity assets by:
 - Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:
 - Utilising the stream network (particularly the Nant Ty Draw, Nant Glandulais and Nant y Draenog) as core elements of new ecological corridors through the site;
 - Links from the Nant Fawr corridor south west of the site ensuring the corridor links to other open space corridors within the site;
 - ~~Enhancing the disused rail line as a walking/cycling and ecological corridor;~~
 - Links to access points to the countryside to the north west at Lisvane and underpasses below the M4;
 - Linking corridors where possible between the above to provide a good network;
 - Ensuring that there is no detriment to the maintenance of the favourable conservation status of Dormouse on the site including provision of suitable compensatory planting to supplement existing retained habitats including Malthouse Woods, other woodlands and hedgerows;
 - Providing suitable buffers to the Llanishen Reservoir SSSI, retained woodlands and streams referred to above and other habitats including hedgerows within the site;
- Effectively respond to heritage assets by:
 - Assessing and effectively addressing potential impacts on known assets including Listed Buildings within and near to the site;
- No development to take place within the C2 flood zone area forming part of the Nant Glandulais valley.

1. 4.69 North East Cardiff (West of Pontprennau) is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is the second largest Strategic Site (237 ha) within the Plan and relates to countryside located between Lisvane to the west, Pontprennau to the east and the M4 Motorway to the north.

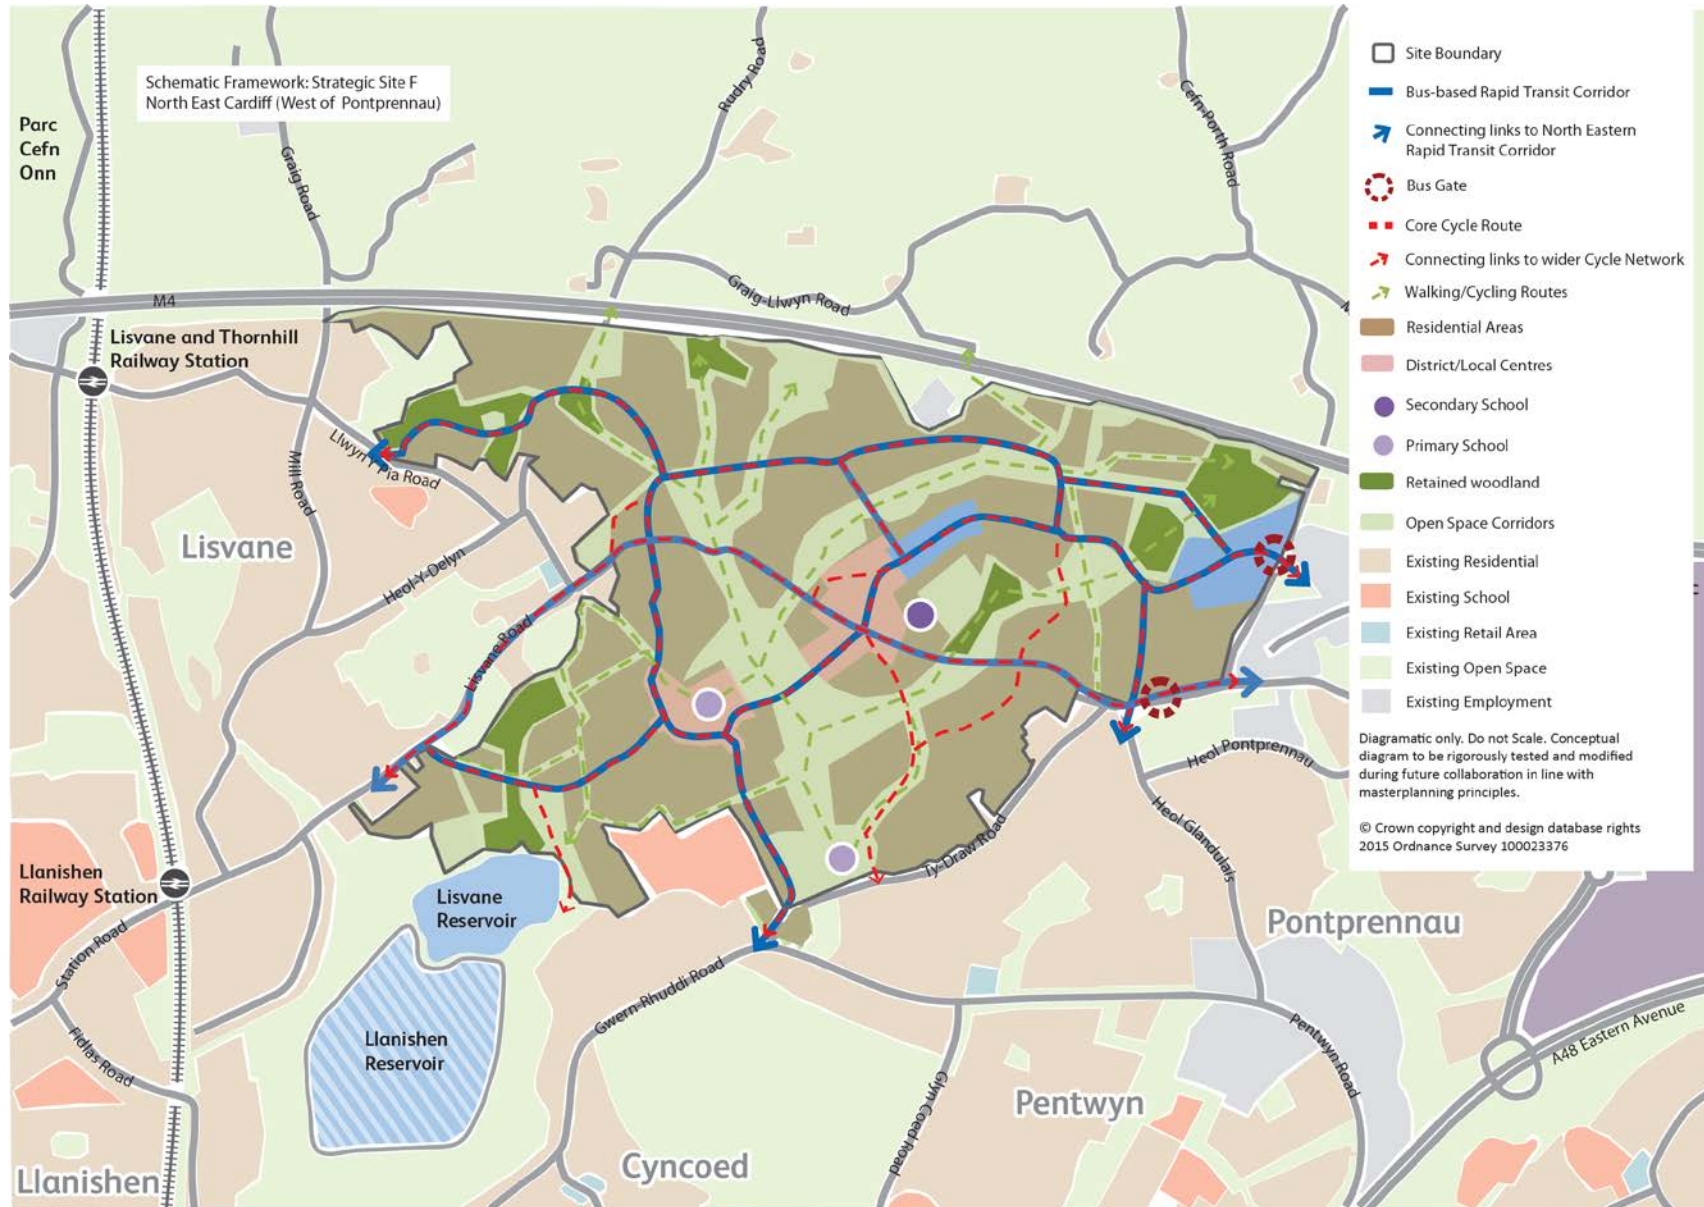

2. 4.70 ~~Most of the land is owned by two landowners and.~~ The Site will be delivered by a number of different developers operating out of

different outlets. This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

3. 4.71 The scale of the site allows numerous outlets to be operating at any one time in different parts of this large site and will provide a wide range and choice of housing offer and opportunities for a variety of different tenures. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

4. 4.72 Rapid Transit Corridors within the site will be bus-based and of sufficient width and otherwise designed, including the control of car parking, to allow the safe two-way passing of the largest vehicles. Bus priority measures will be provided at appropriate locations to allow bus rapid transit to avoid queuing traffic. Bus-based Rapid Transit Corridors will link the site to the Northern and Eastern Bus Corridors with off-site bus priority measures provided to assist the flow of buses. Further off-site corridor enhancements will be provided on the Northern and Eastern Bus Corridors as shown on the Proposals Map and consistent with policy T2 in order to support delivery of the increased frequency and reliability of services. The integration of housing and supporting services and community infrastructure provides the opportunity for a high proportion of short, local trips to be made by walking and cycling. This will be made possible by integrating networks of high quality walking and cycling routes within development layouts and ensuring that the design of roads, streets, junctions and public spaces accommodate the natural 'desire lines' of people making trips on foot and by bicycle.

5. 4.73 District and Local Centres will be the focus for community uses and activities including schools in close proximity. They will be well located in relation to sustainable transportation options and also link into the network of green corridors largely based on the existing stream network.

KP2(G): EAST OF PONTPRENNAU LINK ROAD

Land is allocated East of Pontprennau Link Road, as defined on the Proposals Map, for a housing-based scheme of a minimum of 1,300 homes with associated community uses, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Provision of new bus-based Rapid Transit Corridors through the site including links to the Local Centre and provision of Bus Gates at St Mellons Road at the north western edge of the site and Bridge Road to the south east of the site;**
 - **Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Eastern Bus Corridors and other routes within the North Eastern/Eastern Rapid Transit Corridor including services linked to Strategic Site F, facilitating transfer/ improving interchange facilities to Rhymney Line rail services at Llanishen Station and Thornhill Station, and, employment facilities at St Mellons Business Park and Strategic Site H;**
 - **Off-site enhancements including bus priority measures to the Eastern Bus Corridor;**
 - **Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services taking account of links with Strategic Site F;**
 - **Provide a bus-only route along Bridge Road**
- **Walking and cycling:**
 - **On and off-site measures to provide a network of high quality, safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including employment in Pontprennau, Pentwyn and Cardiff Gate Business Park;**
 - **Improve walking/cycling access at junction of Church Road/ A4232/Heol Pontprennau;**
 - **Provide a safe, attractive and convenient link from the site to the Rhymney Trail;**
 - **Enhance subway under A48, south of St Edeyrn's Church;**

- Provide cycle/pedestrian link between the subway under the A48 and Mill Lane, Llanrumney;
- Upgrade Rhymney Trail to provide shared pedestrian/cycle route between subway under A48, south of St Edeyrn's Church and the subway west of Pentwyn interchange

Necessary Infrastructure

- 1 centrally located Local Centre linked to rapid transit infrastructure and school facilities including Primary Care facility (Branch Surgery linked to Strategic Site F), multifunctional community facility, and financial contribution to upgrading of Pentwyn and Pontprennau Leisure Centres;
- Education-1 new Primary School located in or adjacent to the local Centre and financial contribution to provision of Secondary School at Strategic Site F;
- Minimum of 7.9ha Open Space including 3.9ha of formal recreation, 2 playgrounds, 1 teen facility, and 1x 26 plot allotment site

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

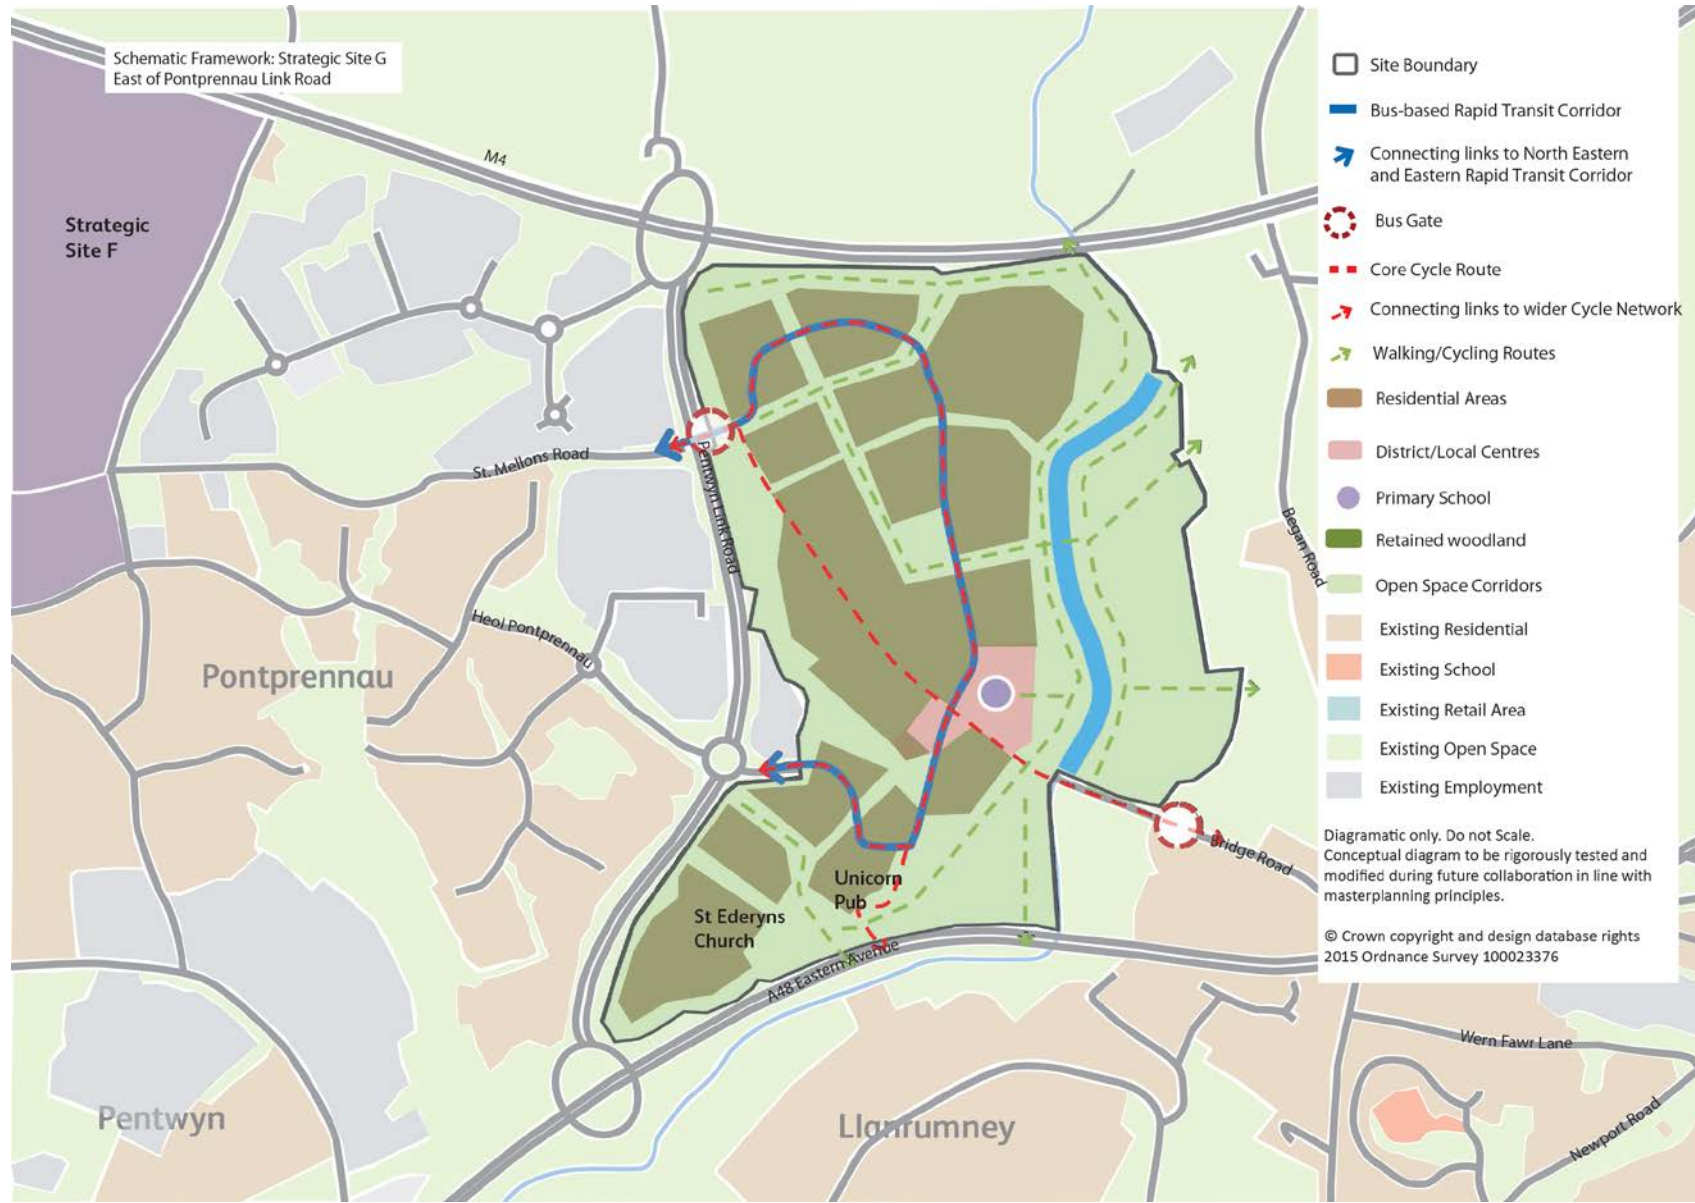

- Provide a range of densities with high density (minimum of 45-50+ dwellings per hectare) alongside rapid transit corridor towards centre of site, medium density (35-45+ dwellings per hectare) towards the north and lower densities alongside the riverside park;
- Initial phases in the south, middle phases towards the centre and later phases to the north;
- Local Centre to accommodate a range of services including convenience goods floorspace and other retail of a scale and nature which accords with Plan retail policies;
- Integrate cluster of low density buildings at St Julian's Manor/ House;
- Effectively respond to landscape and biodiversity assets by:
 - Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:
 - Creating a riverside park incorporating the Rhymney Trail and other Public Rights of Way on an extensive

- area of land to the east of the site with links running west into the site;
- Retaining the green buffer along the A4232 (primarily as an ecological resource and landscape role);
- Links from riverside park to countryside to north and Rhymney Valley to south west;
- Linking corridors where possible between the above to provide a good network
- Ensuring that there is no detriment to the maintenance of the favourable conservation status of Dormouse on the site including provision of suitable compensatory planting to supplement existing retained habitats including compensatory planting on the southern and eastern site boundaries;
- Providing suitable buffers to retained habitats, particularly the hedgerows within the site;
- Effectively respond to heritage assets by:
 - Assessing and effectively addressing potential impacts on known assets including Listed Buildings within and near to the site;
 - Preserving the village character around Llanedeyrn village and effectively integrate existing buildings into layout including protecting view of St Edeyrn's Church from the A48;
- Effectively respond to heritage assets by:
 - Assessing and addressing potential impacts on the Listed Buildings of Unicorn Public House, Church of St Edeyrn, Bridge House Farm, St Julian's Manor House and associated curtilage structures;
- Protect water quality of River Rhymney and Nant Mwlán;
- Address issues with Japanese Knotweed along the River Rhymney;
- No development to take place in C2 flood zone forming part of River Rhymney valley.

1.4.74 Land East of Pontprennau Link Road forms one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It amounts to 80.7 ha and is located in countryside located between the Pontprennau Link Road to the West, River Rhymney valley to the east, the A48 to the south and the M4 Motorway to the north.

2. 4.75 Most of the land is owned by a single landowner and has the benefit of Outline Planning Permission for 1,020 homes together with supporting infrastructure and facilities. A Section 106 Agreement has been signed and secures the phased delivery of supporting infrastructure and facilities including the provision of a Primary School on site with trigger clauses securing delivery.

3. 4.76 Other parts of the site not covered by the Outline Planning Consent will be considered in the context of this policy, together with other relevant policies which will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process

KP2(H): SOUTH OF ST MELLONS BUSINESS PARK

Land is allocated South of St Mellons Business Park, as defined on the Proposals Map, for a strategic employment site together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - **Provision of transport hub including new rail station served by relief line rail services connecting to the city centre and services to Cardiff Airport and London via Cardiff Central;**
 - **Provision of park and ride facility;**
 - **Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Eastern Bus Corridors and other routes within the North Eastern/Eastern Rapid Transit Corridor including services linked to the City Centre and Strategic Sites G and F;**
- **Walking and Cycling:**
 - **Provide high quality on-site and off-site walking and cycling links and facilities to maximise walking and cycling access to the site from neighbouring communities including Trowbridge and St Mellons;**
- **Flood mitigation/ defences:**
 - **Flood mitigation works including raising the development plateaus and providing compensatory flood storage areas south of the rail line**

Necessary Infrastructure

- **Retain the area of land to the east of Cypress Drive and Faendre Reen as green space linked with Hendre Lake Park;**
- **If the infilling of any reen or field ditch proves to be unavoidable at the application stage it should be realigned (with at least an equal capacity) around the perimeter of the development or a compensatory length of ditch should be provided elsewhere within the site**

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Provide 44 ha of business land capable of accommodating up to 90,000 square metres campus style high quality**

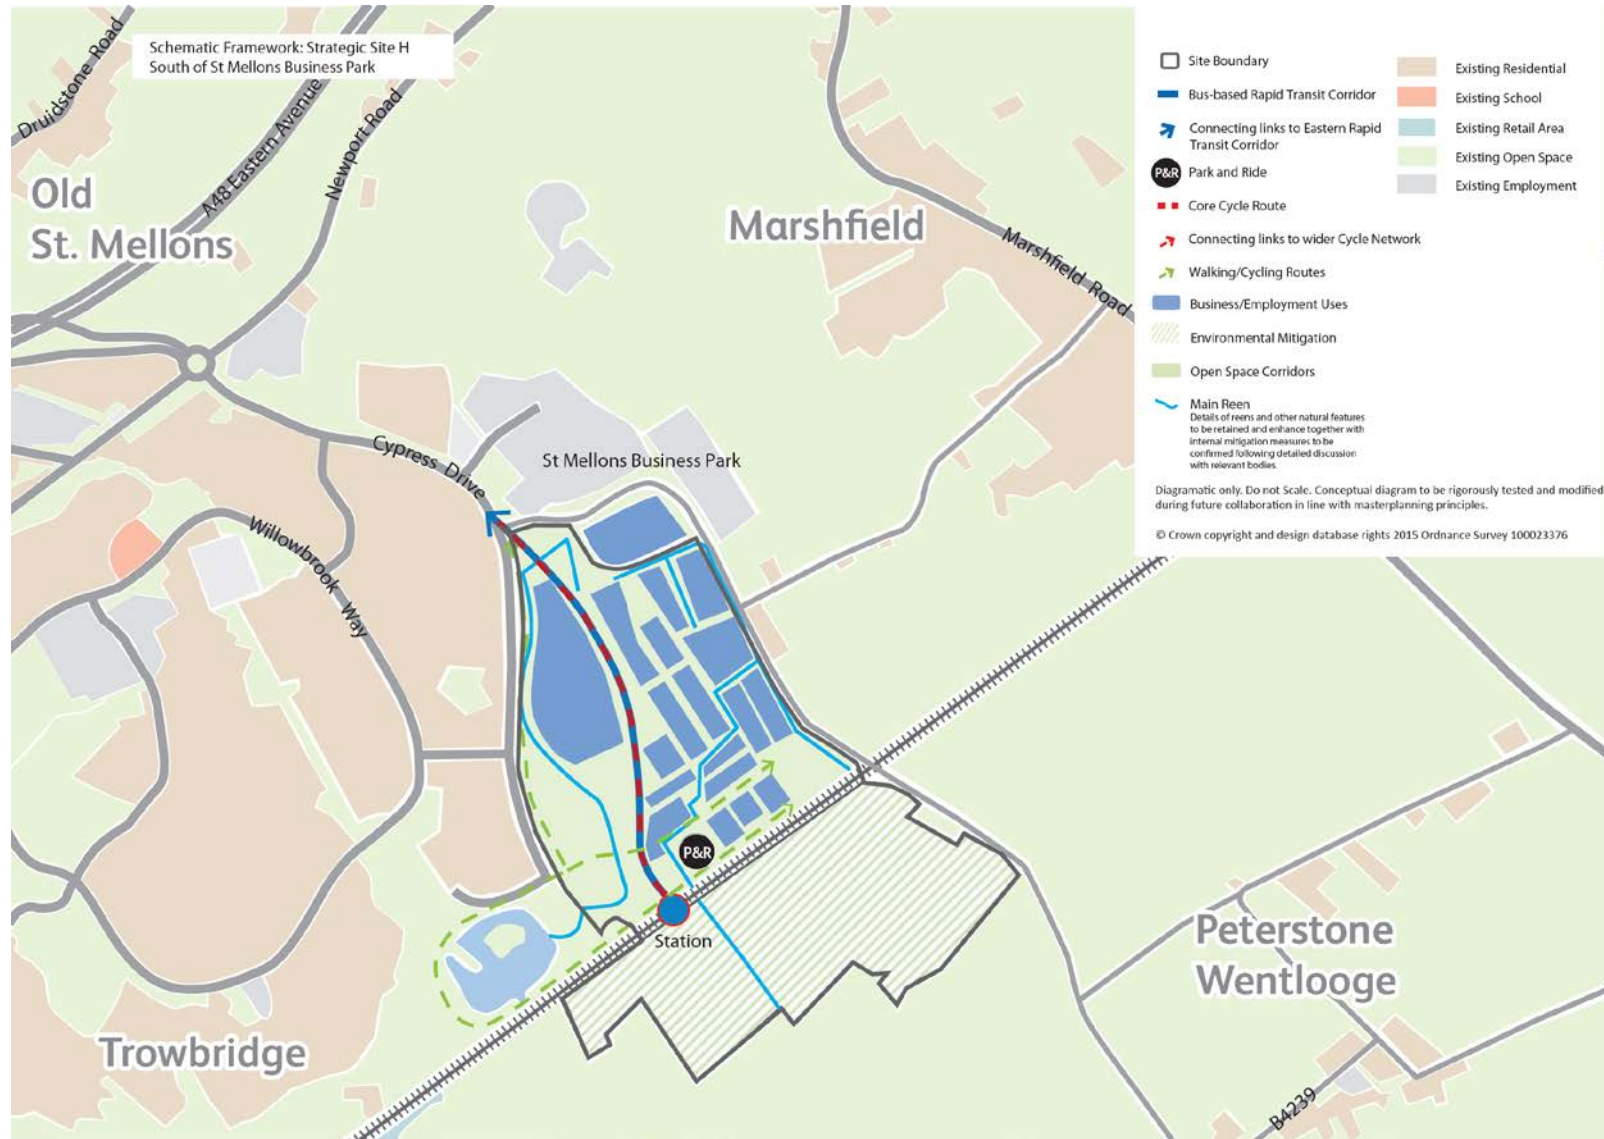

development similar to existing business park at St Mellons in a location which benefits from Assisted Area Status;

- Integrate the site with local facilities in the surrounding area;
- Effectively respond to landscape and biodiversity assets by:
 - Protecting the value of the Gwent Levels SSSI with development being a minimum of 12.5 metres from main reens and 7 metres from field ditches;
 - Ensuring that all development accords with the Natural Resources Wales (formerly Countryside Council for Wales) Wentloog Levels guidelines “Nature Conservation and Physical Developments on the Gwent Levels – the current and future implications”;
 - Integrating any landscape natural features, such as existing reens and hedgerows into the design including provision of suitable buffers;
 - Protecting the Marshfield SINIC;
 - Respecting the intricate reen network and exiting hedgerows;
 - Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:
 - Links between retained reens and hedgerows;
 - Green links to Hendre Lake Park which respond to the natural landscape value of the area;
 - Ensuring that there is no detriment to the maintenance of the favourable conservation status of the Shrill Carder Bee by carrying out a survey, and if found, provide appropriate compensatory measures;
 - Ensuring that there is no detriment to the maintenance of the favourable conservation status of European Protected Species including bats, otters and reptiles including provision of suitable compensatory planting to supplement existing retained habitats;
- Effectively respond to heritage assets by:
 - Assessing and effectively addressing potential impacts on known assets including the Wentloog Levels Archaeologically Sensitive Area and registered Landscape of Outstanding Historic Interest;

1. 4.77 This is an important employment site which contributes to the necessary range and choice of types of employment opportunities in the city. Its location is particularly well placed to provide accessible job opportunities to areas of known deprivation and its position adjacent to the main rail line offers significant opportunities for a new station together with supporting sustainable transportation infrastructure. This proposal is a long-standing proposal in the Regional Transport Plan, is identified in the emerging work on the South Wales Metro concept and has Welsh Government support. However, the precise location of the station is yet to be defined so it would be premature to show a specific allocation for this use on the Proposals Map but it is shown within the Schematic Framework and referenced within the policy.

2. 4.78 It is recognised that the area possesses environmental and flood risk constraints. In terms of environmental issues, the majority of the area is a Site of Special Scientific Interest with the reens forming the major interest. Run-off will enter the River Severn Estuary, a European designated site so drainage and potential disturbance to birds will need to be suitably addressed. The land also meets the qualifying criteria using the LANDMAP landscape methodology for Special Landscape Area status. Furthermore, there are significant historic interests and the land is designated as a Historic Landscape and Archaeologically Sensitive Area.

3. 4.79 These environmental and flood risk constraints have been carefully examined so that the mitigation and enhancement measures embedded within this policy provide an appropriate framework at this level to address these issues. These measures will provide a framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process. In this way, the significant social and economic benefits brought forward by this allocation can be delivered whilst carefully responding to and putting in place the policy framework to effectively address the known constraints relating to the site.

2. Putting in place a framework to manage future growth and encourage high quality, sustainable design

~~KP3(A): GREEN BELT~~

~~In order to strategically manage the urban form of Cardiff and to protect the setting of the urban area, a Green Belt is proposed on land North of the M4 as shown on the Proposals Map. Within this area development which prejudices the open nature of this land will not be permitted. Positive biodiversity, landscape, climate change mitigation and informal recreational management and enhancement measures will be encouraged in this area to further enhance the long term role of the area as a key natural resource benefiting the city.~~

~~4.69~~ Together with Key Policy KP3(B), this Policy seeks to strategically manage the future built form of Cardiff's urban area. Supporting Document 3 evidences the assessment of the potential for a Green Belt in Cardiff. It concludes that designation is considered appropriate for Cardiff and would accord with national guidance relating to Green Belts as set out in Planning Policy Wales (PPW).

~~4.70~~ Importantly, given that the Plan proposes some significant greenfield releases, this Policy provides some longer term certainty as to the future urban form of the city. In this respect, it should be noted that land within a Green Belt should be protected for a longer period than the Plan period. This is also a reason why a Green Belt policy is required rather than a Green Wedge policy which would not give the long term protection considered necessary to effectively manage urban form.

~~4.71~~ The designated area forms land North of the M4 in Cardiff as shown on the Proposals Map. This land unquestionably forms a distinctive, prominent and well known green backdrop to the city forming a strategically important setting to the urban area. The land is also generally well contained by the strong physical boundary of the M4 Motorway to the south which is an important requirement of any designated Green Belt area.

~~4.72~~ With regard to land immediately to the North of the proposed Green Belt within Caerphilly and Rhondda Cynon Taff, it is noted that policies set

~~out in adopted LDPs very much support development restraint. For example, within Caerphilly, the Caerphilly Mountain Area is all outside the settlement boundaries and a combination of Special Landscape Area and Visually Important Local Landscape designations apply across the whole area. Within Rhondda Cynon Taff, land to the North of the proposed Green Belt carries a Special Landscape Area designation. Future LDP Reviews for these areas or any strategic planning measures which may be introduced in future years could consider an identifying extension of the Green Belt area in accordance with national guidance. However, at this juncture, it is considered that Green Belt designation in Cardiff creates no obvious cross-boundary anomalies or direct policy conflicts.~~

~~**4.73** The tightness of Cardiff's administrative boundaries to the urban area to parts of the West and East, limits scope for a Green Belt designation in these locations. For example, the visually prominent Leckwith Escarpment is located in the Vale of Glamorgan but is protected by a Special Landscape Area designation in the Vale of Glamorgan Development Plan. In fact, most of the land within the Vale of Glamorgan immediately adjacent to Cardiff carries with it either Special Landscape Area or Green Wedge (around Culverhouse Cross) status. This provides an element of protection to Cardiff's setting to the West.~~

~~**4.74** With regard to Newport, it is noteworthy that Newport's adopted Unitary Development Plan includes a Green Belt designation on land immediately East of Cardiff's boundary. This puts in place measures to prevent the coalescence of Cardiff and Newport. It extends from the M4 to the coast running as far East as Castleton and Marshfield providing long-term protection for this large area. In places, the edge of Cardiff's urban area runs right up to the administrative boundary and Green Belt designation within Newport but pockets of countryside remain in Cardiff around Old St Mellons and North of the sea wall.~~

~~**4.75** Green Belt designation is not considered appropriate for either of these areas as it is important that there remains a sufficient range of potential development land available in the longer term. Including such areas runs a significant risk of not taking full account of national guidance in this respect and undermining the Policy. The Green Belt designation in Newport is considered sufficient to prevent settlement coalescence between Cardiff and Newport and there is no demonstrable evidence supporting a wider designated area to support this objective. However,~~

~~there are clear and compelling other reasons for a Green Belt in other areas within Cardiff and for other reasons which are enlarged upon below.~~

~~**4.76** The proposed designated Green Belt is considered essential to protect the strategically significant rising land North of the M4 which is critical to the overall identity of Cardiff and much cherished by its residents. It should also be noted that existing policies are not sufficient to protect the open nature of this land.~~

~~**4.77** Significant development pressures exert on this area. This has been evidenced through planning applications for dwelling conversions, rebuilds and related structures which are having a cumulative impact on landscape quality. Furthermore, numerous applications have been submitted for equine-related activities and other uses which are again beginning to have a cumulative impact on this highly visible and sensitive area. Significant Candidate Sites have also been submitted within the area.~~

~~**4.78** The designation of a Green Belt with its associated strict policy to preserve the open nature of this land is the only policy tool available to the Council to prevent the long term deterioration of this visually prominent land providing a strategic setting to the city. It is very much recognised by the public as being a key distinctive element which helps defines the very nature of Cardiff in the same way that other readily recognised areas are perceived and valued such as Cardiff Bay and the City Centre.~~

~~**4.79** Although Green Belts are not intended to be a tool to protect areas of high intrinsic value, the land is of high environmental value and also a popular area for informal recreation. The Policy therefore also has a positive aspect to build upon the long term certainty of protection by putting in place support for management and enhancement measures. For example, the long term protection can act as a stimulus to consider landscape-scale initiatives addressing such matters as carbon sinks, habitat creation and management initiatives and wider green infrastructure related projects where long term certainty would support planning and delivery.~~

~~**4.80** PPW provides specific guidance on the consideration of planning applications within the Green Belt. It provides a presumption against inappropriate development and outlines the very exceptional~~

~~circumstances where other considerations may clearly outweigh the harm to protecting the openness of the Green Belt.~~

Insert new KP3(A) Green Wedge to replace existing KP3 (A)

KP3(A): GREEN WEDGE

In order to strategically manage the urban form of Cardiff and to protect the setting of the urban area, a Green Wedge is proposed on land North of the M4 as shown on the Proposals Map. Within this area development which prejudices the open nature of this land will not be permitted. Positive biodiversity, landscape, climate change mitigation and informal recreational management and enhancement measures will be encouraged in this area to further enhance the long term role of the area as a key natural resource benefiting the city.

4.80 Together with Key Policy KP3(B), this Policy seeks to strategically manage the future built form of Cardiff's urban area. The designated area forms land North of the M4 in Cardiff as shown on the Proposals Map. This land unquestionably forms a distinctive, prominent and well known green backdrop to the city forming a strategically important setting to the urban area. The land is also generally well contained by the strong physical boundary of the M4 Motorway to the south.

4.81 PPW provides specific guidance on the consideration of planning applications within the Green Wedge designation.

KP3(B): SETTLEMENT BOUNDARIES

In order to strategically manage the spatial growth of Cardiff, settlement boundaries are proposed as shown on the Proposals Map. In all areas outside the defined settlement boundaries, otherwise referred to as countryside, there will be a corresponding presumption against inappropriate development.

4.82 Cardiff's settlement boundaries are a key mechanism for helping to manage growth by defining the area within which development would normally be permitted, subject to material planning considerations. This

Policy compliments the Green Wedge Key Policy (KP3(A)) set out above. The policy will impose a strict control on development of all countryside in Cardiff outside the identified settlement boundaries as shown on the Proposals Map. Detailed Policy EN1 provides more guidance on the interpretation of this Policy approach.

4.83 Cardiff's countryside is a valuable and finite resource which is under increasing pressure from all kinds of development due to its proximity to the urban area, including farm diversification and equine-related proposals, and because of the large number of properties and small parcels of land in different ownerships spread throughout the countryside. Whilst it is necessary to encourage sensitive proposals that support a working countryside, Cardiff's countryside is particularly vulnerable to the cumulative impact of insensitive new developments that may harm its character and appearance together with 'suburbanising' attractive landscapes. Where it can be demonstrated that development outside settlement boundaries is acceptable in principle, other detailed Deposit-LDP policies provide the framework to consider the merits or otherwise of proposals along with national planning policy including TAN 6: Planning for Sustainable Rural Communities.

4.84 Cardiff's settlement boundaries have been carefully assessed and follow logical, existing boundaries wherever possible. Full account has been taken of the particular characteristics, usage and degree of openness of specific parcels of land together with their inter-relationships with surrounding land. Proposals located on the urban fringe which have an extant planning permission may have been incorporated within the settlement boundaries. Cardiff's settlement boundaries are illustrated on the Proposals Map.

KP4: MASTERPLANNING APPROACH

Major development should accord with:

(i) The following Masterplanning General Principles:

- 1. Development schemes that are planned in a comprehensive and integrated manner reflecting partnership working and setting out the phasing of development along with a timely provision of supporting infrastructure. Masterplans will need to encompass the whole of a development area regardless of land ownership patterns, and this will require partnership working, involving all relevant parties;**
- 2. High density residential and mixed-use development is focused along public transport corridors and in neighbourhood centres with lower densities provided elsewhere to deliver an overall range and choice to meet different needs;**
- 3. Dedicated sustainable transport corridors including provision for public transport, cycling and walking which will form key elements of the overall master plan and effectively link into the wider network;**
- 4. Walking, cycling and public transport will be attractive, practical and convenient travel choices for all;**
- 5. Provision of a full range of social and community facilities will be concentrated within mixed use neighbourhood centres located along public transport corridors and easily accessed by walking and cycling;**
- 6. The masterplanning process effectively responds to the local context and the context of climate change, to create new well designed neighbourhoods with a distinctive character which residents will be proud of;**
- 7. New development responds to local deficiencies and provides good connectivity to adjoining areas and is informed by feedback from existing communities;**
- 8. Multi-functional and connected green open spaces form strategically important links to the surrounding area to provide routes for people and wildlife and open spaces for sports, recreation and play;**
- 9. Sympathetically integrate existing landscape, biodiversity and historic features of the site into the development taking opportunities to protect, enhance and manage important features along with mitigation and enhancement measures to provide satisfactory compensatory measures;**
- 10. Innovative and creative energy, management of surface water and waste management solutions are adopted to make new developments more environmentally sustainable ; and**

(ii) Guidance set out in Site-Specific Masterplanning Frameworks, where prepared.

4.87 5 In order to more effectively manage the form, uses, transportation solutions, phasing and appearance of major new developments, the Deposit LDP sets out a 'masterplanning approach'. This will provide greater certainty to developers, the public and all other interested parties. The overall aim will be for the Council to set out a broad framework at the outset which will provide an overarching context for more detailed design and implementation work to follow. This Policy relates to all strategic sites and any other major new developments which may emerge over the Plan period.

~~4.85 The outputs of this approach are set out in Supporting Document No. 16 which includes:-~~

~~**General Principles:** 10 General Principles based on different themes considered essential to create new sustainable neighbourhoods. These principles have been agreed by the Cabinet Meeting of 16th May, 2013 and relate to all sites, strategic or non-strategic, greenfield or brownfield;~~

~~**Strategic Schematic Framework:** To provide a link between the General Principles and Site Specific Principles, 3 county-wide plans together with supporting text will provide a spatial context relating to landscape, movement and neighbourhood factors;~~

~~**Site-Specific Framework:** Working within the context of the first 2 outputs, this output will not be overly prescriptive but give a spatial indication of land uses, transportation measures and key open space corridors together with information on proposed densities, infrastructure and phasing of the strategic sites allocated in the Deposit LDP. It is intended that following consideration of consultation responses, that the site-specific framework will be drafted into SPG and follow the normal SPG consultation process prior to the LDP examination; and~~

~~**Area-Based Masterplans:** Detailed Masterplans will be worked up by the landowners/developers with the context of the framework prepared by the Council as set out in the Deposit LDP supporting information. These will contain a greater level of detail than the over-arching framework and can assist in the examination of the LDP together with providing a context for the phased submission of planning applications for development sites.~~

4.86 With regard to Strategic Sites, policies KP2(A) to KP2(H) set out the infrastructure and masterplanning requirements for each of the sites which are shown indicatively, where appropriate, on Schematic

Frameworks. To avoid repetition and unnecessarily long policies, only site-specific and not generic requirements have been articulated and embedded in the policy relating to each Strategic Site.

4.87 The infrastructure requirements contained within policies KP2(A) to KP2(H) reflect the level of detailed information known. Future updates to the Infrastructure Plan will allow such information to be regularly updated to reflect prevailing circumstances and show more detail when it is known. It would be premature and unhelpful to include overly prescriptive directions in the Plan where detailed matters are more appropriately considered through the Development Management process but within the context of the framework embedded within the Plan. In this way, the maximum possible certainty can be given without setting out unsupported aspirations.

4.88 This policy, in conjunction with other relevant policies, will provide the masterplanning framework for landowners and developers to prepare Parameter Plans and Master Plans for major new development proposals, which will inform the Development Management process.

KP5: GOOD QUALITY AND SUSTAINABLE DESIGN

To help support the development of Cardiff as a world-class European Capital City, all new development will be required to be of a high quality, sustainable design and make a positive contribution to the creation of distinctive communities, places and spaces by:

- i. Responding to the local character and context of the built and landscape setting so that layout, scale, form, massing, height, density, colour, materials, detailing and impact on the built and natural heritage are all addressed within development proposals;**
- ii. Providing legible development which is easy to get around and which ensures a sense of continuity and enclosure;**
- iii. Providing a diversity of land uses to create balanced communities and add vibrancy throughout the day;**
- iv. Creating interconnected streets, squares and spaces as distinctive places, which are safe, accessible, vibrant and secure and incorporate public art where appropriate;**

- v. **Providing a healthy and convenient environment for all users that supports the principles of community safety, encourages walking and cycling, enables employment, essential services and community facilities to be accessible by sustainable transport and maximises the contribution of networks of multi-functional and connected open spaces to encourage healthier lifestyles;**
- vi. **Maximising renewable energy solutions;**
- vii. **Achieve a resource efficient and climate responsive design that provides sustainable water and waste management solutions and minimise emissions from transport, homes and industry;**
- viii. **Achieving an adaptable design that can respond to future social, economic, technological and environmental requirements;**
- (ix) "Promoting the efficient use of land, developing at highest practicable densities and where appropriate achieving the remediation of ~~contaminated~~ land contamination;"**
- x. **Ensuring no undue effect on the amenity of neighbouring occupiers and connecting positively to surrounding communities;**
- xi. **Fostering inclusive design, ensuring buildings, streets and spaces are accessible to all users and is adaptable to future changes in lifestyle; and**
- xii. **Locating Tall buildings in locations which are highly accessible through walking and public transport and within an existing or proposed cluster of tall buildings.**

4.402 89 High quality sustainable design is vital if Cardiff is to meet the objectives set out in the Vision and develop as a world-class capital. More specifically, good design plays a number of significant roles: tackling climate change; protecting and enhancing Cardiff's natural and built environment; protecting local distinctiveness; attracting investment and promoting social inclusion, health and quality of life.

4.403 90 Good design therefore goes beyond traditional aesthetic considerations and should be an aim for all development proposals within Cardiff, regardless of their scale. Together with the masterplanning approach set out in Key Policy KP4, above, and relevant Detailed Policies, it is considered that the Plan provides a sound policy framework to ensure the best possible design solutions are secured as the Plan is implemented. Implementation of this Policy, which is aimed in part at improving water resource use efficiency, will ensure adequate water supply without adverse impacts on the River Usk and River Wye SACs, thereby helping to

avoid the likelihood that this Plan will have a significant effect upon European designated sites. Implementation of this Policy will also reduce emission of air, water and ground pollutants, thereby offsetting increases in pollution arising from implementation of other policies in the Plan. This would contribute to avoiding significant effects upon European Sites.

4.104 91 ~~There is currently a~~ A range of design-related SPG for different forms of development. ~~These~~ will be updated and consolidated as summarised in Appendix ~~5~~ 4 to provide full guidance on the detailed interpretation of this Policy.

3. Bringing forward new infrastructure

KP6: NEW INFRASTRUCTURE

KP6: NEW INFRASTRUCTURE

New development will make appropriate provision for, or contribute towards, ~~the~~ all essential, enabling and necessary infrastructure required as a consequence of the proposed development in accordance with Planning Policy Guidance. Such infrastructure will be delivered in a timely manner to meet the needs of existing and planned communities and includes the following aspects which may be required ~~subject~~ having regard to the nature, scale and location ~~and details~~ of the ~~proposed~~ development:

Essential / Enabling Infrastructure:

- Transportation and highways including access, circulation, parking, public transport provision, walking and cycling;
- Utility services;
- Flood mitigation / defences;

Necessary Infrastructure:

- Affordable Housing;
 - Schools and education;
 - Health and social care;
 - Community buildings and facilities including District and Local Centre improvements;
 - Local employment and training including replacement employment opportunities where relevant;
 - Community safety initiatives;
 - Open space, recreational facilities, playgrounds, allotments;
 - Protection, management, enhancement and mitigation measures relating to the natural and built environment;
 - Public realm improvements and public art;
 - Waste management facilities including recycling and services;
 - District heating and sustainable energy infrastructure; ~~and~~
- ~~Other requirements~~
- ~~Other facilities and services considered necessary.~~

~~4.89~~ 4.92 Policy KP6 seeks to ensure that new developments, irrespective of their size, location, or land use, make appropriate provision for infrastructure. Specific infrastructure requirements will vary in different locations and be dependent upon the scale and nature of proposed development. Infrastructure may be required to facilitate development (~~essential / enabling such as highways or utilities~~) or can be required to make a development acceptable (~~necessary such as schools, community facilities, open space~~). For example, it may include elements from the list contained as part of the Policy, which is not exhaustive, but gives an indication of the potential scope of infrastructure which may be required.

- Category 1: Essential / Enabling Infrastructure (to facilitate development) - Those items which will need to be delivered prior to, or from the commencement of the relevant phases of development (e.g. transportation / highways infrastructure, utility services and flood mitigation / defences).
- Category 2: Necessary Infrastructure (to make development acceptable) - Items which need to be phased and implemented alongside new development, to ensure that areas are served with appropriate facilities over time (e.g. schools and recreational open space)'.

4.90 3 The list serves to give a general indication only as each topic may have complex requirements. For example transportation infrastructure could include elements of the following:

- Routes and facilities for walking and cycling comprising both on-road and off-road improvements;
- Rapid transit corridors, including heavy rail, light rail, tram train and bus rapid transit;
- Key bus corridors and the wider bus network including bus priority measures and passenger facilities;
- The rail network and rail services including new rail stations, station improvements and facilities for rail freight;
- Transport interchanges to support integration between modes including, bus and rail stations, facilities for bus and rail-based park and ride, park and share, passenger drop off, taxis, park and cycle, coach parking, overnight lorry parking and water transport;
- Designated freight routes and freight transfer facilities;
- The road network, particularly measures to make better use of existing highway capacity;
 - Transport by river (including Cardiff Bay); and

- Port and shipping facilities.

4.94 With regard to Strategic Sites, policies KP2(A)-KP2(H) provide clear guidance on the Council's infrastructure and masterplanning requirements. This information will be cross-referenced to the Cardiff Infrastructure Plan which is a 'living document' sitting alongside the LDP. The Infrastructure Plan is directly linked to the LDP Monitoring Framework and will be regularly updated, so as more details are established they can be incorporated into the document.

~~4.94_5 Further work has therefore been undertaken to supplement the Policy and is included in Supporting Document 6 (Infrastructure Plan) which provides details and evidence of the infrastructure that is required to support the planned level of growth. The Infrastructure Plan also identifies the potential costs of such infrastructure provision, potential funding mechanisms and / sources of funding and provides an indication of phasing requirements. The diagram set out below shows some of the potential funding sources for infrastructure provision. However, at this stage it~~ It is important to note that there are numerous potential funding sources and ~~that the potential sources~~ those shown on the diagram raise peripheral issues which require further discussion and work to investigate the feasibility of securing funding through these means.

4.92 6 Within larger sites, which are the subject of detailed masterplanning and phasing, it is likely that necessary infrastructure can be delivered as part of comprehensive mixed-use development. This infrastructure could be delivered through planning obligations or by direct intervention from service/infrastructure providers. In all cases, the early identification of infrastructure requirements and a commitment from developers and service providers to work in partnership will help ensure that all necessary infrastructure can be planned, delivered and managed in an orderly and timely manner.

4.93 7 The provision of flexible, multi-functional buildings and places will allow for essential services to be provided, whilst allowing communities to define and re-define their infrastructure requirements over time. A strong commitment to shared community buildings, services, their management and maintenance will ensure that facilities are at the heart of the community, whilst reducing overall costs to both developers and service providers. The principle of community buildings integrated within multi-function “hubs” (for example, the new @Loudoun development in Butetown) is a trend which is set to continue. The Infrastructure Plan (~~Supporting Document 6~~) provides further information regarding potential opportunities for shared premises as well as an indication of compatible uses and services.

~~4.94~~ 8 A Community Infrastructure Levy (CIL) for Cardiff is being progressed. ~~will be progressed following the adoption of the Plan.~~ The balance between site masterplanning, planning obligations and CIL to deliver infrastructure will be informed by site viability, dialogue with developers and the availability of other funding sources. Detailed Policy KP7 (Planning Obligations) provides further detail and describes those infrastructure requirements which may be delivered through planning obligations.

~~4.95~~ There may also be additional requirements depending on the scale, nature, location and phasing of proposed developments to support the future needs of infrastructure providers and the communities they serve. Further detailed work will be undertaken following consultation on the Deposit LDP to fine tune requirements and delivery sources. This will include identifying in more detail the different ways in which infrastructure can be provided.

KP7: PLANNING OBLIGATIONS

Planning obligations will be sought to mitigate any impacts directly related to the development and will be assessed on a case by case basis in line with Planning Policy Guidance.

~~4.96~~ 99 Planning obligations are a means of overcoming obstacles to the grant of planning permission. They are attached to planning permissions and are commitments by developers to undertake necessary works or make financial contributions that cannot be secured by condition or other statutory means.

~~4.97~~ 100 New development often generates additional demands upon existing services, facilities, infrastructure and the environment. Planning obligations are a means of seeking contributions from developers towards these demands, as well as negotiating benefits that improve the standard of development proposals by providing necessary infrastructure and community benefits.

~~4.98~~ 101 The legislative and policy framework governing the use of planning obligations is provided in PPW, Community Infrastructure Levy Regulations 2010 (as amended) and Welsh Office Circular 13/97 'Planning Obligations' (or subsequent versions).

~~4.99~~ 102 The CIL Regulations require there to be no overlap between infrastructure funded from CIL and what can be delivered through planning obligations. To avoid duplication, and to provide clarity to developers, the Authority will publish a list

(Regulation 123 List) of the infrastructure which will be funded through the CIL. For infrastructure not included on the Regulation 123 List, it may be appropriate to secure necessary infrastructure through planning obligations.

4.400-103- Obligations will be sought from a developer to:

- Restrict the development or use of land;
- Require land to be used in a specific way;
- Require operations or activities to be carried out; or
- Require payments to be made to the authority.

4.104 4 They will be sought where they are:

- ~~Necessary to make a proposal acceptable in land use planning terms;~~
- ~~Relevant to planning; and~~
- ~~Directly related to the proposed development.~~
- Necessary to make the development acceptable in planning terms
- Directly related to the development; and
- Fairly and reasonably related in scale and kind to the development

4.402 5 Obligations are normally negotiated under Section 106 of the 1990 Town and Country Planning Act. Agreements can also be entered into under Section 278 of the 1980 Highways Act. These prescribe the highway works required as a result of proposed developments. SPG will be prepared to provide further guidance on the use of planning obligations.

4. Delivering sustainable transportation solutions

KP8: SUSTAINABLE TRANSPORT

Development in Cardiff will be integrated with transport infrastructure and services in order to:

- Achieve the target of a 50:50 modal split between journeys by car and journeys by walking, cycling and public transport.**
- Reduce travel demand and dependence on the car;**
- Enable and maximise use of sustainable and active modes of transport;**
- Integrate travel modes;**
- Provide for people with particular access and mobility requirements;**
- Improve safety for all travellers;**

- vii. **Maintain and improve the efficiency and reliability of the transport network;**
- viii. **Support the movement of freight by rail or water; and**
- ix. **Manage freight movements by road and minimise their impacts.**

4.103 6 For Cardiff to accommodate the planned levels of growth, existing and future residents will need to be far less reliant on the private car. Therefore, ensuring that more everyday journeys are undertaken by sustainable modes of transport – walking, cycling and public transport – will be essential.

4.104 7 The location and form of developments are major determinants of the distance people travel, the routes they take and the modes of transport they choose. Much of the growth in car travel in recent decades can be attributed to developments which have been poorly integrated with the transport network. Integration of land use and transport provision can help to manage travel demand, avoid developments which are car dependent and make it easier to facilitate movements by sustainable modes.

4.105 8 The purpose of this Key Policy, therefore, is to ensure that developments are properly integrated with the transport infrastructure necessary to make developments accessible by sustainable travel modes and achieve a necessary shift away from car-based travel.

4.109 In order to mitigate transport impacts and achieve the 50:50 modal split target, the development of strategic sites will be integrated with provision of transport and highways infrastructure referred to in Policy KP6 (New Infrastructure). Such infrastructure will include:

- the walking and cycling infrastructure supported by Policy T1;
- the strategic rapid transit, bus corridor enhancements and wider improvements to the city's bus network supported by Policy T2;
- Transport Interchanges supported by Policy T3; and
- the Regional Transport Hub supported by Policy T4.

4.110 Policies KP2 (A) to KP2 (H) list the 'Essential' and 'Enabling infrastructure' required to support the development of each strategic site ~~s contribution to and~~ the delivery of the ~~county-wide~~ 50:50 modal split target.

Policies KP2 (A) to KP2 (H) list the 'Essential' and 'Enabling infrastructure' required to support the development of each strategic site and the delivery of the 50:50 modal split target.

4.106 11 Currently (2011) 64% of all weekly journeys (work and non-work related) are made by car, whilst 36% are made by other modes. A central aim of the transport strategy supporting the LDP is to achieve a 50:50 split between travel by car and sustainable travel. This target is not simply a policy aspiration; local knowledge of the transportation network and research of travel behaviour, patterns and trends in combination with modelling work carried out by the Council has shown that achieving this ratio is necessary for the transport network to accommodate movements associated with the growth envisaged within this plan in a way which avoids unmanageable levels of congestion on the highway network.

~~4.107~~ 12- ~~Supporting Document No. 5, gives details of the~~ A transport model was developed to assess the overall impact of proposed development sites on the highway network in Cardiff in 2026. ~~4.108~~ The model is based on the morning peak periods when pressures on the highway network are greatest. Peak period flows have been modelled on a 2010 base and then compared with 2026 based on the following increases in housing and employment:

- A 25% increase in housing (142,382 to 178,594)
- A 20% increase in jobs (from 198,400 to 238,400)

~~4.109~~ 13 The 2026 model was based on the 2010 highway network and assumes no changes have been made to accommodate the additional vehicle movements from the development sites; this approach is known as a 'business as usual' scenario. This has enabled the impact of the LDP ~~Preferred Strategy~~ to be fully quantified. The key outcomes of the modelling exercise illustrate that:

- The demand for travel by car would increase by 41%;
- 10% of new demand would be unable to travel on the highway network due to lack of capacity so there would be a 32% net increase in traffic;
- Average journey speeds would decrease; and
- Journey times would increase by approximately 41% or 7 minutes (average).

4.140 14 The Council's modelling assessment demonstrates that the growth projected in the LDP will result in major increase in transport movements generally including significant additional trips on the highway network. Furthermore, that in order to accommodate the additional vehicular trips on the highway network, it will be necessary that at least 50% of all trips on Cardiff's transport network are made by sustainable modes by the end of the Plan period in 2026.

4.144 15 The results of the modelling and assessment work show that in order to achieve a 50:50 split between car-based and non car-based travel, development proposed in the LDP will need to be supported by significant new transport infrastructure, improvements to existing transport facilities, and measures to manage travel demand and encourage use of sustainable transport both within existing and new communities in Cardiff. In light of the scale of transport impacts highlighted in the transport evidence base, it is essential that in considering planning applications, the Council seeks to secure measures which maximise the accessibility of development schemes by sustainable modes.

4.142 16 It is accepted that for some development sites it may not be possible to achieve a 50:50 modal split, at least in the short term. However, in light of the scale of transport impacts highlighted in the transport evidence base, it is essential that in considering planning applications, the Council seeks to secure measures which maximise the accessibility of development schemes by sustainable modes.

4.143 17 For smaller schemes, this could include accommodating through-pedestrian or cycle movements within the development layout or positioning access to the site where it could minimise the walking distance to the nearest bus stop.

4.144 18 For larger development schemes which have significant transport implications, more substantial measures will be required to address travel impacts and maximise sustainable access. It is important to clarify that achieving the 50:50 modal split target will not be a matter of requiring all new developments within the plan period to achieve a 50:50 modal split. Rather, the target will be achieved by the Council seeking to secure through the development process measures which maximise the possible share of trips made by sustainable modes for all sites. It is accepted that for some developments a 50:50 modal split may not be achievable, at least in the short term. However, for other development sites the Council will seek to secure a higher than 50% share of trips by sustainable modes.

4.145 19 Planning applications for development schemes at or above the size thresholds specified in TAN18: Transport will need to be supported by a Transport Assessment (TA). The TA will provide the basis for assessing all the potential travel impacts of developments including their effect on the highway network and the likely modal split of the trips that would be generated. This assessment will help establish the gaps in existing transport provision and the measures necessary to make a development accessible by sustainable modes.

4.146 20 Such measures will be secured as a condition of planning consent and/or by way of planning obligation. In all cases, the nature of the measures sought will be in proportion with the scale of the development and the impacts requiring mitigation.

4.147 21 For planning applications relating to the LDP strategic sites, the Council will seek to secure the on-site and off-site transport infrastructure identified within ~~the schematic master plans and site-specific principles for each site~~ Policy KP2. Implementation of this Policy will help to reduce pollution arising from road traffic. This will counteract increases in atmospheric pollution as a result of the Plan, thereby avoiding significant effects upon internationally designated sites.

4.148 22 The transport aspects of all development proposals will be considered with regard to this key Policy and the detailed transport policies ~~featured below.~~

5. Responding to evidenced economic needs

KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS

Provision will be made for a range and choice of new employment sites including those identified in KP2 for different types of employment and in different geographical locations to effectively deliver the level of growth set out in the plan together with putting in place a framework to protect the role of existing employment land

4.149 123 This Policy responds to Cardiff's role as the main economic driver in South East Wales and operates as a city-region which effectively increases the population to around 1.4 million reflecting its position as capital of Wales and seat of Welsh Government and accounting for 32% of total employment in South East Wales. It delivers the strategic aspirations for economic development in Cardiff through the identification and protection of employment land and premises and opportunities to deliver the key economic growth sectors relating to ICT, energy and environmental technologies, advanced materials and manufacturing, creative industries, life sciences and financial and professional services.

4.120 124 At the heart of this approach is recognition that the Cardiff city-region clearly forms a natural economic area and it has consistently made a major positive contribution to the economic growth of Wales. In core city analysis, Cardiff performs well and there is an opportunity to build further on this through continuing to enhance Cardiff's role and also improve linkages and connectivity within the city-region. It is also recognised ~~(as evidenced in the recent Cardiff LDP regional collaborative~~

~~working exercise summarised in Supporting Document 17)~~ that there are significant benefits for adjoining areas from Cardiff's success in achieving economic growth.

~~4.121-125~~ 125 The economic strategy for the LDP supports inward investment and new business requirements through striking a balance between the supply and demand for employment land and continuing to provide a diverse range of job opportunities. Critical to the economic strategy for the city is an appreciation of the changes in population, labour market and employment base together with achieving the appropriate balance between the provision of new jobs and homes. ~~Supporting Document 4 provides detailed evidence on how such matters have been addressed.~~

~~4.122~~ 126 A number of key issues and messages emerge from the supply and demand studies which have implications for Cardiff's economic performance and therefore are critical elements of the economic strategy for the LDP. The evidence points to the need for a Strategy that addresses these three issues:

- Providing a range and choice of new employment land;
- Cardiff Central Enterprise Zone as a core element of the strategy; and
- Recognising the role of existing employment land and premises.

~~4.123~~ 127 In terms of providing for new employment land, the ~~Deposit~~ LDP sets a framework for delivering a wide range and choice of employment sites in different locations and for different sectors including the key market sectors of ICT, energy and environmental technologies, advanced materials and manufacturing, creative industries, life sciences and financial and professional services. The range of new sites ensures that Cardiff can deliver the stated level of growth for new jobs. Importantly, different sites will perform different roles in the strategy. For example, land at Junction 33 may be better suited to ICT, life sciences, energy and environmental technologies whilst Porth Teigr (Roath Basin) is becoming an important location for media and creative industries. Land south of St Mellons Business Park is also allocated to provide a strategic employment site capable of attracting inward investment opportunities for high value service and knowledge based sectors.

~~4.124~~ 128 The provision of employment land as part of wider housing-led comprehensive developments at North West Cardiff, North East Cardiff,

Arjo Wiggins and Roath Basin provides an important role in terms of the overall supply and mix of employment land offering a good range and choice of small out of centre employment sites, including offices, creative industries, small workshops, and starter units. This will be essential to ensure the continued provision of local employment opportunities and address the geographical employment disparities across the county.

~~4.125-~~ 129 The geographical spread of the 'Cardiff offer' also addresses the need to provide jobs in accessible locations. In this respect, the key strategic proposal relating to the Cardiff Central Enterprise Zone and Regional Transport Hub represents a highly sustainable and accessible location, close to areas of high unemployment in the city but also readily accessible to the wider region via sustainable modes of transport.

~~4.126-~~ 130 This key site is an integral part of the Council's economic vision to establish Cardiff as a leading European business city over the next two decades and will underpin and promote the financial and professional services sector and create a platform for investment. It will greatly assist promoting Wales' share of UK inward investment which has fallen from previous rates of 20% to just 2%. Furthermore, the scale of this proposal relating to Grade A office space is potentially a real 'game changer' for Cardiff and Wales to compete more effectively with other UK cities.

~~4.127-~~ 131 It is a long-term proposal which seeks to revitalise up to 140 acres of brownfield city-centre land adjacent to Cardiff Central railway station. It will focus on enhancing Cardiff's growing reputation as a financial and professional services cluster and is a key sustainable regeneration project.

~~4.128-~~ 132- Integrated transport sits at the heart of the Cardiff Central Enterprise Zone with Central Square becoming the hub of the Enterprise Zone. The proposal represents the next phase of redevelopment of Cardiff city centre and aims to create a modern and high quality gateway to the city whilst extending the function of the city centre south of the railway line, creating a better link between the city centre and Bay and a provide a new convention centre to attract business, tourism and promote the city for business. The Cardiff Central Enterprise Zone is one of 7 new Enterprise Zones in Wales designated by the Welsh Government and the

only Zone in the focused on financial and professional services. The Zone came into effect on 1st April 2012 and has a lifespan of 5 years.

~~4.129-133~~ - It is important to ensure that a range and choice of employment land and business premises are provided to maintain and improve the competitiveness of the city, promote and protect indigenous business and attract inward investment. There has been growing pressure over recent years for the development and redevelopment of employment land and premises for alternative uses (predominantly residential), whether still occupied or where current operations have ceased, which offer a greater level of return for investors. Such development proposals can result in significant losses to the county's stock of employment land and premises.

~~4.130-134~~ The loss of employment land can be incremental with the loss of one site setting the precedent for the loss of a series of others in a similar location, leading to a gradual erosion of an employment area. Sometimes alternative uses can also fragment a larger business area or sever links between employment uses in an area. Over time pressure for alternative uses result in a cumulative loss of employment sites to the detriment of the local economy. In addition many existing industrial areas are located within the 'southern arc' of deprivation in areas of greatest need for jobs and it is important to retain employment in these locations due to their accessibility.

~~4.131-135~~ - The Strategy seeks to protect existing business and industrial and warehousing land (B1b/c, B2 and B8 uses) to ensure their continued important contribution to providing accessible sources of employment in the city. Similarly, there will be a strong presumption in favour of retaining existing high quality and accessible office accommodation. However, consideration will be given to the change of use (to housing for example) of lower quality office and industrial premises which do not perform an important strategic or local role in terms of the overall range and choice of premises. Where alternative use of land is considered appropriate, priority will be given to mixed-use development comprising employment, housing and community facilities or, where that is not feasible, housing. (This policy position will also help to support future windfall provision over the Plan period) Other proposals will need to demonstrate why a mixed-use of housing and employment schemes cannot be achieved on a site.

~~4.132~~136 It is also important to recognise the role of the sea port, ABP and its tenants in South Wales directly and indirectly supports over £1.7 billion of gross output in Wales. There are therefore opportunities to continue to support the role of the port, particularly its potential to generate new industry and services (Competitive Capital – The Cardiff Economic Strategy 2007 to 2012, Cardiff Council).

~~4.133~~137 In addition, in order to maximise the contribution to providing jobs from existing sites and promote the efficient use of land, the strategy seeks to encourage the intensification and refurbishment of existing employment land and premises which are under used, vacant or in decline. The Strategy supports the regeneration of land and property for employment purposes such as Mount Stuart Square as a focus on innovative business.

KP10: CENTRAL AND BAY BUSINESS AREAS

The following uses are considered appropriate within the Central and Bay Business Areas:

- i. New offices, residential and commercial leisure uses within the Central and Bay Business Areas;**
- ii. Enhanced retail and complementary facilities within the Central Shopping Area; and**
- iii. Other uses most appropriately located in city centres.**

~~4.134~~ 138 This Policy describes the range of uses appropriate within the Central and Bay Business Areas, as identified on the Proposals Map. It identifies those uses most appropriately located in centres accessible to large numbers of people and encourages a mix of complementary uses to maintain and enhance the vitality, attractiveness and viability of such centres. Identified within the Central Business Area (CBA) is the Central Shopping Area, as defined on the Proposals Map, where new and improved retail uses are most appropriate to maintain a vibrant and vital shopping centre.

~~4.135~~ 139 The CBA is the administrative and business heart of the city, and the established focus for major office and commercial leisure developments. The CBA contains the Central Shopping Area, with the

recent St. David's redevelopment confirming Cardiff's position at the head of the regional shopping hierarchy. The civic centre is home to the National Museum of Wales and Cardiff University which, along with Cardiff Castle and Bute Park to the north, provide the historic setting for the city centre. The area has the diversity and attractiveness befitting a European capital city.

~~4.136~~ 140 The Bay Business Area (BBA) is the focus for government, tourism and leisure development; with the Senedd, the Wales Millennium Centre and other landmark buildings redefining the architectural quality and attractiveness of the waterfront and its environs. Future development should continue to enhance the waterfront as an attractive and diverse mixed-use location, whilst complementing and supporting the CBA as the economic driver for the city region. The Cardiff Bay Barrage has created a 200 hectare freshwater lake and 13km of waterfront providing opportunities for further tourism and water based recreation as well as attracting significant inward investment in an attractive waterfront location.

~~4.137~~ 141 New and improved leisure, recreation and tourist facilities are important for the future development of Cardiff. These uses are major employers in the city centre and generate significant benefits to the local economy. By improving the quality and range of sporting, recreation and leisure facilities, the area is made a more attractive place in which to live, work and visit, thereby helping to attract inward investment and regeneration. These attractions are also important for city marketing and the branding of Cardiff as a major cultural, sporting and leisure destination. Furthermore, it is recognised that these facilities are an important factor in improving the well-being and quality of life of our local communities.

~~4.138~~ 142 The Central and Bay Business Areas also contain a significant number of residential premises including high-rise apartment blocks, student accommodation and residential uses above commercial premises. Although the city centre and bay areas have experienced a large increase in residential development over the past 20 years, there remains the potential for further residential development. New residential development within the Central and Bay Business areas will support the delivery of balanced, mixed use areas where, by virtue of their proximity to public transport, leisure, employment and community facilities, can

create sustainable urban neighbourhoods and contribute to the daytime and evening economy.

4.139 143 A series of City Centre Strategies have been prepared since 1997, providing the framework for the strategic regeneration and management of the city centre. A new Strategy is to be prepared alongside a series of Area Action Plans to define the regeneration activity and infrastructure necessary to deliver, sustain and manage the development of the city centre for present and future generations.

KP11: ~~MINERALS AND~~ CRUSHED ROCK AGGREGATES AND OTHER MINERALS

Cardiff will maintain a steady and adequate supply of minerals and contribute to regional aggregate supplies by:

- i Promoting and supporting the efficient use of minerals and use of alternatives to naturally occurring minerals including the re-use of secondary aggregates;
- ii. Protecting existing mineral reserves and safeguarding potential resources of limestone, coal and sand and gravel from development that would preclude their future extraction; **and**
- iii. Maintaining a minimum 10 year land bank of permitted crushed rock aggregate reserves in line with national guidance;
- iv. Supporting appropriate applications for sand and gravel extraction; and
- v. Safeguarding wharves from development that would prevent their use for landing marine dredged sand and gravel.

4.140 144 Mineral resources are a valuable but finite resource. An adequate and steady supply of minerals is essential to the national, regional and local economy and their exploitation makes a significant contribution to our economic prosperity and quality of life. Cardiff is one of the largest producers and consumers of minerals in the region and those worked in Cardiff at present provide the essential raw materials for our buildings, infrastructure and maintenance. Natural minerals include quarried hard rock (carboniferous limestone and dolomite) and dredged sand landed in Cardiff Docks.

~~4.141–145~~ Crushed rock production in the past has averaged 1 million tonnes (mt.) per annum, broadly similar to the County's consumption. In addition approximately 0.3 mt. of sea dredged sand is landed at Cardiff Docks every year. The majority of natural mineral production is used in the construction industry as crushed rock aggregates. Secondary materials, such as construction and demolition waste, are also used as substitutes for natural aggregates. Cardiff is also an important source of dolomitic and high purity limestone for industrial use in the local steelmaking process. Existing permitted reserves of hard rock minerals (41 mt.) represent ~~over 69 years' supply at current output rates, sufficient to meet need well beyond the Plan period.~~ Regionally, Cardiff contributes ~~around 10% of South Wales' annual crushed rock aggregate production and its reserves represent 8% of the regional total, sufficient to maintain this contribution during the Plan period.~~ The Regional Technical Statement 1st Review (August 2014) produced by the North and South Wales Regional Aggregates Working Parties states that Cardiff should make provision for 0.86 million tonnes of crushed rock aggregates per year up to 2036, resulting in a total apportionment of 21.5 million tonnes. This requirement is based on average annual production for the period 2001 to 2010 and compares with the existing landbank of 41 million tonnes (as at 31st December 2010) of crushed rock reserves meaning Cardiff based on current information has a surplus of permitted reserves when compared to the requirements set out in the Regional Technical Statement 1st Review. This Policy recognises that Cardiff is an important regional provider of minerals and provides for the continuation of its present contribution to regional demand.

~~4.142–146~~ The Policy promotes the increased use of alternatives to naturally occurring minerals. The re-use or recycling of construction and demolition material and industrial waste serves not only to reduce the amount of waste produced but also conserves scarce non-renewable natural mineral resources and minimises environmental damage.

~~4.143~~ 147 However, allowing for improvements in recycling and re-use, there will remain a need for primary minerals. It is recognised that natural mineral resources can only be replenished over geological timescales and that they need to be protected for future generations. As minerals can only be worked where they exist, it is important to protect

them from inappropriate development, which could effectively sterilise them. The Policy precludes inappropriate development on mineral reserves and resources themselves and allows for buffer zones within which sensitive development will be prevented.

KP12 WASTE

Waste arisings from Cardiff will be managed by:

i. Promoting and supporting additional sustainable waste management facilities, measures and strategies in accordance with the Collections, Infrastructure and Markets Sector Plan (2012) and TAN 21 (2014) Regional Waste Plan and in a manner that follows the waste hierarchy ~~which seeks to maximise the reduction of waste in the first place and thereafter reusing, recovering and recycling options before disposal of waste~~ and the principles of an integrated and adequate network of waste installations; nearest appropriate installation; self-sufficiency and protection of human health and the environment;

ii. Encouraging the provision of in-building treatment facilities on existing and allocated areas of general industry;

iii. Supporting the provision and maintenance of sustainable waste management storage and collection arrangements in all appropriate new developments; and

iv. Supporting waste ~~minimisation~~ prevention and reuse and the provision of facilities that use recycled or composted products.

~~4.144~~¹⁴⁸ Cardiff produces around a million tonnes of waste each year, varying from harmless inert materials to highly toxic chemical by-products and residues. It is important for the Council to manage the land use implications of this waste in an environmentally acceptable and sustainable way. The Council is moving towards more sustainable waste management practices in line with European and national guidance, by increasing the amount of municipal waste recycled or composted and reducing the amount of biodegradable waste sent to landfill. ~~Additional treatment facilities are likely to be required within the Plan period in order to achieve these aims.~~

4. ~~145 149~~ The South East Wales Regional Waste Plan indicates that a maximum of 20.9 hectares of land will be required for waste management facilities within the county. New waste management facilities will generally be favoured on B2 land for general industry, in line with national guidance. In this respect the 1st Review of the Regional Waste Plan endorsed by the Council in July 2008 identifies a range of potential sites for waste management purposes on vacant general industrial land.

TAN 21 (2014) sets a framework for the delivery of sustainable waste management infrastructure through the planning process. The Collections, Infrastructure and Markets Sector Plan (2012) is intended to deliver the sustainable development outcomes set out in 'Towards Zero Waste' the overarching waste strategy document for Wales. The Council will work with others within the South East Wales region to monitor waste arisings and capacity requirements and respond to identified needs by providing an integrated and adequate network of waste management facilities across the region. Additional treatment and recovery facilities are likely to be required within Cardiff during the Plan period in order to achieve the targets set out in the CIM Sector Plan and the policy principles established in TAN 21 (2014).

4.446 150 All appropriate new development should include provision for the storage, recycling and management of waste. This will encourage waste reduction, recycling, composting and separation at source, in order to contribute towards meeting waste management targets.

6. Responding to evidenced social needs

KP13: RESPONDING TO EVIDENCED SOCIAL NEEDS

A key part of the successful progression of the city will be to develop sustainable neighbourhoods, tackle deprivation, and improve the quality of life for all. This will be achieved through:

- i. Providing a range of dwelling sizes, types and affordability including seeking to provide a target of ~~6,953~~ 6,646 affordable dwellings over the remaining ~~13~~ 12 years of Plan period;**
- ii. Supporting the vitality, viability and attractiveness of existing District and Local Centres and their regeneration, including retail**

and other commercial development and housing of an appropriate scale;

iii. Encouraging the provision of a full range of social, health, leisure and education facilities and community infrastructure for both existing and new communities that are accessible to all by walking and cycling and public transport;

iv. Supporting the regeneration of deprived communities within the city and maximising the additional benefits that new communities can bring to adjoining or surrounding communities;

v. Encouraging the enhancement of communities through better equality of access to services for all, promoting cultural and wider diversity for all groups in society, and creating places that encourage social interaction and cohesion;

vi. Developing new cultural and sporting facilities to build upon Cardiff's role as a major tourist, cultural and sporting destination for visitors and residents alike; and

vii. Designing out crime and creating communities which are safer and feel safer.

4.447 151 PPW promotes sustainable communities. In delivering sustainable communities, the Council will seek to ensure a range of dwelling sizes, types and affordability is provided in terms of both market and affordable housing to meet identified needs (including supported and sheltered housing and other special needs where appropriate), in safe neighbourhoods. In Cardiff, in line with national trends, average household size has been declining and in general this has been reflected in an increasing proportion of 1 and 2 bedroom flats in schemes with residential consent.

4.448 152 Whilst the provision of flats does cater for those seeking smaller units of accommodation, and this may free up other larger units of existing housing, there will still be a need for a range of dwelling types and sizes to be provided on sites that come forward during the Plan period. Whilst flats may be appropriate on some sites, the Council will seek to ensure, particularly in larger schemes, that a range of dwelling types and affordability is provided.

4.449 153 The affordable housing target (~~6,953~~ 6,646 or ~~535~~ units per annum) identifies the number of affordable housing units that it is anticipated will be provided over the remainder of the Plan period ~~2013~~ 2014 to 2026. The target takes into account the current landbank of affordable units (less an allowance for flexibility) and expected contributions from strategic and non-strategic sites, windfall sites and change of use schemes based on the affordable housing target

percentages (30% for greenfield sites and 20% for brownfield sites) outlined in Policy H3.. It is also likely that some affordable housing will also come forward from sources other than by the use of planning obligations, for example on sites or in dwellings acquired by social housing providers.

4.154 The Cardiff LHMA assessment sets a requirement over the period 2013-2018 of 3,989 affordable units per year or a total of 19,945. Clearly, the affordable housing target over the Plan period will not meet the need figure as set out in the LHMA

~~4.450~~ 155 The Plan also supports the viability and attractiveness of District and Local Centres which form an important part of Cardiff's retail hierarchy and of its social, economic and physical fabric. In addition to their primary function of providing local shopping facilities they also accommodate a range of accessible services facilities and employment. This Policy aims to support the retention and provision of local shopping facilities, which remains the primary role of centres and underpins their vitality, attractiveness and viability. Such facilities are also accessible to the local community by public transport, walking and cycling thereby supporting the sustainable transportation objectives set out in the Plan. Furthermore, the Policy also seeks to encourage investment and renewal of the physical fabric of centres.

~~4.451~~ 156 Providing a range of community, health, religious and educational facilities which are accessible to as many people as possible is an essential requirement in order to secure sustainable communities. Such facilities are significant local employers and can contribute towards the regeneration of local areas. Additionally, these services are essential to maintain and improve the quality of life of people living and working in Cardiff.

~~4.452~~ 157 The masterplanning approach which has been adopted to provide a framework for the development of strategic sites fully recognises the potential benefits that new development can bring to adjoining areas. Opportunities can be taken to deliver the aims of this Policy by new development enhancing the quality and range of existing provision of a range of facilities and services.

~~4.453~~ 158 In order to further support the regeneration of deprived communities within the city the LDP will support implementation of the Council's Neighbourhood Improvement Programme (March 2007) and the Communities First Programme, which aim to close the gap between the most deprived neighbourhoods and the city as a whole.

4.154 159 In order to secure sustainable communities it is important that the LDP helps promote a culture in which diversity is valued and equality of opportunity is a reality. This can be achieved through a combination of policies within the Plan, particularly those creating places that encourage social interaction and cohesion.

KP14: HEALTHY LIVING

Cardiff will be made a healthier place to live by seeking to reduce health inequalities through encouraging healthy lifestyles, addressing the social determinants of health and providing accessible health care facilities. This will be achieved by supporting developments which provide for active travel, accessible and useable green spaces, including allotments.

4.155 160 This Policy accords with the aim in PPW to deliver sustainable development through ensuring that health is considered in new developments. It also assists achievement of a number of PPW objectives regarding travel and access to key community facilities. It reflects the direction that *'health considerations can be material considerations in determining planning applications'* (PPW Para. 12.13.8) and accepts that the effect of development on people's health is a key element of sustainable development and its consideration will raise any significant issues which need to be taken into account.

4.156 161 Implementation of this Policy supports the Cardiff Partnership Strategy (2010-2020) and the population outcome 'people in Cardiff are healthy'. It also contributes to the delivery of a number of objectives regarding healthy lifestyles including physical activity and recreation, in accordance with Our Healthy Future (Welsh Government 2009), Fairer Health Outcomes for All (Welsh Government 2011) and Creating an Active Wales (Welsh Government 2010).

4.157 162 The Policy reflects evidence provided by 'The Marmot Review: implications for spatial planning' and Barton and Tsourou (2000) 'Healthy Urban Planning' and supports the theme of healthy urban environment and design taken forward by the World Health Organisation and UK Healthy Cities Networks.

4.158 163 Overall, these policies and guidance conclude that the built and natural environment together with lifestyle behaviours contribute to

improving health. Key measures to improve the health of the population include supporting:

- Active travel such as walking and cycling;
- Access to well-maintained open spaces for physical activity and food growing; and
- Access to health care facilities.

4.159 165 Such measures will assist in:

- Achieving and maintaining a healthy weight;
- Protecting mental health; and
- Reducing stress levels.

4.160 165 Cardiff has a wealth of open spaces and walking and cycling rates to work/school and for leisure are on the increase and it is important to protect and enhance these assets for health improvement.

7. Respecting Cardiff's environment and responding to climate change

KP15: CLIMATE CHANGE

To mitigate against the effects of climate change and adapt to its impacts, development proposals should take into account the following factors:

- Reducing carbon emissions;**
- Protecting and increasing carbon sinks;**
- Adapting to the implications of climate change at both a strategic and detailed design level;**
- Promoting energy efficiency and increasing the supply of renewable energy; and**
- Avoiding unnecessary flood risk by assessing the implications of development proposals within areas susceptible to flooding and preventing development that unacceptably increases risk. Avoiding areas susceptible to flood risk in the first instance in accordance with the sequential approach set out in national guidance; and**

(vi) Preventing development that increases flood risk.

~~4.161~~ 166 A core function of the Plan is to ensure that all development in the city is sustainable, taking full account of the implications of reducing resource use and addressing climate change. This Policy provides a framework for sustainable growth by promoting development that mitigates the causes of climate change and which is able to adapt to its likely effects. This long-term approach is vital if Cardiff is to realise the economic, environmental and social objectives set out in the Vision.

~~4.162~~ 167 In the first instance, a reduction in carbon emissions will be achieved by means of controlling the energy demand associated with development through maximising energy efficiency. Secondly, sustainable sources of energy should be incorporated, without reliance on fossil fuels.

~~4.163~~ 168 Carbon sinks act as a means of off-setting carbon emissions by natural means. Trees and soils act as substantial reservoirs of carbon, sequestering atmospheric carbon, and contributing substantially to soils, which accrete carbon faster under tree cover than other forms of vegetation. This stored carbon will usually be emitted as a greenhouse gas if trees are removed or damaged, or soils removed, covered or disturbed (by compaction or contamination) during the construction process.

~~4.164~~ 169 As far as practicable, trees should be retained and protected, and land kept as functioning vegetated soil open to the fall of organic matter, with new trees and shrubs provided by developers wherever possible. Where trees and shrubs cannot be surrounded by open soil, hard surfaces should not be used unless there is an overriding need, and areas that are not needed for pedestrian or vehicle use should be retained for soft landscape. Cardiff's open spaces, trees and soils play a crucial role in mitigating the effects of climate change at the local level. Open vegetated soils absorb rainfall and runoff.

~~4.165~~ 170 Adapting to the implications of climate change will require buildings which are able to cope with the likely increased temperature ranges, more frequent and severe flooding and increased extreme weather events. Buildings and related infrastructure should be designed to be flexible not only to climatic change but also to accommodate a

variety of uses over their lifetime rather than being suitable for one sole application. Landscape will be a critical issue with trees providing protection both by shading and active cooling. This cooling will be required particularly in the city centre and District Centres, and where the young children, older people, and people with mobility impairments gather.

~~4.166-171~~ The Council will require high standards of energy efficiency in new development ~~in accordance with national guidance and as further amplified in relevant Deposit LDP policies and supporting guidance.~~ Implementation of this Policy, which promotes incorporation of renewable energy generation, will also reduce emission of aerial pollutants, thereby offsetting increases in aerial emissions arising from implementation of other policies in the Plan. This would contribute to avoiding significant effects upon European Sites.

~~4.167 172~~ Avoiding unnecessary flood risk will be achieved by strictly assessing the flood risk implications of development proposals within areas susceptible to tidal or fluvial flooding and preventing development that unacceptably increases risk. In accordance with TAN15: Development and Flood Risk no highly vulnerable development will be permitted in development advice zone C2. Development will only be considered in other areas at high risk of flooding where it can be demonstrated that the site can comply with the justification and assessment requirements of TAN15 (2004 – Section 6, 7 and Appendix 1). Policy EN14 relating to Flood Risk sets out a range of criterion which will be considered when assessing development proposals in areas of high risk of flooding. ~~Information is provided to demonstrate that a proposal satisfies the Flood Consequence Assessment tests set out in TAN15: Development and Flood Risk.~~

KP16: GREEN INFRASTRUCTURE

Cardiff's distinctive natural heritage provides a network of green infrastructure which will be protected, enhanced, ~~created~~, and managed to ensure the integrity and connectivity of this multi-functional green resource is maintained.

Protection and conservation of natural heritage network needs to be reconciled with the benefits of development. Proposed development should therefore demonstrate how green infrastructure has been considered and integrated into the proposals. If development results in overall loss of green infrastructure, appropriate compensation will be required.

Natural heritage assets are key to Cardiff's character, value, distinctiveness and sense of place. They include the City's:

- i. Undeveloped countryside and coastline (EN1 and EN2);**
- ii. Landscape, geological and heritage features which contribute to the City's setting (EN3);**
- iii. Strategically important river valleys of the Ely, Taff, Nant Fawr and Rhymney (EN4);**
- iv. Biodiversity interests including designated sites and the connectivity of priority habitats and species (EN5, EN6 and EN7);**
- v. Trees (including street trees), woodlands and hedgerows (EN8);**
- vi. Strategic recreational routes, cycleways and the public rights of way network (T5, T6 and T8);**
- vii. Parks, playing fields, green play areas and open spaces (~~C3~~, C4, C5 and ~~C6~~);**
- viii. Growing spaces including allotments, community orchards and larger gardens (~~C5~~);** and
- ix. Holistic integrated surface water management systems (EN10).**

4.188 173 The policy aims to ensure that Cardiff's green infrastructure assets are strategically planned and delivered through a green infrastructure network. Other policies in the Plan provide more detailed guidance on aspects of these assets, together with supporting SPG.

4.189 174 The green infrastructure network is important for its own sake and for its contribution to the wider quality of life, including the value that people attach to it. It provides a range of economic, social and environmental benefits including reducing impacts of climate change (KP15), enhanced biodiversity habitat and species connectivity (EN5, EN6 and EN7), providing greater opportunities for sports and recreation (C4), contributing to the communities' health and wellbeing (~~C76~~) and providing visual benefits for all (KP5).

~~4.190~~ 175 Where development is permitted, planning conditions and/or obligations will be used to protect or enhance the natural heritage network. New developments should incorporate new and / or enhanced green infrastructure of an appropriate size, type and standard to ensure no fragmentation or loss of connectivity.

~~4.191~~ 176 Where the benefits of development outweigh the conservation interest, mitigation and/or compensation measures will be required to offset adverse effects and appropriate, planning obligations sought. The implementation of Policies designed to provide and protect public open space throughout Cardiff would also serve to offset any increase in recreational pressure on the Cardiff Beech Woods SAC, thereby helping to avoid likely significant effect upon that site.

~~4.192~~ 177 Management of Cardiff's green infrastructure network should be in place prior to development, and appropriate planning obligations sought. SPG on this topic will be prepared to more fully outline the extent of Cardiff's green infrastructure and how this policy can be implemented in more detail.

Policy KP17: BUILT HERITAGE

Cardiff's distinctive heritage assets will be protected, managed and enhanced, in particular the character and setting of its Scheduled Ancient Monuments; Listed Buildings; Registered Historic Landscapes, Parks and Gardens; Conservation Areas; Locally Listed Buildings and other features of local interest that positively contribute to the distinctiveness of the city.

~~4.193~~ 178 This Policy affords strategic policy protection for Cardiff's historic environment as required by legislation and PPW. The historic environment enriches people's lives and the visual appearance of the city. It reflects the diversity and culture of the communities that have formed it over time, provides evidence of Cardiff's past and helps define its present identity and character. An understanding of the historic and cultural significance of the city can provide a context for managing change and creates a backdrop for innovation in the design of new development to shape the future of the city.

~~4.194~~ 179 There are currently 28 Scheduled Ancient Monuments in Cardiff. This Policy affords appropriate protection to these monuments and others that may be scheduled over the Plan period, as well as other important archaeological remains identified within the Historic Environment Record. The SPG on Archaeologically Sensitive Areas provides further guidance on four areas of the city where significant finds have been recorded.

~~4.195~~ 180 There are currently almost 1,000 buildings in Cardiff on the statutory List of Buildings with Special Architectural or Historic Interest, designated by Cadw on behalf of the Welsh Government. Along with the legislation referred to above, This Policy affords appropriate protection to these statutory listed buildings and others that may be added to the list by Cadw over the Plan period.

~~4.196~~ 181 The Council also holds a Local List of Buildings of Merit. This Policy identifies the significance of these locally listed buildings (and others that may be added to the list by the Council over the Plan period) have in forming the character of the area. Welsh Office Circular 61/96 identifies the weight their designation may have in the assessment of development proposals.

~~4.197~~ 182 There are currently 27 conservation areas in Cardiff, as identified on the Constraints Map. Along with the legislation referred to above, This Policy affords appropriate protection to these and other areas that may be designated by the Council over the Plan period. The Policy should be read in conjunction with the adopted Conservation Area Appraisal prepared for each area, including the enhancement proposals included within them.

~~4.198~~ 183 Finally, there are currently 19 historic parks and gardens and 1 historic landscape (the Wentloog Levels) included on the Cadw/ICOMOS 'Register of Historic Landscapes Parks, and Gardens'. This Policy affords appropriate protection to these and other historic parks, gardens and landscapes that may be added to the register by Cadw/ICOMOS over the Plan period.

~~4.199~~ 184 In seeking to respond to the presence of heritage assets, developers are encouraged to follow a sequence of investigation and assessment to identify the cultural and historic significance of a place

before developing proposals for change or alteration. In this way appropriate approaches can be developed to preserve and enhance the historic environment through proposals that respond to and complement their context. The process is commended within Circular 61/96 and advice within BS Standard 7913, 2013.

KP18: NATURAL RESOURCES

In the interests of the long-term sustainable development of Cardiff, development proposals must take full account of the need to minimise impacts on the city's natural resources and minimise pollution, in particular the following elements:

- i. Protecting the best and most versatile agricultural land;**
- ii. Protecting the quality and quantity of water resources, including underground surface and coastal waters;**
- iii. Minimising air pollution from industrial, domestic and road transportation sources and managing air quality; and**
- (iv) "Remediating land contamination through the redevelopment of contaminated sites."**

4.180 5 The best and most versatile agricultural land (grades 1, 2 and 3a of the Agricultural Land Classification) is a finite resource. Once lost to development it is rarely practicable to return such land to best quality agricultural production.

4.181 6 There is no up-to-date definitive map of agricultural land quality for Cardiff as a whole but the best and most versatile agricultural land is known to exist in parts of the West, North and East of Cardiff. In meeting the needs to provide new homes and jobs in this Plan, some high quality land will be lost but taking account of all relevant factors, this loss is considered justified. Moreover, by putting in place a planned and managed approach to meeting future economic and social needs, this adds strength to the protection of good quality land outside these areas.

4.182 7 Cardiff's rivers, lakes, ponds and water bodies are important for a wide range of uses and users. Development has the potential to affect water quality and quantity. It is important that development is only allowed where there would be no unacceptable harm to the quality or

quantity of water resources and where provision can be made for any infrastructure required to safeguard water quality and quantity. New developments should have an adequate water supply and sewerage system to serve the development. This policy, which is aimed in part at improving water resource use efficiency, will ensure adequate water supply without adverse impacts on the River Usk and River Wye SACs, thereby helping to avoid the likelihood that this LDP will have a significant effect upon European designated sites.

4.183 ~~8~~ 8 Poor air quality can affect people's health, quality of life and amenity and can impact on nature conservation and built heritage interests. Development has the potential to cause air pollution, or sensitive developments can be affected by existing air quality problems in an area. In Cardiff, transport emissions are one of the main contributors to poor air quality. Development will not be permitted if it would cause or result in unacceptable harm due to air pollution. ~~Implementation of this Policy, which is aimed in part at improving water resource use efficiency, will counteract increases in water demand arising from implementation of other policies in the Plan, thereby avoiding significant effect upon River Usk and River Wye SACs.~~ Implementation of this Policy will also help to counteract any increase in atmospheric pollution as a result of the Plan, thereby helping to avoid the likelihood that this LDP will have a significant effect upon internationally designated sites.

4.184 ~~9~~ 9 "The redevelopment of sites with contaminated land contamination allows such land to be brought back into beneficial use, prevents dereliction and reduces the need to develop greenfield sites land." Developers will be required to demonstrate that any actual or potential contamination can be overcome, thereby ensuring that the land is suitable for the development proposed.

1. HOUSING

H1: NON-STRATEGIC HOUSING SITES

The following non-strategic sites are allocated for housing:

Site Ref.	Site Name	Estimated Units	Site Size (Ha)
H1.1	Land at Areas 9-12, St Mellons	150	3.98
H1.2	Land rear of Clive Street	80	2.87
H1.3	Rookwood Hospital	80 <u>90</u>	2.90 <u>3.40</u>
H1.4	Former Lansdowne Hospital	75	1.51
H1.5	Land at Dan-y-Garth, Pentyrch	53 <u>47</u>	2.49
H1.6	Land at former St John's College	50 <u>64</u>	2.50
H1.7	Ely Bridge Farm, Dyfrig Road. Ely	35 <u>41</u>	0.72
H1.8	Electrocoin Automatics Ltd, Caerphilly Road	20	0.61
H1.9	Land at Mill Road, Tongwynlais	5	0.40

5.1 To help satisfy the new dwelling requirement it is necessary to allocate non-strategic housing sites, as well as taking into account numbers of dwelling units estimated that will come forward from the existing landbank, strategic sites, and allowances for windfalls and changes of use over the Plan period to 2026.

5.2 The non-strategic housing sites listed in this Policy were put forward as candidate sites in the LDP process and are considered acceptable in principle for residential use. The proposed number of units shown for each site is indicative and may be subject to change depending on details of planning applications yet to be submitted and approved.

~~5.3 Supporting Document No. 1 provides a fuller explanation of how provision has been made to meet the dwelling requirement.~~

H2: CONVERSION TO RESIDENTIAL USE

Within the Central Business Area of the city centre, District and Local centres, as defined on the Proposals Map, the conversion of suitable vacant space above commercial premises to residential use will be favoured where:

- i. Adequate servicing and security can be maintained to the existing commercial use(s);**
- ii. Appropriate provision can be made for parking, access, pedestrian access, amenity space, and refuse disposal together with any appropriate external alterations and;**
- iv. The residential use does not compromise the ground floor use.**

5.4 ~~3~~ Within the areas identified the Council will encourage the conversion of suitable space above commercial premises to residential use. The conversion of empty space above shops to residential use provides a valuable contribution to the city's housing stock and provides much needed homes. It also positively contributes to the creation of vibrant, mixed use communities where people live and shop. Centres remain busy and populated beyond business hours, increasing surveillance and providing a market for ancillary uses associated with the night-time economy.

Policy H3: AFFORDABLE HOUSING

~~Where there is evidence of need~~ **The Council will seek 20% affordable housing on Brownfield sites and 30% affordable housing on Greenfield sites in all residential proposals that:**

- i. Contain ~~4-5~~ or more dwellings; or**
- ii. Sites of or exceeding ~~0.13~~ hectares in gross site area; or**

~~iii. Sites of or exceeding the thresholds in (i) or (ii) above for adjacent sites.~~

Where adjacent and related residential proposals result in combined numbers or site size areas exceeding the above thresholds, the Council will seek affordable housing based on the affordable housing target percentages set out above
Affordable housing will be sought to be delivered on-site in all instances unless there are exceptional circumstances.

5.5 4 The aim of this Policy is to assist the Council to meet evidenced housing need by seeking an appropriate affordable housing contribution from new residential developments in the city.

5.6 5 The Policy will help provide a range and mix of sustainable affordable housing, in line with Policy KP13.

5.7 6 PPW recognises that a community's need for affordable housing is a material planning consideration. It also promotes mixed and inclusive communities. More detailed guidance in TAN2: Planning and Affordable Housing requires local authorities to include affordable housing policies in their LDPs where a Local Housing Market Assessment (LHMA) has provided the evidence base to support policies to deliver such housing through the planning system. The Cardiff LHMA update (2013) indicates an annual shortfall of 3,989 affordable dwellings per annum.

5.8 7 The Policy applies to all proposed housing developments covered by the policy thresholds, including proposals on previously undeveloped land, redevelopment schemes, schemes providing specialised accommodation (except those in which residents require a significant element of care), conversions, changes of use, and mixed-use developments containing housing. It responds to the evidenced need for the planning system to help play its part in securing land and units for affordable housing. However, housing specifically designated to cater for students would not be required to contribute an affordable housing element.

5.9 8 In accordance with Welsh Government guidance, affordable housing encompasses both social rented and intermediate housing where there are secure mechanisms in place to ensure that it is accessible to those who cannot afford market housing, both on first occupation and for subsequent occupiers. In addition, the Council has a duty to have regard

to the needs of disabled people and chronically sick, the majority of whom are best housed in the community. Where there is evidence of need for affordable special needs housing it may, subject to Council agreement, be provided as all, or part of, the affordable housing requirement.

5.10 9 The Council will provide evidence of need based upon the latest Cardiff Local Housing Market Assessment Update, supplemented by current Council and Registered Social Landlord waiting lists and other relevant information. In order to create mixed and balanced communities, provision for affordable housing will be sought 'on site' unless the Council considers that this is impractical or inappropriate. In such exceptional circumstances, affordable housing may either be provided on another site, (location to be agreed with the Council), or a financial contribution may be provided to address affordable housing requirements elsewhere in Cardiff, in any case, provision should address the need identified in relation to the proposed development.

~~5.11 The LDP target for affordable housing for the Plan period is detailed in Policy KP13. During the remaining Plan period from 2013 to 2026 the target amounts to 535 units per annum.~~

5.12 0 The targets set out in the Policy are derived from the findings of an affordable housing viability study undertaken by Peter Brett Associates. This study assessed the viability of a range of housing scenarios (including a calculation for necessary infrastructure which could be achieved through Sn106 and/or CIL, consistent with Policy KP6: New Infrastructure and LDP Background Paper: Infrastructure Plan) for different development types with varying levels of affordable housing. In order to demonstrate viability, and take account of the higher costs associated with the development of brownfield sites the study recommended a two tiered affordable housing target. The Report confirms that affordable housing is viable at 30% on greenfield sites and at 20% on brownfield sites (based on indicative tenure mixes of 40% social rented, 40% intermediate rented and 20% Low Cost Home Ownership). This is consistent with the recommendations of the Cardiff Local Housing Market Assessment and the Economic Viability Reports of 2013 and 2014 in seeking an appropriate mix of tenures to address evidenced housing need over the Plan period. ~~The full findings of the Viability Study, including the methodology and assumptions made are set out in supporting document 20~~

5.43 11 In negotiating affordable housing, each proposal's actual contribution will depend on that scheme's capacity for provision. This will ensure that the affordable housing contribution in itself will not make the scheme unviable. The Council will work with developers to agree a contribution in an open and transparent manner. In cases where agreement cannot be reached, an independent assessment will be commissioned to be paid for by the applicant/developer. ~~Notwithstanding this, in order to determine an appropriate level of contribution all housing developments of 50 or more dwellings will be expected to provide an independent assessment paid for by the applicant/developer.~~ The assessment should include details and costs of the necessary infrastructure to be delivered either wholly or in part to support the delivery of sustainable neighbourhoods.

~~5.44~~ 12 Detailed guidance on the scale, tenure and nature of the affordable housing to be sought, along with information regarding what will be required as part of independent viability assessments, will be set out in the Affordable Housing SPG. The Policy will normally be implemented by the use of a planning obligation in accordance with Policy KP7.

H4: CHANGE OF USE OF RESIDENTIAL LAND OR PROPERTIES

Outside the Central and Bay Business Areas and District and Local Centres, identified on the Proposals Map, conversion or redevelopment of residential properties to other uses will only be permitted where:

- i. The premises or their location are no longer suitable for residential use; or**
- ii. The proposal is for a community use necessary within a residential area.**
- ~~**iv. The proposal is for a use that could contribute to the creation of sustainable communities.**~~
- iii. There would be no unacceptable impact on residential amenity.**

5.45 13 This Policy identifies the circumstances in which proposals for the conversion or redevelopment of residential properties outside the Central and Bay Business Areas and District and Local Centres identified on the Proposals Map, to other use will be permitted.

5.46 14 As acknowledged in PPW, offices, retail, entertainment and other uses that attract a significant number of visitors, whether by vehicle or on foot, are generally best located in centres where they are most widely accessible, particularly by public transport and have least harmful impact on residential amenity. Within Cardiff, these centres are the Central and Bay Business Areas, Central Shopping Area and District and Local centres identified on the Proposals Map. A range of Plan policies seeks to direct appropriate uses to these centres.

5.47 15 Outside these centres, proposals for the conversion or redevelopment of residential properties to other use will only be permitted in line with Policy H6 and if no unacceptable harm will be caused to the amenity or health of remaining residences in line with Policy H6.

5.48 16 There is a range of community uses that are appropriate and necessary, in principle, within residential areas. These include doctors' and dentists' surgeries, residential homes and child-care facilities. ~~Similarly there are other uses such as local shops and other commercial uses, of an appropriate scale, that could contribute to the creation of sustainable communities. Such uses will be permitted where there would be no unacceptable impact on residential amenity or to an area's character. Subsequent conversion from such uses to other non-residential uses will not normally be permitted.~~ Further guidance on the conversion of residential properties to childcare facilities will be set out in SPG.

5.49 17 In order to safeguard the amenity of residential areas, there will be a general presumption in favour of permitting the range of commercial and community uses in the Central and Bay Business Areas and District and Local Centres identified on the Proposals Map - including by the conversion or redevelopment of existing residential accommodation - subject to relevant policies. Within the Central and Bay Business Areas, proposals will be assessed having regard to Policy KP10 District and Local Centres, proposals will be assessed having regard to Policies R5 4 & R6-5

H5: SUB-DIVISION OR CONVERSION OF RESIDENTIAL PROPERTIES

Proposals for any conversion to flats or Houses in Multiple Occupation will be permitted where:

- i. The ~~existing~~ property is of a size (~~without being extended for the proposed use~~), whereby the layout, room sizes, range of facilities and external amenity space of the resulting property would ensure an adequate standard of residential amenity for future occupiers.**
- ii. There would be no material harm to the amenity of existing, nearby residents by virtue of general disturbance, noise or overlooking.**
- iii. The cumulative impact of such conversions will not adversely affect the amenity and/or the character of the area.**
- iv. Does not have an adverse affect on local parking provision**

~~5.20~~ 18 The subdivision of a residential building into smaller residential units can be an important source of housing. It can take different forms such as:

- Subdivision of existing houses into flats and HMOs (Houses in Multiple Occupancy).
- Conversion of HMO's to flats.

~~5.21~~ 19 The Council requires all flat conversions and HMOs to be of a high quality and to be well designed.

~~5.22~~ 20 The objectives of the Policy are:

- to support the creation of attractive sustainable development for self contained flats and HMOs;
- to promote good design and layout.

~~5.23~~ 21 The subdivision of a building into smaller residential units is a sustainable form of development as it gives a new lease of life to buildings which might be redundant or economically unviable in their current use.

~~5.24~~ 2 With sympathetic alterations to the exterior of a building, conversion has a lower visual impact on the street scene by preserving the existing frontage and respecting the character of an area.

~~5.25~~ 3 However, unsatisfactory conversion work can result in accommodation which is an over-intensification form of development resulting in inadequate and poor quality accommodation. Occupants may be exposed to problems, such as overlooking, poor outlook, overcrowding

and lack of amenity space, noise and disturbance from neighbouring premises, and inconvenient and unsafe access.

5.26 4 Further information will be given in SPG Design Guidance and Space Standards for Flat Conversions and Houses in Multiple Occupation HMOs.

H6: CHANGE OF USE OR REDEVELOPMENT TO RESIDENTIAL USE

Change of use of redundant premises or redevelopment of redundant previously developed land for residential use will be permitted where:

- i. There is no overriding need to retain the existing use of the land or premises and no overriding alternative local land use requirement;**
- ii. The resulting residential accommodation and amenity will be satisfactory;**
- iii. There will be no unacceptable impact on the operating conditions of existing businesses;**
- iv. Necessary community and transportation facilities are accessible or can be readily provided or improved; and**
- v. It can be demonstrated that the change of use to a more sensitive end use has been assessed in terms of land contamination risk and that there are no unacceptable risks to the end users.**

5.27 5 This Policy provides a framework for the assessment of applications for the change of use, conversion or redevelopment of redundant previously developed land and premises for residential purposes within settlement boundaries. It is aimed at ensuring that:

- Where necessary, land retains its existing use;
- Land that is no longer required for its existing or former use, if there is no overriding need to retain the existing use of the land or premises and no overriding alternative local land use requirement, contributes to meeting housing requirements, thereby reducing the need to develop previously undeveloped land - which is a fundamental component of the LDP Strategy; and
- New residential accommodation and environments are well-designed, environmentally sound and make a significant contribution to promoting community regeneration and improving the quality of life.

5.28 6 The Policy responds to evidenced social need for new homes in line with Policy KP1 and relates to Policies EC3 & H2. PPW indicates that such changes of use and redevelopment should be taken into account in housing provision. It defines 'previously developed land'. National guidance and plan policies relevant generally to the countryside will apply outside settlement boundaries. The Policy will also apply to mixed-use development including housing.

5.29 7 Assessment of whether land or premises are redundant or need to be retained in their former use (criterion '(i)') will include tests identified in relevant policies, notably Policy EC3 Alternative use of sites and premises relating to the protection of employment land and premises.

5.30 28 Considerations under criterion '(ii)' will include the compatibility of neighbouring uses, preventing insensitive or inappropriate infilling, privacy/amenity, size, density, aspect scale, layout and requirements for security and amenity space.

5.31 29 Criterion '(iii)' is intended to ensure that the introduction of residential use into an area or building does not unduly restrict the operating conditions of existing businesses.

5.32 0 Criterion '(iv)' may involve contributions being sought from developers towards the provision of necessary community and other facilities, in accordance with Policy KP7, delivering necessary infrastructure.

5.33 1 Where there is a change of use or redevelopment of commercial/industrial units to residential, there needs to be an appropriate assessment for the presence of land contamination. The land contamination standards set for commercial/industrial use are not suitably protective for residential use and therefore unacceptable risks to the end users may be present and will require appropriate remediation, where residential use is proposed.

~~H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE~~

~~**Land is allocated for the provision of Gypsies and Travellers accommodation at Seawall Road as defined on the Proposals Map.**~~

~~5.34 Currently, there are two Council-managed Gypsy and Traveller residential sites in Cardiff: at Rover Way and Shirenewton which were developed in the 1970's and 1980's. These sites provide 80 pitches between them; 59 at Shirenewton and 21 at Rover Way. In addition there are a few privately run facilities, most notably a site next to the Council's residential site at Shirenewton. Collectively these sites generate a future need for new pitches which the Council has a statutory duty to provide for with the LDP providing the tool to formally identify appropriate land to meet this need.~~

~~5.35 In order to fully inform considerations, the Council has recently commissioned 3 independent studies carried out in consultation with the Gypsy and Traveller community to assess the relevant aspects of this matter. The first independent study, by Opinion Research Services, was to identify the level of need over the LDP plan period. It identifies a need to provide for an additional 108 pitches in the city up to 2026 together with an additional need for a transit site of around ten pitches, which should be located near the M4 to meet the needs of Gypsy and Travellers who are visiting the area or travelling through it. The study concludes that a transit site need not necessarily fall within the boundaries of the County of Cardiff and recommends entering a cross boundary process with neighbouring Councils and across South East Wales to identify a suitable site within the region.~~

~~5.36 The second independent study carried out by Atkins examined the physical condition of the Rover Way site. It outlined some significant and challenging issues which would require resolution in future years. Therefore, in the event that this site could be replaced at some point in the future, this could add to the level of need to be provided for in the LDP (21 pitches).~~

~~5.37 The third independent study was prepared by Peter Brett Associates and provides advice to the Council on potential sites required to respond to the needs identified in the first study. It contains an assessment of potential sites for the Council to consider which is further discussed in the following paragraphs.~~

~~5.38 The Peter Brett study followed criteria set out in national guidance and looked at the availability, suitability and achievability of potential~~

sites. The process resulted in a long list of 32 sites with 5 sites being identified as potentially suitable to contribute additional pitches. However, it is noted that the sites recommended would only deliver 92 pitches which falls short of the required number. The Council has placed the study in the public domain and received feedback on its contents. Work has been undertaken to examine the study in considerable detail. As a result of recent analysis, there are significant concerns with the suitability of all 5 recommended sites having regard to a wide range of material factors including the role of potential sites for other uses.

5.39 Consideration of the study has also included addressing all 32 sites on 'the long list' of sites assessed by the consultants. In this respect, further work has been undertaken with regard to the large area of unused land at Pengam Green bounded by Seawall Road to the west, and Rover Way to the south, (opposite the existing Gypsy and Traveller site at Rover Way). The study concluded that the land was not considered suitable due to flood risk but added, "However should satisfactory flood mitigation measures be identified as part of a wider scheme to mitigate flood risk in the area it is considered the site could have the potential for Gypsy and Traveller use. The Council should keep this under review".

5.40 Dialogue with Natural Resources Wales (NRW) undertaken since the Peter Brett study has revealed that NRW are proposing to carry out 2 flood defence enhancement schemes in relation to the River Rhymney and Roath Brook. These schemes are currently programmed for implementation in 2015/16 as part of the Severn Estuary Flood Risk Management Strategy and will reduce flood risk in part of the flood plain contiguous with land south of the railway line.

5.41 Whilst the schemes do not remove flood risk from the unused land north of Rover Way, they provide an important stage in delivering significant measures to address flood risk in the wider area. If complemented by further measures closer to the mouth of the River Rhymney and existing tidal defences, a comprehensive solution may be feasible which significantly reduces flood risk for the whole local area including a large number of existing properties and premises in the locality. Flood defence enhancements would also be fully consistent with the Severn Estuary Shoreline Management Plan 2 which supports, 'holding the line' of sea defences in this area.

5.42 Detailed analysis of the land east of Seawall Road and north of Rover Way reveals different degrees of flood risk within the site. A Phase

~~2 Strategic Flood Consequences Assessment (SFCA) undertaken for the Council by Atkins in 2011 indicates that flood risk is within guidelines for development for conditions today but becomes an issue when considering the impact of rising sea levels in future years and guidance states regard must be had to, 'lifetime of development' rather than assessing purely current conditions. The western corner of the site adjacent to Seawall Road is unused with no extant planning consents and contains two large raised areas of land including access roads which removes flood risk according to national guidance criteria until 2110 flood extents whilst lower surrounding developed and unused land triggers flood risk in 2085 flood extents.~~

~~5.43 In order to fully assess the precise nature of flood risk and explore effective mitigation measures in relation to the lifetime of development, a Phase 3 Flood Consequence Assessment will need to be undertaken. Initial dialogue has taken place with NRW in this respect and the Council will commission independent consultants to work to a brief agreed with NRW and in accordance with national guidelines. Given the fact that flood risk does not become an issue until 2110 on this part of the unused land plus the fact that the Severn Estuary Strategy Management Plan is sea defence improvements before this time, an allocation on this land is not unreasonable at this juncture. However, the Phase 3 study will be progressed as a priority to allow the Council time to consider its findings and update details as appropriate prior to formally agreeing the LDP submission and focussed changes in May 2014.~~

~~5.44 Having regard to other factors, there are strong reasons to support this allocation. This has the benefits of building upon the strong existing links with the existing community and facilities provided. Indeed, the site would benefit from far safer access to Willows High School and local services, overcome existing coastal erosion concerns and provide a more satisfactory living environment in a well-screened site not directly adjacent to the busy Rover Way.~~

~~5.45 In terms of potential capacity, the area of raised land adjacent to Seawall Road is approximately 3.2 hectares in size. It could be developed for Gypsy and Travellers in a phased manner utilising existing access roads together with room for new internal landscaping to compliment strong and mature boundary planting forming the western site boundary which extends to the north and east providing a distinctive feature in the~~

local landscape. Based on existing pitch densities, the site can deliver around 65 pitches.

5.46 The site would be of a large scale in a Wales context and above recommended site size in national guidance. However this guidance also states local authorities may consider it necessary to be flexible by allowing more pitches on a site when taking into account local circumstances and the current level of need. Furthermore, the council's experience operating the Shirenewton site of 59 pitches has demonstrated that large sites can be very effectively managed providing both benefits for the Gypsy and Traveller community and enabling the effective delivery of supporting services. The site allows for a logical phased development where pitches can be provided in a managed and orderly manner together with integrating the provision of supporting facilities. Developing a larger site at this location is not considered a viable or sustainable solution. It would go well beyond the recommended size of sites in national guidance and well beyond the Council's ability to demonstrate that such a model could effectively operate in practice.

5.47 The allocation of a new site for 65 pitches at Seawall Road represents a major provision in a national context and demonstrates the Council's continued commitment to responding to the needs of a large Gypsy and Traveller community. This represents meeting more than the immediate needs in Cardiff (43 pitches) as identified in the ORS needs assessment. However, it does not satisfy the overall level of need identified in the ORS needs assessment. This is a reflection of the unprecedented level of need to be addressed in a Wales context together with the limited suitability of other potential sites as shown through consideration of the Peter Brett Study. There has been insufficient time since the consideration of the Peter Brett study to identify additional sites prior to progressing the Deposit LDP in strict accordance with the Delivery Agreement approved by the Welsh Government.

5.48 The progression of the LDP through to examination allows this issue to be more thoroughly explored including an analysis of consultation responses on the Deposit Plan. Discussions have already been initiated with the Welsh Government to progress a balanced approach to addressing needs for the South East Wales region. Furthermore, it should Delete Policy H7 and reasoned justification

H87: SITES FOR GYPSY AND TRAVELLER CARAVANS

New sites and extensions to existing sites will be permitted where:

- i. Necessary physical, transport and social infrastructure are accessible or can be readily provided;**
- (ii) “Environmental factors including flood risk, ground stability, ~~contaminated~~ land contamination and proximity of hazardous installations do not make the site inappropriate for residential development;”**
- iii. The site is designed with reference to both the Welsh Government Good Practice Guide in Designing Gypsy Traveller Sites and the views of local Gypsies and Travellers;**
- iv. There would be no unreasonable impact on the character and appearance of the surrounding areas including impact on residential amenity of neighbouring occupiers or the operating conditions of existing businesses; and**
- v. In the case of a transit or touring site, it has good access to the primary highway network.**

5.51 32 This Policy provides a framework for assessing proposals for both new and extensions to existing sites whether for permanent or transit sites.

5.52 33 Cardiff currently has two Gypsy and Traveller sites, at Rover Way and Shirenewton, providing a total of 80 permanent pitches. To date these two sites have accommodated natural population growth, with some overcrowding..—The latest Gypsy and Traveller Needs Assessment was undertaken in April 2013 and showed a need for 108 permanent Gypsy and Traveller pitches. Local authorities are required to assess the accommodation needs of Gypsy families (Housing (Wales) Act 20014 S.225 & 226) .—and submit the assessment to the Welsh Government for approval by March 2016. PPW says that it is important for LDPs to have policies for the provision of sites. Welsh Government Circular 30/2007 indicates that where there is an assessment of unmet need for Gypsy and Traveller accommodation, sufficient sites should be allocated in the LDP to meet needs. A criteria based Policy for Gypsy and Traveller sites must also be included in order to meet future need.

5.53 34 This updated assessment will inform a wider site selection process which will progress over the next two years to meet the short and long term need for Gypsy and Traveller pitches. This process is referenced in the Monitoring Framework and includes the following key outputs and timescales. Sites that come forward through this process, together with any other proposals will be assessed against this policy.

- Agree methodology and project management arrangements by end of 2015
- Undertake Gypsy and Traveller Needs Assessment for both permanent and transit pitches in accordance with Housing (Wales) Act 2014 by February 2016
- Undertake a site search and assessment and secure approval of findings by October 2016
- Secure planning permission and funding (including any grant funding from Welsh Government) for identified sites(s) required to meet **the short term need for 43 pitches** by May 2017
- Secure planning permission and funding (including any grant funding from Welsh Government) for identified(s) required to meet **the long term need for 65 pitches** by May 2021

~~5.53 Cardiff currently has two Gypsy and Traveller sites, at Rover Way and Shirenewton, providing a total of 80 permanent pitches. To date these two sites have accommodated natural population growth, with some overcrowding. Policy H7 allocates land specifically for the provision of Gypsy and Travellers but This policy provides further scope for considering any additional proposals which may arise over the plan period.~~

2. ECONOMY

EC1: EXISTING EMPLOYMENT LAND

The city's existing employment areas outside of the Central and Bay Business Areas (as designated on the Proposals Map) will be protected for B Use Class employment generating uses (together with appropriate ancillary and/or complementary uses and activities as referred to in Policy EC2) as described in the table below.

Site Name	Primary Use/Activity	Status
Ocean Park	B1, B2, B8	Primary
Cardiff Port (& Heliport and Surrounds)	B1, B2, B8	Primary (Port related activities)
Rover Way (Celsa Steel Works, Tremorfa Industrial Estate, Seawall Rd)	B2, B8	Primary
Wentloog Road (Capital Business Park, Lamby Way Industrial estate, Wentloog Corporate Park, Rail freight terminal)	B1, B2, B8	Primary
St Mellons Business Park	B1, B2, B8	Primary
Cardiff Gate Business Park	B1 (offices), ancillary B2	Primary
Cardiff Business Park & Land North of Maes y Coed Rd, Llanishen	B1, B2, B8	Primary
Forest Farm, Longwood Drive	B1, B2, B8	Primary
Green Meadow Springs	B1 (offices)	Primary
Penarth Road Area (includes Hadfield Rd, Sloper Rd, Bessemer Rd)	B1, B2, B8	Primary
Ty Nant Road	B1, B2, B8	Local
Crown Way (Companies House)	B1 (offices)	Local
Wentloog Road (North of railway line)	B1, B2, B8	Local
Pentwyn (Panasonic Plant, Avenue Industrial estate)	B1, B2, B8	Local
Eastern Business Park	B1 (offices)	Local
Willowbrook Business Technology Park	B1 (science, research and development)	Local
Excelsior Rd	B1, B2, B8 & complementary trade counter	Local
Norbury Road Industrial Estate	B1, B2, B8	Local
Wroughton Place, Ely	B1, B2, B8	Local

Argyle Way, Caerau	B1, B2, B8	Local
Garth Industrial Estate	B1, B2, B8	Local
Land around Volvo Garage	B1, B2, B8	Local
Alexandra Gate Business Park	B1	Local

5.54 35 This Policy responds to the economic vision and objectives of the Plan to ensure a range and choice of employment land and premises are available across the city to assist economic competitiveness, encourage entrepreneurship, promote the growth of indigenous businesses of all types and size and attract inward investment.

5.55 36 A key role for the LDP is to ensure the provision of a portfolio of an appropriate range, quantity and quality of employment land and premises to meet the current and future needs of the city and the city's workforce. One of the main strategies to achieve this aim is the protection of existing employment sites across the city.

5.56 37 One of the key recommendations of the GVA Grimley Report 'Cardiff Employment Land and Commercial Review' (2009) and Hardisty Jones Associates/Origin 3 Study 'Cardiff Employment Land and Property Study' (April 2012) was to introduce policies to protect nearly all of the remaining employment locations (or allocations that were made in the Local Plan) either because of the important economic role they currently play in the overall employment land portfolio for the city or because of the distribution of this land across the city.

5.57 38 A critical factor in Cardiff maintaining a supply of employment land will be the ability to protect land and premises for employment from being lost to alternative uses. There has been growing pressure over recent years for the development/redevelopment of employment land and premises for other uses (predominantly residential), whether still occupied or where current operations have ceased. Such development proposals can result in significant losses to the county's stock of employment land and premises.

5.58 39 The loss of employment land can be incremental with the loss of one site setting the precedent for the loss of a series of others in a similar location, leading to a gradual erosion of an employment site. Sometimes

alternative uses can also fragment a larger business area or sever links between employment uses in an area. Over time pressure for alternative uses result in a material aggregate loss of employment sites to the detriment of the local economy.

5.59 40 The employment sites identified in Policy EC1 display strong potential to continue playing an important economic role, whether this is to provide local employment on smaller sites within key neighbourhoods or whether the sites are more strategic in size, position and function.

5.60 41 Due to the time that has elapsed since the completion of the GVA Study, the employment sites identified for protection have been reviewed. Some sites have experienced further pressure for alternative uses with additional losses of employment land and their B use class employment function has been all but eroded. These sites, for example North and South of Newport Road and Colchester Avenue are therefore no longer identified for protection for employment purposes. Similarly Cathedral Road and offices adjacent to the River Taff which are characterised by low grade offices with a high level of vacancy are no longer identified for protection and a change of use to housing for example will be given consideration.

5.64 42 The protection of employment sites also allows for the modernisation and refurbishment of land and property and increasing density of development on site thereby making the most efficient use of land.

EC2: PROVISION OF COMPLEMENTARY FACILITIES FOR EMPLOYEES IN BUSINESS, INDUSTRIAL AND WAREHOUSING DEVELOPMENTS

Provision for open space, public realm, leisure, food and drink, and child-care facilities will be appropriate in office, industrial and warehousing developments, provided, the facility is of an appropriate scale and nature intended primarily to meet the needs of workers in the vicinity, therefore not attracting significant levels of visitor traffic into the area, or exacerbating existing traffic conditions.

5.62 43 This Policy seeks to enable the provision of appropriate complementary leisure, food and drink, and childcare facilities in existing and new office, industrial and warehousing areas and helps to deliver Plan objectives. Employees in such areas may require good access to a range of facilities, including food and drink, leisure/recreation and child-care. The absence of such facilities in an employment area can increase travel demand and make the areas less attractive to employers and employees.

5.63 44 In existing employment areas, change of use of existing premises will be considered for appropriate complementary facilities, including food and drink, leisure and child-care.

5.64 45 Where new employment areas are proposed, the need for such facilities should be considered as part of the overall development scheme.

5.65 46 In all cases, only facilities of an appropriate nature and scale to meet the needs of employees will be permitted. Appropriate leisure facilities may include fitness centres/clubs and indoor sports facilities. Provision for accessible open space or public realm improvements may also be appropriate.

EC3: ALTERNATIVE USE OF EMPLOYMENT LAND AND PREMISES

Development of business, industrial and warehousing land and premises for other uses will only be permitted if:

- i. The land or premises are no longer well located for business, industrial and warehousing use; or**
- ii. There is no realistic prospect of employment use on the site and/or the property is physically unsuitable for employment use, even after adaption/refurbishment or redevelopment; or**
- iii. There is no need to retain the land or premises for business, industrial or warehousing use, having regard to the demand for such land and premises and the requirement to provide for a range and choice of sites available for such use; and**
- iv. There will be no unacceptable impact on the operating conditions of existing businesses.**

~~5.66~~ 47 This Policy provides criteria against which proposals for the change of use of business and industrial land and premises will be assessed. It will apply to existing, permitted and allocated business, industrial and warehousing land and premises and address:

- The need to retain a range and choice of well located sites and premises attractive to business, industry and warehousing;
- Making the best use of redundant land and premises for alternative employment purposes; and
- Where land and premises need to be retained because they are of local importance for employment opportunities.

~~5.67~~ 48 Criteria for assessing whether land and premises remain well located for business, industrial and warehousing uses will include:

- Accessibility to the primary highway network, rail-freight facilities and the port;
- Accessibility by public transport; and
- Proximity to housing or other sensitive uses.

~~5.68~~ ~~Provision might be made for conversion to alternative uses but only if there were compelling and exceptional circumstances, for example:~~

- ~~• Robust evidence that there is no realistic prospect of employment use on the site; and/or~~
- ~~• The property is physically unsuitable for employment use, even after adaption/refurbishment or redevelopment.~~

~~5.69~~ 49 The 'robust evidence' for assessing the need to retain land and premises for business, industrial and warehousing use include the following criteria:

- Whether and for how long land or premises have been vacant and actively marketed and the expressions of interest during this period;
- Whether the site offers particular benefits not generally available within the overall land bank;
- Whether the site is within an area of high unemployment and offers realistic prospects of use for appropriate employment purposes;
- Whether the relocation of existing occupiers to other suitable accommodation will be facilitated;
- Whether the proposed development would retain an element of industrial, office or warehousing floorspace; and
- Whether the proposed use need to be accommodated on business, industrial or warehousing land (e.g. transport depots).

- Other priorities, such as housing need, override more narrowly focussed economic considerations.

5.70 50 Where alternative use of land is considered appropriate, priority will be given to mixed-use development comprising employment, housing and community facilities or, where that is not feasible, housing. Other proposals will need to demonstrate why a mixed-use of housing and employment schemes cannot be achieved on the site.

5.71 51 It is also important to ensure that the introduction of residential or other uses into an industrial or warehousing area does not unduly restrict the operating conditions of remaining businesses.

5.72 52 Where employment land and premises are under development pressure from non-employment uses and it is considered that there still exists an opportunity to make a contribution towards longer term economic development and job retention and growth within an area, developers will be requested to make provision for an appropriate contribution towards bringing forwards compensatory employment opportunities elsewhere in the County in line with Policy KP7 Planning Obligations.

5.73 53 Where there is the potential to develop residential units on areas previously identified for commercial/ industrial use, there needs to be an appropriate assessment for the presence of land contamination. The land contamination standards set for commercial/industrial use are not suitably protective for residential use and therefore unacceptable risks to the end users may be present which will require appropriate remediation.

5.74 54 Further guidance on the application of this Policy will be set out in the Protection of Employment Land and Premises for Business, Industry and Warehousing SPG.

EC4: PROTECTING OFFICES IN THE CENTRAL AND BAY BUSINESS AREAS

The alternative use of offices within the Central and Bay Business Areas will only be permitted where it can be demonstrated that there is no need to retain the site or premises for office use

having regard to the demand for offices and the requirement to provide a range and choice of sites available for such use.

~~5.75~~ 55 This Policy aims to ensure that office sites within the Central and Bay Business Areas identified on the Proposals Map, whether occupied, vacant, or with permission are protected from inappropriate changes of use. Any proposal involving the loss of offices will need to demonstrate that there is a sufficient range and choice of commercial office floorspace to meet the city's office requirement up to 2026.

~~5.76~~ 56 When considering proposals for the alternative use of office accommodation, the following issues will be considered:

- Whether, and for how long the premises have been vacant and actively marketed for office use;
- Whether the development of the site for appropriate uses will facilitate the relocation of existing office occupier/s to other suitable accommodation within the Central or Bay Business Area;
- Whether the proposed development would retain a significant element of office floorspace;
- Whether the proposed use is complementary to an employment use; and
- Whether the proposed development can demonstrate wider economic, social and regeneration benefits.

~~5.77~~ 57 The Central and Bay Business Areas contain a wide range of office premises, including modern Grade A accommodation (e.g. Callaghan Square and Assembly Square); high-rise accommodation built in the 1960s and 1970s (e.g. Newport Road); office accommodation above commercial premises (e.g. St. Mary Street and Greyfriars Road); and converted historic villas in the north of the city centre (e.g. Park Place and Windsor Place). Over time, and as the needs of businesses change, premises can fail to meet modern occupier requirements. This has been evidenced recently with changes of use from offices to residential and hotel uses, resulting in a significant reduction in office vacancy levels within the city centre.

~~5.78~~ 58 To ensure that Cardiff continues to attract and retain quality businesses, the City Centre must contain sufficient land for new office accommodation, as well as providing a range and choice of office premises for existing and future occupiers, including large Grade A

offices, small and medium sized enterprises, incubator units and live-work premises. The Cardiff Central Enterprise Zone along with other planned employment areas provides a range and choice of new business locations. ~~Further information regarding the potential contribution of the Cardiff Central Enterprise Zone to the supply of new business premises for the city, as well as opportunities for other commercial and residential development, is contained in Supporting Document No. 4.~~

5.79 59 It is acknowledged that some office vacancy is necessary to allow for the turnover of businesses and the renovation of premises to meet modern business needs. However, long-term vacancy can have a damaging impact upon the vitality and viability of commercial centres. Office premises that, despite active marketing, have remained unoccupied for over two years will be considered more favourably for changes of use to other, appropriate uses.

5.80 60 Mixed-use redevelopment proposals that retain a significant element of commercial office floorspace, or those that do not result in any net loss in the level or quality of office accommodation within the City Centre, are likely to be more favourably considered.

5.81 61 Where proposals involve the loss of office accommodation, they will only be permitted where they do not harm, and are complementary to, the primary office role and function of the area and accord with other Plan policies. Such uses could include childcare facilities, training, tertiary education, residential development, commercial leisure and hotels.

EC5: HOTEL DEVELOPMENT

Proposals for hotel development will be permitted:

- i. Within the Central and Bay Business Areas of the city centre;**
 - ii. In appropriate locations for the conversion of suitable residential or commercial properties;**
 - iii. At other locations within the urban area, if there is no need to preserve the site for its existing or allocated use, assessed against the relevant policies of the plan;**
- Subject to considerations of scale, location, design, amenity and transportation being acceptable.**

~~5.82~~ 62 This Policy favours hotel development at appropriate locations within the Central and Bay Business Areas.

~~5.83~~ 63 The conversion of existing properties to hotels or guest houses contributes to the range of accommodation available for tourists and other visitors to the city. In assessing such proposals, 'appropriate locations' are likely to be on main roads into the city and close to tourist or business areas, and 'suitable properties' are likely to be larger houses and vacant low grade offices, able to accommodate parking requirements. In terms of both the proposed property and its location, importance will be attached to the need to safeguard amenity of residential areas. Proposals for the change of use of converted hotels in residential areas to uses other than residential or uses acceptable within a residential area will be resisted.

EC6: NON-STRATEGIC EMPLOYMENT SITE

Land is allocated for university related research and development uses at Maindy Road, Cathays (3.3ha)

~~5.84~~ 64 This non-strategic site is considered acceptable for university related research and development uses given its close proximity to the existing Cardiff University campus. Dialogue with the University has indicated the merits of university related research and development uses for this site, which can assist in the long term development of Cardiff University and other academic institutions within the city together with wider economic benefits for the region.

~~5.85~~ 65 The allocation of the site for university research and development uses supports the LDP vision and the economic objectives which seek to promote clusters of research & development expertise. It also supports policies KP1 and KP9 which promote the provision of range and choice of new employment sites for different types of employment. The site is directly adjacent to the existing Cardiff University and in an accessible location which reduces the need to travel, a key component of developing sustainable communities. The precise nature of research and development uses will be subject to further detailed work.

EC7 EMPLOYMENT PROPOSALS ON LAND NOT IDENTIFIED FOR EMPLOYMENT USE

Proposals for employment use (B Use Class) on unallocated sites will be permitted provided that:-

- i. The proposal cannot reasonably be accommodated on existing employment land and in the case of offices in the Central Enterprise Zone (Policy KP2) and the Central and Bay Business Areas (Policy EC4);**
- ii. The site falls within the settlement boundary and has no specific policy designation;**
- iii. The use is compatible with uses in the surrounding area and;**
- iv. The proposal is well related to the primary highway network and accessible to sustainable modes of transport**

5.66 Policy EC7 provides guidance on how the Council will determine applications for employment development on sites not identified for employment and ensure a sequential approach to site selection is followed, thereby steering employment allocations to the most appropriate locations consistent with national policy (PPW para. 10.2.9 and 10.2.11). This policy is intended to support the economy by allowing for future economic growth which sustains and provides job opportunities within Cardiff which is considered essential in responding to economic uncertainty and fulfils the LDP economic evidenced needs.

5.67 The LPA is not able to fully predict all potential business and operator requirements over the Plan period. Therefore it is important for the policy framework to allow an element of flexibility to enable businesses to locate within the County.

3. ENVIRONMENT

Countryside Protection

Policy EN1: COUNTRYSIDE PROTECTION

~~There will be a presumption against development in the countryside, beyond the settlement boundaries identified on the Proposals Map, except where it can be justified for agricultural and forestry needs or it is essential for facilitating sustainable access to and enjoyment of the countryside including appropriate outdoor recreation and tourism uses.~~

~~Appropriate development in the countryside should be in with, and not cause unacceptable harm to, the character and quality of the surrounding countryside and landscape demonstrating:~~

- ~~i. The need for the development to be located in the countryside;~~
- ~~ii. That alternative locations have been considered, where appropriate;~~
- ~~iii. That the need cannot be accommodated through the conversion, extension or demolition and replacement of an existing building;~~
- ~~iv. That farm diversification schemes are ancillary to, and do not prejudice, the operation of the existing business;~~
- ~~v. That the proposed development respects the character of the surrounding area and is of appropriate scale, and design including both soft and hard landscaping and access;~~
- ~~vi. That any new buildings are grouped and designed in harmony with existing buildings wherever possible and;~~
- ~~vii. Appropriate measures are in place to protect, maintain, manage or improve the features of the surrounding countryside and landscape.~~

Development in the countryside, beyond the settlement boundaries identified on the Proposals Map, will only be permitted where the use is appropriate in the countryside, respects the landscape character and quality and biodiversity of the site and surrounding area and where it is appropriate in scale and design. A landscape assessment and landscaping scheme will be required

for significant development proposals. Proposals for new housing, rural diversification and rural enterprise, will only be permitted where they comply with National Planning Policy.

5.86 68 The countryside in Cardiff is land located outside the settlement boundaries as identified on the LDP Proposals Map. Cardiff's countryside is a valuable and finite resource which is under pressure from all kinds of development. The aim of this Policy is to ensure that development within the countryside is strictly controlled to protect and enhance Cardiff's natural heritage and setting. It further seeks to manage and enhance this rich asset in order to maintain Cardiff's unique distinctiveness whilst helping to mitigate against climate change and also aims to ensure that those uses that do not need to be located in the countryside will be resisted.

5.87 69 It should be read in conjunction with Policy KP3A and KP3B and aims to ensure that those uses that do not need to be located in the countryside will be resisted. Whilst KP3A provides strict controls in the Green ~~Belt~~ Wedge area for the reasons given, this policy provides further guidance on uses appropriate in the countryside as a whole.

5.88 70 Although farming and forestry comprise a relatively small part of Cardiff's economy, the economic viability of the countryside around Cardiff remains crucial, with agriculture and forestry playing an important role in both the management and conservation of the countryside. As such, the Council will adopt a positive approach to supporting the rural economy. Development proposals relating to ~~agriculture and forestry, including farm~~ rural diversification and enterprise will be assessed against ~~the above criteria~~, (PPW 2014)(2012, Para 7.3.3) and TAN 6: Planning for Sustainable Rural Communities. Farm diversification schemes should remain linked to the existing farm business and maybe subject to planning obligations in accordance with TAN 6: Planning for Sustainable Rural Communities (2010 Para 3.7) and Policy KP7.

5.89 71 Close proximity to a large urban population brings many pressures to Cardiff's countryside, including outdoor recreation. Whilst its importance for local recreational purposes and tourism is accepted, it is essential to ensure that both these uses, and any built development associated with them, do not cause unacceptable harm to the character and quality of the countryside. Small scale, low impact development

associated with activities which need to be located in the countryside, or encourage access to and enjoyment of the countryside, may be acceptable subject to the tests set out ~~above~~ in national guidance.

5.90 72 Planning permission is normally required for the use of land for keeping horses and for equestrian activities, unless they are kept as “livestock” or the land is used for “grazing”. The keeping of horses in Cardiff is very widespread, so that land used for grazing, recreation and associated development such as stabling, ménages, fencing, lighting, and car parking is already having a considerable impact on the character of Cardiff’s countryside. Whilst it is accepted that these horse related uses can only be accommodated in the countryside, not all locations within the countryside are necessarily appropriate. The overall impact of such proposals will be assessed against the criteria ~~above~~ set out in national guidance.

5.94 73 Additionally there has been an increase in the number of applications for kennels and catteries. Applications for the siting of kennels and catteries outside the curtilage of a dwelling house i.e. in a separate field or paddock will also be subject to the tests set out ~~above~~ in national guidance.

5.92 74 There is continuing pressure on the countryside in terms of residential development; however the LDP has identified sufficient land to meet the foreseeable residential need over the Plan period. As such, new residential development will not normally be permitted in the countryside unless it is justified for agricultural or forestry purposes or other rural enterprises. In these instances, applicants should refer to PPW (2012), 2014 and TAN 6: Planning for Sustainable Rural Communities (4.3 – 4.4).

5.93 75 Any new development in the countryside should be designed and located to minimise their impact, usually within existing clusters of buildings or farm complexes and/or close to existing infrastructure and public transport. The use of outdoor space associated with development including hard and soft landscaping, means of access, car parking and the treatment of boundaries can all have a significant detrimental effect on the character and quality of the countryside and will therefore be strictly controlled. ~~In these instances a Design and Access Statement will be required.~~

5.94 76 Supplementary information may need to accompany planning applications, explaining how the proposal has considered and responded to criteria outlined in the Policy. Where relevant, information should also be submitted to show how the proposals respond to National Guidance, including TAN 6 Planning for Sustainable Rural Communities. Where appropriate, this information should also explain the reasons for locating the development in the countryside. Significant development proposals in the countryside will be expected to include a landscape assessment and landscaping scheme in accordance with Policy EN3.

EN2: CONVERSION, EXTENSION AND REPLACEMENT BUILDINGS IN THE COUNTRYSIDE

There will be a presumption against conversion, extension and replacement of buildings in Cardiff's countryside except where:

- a. The proposed conversion is demonstrated to:**
 - i. be structurally sound and capable of being made so without major alterations, reconstructing or extensions;**
 - ii. be possible without materially changing the existing character of the building or have a harmful effect on the countryside;**
 - iii. Not give rise to a demand for additional buildings; and**
 - iv. Be suitable for the proposed re-use.**

~~With particular regard to the proposed conversion to residential use in addition to the above, control similar to that of new house building in the open countryside will be applied where:~~

- ~~v. the building is unsuitable for conversion without extensive alteration, rebuilding or extension or if~~
- ~~vi. the creation of a residential curtilage would have a harmful effect on the countryside.~~

- b. The proposed extension is demonstrated to:**
 - i. be the subordinate part of the existing building; and**
 - ii. Respect the scale, character and design of the original part of the building within its countryside and landscape setting.**
- c. The proposed replacement building is demonstrated to:**

- i. Not result in any greater impact on the quality and character of the surrounding area in terms of its proposed scale and design, including any residential curtilage;**
- ii. Be on the footprint of the existing building unless relocation can be justified in terms of either being part of an existing group or improving the countryside or landscape setting; and**
- iii. Not replace any building of architectural, historic or visual merit. All proposals should be of an appropriate scale and design and be at least as sympathetic in its setting as the existing building.**

5.95 77 The aim of this Policy is to ensure that conversions, extensions and replacement of buildings in the countryside conserve the character and quality of Cardiff's countryside and natural heritage value, without being unduly restrictive.

5.96 78 The Policy contributes towards Plan objectives ~~and PPW (2012, Para 7.6.8)~~ which supports the re-use and adaption of existing rural buildings to help meet the needs of commercial and industrial development, as well as for tourism sport and recreation. ~~It further accords with PPW (2012, Para 7.6.9 and 7.6.10) which supports the inclusion of polices within the development plan which do not allow residential re-use which would have a harmful effect on the character of the countryside.~~ Reference should also be made to KP3A with regard to the consideration of proposals in the Green **Belt Wedge** area.

5.97 79 The scale and design of some individual buildings is already having a detrimental effect on the character and quality of Cardiff's countryside. Although small-scale extensions, conversions and replacement buildings may be acceptable, all development in the countryside will be strictly controlled to prevent unacceptable harm. Where permissions are granted, permitted development rights may also be removed.

5.98 80 With regard to conversions, it is recognised that many buildings have and continue to fall into disrepair meaning that they become unfit for the original purpose they were intended for. Whilst the re-use and adaptation of such buildings may prevent existing building stock from going to waste, a balance is required to protect the character and quality of the countryside. However, proposals for the conversion of rural

buildings will only be permitted where they conform to the criteria set out above and the other relevant policies of the Plan. In addition to this, any access, hard-standing, boundary treatment, landscaping or other external features associated with the proposals should not result in the loss of fields or have a detrimental impact on the character of the surrounding area.

5.99 ~~81~~ In the case of proposed residential conversions, the applicant should demonstrate that they have made every effort to secure suitable business re-use and that the application is supported by a statement of the efforts they have made. The creation of new gardens and garden extensions will not normally be considered appropriate due to their individual and cumulative detrimental impact on the quality and character of the countryside and landscape.

5.100 ~~82~~ Extensions to existing buildings will also be strictly controlled to limit their individual and cumulative impact. Proposals for extensions should ensure that the existing building remains the dominant form. In the case of buildings that have had previous extensions, the proposals should have regard to the scale and character of the original part of the building. The tendency to seek successive extensions to individual buildings will be resisted.

5.101 ~~83~~ The demolition and replacement of buildings will generally only be permitted on the footprint of an existing building or relocated elsewhere on the site where their scale and design, including residential curtilage, does not result in any greater impact on the quality and character of the area. The replacement of non-residential buildings with dwellings will be resisted. In general, the re-use or adaptation of existing buildings will normally be favoured in preference to new development.

EN3: LANDSCAPE PROTECTION

Development will not be permitted that would cause unacceptable harm to the character and quality of the landscape and setting of the city, with

Particular priority will be given to protecting, managing and enhancing the character and quality of the following Special Landscape Areas:

- i. **St Fagans Lowlands and the Ely Valley;**
- ii. **Garth Hill and Pentyrch Ridges;**
- iii. **Fforest Fawr and Caerphilly Ridge;**
- iv. **Wentloog Levels; and**
- v. **Flat Holm.**

A landscape assessment and landscaping scheme will be required for significant development proposals.

5.402 84 The aim of this Policy is to ensure that those features of the landscape that contribute to its character, value, distinctiveness, sense of place, and quality, with particular priority given to SLAs (as identified on the Proposals Map) are protected from inappropriate development. It seeks to manage and enhance this rich asset in order to maintain Cardiff's unique distinctiveness whilst helping to mitigate against climate change.

5.403 85 This Policy applies to the whole county, acknowledging that the urban area also contains features of landscape importance. When dealing with planning applications that affect Cardiff's landscape, unacceptable harm will be assessed in relation to:

- The impact of the proposed development on key features of the landscape in terms of physical character, vegetation and habitats, land use and settlement patterns, visual character, historical character and cultural associations;
- The need for the proposed development in relation to its impact;
- The availability of alternative locations; and
- The ability to provide appropriate mitigation measures.

5.404 86 Wherever possible, development will be expected to maintain and strengthen positive attributes of the landscape and seek to mitigate or remove, rather than compound negative influences. Reference should also be made to KP3A with regard to the consideration of proposals in the Green ~~Belt~~ Wedge area.

5.405 87 The scale, location and design of development proposals should respect their landscape context. Where large scale development is proposed, or where development may impact significantly on the landscape character or key features of an area, a landscape assessment should be submitted with the planning application and, where appropriate, a landscaping scheme.

~~5.406~~ 88 Where landscape assessments or landscaping schemes are required they should set out the impact of the development on key features, ~~of the~~ landscape character and qualities and should explain how the design solution proposed addresses both its positive and negative attributes and associated landscape and visual impacts effects, including cumulative effects where appropriate. Assessments and schemes should include the landscape baseline information from all five LANDMAP* layers and should focus on the relevant aspect areas, their descriptions, and evaluations. using the LANDMAP approach (as described below). Design solutions should clearly demonstrate how the strategic landscape assessment and site appraisal have informed the detailed design and location of the development and planting proposals. Schemes should generally be implemented prior to all or part of the site coming into beneficial use. The management of landscape features of importance will also be encouraged.

*Further information can be found at
<http://www.ccw.gov.uk/landscape--wildlife/protecting-our-landscape/landmap.aspx>

~~5.407~~ 89 TACP Consultants were appointed by the Council in September 2007 to undertake a review of the existing proposed Special Landscape Areas (SLAs) and Landscape Character Areas (LCAs) previously defined as Combined Aspect Areas, based on the original Landscape Study of Cardiff undertaken by Atlantic Consultants, using the LANDMAP methodology developed by the Countryside Council for Wales. In addition, the St Fagans Lowlands and Ely Valley proposed boundary took into account the detailed work undertaken by Wardell Armstrong in 2006.

~~5.408~~ 90 The 2008 reviews used the updated LANDMAP information methodology system established in 2003 and as recognised in PPW. A key output from this exercise has been the preparation of supplementary advice on SLAs including evidence satisfying the selection and extent of candidate SLA areas with a description of key landscape characteristics and consideration of five discrete aspect topic layers: geological landscapes, landscape habitats, visual and sensory landscapes, historic landscapes and cultural landscapes based upon an all-Wales set of criteria.

5.109 91 SLAs are designated to protect areas that are considered to be important to the overall landscape of the County due to their visual and sensory, geological, cultural, historical and habitat landscapes. They are intrinsic to the overall character of the area and provide a living history of the evolution of the area's landscape as well as a cultural backdrop and visual setting.

5.110 92 Development proposals within SLAs will be assessed against the same criteria as those set out above. However, greater weight will be given to landscape consideration within SLAs and to the special character and quality of the particular area. Development proposals will also be required to address any relevant key issues identified in the Review of Special Landscape Areas and Landscape Character Areas. In addition landscape assessments and schemes are more likely to be required to accompany applications for development in these areas.

5.111 93 Although, SLA designations will not unduly restrict acceptable development in the countryside, there will be a presumption against urban expansion or other development within SLAs that would cause unacceptable harm to the character and quality.

5.112 94 Quarries, for example, have been included within proposed designations because they reflect the underlying geology as well as the history of mining within the area and form a distinctive element of the areas, but settlements lying within SLAs have been excluded from the proposed designations. Development proposals within these settlements, or within close proximity to an SLA including allocations will need to have regard to their potential impact on the character and quality of the SLA.

EN4: RIVER ~~VALLEYS~~ CORRIDORS

The Natural Heritage, character and other key features of Cardiff's river corridors will be protected, promoted and enhanced, together with facilitating sustainable access and recreation.

5.113 95 The Policy provides a planning framework within which the Council can protect, promote and enhance the river corridors.

~~5.414~~96 It will be used as a mechanism to implement the Council's aims with regards to the river corridors. The Policy helps to deliver Plan objectives relating to social needs and natural environment together with according with PPW (Para 5.1, 5.4 and 5.5) which values the importance of the natural heritage of Wales including non-statutorily designated sites and seeks to conserve and enhance this heritage in ways which bring benefits to the local community.

~~5.415~~ 97 Cardiff contains the four river corridors of the Taff, Ely, Rhymney and Nant Fawr. They make a unique contribution to the character and form of the city providing continuous green corridors between the Severn Estuary and the countryside beyond the urban edge. The watercourses and adjoining open spaces possess high recreational, biodiversity, historic, cultural and landscape value. Additionally, they are located close to local communities and offer excellent opportunities for off-road access routes that can provide part of the wider strategic recreational routes and everyday network of routes.

~~5.416~~ 98 This Policy aims to protect and enhance the features of Cardiff's river corridors, whilst also facilitating sustainable access and recreation opportunities.

~~5.417~~ 99 The extent of Cardiff's river corridors within the urban area are illustrated on the Proposals Map. They include the rivers together with adjoining open space and other predominantly open land that together form the strategically important corridor of mixed open spaces that run through the heart of the urban area. The Policy also applies to the river corridors outside the urban area (as defined by the settlement boundaries). Such land is protected from inappropriate development through other Policies. However, this Policy will also apply and aims to ensure the strategic role played by the river corridors is continued from the urban area, through the surrounding countryside up to the County boundary. In this respect it is considered inappropriate to designate an arbitrary boundary to a notional river corridor running through farmland. Any proposals will be assessed to ensure the aims of this Policy are met and not prejudiced.

~~5.418~~ 100 This Policy provides a planning framework within which the Council can protect, promote and enhance the river corridors. It will be used as a mechanism to implement the council's aims with regards to the

river corridors and will be used in conjunction with the River Valleys Initiative that was established in 2004/ 05 in order to develop a more joined up approach to the planning and management of Cardiff's river valleys. The River Valleys Initiative brings together a wide range of organisations who have roles to undertake within the river valleys. One of the key outcomes of this process to date is an agreement to develop Action Plans for each of the three main river valleys. Action Plans have been prepared and are implemented, monitored and reviewed in partnership with a wide range of organisations, overseen by a steering group. There are River Corridor Action Plans for the Ely Valley, Taff Corridor and Rhymney Valley and Nant Fawr Corridor. Projects that implement the objectives set out in the Action Plans, and Cardiff's Countryside Strategy are undertaken by a variety of organisations, individually and in partnership using funding from a range of sources, including the partnership programme with the Natural Resources Wales Countryside Council for Wales, other Cardiff Council funding and planning obligations.

5.419101 Proposals for development within the river corridors will be assessed against other relevant policies in the Plan. New development within, or adjacent to the river corridors may be required to contribute to projects which help to achieve the objectives set out in the River Corridor Action Plans. Where appropriate, planning obligations may be required in accordance with Policies relating to the provision of new infrastructure.

5.420 102 Progress on achieving this Policy will be monitored through the existing River Valley Action Plans process which can in turn inform the wider LDP monitoring.

~~EN5: LOCAL NATURE RESERVES AND NON-STATUTORY SITES OF NATURE CONSERVATION AND GEOLOGICAL IMPORTANCE~~

Designated Sites

Development will not be permitted that would cause unacceptable harm to sites of international or national nature conservation importance.

Development proposals that would affect locally designated sites of nature conservation and geological importance should maintain or enhance the nature conservation and/or geological importance of the designation. Where this is not the case and the need for the development outweighs the conservation importance of the site, it should be demonstrated that there is no satisfactory alternative location for the development which avoids nature conservation impacts, and compensation measures designed to ensure that there is no reduction in the overall nature conservation value of the area or feature.

5.103 The purpose of Policy is to ensure that the Council fulfils its obligations in respect of protecting sites of nature conservation importance from harmful development.

5.104 Where development is proposed which may have an effect on a site of international or national importance for nature conservation, sufficient information will be required of all applicants to enable a full assessment of the proposal to be carried out. The need for such assessments will not be limited to development located within the designated areas as, depending on the nature of the development and of the nature conservation interest, significant effects may occur even if the development is some distance away.

5.105 Assessment of unacceptable harm will be in accordance the criteria set out in the legislation which establishes the sites of international or national importance for nature conservation, and which are expanded upon in Chapter 5 of **Planning Policy Wales (2012)** and Sections 5.3, 5.4 and Annex 3 of **Technical Advice Note (Wales) 5: Nature Conservation and Planning (2009)**.

5.106 In the case of developments required to be assessed under the Conservation of Habitats & Species Regulations 2010 (as amended), where an initial determination of likely significance has indicated that the proposal may be likely to have a significant effect, or the decision as to whether or not the development would have a significant effect on the designated site is inconclusive, an appropriate assessment under Regulation 61(1) will be required and further information may be required from the applicant or other parties.

5.107 Where development proposals may be likely to result in disturbance or harm to a European or UK protected species or its habitat, additional information will be requested of applicants

5.108 If planning permission is granted it may be the subject of appropriate conditions, or management agreements or planning obligations will be sought, to secure appropriate protection, monitoring, mitigation or compensation and favourable management.

~~5.121~~ 109 The network of SSSIs/SACs/SPAs and Ramsar Sites alone is not sufficient to maintain the biodiversity of Cardiff. It is therefore important to identify other locally designated wildlife sites such as Sites of Importance for Nature Conservation (SINC's) and Local Nature Reserves (LNR's). Cardiff currently has 177 SINC's and 6 LNR's.

~~5.122 Cardiff's LNR's are shown on the Proposals Map and SINC's are illustrated in the Biodiversity SPG.~~

~~5.123~~ 110 Geological and geomorphological sites of importance that do not merit notification as a SSSI may also be designated as a SINC or Regionally Important Geological Site (RIGS). Such sites define the most important places for geology and geomorphology outside those that are statutorily protected. Geological sites within Cardiff will be designated during the Plan period. The aim of this Policy is to protect the LNRs, SINC's and RIGS referred to above.

~~5.124~~ 111 The Policy will contribute to the protection and enhancement of Biodiversity interests in accordance with Policy EN6 and will work towards delivering the Plan's objective of protecting and enhancing features of Cardiff's natural environment and heritage.

~~5.125 The current SPG on Biodiversity covers the protection of non-statutory and locally designated sites. This document will be updated and made available as SPG to the LDP.~~

~~5.126~~ 112 Chapter 5 of PPW and TAN 5 provide guidance on planning policies to protect biodiversity interests. In accordance with this guidance, the Council will carefully assess proposals for development affecting non-statutory and locally designated sites by evaluating whether:

- the need for the proposed development is considered to outweigh the importance of the particular nature conservation interest and any harm likely to be caused to it;
- the proposed development can be more satisfactorily accommodated elsewhere; and appropriate mitigation or compensation measures are proposed.

5.427 113 Where development is proposed which may have an effect on a non-statutory or locally designated site, sufficient information will be required from all applicants to enable a full assessment of the proposals to be carried out. The need for such assessments will not be limited to development located within the designated areas as, depending on the nature of the development and the nature conservation interest, significant effects may occur even if the proposed development is located some distance from the conservation interest. The required assessments, including ecological surveys, will need to be undertaken at the appropriate time of the year, in accordance with the Council's Biodiversity SPG.

5.428 114 Where planning permission is granted, it may be the subject of appropriate conditions or management agreements to ensure suitable protection, monitoring, mitigation or compensation and favourable management. Where compensatory provision is required, it should be of the same standard and size to that lost as a result of the development. In such cases, details of the type and level of provision will be provided, and agreed by the case officer, prior to determination of the planning application. This may also be required for outline planning applications where appropriate. Where necessary, planning obligations may be sought in accordance with Policy KP7.

~~5.129 Where the conservation interest cannot be protected by planning conditions or obligations, it may be necessary to refuse development proposals.~~

5.430 115 SINC's will be measured in accordance with the annual review of SINC's and additionally reported on in the LDP Annual Monitoring Report.

5.116 The Designated Sites identified in this Policy are defined on the Constraints Map and listed in Appendix 7. (It should be noted that although this information is accurate at the time of adoption, potential changes to designated areas are possible over the plan period. The

Council will keep an up to date record of the boundaries of all designated sites which can be accessed via the Council website.

EN6: ECOLOGICAL NETWORKS AND FEATURES OF IMPORTANCE FOR BIODIVERSITY

Development will only be permitted if it does not cause unacceptable harm to:

- i. Landscape features of importance for wild flora and fauna, including wildlife corridors and 'stepping stones' which enable the dispersal and functioning of protected and priority species;**
- ii. Networks of importance for landscape or nature conservation. Particular priority will be given to the protection, enlargement, connectivity and management of the overall nature of semi natural habitats. Where this is not the case and the need for the development outweighs the nature conservation importance of the site, it should be demonstrated that there is no satisfactory alternative location for the development and compensatory provision will be made of comparable ecological value to that lost as a result of the development.**

5.434 117 This Policy aims to protect Cardiff's ecological networks and landscape features that are important for biodiversity. It accords with Policy KP16 by protecting and enhancing Cardiff's natural heritage, including its biodiversity. The Policy also contributes to the aims and objectives of the Plan by ensuring that Cardiff's biodiversity and abundance of wildlife habitats and native species are protected and enhanced.

5.432 118 Wild species, whether legally protected or not, are often widely dispersed in the landscape, with significant populations being isolated from each other. In such cases, landscape features may provide wildlife corridors for some species, as well as links or 'stepping-stones' between habitats. Whilst it is crucial to maintain and enhance a network of sites to safeguard current levels of biodiversity, this cannot be achieved without also safeguarding and managing the intervening habitats and areas.

5.433 119 The protection, management and enhancement of ecological networks are identified as being particularly important in Article 10 of the

EU Habitats Directive. Regulation 39(3) of The Conservation of Habitats and Species Regulations 2010 (as amended) requires planning authorities to encourage the positive management of landscape features which make up this network and are of importance for wild flora and fauna. This is also reinforced in PPW and the associated Companion Guide (2006) in that it advises LDP's to safeguard and manage landscape features of major importance for nature conservation.

5.134 120 For the purposes of this Policy, features of the landscape which are of importance for wild flora and fauna are those, by virtue of their linear and continuous structure (such as rivers with their banks or the traditional systems of marking field boundaries) or their function as stepping stones (such as ponds or small woods), that are essential for the migration, dispersal and genetic exchange of wild species.

5.135 121 Where development is proposed which may cause unacceptable harm to such networks or features, information will be required of all applicants to enable a full assessment of the proposal to be carried out. Such assessments, including ecological surveys will need to be undertaken at the appropriate time of year, in accordance with the Council's Biodiversity SPG.

5.136 122 If there are overriding material planning considerations in favour of development, then the Council will seek to secure reasonable measures from developers to minimise or offset any impacts or loss of habitat features or species present on a site. Such measures will be agreed prior to the commencement of development and will be secured through appropriate planning conditions and/or planning obligations. Planning Obligations will be secured in accordance with Policy KP7.

~~5.137 Where the ecological networks or landscape features of importance for biodiversity cannot be adequately protected by planning conditions or obligations, it may be necessary to refuse development proposals.~~

EN7: PRIORITY HABITATS AND SPECIES

Development proposals that would have a significant adverse effect on the continued viability of habitats and species which are legally protected or which are identified as

priorities in the UK or Local Biodiversity Action Plan will only be permitted where:

- i. The need for development outweighs the nature conservation importance of the site;**
- ii. The developer demonstrates that there is no satisfactory alternative location for the development which avoids nature conservation impacts; and**
- iii. Effective mitigation measures are provided by the developer.**

Where harm is unavoidable it should be minimised by effective mitigation to ensure that there is no reduction in the overall nature conservation value of the area. Where this is not possible compensation measures designed to conserve, enhance, manage and, where appropriate, restore natural habitats and species should be provided.

5.438 123 This Policy is in accordance with the aims and objectives of the Plan by protecting and enhancing the features of Cardiff's natural heritage, including its biodiversity and abundance of wildlife habitats and native species. More specifically, it will help protect the current Priority Habitats and Species as defined in the Local Biodiversity Action Plan 2008. The Policy also helps to deliver Policy KP16.

5.124 The presence of a species protected under European or UK legislation is a material consideration in considering development proposals which would be likely to result in disturbance or harm to the species or its habitat. Appropriate surveys to confirm if a protected species is present and an assessment of the likely impact of the development on a protected species may therefore be required from applicants. Thereafter the development proposals will be assessed in accordance with criteria set out in sections 5.5.11 and 5.5.12 of **Planning Policy Wales 2012** and Chapter 6 of **Technical Advice Note (Wales) 5: Nature Conservation and Planning (2009)**.

5.439 125 Development proposals that have the potential to cause a significant adverse effect on priority habitats and species will need to be accompanied by an ecological survey and an assessment of the likely impact of the development on the protected species. The need for such

assessments will be undertaken at the appropriate time of year, in accordance with the Council's Biodiversity SPG.

5.140 126 In considering any significant adverse effect on the Priority Habitat or Species, the Council will look at:

- The current distribution and status of the priority habitat or species within Cardiff as informed by the Cardiff Biological Database as well as other sources of data that may be relevant, accurate and practical to use for such purposes in the future;
- Whether the development proposals are likely to have a significant affect on the priority habitats/ species; and
- Whether effective mitigation measures have been provided.

5.141 127 Where planning permission is granted, the Council may attach conditions or enter into agreements that would overcome the potentially damaging effects of development on the habitats or species of conservation importance. The Council will encourage the applicant to identify and include measures that contribute to the restoration or expansion of important habitats, and these will be set out in the landscaping and planting conditions that accompany the planning permission. Any planning obligations required will be in accordance with Policy KP7.

5.142 128 Where there is a significant adverse effect on a significant population of the Priority Habitat or Species and where planning conditions and/ or planning obligations cannot adequately protect the interest, it may be necessary to refuse development proposals.

5.143 129 Priority Habitats and Species are monitored as part of the 3 yearly review of the UK and Local Biodiversity Action Plans.

EN8: TREES, WOODLANDS AND HEDGEROWS

Development will not be permitted that would cause unacceptable harm to trees, woodlands and hedgerows of significant public amenity, natural or cultural heritage value, or that contribute significantly to mitigating the effects of climate change.

5.144-130 The purpose of the Policy is to protect trees, woodlands and hedgerows with natural heritage or amenity value.

5.145 131 It responds to Plan objectives relating to the natural environment and climate change and accords with PPW which emphasises the protection and preservation of trees and woodlands against inappropriate development.

5.146 132 Trees, woodlands and hedgerows offer multiple benefits, including visual amenity, defining a sense of place, providing places for relaxation and recreation, habitats for wildlife, improved health and wellbeing and mitigating the effects of climate change. To maintain these benefits, the protection and enhancement of a sustainable urban forest is critical. A sustainable urban forest adapted to meet the challenges of climate change and exotic pest and disease outbreaks will contain a diverse age range and species mix of trees, though large, long-lived trees will be favoured for protection and planting due to the increased benefits they offer in mitigating the effects of climate change.

5.147 133 In order to determine unacceptable harm to trees, woodland and hedgerows within or bounding a site, applicants must assess them in accordance with the current British Standard 5837. The assessment must inform design, and in considering hedgerows, regard will be given to their landscape, historical and ecological value, as well as their function as boundaries. Further guidance and advice is also contained in SPG relating to Trees and development.

5.148 134 The value of trees, woodlands and hedgerows in sequestering carbon and mitigating the effects of climate change will be ascertained partly by the British Standard 5837 assessment, and partly by how effectively they are integrated into a sustainable urban forest as defined in paragraph 5.83.

5.149 135 To prevent damage to trees, woodlands and hedgerows during development, schemes of protection will normally be required, in accordance with the current British Standard 5837.

5.150 136 Trees are the largest and longest living organisms in Cardiff. When considering developments that may affect them, regard will be given to potential short and long-term impacts. Where trees are lost, new planting will be sought that is provided with sufficient usable soil volume, aeration and irrigation to ensure healthy long-term growth. Although younger trees are more easily replaced, the Council will seek to ensure that sufficient young trees survive to maturity, having regard to the number of developments that may occur during their natural lifespan. Proposals that create spaces for larger tree species to grow to maturity will be favoured over proposals for scattered smaller trees.

5.151 137 Ancient woodlands are irreplaceable habitats of high biodiversity value which will be protected from development that would result in significant damage. Veteran trees and ancient hedgerows cannot be recreated and developments will be expected to retain them. Where appropriate, Tree Preservation Orders will be served to protect important amenity trees from removal or harm. The amenity value of trees will be assessed in accordance with government guidance and nationally recognised systems of amenity evaluation.

The Historic Environment

EN9: CONSERVATION OF THE HISTORIC ENVIRONMENT

Development relating to any of the heritage assets listed below (or their settings) will only be permitted where it can be demonstrated that it preserves or enhances that asset's architectural quality, historic and cultural significance, character, integrity and/or setting.

- i. **Scheduled Ancient Monuments;**
 - ii. **Listed Buildings and their curtilage structures;**
 - iii. **Conservation Areas;**
 - iv. **Archaeologically Sensitive Areas;**
 - v. **Registered Historic Landscapes, Parks and Gardens; or**
 - vi. **Locally Listed Buildings of Merit and other historic features of interest**
- that positively contribute to the distinctiveness of the city.**

5.152 **138** This Policy aims to set out the criteria against which proposals affecting Cardiff's heritage assets will be assessed. The Heritage assets identified in this Policy are defined on the Constraints Map and in Appendix (tbc) with the exception of Statutory Listed Buildings and Locally Listed Buildings of Merit which can be viewed on the Council website
**<http://ishare.cardiff.gov.uk/mycardiff.aspx?layers=ListedBuildings&startEastin g=315000&startNorthing=179000&startZoom=50000>

5.139 It should be noted that although this information is accurate at the time of adoption, potential changes to designated areas are possible over the plan period. The Council will keep an up to date record of the boundaries of all designated sites which can be accessed via the Council website.

5.140 Occasionally built heritage will be a constraint, the need for preservation outweighing the benefit of development. More often, a heritage asset will be an opportunity for retaining local identity through the repair and reuse of historic assets and strengthening this through respect for local characteristics of design, for the interpretation of hidden heritage assets, or for the enhancement of the characteristic natural environment. All new developments within historic areas

should be designed in such a way as to preserve or enhance their special character.

Scheduled Ancient Monuments

5.153 141 PPW, Chapter 3 *Conserving the Historic Environment* and Welsh Office Circular 60/96: Planning and the Historic Environment: Archaeology (scheduled to be replaced by a Technical Advice Note within the plan period) set out clear statements of national development management policy for archaeological remains and should be referred to accordingly.

Listed Buildings

5.154 142 Once a building is listed (or is subject to a Building Preservation Notice) no work to the interior or exterior of the building, or to structures within its curtilage, that would affect the special architectural or historic interest of the building can be undertaken without Listed Building Consent. This can include work that would not require planning permission under the provisions of the Planning Acts.

5.155 143 Listed building control is subject to the provisions of the Planning (Listed Buildings & Conservation Areas) Act 1990. Advice is set out in Circular 61/96 (scheduled to be replaced by a Technical Advice Note within the plan period). There is no statutory requirement to have regard to the provisions of the development plan when considering an application for listed building consent. It is strongly recommended, however, that owners or developers seek early advice from the Council prior to undertaking any works or making an application for listed building consent.

5.156 144 Where Policy EN9 is particularly relevant is in the case of development that affects the setting of a listed building or in the consideration of an associated planning application for a change of use.

5.157 145 Listed building consent is not required if the development is beyond the curtilage of the listed building and only affects its setting. However, considerable damage can be done to the architectural or historic interest of the listed building if the development is insensitive in design, scale or positioning. The setting of a listed building is often an essential feature of its character. The setting may be limited to the immediate surroundings, but it can extend for a considerable distance. A proposed development might affect the gardens or parkland of a major house, the rural characteristics of a farmstead or the street setting of an urban building that forms an important visual element of that street. Policy EN9 requires that development proposals take full account of the

setting of any listed building in the vicinity and that developers demonstrate that the setting will not be harmed.

~~5.158~~ 146 In terms of associated planning applications for changes of use of a listed building, the Council will expect applicants to demonstrate how their proposals have been arrived at in the context of the PPW aim to identify the optimum viable use that is compatible with the character and setting of the listed building.

Conservation Areas

~~5.159~~ 147 The adopted series of Conservation Area Appraisal (CAA) documents seek to provide a sound basis for managing development proposals and for progressing initiatives to preserve and enhance each conservation area, in line with advice in PPW and ~~Welsh Office~~ Circular 61/96. The documents were adopted following extensive local consultation and provide a clear and agreed definition of those elements which contribute to the special character and historic interest of the area.

~~5.160~~ 148 The findings of the CAAs need to be fully taken into account when considering development proposals. The design and access statement accompanying any application for planning permission should, where relevant, clearly set out how the development preserves or enhances the conservation area. In the assessment of planning applications, the Council will wherever feasible seek to enhance the special character of each area as defined and promoted by each adopted CAA.

~~5.161~~ 149 It is recommended that owners or developers seek early advice from the Council prior to making an application for demolition or development within a conservation area.

~~5.162~~ 150 The Council will continue to review its conservation area designations, boundaries and CAAs as required and against recognised national criteria in PPW and Circular 61/96, in addition to those characteristics identified within the approved Conservation Area Strategy (Sept 1997) to determine whether an area is of special interest.

Archaeologically Sensitive Areas

~~5.163~~ 151 Four archaeologically sensitive areas have been identified in Cardiff. The purpose of this non-statutory designation is to assist those who are planning development in areas where there is a known archaeological resource or where it is likely that remains may be sensitive to development pressures. The adopted Archaeologically Sensitive Areas SPG provides further guidance and information.

Registered Historic Landscapes Parks and Gardens

5.164 152 The landscapes, parks and gardens on the register have no statutory protection, but they must be taken into account when development proposals are made that either affect them directly or that affect their setting.

Locally Listed Buildings of Merit and other historic features of interest

5.165 153 Many buildings, structures and archaeological remains that do not meet the very special criteria to merit scheduling or inclusion on the statutory list are nevertheless of value to the identity of the city for their contribution to local built character and/or social and historical associations.

5.166-154 Heritage and culture is an important social aspect and contributes to creating places where people want to live and work. Historic assets can create focal points and are useful in identifying the vernacular characteristics of an area that create distinctive places. Restoration and re-use is also a basic principle of developing sustainably. Standing buildings represent an investment of material and embodied energy that should not be ignored. Their removal, disposal and subsequent site works require further energy and creates waste.

5.167 155 These assets may be noted within the Council's list of buildings of local merit, embodied in the unscheduled archaeological record maintained by the Glamorgan Gwent Archaeological Trust or may yet to be registered or listed but still worthy of retention for their contribution to local character or identity.

5.168 156 While inclusion on the local list does not currently afford any additional statutory protection to the buildings, it is the intention of Policy EN9 to ensure that full consideration is given to the conservation and continued use of such buildings, as part of the protection and enhancement of the special identity of Cardiff.

Natural Resources

EN10: WATER SENSITIVE DESIGN

Development should apply water sensitive urban design solutions (the process of integrating water cycle management with the built

environment through planning and urban design). To include the management of:

- i. **Water demand and supply;**
- ii. **Waste water and pollution;**
- iii. **Rainfall and runoff;**
- iv. **Watercourses and water resource;**
- v. **Flooding; and**
- vi. **Water pathways.**

~~5.169~~ 157 Increasing pressures on urban drainage systems and challenges of water management highlight the need to redress the balance of the water cycle. Recent climate change studies have identified that Wales can expect more extreme weather events including an increase in the frequency of intense rainfall. Natural Resources Wales and Welsh Water support these findings.

~~5.170-158~~ There is a need for an approach where the whole urban water cycle is incorporated into a holistic system. Water sensitive design focuses on managing water locally and reducing demands on the strategic network.

~~5.171~~ 159 Such examples of integrated water cycle management include Sustainable Urban Drainage Systems (SUDS); water recycling; and the holistic integration of surface water systems designed into the development layout, as well as into networks of green spaces applicable at a range of spatial scales, such as gardens, green roofs, streets, car parks and river corridors.

~~5.172~~ 160 There is a need for all those involved in the water industry and built environment to work together to create a sustainable strategy for expanding the water ecosystem whilst providing opportunities for wildlife, adaptable landscapes, health and exercise. Implementation of this Policy, which is aimed in part at improving water resource use efficiency, will counteract increases in water demand arising from the implementation of other policies in the Plan, thereby avoiding likely significant effect upon the River Usk and River Wye SACs.

~~5.173-161~~-The benefits of a water sensitive urban design initiative are; reduction of flood risk; security of water supply; better watercourse health, more affordable water bills; improved health and well-being, celebration of environment, local character and community; delivery of green infrastructure and efficiencies; creation of attractive places and improved ecosystem health.

EN11: PROTECTION OF WATER RESOURCES

Development will not be permitted that would cause unacceptable harm to the quality or quantity of underground, surface or coastal waters.

5.474 162 This Policy expands on Policy KP18 and its purpose is to maintain and enhance the quality and quantity of water resources, including rivers, lakes, ponds and other water bodies, which are important for a wide range of uses and users. Poor and deteriorating water quality and compromised water quantity can affect the supply of water resources for industrial and domestic consumption, fisheries, amenity, recreation and nature conservation.

5.475 163 The EU Water Framework Directive (2000/60/EC) establishes a strategic approach to water management and a common means of protecting and setting environmental objectives for all ground waters and surface waters. It aims to protect and restore clean water and ensure its long-term sustainable use. PPW emphasises that planning controls should be used to prevent the location of incompatible land uses and development close to potential sources of pollution.

5.476 164 Development will only be allowed where provision is made for the necessary infrastructure to protect water quality and quantity. Planning permission may be granted subject to conditions to secure the necessary measures, or developers may be required to enter into planning obligations. Applications that cannot provide adequate protection of watercourses, ground and surface water will be refused. New development that:

- Poses an unacceptable risk to ground water or water courses;
- Poses an unacceptable risk to ground water pollution, depletion or obstruction; and
- Incorporates inappropriate measures to prevent pollution

will be refused planning permission, unless appropriate measures to prevent pollution can be incorporated into the development proposal.

5.477 165 Future development will be limited to areas where adequate water resources exist or they can be reasonably provided without adversely affecting existing abstractions, river flows, water quality, agriculture, fisheries, amenity or nature conservation and where provision coincides with the timing of development. Existing groundwater and river levels must be maintained, and water pollution must be avoided.

5.178 166 Natural Resources Wales is responsible for protecting and improving the water environment. The Council will consult NRW and Caldicot and Wentlooge Levels Internal Drainage Board, where necessary, on any proposal that is likely to affect the supply of water, the quality of water, or is likely to be affected by, or cause flooding. Levels of impact and risk will be assessed through consultation with these bodies.

5.179 167 Planning permission will not be granted for development that, in the opinion of the Council, following consultation with NRW and the Caldicot and Wentlooge Levels Internal Drainage Board, would adversely affect the quality, quantity or supply of surface water or groundwater as a result of:

- The nature of the surface or waste water discharge; or
- Unsatisfactory agreements for the disposal of foul sewerage, trade effluent or surface water; or
- The spillage or leakage of stored oil or chemicals.

5.180 168 Planning permission will not be granted for developments involving local abstraction of surface or ground water which, in the opinion of the Council, following consultation with Natural Resources Wales and the Caldicot and Wentlooge Levels Internal Drainage Board, would:

- Increase requirements for water, unless an adequate water supply already exists or would be provided in time to serve the development; or
- Pose an unacceptable risk to the current supply of water uses.

5.181 169 Developments that improve the quality of the water environment or help to prevent water pollution or flooding will be favoured. Implementation of this Policy, which is aimed in part at improving water resource use efficiency, will counteract increases in water demand arising from implementation of other policies in the Plan, thereby avoiding likely significant effect upon the River Usk and River Wye SACs.

EN12: RENEWABLE ENERGY AND LOW CARBON TECHNOLOGIES

Development proposals are required to maximise the potential for renewable energy.

The Council will encourage developers of major and strategic sites to incorporate schemes which generate energy from renewable and low carbon technologies. This includes opportunities to minimise carbon emissions associated with the heating, cooling and power systems for new development.

An independent energy assessment investigating the financial viability and technical feasibility of incorporating such schemes will be required to support applications.

5.182-170 The UK government has committed to sourcing 15% of its energy from renewable sources by 2020. Modelling undertaken on behalf of the Department for Energy and Climate Change (DECC) suggests that by 2020, this could mean that more than 30% of our electricity and 12% of our heat, may be generated from renewable sources. These targets are presented as the lead scenario, which relies on strong, co-ordinated efforts from several sectors including local authorities.

5.183 171 PPW enables Local Planning Authorities to assess strategic sites to identify opportunities to require higher sustainable building standards (including zero carbon) where requirements are demonstrated to be evidence-based and viable. Particular reference is made to opportunities for minimising carbon emissions associated with the heating, cooling and power systems. This includes utilising new or existing low and zero carbon energy supply systems (such as district heating systems), encouraging the development of new opportunities to supply proposed and existing development, and maximising opportunities to co-locate potential heat customers and suppliers.

5.184 172 In preparing the LDP, Cardiff Council has undertaken a Renewable Energy Assessment (REA). The REA aims to identify the potential energy capacity of renewable and low carbon technologies in the local authority area and consider the contribution these can make towards Cardiff's future heat and electricity energy requirements. The REA was prepared in accordance with the Welsh Government Practice Guidance "Planning for Renewable and Low Carbon Energy – A Toolkit for Planners". Findings within the REA suggest that by 2020 the percentage of Cardiff's electricity and heat met by renewable energy sources is likely to be 24% and 6% respectively. Both of these figures are below the guide targets in the UK Renewable Energy Strategy. The REA (and future updates) can assist in identifying which renewable energy technologies may be appropriate in particular locations.

5.185-173 The co-location of high density and mixed-use development can present significant opportunities for utilising renewable and low carbon technologies, including energy supply systems. Both major development sites and the identified strategic sites will form a large percentage of future development in Cardiff and are likely to play a significant role in Cardiff meeting its renewable energy potential identified

in the REA. Major development sites are taken to be those of 100 dwellings and above, or, commercial developments of 1,000 square metres or more.

5.186 174 Developers are expected to submit an independent energy assessment investigating the financial viability and technical feasibility of incorporating such schemes. Statements should be submitted at the planning application stage to ensure that any viability assessment reflects technological developments and economic circumstances. Developers should refer to the Council's REA and Preliminary Heat Opportunities Plan in undertaking their energy assessments to identify possible opportunities for renewable and low carbon technologies. In implementing this Policy it is expected that developers follow the energy hierarchy as advocated by national policy (TAN 12 & ~~TAN 22~~). Further guidance in relation to energy assessments will be issued in the form of SPG. This will specify what is expected of developers to meet the requirement of Policy EN12.

5.187 175 PPW contains national policy relating to climate responsive development and specifies the current sustainable building standards in Wales[i]. Section 12.10.1 contains national development management policy in relation to planning applications for renewable and low carbon energy development and associated infrastructure. Accordingly, developers should refer to this Policy and ~~TAN 22 - Planning for Sustainable Buildings~~ for further guidance. Implementation of this Policy, which promotes incorporation of renewable energy generation, will also reduce emission of aerial pollutants, thereby offsetting increases in aerial emissions arising from implementation of other policies in the Plan. This would contribute to avoiding significant effects upon European Sites.

Pollution

EN13 Air, Noise, Light Pollution and ~~Contaminated~~ Land Contamination

Development will not be permitted where it would cause or result in unacceptable harm to health, local amenity, the character and quality of the countryside, or interests of nature conservation, landscape or built heritage importance because of air, noise, light pollution or the presence of unacceptable levels of land contamination.

5.188 ~~176~~ 176 The purposes of the Policy are to ensure that:

- Developments that would generate unacceptable levels of air, noise or light pollution are appropriately located and controlled;

- Incompatible land uses and development are not located close to potential sources of pollution; and
- Developments are suitable for the proposed end use and that any actual or potential land contamination can be overcome, thereby ensuring that there is no unacceptable harm to human health or the environment.

5.189 177 PPW emphasises that whilst planning controls should be used to control the above matters, they should not be used to control matters that are the proper concern of pollution control regimes.

5.190 178 Poor air quality can harm people's health, quality of life and amenity, as well as nature conservation and built heritage interests. Poor air quality is a problem in certain areas of Cardiff. Current Air quality assessments have identified four areas of the County where statutory air quality standards are being exceeded. The Council has identified these as Air Quality Management Areas:

- Cardiff City Centre;
- Ely Bridge;
- Stephenson Court, Newport Road; and
- Cardiff Road, Llandaff.
-

5.191 179 These areas suffer from high levels of pollution caused by road traffic. As part of its statutory monitoring of air quality within the city the Council will annually review air quality and may revoke or declare additional Air Quality Management Areas as appropriate.

5.192-180 In determining planning applications, consideration will be given to a development's likely effect in terms of air pollution it may cause directly, but also in terms of any increase or decrease in traffic it may generate. Where a development is likely to affect air quality significantly (i.e. where air quality standards are, or are likely to be breached or a new residential development gives rise to the need for a new Air Quality Management Area to be declared by introducing residents to areas where air quality standards are already being breached) then an application may be approved subject to conditions mitigating its impact on air quality, or refused where appropriate.

5.193 181 Noise can have a harmful impact on people's health and quality of life. Developments such as housing, schools and hospitals can be particularly sensitive to noise, as can areas of landscape, nature or built heritage importance. Where possible, new developments that are particularly noise-sensitive should be located away from existing or proposed sources of significant noise. This assessment can be informed by information on noise complaints being collated by the Council as part of an on-going initiative to reduce noise nuisance.

~~5.194~~-182 Major transport routes (road, rail and air) and some industrial and commercial activities can generate particularly high noise levels. There is specific guidance within TAN 11 that specifies Noise Exposure Categories that assists with proposed residential development near transport related noise.

~~5.195~~ 183 In addition to this, Welsh Government as part of its statutory duties under the Environmental Noise Directive has designated areas within Cardiff Noise Action Planning Priority Action Areas. The aim of the Directive is to define a common approach intended to avoid, prevent or reduce on a prioritised basis the harmful effects, including annoyance, due to exposure to environmental noise. The Directive defines environmental noise as unwanted or harmful outdoor sound created by human activities, including noise emitted by means of transport, road traffic, rail traffic, air traffic, and from sites of industrial activity.

~~5.196~~ 184 Under the Regulations, the Welsh Ministers had an obligation to make strategic noise maps for:

- **agglomerations** (large urban areas with populations of more than 100,000);
- **major roads** (those with more than three million vehicle passages per year); and
- **major railways** (those with more than 30,000 train passages per year).

~~5.197~~ 185 The noise maps have been published by the Welsh Government.

~~5.198~~-186-Mitigating noise issues after they have arisen can be a lot more expensive than avoiding them in the first place. It is therefore desirable to seek interventions that bring multiple benefits, such as reducing people's exposure to air pollutants, making buildings more energy-efficient, encouraging safer driving or improving the road surface for drivers and cyclists at the same time as decreasing noise levels.

~~5.199~~-187-A current list of Noise Action Planning Priority Areas is available on the Welsh Government website.

~~5.200~~ 188 Special consideration is required where noise-generating development is proposed in or near special areas such as urban quiet areas, which are tranquil urban green spaces designated by the Welsh Government under the Environmental Noise Directive.

~~5.201~~-189 There are currently 6 quiet areas within Cardiff, namely:

- Heath Park;

- Park Cae Delyn;
- Roath Park;
- Roath Park Pleasure Garden;
- Roath Park Recreational Ground; and
- Thompson Park.

5.202 190 There are a further 6 candidate quiet areas in Cardiff which the Welsh Government are currently consulting upon, these are:

- Bute Park;
- Fairwater Park;
- Insole Court;
- Llanishen Park;
- Splott Park; and
- Victoria Park.

5.203 191 Quiet Areas have been designated as part of the implementation of the Environmental Noise Directive.

5.204 192 Necessary new development that would give rise to high noise levels, including proposed transport schemes, should be located and designed so as to minimise their noise impact. Where noise-sensitive development needs to be located close to transport infrastructure for access reasons, it should be designed to reduce noise impact. Where necessary, developers will be required to provide an assessment of noise impact, together with proposals for mitigation.

5.205 193 The provision of lighting can help prevent crime and the fear of crime, enhance safety and security, and facilitate some sport and recreational activities. However, it can also be intrusive, cause glare and have a harmful impact on natural and built heritage assets, the amenity of neighbouring land uses and traffic safety.

5.206 194 Where new lighting constitutes development (e.g. floodlighting) it is principally controlled through the planning system. Planning permission can be refused if the design of proposed lighting systems is not considered satisfactory in order to prevent light pollution. Where necessary, planning permission will be conditioned to ensure that the design and operation of lighting systems are satisfactory and/or to prevent light pollution.

5.207 195 As detailed in PPW, where significant contamination is likely to be present, the local planning authority will require evidence of a detailed investigation and risk assessment prior to the determination of the application to enable beneficial use of land. Where acceptable remedial measures can overcome such contamination, planning permission may be granted subject to conditions specifying the necessary measures. If

contamination cannot be overcome satisfactorily, the authority may refuse planning permission.

5.208 196 The onus will remain with the developer to ensure that the development of the site will not result in designation as a site with contaminated land contamination under Part 2A of the Environmental Protection Act 1990, thus ensuring the land is suitable for its proposed use.

EN14: Flood Risk

Development will not be permitted:

i. Within tidal or fluvial flood plains unless it can be demonstrated that the site is justified in line with national guidance and an appropriate detailed technical assessment has been undertaken to ensure that the development is designed to alleviate the threat and consequences of flooding over its lifetime; existing or proposed flood prevention and/or protection measures are acceptable; or

ii. Where it would increase the risk of flooding from fluvial and/or tidal flooding or from additional run-off from the development in any location; or

iii. Where it would hinder future maintenance or improvement schemes of flood defences and watercourses; or

iv. Where it would cause adverse effects on the integrity of tidal or fluvial defences; or

v. Where ground floor bedrooms are proposed in areas at high risk of flooding; or

Where appropriate the developer should demonstrate that they have considered the need to incorporate environmentally sympathetic flood risk mitigation measures such as Sustainable Urban Drainage Systems (SUDS).

5.209-197 The purpose of this Policy is to avert development from where it would be at risk from river, ordinary watercourse, coastal, surface

water flooding or where it would increase the risk of flooding or additional run off from development elsewhere.

5.210 198 The Policy will help deliver LDP objectives relating to flood risk and reflects advice set out in PPW and Technical Advice Note 15: Development and Flood Risk (July 2004).

~~5.211 199 TAN15 states that the development advice maps are based on the best available information considered sufficient to determine when flood risk issues need to be taken into account in planning future development. Development advice zones C1 and C2 of the maps show high flood risk areas and are based on Natural Resources Wales extreme flood outlines for tidal and fluvial flooding. These areas are shown on the Constraints Map based on information from the latest development advice maps (2015) Areas of Cardiff identified by Natural Resources Wales to be at risk from tidal or river flooding through surveys undertaken under Section 105(2) of the Water Resources Act 1991 are shown on the Constraints Map.~~

5.212 100The Council is required to consult Natural Resources Wales and Caldicot and Wentlog Levels Internal Drainage Board on planning applications that have any flooding implications. It must have good reasons if it does not intend to follow Natural Resource Wales advice as it forms a material consideration.

5.213 201 The Flood and Water Management Act (FWMA) that was introduced in 2010, places a duty on Cardiff Council to prepare a Local Flood Risk Management Strategy (LFRMS) that sets out how the Council will proactively seek to minimise flood risk and prepare our communities.

5.214 202 Cardiff Council is now a Lead Local Flood Authority (LLFA) as defined by the new Flood and Water Management Act 2010. The FWMA aims to provide better, more comprehensive management of flood risk for people, homes and businesses. This role includes ensuring that flood risk from all sources is suitably managed and aims to promote an integrated approach to planning and managing all forms of flood risk.

5.215 203 Cardiff Council in general are opposed to the culverting of watercourses because of the adverse ecological, flood risk and other effects that are likely to arise. Culverting can exacerbate the risk of flooding and increase the maintenance requirements for a watercourse. It

also destroys wildlife habitats, damages a natural amenity and interrupts the continuity of the linear habitat of a watercourse. It is recognised there are various reasons why in some instances landowners, developers and local authorities believe that open watercourses should be culverted. However, Cardiff Council considers any benefits are usually outweighed by the potential problems in managing the system, the loss of habitats and difficulty in pollution detection.

5.216 204 New developments will only be permitted where the Council is satisfied that they will not result in adverse affects on the quality and/or quantity of surface waters or groundwater resources. Where detailed information in respect of flood risk is not available, developers will be required to carry out a Flood Consequence Assessment (FCA) to evaluate the extent of risk and ensure that no unacceptable development occurs within the flood risk area identified.

5.217 205 Managing flooding is an important part of contributing towards achieving sustainability. Developers, wherever necessary and appropriate, are required to incorporate environmentally sympathetic mitigation measures into their proposals. This would include such measures as Sustainable Urban Drainage Systems (SUDS). SUDS are seen as a means to control surface water which provide a valuable amenity asset and new habitats for wildlife.

5.218 206 In general, development will be resisted in identified flood plains or areas at unacceptable risk from flooding or where third parties may be adversely affected by an increased flood risk. Proposals involving bedrooms on ground or lower floors in areas liable to flood will not be acceptable. Development will only be permitted if the risks and consequences can be demonstrated to be managed to an acceptable level in line with national planning policy, in particular the tests set out in TAN 15.

5.219 207 Further guidance on the application of this Policy will be set out in SPG.

4. TRANSPORT

T1: WALKING AND CYCLING

To enable people to access employment, essential services and community facilities by walking and cycling the Council will support developments which incorporate:

- i. High quality, sustainable design which makes a positive contribution to the distinctiveness of communities and places;**
- ii. Permeable and legible networks of safe, convenient and attractive walking and cycling routes;**
- iii. Connections and extensions to the Cardiff Strategic Cycle Network and routes forming part of the Cardiff Walkable Neighbourhoods Plan;**
- iv. Measures to minimise vehicle speed and give priority to pedestrians and cyclists;**
- v. Safe, convenient and attractive walking and cycling connections to existing developments, neighbourhoods, jobs and services;**
- vi. Infrastructure designed in accordance with standards of good practice including the Council's Cycling Design Guide;**
- vii. Supporting facilities including, signing, secure cycle parking and, where necessary, shower and changing facilities; and**
- viii. The provision of Car-Free Zones.**

5.220 208 Research undertaken by Sustrans and Socialdata in 2011 revealed that a large proportion of car trips in Cardiff are relatively short: just over half are no further than 5 km and nearly a third are no further than 3km (under 2 miles). Many of these trips could be undertaken by foot or by bicycle.

5.224 209 The purpose of this Policy is to exploit this potential by favouring developments which include design features and facilities that make it easy for people to walk and cycle for everyday journeys instead of travelling by car. Encouraging 'active travel' will help to minimise car use and support the Council in fulfilling its legal duty under the ~~(emerging)~~ Active Travel (Wales) Bill Act 2013 to develop, improve and maintain local walking and cycling networks.

5.222 210 The Council has produced a plan for the development of the city's Strategic Cycle Network known as 'Enfys'. The plan defines a core network of numbered cycle routes connecting to different parts of Cardiff. The Council is building the Enfys cycle network through a rolling programme of infrastructure schemes. Developments brought forward through the LDP will provide the opportunity to extend and enhance the network through the provision of new links and incorporating sections of the network within development schemes.

5.223 211 The Council is also developing a Walkable Neighbourhoods Plan. This will set out a programme of area-based measures to improve the local walking environment and make it easier and safer for people to reach local services and facilities on foot. New developments will provide the opportunity to extend these improvements and provide walking connections which help to integrate new neighbourhoods with existing communities.

5.224 212 Car-Free Zones provide a particular opportunity which can help to successfully deliver this Policy. They could form part of wider development areas adding to the range and choice of available housing. Located in areas with good public transport and other sustainable transport options, together with good access to local facilities, such areas are likely to be attractive to many potential occupiers of all ages. In designing such Zones it will be important to ensure the needs of disabled people are taken into account.

5.225 213 The Policy will be implemented through the development process. In considering proposals, the Council will seek to ensure that developments give priority to walking and cycling within their design and layout. High quality design which makes a positive contribution to the distinctiveness of communities and places will be essential to make walking and cycling attractive and popular travel options.

5.226-214 The Policy will be a key consideration in the master planning of strategic sites and should be read in conjunction with the strategic site master planning general principles and those included within the schematic master planning frameworks for those sites. Provision of infrastructure will be secured through planning conditions, planning obligations and resourced through Community Infrastructure Levy and matching transport funding. Implementation of this Policy will help to reduce pollution arising from road traffic. This will counteract increases in atmospheric pollution as a result of the Plan, thereby avoiding significant effects upon internationally designated sites.

T2: STRATEGIC RAPID TRANSIT AND BUS CORRIDORS

BUS CORRIDOR ENHANCEMENTS

i. City Centre Bus Routes;

- ii. Eastern Bus Corridor (A48, A4232 from the A48 to Junction 30 of the M4 Motorway, A48M Trunk Road, Southern Way and A4161 Newport Road);
- iii. Northern Bus Corridor (A470 North Road/ Manor Way and A469 Caerphilly Road/A470 Trunk Road to the County Boundary); and
- iv. Western Bus Corridor (~~A4161 Lansdowne Road~~, Cowbridge Road, A48, A4055 Cardiff Road; A4119 Llantrisant Road from the County Boundary to Cowbridge Road and A4232 Trunk Road from Culverhouse Cross to Junction 33 of the M4 Motorway);
- v. Southern Bus Corridor (Lloyd George Avenue, Lloyd George Avenue to the County Boundary via A4232 and Cogan Spur and via the Cardiff Barrage).

Provision will be made to facilitate the functional integration of these corridors and associated services with the wider transport network including the bus network and local walking and cycling routes. The trunk road sections of the Bus Corridor Enhancements are the responsibility of the Welsh Government. Cardiff Council will work with the Welsh Government to identify appropriate measures on the trunk road sections of these routes.

Improvements to the city's wider bus network, including the provision of new infrastructure and the introduction of new routes and services will be supported where these are necessary to provide sustainable travel options and address the movement impacts of new development.

~~5.227 This Policy requires development to be served by effective public transport through the development of new rapid transit routes, key strategic bus corridors and improvements to the wider city bus network.~~

Rapid Transit Corridors

~~5.228-215~~ Rapid transit corridors will connect neighbourhoods to the city centre with high frequency services which will run along on-road and off-road infrastructure and offer shorter journey times than conventional bus services Four Rapid Transit Corridors have been identified based on four broad geographical channels feeding in towards the city centre. The Rapid Transit Corridors can be defined as the collection of high frequency

public transport services which will run along on-road and off-road infrastructure linking neighbourhoods to the city centre and wider public transport network offering shorter journey times than conventional bus services. The Bus Corridor Enhancements referenced in paragraph 5.230 are largely located within the Rapid Transit Corridors but are specifically highlighted as the key bus-based corridors with important cross-boundary linkages and will therefore be a focus for future enhancements. Each corridor will include improvements that give rapid transit and bus services increased priority over general traffic and improved accessibility to a wider range of destinations.

~~5.229-216 This Policy provides for the development of four principal rapid transit corridors that will serve the main LDP strategic sites. The form of rapid transit (heavy rail, light rail, tram train, bus rapid transit etc.) which can be accommodated on each corridor will be determined through further technical assessment work and as part of the detailed master planning of the strategic sites. The Rapid Transit Corridors are shown on the Constraints Map with further detailed work informing the precise mode, alignments and land take requirements. This Policy provides for the development of four principal rapid transit corridors that will serve the main LDP strategic sites. The mode of rapid transit could take one of the following forms or another form of technology that provides for the same purpose:~~

- heavy rail;
- light rail;
- tram;
- tram/train running on segregated rails;
- tram/train combining running on segregated rails and on-street running;
- conventional buses operating a limited stop express service using carriageway space on the public highway used by general traffic;
- conventional buses using dedicated buses lanes and assisted by other bus priority measures in combination with use of other carriageway space on the public highway; or
- conventional buses or guided buses using busways completely segregated from the main highway along their entire length or for short sections in combination with use of the public highway/bus priority measures on the public highway.

5.217 Some elements of the rapid transit corridors will be provided within the strategic sites. However, the alignment and mode of rapid transit and how they connect to and interchange with the public transport network is not yet known and cannot be defined precisely on a map. The need for the rapid transit corridors is included in the key policies on Strategic Sites. The mode of rapid transit that can be accommodated on each corridor will be determined through further technical assessment work including work undertaken as part of the detailed master planning of the strategic sites and in support of planning applications. This will help inform the precise mode, route alignments and land take requirements. Therefore, for these reasons the rapid transit routes are not shown on the Proposals Map.

Bus Corridor Enhancements

~~5.230 The city's key strategic bus corridors form a central element of the city's strategic public transport network. Around 80% of daily inbound commuter journeys are by car. These movements create congestion on the city's strategic highway network which makes bus journeys longer and services less reliable. This Policy seeks to address these issues by providing for improvements to maximise the efficiency and attractiveness of bus services on each of the city's key bus corridors. Such measures will include provision of bus lanes (including timed bus lanes operating at peak times only), bus priority measures at key junctions and improved passenger waiting and information facilities. The Bus Corridors referred to in this policy are shown on the Constraints Map.~~

5.230 218 The Bus Corridor Enhancements listed in Policy T2 are defined as the strategic bus routes that connect Cardiff to the Region. These corridors form a central element of the city's strategic public transport network. Around 80% of daily inbound commuter journeys to Cardiff from the Region are by car. These movements create congestion on the city's strategic highway network which makes bus journeys longer and services less reliable. This Policy seeks to address these issues by making provision for improvements to maximise the efficiency and attractiveness of bus services through reducing journey times and improving journey time reliability. The corridors are shown on the Proposals Map.

5.219 Sufficient carriageway space will be required to facilitate the expeditious passage of buses (including express services with limited stops), minimising journey times and maximising journey time reliability. Where necessary to meet these requirements, the Council will seek to remove pinch points and to remove and/or relocate on street parking. The Council will also use a range of tools and measures to change travel behaviour by helping to make sustainable travel an attractive choice, managing the network and influencing travel demand. Some of these measures include for example, providing high quality walking, cycling and public transport infrastructure, improvements associated with development, reallocating road space, route improvements serving key destinations and developments, interchange/transport hub facilities, bus stops, cycle stands, improvements in accessibility, parking controls and policies, parking pricing, parking enforcement, moving traffic offences, bus priority, bus gates, junction controls, traffic signal control, managing road speed limits, high quality signage and road markings, designing for active travel, shared cycling and walking routes, partnership working with transport providers (e.g. encouraging new, express and cross-city bus routes), travel information, promotional initiatives, personalised travel planning, road safety initiatives, collaborative working cross-boundary with other authorities and with key transport stakeholders, road safety and transport infrastructure maintenance.

Local Bus Network

~~5.231 Ensuring the bus is a more attractive and practical travel option is crucial to reducing car dependency and improving accessibility. Cardiff has an extensive local bus network serving most parts of the city. However, the bus is not an attractive travel option for many journeys in Cardiff. For example, most routes on the network are radial and converge on the city centre. This means that people have to travel into the city centre in order to access bus services to another part of the city. Consequently, the car is the preferred mode of travel for many relatively short journeys. To address this problem this Policy supports the expansion and improvement of Cardiff's local bus network, in conjunction with the development of rapid transit routes and the strategic bus corridors.~~

~~5.232 The alignments of the strategic rapid transit corridors, strategic bus corridors and other bus routes are likely to overlap in some locations offering the opportunity for interchange between services. Therefore, the Council will seek to ensure that the routes, services and supporting facilities which make up the rapid transit and bus networks are fully integrated in their design and operation.~~

Improvements to the Wider City Bus Network

~~5.231~~ 220 Ensuring the bus is a more attractive and practical travel option is crucial to reducing car dependency, improving accessibility and effecting modal shift. Cardiff has an extensive local bus network serving most parts of the city. However, the bus is not an attractive travel option for many journeys in Cardiff. For example, most routes on the network are radial and converge on the city centre. This means that people have to travel into the city centre in order to access bus services to another part of the city. Consequently, the car is the preferred mode of travel for many relatively short journeys. To address this problem this Policy supports the expansion and improvement of Cardiff's local bus network, in conjunction with the development of Rapid Transit Corridors and Bus Corridor Enhancements. Technical work carried out by the Council indicates that re-configuring the network and introducing new orbital routes and points of interchange between routes and services would enable a much wider range of journeys within Cardiff to be undertaken by bus, thus reducing reliance upon the car.

~~5.232~~ 21 Routes forming part of rapid transit corridors, strategic bus corridors and the wider city bus network will be connected in many locations across the public transport network. This offers the opportunity for interchange between services. Facilitating interchange with high quality passenger facilities and travel information will form an important element of enhancements to the to the city bus network.

~~5.233~~ 222 Central to the delivery of this Policy will be detailed master plans for the LDP strategic sites and the provisions they make for public transport infrastructure and its phasing. Site master plans will be expected to meet the requirements of this Policy and be consistent with general master planning principles for strategic sites - both key considerations in planning applications on strategic sites. Provision of

infrastructure will be secured through planning conditions, planning obligations and resourced through Community Infrastructure Levy and matching transport funding.

5.234 223 Implementation of this Policy will require the Council to exercise its statutory powers to carry out improvements to highway infrastructure. Measures will include provision of dedicated bus lanes and bus priority at key junctions. In some areas this will require on-street parking arrangements to be reviewed and modified. The location and nature of improvements will be informed by modelling and technical assessment work relating to specific corridors and Cardiff's wider transport network, as well as the detailed assessment of travel impacts of individual development sites and planning applications. Infrastructure measures will generally be resourced through the Community Infrastructure Levy and matching transport funding. In most cases they will be implemented by the Council as the highway authority.

5.235 224 Implementation of this Policy will help to reduce pollution arising from road traffic. This will counteract increases in atmospheric pollution as a result of the Plan, thereby avoiding significant effects upon internationally designated sites.

T3: TRANSPORT INTERCHANGES

In order to facilitate the transfer between transport modes and help to minimise travel demand and reduce car dependency, the following developments will be supported:

- i. New rail stations which can be easily accessed by walking, cycling and local bus services, facilitate rail park and ride, where appropriate, and meet the access needs of all users;**
- ii. Improvements to existing rail and bus interchanges, including measures to facilitate access by active travel modes and disabled people with particular access needs;**
- iii. Measures to support interchange between local bus services, including facilities to accommodate bus layover and driver facilities;**
- iv. Strategically located park and ride facilities, supported by attractive, frequent and reliable bus or rapid transit services;**
- v. High quality passenger facilities including but not limited to seating, information, toilet facilities and cycle parking;**
- vi. Facilities for park and share;**
- vii. Facilities for coach parking, taxis and passenger drop off;**
- viii. Facilities for overnight lorry parking and freight transfer; and**
- ix. Facilities for interchange with water-based transport.**

5.236-225 Providing for interchange between transport modes is essential to the efficient functioning of the transport network and making sustainable travel options more practical and attractive. This is particularly important in relation to the public transport network. This Policy provides support for all forms of transport interchange that help meet these requirements and deliver the modal shift objectives of the LDP. It is important that these interchanges are accessible to disabled travellers and people with prams/young children.

5.237 226 Implementation of this Policy will help to reduce pollution arising from road traffic. This will counteract increases in atmospheric pollution as a result of the Plan, thereby avoiding significant effects upon internationally designated sites.

T4: REGIONAL TRANSPORT HUB

Support will be given to the development of infrastructure and facilities in and around Cardiff Central Railway Station which:

- i. Facilitate the easy interchange of passengers between national, regional and local rail and bus services;**
- ii. Provide high quality passenger facilities, including but not limited to seating, information, toilet facilities and cycle parking;**
- iii. Can be easily accessed by walking and cycling and meets the access needs of all users;**
- iv. Is well integrated with development in the surrounding area and facilitates easy access to the centre of the city, Cardiff Bay and the Enterprise Zone;**
- v. Complement the development and regeneration of land north and south of Central Railway Station and the wider Enterprise Zone;**
- vi. Provide a public transport gateway of a high aesthetic and functional quality, which is commensurate to Cardiff's status as a European capital city; and**
- vii. Provides an attractive, legible and vibrant environment.**

5.238 227 The development of a central public transport interchange focussed on land in and around Cardiff Central Railway Station and the Central Square area is a longstanding objective of the Council. Cardiff is located on the south Wales main railway line and forms the central hub of regional Valley Lines rail network – all scheduled for electrification by 2020.

5.239 228 The provision of a central public transport interchange to facilitate transfer between national, regional and local rail and bus services is essential for Cardiff to fulfil its role as a growing capital city and an employment and service centre for a major city region. It is also

critical to achieving the transport connectivity required to sustain Cardiff's economic competitiveness with other UK cities and city regions and maintain its attractiveness to business investors.

5.240 229 This Policy sets out the Council's requirements with regard to the functionality and aesthetic quality of a central interchange and its integration with existing and future development within the Cardiff Central Enterprise Zone. The Policy will be implemented through a process of master planning undertaken in collaboration between the Council, developers, transport providers, the public and key stakeholders.

T5: MANAGING TRANSPORT IMPACTS

Where necessary, safe and convenient provision will be sought in conjunction with development for:

- i. Pedestrians, including people with prams and/or young children;**
- ii. Disabled people with mobility impairments and particular access needs;**
- iii. Cyclists;**
- iv. Powered two-wheelers;**
- v. Public transport;**
- vi. Vehicular access and traffic management within the site and its vicinity;**
- vii. Car parking and servicing;**
- viii. Coach parking; and**
- ix. Horse-riders.**

5.241 230 The purpose of this Policy is to ensure that all new developments for which planning permission is required:

- i. Properly address the demand for travel and its impacts;**
- ii. Contribute to reducing reliance on the private car, in line with national planning policies and the strategic transport objectives and policies of the LDP;**
- iii. Make satisfactory provision for access, parking and circulation, particularly by pedestrians, cyclists, public transport users and disabled people with mobility impairments and particular access needs; and**
- iv. Avoid unacceptable harm to safe and efficient use and operation of the road, public transport and other movement networks and routes.**

5.242-231 Measures appropriate to a particular development will depend on its scale, location and use(s). They may include providing for and/or improving, as appropriate:

- The needs of disabled people with mobility impairments and particular access needs;
- The needs of people with prams and/or young children;

- Safe and convenient pedestrian access to and movement within the development, including pedestrian priority measures, lighting, security, and weather protection;
- Walking links to existing pedestrian routes and networks, District and Local centres, open space and other community facilities; (e.g. safe routes to school) - for access and recreational purposes - and designed for use by everyone;
- The strategic recreational routes;
- Cycling links to existing cycle routes and networks, District and Local centres and community facilities designed for use by everyone;
- Secure cycle parking and changing facilities in accordance with guidelines set down in SPG;
- Management of conflict between modes of access, including vehicles, pedestrians and cyclists;
- Public transport, including bus stops, bus lanes and interchange facilities;
- Safe vehicular access to the site that does not unreasonably restrict the flow of traffic on the adjoining highway network;
- Traffic and speed management measures; and
- Car and coach parking and servicing facilities in accordance with revised guidelines set down in supplementary planning guidance.

5.243-232 Parking and servicing will be provided, where appropriate in accordance with the Council's adopted standards (currently contained in the Access, Circulation & Parking Standards SPG, which is likely to be revised prior to the LDP examination).

User Hierarchy

5.244-233 In assessing the transport and access aspects of proposals the Council will be more likely to give favourable consideration to developments which through their design and layout give priority to movements by sustainable travel modes and reflect the user hierarchy in Department for Transport Manual for Streets, namely:

Consider First	Pedestrians
V	Cyclists
V	Public Transport Users
V	Specialist Service Vehicles (e.g. emergency services, waste etc.)

Consider Last	Other motor traffic

Sustainable Travel Choices

5.245 234 Where necessary to mitigate travel impacts, development will need to be supported by actions designed to manage travel demand, minimise private car use and increase the proportion of journeys made by walking, cycling and public transport. Such measures will include although not be restricted to:

- Area based personalised travel planning projects and programmes;
- Travel Plans including measures to support sustainable travel to/from residential areas, workplaces, schools and other significant trip generators; Car Clubs and Car Share Schemes; Cycle Training; and
- Promotional/marketing initiatives and campaigns to encourage sustainable travel.

5.246 235 These will be secured by way of planning condition and/or a Section 106 planning obligation. Where necessary, planning agreements will secure resources for survey and monitoring activity required to support delivery of specific interventions.

5.247 236 Implementation of this Policy will help to reduce pollution arising from road traffic. This will counteract increases in atmospheric pollution as a result of the Plan, thereby avoiding significant effects upon internationally designated sites.

T6: IMPACT ON TRANSPORT NETWORKS AND SERVICES
Development will not be permitted which would cause unacceptable harm to the safe and efficient operation of the highway, public transport and other movement networks including pedestrian and cycle routes, public rights of way and bridle routes.

5.248 237 The purpose of this Policy is to protect the transport network and its users from developments which may otherwise cause unacceptable harm to the operation and use of key transport networks and routes.

T7: STRATEGIC TRANSPORTATION INFRASTRUCTURE
Support will be given to the development of the following elements of strategic transportation infrastructure:

- i. **Eastern Bay Link;**
- ii. **St Mellons rail interchange including Park and Ride; and**
- iii. **New sustainable transport corridor in North West Cardiff**

5.249 238 This Policy provides support for three key elements of strategic transport infrastructure which are illustrated on the Constraints Map with further detailed work informing the precise land take requirements.

5.250 239 The Eastern Bay Link Road is a longstanding aspiration of the Council and is featured in the South East Wales Transport Alliance (Sewta) Regional Transport Plan (RTP). The road would complete a peripheral distributor road running between M4 Junction 33 in North West Cardiff and Llanedeyrn Interchange in the East of the city. It would provide additional capacity for road-based access to the Cardiff Central Enterprise Zone from the East and supporting development in that area. A scheme is currently being promoted and developed by the Welsh Government. Details of proposed works are not currently available so the Constraints Map indicates the extent of the Eastern Bay Link running from the Queensgate Roundabout to the A48, Eastern Avenue.

5.251 240 The proposal for a rail station at St Mellons is included in the Sewta RTP and Sewta rail Strategy (2013). The station would potentially serve the strategic development site south of St Mellons Business Park. It could also form part of a future South Wales Metro network including rail or rapid transit connections linking central Cardiff to strategic developments in and around Newport. Initial work to investigate the technical feasibility of a station at St Mellons is currently underway.

5.252 241 The strategic development sites proposed to the West of Pentrebane and North of the M4 junction 33 will require effective public transport connections. The potential exists to develop a dedicated public transport corridor connecting Cardiff city centre to the strategic sites in North West Cardiff and strategic development areas beyond Cardiff's boundary in Rhondda Cynon Taff. Such a link can be incorporated within the master plans for the strategic sites and form an essential component of those developments. Its extension into growth areas within Rhondda Cynon Taff also makes the corridor strategically important within a regional context. As such it would form a key corridor within a future South Wales Metro network.

T8: STRATEGIC RECREATIONAL ROUTES

A strategic network of recreational routes will be maintained and developed to link Cardiff's coast, river corridors, open spaces, countryside, and the regional network of routes, facilitating

access to them by local communities, and forming an integral part of the wider cycling and walking network in Cardiff.

The core strategic network will comprise:

- i. The Taff Trail;**
- ii. The Ely Trail;**
- iii. The Rhymney Trail;**
- iv. The Nant Fawr Trail;**
- v. The Bay Trail;**
- vi. The Wales Coast Path; and**
- vii. The Glamorgan Ridgeway Walk**

~~5.253~~ 242 This Policy sets out the Council's desire to develop a network of recreational routes that will allow everyone in Cardiff to gain easy access to local green spaces, and the wider coast and countryside.

~~5.254~~ 243 The Policy helps to deliver Plan objectives and also accords with PPW which seeks to promote provision of safe accessible, convenient and well-signed walking and cycling routes and to protect and enhance the national cycle network and long-distance routes and footpaths that are important tourism and recreation facilities, both in their own right and as a means of linking other attractions and local communities.

~~5.255~~ 244 Wherever possible, the strategic network will make provision for access by walkers, cyclists and horse riders, (although access for all is limited by practicalities). The core strategic network will be linked to local communities and other routes, including permissive paths, public rights of way, and open spaces. This will help to provide a range of routes and enable everyone to use and enjoy Cardiff's natural heritage, whilst also linking Cardiff to the wider regional network. Local opportunities are important for both health and well-being and sustainability reasons.

~~5.256~~ 245 The development of the coast and river corridor routes are particularly important for people living in the southern arc of Cardiff where the choice of open spaces, public rights of way network and access to the countryside is more limited. The development of a network of safe, convenient attractive routes through green spaces will also provide the opportunity for more people to use them as part of their everyday journeys - to school, work and local community facilities. Development of cross border routes into other authority areas together with within County routes contribute towards the city's green tourism offer.

~~5.257~~ 246 New developments including the proposed Strategic sites, adjacent to, the main strategic routes, public rights of way or other recreational routes will be expected to respect their existence and contribute to their development, or links to them where applicable.

5.258 247 The current extent of the existing core recreational strategic network are shown on the Constraints Map, proposals for development of these routes including creation of 'missing' links are shown on the Proposals Map. Where details of proposed new routes are not yet fully worked up and agreed with relevant parties, such as the Taff Ely Link, routes will not be shown on the Deposit Plan Maps but further work will continue to explore their future implementation.

5.259 248 The usage of routes will be monitored through cycle counter data where deployed together with wider feedback through the Cardiff River Valleys initiative.

Policy T9 Cardiff City Region 'Metro' network

The Council will seek to facilitate the development of a future regional 'Metro' network of integrated public transport routes and services within Cardiff and connecting the city with the wider south east Wales region, including the development and/or enhancement of the following on-highway and off-highway infrastructure components:

- i. **Existing and new heavy rail routes**
- ii. **New light rail routes**
- iii. **Tram**
- iv. **Tram/train on segregated rails and/or running on street**
- v. **conventional buses, or guided buses using busways completely segregated from the main highway along their entire length or for short sections, in combination with use of the public highway/bus priority measures on the public highway.**
- vi. **conventional buses using dedicated buses lanes and assisted by other bus priority measures, in combination with use of other carriageway space on the public highway; and**

- vii. conventional buses using carriageway space on the public highway used by general traffic.

Where the alignment of a future route which is likely to form part of a 'Metro' network falls within any part of a development site, the Council will, through the development management process, seek either to secure provision of the necessary infrastructure as part of the development, or otherwise, safeguard the land and space required to accommodate the route and potential mode options in the future. This will include requiring a development to be designed in a way which does not prejudice the future development of the 'Metro' route and would enable it to be incorporated within the development at a later date.

5.249 Reasoned justification: The Cardiff City Region Metro is a proposal for a metropolitan-style, integrated public transport network extending across Cardiff and South East Wales. The 'Metro' is likely to be developed in phases over a number of years. Its purpose is to significantly enhance public transport accessibility across the region. This would be achieved by the physical and operational integration of routes for different public modes (rail-based and bus-based) and enabling provision of frequent, fast and efficient public transport services connecting principal settlements and trip destinations in the region. A 'Metro' network would include points of interchange and be supported by integrated timetables and ticketing with a common branding. In combination, these elements would enable people to make daily journeys and reach key trip destinations without the need for a car. This enhanced connectivity would have significant economic benefits for Cardiff and the wider City Region, as well as easing pressures on key strategic transport corridors within and beyond Cardiff boundaries.

5.250 Potential routes/corridors which would make up the 'Metro' network have been identified in a series of investigative studies in recent years. Future technical work will be led by the Welsh Government in consultation with local authorities, land owners, communities and the transport industry. Welsh Government's ~~National Transport Plan 2015~~ ~~Consultation Draft (December 2014)~~ ~~National Transport Finance Plan 2015 (July 2015)~~ includes a commitment to progress this work which

will determine the form of the network and the mix of public transport modes on each corridor/route.

5.251 It is important that development that takes place within the plan period does not prejudice the delivery of this regionally important future asset.

5.252 Policies KP2 (A) to KP2(H) include references to improvements to the strategic public transport network within the supporting lists of 'Essential' and 'Enabling' transport infrastructure for the individual LDP strategic sites. A number of these measures will potentially form part of the future 'Metro' network.

5.253 Policy T9 augments Policy KP2 by providing general support for the future delivery of the 'Metro' and the means by which the Council can, through controls exercised through the development management process:

- secure infrastructure forming part of the network; or
- otherwise, safeguard the route alignment, potential mode options and physical space requirements for future 'Metro' routes/corridors.

5.254 This protection will be integrated within the design and layout of approved developments. The policy also provides the basis for resisting developments which would prevent or compromise future delivery of a 'Metro' route.

5. RETAIL

R1 RETAIL HIERARCHY

Retail proposals, (including changes of use, redevelopment and extensions) will be considered in accordance with the retail hierarchy which comprises Central Shopping Area (CSA) at the head of the regional hierarchy supported by a range of district centres and smaller local centres as identified on the Proposals Map. Retail proposals outside centres identified on the Proposals Map will be assessed against Policy R4: Retail Development (Out

of Centre). or Policy R7: Retail Provision within Strategic Sites where they form part of an allocated housing led strategic site.

5.255 This policy is a central component of the retail strategy which aims to:

- Sustain and enhance the role of the Central Shopping area at the head of the regional shopping hierarchy;
- Sustain and enhance the vitality, viability and attractiveness of district and local centres identified on the Proposals Map.
- Promote good accessibility to a range of shopping facilities by all sections of the community and reduce dependence on car travel for shopping trips; and
- To control the amount, size and nature of out-of-centre retail.

5.256 The policy establishes the existing hierarchy of centres in line with national guidance and favours new and improved retail facilities within the Central Shopping Area and at an appropriate scale, within district and local centres, whilst non shopping uses will be controlled. This ensures that a sequential approach is adopted which means first preference for retail proposals should be in existing centres and then for sites immediately adjoining these centres. If there are no suitable sites in these locations, only then will out-of-centre sites in locations that are accessible by a choice of means of transport be considered.

5.257 Proposals outside centres identified on the Proposals Map will be assessed against Policy R4: Retail Development (Out of Centre).

5.258 District and Local Centres within allocated housing led strategic sites that develop over the plan period in accordance with Policy R7: Retail Provision within Strategic Sites will become designated centres within the retail hierarchy and defined on the Proposals Map as part of the LDP review.

R4 R7RETAIL PROVISION WITHIN STRATEGIC SITES

Retail development which forms part of the allocated housing led Strategic Sites will be assessed against Policy R4 (Retail Development (Out of Centre) and will be supported where:

- i. It is of appropriate scale which satisfies an identified local need;
- ii. It will not negatively impact on the vitality and viability of designated centres.
- iii.** It is located along public transport corridors and easily accessible by walking and cycling; and
- iv.** It forms part of a planned centre which reinforces a sense of place

5.259 It is recognised that there will be a need for retail provision close to where people live to meet the everyday needs of future large scale new communities. Such facilities often include a range of small shops, serving the local catchment including small supermarkets, newsagents and food and drink outlets. The provision of future local shopping within the housing development should not negatively impact on the vitality and viability of existing designated District or Local Centres. Planning applications should also demonstrate that this is the most appropriate location for local shopping provision, in relation to public transport and design layout.

R2: DEVELOPMENT IN THE CENTRAL SHOPPING AREA

Development proposals within the Central Shopping Area (CSA) will be assessed against the following criteria:

- i. Whether the proposal involves the loss of shop uses (Class A1) from within Protected Shopping Frontages;
- ii. Whether the proposal involves retail and other uses which enhance the vitality, viability and attractiveness of the city centre;
- iii. Whether the development allows for, or retains the effective use of, upper floors; and
- iv. Supports the regeneration, renewal and enhancement of the city centre.

5.260 The purpose of this Policy is to allow, monitor and manage the diversity of uses within the Central Shopping Area identified on the Proposals Map.

5.261 The Central Shopping is the head of the retail hierarchy for Cardiff and South East Wales. It offers a range and quality of shopping facilities unrivalled in the region, together with a diversity of complementary service, leisure, residential and business uses, within a compact and

accessible area. Despite this, the area is not invulnerable to trends in retail location and shifts in consumer demand and expenditure, including competition from out-of-centre locations and internet shopping. There is a continuing need to improve facilities within the Central Shopping Area in order to provide a quantity and quality of shops that will enhance its primary shopping role and character, and its vitality, attractiveness and viability.

5.263 An appropriate mix of non-shop uses can contribute to vitality, attractiveness and viability by introducing a diversity of compatible uses within the Central Shopping Area. However, too many can harm the primary shopping role and character of shopping streets by reducing their attractiveness to shoppers, undermining the viability of remaining shop units and reducing the prospect of attracting new retailers and retail investment.

R3: PROTECTED SHOPPING FRONTAGES

Development proposals involving the loss of Class A1 (shop) uses within Protected Shopping Frontages will be assessed against the following criteria:

- i. The balance and distribution of existing and committed non-shop uses;**
- ii. The amount of A1 floorspace and frontage length being lost;**
- iii. Whether, and for how long, the premises have been vacant and actively marketed;**
- iv. The location, character and prominence of individual premises or frontages;**
- v. The nature of the proposed use, including whether an appropriate shop front and window display is to be provided; and**
- vi. The impact of the proposed use upon the amenity of adjacent or nearby residents.**

5.264 This Policy provides an enhance level of protection for the City Centre's most important shopping streets. The protected frontages are identified on the Proposals Map. Supporting Document No. 8 – City Centre Protected Frontage Assessment provides the methodology and analysis to determine city centre Protected Shopping Frontages and Further guidance will be set out in SPG.

5.265 Proposals will be assessed in terms of their impact cumulatively with other existing and committed non-shop uses. Where the application frontage is closely related to surrounding frontages (e.g. in narrow or pedestrianised streets or arcades) it will be appropriate to consider the proposal's impact on both the application frontage and surrounding frontages.

5.266 The Policy allows for other uses (including A2 and A3) at appropriate locations within Protected Frontages, provided those uses do not, either alone or cumulatively with other non-shopping uses, undermine the primary shopping role and character of those frontages or groups of frontages. This is intended to maintain the centre's retail offer whilst providing complementary services during normal shopping hours, generating pedestrian flows and providing visually interesting and active frontages.

5.267 Like offices, it is acknowledged that an element of retail vacancy can be created by the natural turnover of businesses or through refurbishment. However, long-term vacant shop floorspace is a strong indicator of decline, adversely impacting upon perceptions of the high street to shoppers and investors. Proposals which seek to bring back into beneficial use retail premises which have remained vacant, despite active marketing, will be more favourably considered. Temporary or "meanwhile" uses can enliven city streets and provide short-term retail, business incubation or exhibition space, whilst reducing management and maintenance costs to landowners.

~~R4~~ R6: RETAIL DEVELOPMENT (OUT OF CENTRE)

Retail development will only be permitted outside the Central Shopping Area, District and Local Centres identified on the Proposals Map if:

- i. There is a need for the proposed floorspace (with precedence accorded to establishing quantitative need);**
- ii. That need cannot satisfactorily be accommodated within or adjacent to the Central Shopping Area, within a District or Local Centre;**
- iii. The proposal would not cause unacceptable harm to the vitality, attractiveness or viability of the Central Shopping Area, a District or Local centre or a proposal or strategy including the Community Strategy, for the protection or enhancement of these centres;**
- iv. The site is accessible by a choice of means of transport; and**
- v. The proposal is not on land allocated for other uses. This especially applies to land designated for employment and housing, where retail development can be shown to limit the range and quality of sites for such use.**

5.268 This Policy identifies the criteria against which proposals for retail development outside the Central Shopping Area, District and Local

Centres identified on the Proposals Map will be assessed in line with PPW 'Planning for Retailing and Town Centres'.

5.269 This Policy relates to any proposals that introduce additional retail floorspace, including redevelopment, extensions (including mezzanine floors, where permission for this is required); subdivision; changes of Use Class and; variations of planning conditions. The aim is to control the nature and size of out- of-centre retail development so as to minimise competition with, and impact on the vitality and viability of shopping centres identified in the Plan.

5.270 This Policy contributes to protecting and enhancing designated shopping centres and resisting out-of-centre retail development that could be harmful to District and Local shopping facilities. It supports sustainability objectives by encouraging the grouping of retail facilities together in easily accessible locations and reducing dependence on private transport for shopping trips and helps deliver the strategy by developing sustainable communities

5.271 The sequential test as detailed in PPW aims to direct retail developments to existing centres wherever possible or to the edges of such centres if sites within the centres are not available. Only where need for additional retail floorspace has been demonstrated and there are no location in or adjacent to designated centres that could accommodate that need, should out-of centre locations be considered. In Cardiff the order of preference is:

- Within the Central Shopping Area;
- On the edge of the Central Shopping Area;
- Within a District or Local Centre;
- On the edge of a District of Local Centre;
- An out-of-centre location accessible by a choice of means of transport.

~~5.272 The sequential test applies to the level of need agreed between the applicant and the Council, not to the development format proposed by the applicant. Thus, a series of sites in different centres may accommodate and agreed retail need, though the proposal may be for large scheme in a single location. The test is not satisfied because a retailer considers that a town centre site does not meet its operational requirements in principle. It must address whether the types of goods proposed could be accommodated in or on the edge of a designated centre.~~

5.273 PPW acknowledges that some types of retailing, for example selling bulky goods and requiring large showrooms, may not be able to find appropriate sites in town centres. Such stores should be grouped together at locations accessible by a choice of means of transport, encouraging linked trips and a reduction in dependence on car travel. Where bulky goods development is proposed and it passes the need and sequential tests, it will be directed towards existing concentrations of bulky goods retailers wherever possible. Similarly, re-use of vacant out-of-centre units at locations accessible by a choice of means of transport is preferable to new out-of-centre development. Where applications are made to reuse vacant units, applicants will be expected to demonstrate how they intend to improve the pedestrian environment and linkages.

5.274 Impact will be assessed in terms of both the direct commercial impact of a proposal on neighbouring designated centres and of the impact on the retail strategy itself. All proposals for out-of-centre development that satisfy the tests of retail need and the sequential approach must demonstrate that they would not harm designated shopping centres or the retail strategy, either in their own right, or in conjunction with other recent developments or unimplemented permissions.

5.275 Where permission is granted for out-of-centre retail development or, in some instances, edge-of-centre development, conditions will be attached to control the nature and scale of the retail activity and minimise any potential impact on designated centres or the retail strategy.

~~5.276: In addition, in line with Policy R8, Protection of Local Shopping Parades, consideration will also be given to the impact of out of centre retailing on local shops selling convenience goods in smaller shopping parades outside of designated centre.~~

5.277 Contributions will be negotiated from out of centre retail developments towards environmental improvement in the nearest District or Local Centre to mitigate adverse impacts, in line with the policy on Planning Obligations. Further details are provided in District and Local Centre Strategy.

5.278 The Council monitors the vitality, attractiveness and viability of designated centres. All applications for out-of-centre retailing will be

expected to examine the health of centres, including shopping parades most likely to be affected and their likely impact.

5.279 Proposals for out-of-centre retail development are likely to require assessment against a range of other Policy considerations including traffic and transportation implications.

R5 4: DISTRICT CENTRES

Retail, office, leisure and community facilities will be favoured within the following District Centres identified on the Proposal Map:

(1) Albany Road / Wellfield Road

(2) City Road

(3) Clifton Street

(4) Cowbridge Road East

(5) Crwys Road/ Woodville Road

(6) Bute Street/James Street

(7) Merthyr Road, Whitchurch

(8) Penarth Road/Clare Road

(9) St Mellons

(10) Thornhill

(11) Whitchurch Road

This will be subject to:

- (i) The proposal being of a scale appropriate to the particular centre;**
- (ii) The location of business offices (Class B1) above the ground floor,**

- (iii) Proposals not impeding the effective use of upper floors.
- (iv) Proposals for uses other than Class A1 being permitted at ground floor level if they would not cause unacceptable harm to the predominant shopping role and character of the centre, the vitality, attractiveness and viability of a specific frontage or group of frontages;

Unacceptable harm should take account of:

- **The existing level and nature of non-shopping uses within the centre as a whole**
- **The size of the retail unit in relation to the overall size of a centre or a specific group of frontages; and**
- **The distribution and proximity of non-shopping uses within a frontage.**

Proposals that result in, or add to a continuous stretch of non-shopping uses (3 or more units in non-shopping use) will be less favourably considered

Applications for changes of use that involve new non-shopping uses in vacant premises will be considered in light of the following:

- **The vacancy rate in the surrounding area; and**

Whether, and for how long, the premises have remained vacant whilst being actively marketed for their existing or previous use.

5.280 The aim of this Policy is to promote and protect the shopping role of District Centres while supporting a mix of appropriate uses. The District Centres identified in Policy R4 are defined on the Proposals Map (and in Appendix X) New text

5.281 PPW acknowledges that a range of uses as well as shops are appropriate within centres. These include financial and professional services (A2) and food and drink uses (A3). In general, proposals for such uses will be permitted where they would not cause unacceptable harm to the primary shopping function of the centre or the vitality, attractiveness or viability of its shopping frontages, by virtue of their number or location. What is deemed as unacceptable harm will depend upon the nature of each centre which will have its own individual characteristics.

5.282 The size and character of District Centres means that they are more likely to be able to satisfactorily accommodate a greater range and mix of non-retail uses including businesses offices and commercial leisure facilities.

5.283 Where a change of use from an A1 retail unit to a non-shopping use (use class other than A1) is proposed, the assessment in terms of unacceptable harm should take account of:

- The existing level and nature of non-shopping uses within the centre as a whole (This should also take into consideration the number of premises, and
- whether any have unimplemented planning consent for non-shopping uses);
- The size of the retail unit (frontage length and floorspace) in relation to the overall size of a centre or a specific group of frontages; and
- The distribution and proximity of non-shopping uses within a frontage.

5.284 It is important that non-shopping uses are dispersed as much as possible in order to limit harm to the shopping role and character of a centre. Proposals that result in, or add to a continuous stretch of non-shopping uses (3 or more units in non-shopping use) will be less favourably considered, as they will fragment the shopping frontage.

5.285 A high level of vacancy is often an indicator of poor retail performance, reduced levels of demand and/or investor confidence, and can be harmful to the vitality, attractiveness and viability of an area in the long-term. Applications for changes of use that involve new non-shopping uses in vacant premises will, therefore, be considered in light of the following:

- The vacancy rate in the surrounding area; and
- Whether, and for how long, the premises have remained vacant whilst being actively marketed for their existing or previous use.

5.286 This Policy will favour business class offices above ground floor level within District Centres. At ground floor level, only professional and

financial (A2) offices with a shop front will be acceptable. B1 uses do not provide an active frontage or service to visiting members of the public.

5.287 The provision of residential accommodation at upper floors within centres can support their vitality, attractiveness and viability. However, it is recognised that District Centres cannot offer the same degree of amenity as purely residential areas. To enable opportunities for offices and other appropriate business uses at upper floors within District Centres, it may be necessary to allow the change of use of premises in residential use.

5.288 A District Centres Strategy has been prepared to raise the profile of District Centres within Cardiff and provide a framework and justification for the preparation of individual Action Plans for priority District Centres. This Strategy also acts as a reference point for co-ordinated working between service providers; a mechanism for attracting inward investment and securing funding for improvements within these designated centres.

R6 5: LOCAL CENTRES

Retail, office, leisure and community facilities will be favoured within the following Local Centres identified on the Proposal Map:

- (1) Birchgrove**
- (2) Bute Street (Loudoun Square)**
- (3) Cathedral Road**
- (4) Countisbury Avenue**
- (5) Caerau Lane**
- (6) Fairwater Green**
- (7) Gabalfa Avenue**
- (8) Grand Avenue**
- (9) High Street, Llandaff**
- (10) Maelfa, Llanedeyrn**
- (11) Newport Road, Rumney**
- (12) Rhiwbina Village**

- (13) Salisbury Road
- (14) Splott Road
- (15) Station Road, Llanishen
- (16) Station Road, Llandaff North
- (17) Station Road, Radyr
- (18) Tudor Street
- (19) Willowbrook Drive
- (20) Wilson Road

This will be subject to:

- (i) The proposal being of a scale appropriate to the particular centre;
- (ii) The retention of residential accommodation at upper floors;
- (iii) Proposals for uses other than Class A1 (except business offices class B1) being permitted at ground floor level if they would not cause unacceptable harm to the predominant shopping role and character of the centre, the vitality, attractiveness and viability of a specific frontage or group of frontages;

Unacceptable harm should take account of:

- **The existing level and nature of non-shopping uses within the centre as a whole**
- **The size of the retail unit in relation to the overall size of a centre or a specific group of frontages; and**
- **The distribution and proximity of non-shopping uses within a frontage.**

Proposals that result in, or add to a continuous stretch of non-shopping uses (3 or more units in non-shopping use) will be less favourably considered

Applications for changes of use that involve new non-shopping uses in vacant premises will be considered in light of the following:

- **The vacancy rate in the surrounding area; and**
- **Whether, and for how long, the premises have remained vacant whilst being actively marketed for their existing or previous use.**

5.289 The aim of this Policy is to promote and protect the shopping role of Local centres while supporting a mix of appropriate uses. The Local Centres identified in Policy R5 are defined on the Proposals Map (and in Appendix 8) New text

5.290 PPW acknowledges that a range of uses as well as shops are appropriate within centres. These include financial and professional services (A2) and food and drink uses (A3). In general, proposals for such uses will be permitted where they would not cause unacceptable harm to the primary shopping function of the centre or the vitality, attractiveness or viability of its shopping frontages, by virtue of their number or location. What is deemed as unacceptable harm will depend upon the nature of each centre which will have its own individual characteristics.

5.291 Local Centres are generally smaller in size and variety of uses. Local Centres are generally more residential in nature than District Centres and do not have the scale or variety of retail and non-retail uses. As a consequence proposals other than A1 may be more difficult to satisfactorily accommodate than in District Centres. Within Local Centres, the Policy stance is to discourage significant office or commercial leisure developments and give greater emphasis to safeguarding residential amenity. At ground floor level, only professional and financial (A2) offices with a shop front will be acceptable, provided they do not cause unacceptable harm to the vitality, and viability of the centre. In relation to A3 uses more emphasis will be placed on closing times, and the type of premises.

5.292 Where a change of use from an A1 retail unit to a non-shopping use (use class other than A1) is proposed, the assessment in terms of unacceptable harm should take account of:

- The existing level and nature of non-shopping uses within the centre as a whole (This should also take into consideration the number of premises,
- whether any have unimplemented planning consent for non-shopping uses);
- The size of the retail unit (frontage length and floorspace) in relation to the overall size of a centre or a specific group of frontages; and
- The distribution and proximity of non-shopping uses within a frontage.

5.293 It is important that non-shopping uses are dispersed as much as possible in order to limit harm to the shopping role and character of a centre. Proposals that result in, or add to a continuous stretch of non-shopping uses (3 or more units in non-shopping use) will be less favourably considered, as they will fragment the shopping frontage.

5.294 A high level of vacancy is often an indicator of poor retail performance, reduced levels of demand and/or investor confidence, and can be harmful to the vitality, attractiveness and viability of an area in the long-term. Applications for changes of use that involve new non-shopping uses in vacant premises will, therefore, be considered in light of the following:

- The vacancy rate in the surrounding area; and
- Whether, and for how long, the premises have remained vacant whilst being actively marketed for their existing or previous use.

5.295 Loss of residential units will generally be resisted at upper floors in Local Centres where the characteristics of the premises and their location remain suitable for residential use.

Insert new paragraph after paragraph 5.295

In addition to local centres identified on the proposals Map, there are numerous smaller groups of shops and individual 'corner shops' across the county that provide valuable shopping facilities to surrounding communities. Proposals that could lead to the loss of such local shops will be assessed having regard to the role of those shops in meeting local shopping needs and the viability of the premises for continued shopping use. Planning Policy Wales recognises the important economic and social role of such local shopping facilities to communities.

~~5.296 Further information on centre designations is contained in Supporting Document No. 7 – District and Local Centres.~~

R-7-8: FOOD AND DRINK USES

Food and Drink Uses are most appropriately located in:

- i. The City Centre (Central Business Area)**
- ii. The inner harbour/waterfront area of Cardiff Bay (Bay Business Area)**
- iii. District and Local Centres**

Subject to amenity considerations, highway matters, crime and fear of crime considerations, and where they do not cause unacceptable harm to the shopping role and character of designated centres. Food and drink uses are unlikely to be acceptable within or adjacent to residential areas, where they would cause nuisance and loss of amenity, or result in the loss of a residential property.

5.297 Food and drink uses, including restaurants and hot food take-aways, are better located in designated centres where they can complement and enhance the existing shopping role, increase footfall and are accessible by public transport. Such uses are better located in designated centres than residential areas because of the impact they can have in terms of vehicular and pedestrian traffic, noise, fumes, litter, late night disturbance. The Central and Bay Business Areas, and District Centres are more likely to be able to satisfactorily accommodate A3 uses without causing unacceptable harm, due to their size and character. However, concentrations of such uses in centres can cause harm, either to residential amenity within or adjoining the centre, or to the predominant shopping role and character of the centre and its vitality, attractiveness and viability.

5.298 Food and drink uses are acceptable in principle, within the City Centre. It is recognised that such uses can contribute to the range and choice of facilities available to residents, promote the evening economy and may also support tourism. However, new A3 proposals at ground and upper floor level will need to be assessed against Policy R3. This Policy is intended to ensure that food and drink uses as well as other non-shopping uses, do not harm the shopping role, character and vitality of the City Centre.

5.299 Food and drink uses are also complementary, in principle, to the main shopping role of District and Local Centres, so long as they do not adversely affect the living environment of nearby residents, or with other

non-shopping uses, reach such a level that they undermine the shopping character of the area in accordance with Policies ~~R5~~ R4 District Centres and ~~R6~~ R5 Local Centres.

5.300 Local Centres and smaller neighbourhood centres are generally more residential in nature, and do not have the scale or variety of retail and non-retail uses of larger centres. Therefore, A3 proposals may be more difficult to accommodate, and are less likely to be acceptable on amenity grounds (e.g. potential noise and disturbance, anti-social behaviour and litter associated with this type of development proposal). As a consequence more emphasis will be placed on protecting residential amenity within these centres through restricting closing times and the type of A3 premises.

5.301 Outside District and Local Centres and the Central and Bay Business Areas proposals for A3 uses are unlikely to be acceptable in, or adjacent to, predominantly residential areas because of their impact on residential amenity and potential to cause nuisance from noise and odour.

5.302 Food and drink proposals within existing employment areas will be considered against Policy EC2 Provision of complementary facilities for employees in business, industrial and warehousing development.

~~5.303 Proposals for A3 uses within 400 metres of a school will be considered against Policy C7 Health and the related Health SPG.~~

5.304 Further guidance on the application of this Policy will be set out the Food and Drink Uses in SPG.

~~Policy R8 PROTECTION OF LOCAL SHOPPING PARADES~~

~~Proposals that would lead to the loss of local shops outside of identified centres will be assessed having regard to the role of those shops in meeting local shopping needs and the viability of the premises for continued retail use~~

~~5.305 In addition to the District and Local Centres identified on the Proposals Map there are numerous smaller local shopping parades across the County. Although these have a smaller more limited retail offer, they~~

~~provide easily accessible valuable shopping provision to surrounding communities.~~

~~5.306 For the purpose of this Policy the definition of a local parade is a cluster of 3 or more A1 retail units (i.e. newsagents, convenience store, off-licence) with~~

~~supporting A2, A3, or D1 uses that function as a group of units capable of serving the needs of the local resident catchment population.~~

~~5.307 In such areas the Policy will seek to protect and retain local convenience shops, because of the importance of these uses for meeting the everyday needs of those living locally. Proposals for development within such areas must relate to the scale, role and function of the local shopping parade and will be determined on individual merit. Individual 'corner shops', have an important role in areas which are relatively remote from other shops particularly convenience retail. This is especially important for residents who are less mobile or do not have access to private transport.~~

~~5.308 It should be noted that many shops within a local shopping parade are independently run and can therefore become vacant as a result of retirement by the proprietor rather than a fall in business sales or patronage.~~

~~5.309 In terms of assessing the viability of the premises for continued retail use, the applicant will need to provide evidence of active marketing if a retail unit is vacant, taking into consideration the fact that a recently vacated unit may have the potential to attract an A1 use.~~

~~5.310 The role and function of local shopping parades should be protected from out of centre retail development that could potentially harm their vitality and viability. Such schemes will need to be considered against Policy R4.~~

6. COMMUNITY

C1: COMMUNITY FACILITIES

Proposals for new and improved community facilities, health and religious facilities will be encouraged, subject to the following criteria being satisfied:

- i. The facility would be readily accessible to the local community it is intended to serve by public transport, walking and cycling;**
- ii. The facility would not unduly prejudice the amenities of neighbouring and nearby residential occupiers;**
- iii. The facility would not detract from the character and appearance of a property or the locality;**
- iv. The facility will not lead to unacceptable parking or traffic problems;**
- v. The facility is designed with the greatest possible flexibility and adaptability to accommodate additional community uses without compromising its primary intended use.**

5.344 For the purpose of this Policy, community facilities are defined as non-commercial facilities used by local communities for leisure and social purposes. This constitutes including community centres and meeting places, community halls, community learning, leisure centres, libraries and youth centres. Religious facilities also often provide for wider community provision. Health facilities would include doctors and dentists surgeries which serve the local community.

5.302 New Paragraph - Other uses of a commercial nature within the D1/D2 use class should be located within the Central and Bay Business Areas, and in District and Local centres of an appropriate scale.

5.312 303 If development occurs without consideration being given to the adequacy of existing community facilities, this can place a strain on existing facilities, to the detriment of the local community. As a result, there is a need to ensure that adequate local facilities are provided to meet the future demands of local communities.

5.313 304 The provision of community facilities should go hand in hand and be integrated with new development. Providing a range of community facilities that are accessible to as many people as possible is fundamental in terms of securing sustainable communities. Such facilities are valuable not only in terms of the amenity they provide, but are also important in

generating employment and attracting people to live within an area. Whilst, it is recognised that there are many competing needs for the development and use of land the Council is committed to ensuring that there are adequate facilities to serve residents within new strategic housing allocations.

5.314 05 New strategic housing developments allocated in Policy KP2 will be required to ensure that sufficient new community facilities are provided and integrated within the development to serve the needs of future and existing residents. This will be achieved through planning obligations or the community infrastructure levy as appropriate (see Policies KP6 and KP7).

5.315 06 On all other significant residential developments, the Council will seek to enter into negotiations with prospective developers to secure land, buildings and or financial contributions towards community facilities arising from the needs of residential development. This is because the increased population will result in increased demand for local community facilities. Further guidance on this will be set out in SPG.

5.316 07 Community facilities, health uses (~~including doctors and dental surgeries~~) and religious facilities will be favoured within District or Local Centres where appropriate, however, where such uses cannot be satisfactorily accommodated within centres, proposals on the edge of centres or within residential areas (to include the conversion or redevelopment of existing residential premises) will be favourably considered provided that issues of residential amenity, urban design (Policy KP5), and transportation are appropriately addressed. Furthermore, if the residential area falls within a Conservation Area, the proposed development should not detract from its character, nor should it have any negative impact on the built heritage assets (Policy KP17).

C2: Protection of Existing Community Facilities:

Proposals involving the loss or change of use of buildings currently or last used for community facilities will only be permitted if:

i) An alternative facility of at least equal quality and scale to meet community needs is available or will be provided within the vicinity and or;

ii) It can be demonstrated that the existing provision is surplus to the needs of the community.

5.308 Existing community facilities are widely available throughout the City. Ensuring an adequate provision is maintained, is very important in order to encourage social interaction, improve health and well-being and reduce inequalities between different communities. The retention of existing facilities will therefore be sought unless it can be demonstrated that the above criteria can be met.

5.309 Whilst this policy will apply to both commercial and non-commercial uses which provide a social or welfare benefit to the community, community land and buildings are of particular importance. This includes land and buildings that are managed and used primarily by the voluntary and community sector for community-led activities.

5.310 In order to satisfy criterion ii) of the policy it will be necessary to demonstrate that continued use as community facility is no longer viable giving consideration to; appropriate marketing, and local need and demand for the existing community facility.

C23: COMMUNITY SAFETY/CREATING SAFE ENVIRONMENTS

All new development and redevelopment shall be designed to promote a safe and secure environment and minimise the opportunity for crime. In particular development shall:

- i. Maximise natural surveillance of areas which may be vulnerable to crime such as publicly accessible spaces, open space, car parking areas and footpaths;**
- ii. Have well defined routes, spaces and entrances that provide convenient movement without compromising security;**
- iii. Maintain perceptible distinction between public and private spaces through well defined boundaries and defensible space;**
- iv. Provide a good standard of lighting to public spaces and routes while minimising energy use and light pollution; and**
- v. Be designed with management and maintenance in mind, to discourage crime in the present and future.**

5.317 1The aim of this Policy is to achieve a uniform and consistent standard of security through considerate design without compromising the character or attractiveness of the local area. Incorporating security considerations into the design of new developments and redevelopments

will enable natural surveillance and create a sense of ownership and responsibility.

5.318 12 Designing out crime contributes to Policy KP5. Further detailed information relating to the objectives of this Policy can be found at www.securedbydesign.com. ~~in the Cardiff Community Safety Partnership's guidance "As Safe as Houses – Crime and the Built Environment" (May 2006).~~

5.319 3 The Council has responsibility under section 17 of the Crime and Disorder Act (1998) to take account of the need to deter and prevent crime in carrying out all its responsibilities, which include planning. Used sensitively, the planning system can be influential in producing active, well managed environments that help to discourage crime and disorder by encouraging developers to adopt designs for new development that take the security of people and property into account. Developments should be encouraged to incorporate the principles and practices of the 'Secured by Design' Award Scheme, and reflect both the safety of people and the security of property.

5.320 14 Any design solution or security measures should remain sensitive to local circumstances and their degree and application should reflect the characters and amenity of the area. There should be a balanced approach to design which attempts to reconcile the visual quality of a development with the needs of crime prevention. Developments can be made secure without resorting to razor wire, grilles, bars, unsightly types of fencing and other visually intrusive security measures, if safety and security is considered at an early stage of the design process.

5.321 15 Prior to submitting detailed proposals, developers are encouraged to seek advice by engaging in pre-application discussions with the South Wales Police ~~Architectural Liaison Officer (ALO)~~ Crime Prevention Design Officer on designing out crime, and any recommendations received should be taken into consideration in relation to the development proposal. Where there are other significant interests (for example, the setting of Listed Buildings) a balanced compromise must be agreed. Developers are further encouraged to submit statements in conjunction with planning applications that emphasise and clearly demonstrate the proposed measures taken to design out crime.

5.322 16 In appropriate cases, where crime prevention or the fear of crime is considered material to a proposed development the Council may consider imposing community safety conditions or seek developer contributions via legal agreements for crime prevention through environmental design (CPTED), community safety initiatives, improved street lighting, alley gating, provision of CCTV, landscaping improvements or other necessary security measures. This is in accordance with Policy KP7.

5.323 17 Terrorist attacks within the UK have become a distinct possibility in recent years, posing a real and serious threat. Measures to mitigate against the occurrence and effects of terrorism attacks should be designed in from the outset of a development proposal. For example, through protection from flying glass and vehicle access controls to underground car parks and areas of potential high risk. These measures must be balanced with good design principles to ensure against the creation of a "fortress" appearance. It is recommended that where major development is proposed within a place defined by the Home Office as a "crowded place", the design statement accompanying the application should set out the measures undertaken to meet these principles. It is recommended that advice is sought from a Counter Terrorism Security Advisor during the design stage. (Refer to WECTU (Wales Extremism and Counter Terrorism Unit) for further advice).

C34: PROTECTION OF OPEN SPACE

Development will not be permitted on areas of open space unless:

- i. It would not cause or exacerbate a deficiency of open space in accordance with the most recent open space study; and**
- ii. The open space has no significant functional or amenity value; and**
- iii. The open space is of no significant quality; or**
- iv. The developers make satisfactory compensatory provision; and, in all cases;**
- v. The open space has no significant nature or historic conservation importance.**

5.324 18 The aim of this Policy is to protect open space that has significant functional, conservation, environmental or amenity value. It applies to all areas of open space within the County.

5.325 19 The Policy will help protect the current network of open spaces in Cardiff and work toward delivering Policy KP13 and LDP objectives related to maintaining and enhancing a network of green space and corridors.

5.326 20 The Policy is in accordance with the Wales Spatial Plan, PPW and Technical Advice Note 16: Sport Recreation and Open Space (2010) which requires that all types of open space are protected, particularly where it has a strategic countywide importance.

5.327 21 The various types of open space in Cardiff are listed and explained in detail in the Cardiff Open Space SPG. ~~Open Space is also shown on the Constraints Map which accompanies the LDP.~~ However, for the purposes of this Policy, functional green space includes land that can accommodate formal and / or informal recreational uses including sporting use and children's play.

5.328 22 Proposals for development on areas of open space will be assessed against a functional green space requirement of 2.43 hectares per 1,000. This is explained in more detail under Policy C4.

5.329 23 In assessing the functional and amenity value of an area of open space, regard will also be given to whether it serves a purely local function or has more strategic countywide importance. Special protection will be afforded to open space that has strategic countywide importance whether for functional, amenity or wildlife purposes.

5.330 24 The quality of an area of open space will be assessed having regard to issues such as:

- Accessibility;
- Biodiversity;
- Facilities;
- Management and maintenance;
- Contribution to local amenity;
- Contribution to recreation; and
- Strategic value.

5.331 25 Where a development proposal involving the loss of open space would exacerbate a local or countywide deficiency of functional open space, compensatory provision for open space or alternative provision of equivalent community benefit may be acceptable. This is explained further in the Open Space SPG.

5.332 26 The appropriateness of compensatory open space or replacement facilities will be assessed having regard to the importance of the resource to be lost and the needs of the locality. Compensatory provision should:

- Contribute towards meeting the needs of the local community;
- Be of at least equal value to that being lost;
- Be reasonably related to the original site to serve the population affected by the loss;
- Be provided in accordance with the Open Space SPG; and
- Be agreed between the Council and the developer.

5.333 27 Corridors and networks of open space, like the river valleys, have strategic importance in terms of recreation, amenity and wildlife. The corridors of the rivers Ely, Taff, Rhymney and the Nant Fawr (identified on the Proposals Map) are a particularly important resource within both the urban and rural context, linking the waterfront and the urban area with the countryside. Specific protection of river valleys is set out in Policy EN4.

5.334 28 Many areas of open space have value for nature conservation. Some are designated for their international, national or local importance, while others contribute more generally to biodiversity. Some areas also have historic conservation importance. These include Historic Gardens and Parks, land within Conservation Areas and land that provides the setting for Ancient Monuments or other archaeological remains.

5.335 29 The implementation of policies designed to provide and protect public open space throughout Cardiff would also serve to offset any increase in recreational pressure on the Cardiff Beech Woods SAC, thereby helping to avoid the likelihood that this LDP will have a significant effect upon this site.

5.336 30 The protection of open space Policy will be assessed each year in the Annual Monitoring Report. The loss of open space is a Core Indicator required by Welsh Government and will be monitored on an annual basis, forming part of the Open Space Assessment.

C45: PROVISION FOR OPEN SPACE, OUTDOOR RECREATION, CHILDREN'S PLAY AND SPORT

Provision for open space, outdoor recreation, children's play and sport will be sought in conjunction with all new residential developments. This policy is aimed at securing the provision or improvement of open space and other appropriate outdoor recreation and sport in conjunction with all new residential developments over 8 units and on site provision of functional open space in conjunction with all new residential developments over 14 units. The appropriate amount of multi functional green space is based on a minimum of 2.43 hectares of functional open space per 1,000 projected population. All other open space provision will be in addition to the provision of multi functional green space.

5.337 This Policy will help enhance the existing network of green spaces and provide increased opportunities for healthy recreation and leisure activities in line with LDP objectives for sustainable living. Improving the provision of open space is particularly important in some areas of South Cardiff where communities have poorer access to areas of open space.

5.338 Obtaining functional open space and appropriate provision for sport through the development process is provided for in PPW. It explains that Local Planning Authorities may be justified in seeking Section 106 Planning Agreements to contribute to the maintenance of safe and attractive facilities and open space, and to meet the needs of new communities.

5.339 This Policy applies to all new proposed housing developments, redevelopment schemes, conversions and mixed-use developments containing housing, sheltered housing and student accommodation over 8 units.

5.340 The Open Space SPG sets out detailed guidance on how the provision of functional open space, outdoor recreation, children's play and sport from new residential developments will be assessed and managed. It explains that the amount of open space provision generated by a housing proposal will be assessed in relation to its type and density. Consideration will also be given to the availability and adequacy of existing functional open space within the surrounding area. The Council will therefore seek to secure a range of improvements for accessible, high quality open space, sport and outdoor recreation provision, as appropriate to the particular site and development proposal.

5.341 These may include one or more of the following:

- Provision of as much necessary open space provision as possible, on site or on readily accessible sites;
- Contribution towards the improvement of existing open space facilities on readily accessible sites;
- Improvements to the network of recreational routes and open spaces; and
- Improvements to the public realm (in line with Policy KP5, High quality and sustainable design and improved public access to waterfront areas.

5.342 Due to the shortage of open space and recreation facilities in central and inner parts of the city and the limited opportunities for improvement, provision for open space and/or improving links with nearby open spaces may be sought on large-scale commercial developments in accordance with Policy KP7 on Planning Obligations.

5.343 As a general rule, provision of a satisfactory level and standard of open space will be sought on all new residential developments. For those developments of **14 or more dwellings** the amount of on-site open space provision is calculated from the projected population of the development and the application of the minimum standard of 2.43 hectares of functional open space per 1,000 population. However this standard will be applied flexibly in recognition that:

- In certain circumstances, provision of all-weather facilities can be more effective than traditional pitches;
- Changing trends in sport, recreation and leisure and the importance of providing outdoor and indoor facilities; and
- Achievement of provision in strict accordance with the standard can sometimes be impractical and/or inappropriate on previously developed sites.

5.344 Open spaces should be designed in line with Cardiff Open Space SPG guidelines to create a landscaped open space which fulfils its function with efficiency, can be maintained in a viable condition and contributes to the welfare and appearance of the environment. Functional open spaces can fulfil a number of roles including minimising vandalism, increasing privacy, providing wildlife habitats and minimising the intrusion of noise and air pollution.

5.345 The implementation of policies designed to provide and protect public open space throughout Cardiff would also serve to offset any increase in recreational pressure on the Cardiff Beech Woods SAC, thereby helping to avoid the likelihood that this LDP will have a significant effect upon this site.

~~C5: PROVISION FOR ALLOTMENTS AND COMMUNITY GROWING~~

~~Provision for allotments and/or community growing areas will be sought on new residential developments over 46 units and on all developments over 1800, provision of a 40 plot allotment site will be sought, increasing on a pro-rata basis for larger sites.~~

~~5.346 Where the provision of land for allotments is not possible, provision will be sought for land for community growing. This would include such uses as community spaces, community farms, communal gardens, orchards and community harvesting schemes.~~

~~5.347 The role of allotments and community growing areas in contributing towards sustainable communities, healthy living and improved interaction between different social and age groups is recognised in PPW and TAN 16: Open Space (2008). Further information is set out in the Cardiff Allotment Strategy and Open Space SPG.~~

~~5.348 Allotments and community growing areas play an important open space function particularly in urban areas and can help enhance biodiversity, provide opportunities for recreation and improve the quality of life.~~

~~5.349 Provision for allotments and community growing areas helps work towards delivering Plan Objectives and key policies.~~

~~5.350 For developments over 46 units, the Council will seek to secure financial contributions towards off-site provision of increased allotment or community growing space or improving and enhancing existing allotments or community growing areas.~~

~~5.351 For developments over 1800 units, the Council will seek to secure the provision of a new 40 plot allotment site, increasing on a pro-rata basis for developments over 1800 units. The developer would be required to provide and fence the land and provide a financial contribution to lay out the allotments site and all associated infrastructure. The Council would then subsequently adopt the allotments and provide for future management and maintenance, including the designation of the site as a statutory allotment area.~~

~~5.352 The required standard for allotment size and the calculation for off-site contributions towards allotments and community growing areas are covered in greater detail in the Open Space SPG.~~

~~C6: PROVISION FOR CHILDREN'S PLAY~~

~~Provision for children's play should be an essential element of the layout of new developments. Access to at least three different types of outdoor play provision as indicated below shall be provided within 400m of family homes within new developments.~~

~~5.353 This Policy and the associated model for play provision seeks to ensure that that the developmental needs of children to access varied play opportunities are properly provided for in new developments and do not rely exclusively on the provision of a limited number of equipment play areas.~~

~~5.354 The inclusion of private gardens as a location for play will ensure that those developments that do not have access to private gardens will require a greater level of alternative provision for play, which could include child friendly streets and safe access to good quality open space as well as the provision of accessible playgrounds in accordance with Policy T1.~~

C7: HEALTH

Priority in new developments will be given to reducing health inequalities and encouraging healthy lifestyles through:

i. Identifying sites for new health facilities, reflecting the spatial distribution of need, ensuring they are accessible and have the potential to be shared by different service providers; and

- ii. Ensuring that they provide a physical and built environment that supports interconnectivity, active travel choices, promotes healthy lifestyles and enhances road safety; and
- ~~iii. Managing the location of fast food takeaways to appropriate locations; and in all cases;~~
 - ~~v. Demonstrating that the effect of new developments on health is taken into account.~~

5.355 This Policy aims to improve the health of Cardiff's population by seeking to secure new health facilities in areas most at need, requiring that the built environment fosters healthy lifestyles, ~~managing the location of fast food takeaways~~ and ensuring that health is a key consideration in new developments.

5.356 The Policy seeks to address health inequalities in Cardiff where the difference in life expectancy between some wards is up to 12 years (Welsh Index of Multiple Deprivation 2011). It gives greater detail on the Key Policy KP14 on Health and helps work towards delivering LDP objectives relating to health and one of the main strategic outcomes of the Cardiff Partnership Strategy 'people in Cardiff are healthy'.

5.357 It accords with the aim of PPW in delivering sustainable development by ensuring that health is taken account of in new developments and assists a number of PPW objectives regarding travel and access to key community facilities. It also helps deliver a number of objectives regarding healthy lifestyles, sport and recreation in accordance with Our Healthy Future (Welsh Government 2009) and Fairer Health Outcomes for All (Welsh Government 2011).

5.358 This Policy reflects the fact that '*health considerations can be material considerations in determining planning applications.*' (PPW 12.13.8) The effect of development on people's health is a key element of sustainable development and its consideration will raise any significant issues which need to be taken into account.

5.359 It is recognised that not all new developments will be able to identify land for new health facilities. This largely depends on the scale of development and will be applied flexibly as a result. It is recommended that the local health board is contacted for further advice on this matter. Relevant documents are 'Together for Health' (Welsh Government 2012)

and 'Setting the Direction Primary and Community Services Strategic Delivery Programme' (Welsh Government 2010).

~~5.360 In order to support the aims of this Policy, it is recommended that the Welsh Health Impact Assessment Unit document 'Health Impact Assessment: A Practical Guide' (2012) is used in screening large planning applications to assess whether a Health Impact Assessment is required. It is recommended that all large developments including housing, health care, retail, waste and schools undertake a Health Impact Assessment.~~

5.361 5.361 For a description of appropriate locations to provide health facilities, see Policy C1 on Community Facilities. In addition, a number of other issues relating to the effect of new development on health including design, open space/community growing and transport are referred to in the respective policies.

5.362 Further details on this Policy will be set out in ~~an~~ Health SPG to accompany the LDP. ~~regarding new or enhanced health facilities and on managing the location of fast food takeaways (see Policy R7), in particular when they are near a residential area or a school and when a Health Impact Assessment may be required.~~

~~**E8: PLANNING FOR SCHOOLS**~~

~~**New and improved school facilities will be provided to meet existing and future educational needs.**~~

~~5.363 — The Council has a statutory duty as local education authority to ensure that there is a sufficient number and variety of school places at primary and secondary level, available to meet the needs of the population of the County.~~

~~5.364 — Although the supply and demand for school places varies by area, it is anticipated that there will be no overall surplus school places at entry to the primary sector in 2015, nor in the secondary sector in 2019. This takes account of existing school investment proposal and projections based upon health service (GP) and school roll data. Additional primary and secondary education provision will therefore be required to serve the new pupils generated as a result of greenfield or brownfield housing developments that come forward during the Plan Period.~~

~~5.365 The Council will seek financial contributions (See Policy KP7 Planning Obligations), towards the cost of providing additional or improved primary and/or secondary school facilities from developers proposing housing developments that would generate a requirement for school places that cannot be reasonably met by existing schools because:~~

~~a. the capacity at the school(s) in whose catchment area (s) new housing development are proposed would as a result of the development be exceeded by demand; and/or~~

~~b. there is a surplus capacity in such schools to accommodate some or all of the projected number of pupils generated from the proposed development but investment is required to make it suitable.~~

~~5.366 The Council will also seek the provision of land and/or premises, depending on scale and location of development. Please refer to Key Policy KP6 'New Infrastructure' and Supporting Document No. 6 Infrastructure Plan for detailed analysis.~~

~~5.367 It is recognised that the future additional pupils generated from strategic housing allocations (D-H) could not be accommodated in existing schools. The Council requests that developers set aside appropriate sites and provide school facilities in the initial phases of development aligned with the construction process, and additional forms of entry made available where necessary (210 primary school places plus nursery provision, 150 secondary school places plus sixth form provision) following completion of each 700 dwellings.~~

~~5.368 There will also be a need to address school provision in catchment areas where there is little or no existing capacity to accommodate the additional demand likely to arise from housing development on previously developed land (including strategic sites) or other in-fill sites. With limited exceptions financial contributions will be sought from developers towards the provision of new classroom accommodation, in accordance with the needs which arise from the proposed development.~~

~~5.369 In the event of the Council being allocated developer contributions to expand existing provision, the phasing of contributions over the period of construction will need to be in line with those set out in SPG, and will require careful consideration to ensure that the supply of school places is aligned with the construction process and occupancy of~~

~~dwellings. Monitoring of take-up of school places will be a key consideration in order to inform existing and future needs.~~

~~5.370 Further guidance on the application of this Policy will be set out in SPG.~~

~~C9: New Educational Facilities~~

~~Development of nursery, primary, secondary and sixth form education should:~~

~~i. Be well designed, well related to neighbourhood services and amenities, and easily accessible by sustainable transport modes; and~~

~~ii. Include, where appropriate, provision for other appropriate community uses in addition to their educational use.~~

~~5.371 Opportunities should be taken to share school buildings and facilities, or co-locate on shared sites with other Council Service areas and selected external services. This would serve to maximise the use of the land and provide an integrated citizen focused resource for the whole community. Opportunities for shared facilities could include libraries, community centres, leisure centres, indoor recreation facilities, play centres, adult education facilities, integrated childcare facilities, adjoining natural habitat, health care facilities.~~

~~5.372 Dependant on geographical constraints, opportunities should be taken to explore shared school facilities/playing fields with other schools (e.g. a Primary and Secondary School sharing fields) or continuous ages 3-19 school provision.~~

~~5.373 Further guidance on the application of this Policy will be set out in SPG.~~

~~C10: HEALTH EMPLOYMENT NON STRATEGIC ALLOCATION~~

~~Land is allocated for health related uses at Government Offices, St Agnes Road, Heath (4.07ha)~~

~~5.374 The site provides a good opportunity to allow for the future expansion of health related uses associated with University Hospital Wales.~~

~~5.375 This non-strategic site was put forward as a candidate site in the LDP process and is considered acceptable for health related uses. Dialogue with the University and NHS Trust has indicated the merits of health-related uses for this site, which can assist the strategic provision of health care in future years as the city continues to grow, placing further demands on the health service.~~

~~5.376 There are potential opportunities to develop the site for health related uses in direct conjunction with the existing hospital, offering the potential for comprehensive transport and access solutions.~~

~~5.377 The allocation of the site for health related uses supports the LDP vision and objectives on health and policies KP14 and C7 which promote the provision of health facilities in accessible locations. The site is directly adjacent to the existing University Hospital and in an accessible location which reduces the need to travel, a key component of developing sustainable communities. The precise nature of health related uses will be subject to further detailed work but could include health related employment and/or include an element of ancillary key health worker accommodation providing accessible accommodation and minimising travel to work distances.~~

Insert new Policy after existing paragraph 5.362 to be referenced as Policy C7

C7 PLANNING FOR SCHOOLS

Where a need has been identified for new and improved school facilities as a result of development ,the Council will seek contributions towards the cost of additional education provision. Negotiated contributions will be fairly and reasonably related in

scale and kind to the proposed development. Where appropriate on site provision will be required.

Development of nursery, primary, secondary and sixth form education should:

i. Be well designed, well related to neighbourhood services and amenities, and easily accessible by sustainable transport modes; and

ii. Include, where appropriate, provision for other appropriate community uses in addition to their educational use.

The Council has a statutory duty as local education authority to ensure that there is a sufficient number and variety of school places at primary and secondary level, available to meet the needs of the population of the County.

Although the supply and demand for school places varies by area, it is anticipated that there will be no overall surplus school places at entry to the primary sector in 2015, nor in the secondary sector in 2019. This takes account of existing school investment proposal and projections based upon health service (GP) and school roll data. Additional primary and secondary education provision will therefore be required to serve the new pupils generated as a result of greenfield or brownfield housing developments that come forward during the Plan Period.

The Council will seek financial contributions (See Policy KP7 Planning Obligations), towards the cost of providing additional or improved primary and/or secondary school facilities from developers proposing housing developments that would generate a requirement for school places that cannot be reasonably met by existing schools because:

a. the capacity at the school(s) in whose catchment area (s) new housing development are proposed would as a result of the development be exceeded by demand; and/or

b. there is a surplus capacity in such schools to accommodate some or all of the projected number of pupils generated from the proposed development but investment is required to make it suitable.

The Council will also seek the provision of land and/or premises, depending on scale and location of development. Please refer to Key Policy KP6 New Infrastructure, and Supporting Document No. 6 Infrastructure Plan for detailed analysis.

It is recognised that the future additional pupils generated from strategic housing allocations (D-H) could not be accommodated in existing schools. The Council requests that developers set aside appropriate sites and provide school facilities in the initial phases of development aligned with the construction process, and additional forms of entry made available where necessary (210 primary school places plus nursery provision, 150 secondary school places plus sixth form provision) following completion of each 700 dwellings.

There will also be a need to address school provision in catchment areas where there is little or no existing capacity to accommodate the additional demand likely to arise from housing development on previously developed land (including strategic sites) or other in-fill sites. With limited exceptions financial contributions will be sought from developers towards the provision of new classroom accommodation, in accordance with the needs which arise from the proposed development.

In the event of the Council being allocated developer contributions to expand existing provision, the phasing of contributions over the period of construction will need to be in line with those set out in SPG, and will require careful consideration to ensure that the supply of school places is aligned with the construction process and occupancy of dwellings. Monitoring of take-up of school places will be a key consideration in order to inform existing and future needs.

Opportunities should be taken to share school buildings and facilities, or co-locate on shared sites with other Council Service areas and selected external services. This would serve to maximise the use of the land and provide an integrated citizen focused resource for the whole community. Opportunities for shared facilities could include libraries, community centres, leisure centres, indoor recreation facilities, play centres, adult education facilities, integrated childcare facilities, adjoining natural habitat, health care facilities.

Dependant on geographical constraints, opportunities should be taken to explore shared school facilities/playing fields with other schools (e.g. a

Primary and Secondary School sharing fields) or continuous ages 3-19 school provision.

Further guidance on the application of this Policy will be set out in SPG.

7. MINERALS

M1: MINERAL LIMESTONE RESERVES AND RESOURCES

Mineral reserves with planning permission will be safeguarded from development that would prevent their extraction at:

- i. Creigiau Quarry;**
- ii. Taffs Well Quarry;**
- iii. Ton Mawr Quarry; and**
- iv. Blaengwynlais Quarry.**

Preferred Resource Areas of known resources suitable for the future working of Limestone have been identified ~~will be safeguarded from development that would prevent their~~ as extensions to at:

- vi. Creigiau Quarry; and**
- vii. Ton Mawr Quarry.**

5.378 The aim of this Policy is to protect identified mineral limestone reserves and resources from incompatible forms of development that could cause sterilisation and prevent them from being worked, so that they remain available for future generations.

5.379 This Policy expands on Policy KP11 and aims to protect existing mineral reserves and potential resources from development that would preclude their future extraction. It corresponds with guidance contained in Minerals Planning Policy Wales (2000) (MPPW), a key principle of which is to provide mineral resources to meet society's needs and to safeguard resources from sterilisation.

5.380 Mineral reserves are sites with planning permission for mineral working Cardiff has several mineral reserves, which are identified on the Proposals Map These are limestone quarries which are active at present, or those which have planning permission for the working of limestone.

~~Preferred Mineral Resource Areas of known resources~~ are sites within the County considered suitable for the future working of limestone. ~~Areas of mineral resource~~ These areas are identified on the Proposals Map. ~~The methodology used to identify these areas is set out in Supporting Document No.9 Minerals.~~

5.381 Permanent development on, or close to, mineral reserves or resources can mean that the minerals become sterilised or future extraction hindered. The identified reserves and resources will be protected from incompatible forms of development in order to prevent this. Incompatible forms of development include premature in-filling with waste or other material, and permanent building development. Policy M4 on Minerals Buffer Zones further protects such areas by defining buffer zones around identified reserves and resources, within which neither mineral working nor housing and other similarly sensitive development will be permitted.

M2: PREFERRED ORDER OF MINERAL RESOURCE RELEASE

The extension or deepening of existing mineral workings will be favoured in preference to the release of new sites and, with the exception of the lateral extensions of Creigiau and Ton Mawr Quarries referred to in Policy M1, deepening will be preferred to lateral extension. Applications to extend or deepen mineral workings will be permitted where it can be demonstrated that:

i. There are environmental improvements at the site which can be justified by the addition of new reserves, or traded off by the giving up of existing reserves, or;

ii. The addition of new reserves preserves the productive capacity of Cardiff to meet its sub regional apportionment commitments; or

iii. There are operational benefits in permitting further reserves that will lead to more efficient exploitation of the resource;

~~i. There are no suitable alternative materials available;~~

~~ii. Reserves in the existing site will be exhausted, at existing output levels, within 10 years;~~

~~iii. Reserves in the extended or deepened site, in combination with those remaining in the existing site, do not provide, at existing output levels, for more than 20 years' reserves; and~~

iii- It should also be demonstrated that such an approach will not cause unacceptable harm to the environment~~-, including consideration of impacts relating to access, noise, air quality, landscape and visual effects, ecology, soil resources, hydrology and hydrogeology, blast vibration and cultural heritage, and in the case of Creigiau Quarry, the objectives of Policy M3 are delivered as part of an extension or deepening application.~~

5.382 The extent of Cardiff's existing minerals landbank means it is unlikely that there will be a need to grant any further permissions for mineral resource release within the Plan period. The Regional Technical Statement 1st Review (August 2014) states that based on current information Cardiff has a surplus of permitted reserves and no further allocations are necessary. However, it also notes that these conclusions do not take into account all factors that may be material to ensuring an adequate and steady supply of aggregates for appropriately located sources including the technical capability of one type of aggregate to interchange for another, the relative environmental cost of substitution of one type of aggregate by another, the relative environmental effects of changing patterns of supply and whether adequate production capacity can be maintained to meet the required level of supply. The purpose of this Policy is to set out the sequential test approach which would be used to guide the future release of mineral resources, should this be necessary.

5.383 This Policy expands on Policy KP11 and promotes and supports the efficient use of minerals. The Policy accords with guidance contained in MPPW which recognises that extensions to existing minerals workings are often more generally acceptable than new greenfield sites. ~~Minerals Technical Advice Note (Wales) 1: Aggregates (2004) (MTAN1) indicates that a minimum 10 year landbank of crushed rock should be maintained throughout the entire Plan Period, but that new allocations in development plans will not be necessary where landbanks already provide for more than 20 years of aggregates extraction.~~

5.384 Generally, the continuation of quarrying at existing sites is preferable to the environmental and financial upheaval of shifting production to new sites. In addition, the deepening of sites is preferred to lateral extension as it minimises the area of land given over to working and ensures the best use of existing reserves. However, in determining the best option, consideration will need to be given to possible environmental and restoration implications and for this reason an

exception is made for Creigiau quarry where the objectives of Policy M3 to swap reserves for less environmentally sensitive reserves will be delivered as part of an extension or deepening application.

5.385 The life of any reserves released will be restricted to enable new technology and new environmental expectations to be reflected, without compromising the ability of operators to amortise their investment in plant. In addition, reserves will not be released prematurely to avoid sterilisation of land, and to ensure operators maximise the use of the existing site before moving into new areas. This will also help ensure the older site can be restored earlier.

5.386 In determining the best option, consideration will need to be given to the possible impact on the environment, natural heritage and built heritage.

M3: QUARRY CLOSURES AND EXTENSION LIMITS

Measures to prevent further mineral working and, where appropriate, to secure restoration and landscaping works at the earliest opportunity, will be sought at the following sites:

- i. Cefn Garw Quarry, Tongwynlais;
- ii. Highland Park Brickworks, Ely;
- iii. West End Brickworks, Ely; and
- iv. Southern and western parts of Creigiau Quarry.

~~No further extension to mineral reserves will be permitted at these sites, or at:~~

~~v. Blaengwynlais Quarry, Rhiwbina Hill.~~

5.387 The aim of this Policy is to introduce measures to prevent further extraction of minerals at the sites above, as shown on the Proposals Map, as mineral working is no longer considered appropriate at these locations.

5.388 This Policy expands on Policy KP11. It accords with guidance contained in MPPW, which states that inactive sites with planning

permission for future working which are considered unlikely to be activated for the foreseeable future should be identified in the development plan and should be the subject of a suitable strategy.

5.389 The Policy identifies three mineral sites ((i) to (iii) above) and parts of Creigiau Quarry where mineral working is no longer considered appropriate by modern standards. ~~Additionally, Blaengwynlais Quarry is considered unsuitable for extension in view of its sensitive location and poor access, so further extensions at this site will be resisted.~~

5.390 Cardiff contains several quarries for limestone or brick-earth that have not been worked for many years and in many cases have either re-vegetated naturally or have been put to alternative uses. For example, the part of Ely Brickworks within Cardiff has now been largely covered by the Ely Link Road. Despite long periods of disuse or alternative uses of some sites, planning permissions for mineral extraction still exist and could be reactivated at these sites. The sites identified have been effectively abandoned by the minerals industry for many years. By today's environmental standards, they are no longer suitable for mineral working and so are not needed for mineral purposes.

5.391 To eliminate any doubt over possible re-working at the sites outlined in (i) to (iv) above, measures to prevent further extraction and secure restoration and landscaping works will be pursued. Measures ~~will~~ may include the use of Prohibition Orders to ensure that no further working can take place at Cefn Garw Quarry, Tongwynlais, Highland Park Brickworks, Ely and West End Brickworks, Ely and closure of the southern and western parts of Creigiau quarry through a legal agreement with the site owners to relinquish these areas in favour of a new area set out in Policy M1 of the Plan and identified on the Proposals Map. , ~~No further extensions will be permitted, except at Creigiau Quarry, in line with Policy M1 on Mineral Limestone Reserves and Resources. Blaengwynlais Quarry is not considered appropriate for extension, and any applications will be determined accordingly.~~

M4: MINERALS BUFFER ZONES

Within the minerals buffer zones no mineral working, housing or other sensitive development will be permitted.

5.393 The aim of this Policy is to provide an explanation of the minerals buffer zones identified on the Proposals Map. The purpose of the buffer zones is to protect identified mineral reserves and resources from incompatible development which could sterilise them, and to reduce the environmental impact of quarrying by separating sensitive developments and mineral working.

5.394 This Policy expands on Policy KP11 and aims to protect existing mineral reserves and potential resources from development that would preclude their future extraction. Guidance contained in MPPW indicates that buffer zones should be defined in order to provide areas of protection around permitted and proposed mineral working. MTAN1: Aggregates indicates a minimum set distance for buffer zones of 200m, and that within buffer zones no new sensitive development or mineral extraction should be approved.

5.395 Buffer zones have been drawn around all minerals reserves (sites with planning permission for mineral working) and resources (sites identified as suitable for future mineral working) indicated on the Proposals Map. The purpose of buffer zones is to protect identified mineral reserves and resources from incompatible development which could sterilise them, and to ensure a separation distance between potentially conflicting land uses. The size of each buffer zone is appropriate to the environmental impact of the quarry, particularly the effects of ground vibration from blasting operations. ~~The methodology used to identify the buffer zones is set out in Supporting Document No. 9 – Minerals.~~

5.396 Sensitive development includes land uses most susceptible to adverse impact from quarrying, such as housing, schools and hospitals. These uses will be resisted within buffer zones. Some less sensitive development, where a lower standard of amenity could be tolerated, such as industrial land uses, offices and developments ancillary to the mineral working may be considered acceptable within buffer zones. Buffer zones also ensure that the environmental impact of quarrying on residents is minimised, particularly where mineral working and new residential developments are separated.

5.397 Since minerals can only be worked where they occur, this Policy will be afforded greater weight than policies favouring quarry-sensitive development that could be located elsewhere.

M5: RESTORATION AND AFTER - USE OF MINERAL WORKINGS

Proposals for mineral working or for related plant and buildings will be permitted only where firm proposals are included for the reinstatement of the site to a condition fit for an appropriate after-use supported, where relevant, by adequate after-care proposals. Appropriate reinstatement and after-care proposals will similarly be required when existing controls are reviewed. In drawing up restoration proposals, mineral operators will be encouraged to:

- i. Undertake progressive restoration;**
- ii. Make beneficial use of mineral waste generated by mineral operations;**
- iii. Consider whether restoration can contribute to nature conservation targets set out in the Local Biodiversity Action Plan.**
- iv. New uses of former mineral workings other than those appropriate to a rural area will not be permitted without special justification. Proposals to carry out safety works at derelict or dormant sites will be favoured.**

5.398 The aim of this Policy is to ensure that all proposals for mineral working or related development are accompanied by plans for restoration and suitable after-use of the site, or after-care where appropriate.

5.399 This Policy expands on Policy KP11. The Policy accords with objectives contained in MPPW and MTAN 1: Aggregates which aim to achieve a high standard of restoration and aftercare, and provide for beneficial after-uses when mineral working has ceased.

5.400 This Policy will be applied in order to avoid dereliction and uncertainty by requiring all applications for mineral working, including reviews of existing permissions, to be accompanied by effective proposals to ensure restoration and after-care of the site once mineral working finishes. This applies equally to ancillary plant and buildings and to secondary industry, whose presence is normally only justified by the existence of the mineral working site. It is essential to avoid dereliction

and uncertainty once mineral working ends, and to ensure the site is left in a safe and usable condition and restored to a high standard suitable for its agreed after-use. Operators will generally be expected to agree the broad aims of the restoration scheme at the outset, to keep those aims under regular review throughout working and to implement the scheme forthwith. The choice of after-use will depend on many issues including the location, final landform, availability and quality of soils or other restoration materials, and neighbouring land uses.

5.401 Where restoration is to agricultural or amenity use, appropriate after-care proposals will be needed. A separate planning permission is likely to be required for any after-use except agriculture, forestry, nature conservation or certain forms of informal recreation which do not normally require planning permission.

5.402 Proposals for new quarries or major extensions will be expected to be accompanied by detailed soil and habitat surveys. Comprehensive programmes for the stripping and storage of topsoil, subsoil and conservation of other soil-making materials should form part of the initial restoration proposals, which will be expected to provide for phased and progressive restoration of worked out areas.

5.403 Restoration can provide opportunities for creating and enhancing sites for nature conservation and contributing to the targets in the UK Biodiversity Action Plan and Local Biodiversity Action Plan.

Policy M6: ~~DREDGED AGGREGATE LANDING AND DISTRIBUTION FACILITIES~~ SAND WHARF PROTECTION AREAS

The sand wharves shown on the Proposals Map will be protected against

development which would prejudice their ability to land marine dredged sand and gravel. Proposals for the provision and improvement of landing and distribution facilities for marine dredged aggregates within the sand wharves shown on the Proposals Map Cardiff Docks will be favoured where there will be no unacceptable harm to the environment; ~~or nearby residential areas or future regeneration prospects of the waterfront area.~~

5.404 Marine sources currently supply the majority of fine aggregate construction needs for Cardiff. This Policy provides a framework for the protection of existing wharves and the assessment of applications for new or improved sand and gravel wharves and related facilities.

5.405 This Policy expands on Policy KP11. The Policy accords with guidance contained in Interim Marine Aggregates Dredging Policy (2004) which indicates that the use of marine dredged sand and gravel will continue for the foreseeable future where this remains consistent with the principles of sustainable development. It accords with the ~~South Wales~~ Regional Technical Statement 1st Review for Minerals (200814) which requires the protection of existing and potential wharves.

5.406 Although marine dredging is outside the control of the Council, it is necessary to ensure that existing wharves are protected and that appropriate landing and distribution facilities are provided to ensure this important source of construction materials remains available. Without it, the County would have to accept greater demands on land-based sources and more costly imports.

5.407 In response to concerns about the long-term effects of dredging on coastal erosion, Interim Marine Aggregates Dredging Policy (2004) proposes a more cautious approach to dredging and seeks a more balanced approach to the sourcing of supplies for fine aggregates in South Wales. Although this may lead to long-term changes in supply patterns, in the short term the present pattern of supply is likely to continue, and it is therefore prudent to ensure that facilities which enable current levels of supply to be maintained are protected and new facilities favoured.

5.408 Operations involving the trans-shipment of minerals do not normally need specific planning permission within the operational area of the port. However, secondary processes including the manufacture or treatment of mineral products usually need permission. Where proposals are submitted they will need to demonstrate minimal impact on the environment, ~~and nearby residential areas, and that they will not prejudice any future regeneration proposals in the waterfront area of Cardiff Bay.~~ Where proposals are likely to have significant effects upon the environment, applications may be subject to Environmental Impact Assessment. Additionally, proposals will need to have regard to the Severn Estuary SSSI/SAC/SPA and Ramsar site and where proposals are likely to have a significant effect on an international site, an appropriate assessment of the proposal would be undertaken.

~~M7: SAFEGUARDING OF SAND AND GRAVEL RESOURCE~~

~~The sand and gravel safeguarding area shown on the Proposals Map will be protected against all forms of permanent development in order to prevent sterilisation of the resource and to ensure that the sand and gravel within that area will be preserved for the~~

~~future, should a demonstrable need for the use of those resources arise.~~

~~5.409 The aim of this Policy is to ensure that the area of sand and gravel resource identified on the Proposals Map is protected from development that would cause its sterilisation and safeguarded for the future, should a need for the resource arise.~~

~~5.410 This Policy expands on Policy KP11 in that it protects potential resources from development. The Policy accords with guidance contained in MPPW which~~

~~requires Mineral Planning Authorities to safeguard access to mineral deposits which society may need and cautions against continuing to rely on marine dredged materials. MTAN1: Aggregates states that land based sand and gravel resources must be safeguarded for potential use by future generations in view of their relatively limited regional availability.~~

~~5.411 At present, marine dredged sources provide the majority of fine aggregate required to meet construction needs within Cardiff. In the short term this supply pattern is unlikely to change significantly. In view of the existing pattern of dredged aggregate supply, it is very unlikely that sand and gravel resources will need to be released for development within the Plan period. However, in light of concerns regarding the sustainability of the current pattern of marine dredged aggregate supplies, it is necessary for land-based sand and gravel resources to be safeguarded for potential use in the future. This Policy will be used to resist all forms of permanent development in the sand and gravel resource area shown on the Proposals Map. Land-based sand and gravel could only be worked where it is found, so this Policy represents a long-term strategy to protect existing resources, as they could become a strategic resource in the future. This Policy will carry more weight than policies favouring development that could be located elsewhere.~~

~~5.412 The designation as a safeguarded area does not indicate an acceptance of sand and gravel working in that area.~~

~~M8: SAFEGUARDING OF COAL RESOURCES~~

~~The coal safeguarding area shown on the Proposals Map will be protected against all forms of permanent development in order to~~

~~prevent sterilisation of the resource and to ensure that the coal within that area will be preserved for the future, should a demonstrable need for the use of those resources arise.~~

~~5.413 The aim of this Policy is to ensure that the areas of coal resource identified in the County are protected from development that would cause sterilisation and safeguarded for the future, should a need for the resources arise.~~

~~5.414 This Policy expands on Policy KP11 in that it protects potential resources from development. The Policy accords with MPPW which requires Mineral Planning Authorities to safeguard access to mineral deposits which society may need and MTAN2: Coal which requires the safeguarding of mineral resources.~~

~~5.415 Current energy supply does not necessitate the working of coal resources within Cardiff, and this situation is highly unlikely to change in the short term.~~

~~Consequently, it is unlikely that it will be necessary to release coal resources for~~

~~working to provide for energy needs in the Plan period. However, it is prudent to ensure that the coal resources identified are protected from sterilisation to maintain their potential for use in the future, should this become necessary.~~

~~5.416 All coal resources up to settlement boundaries are identified on the Proposals Map. Where safeguarded coal resources abut defined settlement boundaries, a 500m buffer has been shown. Although this buffer area includes safeguarded coal resources, it identifies the area of land within which future coal extraction will generally not be acceptable.~~

~~5.417 Coal could only be worked where it is found, so this Policy represents a long-term strategy to protect existing resources as they could become a strategic resource in the future. This Policy will carry more weight than policies favouring development that could be located elsewhere.~~

~~5.418 The designation as a safeguarded area does not indicate an acceptance of coal working in that area.~~

~~M9: SAFEGUARDING OF LIMESTONE RESOURCES~~

~~The limestone safeguarding area shown on the Proposals Map will be protected against all forms of permanent development in order to prevent sterilisation of the resource and to ensure that the limestone within that area will be preserved for the future, should a demonstrable need for the use of those resources arise.~~

~~5.419 The aim of this Policy is to ensure that the areas of limestone resource identified in the County are protected from development that would cause sterilisation and are safeguarded for the future, should a need for the resources arise.~~

~~5.420 This Policy expands on Policy KP11 in that it protects potential resources from development. The Policy accords with MPPW which requires Mineral Planning Authorities to safeguard access to mineral deposits which society may need.~~

~~5.421 Currently there is a sufficient landbank of limestone reserves in the County for the Plan period and, should the landbank not prove sufficient, the limestone resource areas identified in Policy M1 would be considered before any of the safeguarded areas shown on the Proposals Map. Given this, it will not be~~

~~necessary to release any of the safeguarded areas for working to provide for aggregates needs over the Plan period. However, it is prudent to ensure that the limestone resources identified are protected from sterilisation to maintain their potential for use in the future, should this become necessary.~~

~~5.422 The designation as a safeguarded area does not indicate an acceptance of~~

~~limestone working in that area.~~

New Policy M7: SAFEGUARDING OF SAND AND GRAVEL, COAL AND LIMESTONE RESOURCES

Development will not be permitted within the Sand and Gravel, Coal and Limestone Safeguarding Areas shown on the Proposals

Map that would permanently sterilise these mineral resources unless:

- i. The applicant can demonstrate to the satisfaction of the Local Planning Authority that the mineral concerned is no longer of any resource value or potential resource value; or**
- ii. The mineral can be extracted satisfactorily prior to the incompatible development taking place; or**
- iii. The incompatible development is of a temporary nature and can be completed and the site restored to a condition that does not either sterilise the resource or inhibit extraction within the timescale that the mineral is likely to be needed; or**
- iv. There is an overriding need for the incompatible development which overrides the need for the resource, including a requirement for prior extraction if practicable.**

The aim of this Policy is to ensure that the sand and gravel, coal and limestone safeguarding areas identified on the Proposals Map are protected from development that would cause its sterilisation and safeguarded for the future, should a need for these resources arise. In order to ensure this the Policy sets out a range of criteria against which proposals for development will be assessed.

This Policy expands on Policy KP11 in that it protects potential resources from development. The Policy accords with guidance contained in MPPW which requires Mineral Planning Authorities to safeguard access to mineral deposits which society may need. It also accords with MTAN1: Aggregates which states that land based sand and gravel resources must be safeguarded for potential use by future generations in view of their relatively limited regional availability and MTAN2: Coal which requires the safeguarding of mineral resources.

Sand and Gravel Safeguarding Area

At present, marine dredged sources provide the majority of fine aggregate required to meet construction needs within Cardiff. In the short term this supply pattern is unlikely to change significantly. In view of the existing pattern of dredged aggregate supply, it is very unlikely that sand and gravel resources will need to be released for development within the

Plan period. However, in light of concerns regarding the sustainability of the current pattern of marine dredged aggregate supplies, it is necessary for land-based sand and gravel resources to be safeguarded for potential use in the future. This Policy will be used to resist all forms of permanent development in the sand and gravel resource area shown on the Proposals Map. Land-based sand and gravel could only be worked where it is found, so this Policy represents a long-term strategy to protect existing resources, as they could become a strategic resource in the future. This Policy will carry more weight than policies favouring development that could be located elsewhere.

Coal Safeguarding Area

Current energy supply does not necessitate the working of coal resources within Cardiff, and this situation is highly unlikely to change in the short term. Consequently, it is unlikely that it will be necessary to release coal resources for working to provide for energy needs in the Plan period. However, it is prudent to ensure that the coal resources identified are protected from sterilisation to maintain their potential for use in the future, should this become necessary.

In accordance with guidance set out in MTAN2: Coal all international and national designations of environmental and cultural importance have been excluded from the Coal Safeguarding Area and a 200 metre margin has been included to protect the setting of Ancient Monuments. All coal resources outside these designations are identified on the Proposals Map. Where safeguarded coal resources abut defined settlement boundaries, a 500m area where coal working will not be acceptable has been shown. Although this area includes safeguarded coal resources, it identifies the area of land within which future coal extraction will generally not be acceptable, subject to the exceptions in paragraph 49 of MTAN2:Coal. Further details are set out in Policy M8: Areas where Coal Working is not Acceptable.

Coal could only be worked where it is found, so this Policy represents a long-term strategy to protect existing resources as they could become a strategic resource in the future. This Policy will carry more weight than policies favouring development that could be located elsewhere.

Limestone

Currently there is a sufficient landbank of limestone reserves in the County for the Plan period and, should the landbank not prove sufficient,

the limestone resource areas identified in Policy M1 would be considered before any of the safeguarded areas shown on the Proposals Map. Given this, it will not be necessary to release any of the safeguarded areas for working to provide for aggregates needs over the Plan period. However, it is prudent to ensure that the limestone resources identified are protected from sterilisation to maintain their potential for use in the future, should this become necessary.

The designation as a safeguarded area does not indicate an acceptance of sand and gravel, coal or limestone working in that area.

In addition to the resources outlined above the Aggregates Safeguarding Maps of Wales identifies a small amount of Category 1 Sandstone HSA (High Specification Aggregate) resources in the extreme north west of the County. As this area lies wholly within the Coal Safeguarding Area outlined above it is not identified separately on the Proposals Map as it is already protected from sterilisation and safeguarded for the future, should a need for these resources arise.

New Policy M8: AREAS WHERE COAL WORKING WILL NOT BE ACCEPTABLE

Future Coal extraction will not be permitted within the Areas where Coal Working will not be Acceptable shown on the Proposals Map unless exceptional circumstances show a smaller Area is appropriate.

The aim of this Policy is to protect the amenity of existing residential areas and international and national designations of environmental and cultural importance by ensuring that an appropriate area where coal working will not be acceptable is maintained between future coal working and residential areas and environmental and cultural designations are protected. The Policy accords with guidance contained in MPPW and MTAN2: Coal.

All coal resources outside international and national designations of environmental and cultural importance up to settlement boundaries are identified on the Proposals Map and the Policy identifies the area of land within which future coal extraction will generally not be acceptable by defining a 500m area where coal working will not be acceptable from existing residential areas. This accords with guidance set out in MTAN2: Coal which states that Coal working will generally not be acceptable

within 500 metres of settlements unless there are exceptional circumstances and that a area where coal working will not be acceptable should be shown on the Proposals Map.

MTAN2: Coal sets out factors that could justify exceptional circumstances where a smaller area where coal working will not be acceptable may be appropriate. These include:

- Where coal working provides the most effective solution to prevent risks to health and safety arising from previous mineral working;
- To remediate land damaged by shallow coal workings or mine waste, where coal extraction appears to be the most sustainable option;
- Where topography, natural features such as woodland, or existing development, would significantly and demonstrably mitigate impacts;
- Where major roads or railways lie between the settlement and the proposed operational area and coal working would not result in appreciable cumulative and in-combination effects;
- Where the surface expression of underground working does not include the significant handling or storage of the mineral or waste;
- When the proposal is of overriding significance for regeneration, employment and economy in the local area; or
- Where extraction would be in advance of other, permanent, development which cannot reasonably be located elsewhere.

In accordance with guidance in MTAN2: Coal where such exceptions justify surface working within 500m of a settlement, the area of working should be restricted to the area reasonably necessary for remediation and the best balance between the scale, working-method and the timing of individual phases, the opportunities for early restoration and aftercare, and hours of working will be sought. In order to justify working within 200 metres of a settlement strong evidence of the necessity for remediation, including the evaluation of options will be required and the social and environmental impacts on the affected settlement must be carefully weighed.

8. WASTE

~~W1: LAND FOR WASTE MANAGEMENT~~

~~Land will be allocated for waste management purposes at Lamby Way as defined on the Proposals Map~~

~~5.423 The purpose of this Policy is to allocate an area of land at the existing waste management facility at Lamby Way to accommodate waste related development, so that the Council can continue to manage current waste arisings and can accommodate further facilities which will enable it to meet European and national targets.~~

~~5.424 This Policy expands on Policy KP12. The Policy accords with TAN 21: Waste (2001); The National Waste Strategy for Wales: Wise About Waste (2002);~~

~~Towards Zero Waste (2010) and the South East Wales Regional Waste Plan 1st Review (2008)~~

~~5.425 Challenging targets set for recycling and composting, and the reduction of waste going to landfill, mean there is a need for further facilities which divert waste away from landfill and increase materials recovery, recycling and composting. The land allocated at Lamby Way, as shown on the Proposals Map, may prove an appropriate location for any new waste management facilities which may be required over the Plan period.~~

~~5.426 Completion of landfilling at the Lamby Way waste management site is likely to take place early in the Plan period. Upon completion of landfilling, the majority of the land will be utilised for public open space. However, waste management facilities may be retained on a permanent basis and will need to be integrated into the eventual after-use of the site.~~

~~5.427 The five local authorities who make up the Prosiect Gwyrdd regional partnership have agreed that Viridor should be appointed the preferred~~

bidder for a 25 year contract to deal with the residual waste of the region. Viridor's solution is based on an energy from waste facility located at Trident Park. This facility is currently under construction and a permit to operate was granted by Natural Resources Wales in 2010.

5.428 The Regional Waste Plan 1st Review identified that Cardiff will need to provide a maximum of 20.9ha of land for waste management purposes. The identified sites will contribute towards this requirement.

W21: SITES FOR WASTE MANAGEMENT FACILITIES

Proposals for the development of waste management facilities will be

permitted where:

i. There is a demonstrable need assessed against ~~County and~~ regional

requirements;

ii. They conform with the ~~principle of the~~ waste hierarchy and the principles contained in the Waste Framework Directive of An Integrated and Adequate Network; Nearest Appropriate Installation; Self Sufficiency and Protection of Human Health and the Environment , ~~the 'proximity principle' and the principle of regional self-sufficiency;~~

iii. They would not cause unacceptable harm to the environment, built

heritage or to human health;

iv. They include acceptable proposals for restoration, aftercare and after-use, including the beneficial after-use of by-products;

v. They would not endanger aviation safety; ~~and~~

vi. They include acceptable proposals for the protection of adjoining and

nearby land from landfill gas and leachate migration or contamination;

- vii. They are not located within an area at risk from flooding;**
- viii. They would not cause unacceptable air, noise or light pollution, dust, vibration or odours, or attract excessive vermin;**
- ix They provide safe means of access to the highway and adequate on-site parking and turning facilities; and**
- x. They are accompanied by a Waste Planning Assessment containing sufficient information to enable an assessment of the proposal.**

Facilities for the handling, treatment and transfer of waste will generally be encouraged towards existing use class B2 general industrial land.

5.429 The purpose of this Policy is to provide a framework for the assessment of planning applications for waste management facilities.

5.430 This Policy expands on Policy KP12. The Policy accords with ~~TAN 21: Waste (2001); The National Waste Strategy for Wales: Wise About Waste (2002); Towards Zero Waste (2010) and the South East Wales Regional Waste Plan 1st Review (2008).~~ the National Waste Strategy for Wales: Wise About Waste (2002); Towards Zero Waste (2010); The Collections, Infrastructure and Markets Sector Plan (2012) and TAN 21: Waste (2014).

5.431 It is anticipated that applications will come forward within the Plan period for new waste management facilities. Applications are likely to include waste disposal, processing, recycling and transfer of waste. The need for waste facilities will be assessed against the ~~South East Wales Regional Waste Plan 1st Review (2008).~~ The RWP estimates that, within Cardiff, a maximum of 20.9ha of land will be required for waste management facilities. Collections, Infrastructure and Markets Sector Plan and capacity requirements established through regional monitoring, as set out in TAN 21.

5.432 The 'waste hierarchy' advocates a sequential approach to waste management. At the top of the hierarchy is waste prevention and re-use, followed by ~~reduction, re-use, then materials recovery (e.g. recycling and~~

composting), then energy recovery (e.g. incineration to provide energy) and finally (i.e. least favoured) disposal (e.g. landfill or incineration without energy recovery). The 'proximity principle' requires waste to be disposed of as near to its place of production as possible, to reduce the amount of waste transported long distances, and to reflect the 'polluter pays' principle. 'Regional self-sufficiency' refers to the aim of minimising the amount of waste exported to other regions or countries. preparation for reuse, recycling, recovery and finally (i.e. least favoured) disposal.

5.433 Waste facilities will generally be encouraged towards existing general industrial areas (use class B2), unless it can be demonstrated that they could be acceptably located elsewhere, or unless assessment of the proposal indicates that more onerous locational standards should apply. ~~The RWP contains Areas of Search~~

~~maps for use in identifying potential new sites for in-building and open-air waste management/resource recovery facilities. Developers are encouraged to use the recommendations to assist in the identification of suitable sites. The first Review of the Regional Waste Plan endorsed by the Council in July 2008 identifies a range of potential sites for waste management purposes on vacant general industrial land. The Regional Waste Plan 1st Review (2008) contains Areas of Search Maps which TAN 21 indicates remain relevant for use in identifying potential new sites for in-building and open-air waste management/resource recovery facilities. Developers are encouraged to use the recommendations to assist in the identification of suitable sites.~~

~~5.434 In addition to the tests set out in the Policy, all proposals will be assessed against other relevant policies. Notably, they should not be located within an area at risk from flooding, cause unacceptable air, noise or light pollution, dust, vibration or odours, or attract excessive vermin. Proposals should also: Provide safe means of access to the highway and adequate on-site parking and turning facilities; Be accompanied by details of the type, quantity and source of waste; and Set out the proposed duration of the development.~~

5.435 Planning applications for waste management facilities should be accompanied

~~by sufficient information to allow the environmental impact of the proposal to be adequately assessed. Such information should include the nature of the waste, the broad technical requirements arising from the~~

~~type of waste, the amount of waste proposed to be treated or disposed of, access, the timescale of the operations and, where appropriate, restoration and after-use proposals.~~ a Waste Planning Assessment containing sufficient information to enable an assessment of the application and its contribution to meeting the requirements set out in the Collections, Infrastructure and Markets Sector Plan. Information to be provided should include:

- Waste Policy Statement (contribution to the CIM Sector Plan, need and locational requirements, demand, identification of markets, current shortfall in treatment capacity, consultation);
- Time-scale (lifespan of the operation, days and hours of operation);
- Types and quantities of waste to be managed;
- Design, layout, buildings and plant;
- Amenity and nuisance;
- Air pollution;
- Energy efficiency.

Further details are contained in Annex B of TAN 21 (2014). Where appropriate, proposals should be accompanied by a formal environmental assessment and Health Impact Assessment. In assessing such proposals, close consultation will be undertaken with Natural Resources Wales and conditions will be attached to any permissions and/or legal agreements sought to ensure adequate environmental safeguards and controls.

5.436 Further guidance on the application of the Policy will be set out in the Locating Waste Management Facilities SPG.

W32: PROVISION FOR WASTE MANAGEMENT FACILITIES IN DEVELOPMENT

Where appropriate, provision will be sought in all new development for facilities for the storage, recycling and other management of waste

5.437 406 The purpose of this Policy is to ensure that adequate provision is made for waste management facilities within new developments, in order to aid the Council in meeting the challenging waste recycling targets set by European and national targets.

5.438 ~~407~~ The Policy accords with TAN21: Waste, The National Waste Strategy for Wales: Wise About Waste (2002) and Towards Zero Waste (2010).

5.439 ~~408~~ Targets set out in Wise About Waste (2002) mean that the Council is required to be more proactive in managing waste. It is important that new development is designed to incorporate facilities for waste management to encourage waste reduction, recycling, composting and separation at source. This Policy will be used to ensure that adequate storage and collection facilities are provided in all appropriate new developments.

5.440 ~~409~~ The general requirement for all developments will be to provide:

- On-site waste, recycling and composting, separation and storage facilities;
- Communal waste, recycling and composting, separation and storage facilities for larger developments;
- Access arrangements for refuse vehicles and personnel for collection purposes.

5.441 ~~410~~ Facilities provided should be secure, unobtrusive and easily accessible. Further detailed guidance on matters such as the types of facilities required and their design will be set out in SPG.

6. Monitoring and Implementation

~~6.1 Monitoring the effect of planning policies is the principle way through which the effectiveness of implementing the LDP can be assessed. The monitoring process helps to positively identify key issues and questions such as:~~

- ~~Which policies are being implemented successfully — i.e. their effectiveness in determining planning applications and in withstanding appeals.~~
- ~~Whether policies are having their intended output.~~
- ~~If policies are not working well, what actions are needed to address them?~~
- ~~What changes to the evidence base has occurred or needs to take place?~~
- ~~What gaps can be identified that should be addressed by the LDP?~~
- ~~If an amendment of policies or complete review of the LDP is required.~~

~~6.2~~ The Council is required to submit an Annual Monitoring Report (AMR) to Welsh Government by 31st October each year following adoption of the LDP as set out in Section 37 of the Town and Country Planning (Local Development Plan) Regulations 2005 (the Regulations). Having a clear mechanism for the monitoring of the LDP is one of the 'Tests of Soundness' considered in the Examination of the LDP by the Planning Inspector.

~~6.3~~ The LDP Manual explains that the Annual Monitoring Report process should not just be about data collection, but about taking a forward looking action-orientated approach which may raise issues that need to be addressed and will help form the basis for a review of the LDP.

~~6.4~~ The LDP is subject to a four year review period. However, a full review of the LDP is only likely to be required in certain circumstances, for example where new legislation or guidance is released, significant changes to forecasts occur or where delivery of the LDP objectives is not being delivered. It is a combination of all of these factors, together with the issues raised in the AMR which may warrant consideration of a partial or full review. It would not be based solely on whether an individual target was being met or policy having a specific outcome.

~~6.5~~ The LDP Manual acknowledges that data cannot be collected for every policy in the Plan; it would lead to an unnecessarily large and complicated document. It suggests that key policy areas are monitored consistently to allow for trends to be recognised. Where possible, use will be made of existing information being collected, for example linking with the Sustainability Appraisal monitoring indicators.

~~6.6~~ It is important to recognise that the monitoring process can be a complex task, particularly where there is a lack of consistent data or if there is doubt an outcome can be solely attributed to development plan policies. There may also be difficulties in monitoring certain impacts on an annual basis when some changes take a longer time to materialise. Therefore, careful attention has been given to gathering the right volume and grain of data.

~~6.7~~ The LDP monitoring process involves gathering data on a range of different indicators including:-

- National core output indicators;
- National sustainable development indicators;
- Local output indicators relating to key objectives, strategic and detailed policies in the LDP;
- SA/SEA indicators regarding environmental impacts of the LDP; and

- Contextual issues affecting Cardiff such as changes in national policy or legislation, external factors and local social, economic and demographic trends; all of which will be presented and assessed in the AMR each year.

~~6.8~~ Targets linked to the indicators are set to assess whether policies are being implemented effectively. The AMR will provide a commentary on the extent to which targets have been met along with a consideration of factors influencing the findings in order to fully inform the overall review of performance. Trigger points are used to highlight any issues regarding relevant policies which could warrant further consideration. If a trigger point was reached it would not automatically mean a policy would need to be amended. It would be an issue for the AMR to consider in greater detail, in particular whether a policy is failing or if there are wider external factors contributing to a trigger point being reached.

~~6.9~~ Monitoring of the LDP is an on-going process and indicators and targets will be developed as this process continues. Existing indicators and targets will be evaluated and, where appropriate, changes made to existing indicators and targets including the additional inclusion of new indicators, should they be considered necessary. The process also allows gaps in data collection to become evident and may warrant measures to be taken to address those gaps. It is important that targets are realistic and measurable. It is recommended in the LDP Manual that any targets developed are 'SMART' i.e. that they are specific, measurable, achievable, realistic and time-bound.

~~6.10~~ Monitoring enables the implementation the LDP Strategy to be assessed, for example delivering development on allocated sites. This will show at an early stage a better understanding of whether the LDP Strategy is being delivered as intended or if not, identifying measures that may be required to do so.

~~6.11~~ The monitoring framework is set out in Appendix 9 and demonstrates how key objectives, strategic and detailed policies will be assessed against a set of indicators.

6. Monitoring and Implementation

6.1 Monitoring the effect of planning policies is the principle way through which the effectiveness of implementing the LDP can be assessed. The monitoring process helps to positively identify key issues and questions such as:

- Which policies are being implemented successfully – i.e. their effectiveness in determining planning applications and in withstanding appeals.
- Whether policies are having their intended output.
- If policies are not working well, what actions are needed to address them?
- What changes to the evidence base has occurred or needs to take place?
- What gaps can be identified that should be addressed by the LDP?
- If an amendment of policies or complete review of the LDP is required.

6.2 The Council is required to submit an Annual Monitoring Report (AMR) to Welsh Government by 31st October each year following adoption of the LDP as set out in Section 37 of the Town and Country Planning (Local Development Plan) Regulations 2005 (the Regulations). Having a clear mechanism for the monitoring of the LDP is one of the 'Tests of Soundness' considered in the Examination of the LDP by the Planning Inspector.

6.3 The LDP Manual explains that the Annual Monitoring Report process should not just be about data collection, but about taking a forward looking action-orientated approach which may raise issues that need to be addressed and will help form the basis for a review of the LDP.

6.4 The LDP is subject to a four year review period with an interim target therefore of Autumn 2019. However, a full ~~review~~ revision of the LDP is only likely to be required in certain circumstances, for example where new legislation or guidance is released, significant changes to forecasts occur or where LDP objectives are not being effectively delivered. It is a combination of all of these factors, together with the issues raised in the AMR which may warrant consideration of a partial or full review. It would not be based solely on whether an individual target was being met or policy having a specific outcome.

6.5 The LDP Manual acknowledges that data cannot be collected for every policy in the Plan; it would lead to an unnecessarily large and complicated document. It suggests that key policy areas are monitored consistently to allow for trends to be recognised. Where possible, use will be made of existing information being collected.

6.6 It is important to recognise that the monitoring process can be a complex task, particularly where there is a lack of consistent data or if there is doubt an outcome can be solely attributed to development plan policies. There may also be difficulties in monitoring certain impacts on an annual basis when some changes take a longer time to materialise. Therefore, careful attention has been given to gathering the right volume and grain of data.

6.7 A set of indicators have been comprised which will act as a benchmark in measuring performance. Indicators will be noted as either 'Contextual', 'Core' or 'Local'.

- Contextual Indicators – These are broad indicators which help monitor the effectiveness of the LDP at a strategic level and are designed to give an overall picture of how Cardiff as a whole is performing.
- Core Indicators – The Local Development Plan Manual (2006) sets out a number of core output indicators which are considered to be essential for assessing implementation of national policy.
- Local Indicators – The Council has identified local indicators which are more specific to Cardiff and considered important in monitoring the effectiveness of the LDP.

6.8 All indicators are linked to monitoring targets which set out the position that needs to be achieved in order to help deliver the LDP Strategy. If monitoring targets are not being met, trigger points are included to assess the extent to which circumstances have diverged from the target. The trigger points will indicate if certain parts of the Plan are not achieving their desired outcomes. If these trigger points are activated then the AMR will consider the necessary action which is required.

6.9 In setting trigger points, the principle adopted has been to set strict activation points rather than building in wide margins of delivery significantly below or above the target based on Plan policies. Therefore, where trigger points are based on numerical delivery rates, a trigger of 10% above or below the target has been adopted. In this way trigger activation enables the understanding of the reasons lying behind and consideration of whether any improvements can be made to make Plan implementation as effective as possible.

6.10 In this respect, careful consideration will be given to the likely underlying reasons for the activation of any trigger points. This will inform whether reasons reflect external factors or national trends largely outside

the scope of the effectiveness of LDP policy implementation or whether reasons may be more directly related to the Plan or local factors. In such situations a range of appropriate corrective actions can be considered. Such actions are set out in more detail fully below.

6.11 Options are available to the Council with respect to each indicator, monitoring target and trigger point. The AMR will assess the severity of the situation associated with each indicator and recommend an appropriate response in accordance with the following table:

Continue Monitoring (Green)
Where indicators are suggesting the LDP Policies are being implemented effectively and there is no cause for review
Training Required (Blue)
Where indicators are suggesting that LDP policies are not being implemented as intended and further officer or Member training is required.
Supplementary Planning Guidance Required (Purple)
Indicators may suggest the need for further guidance to be provided in addition to those already in the Plan.
Further Research (Yellow)
Where indicators are suggesting the LDP policies are not being as effective as they should, further research and investigation is required.
Policy Review (Orange)
Where indicators are suggesting the LDP policies are failing to implement the strategy a formal review of the Policy is required. Further investigation and research may be required before a decision to formally review is confirmed/.
Plan Review (Red)
Where indicators are suggesting the LDP strategy is failing and a formal review of the Plan is required. This option to fully review the Plan will need to be fully investigated and undertaken following serious consideration.

Appendix 3 2: National and Regional Policy Framework

Introduction

1.1 Cardiff's LDP must take into account relevant policies and guidance relating to Wales, the city-region and other approved policies relating to the local area.

LDP legislation and guidance

1.2 Every local planning authority in Wales must prepare a LDP for its area. This is known as a 'plan-led' system and together with other relevant plans, strategies and policies, provides the framework for planning in Cardiff. The main relevant legislation and guidance relating to LDPs is as follows:

- Planning and Compulsory Purchase Act 2004- Requires the Council to prepare a LDP and, in doing so, to have regard to its Community Strategy and national policy including the Wales Spatial Plan (WSP);
- The Town and Country Planning (Local Development Plan) (Wales) Regulations 2005- Outlines the details of how the LDP system will be operated. This includes the need for LDPs to have regard to the Waste Strategy for Wales, Regional Waste Plans, Regional Transport Plan and Local Housing Strategies; and
- Additional guidance on the preparation of LDPs has been prepared by the Welsh Government and includes:
 - Local Development Plans Wales (2005)
 - Local Development Plan Manual (2006)
 - Planning Your Community: A Guide to Local Development Plans (2006)
 - Guide to the examination of Local Development Plans (2006)

National policy framework

1.3 The Welsh Government's national land use policies are set out in **Planning Policy Wales (Edition 5, November 2012)** and **Mineral Planning Policy Wales (2001)**. These are supplemented by Technical Advice Notes and Circulars. Planning Policy Wales sets out how the land use planning system can help achieve the Welsh Government's goals of:

- Sustainable Development - meeting the needs of the present without compromising the ability of future generations to meet their own needs;
- Building a dynamic and advanced economy - supporting economic regeneration, creating wealth and good quality jobs;
- Tackling social disadvantage - developing an inclusive society where everyone has the chance to fulfil their potential; and

- Equal Opportunities - promoting a culture in which diversity is valued and equality of opportunity is a reality.

1.4 Chapter 2 of PPW sets out further information on Development Plan coverage.

1.5 People Places Futures: The Wales Spatial Plan (2008 update) provides a strategic framework to guide future development and policy interventions across Wales, beyond the scope of formal land use planning control. The Spatial Plan places Cardiff at the centre of the South East - 'Capital Network' - area of Wales, for which its vision is of, " An innovative skilled area offering a high quality of life – international yet distinctively Welsh. It will compete internationally by increasing its global visibility through stronger links between the Valleys and the coast and with the UK and Europe, helping to spread prosperity within the area and benefiting other parts of Wales".

1.6 The Spatial Plan acknowledges that it is important for Wales as a whole that Cardiff becomes significant internationally and that, to achieve this, the city needs to be the focal point of a coherent and successful urban network in south east Wales. Integrated transport is identified as being crucial to the area effectively functioning in this way; and achieving this in ways which reduce reliance on private cars, through improved public transport links.

1.7 Of particular relevance, the Spatial Plan also identifies:

- The City Coastal Area will function as a networked city-region, on a scale to realise its international potential, its national role and to reduce inequalities;
- The success of the City Coastal Area relies on Cardiff developing its capital functions, together with strong and distinctive roles of other towns and cities;
- The overall priority is to make better use of the area's existing transport infrastructure to deliver more sustainable access to jobs and services;
- The pressure to provide more housing and employment should be managed so as to fit in compatibly with conservation of the landscape, environment and community strength of this area; and
- Substantial growth of housing in the coastal zone should also be compatible with the health of housing markets in the Heads of the Valleys and Connections Corridor.

1.8 The **Environment Strategy for Wales (2006)** outlines the Welsh Government's long-term strategy for the environment of Wales, setting out

the strategic direction for the next 20 years. The purpose of the Strategy is to provide a framework within which to achieve an environment that is clean, healthy, biologically diverse and valued by the people of Wales. Welsh Government wishes to see the environment thriving and contributing to the economic and social well-being and health of all of the people of Wales.

1.9 One Wales, One Planet (2009) sets out the Welsh Government's vision of a sustainable Wales and the priority it attaches to sustainable development. This builds on the Welsh Government's legal duty to deliver sustainable development and requires all organisations in Wales to actively commit to sustainable development.

1.10 Economic Renewal: A New Direction (2010) is the Welsh Government's Strategic Framework for economic development. It sets out a vision for making Wales *'one of the best places in the world to live and to work'*. The strategy outlines the Welsh Government's following priorities, which are; investing in high quality sustainable infrastructure; making Wales a more attractive place to do business; broadening and deepening the skills base; encouraging innovation and targeting support for business.

1.11 One Wales: Connecting the nation – The Wales Transport Strategy (2008) is the Welsh Government's strategy for transport. It sets out how the Welsh Government intends to achieve certain social, economic and environmental outcomes. Five key areas are identified for progress:

- Reducing greenhouse gas emissions and other environmental impacts;
- Improving public transport and better integration between modes;
- Improving links and access between key settlements and sites across Wales and strategically important all-Wales links;
- Enhancing international connectivity; and
- Increasing safety and security.

1.12 The National Transport Plan (2010) sets out in detail how the Welsh Government proposes to deliver the Wales Transport Strategy One Wales: Connecting the Nation over the next 5 years. The National Transport Plan builds on previous plans, adding and integrating public and community transport, walking and cycling so that investments help to deliver One Wales. The National Transport Plan sits alongside the Regional Transport Plans in delivering the Wales Transport Strategy to ensure consistency of service provision across the transport network. Together the national and regional plans seek to strengthen local service delivery and improve access to essential services such as health and education.

Regional Policy Context

1.13 A Regional Transport Plan (RTP) (2010) has been prepared by the regional transport consortium, the South East Wales Transport Alliance

(Sewta), which is made up of 10 local authorities including Cardiff and other transport stakeholders. The Sewta RTP was approved by the Welsh Government in January 2010. Under the provisions of the Transport (Wales) Act 2006, the RTP replaces the Local Transport Plans formerly produced by each local authority in Wales. Welsh Government guidance requires the RTP to support the delivery of the strategic objectives of the WSP and the Wales Transport Strategy. The RTP is a material consideration in the formulation of LDPs and decisions on land use where there is a transport dimension.

1.14 The Sewta RTP sets out a vision of, "A modern, accessible, integrated and sustainable transport system for south east Wales which increases opportunity, promotes prosperity for all and protects the environment; where walking, cycling, public transport and sustainable freight provide real travel alternatives". To deliver this vision the RTP identifies a range of strategic objectives, policies, and actions, together with a five year rolling programme of schemes to develop and improve the transport network.

1.15 Managing demand for private car travel, making better use of the existing transport network and encouraging use of sustainable and active transport modes are key themes of the RTP which will provide the strategic framework for regional and local level transport improvements across the region.

1.16 The RTP recognises the critical relationship between land use and transport provision and how each affects the other. In tune with Welsh Government RTP guidance, it advocates a process of information sharing, joined-up thinking and integration to establish a consistency between the RTP and LDPs across the south east Wales region. These interactions need to embrace both LDP and Development Management elements of land use planning.

1.17 The South East Wales Regional Waste Plan, First Review (RWP) (2008) provides a land use framework to facilitate the development of an integrated network of facilities to treat and dispose of waste in south east Wales in a way that has regard for the Waste Strategy for Wales, satisfies modern environmental standards and meets targets set by European and national legislation. The document was subject to a 1st Review, the contents of which have been approved by the constituent authorities of south east Wales including Cardiff in July 2008. The Review sets out a Regional Waste Strategy indicating the preferred mix of waste management/resource recovery technologies and capacities for managing the forecast arisings of all controlled waste streams and a spatial element that guides the location of new facilities. In identifying suitable locations for new waste facilities, the LDP waste policies will assist in the development of an integrated network of facilities to treat and dispose of waste in ways that will satisfy modern environmental standards. A grouping of the

authorities (Caerphilly, Cardiff, Monmouthshire, Newport and the Vale of Glamorgan) has been formed through Prosiect Gwyrdd to tackle the issue.

1.18 ~~The South Wales Regional Technical Statement (1st Review for~~ **Aggregates (RTS) (2008,14)** has been prepared in response to Minerals Technical Advice Note 1: Aggregates (MTAN1), issued by Welsh Government in March 2004. This has a primary objective of seeking to ensure a sustainably managed supply of aggregates that are essential for construction, by striking the best balance between environmental, economic and social costs. To achieve that objective, the RTS has been prepared by consultants on behalf of the South Wales and North Wales Regional Aggregates Working Party (RAWP) to provide a strategic basis for aggregates supply for LDPs in the south Wales region until 2021~~36~~ . As appropriate, local planning authorities will then be expected to include allocations for aggregates provision in their area as part of the LDP process. The RTS was endorsed by Welsh Government and the constituent authorities including Cardiff in August 2014 ~~July 2007~~. 1.19 The main recommendations arising out of the RTS for Cardiff's LDP to effectively address are:

- Confirmation that the current aggregate reserves with planning permission are sufficient to meet the 10 year landbank requirements of MTAN1;
- The need to safeguard the marine dredging wharves within Cardiff Docks; and
- The need to safeguard for potential use by future generations the one potential sand and gravel resource block within Cardiff.

Appendix 4-3: The Cardiff context and key issues the plan must address

Introduction

2.1 It is important that the Deposit Plan is informed by relevant information relating to Cardiff. Extensive work has been undertaken to develop a comprehensive and robust evidence base. This section summarises some of the key issues which have been identified following analysis of the information collected. Further detailed information and technical data is contained in the supporting documents which accompany this document.

The Cardiff Context

2.2 The county covers some 143 square kilometres, and is the largest urban area in Wales. Approximately 53% of the county is urban with the remaining 47% formed by countryside and strategic river valleys which embraces a diverse pattern of landscapes and wide range of resources.

2.3 Cardiff is the key driver of the city-region economy in south east Wales which has a total population of 1.4 million. It is also the capital city of Wales and seat of National Government which further enhance Cardiff's nationally important role. This role is reinforced through its excellent range of retail, cultural, further education and sporting facilities.

2.4 LDPs within south east Wales local planning authorities (LPAs) have progressed at different timescales with four of the 10 LPAs having adopted LDPs, but with the majority still under preparation. The current situation is summarised below in Table 1, below.

Table 1: South east Wales local authority LDP progress and overall levels of growth (as at Deposit).

Local Authority	Stage of Preparation	Plan Period	Overall level of growth (dwellings proposed)
Blaenau Gwent	Adopted	2006-21	3,500
Bridgend	Deposit	2006-21	9,000
Caerphilly	Adopted	2006-21	8,625
Merthyr Tydfil	Adopted	2006-21	3,800
Monmouth	Deposit	2011-21	4,000
Newport	Deposit	2011-26	8,750

Rhondda Cynon Taff	Adopted	2006-21	14,385
Torfaen	Deposit	2006-21	5,000
Vale of Glamorgan	Deposit	2011-26	9,950

2.5 In order to assist the LDP in meeting the tests of soundness relating to cross boundary issues and compatibility with LDPs prepared by neighbouring authorities, a Working Group was set up in November 2011, made up of the 10 south east Wales LPAs and other participating organisations in the South East Wales Strategic Planning Group (SEWSPG). The South East Wales Economic Forum (SEWEF) and the South East Wales Transport Authority (Sewta) were also invited to participate. The purpose of the working group was to discuss the cross-boundary implications of the emerging issues involved in the preparation of the LDP.

Key Social Trends and Issues

2.6 Cardiff is the most populated local authority in Wales, with 345,400 people living in the county in 2011 (Office of National Statistics 2012) - over 11% of the total population of Wales. Some 1.4 million people live within 45 minutes drive time of the city. Cardiff's **population** has increased steadily over the past 20 years (by about 2,400 people per year) but much more rapidly since 2001 (about 3,500 per year). Welsh Government projections indicate that the number of households in Cardiff will significantly increase by 37% between 2008 and 2026 from 136,741 to 187,302 households. According to the Welsh Government projections, this is driven partly by in-migration (particularly net international migration), partly by natural population increase (births less deaths), and partly by a decline in average household size with over three quarters of the growth being for 1 and 2 person households.

2.7 In recent years a high proportion of new **housing** has been built on brownfield land. This has contributed to the development of many apartments and the relative under-provision of family housing. On average around 1,476 new dwellings have been built each year for the last 10 years. 14% of those were affordable (213 p.a.). 68% (1,001) p.a. were flats or apartments. Much of this development has been within the city centre and bay area and has helped to revitalise these areas and provide high quality opportunities for urban living. This is demonstrated by the fact that 94% of housing completions in the last 10 years have been on brownfield land compared to 6% on Greenfield sites.

2.8 The affordability of housing - particularly family housing - remains an issue that will continue to need to be addressed. At present (April 2013)

there are 9,710 on the combined housing waiting list; 545 families are in temporary accommodation. These facts help indicate the scale of the **affordable housing** requirement. The Cardiff Local Housing Market Assessment update (LHMA July 2013) indicates that, based on the Welsh Government formula, 3,989 affordable dwellings are required in Cardiff for each of the next 5 years to deal with need. The social and economic importance of providing a range and choice of homes, particularly affordable housing is fully recognised in the Welsh Government White Paper Homes for Wales, "A White Paper for Better Lives and Communities" (May 2012).

2.9 There are two **Gypsy and Traveller** sites in Cardiff (Rover Way and Shirenewton) providing a total of 80 pitches. The population in these sites is growing and there is a demand for new sites. The Council has a legal duty to meet the need for Gypsy and Traveller sites in the Local Development Plan (Welsh Government Circular 30/2007). The latest study in 2013 found a need up to 2026 for an additional 108 pitches plus 10 transit pitches.

2.10 Compared with Wales and the UK, Cardiff has a higher percentage of population in age groups 15-39 years but a lower percentage in age groups from 40 upwards. The impact of the **student** population is particularly significant. According to latest data for 2010-11, the growing student resident population of 37,400 comprised around 10.8% of the city's total population (Higher Education Statistical Authority 2012 and National Statistics).

2.11 The **health** of Cardiff's population is not significantly different from the Welsh average. However, this headline conceals large variations in health status between richer and poorer areas. There is a north-south divide across Cardiff with a difference in life expectancy of nearly 12 years between the poorest and most affluent wards (Cardiff What Matters Headline Needs Assessment 2010¹). Health inequality – the avoidable difference between the least and most advantaged populations – is thus evident in parts of the population. Opportunities for health are less in disadvantaged areas and health outcomes such as cardiovascular mortality are poorer.

2.12 In Cardiff, the greatest causes of death in people aged less than 75 years are cancer, circulatory disease and respiratory disease. Many chronic conditions are preventable by ensuring the environment is health enhancing and through the adoption of healthy lifestyles. However, over half of Cardiff's adults are clinically overweight or obese, just a quarter (25%) of adults meet recommended physical activity guidelines of undertaking at least 30 minutes of moderate intensity physical activity on five or more days per week (the lowest across Welsh local authorities) and 35% of adults eat the recommended 5 or more portions of fruit and vegetables each day (Welsh Health Survey 2011²).

2.13 The built and natural environment together with lifestyle behaviours contribute to improving health. Walking and cycling, access to well-maintained open spaces for physical activity and food growing plus easy access to health care facilities by active travel impact on the health of the population. Achieving and maintaining a healthy weight, protecting mental health and reducing stress levels are supported by this approach. Cardiff has a wealth of open spaces and walking and cycling rates to work/school and for leisure are increasing; there is the opportunity to protect and enhance these assets for health improvement.

2.14 The 2011 census statistics indicate that 16.2% of the population of Cardiff have one or more skills in the Welsh Language (ability to read, write or/and understand Welsh) and 11.1% of the County's population are able to speak Welsh. This compares with a national average of 19.0%. However there are substantial variations between the proportion of Welsh speakers in different communities in Wales, varying from below 8% to above 65%.

2.15 The Welsh Language Board approved Cardiff Council's revised Welsh Language Scheme 2009 to 2012 in July 2009. The Council has adopted the principle that in the conduct of public business and administration of justice in Wales, it will treat the English and Welsh languages on a basis of equality. This scheme sets out how the Council will give effect to that principle when providing services to the public in Cardiff.

2.16 **Community safety** is one of the top issues raised in successive Ask Cardiff Surveys. Between 2010 and 2011, Cardiff had the second highest recorded crime rate in Wales and 50 per cent higher than the average for Wales. These include violence against the person, burglary, vehicle and other theft and criminal damage. However, Cardiff's total recorded crime rate has fallen over the past eight years (with some fluctuations) and is now less than two-thirds of the figure of eight years ago. There was a 12% reduction in total crime between 2009/2010 and 2010/2011 (Home Office Statistics).

2.17 While Cardiff is generally a prosperous city offering a high quality of life for residents; **deprivation** (in terms of housing, physical environment, employment income, educational achievements, health) still remains an important issue that needs to be addressed. Of the 10% most deprived LSOAs (Lower Layer Super Output Area) in Wales, 15.8% are in Cardiff (Welsh Index of Multiple Deprivation 2011). Parts of Ely, Butetown and Splott are the most deprived areas of Cardiff.

1 http://cardiffproudcapital.co.uk/content.asp?nav=264&parent_directory_id=2

2 <http://wales.gov.uk/topics/statistics/headlines/health2012/120919/?lang=en>

2.18 9.5% of the total population of Cardiff live in the 10% most health deprived LSOAs (Lower Super Output Areas) in Wales (i.e. those ranked 1-190). However, this proportion varies greatly across the neighbourhood areas. Cardiff South West (23.2%) has the highest proportion of its residents living in these most deprived areas, followed by City & Cardiff South (19.0%) and Cardiff South East (14.6%). In contrast, Cardiff West (0.0%) has no areas of this kind, while just 1.5% of Cardiff North's population reside within these LSOAs. For Cardiff East the figure is 8.0%.

2.19 When looking at those living within the 20% most health deprived LSOAs in Wales (i.e. those ranked 1-380), it can be seen that 21.7% of Cardiff's total population live within these areas. The disparities across the city's neighbourhood areas also become more apparent. More than two-fifths (43.9%) of Cardiff South West's population live in these LSOAs, while Cardiff East (38.2%), Cardiff South East (29.9%) and City & Cardiff South (24.0%) also have proportions above the Cardiff average. In contrast, just 5.5% of Cardiff North's and 7.3% of Cardiff West's residents live in the 20% most health deprived areas.

2.20 **Ethnic minorities** comprise 15.5% of Cardiff's population broadly similar to the average for England and Wales (14.0%) but higher than the Wales average (4.4%) with a higher concentration of ethnic groups in Grangetown, Butetown, Riverside Adamsdown and Plasnewydd than elsewhere (ONS 2011).

2.21 In terms of **education, training and skill base** the proportion of Cardiff's working age population lacking any qualifications has hovered at around 13% for the past five years. However, Cardiff performs particularly well with regards to high-level skills with 39.8% of 16 to 64 year olds having NVQ level 4 or equivalent, putting Cardiff significantly above the Wales (29.3%) and UK (32.7%) averages (Annual Population Survey, 2011). In addition, 39% of Cardiff's workforce is educated to NVQ level 4 or above compared with Wales (29%) and UK (33%) (Annual Population Survey January 2011) a reflection of the four universities located within the city. However, as with other areas in the UK, it is important to recognise the link between low educational achievement and deprivation.

Key Economic Trends and Issues

2.22 The economy of Cardiff is generally strong and buoyant, reflecting its position as Capital of Wales, seat of Welsh Government and the regional centre and economic driver for the wider south east Wales economy, accounting for 32% of total employment in south east Wales. Commuting patterns into Cardiff demonstrate the city's importance to the **regional economy** and the Wales Spatial Plan and Economic Renewal Programme acknowledge that maintaining Cardiff's performance is vital for the economic well-being of the region and Wales as a whole.

2.23 Cardiff's **employment workforce** totals 188,977 (Employee Jobs Business Register and Employment Survey 2012, ONS) approximately 40% are daily in-commuters – 88% are employed in the service sector, 6% in construction and 6% in manufacturing. Gross Value Added (GVA) is an economic measure of the value of goods and services produced in an area. In 2009 Cardiff and the Vale of Glamorgan generated £9,615 million – 22% of Welsh GVA. GVA per head in Cardiff and the Vale stood at £20,864 in 2009 – higher than both the Welsh and UK averages (ONS 2011). Unemployment in Cardiff was 4.5% in March 2013 (10,617) (Claimant Count ONS). Between 2001 and 2009 employment in Cardiff expanded by 16% compared to an overall growth of 4% in the wider south east Wales region (Source DTZ Validation of Cardiff Labour Market and Employment Scenarios, June 2011). The economic recession over the last few years has contributed to the net loss of approximately 4,733 jobs in Cardiff between 2008 and 2010 (Source ONS Business Register and Employment Survey).

2.24 A key challenge for the LDP is planning for the economy and meeting the need for **future jobs** within the city and the wider south east Wales region through striking a balance between the supply and demand for employment land and continuing to provide a diverse range of job opportunities. Likely future growth sectors in Cardiff over the plan period include specialist sectors relating to ICT, energy and environment, advanced materials and manufacturing, creative industries, life sciences and financial and professional services. It is essential that the location, amount and nature of employment land allocated and protected ensures Cardiff fulfils its economic potential and also the success of the south east Wales region. This includes, for example, the designation in 2012 of a Cardiff Central Enterprise Zone providing a much needed boost to the supply of Grade A office stock for the city.

2.25 **Employment land** take up data for the period July 2001-July 2010 can be summarised as follows. Average take up for offices (B1a) was 28,200 square metres per annum. Average land take up was 8.1 hectares per annum for industrial and warehousing (B1b/c, B2 and B8) (Cardiff Employment Land Study Demand Assessment, DTZ, June 2011). Industrial supply currently comprises 69.7 hectares. Office supply currently comprises 426,971 square metres (Cardiff Employment Land Study Gap Analysis, Hardisty Jones Associates, April 2012).

2.26 Total **industrial** stock in Cardiff is approximately 19.2 million square feet of which 43% is warehousing stock, with the remainder providing more traditional industrial accommodation. However, the quality of stock has become a major issue, with only 6.1% being less than five years old. Many of the buildings within the current stock are reaching functional obsolescence and there is very little new floorspace to satisfy the emerging knowledge and technology services, which are driving demand for high specification industrial buildings, rather than the older, larger premises. Existing general industry and warehousing land is largely concentrated to

the east of the city, within or in close proximity to the southern arc of deprivation which geographically contains some of the most deprived wards in Wales. Key strategic locations include Ocean Park, Splott, Capital Business Park and Wentloog Corporate Park. The Penarth Road/Leckwith area also continues to perform an important employment function, with good linkages to the south and west of the city. As a distribution location, Cardiff's location towards the western end of the UK's major transport axis means it struggles to compete against locations further to the east (Newport, Chepstow, Bristol) for major transport and distribution functions.

2.27 In terms of **office supply** the city centre and Bay Business Area remain the principle locations. These are also the most accessible in the city, in terms of public transport and for those commuting into the city. Out of centre growth has focused at Green Meadow Spring, Coryton, Cardiff Gate, Pontprennau, and St Mellons Business Park. Lack of grade A office space has been addressed to a degree with the development of Callaghan Square, Fusion Point and Caspian Point. However, of the 1.5 million square feet of office space available in Cardiff only 7% is grade A (DTZ Supply Audit, 2011).

2.28 Cardiff city centre is the main **shopping** centre for south east Wales and over the last 3 years (2009 to 2011) has been ranked the 6th top retail centre in the UK (Experian rankings). District and Local Centres provide important local facilities to the local community. However, they are particularly vulnerable to out of centre competition and changing shopping habits. As a consequence the range and quality of retail provision is under pressure in many centres. There has been a 4% reduction in terms of net retail floorspace between 2005 and 2008.

2.29 The regeneration of **Cardiff Bay** represents a major success story with major redevelopment and infrastructure projects being undertaken over the past two decades. Whilst significant progress has been made a number of sites remain to be implemented including the completion of developments at the International Sports Village and the media/creative industries cluster, residential development and associated uses at Roath Basin (Porth Teigr).

2.30 Cardiff's leisure and tourism sector generates significant economic and cultural benefits for the city through the staging of major international events at world class venues such as the Millennium Stadium and Wales Millennium Centre. Cardiff's diverse leisure and tourism offer also embraces a proud heritage, boasting a number of castles, two national museums, two cathedrals, Roman remains and acres of parks and gardens. In 2010 the city attracted a total of 18.3 million visitors (STEAM, 2010), a 25% growth since 2009. Cardiff came in at 11 in Visit Britain's rankings for overseas visits to towns and cities in 2012. The Welsh capital had 301,000 visits, and was just ahead of Leeds (299,000) and behind Brighton (345,000).

Key Transportation Trends and issues

2.31 **Traffic** on Cardiff's roads grew on average by 9% between 2002 and 2012 (Cardiff Annual Traffic Flow Surveys, calculated using 5yr Rolling Averages). Around 56% of employed Cardiff residents travel to work by car; with 17% walking; 10% travelling by bus; 10% by cycle; 6% by rail; and the remaining 1% by other means. This compares with travel by non-car means for other journey purposes as follows: Shopping 53%; Education 59%; and Leisure 57% (Ask Cardiff Survey 2012). A large proportion of car journeys are relatively short: 25% of trips being no longer than 2km and 58% no longer than 5km (Census 2001 excluding working from home). Overall **vehicle occupancy** has increased from 1.37 per private car in 2008 to 1.41 in 2011 (Cardiff Annual Traffic Flow Surveys).

2.32 Cardiff has consistently experienced the highest levels of daily **inbound commuters** of any other local authority in Wales. As of 2011, this equates to nearly 77,900 people travelling into Cardiff each day by all modes, and representing around 37% of the city's total workforce. The largest numbers commute from the adjoining areas of The Vale of Glamorgan (20,500), Rhondda Cynon Taff (18,800) and Caerphilly (9,700). A total of 27,900 Cardiff residents commute outside of the authority on a daily basis, giving a net inflow of around 50,000 commuters (Annual Population Survey, 2011).

2.33 In terms of transport interchanges Cardiff benefits from having a co-located **central rail and bus station** within the heart of the city and within 2 hours rail travel time from London. Central rail station is used by approximately 5.75 million people each year (Source: Office of Rail Regulation, 2011-12 Station Usage Report) and significant improvements are planned for both the bus station and rail station. Its sustainable location within the heart of the city enables it to perform an important role for the south east Wales region in providing easy access to jobs and services.

2.34 Travel on **rail services** into Cardiff has increased considerably, with passenger numbers at Cardiff stations having increased by 82% between 2001 and 2011. Cardiff Central and Cardiff Queen Street Station alone have experienced an increase in patronage during this period of 100% and 53%, respectively. (Cardiff Annual Patronage Surveys, calculated using 5yr Rolling Averages). Significant enhancements to rail services are planned during the plan period with electrification of the main line from Cardiff to London approved for completion in 2017. Proposals for also electrifying the Valley line network and main line to Swansea are currently being considered by UK and Welsh Governments. In addition, work on enhancing the capacity between Central and Queen Street stations, including additional platforms for both, has been approved for completion in 2014.

2.35 With respect to other modes, **cycle usage** within the city centre has seen an increase of 10% between 2001 and 2011, while overall **bus patronage** numbers across the city have decreased from 2001 to 2011 (Cardiff Annual Patronage Surveys, calculated from 5yr rolling averages). Use of the Cardiff East Park and Ride site after opening in October 2009 has increased from approximately 69,500 in 2009/10 to 84,700 in 2012/13 (22% growth) and rail based park and ride in Cardiff remains over-subscribed.

2.36 **Cardiff International Airport** plays an important role in international connectivity for both Cardiff and the wider region and consideration needs to be given to improving the role and links to the airport.

2.37 The **port facilities** within Cardiff docks are important in terms of international freight movement for both Cardiff and the wider region and it is important that these facilities are maintained and improved where necessary. Associated British Ports (ABP) and its tenants at South Wales directly and indirectly support over £1.7 billion of gross output in Wales. There are therefore opportunities to develop the role of the port, particularly concerning its potential to generate new industry, services and accelerate economic growth.

Key Environmental Trends and Issues

2.38 Cardiff is located on the coastal plain of the Severn Estuary. The southern rim of the south Wales coalfields in Caerphilly and Rhondda Cynon Taff provide a strong imposing backdrop to the north of the city, dramatically broken by the River Taff at Tongwynlais. The Rivers Ely and Rhymney also converge on the city from the west and east, respectively. To the south west the Leckwith Escarpment in the Vale of Glamorgan provides another strong backdrop. By contrast, the flat land to the south east, adjacent to the Severn Estuary and Newport forms part of the Gwent Levels. This undeveloped coastline contrasts with the developed coastline further west which includes Cardiff Bay and the barrage and associated fresh water lake. This setting has influenced the city's development to date with its distinctive urban form and will continue to do so in the future.

2.39 **Landscape** studies undertaken in 1997 and 2007 have recognised the particular value of five areas of countryside: St Fagans Lowlands and the Ely Valley; the Garth Hill Uplands and the Pentyrch Ridges and Valleys; the Fforest Fawr and Caerphilly Ridge; the Wentloog Levels; and Flat Holm. In addition Cardiff's three river valleys of the Taff, Ely, and Rhymney (including Nant Fawr) play an important strategic role as wildlife and recreation corridors linking the urban area with the countryside.

2.40 Cardiff has a strong and rich built heritage and many designations have been made to identify interests of **historic conservation** importance in Cardiff which need to be protected and include:

- 28 Scheduled Ancient Monuments and 4 archaeologically sensitive areas;
- Almost 1000 Listed Buildings;
- 27 Conservation Areas;
- 19 Historic Parks, Gardens and Landscapes including part of the Gwent Levels which are included in the Register of Landscapes of Outstanding Historic Interest in Wales; and
- Local buildings of merit.

2.41 The city has a particularly rich Victorian and Edwardian legacy that is reflected in the city centre, its inner suburbs and in the civic centre and religious building. Churches and chapels, schools and public houses remain prominent and often create focal points on streets and junctions. As Cardiff continues to grow, high quality **design** will be required which takes this local distinctiveness into consideration.

2.42 **Open spaces** are important as they improve people's mental and physical health, encourage physical activity, are attractive, support biodiversity, act as a carbon sink, and can help to adapt to climate change. Cardiff has over 400 hectares of recreational open space, 2000 hectares of amenity open space and 200 hectares of education open space. Cardiff has a good coverage of Accessible Natural Greenspace, with over two thirds of the population living within a 400m distance of access to green space. Cardiff has more green space per person than any of the other UK core cities; a situation to be protected and promoted.

2.43 Cardiff has a diverse and widespread collection of species and sites of Local, UK and European **biodiversity** importance which need to be protected. Including:

- 4 sites designated for their international importance – the Severn Estuary Special Protection Area (SPA), Severn Estuary Special Area of Conservation (SAC) and Ramsar sites, and Cardiff Beech Woods Special Area of Conservation (SAC);
- 17 Sites of Special Scientific Interest (SSSIs);
- 6 Local Nature Reserves (LNRs);
- 177 Sites of Importance for Nature Conservation (SINCs) and 4 more pending designation (subject to approval by Cardiff Biodiversity Partnership);
- European protected species occurring in Cardiff include the Great Crested Newt, otter, dormouse as well as several species of bat; and
- A number of the Cardiff priority habitats and species have been identified by UKBAP, Section 42 and Local Priority.

2.44 Good quality **agricultural land** is known to exist within the rural area of Cardiff. The best and most versatile agricultural land is a finite resource.

Areas within the city known to contain some good (Grade 1, 2 and 3a) quality agricultural land include agricultural land in the west, north and north east of the city.

2.45 **Flooding** poses a particular threat to Cardiff because of its coastal location, low-lying areas and rivers, and it is inevitable that climate change will increase flood risk in the city. The Environment Agency advises planning authorities on flooding issues and also gives advice in the form of River Catchment Management Plans. It has identified areas of Cardiff – mainly in the south of the county (Wentloog Levels, Pengam Area) and the river valleys (the Taff, Ely and Rhymney) – which are at high risk of flooding (either with or without defences) or which have a history of flooding. In order to build on this baseline information the Council has undertaken a Strategic Flood Consequence Assessment which assessed fluvial and tidal influences on flood risk within the city for both the present day and in the next 75 and 100 years taking account of climate change and in particular predicted sea level rise. In terms of present day flood risk the findings of this work reinforce the Environment Agency data. However for future flood risk in 75 and 100 years the findings show significantly increased flood risk in the Pengam Green area and Wentloog Levels area south of Rumney and Trowbridge due to the impact of climate change and in particular predicted sea level rise. The need for the plan to respond to these findings is clearly a major issue.

2.46 In order to combat **climate change** a key issue for the plan to address is reducing greenhouse gas emissions which are the key cause of global warming. Cardiff's per capita average CO₂ emissions were estimated at 6.8 tonnes in 2009. The majority of these emissions resulted from industry (45%), domestic sources (30%) and road transport (25%) (Department for Energy and Climate Change). The Welsh Government target is to reduce CO₂ emissions by 80% by 2050.

2.47 The Council is currently undertaking a Renewable Energy Assessment and initial findings show that current production of **renewable energy** in Cardiff is low. The European Union target is to source 15% energy from renewable sources by 2020. (European Directive 2009/28/EC)

2.48 In 2011/12 municipal **waste** arisings in Cardiff totalled 169,216 tonnes. Over the last 10 years the recycling and composting rate of household waste in Cardiff has risen from 4% to 55% meaning the Council is on target to reach the Welsh Government target of 58% by 2016, 64% by 2020 and 70% by 2025. For municipal waste that cannot be recycled or composted the Council is currently working with other authorities in the region through Prosiect Gwyrdd to secure a long term solution to turn waste into energy. In February 2013 Viridor was announced as Preferred Bidder to deliver an environmentally sustainable waste management solution for

the Partnership. Viridor's solution, is based on an energy from waste facility located at Trident Park

2.49 Cardiff has significant, good quality **mineral reserves** (mainly carboniferous limestone) which are an important source of aggregates for the region. A supply of aggregates should be maintained, so mineral reserves need to be safeguarded against inappropriate development. Currently Cardiff has approximately 41 million tonnes of limestone reserves which represent a supply of 69 years, well beyond the plan period. There is also a potential sand and gravel resource adjacent to the Rhymney River in the north east of the county, and potential coal resources in the north west of the county, which are unlikely to be required within the Plan period but which need to be safeguarded for potential future use.

2.50 As a result of past activities including industry, mining, quarrying, dockland and waste disposal there is a range of undeveloped potentially **contaminated land** within the city. However the majority of these undeveloped sites are either protected as areas of open space or for nature conservation purposes or are required for operational purposes such as quarrying activity or port related activities.

2.51 In common with other towns and cities in the UK, the predominant local source of emissions which affects **air quality** is road traffic and the pollutant of concern is nitrogen dioxide. Cardiff currently has three AQMAs including St Mary Street, Ely Bridge and Stephenson Court (on Newport Road near Cardiff Royal Infirmary).

2.52 **Water quality** in the rivers Taff, Ely and Rhymney is improving, but falls below the requirements of the Water Framework Directive. In total the status of watercourses (percent of river lengths achieving good ecological status) in Cardiff using data collected under the Water Framework Directive is 1.8 km Good, 33.7 km Moderate, 7.6 km Poor and 4.2 km Bad. The groundwater around Taff Gorge / Creigiau area is vulnerable.

2.53 In order to meet the needs of new development proposed in the plan new **water supply** infrastructure will be required but dialogue with Welsh Water has demonstrated a commitment to address this issue.

Appendix 5: List of Supplementary Planning Guidance (SPG) to be prepared at different stages

(1) SPG to be submitted prior to/at examination

Title	Timescale	Relevant Deposit Plan Policies
<ul style="list-style-type: none"> • Design and Parking Guidance (incorporating Access, Circulation and Parking Requirements SPG and sustainable design guidance) 	<ul style="list-style-type: none"> • Current adopted SPG to revised, updated and extended and be submitted prior to/at Examination. • Biodiversity	• Current adopted SPG to the Local Plan to be revised after adoption. New planning obligations SPG to pick up S106 issues	• DP59

Appendix 4: – Supplementary Planning Guidance (SPG)

The Table below provides a list of SPG to support the Plan with a timetable for preparation. This list will be kept under review in light of changing priorities for preparation and the need for additional SPG. The requirement for preparation/review of SPG is linked to the Monitoring Framework.

<u>Supplementary Planning Guidance</u>	<u>Current Status / Proposed Action</u>	<u>Relevant Plan Policy</u>	<u>Indicative Date for Production</u>
<u>Design and Parking Guidance (incorporating Access, Circulation and Parking Requirements SPG and sustainable design guidance)</u>	<p><u>Current adopted SPG to the Local Plan</u></p> <p><u>To be revised to link to adopted LDP updated and extended.</u></p> <p><u>New planning obligations SPG to pick up S106 issues from Transportation SPG</u></p>	<u>T5</u>	<u>Within 6 months of adoption</u>
<u>Affordable Housing</u>	<p><u>Current adopted SPG to the Local Plan</u></p> <p><u>To be revised to link to adopted LDP</u></p> <p><u>New planning obligations SPG to pick up S106 issues</u></p>	<u>H3</u>	<u>Within 6 months of adoption</u>
<u>Open Space</u>	<p><u>Current adopted SPG to the Local Plan</u></p> <p><u>To be revised to link to adopted LDP</u></p> <p><u>New planning obligations SPG to pick up S106 issues</u></p>	<u>C4, C5</u>	<u>Within 6 months of adoption</u>
<u>Houses in Multiple Occupation</u>	<u>New SPG</u>	<u>H5</u>	<u>Within 6 months of adoption</u>
<u>Planning Obligations</u>	<u>New SPG</u>	<u>KP7</u>	<u>Within 12 months of adoption</u>

<p><u>incorporating Developer Contributions for Transport facilities and relevant sections from the following SPGs:</u></p> <ul style="list-style-type: none"> • <u>Affordable Housing</u> • <u>Access, Circulation and Parking Requirements</u> • <u>Open Space</u> • <u>Schools</u> • <u>Public Art</u> • <u>PROW</u> • <u>Community Facilities</u> • <u>Trees and Development</u> • <u>Waste Collection and Storage Facilities</u> • <u>Biodiversity</u> 			
<p><u>Locating Waste Management Facilities</u></p>	<p>Current adopted SPG to the Local Plan</p> <p>To be revised to link to adopted LDP</p>	<p><u>W1</u></p>	<p><u>Within 12 months of adoption</u></p>
<p><u>Central Shopping Area Protected Frontages</u></p>	<p>New SPG</p>	<p><u>R3</u></p>	<p><u>Within 12 months of adoption</u></p>
<p><u>Flooding</u></p>	<p>New SPG</p>	<p><u>EN14</u></p>	<p><u>Within 12 months of adoption</u></p>

<u>Natural Heritage Network</u>	<u>New SPG</u>	<u>KP16, EN3 - 8</u>	<u>Within 12 months of adoption</u>
<u>Design Guidance and Standards for Flat Conversions</u>	<u>New SPG</u>	<u>H5</u>	<u>Within 12 months of adoption</u>
<u>Infill Sites Design Guidance</u>	<u>Current adopted SPG to the Local Plan</u> <u>To be revised to link to adopted LDP</u>	<u>KP5</u>	<u>Within 18 months of adoption</u>
<u>Tall Buildings Guidance</u>	<u>Current adopted SPG to the Local Plan</u> <u>To be revised to link to adopted LDP</u>	<u>KP5</u>	<u>Within 18 months of adoption</u>
<u>Householder Design Guidance</u>	<u>Current adopted SPG to the Local Plan</u> <u>To be revised to link to adopted LDP</u>	<u>KP5</u>	<u>Within 18 months of adoption</u>
<u>Shop Fronts and Signs Guidance</u>	<u>Current adopted SPG to the Local Plan</u> <u>To be revised to link to adopted LDP</u>	<u>KP5</u>	<u>Within 18 months of adoption</u>
<u>Public Art Guidance</u>	<u>Current adopted SPG to the Local Plan</u> <u>To be revised to link to adopted LDP</u> <u>New planning obligations SPG to pick up S106 issues</u>	<u>KP5</u>	<u>Within 18 months of adoption</u>
<u>Public Rights of Way and Development</u>	<u>Current adopted SPG to the Local Plan.</u> <u>To be revised and updated to link to adopted LDP</u> <u>New planning obligations SPG to pick up S106 issues</u>	<u>T1</u>	<u>Within 18 months of adoption</u>

<u>Protection of Employment Land and Premises for Business, Industry and Warehousing</u>	<p><u>Current adopted SPG to the Local Plan.</u></p> <p><u>To be revised and updated to link to adopted LDP</u></p>	<u>EC1,EC3</u>	<u>Within 18 months of adoption</u>
<u>Food Drink and Leisure Uses</u>	<p><u>Current adopted SPGs to the Local Plan.</u></p>	<u>R7</u>	<u>Within 18 months of adoption</u>
<u>Premises for Eating, Drinking & Entertainment in Cardiff City Centre</u>	<p><u>To be merged together and revised and updated to link to adopted LDP</u></p>		
<u>Trees and Development</u>	<p><u>Current adopted SPG to the Local Plan</u></p> <p><u>To be revised and updated to link to adopted LDP</u></p> <p><u>New planning obligations SPG to pick up S106 issues</u></p>	<u>EN8</u>	<u>Within 18 months of adoption</u>
<u>Community Facilities and Residential Development</u>	<p><u>Current adopted SPG to the Local Plan</u></p> <p><u>To be revised and updated to link to adopted LDP</u></p> <p><u>New planning obligations SPG to pick up S106 issues</u></p>	<u>C1</u>	<u>Within 18 months of adoption</u>
<u>Childcare Facilities</u>	<p><u>Current adopted SPG to the Local Plan</u></p> <p><u>To be revised and updated to link to adopted LDP</u></p>	<u>EC2</u>	<u>Within 18 months of adoption</u>
<u>Waste Collection and Storage Facilities</u>	<p><u>Current adopted SPG to the Local Plan</u></p> <p><u>To be revised and updated to link to adopted LDP</u></p> <p><u>New planning obligations SPG to pick up S106 issues</u></p>	<u>W2</u>	<u>Within 18 months of adoption</u>

<u>Biodiversity</u>	<p><u>Current adopted SPG to the Local</u></p> <p><u>To be revised and updated to link to adopted LDP</u></p> <p><u>New planning obligations SPG to pick up S106 issues</u></p>	<u>EN5,EN6, EN7</u>	<u>Within 18 months of adoption</u>
<u>Archaeologically Sensitive Areas</u>	<p><u>Current adopted SPG to the Local Plan</u></p> <p><u>To be revised and updated to link to adopted LDP</u></p>	<u>KP17, EN9</u>	<u>Within 18 months of adoption</u>
<u>Health</u>	<u>New SPG to be prepared</u>	<u>C6</u>	<u>Within 18 months of adoption</u>
<u>Gypsy and Traveller Sites</u>	<u>New SPG to be prepared</u>	<u>H7</u>	<u>Within 18 months of adoption</u>
