Appendix 10 : Summary of LDP process including glossary of technical terms

Summary of LDP Process

Introduction

4.1 As Wales has a plan-led system, it means that the LDP will be very important when making planning decisions. It sets out the Council's proposals and policies for future development and use of land in its area. Once the plan has been adopted, decisions on planning permissions will be mostly based on the LDP. The LDP will therefore provide a measure of certainty about what kind of development will and will not be permitted during the plan period.

Stage 1: Delivery Agreement

4.2 The Delivery Agreement sets out how and when you can contribute to the LDP preparation process. It has two parts:

- A timetable for producing the LDP; and
- A Community Involvement Scheme - this explains how developers, the public and interested groups can contribute to plan preparation. It also explains how responses will be treated and what feedback you will receive.

4.3 A revised version of the Delivery Agreement was agreed by the Welsh Government in December 2011 and can be viewed on the Council's website (http://www.cardiff.gov.uk/ObjView.asp?Object_ID=19592) or is available for public inspection at County Hall.

Stage 2: Gathering evidence base

4.5 The LDP needs to be a sound document. This means that it *shows good judgement and can be trusted*. In order to achieve a sound plan, the Council has gathered economic, social and environmental information in order to provide an evidence base for the plan. The evidence base is set out in **Appendix 7** 13 and has informed the development of the vision and objectives for the plan and the Preferred Strategy.

Stage 3: Preferred Strategy

4.6 The Preferred Strategy outlines the overall objectives for the plan and the strategy for growth or change, including preferred options for major development sites. The Preferred Strategy is informed by the evidence base for the plan and consultation undertaken in 2010/11 on the vision and objectives and strategic options and sites. The Council consulted on the Preferred Strategy in November/December 2012.

Stage 4: Deposit plan

4.7 The Deposit Plan (a full draft of the LDP) will be based on the evidence base for the plan and will be informed by comments received in response to the Preferred Strategy. This Deposit Plan presents the Preferred Strategy as agreed or amended, proposals for key areas of change, regeneration or protection and specific sites to be used for particular purposes and other specific policies and proposals. It will be accompanied by a Consultation Report outlining how comments at the previous stage have influenced the plan. Once the LDP is placed on 'Deposit' for six weeks consultation the Council cannot change it. Any changes to the plan are a matter for an Independent Inspector who will examine the plan to determine whether it is 'sound'. This is the stage the plan has now reached and there will be a six week consultation period to allow comments to be made on the plan.

Stage 5: Alternative Sites

4.8 During the six week consultation period on the Deposit Plan objectors may suggest alternative sites or boundaries for development to be considered. After this consultation period the Council will publish any alternative sites or boundaries that have been suggested and a further six week consultation period will be allowed for people to comment on the alternative sites and boundaries.

Stage 6: Examination of the plan

4.9 Once the consultation periods are over, the Council will consider the representations and produce a final Consultation Report. Each of the main issues raised will be summarised in this report. Then the Planning Inspectorate (on behalf of the Welsh Government) will examine the report, all of the deposit representations, the Deposit Plan with its background evidence and the Sustainability Appraisal Report. The examination ensures that the LDP is based on 'sound' information and thinking, and that the views of those with concerns about the plan have been considered. The Inspector will decide what issues will be discussed at the examination and how they will be heard. The LDP is due to be submitted for examination in August 2014.

Stage 7: Inspector's Report

4.10 After the examination, the Inspector will review all the relevant information and consider what changes the Council should make to the LDP. He or she will then publish the Inspector's Report outlining these changes and explaining the reasons for them. The Inspector's views are binding, the local planning authority must make any changes recommended. ~~The Inspectors report is due to be published in August 2015.~~

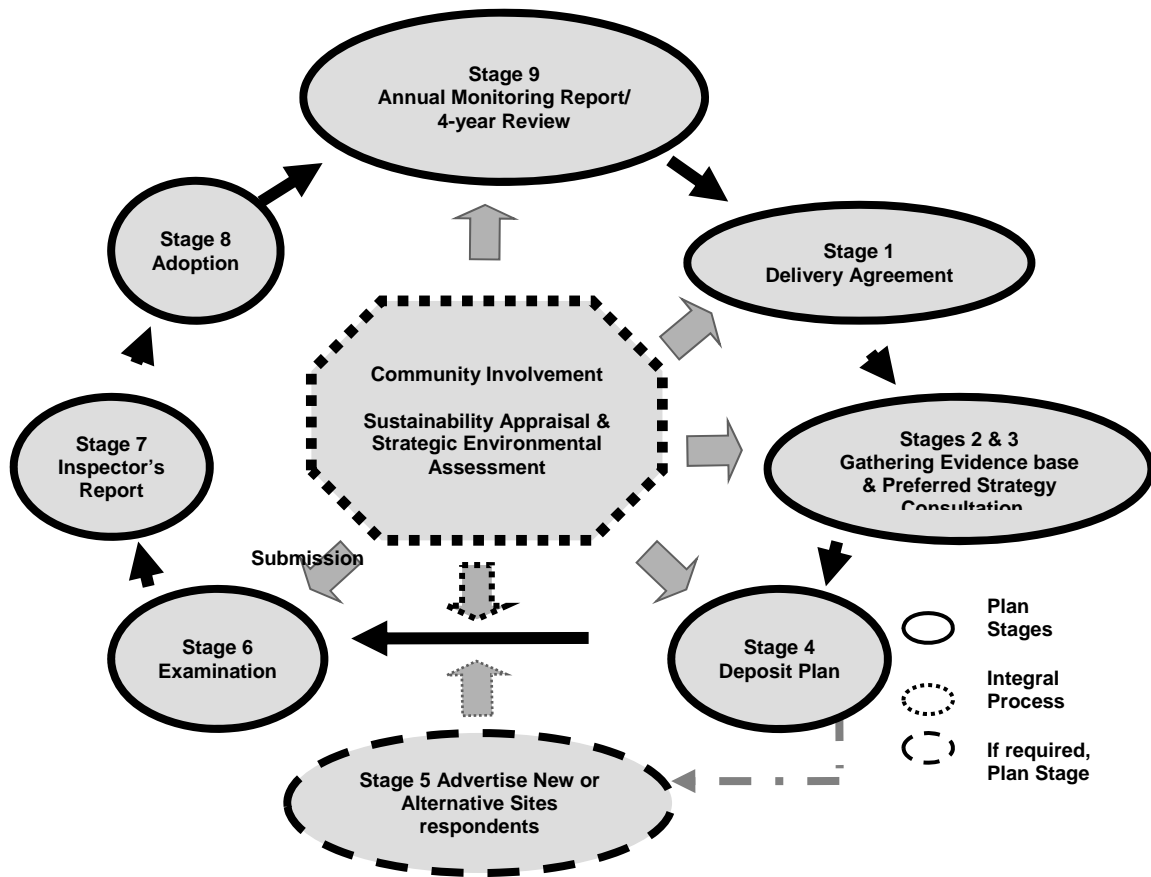

Stage 8: Adoption

4.11 Within eight weeks of receiving the Inspector's Report the Council must advertise the fact that the LDP has been adopted and where it can be inspected. From the date of adoption, the High Court allows six weeks for anyone to challenge it on legal grounds. ~~The LDP is due to be adopted October 2015.~~

Stage 9: Monitoring and review

4.12 Once the Local Development Plan is adopted, the Council must send an Annual Monitoring Report to the Welsh Government each year. This will consider how successful the LDP has been in meeting the plan's objectives and means that the Council will be able to compare the actual effects of the LDP against what was intended. There will be a major review of the LDP at least every four years. This may involve rewriting sections of the plan, or replacing it.

Diagram showing LDP Preparation Process

Glossary of Technical Terms

Adopted Plan

The final, statutorily approved legal version of the Local Development Plan.

Adoption

The final confirmation of a development plan status by a local planning authority (LPA).

Affordable Housing

Housing, whether for rent, shared ownership or outright purchase, provided at a cost considered affordable in relation to incomes that are average or below average, or in relation to the price of general market housing.

Annual Monitoring Report (AMR)

A report submitted to the Welsh Government by the local planning authorities which assess the effectiveness of the LDP against a set of indicators and targets.

Air Quality Management Area (AQMA)

The Environment Act 1995 requires local authorities to review and assess the quality of air in the areas against national air quality standards and objectives. Where the UK air quality objectives are not being met and members of the public are affected they are required to declare an AQMA.

Baseline

A description of the present state of the area against which to measure change.

Biodiversity

A term used to describe the variety of life on Earth, including the wide variety of ecosystems and living organisms, animals, plants, their habitats and their genes

Brownfield Land/Site

Land which is, or was, previously occupied by a permanent structure (excluding agriculture or forestry buildings) and associated fixed surface infrastructure. This includes the curtilage of development, defence buildings and land used for mineral extraction and waste disposal where provision for restoration has not been made.

Candidate Sites

The LDP Manual (Welsh Government 2006) recommends that local planning authorities engage with developers and landowners at the evidence gathering stage of the LDP process to obtain information about potential development sites that may be included in the plan. Accordingly, in November 2010, the Council formally invited developers, landowners,

agents, Council departments and others with an interest in land to submit sites they wished to be considered for development or reuse through the LDP, for a range of uses, including housing, employment, retail, leisure, waste, transport (e.g. park and ride sites), open space and other community uses.

Citizens Panel

The Citizens Panel is made up of a representative sample of over 1,000 local residents from across Cardiff who have agreed to give their views on a number of consultation topics throughout the year. Panel members share their views by completing surveys and occasionally taking part in other activities like focus groups, workshops, or forums.

Climate Change

Long-term changes in temperature, precipitation, wind and all other aspects of the Earth's climate. Often regarded as a result of human activity and fossil fuel consumption.

Commitments (or committed development)

All land with current planning permission or allocated in adopted development plans for development (particularly residential development).

Community

People living in a defined geographical area, or who share common interests.

Community Involvement Scheme (CIS)

The CIS identifies how the LPA intends to involve consultation bodies and the public in the preparation of the LDP. The CIS is submitted to the Welsh Government as part of the Delivery Agreement for its agreement.

Community Infrastructure Levy (CIL)

CIL is a method of securing generalised contributions from developers. The Government legislated for CIL in the 2008 Planning Act. Implementing Regulations followed, and CIL came into force in England and Wales on 6 April 2010.

Community Strategy

Local authorities are required by the Local Government Act 2000 to prepare these, with the aim of improving the social, environmental and economic well being of their areas.

Consultation

Formal process where comments are invited on a particular topic or set of topics, or a draft document.

Conservation Area

Areas of special architectural or historic interest, the character or appearance of which it is desirable to preserve or enhance.

Conservation Area Character Appraisal

A published document defining the special architectural or historic interest that warranted the area being designated.

Conversions

Generally means the physical work necessary to change of use of a building from a particular use, classified in the use classes order, to another use. Can also mean the sub-division of residential properties into self-contained flats or maisonettes.

Delivery Agreement

A document comprising the local planning authorities timetable for the preparation of the LDP together with its Community Involvement Scheme, submitted to the Welsh Government for agreement.

Deposit

A formal stage of consultation in which comments are invited on the full draft LDP.

Deposit LDP

A full draft of the Local Development Plan which undergoes a formal consultation period.

Development

Development, as it is defined in planning law is the 'carrying out of building, engineering, mining or other operations in, on, over or under land.' (Section 55 of the 1990 Planning Act as amended).

Employment Land/Site

Land used for employment purposes by one or more of the following: offices, manufacturing, research and development, storage and distribution.

Enterprise Zones

A specially designated area within which businesses are granted numerous advantages and incentives such as income tax credits, equipment tax refunds and property tax credits. At its core, the enterprise zone is a means to targeting a specific geographical area for economic revitalisation. Creating an enterprise zone encourages investment and promotes economic growth in that area.

Evidence Base

The information and data gathered by the LPA to justify the "soundness" of the policy approach set out in the Local Development Plan, including physical, economic, and social characteristics of an area.

Examination

Examination is carried out by the Planning Inspectorate on behalf of the Welsh Government and involves the examination of the report, all the deposit representations, the Deposit Local Development Plan with its background evidence and the Sustainability Appraisal Report. It ensures that the LDP is based on sound information and thinking, and that the views of those with concerns about the plan have been considered.

Expressions of Interest

Representations or comments on the development plan, including requests for alteration, inclusion or removal of policies or sites for development.

Final Sustainability Report

A term used to refer to the Sustainability Appraisal Report, produced at the deposit stage. It shows how SA/SEA has informed the preparation of the LDP and details the methodology, process and results of the LDP against the Sustainability Objectives identified in the SA/SEA Scoping Report.

Greenfield Land/Site

Land that has not been previously developed, usually farmland, grassland or heath.

Gross Value Added (GVA)

This is a measure in economics of the value of goods and services produced in an area, industry or sector of an economy.

Habitat Regulation Assessment (HRA)

A HRA is a requirement of European Directive 92/43/EEC which assesses the potential effects a Local Development Plan may have on one or more European sites (Natura 2000 sites). The assessment should conclude whether or not a proposal or policy in a Development Plan would adversely affect the integrity of the site in question.

Housing Land Availability (HLA)

The total amount of land reserved for residential use awaiting development.

Infrastructure

Infrastructure includes services such as roads, transport facilities, water supplies, sewerage and associated waste water treatment facilities, waste management facilities, energy supplies (electricity and gas) and distribution networks and telecommunications infrastructure. Soft infrastructure includes ICT and telecommunications.

Initial Sustainability Appraisal Report

A term used to refer to the Sustainability Appraisal Report, produced at the Preferred Strategy stage. This assesses the LDP options against the Sustainability Appraisal framework. The report is then expanded at the Deposit LDP stage and finalised alongside the Adoption Statement.

Inspector's Report

The findings of the Inspector, following an independent examination of the LDP, set out in a report that is binding upon the LPA.

Key Diagram

The diagrammatic interpretation of the LDP's spatial strategy.

LANDMAP

LANDMAP is the national information system, devised by the Countryside Council for Wales, for taking landscape into account in decision-making (<http://landmap.ccw.gov.uk/>).

Listed Building

A building of special architectural or historic interest. Listed buildings are graded I, II* or II with grade I being the highest. Listing includes the interior as well as the exterior of the building, and any buildings or permanent structures.

Local Development Plan (LDP)

The required statutory development plan for each local planning authority area in Wales under Part 6 of the Planning and Compulsory Purchase Act 2004. A land use plan that is subject to independent examination, which will form the statutory development plan for a local authority area. It should include a vision, strategy, area wide policies for development types, land allocations, and where necessary policies and proposals for key areas of change and protection.

Local Development Plans Wales (LDPW)

Planning policy guidance document from the Welsh Government on the preparation of Local Development Plans.

Local Listing (or Building of Local Importance).

A locally important building valued for contribution to local scene or for local historical situations but not meriting listed building status.

Local Nature Reserve (LNR)

Non-statutory habitats of local significance designated by local authorities where protection and public understanding of nature conservation is encouraged.

Local Planning Authority (LPA)

A planning authority responsible for the preparation of the LDP.

Master Planning

In land-use planning, a government entity's plan for the overall utilisation of a particular area, including its allocation for residential or manufacturing uses and the corresponding environmental impacts.

Minerals Aggregates Technical Advice Note (MTAN1)

This was issued by the Welsh Government in March 2004. MTAN1 sets an overarching objective which seeks to ensure a sustainably managed supply of aggregates (which are essential for construction), striking the best between environmental, economic and social costs.

Mitigation

Measures to avoid, reduce or offset significant adverse effects.

Mixed Use

Developments or proposals comprising more than one land use type on a single site.

National Vocational Qualifications (NVQs)

NVQs are work based awards that are achieved through assessment and training.

Objectives and Indicators

Objectives are what the LDP is trying to achieve, and indicators are measures that show whether or not objectives are being achieved. They can be used to help show whether planning policy is effective, or be used in helping to conduct a Sustainability Appraisal.

Office of National Statistics (ONS)

The **ONS** is the executive office of the UK Statistics Authority, a nonministerial department which reports directly to the Parliament of the United Kingdom.

Open Space

All space of public value including public landscaped areas, playing fields, parks and play areas, and also including areas of water such as rivers, canals, lakes and reservoirs, which can offer opportunities for sport and recreation or can also act as a visual amenity and a haven for wildlife.

Participation Phase

Period prior to the pre-deposit Local Development Plan when stakeholders and the public will have the opportunity to influence the issues, options and policies for future growth and development to be included.

Phasing

The development of a site in gradual stages over a period of time rather than all at once.

Planning Gain

The benefits or safeguards, often for community benefit, secured by way of a planning obligation as part of a planning approval and usually provided at the developer's expense. For example, affordable housing, community facilities or mitigation measures.

Planning Obligations and Agreements

Legal agreements between a planning authority and a developer, or undertakings offered unilaterally by a developer, that ensure that certain extra works related to a development are undertaken. For example, the provision of highways. Sometimes called "Section 106" agreements.

Planning Policy Wales (PPW)

Issued by the Welsh Government setting out its national land use policies on different areas of planning.

Population Projection

The prediction of future populations based on the present age-sex structure, and with the present rates of fertility, mortality and migration.

Pre Deposit proposals documents

These include the vision, strategic options, preferred strategy, key policies, and the Sustainability Appraisal report

Pre deposit stage

The strategic Options and Preferred Strategy stage of LDP preparation.

Proposals Map

A component of the Local Development Plan showing the location of proposals on an Ordnance Survey base map.

Prosiect Gwyrdd

Prosiect Gwyrdd is a partnership between, Caerphilly Borough County Council, The County Council of the City and County of Cardiff, Monmouthshire County Council, Newport Council and Vale of Glamorgan Council The combined municipal waste of the five authorities makes up 40% of the total municipal waste of Wales. Prosiect Gwyrdd is committed to looking for the best environmental, cost effective and practical solution for waste after recycling and composting has been maximised in each area (<http://www.caerphilly.gov.uk/prosiectgwyrdd/english/home.html>).

Protected Species

Plants and animal species afforded protection under certain Acts and Regulations.

Ramsar Sites

Sites designated under the Ramsar Convention to protect wetlands that are of international importance, particularly as waterfowl habitats.

The Regional Technical Statement (RTS)

The RTS is produced by the South Wales Regional Aggregates Working Party and sets out a regional plan for aggregate provision in south Wales and is a requirement of the Minerals Aggregates Technical Advice Note (MTAN1).

Regional Transport Plan (RTP)

Regional Transport Plan prepared by Sewta

Representations

Comments in support of, or in opposition, to the deposit Local Development Plan.

United Kingdom Biodiversity Action Plan (UKBAP)

This is the governmental response to the Convention on Biological Diversity signed in 1992. As of 2009 1,150 species and 65 habitats are identified as needing conservation and greater protection and are covered by UK BAPs.

Unitary Development Plan (UDP)

A plan prepared under the previous plan making system which reached Deposit stage in Cardiff.

Scheduled Ancient Monument

Nationally important monuments usually archaeological remains, that enjoy greater protection against inappropriate development through the Ancient Monuments and Archaeological Areas Act 1979.

Scoping SA

The process of deciding the scope and level of detail of a Sustainability Appraisal, including sustainability effects and options which need to be considered, the assessment methods to be used, and the structure and contents of the SA Report.

Section 106 Agreement

A legal agreement under section 106 of the 1990 Town & Country Planning Act. Section 106 agreements are legal agreements between a planning authority and a developer, or undertakings offered unilaterally by a developer, that ensure that certain extra works related to a development are undertaken.

South Wales Regional Aggregates Working Party (RAWP)

The SWRAWP is a technical working group with membership drawn from officers of the 18 Mineral Planning Authorities in South Wales, representatives of the Quarry Products Association, British Aggregates Association, Environment Agency Wales, Countryside Council for Wales, Welsh Assembly Government, Office of the Deputy Prime Minister, Cuddy Demolition, Welsh Environment Trust and British Geological Survey (<http://www.swrawpwales.org.uk/>).

South East Wales Economic Forum (SEWEF)

The Forum is a regional partnership bringing together the ten local authorities, the Welsh Government, the private sector, universities and the third sector to discuss and address the regional economic matters of south east Wales (<http://www.sewales-econforum.co.uk/home>).

South East Wales Strategic Planning Group (SEWSPG)

Membership of the group comprises officer and political representation from the ten local authorities in the South East Wales area. The principal aim of the Group is to meet to discuss regional issues and provide an interface between the Wales Spatial Plan strategy and individual authority development plans.

South East Wales Transport Alliance (Sewta)

Sewta is a consortium established on 1st April 2003 by the ten authorities in south east Wales to carry out their functions in relation to public transport and some other transport matters. Sewta works in close liaison with partners representing public transport operators and users (<http://sewta.net/>).

Sites of Importance for Nature Conservation (SINC)

Locally important sites of nature conservation adopted by local authorities for planning purposes. (See also Local Nature Reserve).

Site of Special Scientific Interest (SSSI)

A site identified under the Wildlife and Countryside Act 1981 (as amended by the Countryside and Rights of Way Act 2000) as an area of special interest by reason of any of its flora, fauna, geological or physiographical features.

Soundness

To be considered sound, a Local Development Plan must be justified (founded on robust and credible evidence and be the most appropriate strategy) and effective (deliverable, flexible and able to be monitored). **There are ten tests of soundness** set out in guidance issued by the Welsh Welsh Government and the Planning Inspectorate against which the LDP will be assessed.

Special Area Of Conservation (SAC)

A site designated under the European Community Habitats Directive, to protect internationally important natural habitats and species.

Special Protection Areas (SPA)

Sites classified under the European Community Directive on Wild Birds to protect internationally important bird species.

Stakeholders

Interests directly affected by the LDP (and/ or SEA) - involvement generally through representative bodies.

Strategic Environmental Assessment (SEA)

Generic term used to describe environmental assessment as applied to policies, plans and programmes. The SEA Regulations require a formal "environmental assessment of certain plans and programmes, including those in the field of planning and land use.

Strategic Opportunity Area (SOA)

Strategic Opportunity Areas (SOAs) offers potential regional benefits from its sustainable development. SOAs are intended to bring greater coherence to their development, and enable public transport links to be strengthened.

Submission

Formal stage when the LDP is submitted to the Welsh Government for independent examination by a government-appointed planning inspector.

Supplementary Planning Guidance (SPG)

Supplementary Planning Guidance may cover a range of issues, both thematic and site specific and provide further detail of policies and proposals in a development plan.

Sustainability Appraisal (SA)

A tool for appraising policies and proposals to ensure they reflect sustainability development objects (i.e. social, environmental and economic factors). Each LPA is required by S62(6) of the Act to undertake an SA of the LDP. This form of SA fully incorporates the requirements of the SEA Directive. The term used in the LDP includes Strategic Environmental Assessment, unless otherwise made clear.

Sustainable Development

Development that meets the needs of the present without compromising the ability of future generations to meet their own needs.

Sustainable Transport

Often meaning walking, cycling and public use of transport (and in some circumstances 'car sharing'), which is considered to be less damaging to

the environment and contributes less to traffic congestion than one-person car journeys.

Technical Advice Notes (TANS)

Documents produced by the Welsh Assembly Government to supplement Planning Policy Wales, which give detailed technical guidance to Local Planning Authorities on particular planning issues. They should be taken into account by LPAs in the development plan preparation process.

Transport Corridor

An area of land in which at least one main line for transport, (road, rail, canal etc) has been built. Often new transport lines are built alongside existing ones to minimise the area affected by pollution

Transport Hub

A place where passengers and cargo are exchanged between vehicles or between transport modes. Public Transport Hubs include train stations, rapid transit stations, bus stops, tram stop, airports and ferry slips

Travel Plan

A travel plan is a package of actions designed by a workplace, school or other organisation to encourage safe, healthy and sustainable travel options. By reducing car travel, Travel Plans can improve health and wellbeing, free up car parking space, and make a positive contribution to the community and the environment

Wales Spatial Plan (WSP)

A plan prepared and approved by the Welsh Government under S60 of the Act, which sets out a strategic framework to guide future development and policy interventions, whether or not these relate to formal land use planning control. Under S62 (5) (b) of the Act a local planning authority must have regard to the WSP in preparing an LDP.

Welsh Index of Multiple Deprivation (WIMD)

The official measure of deprivation in small areas in Wales. It is a relative measure of concentrations of deprivation at the small area level. It looks at issues such as income, housing, employment, access to services, health, environment, education and community safety.

Windfall Site

A site not specifically allocated for development in a development plan, but which unexpectedly becomes available for development during the lifetime of a plan. Most "windfalls" are referred to in a housing context.

Appendix 8 11 : Tests of Soundness Self-Assessment

11.1 When the Council has finalised its LDP, it must place it on deposit for public inspection and the submission of representations, and then submit it to the Welsh Government for examination by an independent inspector. The inspector appointed by the Welsh Government (WG) must determine whether the plan is fundamentally sound having regard to ten test of soundness set out in guidance issued by the Welsh Government and the Planning Inspectorate *A Guide to the Examination of Local Development Plans, Planning Inspectorate Wales, 2007*.

11.2 The following table sets out the ten tests of soundness and the Council's assessment of its progress to date in meeting each of them.

Procedural Tests		
P1	It has been prepared in accordance with the Delivery Agreement including the Community Involvement Scheme	<p>The Delivery Agreement (DA) contains a timetable for LDP production and the Community Involvement Scheme (CIS) that sets out how and when stakeholders and the community can contribute to preparing the LDP and its Sustainability Appraisal (SA). Cardiff's DA was originally approved by Council on 23rd September 2010 and agreed with the WG on 15th October 2010. The DA is kept under continual review. On 5th December 2011 WG agreed amendments to the timetable for preparing and adopting the plan. Consulting on the Deposit Plan in October 2013 fully accords with the adopted timetable. Additionally, it should be noted that the procedural requirements of the Town and Country Planning (Local Development Plan) (Wales) Regulations have been conformed with in preparing the plan.</p> <p>In accordance with the DA, the Council engaged with a wide range of groups, organisations and the wider public to assist developing a consensus on the generation of alternative strategies and options together with identifying key issues. Specific measures undertaken included:</p> <ul style="list-style-type: none"> • Invitation to submit Candidate Sites - December 2010: Invitations were sent out inviting developers, landowners and others with an interest in land to submit sites they wished to be considered for development or reuse through the LDP. In addition a notice was placed in the South Wales Echo and placed on the Council website;

		<ul style="list-style-type: none"> • Consultation on SA/SEA Scoping Report - November/December 2011; • Consultation on vision and objectives – November/December 2010: In order to inform the preparation of LDP vision and objectives an extensive consultation and engagement exercise was carried out. This included: <ul style="list-style-type: none"> ○ A Stakeholder Consultee Conference which was held on 25th November 2010; ○ 4 Public Consultee Conferences held at venues around the city; ○ Questionnaire contained in the November Capital Times; ○ Questionnaire available on-line via the Council's website; ○ 'Ask Cardiff' random postal questionnaire to 5,000 households; ○ Citizens' Panel questionnaire to 1,000 households; and ○ E-mail responses to website and other publicity. • Consultation on strategic options and sites – May/June 2011: In order to inform the preparation of the Preferred Strategy a consultation exercise on strategic options and sites was undertaken between 9th May and 10th June 2011. During this period members of the public and stakeholders were asked to give views on a series of strategic growth options for housing and employment and on candidate sites that had been put forward by developers and landowners to deliver this growth. The consultation included: <ul style="list-style-type: none"> ○ A Stakeholder Consultee Conference which was held on 16th May 2011: ○ 13 Public Consultee Conferences held at venues around the city; ○ Publicity in Capital Times; ○ Representation form available on-line via the Council's website; ○ Citizens' Panel questionnaire to 1,000 households; and
--	--	---

		<ul style="list-style-type: none"> ○ E-mail responses to website and other publicity. <p>Consultation on the Preferred Strategy – November/December 2012. In accordance with Regulation 15 of the Local Development Plan Regulations the Council undertook 6 weeks consultation on the Preferred Strategy and the Initial Sustainability Appraisal between 1st November and 14th December 2012. During this period members of the public and stakeholders were asked to give views on how the Preferred Strategy proposed to address the key environmental, economic and social issues affecting the city and how development needs will be met including the proposed broad locations of new housing, employment and other strategic requirements.</p> <ul style="list-style-type: none"> ○ A Stakeholder Consultee Conference which was held on 2nd November 2012; ○ 4 Public Consultee Conferences held at venues around the city; ○ 14 drop-in exhibitions at venues throughout the city; ○ Publicity in Capital Times; ○ Representation form available on-line via the Council’s website; ○ Citizens’ Panel questionnaire to 1,000 households; and ○ E-mail responses to website and other publicity. <ul style="list-style-type: none"> • Consultation on Masterplanning principles – March 2013. A series of consultation events were held during March 2013 to seek feedback from stakeholders, developers and members of the public on the LDP Masterplanning Approach. • Engagement with key stakeholders through the preparation of various local and regional strategies –ongoing; • Deposit Plan consultation arrangements: When the Deposit Plan is issued, extensive consultation arrangements have been put in place including the facility for on-line representations using the Objective
--	--	---

		<p>Publishing system, public exhibitions, centre-page insert into, 'The Capital Times' that is delivered to every house in Cardiff, production of a user-friendly leaflet that provides a non-technical summary of the LDP and how to make representations, and relevant documents will be made available via the website.</p>
P2	<p>The Plan and its policies have been subjected to Sustainability Appraisal including Strategic Environmental Assessment</p>	<p>Following stakeholder engagement and consultation, a Scoping Report for Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA) of the Cardiff LDP was adopted by the Council's Executive and published in January 2011. An Initial Sustainability Appraisal Report was prepared in October 2012 to accompany the Preferred Strategy Consultation and assessed the Preferred Strategy against the Sustainability Objectives identified in the SA/SEA Scoping Report.</p> <p>A Full Sustainability Appraisal Report has been prepared and published for consultation as part of the Council's Deposit proposals. It sets out an assessment of the Deposit Plan against the Sustainability Objectives identified in the SA/SEA Scoping Report.</p> <p>The SA/SEA work has been undertaken in-house using its Sustainable Development Unit and employed Levett-Therivel Sustainability Consultants to quality assure the work undertaken (process and content), and provide advice at key stages including how to comply with the strategic Environmental Assessment Regulations.</p>

Consistency Tests		
C1	<p>It is a land use plan which has regard to other relevant plans, policies and strategies relating to the area or adjoining areas</p>	<p>The Deposit Plan has regard to other relevant plans, policies and strategies. Section 2 of the Plan specifically identifies the national, regional and local policy framework within which it has been prepared.</p> <p>The Deposit Plan also has regard to the plans of adjoining authorities, namely the adopted Newport</p>

		<p>and Vale of Glamorgan Unitary Development Plan and adopted Caerphilly and Rhondda Cynon Taff Local Development Plan.</p> <p>Technical Appendix 1 of the SA/SEA Scoping Report includes a review of plans, policies and programmes from all levels of government (European, national, regional and local) that have been considered in undertaking SA/SEA of the Preferred Strategy. The Deposit Plan Strategy identifies and takes account of those aspects that are of significance.</p> <p>The Deposit Plan has regard to national policy set out in the Wales Spatial Plan which places Cardiff at the centre of the South East - 'Capital Network' - area of Wales. In this regard the plan recognises that it is important for Wales as a whole that Cardiff becomes significant internationally and that, to achieve this, the City needs to be the focal point of a coherent and successful urban network in South East Wales. In order to ensure the region functions in this way the Plan recognises that it is important to provide an integrated transport solution for the region linked to an appropriate balance of development throughout the region.</p>
C2	It has regard to national policy	<p>The Deposit Plan is consistent with national planning policy. Section 2 of the Preferred Strategy identifies the main elements of national policy which the Council has had regard to in its preparation.</p> <p>Technical Appendix 1 of the SA/ SEA Scoping Report includes a review of all national plans, policies and programmes that have been considered in undertaking SA/SEA of the Plan.</p> <p>The Deposit Plan takes account of those aspects of national policy that are of significance.</p>
C3	It has regard to the Wales Spatial Plan	<p>The Deposit Plan is considered to be consistent with the Wales Spatial Plan. Section 2 of the LDP directly references People Places Futures: The Wales Spatial Plan.</p>

		<p>The Deposit Plan reflects the Spatial Plan's vision, strategy, propositions and actions for Cardiff and the South East Wales Area (The Capital Network).</p> <p>The level of growth in jobs and housing proposed in the plan together with transportation improvements will help deliver the Spatial Plan's vision to place Cardiff at the centre of the South East - 'Capital Network' - area of Wales, helping to spread prosperity within the area and benefiting other parts of Wales.</p>
C4	It has regard to the Community Strategy	<p>The Deposit Plan has full regard to the Council's Community Strategy. Section 3 (Vision and Objectives) of the Plan directly references the 'What Matters' Strategy 2010-2020', and Section 3 and the Plan builds upon it. In particular, the Preferred Strategy vision is based on the economic, social and environmental vision for Cardiff as set in the Strategy. These high level visions have been translated into spatial priorities to deliver the vision and provide the context for the strategic objectives and sub objectives that lie at the heart of the plan. The Deposit Plan sets out the means of delivering these objectives.</p>

Coherence and Effectiveness Tests		
CE1	The plan sets out a coherent strategy from which its policies and allocations clearly flow and, where cross boundary issues are relevant, it is compatible with the development plans prepared by neighbouring authorities	<p>Section 4 of the Deposit Plan sets out a coherent Strategy which flows from the key issues identified through the review of the national, regional and local policy framework, including the Wales Spatial Plan and the Community Strategy, and the evidence base.</p> <p>The strategy takes into account work undertaken at the regional level with neighbouring local authorities on spatial plan area groups and studies. This includes, the recommendations of the Collaborative working Group, the Regional Waste Plan and Regional Transport Plan. This process ensures that cross boundary issues for the Deposit Plan Strategy</p>

		<p>are consistent with the development plans prepared by neighbouring authorities.</p> <p>In particular, the overall Strategy and level of growth proposed is considered to strike the right balance having regard to the evidence base and also taking account of Cardiff's wider regional responsibilities in adopting an approach that still allows other authorities to fulfil their objectives, and those set out in the Wales Spatial Plan.</p>
CE2	<p>The strategy, policies and allocations are realistic and appropriate having considered the relevant alternatives and are founded on a robust and credible evidence base</p>	<p>The Deposit Plan is considered realistic and appropriate having considered all reasonable alternatives (in accordance with the SEA Regulations). A multitude of options and alternatives have been considered as part of the SA/SEA process.</p> <p>The Deposit Plan is founded on a robust and credible evidence base and draws upon the available evidence base, including the national regional and local policy context. The key Issues section of the Deposit Plan sets out the assumptions and background to which the Plan's policies and proposals are based. The Deposit Plan is supported by evidence from the evidence base and background technical papers</p> <p>Technical Appendix 2 of the SA/SEA Scoping Report also includes a review of the evidence base that has been considered in undertaking the SA/SEA of the Deposit Plan.</p> <p>The preparation process has also been participative, with the views of key stakeholders being tested through a series of consultation events and the Council's Citizens Panel.</p> <p>The extensive process of collecting relevant evidence has demonstrated that it is not always possible to reach absolute consensus on all issues and in some cases, different evidence sources may point to different conclusions. However, the Deposit Plan has taken full account of all relevant information available and where judgements have made been made, full reasoning is set out within the document and supporting information to demonstrate how</p>

		conclusions are realistic and appropriate having regard to the evidence base.
CE3	There are clear mechanisms for implementation and monitoring	The Annual Monitoring Report is the principle mechanism through which the implementation of policies in the LDP are measured. The general approach to this is set out in Appendix 8 to the Deposit Plan.
CE4	It is reasonably flexible to enable it to deal with changing circumstances	<p>The Deposit Plan has been specifically designed to provide a flexible policy framework. It is considered sufficiently flexible to deal with unexpected changes in circumstances and has been prepared during a period that has seen economic changes, thereby allowing consideration of the flexibility of the policy response.</p> <p>Finally, the AMR provides a key mechanism to monitor the delivery of the LDP. This will be used to assess whether a review is necessary in case of a change in circumstances.</p>

Cardiff Local Development Plan 2006 – 2026

The LDP Inspectors have authorised the Council to make outstanding typographical and factual errors, together with any other presentational matters and consequential changes flowing from agreed Matters Arising Changes (MACs) and recommended Inspectors Matters Arising Changes (IMACs) such as altered policy cross-references, map title amendments, site area or numerical changes and paragraph numberings. Whilst this final version of the Plan has sought to pick up all such changes there may be others identified and corresponding changes made during final publication of the document

Foreword

As the one of the fastest growing cities in UK, it is vital that new development is guided by an up-to-date Development Plan. The LDP provides the necessary framework and certainty to bring forward the new homes (especially affordable/family housing) and jobs which are required in a managed manner.

A new Plan for Cardiff is all the more vital given the fact that the previous Local Plan was approved in 1996- some 19 years ago. The lack of an up-to-date Plan has had serious negative consequences with insufficient land being brought forward to meet urgent housing needs.

Put quite simply, not having a plan in place does not stop development. All that happens is that development still takes place, but in a policy vacuum where the Council and its residents have limited control. Appeals have been lost for development in the open countryside and also left the Council on the back foot in terms of securing supporting infrastructure and community facilities. A plan-led approach is the only way forward where the Council sets out a clear strategy for the future.

This administration has shown strong leadership by progressing the LDP through a complex preparation process in strict accordance with the approved timetable. This process has involved numerous stages of consultation and in addition a lengthy formal examination process over the past year and a half. Can I take this opportunity of thanking all who have engaged in this exercise which is so important for the future of our city.

It has also responded to issues raised during the process and embedded a strong masterplanning framework within the Plan. In this way, new development will bring with it the phased provision of necessary supporting infrastructure including schools, health facilities and other community benefits. The importance of transportation infrastructure is also recognised with the Plan setting out a new strategic sustainable transportation approach so our city can keep moving and improve links with surrounding areas.

Overall, the Plan provides a balanced response to meeting social and economic needs, but in a manner which best protects our valued open spaces, river corridors and countryside backdrop.

An exciting new era in Cardiff's development unquestionably lies ahead. In coming years we will see the new BBC headquarters and transport interchange in the heart of our city. Other brownfield regeneration schemes continue to come forward including council-led affordable housing projects alongside new greenfield opportunities set out in the Plan. On a city-region scale, there are significant opportunities ahead through the Metro and City Deal.

The adoption of the LDP is therefore not only timely but vital in helping to provide the necessary certainty to attract and sustain new investments. In this way, Cardiff can continue to bring forward the new homes and jobs it needs and further enhance its role as one of the most liveable capital cities in Europe.

Councillor Ramesh Patel
Cabinet Member Transport, Planning & Sustainability

Summary

This section provides a brief summary of the Local Development Plan (LDP).

1. Making provision for new homes and jobs

- Cardiff has a significant need for new homes including family homes, affordable homes together with catering for the whole range of needs.
- Cardiff also plays a key role as economic driver of the wider city-region, providing much needed jobs for the whole region.
- The Plan aims to respond to these evidenced social and economic needs in a balanced way - respecting environmental qualities, providing a framework to manage delivery and provide new infrastructure together with carefully managing impacts.
- The overall level of growth is considered to represent the most robust, balanced and appropriate approach taking into account all relevant factors and the advice of independent population forecasting experts.
- It sets out a Strategy to deliver 41,100 new dwellings and 40,000 new jobs over the Plan period including ways to provide flexibility should build rates be higher than anticipated.
- This level of growth is considered appropriate to deliver Wales Spatial Plan objectives, the Council's overall vision and the LDP objectives.
- New homes, jobs and supporting facilities will be provided from numerous sources including:
 - Those already built since the start of the Plan period in 2006;
 - Minor adjustments to existing housing stock- taking account of anticipated demolitions and changes of use based on past rates;
 - Commitments- Sites with the benefit of an existing planning consent or resolution to grant subject to the signing of a legal agreement;
 - Anticipated windfall provision- Those sites likely to come forward over the Plan period through natural change in an urban area the size of Cardiff; and
 - New allocations including brownfield sites, greenfield sites of different scales and land use combinations.

- Overall, for the whole Plan period, this represents approximately 65% of all new homes being provided on brownfield sites and 35% provided on greenfield sites.
- The provision of a genuine range and choice of new sites is crucial in effectively delivering the required level of growth, delivering LDP objectives, providing flexibility and the ability to meet a wide range of evidenced need for new homes and jobs.
- Key strategic sites to deliver this need are proposed at:
 - Cardiff Central Enterprise Zone
 - Former Gas Works, Ferry Road
 - North West Cardiff
 - North of Junction 33
 - South of Creigiau
 - North East Cardiff (West of Pontprennau)
 - East of Pontprennau Link Road
 - South of St Mellons Business Park

2. Putting in place a framework to manage future growth and encourage high quality, sustainable design

Policies and mechanisms have been put in place to provide a framework to effectively manage future growth. Areas to be kept free from development are made explicit avoiding the current climate of uncertainty created by not having an adopted Plan in place. Protected areas include the designation of Green Wedge North of the M4 Motorway together with the tight settlement boundaries policy county-wide and protection of river valleys and open spaces. Collectively, these policies protect vast tracts of Cardiff's valued countryside, river valleys and open spaces. The master planning approach provides an over-arching framework for the development of new areas setting out key requirements relating to land use, densities, community facilities, transportation, open spaces and phasing. Further work on the detailed master planning of areas will be carried out within this over-arching context. Design policies and guidance set out expectations encouraging more sustainable forms of development.

3. Bringing forward new infrastructure

New development will clearly create the need for new infrastructure. The Plan sets out an approach which requires the timely provision of new infrastructure including community facilities, transportation and other services. Whilst it is recognised that some significant elements of

infrastructure may take many years to complete, the Strategy seeks to ensure that each phase of new development is tied to the provision of necessary infrastructure with each stage of development being able to demonstrate an acceptable level of supporting facilities. The Infrastructure Plan sets out future requirements. Further dialogue and consultation findings will help further develop a detailed list of required infrastructure along with funding opportunities including the roles of Community Infrastructure Levy (CIL) contributions for strategic projects to Section 106 Agreement contributions for local priorities together with other potential funding streams from the public and private sectors.

4. Delivering sustainable transportation solutions

The overall approach seeks to minimise travel demand and provide a range of measures and opportunities which reduce reliance on the car. New development in Cardiff must be integrated with the provision of new transport infrastructure which can help contribute to this objective by putting in place sustainable transport solutions which also provide improved travel choices for the wider community. This approach is fully consistent with on-going work at a city-region scale which seeks to develop a more effective public transport network across the region as a whole, helping people travel from where they live to work and thereby helping to spread prosperity around the entire city-region.

5. Responding to evidenced economic needs

The key economic role performed by Cardiff must be maintained and enhanced for benefits to Cardiff, the city-region and Wales. Evidence demonstrates that Cardiff has consistently delivered a high proportion of jobs in the city-region. The Strategy responds to this by ensuring a full range and choice of economic opportunities across all relevant sectors. The Cardiff Central Enterprise Zone will be a key element of the approach but there is also a need to maintain the roles of the City Centre, Cardiff Bay, existing employment sites together with providing a range and choice of sites to cater for demand across sectors.

6. Responding to evidenced social needs

Cardiff experiences some significant social needs, with particularly high housing demand projected to continue over the Plan period. The Strategy aims to positively respond to these needs by providing a wide range and

choice of sites to respond to the full diversity of needs, including those from the Gypsy and Traveller community as required in national policy and guidance. Overall, the Plan promotes more sustainable communities where emphasis is placed on supporting District & Local Centres, encouraging the full range of accessible social, health and educational facilities, together with supporting regeneration initiatives and utilising the potential positive benefits which new developments can bring to adjoining areas.

7. Respecting Cardiff's environment and responding to climate change

Cardiff possesses a unique and particularly distinctive natural and built heritage. The Plan delivers sustainable development by meeting social and economic needs, but in a managed way which retains, manages and enhances important features of the natural and built heritage. Central to this approach is the designation of a Green Wedge to the North of the M4 Motorway, a strict settlement boundary policy together with protection of the river valleys and open spaces. In this way, Cardiff's distinctive environmental qualities can be successfully maintained with further opportunities to enhance their management and increase public enjoyment. Detailed policies provide clear guidance relating to important elements of Cardiff's biodiversity, landscape and built heritage.

Introduction

The purpose of and status of the adopted Local Development Plan (LDP)

1.1. Cities change. Cardiff is no exception and has grown year on year for generations. This has seen Cardiff become the Capital City of Wales and centre of a wider city-region providing an important source of jobs and services for the whole of South East Wales.

1.2. New homes, jobs, supporting transportation and other facilities are required to meet the needs of future generations. These needs must be carefully balanced against environmental and quality of life factors.

1.3. The adopted Cardiff Local Development Plan (LDP) is the tool to address these issues. It represents a 'plan-led' approach to meeting future needs.

1.4. The adopted LDP provides the statutory framework for the development and use of land within Cardiff over the Plan period (2006-2026). This fulfils the requirements of The Planning and Compulsory Purchase Act 2004 which requires the Council to prepare a LDP. It replaces existing Structure Plans and Local Plans relating to Cardiff and will be used by the Council to guide and control development and provide the statutory local policy context for determining planning applications.

1.5. The Plan has been prepared in accordance with formal regulations and the 'LDP Delivery Agreement' which sets out a timetable for its preparation along with details of consultation as the Plan progressed. This was agreed with the Welsh Government on 5th December, 2011.

1.6 The Plan contains the following sections:

- Foreword;
- Summary;
- Introduction;
- LDP Vision & Objectives;
- Strategy, Key Policies and Key Diagram;
- Detailed Policies;
- Monitoring and Implementation;
- Proposals Map and Constraints Map;
- Appendices.

Monitoring and Review

1.7. The Council will work with others to implement the Plan and take decisions within the new adopted policy framework.

1.8. In order to assess how effectively the Plan is being implemented, the Council must prepare an Annual Monitoring Report (AMR). The report will be based on the Monitoring Framework as set out in Appendix 9 to this document. This is an important aspect of the LDP process since evidence collected through annual monitoring can be used to inform LDP review which takes place every 4 years.

Supplementary Planning Guidance (SPG)

1.9. These are non-statutory documents intended to provide useful advice and guidance which expand on policies set out in the adopted LDP. They must be subject to public consultation. Appendix 4 of this document lists all proposed new and/or updated SPG which are intended to be prepared together with timescales.

Assessment processes that have informed the Plan

1.10 In addition to the overall independent examination of the LDP, the Plan has also been subject to two further formal assessment processes. The Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA) processes - these are required by the Planning and Compulsory Purchase Act 2004 and the SEA Regulations to ensure that the LDP policies reflect sustainability principles and take into account impacts upon the environment and The Habitat Regulations Assessment (HRA) - this process is required to determine the likely significant effects of the Plan on European Sites of nature conservation importance.

1.11. Furthermore, the adopted LDP has been subject to the following additional assessments designed to further scrutinise the Plan contents: Health Impact Assessment - a process involving relevant stakeholders in assessing the health implications of the Plan; and Equality Impact Assessment - a process involving relevant stakeholders in assessing the equality implications of the Plan.

1.12. The importance of Welsh culture and heritage is recognised in the Plan however having assessed the densities of Welsh language use across the City it is not considered to be an issue which requires addressing in the Plan. As a result the proposals contained in the LDP are not considered to have a detrimental impact on the Welsh language and

culture or materially affect the linguistic balance of Cardiff or communities within Cardiff.

The Cardiff Context and Key Issues the Plan must address

2.1. This section provides a summary of the Cardiff context and some of the key issues which have informed the Plan. A fuller version is contained in Appendix 3 of this document along with a summary of the national and regional policy framework.

The Cardiff Context

- Largest urban area in Wales with a population of 345,400.
- Key driver of city-region economy in South East Wales.
- 1.4 million live within a 45 minute drive time of the city.
- Capital city of Wales, seat of Welsh Government.

Key social trends and issues

- Cardiff's population has risen steadily over past 20 years - over 3,500 each year since 2001.
- Official projections indicate continued population growth over the Plan period.
- Significant need for affordable housing- 9,710 people currently on combined housing waiting list.
- Local Housing Market Assessment (2013) indicates a need for over 3,989 affordable dwellings for each of the next 5 years to address need. In addressing this need the Council will need to have regard to the latest welfare reforms and the need to provide smaller dwellings.
- Family housing is a key need.
- A need for 108 permanent Gypsy and Traveller pitches and a regional need for a 10 pitch transit site have been identified over the Plan period to 2026.
- Students comprise approximately 10.8% of Cardiff's population.
- Ethnic minorities comprise 15.5% of Cardiff's population, higher than the Wales average but similar to the England/Wales average.
- Welsh speakers are less than the Wales average but there are considerable variations within communities.
- The city experiences substantial health inequalities.
- Whilst Cardiff possesses a generally high quality of life, there are areas of deprivation geographically mostly concentrated in, 'the southern arc'.
- Community safety is a key issue emerging from residents' surveys.

- Cardiff performs well compared to Wales and the UK average in attaining high-level skills and 39% of its workforce educated to degree level or above.

Key economic trends and issues

- Cardiff accounts for 32% of total employment in South East Wales and its economy is generally strong and buoyant.
- Cardiff's employment workforce totals nearly 189,000 with 88% of jobs being in the service sector.
- Cardiff & the Vale of Glamorgan generate 22% of the Welsh GVA (Gross Value Added).
- Unemployment in Cardiff was 4.5% in March 2013.
- The recession has caused the loss of approximately 4,700 jobs between 2008-2010.
- Cardiff has one of the highest percentages of high growth firms in the UK between 2002-2010.
- Inward investment trends are improving but continue to trail other leading core cities.
- The City Centre and Cardiff Bay remain the principal office locations complemented by out of centre sites but Cardiff lacks a large supply of Grade A office space and the Plan supports the on-going regeneration of the Bay Business Area, including Mount Stuart Square.
- The total industrial stock in Cardiff is approximately 19.2 million square feet and mainly concentrated in the south/eastern area of the city but only 6.1% of the stock is less than 5 years old.
- Cardiff City Centre is the main shopping centre for South East Wales and is ranked the 6th top retail centre in the UK.
- The leisure and tourism sector generates significant economic and cultural benefits for the city.

Key transportation trends and issues

- Traffic on Cardiff's roads grew by 9% between 2002-2012.
- 56% of Cardiff's residents travel to work by car.
- Nearly 77,900 people commute into Cardiff each day by all modes (37% of Cardiff's workforce). The 2001 Census indicates that approximately 80% of commuters travel to Cardiff by car.

- Travel on rail services has increased considerably - the use of Cardiff Central and Queen Street Stations has risen by 82% between 2001-2011.
- Cycle use has increased 10% between 2001-2011 but bus use has fallen slightly over the same period.
- Cardiff International Airport is located within the Vale of Glamorgan providing the closest international links to Cardiff.
- The operational port in Cardiff performs an important role in terms of freight movement.

Key environmental trends and issues

- Cardiff is located within a well-defined landscape setting with prominent ridges to the west and north and Severn Estuary to the south.
- The countryside and urban area contains a wealth of natural and historic interests. For example, there are almost 1,000 Listed Buildings, 27 Conservation Areas, 2 sites noted for their international biodiversity (Cardiff Beechwoods SAC and Severn Estuary SAC/SPA/RAMSAR)
- The city has a particularly rich Victorian and Edwardian legacy.
- Cardiff has over 400 hectares of recreational open space and 2000 hectares of amenity space. The four river valleys of the Ely, Taff, Rhymney and Nant Fawr provide extensive and continuous corridors running from the countryside and through the urban area.
- Good quality agricultural land is known to exist in some areas.
- Flooding is known to pose a risk in relation to fluvial, tidal and surface water.
- Detailed studies have been undertaken to assess the extent of this risk and inform the Plan.
- The main source of CO₂ emissions in Cardiff are from industry (45%) with domestic sources contributing 30%.
- The main source of emissions affecting air quality is road traffic (nitrogen oxide the main pollutant).
- Current production of renewable energy in Cardiff is low.
- Over the past 10 years, recycling rates in Cardiff have risen from 4% to 55%.
- Cardiff possesses a significant and good quality of mineral reserves.
- Water quality in the main rivers is improving but still falls below the requirements of the Water Framework Directive.

LDP Vision and Objectives

Background

3.1. The vision and objectives provide an over-arching context for the Plan that shows how economic, social and environmental considerations can be balanced to deliver the sustainable development of Cardiff up to 2026. They take full account of the strategic issues relevant to Cardiff and the policy context provided by the Council's 'What Matters' Strategy (2010-2020) which brings together the Community Strategy; Children & Young People's Plan; Health, Social Care & Wellbeing Strategy and the Community Safety Strategic Assessment into one document. The Council has worked with partners from the public, private and voluntary sectors in Cardiff to set out the collective vision for the city contained in this document. Furthermore, the vision and objectives also take account of the Council's Strategic Equality Plan which sets out the Council's strategic equality objectives and the Wales Spatial Plan (WSP) that recognises the role played by Cardiff in helping to spread prosperity in the area and delivering a high quality of life.

Vision

3.2 The LDP vision is as set out in the 10 year, 'What Matters' Strategy (2010-2020) which is that:

"By 2020...Cardiff will be a world class European capital city with an exceptional quality of life and at the heart of a thriving city-region".

3.3 Partners have agreed seven strategic outcomes that, if achieved would represent ultimate success and the realisation of the vision. The outcomes are that:

- **People in Cardiff are healthy;**
- **People in Cardiff have a clean, attractive and sustainable environment;**
- **People in Cardiff are safe and feel safe;**
- **Cardiff has a thriving and prosperous economy;**
- **People in Cardiff achieve their full potential;**
- **Cardiff is a great place to live work and play; and**
- **Cardiff is a fair, just and inclusive society.**

3.4. It is important to recognise that the LDP cannot deliver all of these outcomes alone as many issues extend beyond land use planning matters and the remit of the document. However, the LDP is a crucial strategic document that must create the right conditions which both directly and indirectly assist and support the delivery of these outcomes.

3.5 Key priorities have been identified for each of the outcomes. These are:

People in Cardiff are healthy

- Reduce inequalities in health and address the differentials in life expectancy across the city;
- Promote healthy lifestyles and prevent ill health; and
- Improve effectiveness of our service delivery to vulnerable adults and children and young people.

People in Cardiff have a clean, attractive and sustainable environment

- Establish Cardiff as a sustainable 'Carbon Lite' city;
- Improve the quality of Cardiff's environment; and
- Establish Cardiff as a sustainable travel city.

People in Cardiff are safe and feel safe

- Ensure people are safe from harm, abuse and exploitation;
- Develop communities and neighbourhoods in Cardiff which are cohesive;
- Ensure people are free from crime and the effects of crime; and
- Ensure people are safe in their environment.

Cardiff has a thriving and prosperous economy

- Build strong futures for children and young people by focusing on education, training and employment opportunities;
- Improve opportunities for the creation of quality and sustainable employment; and

- Create an environment that develops, attracts and retains skilled workers, businesses and entrepreneurs to Cardiff.

People in Cardiff achieve their full potential

- Encourage active citizenship and participation in all aspects of life;
- Support vulnerable families and individuals to achieve and maintain their independence and ambition; and
- Support and provide access to appropriate learning and training provision for all.

Cardiff is a great place to live, work and play

- Provide the level of urban design infrastructure and connectivity required to make Cardiff a great place to work and do business;
- Support and maintain strong safe and sustainable neighbourhoods;
- Ensure the provision of high quality sustainable and affordable housing; and
- Develop world-class leisure, cultural and sporting facilities – that reflect the wants of citizens and visitors.
- Cardiff is a fair, just and inclusive society
- Enable all people in Cardiff to meaningfully engage and participate in decision making processes;
- Mainstream equality issues at strategic and operational levels; and
- Reduce inequalities through a joined-up, targeted approach.

Objectives

3.6. The LDP objectives set out in more detail how the LDP vision can be addressed through the planning system. They respond to spatial elements contained in the vision together with the economic, social and environmental strands set out in the strategic outcomes.

3.7. In spatial terms, the vision recognises the key role that Cardiff plays as being the heart of a thriving city-region. Nearly 77,900 people commute into the city each day which demonstrates the important economic and social role Cardiff plays in relation to the wider region.

3.8. The vision fully recognises economic, social, environmental, as well as sustainability issues. It is the aim of the LDP objectives to respond to the evidenced economic and social needs but in a way that is co-ordinated, respects and enhances Cardiff's environment and sets out a framework for delivering the sustainable neighbourhoods of the future. This is delivering sustainable development locally and improving the long term economic, social and environmental wellbeing of people and communities in Cardiff. In this way, the LDP can help create sustainable neighbourhoods that form part of a sustainable city that lies at the heart of a sustainable city-region.

3.9. The objectives are set out under 4 main headings:

- 1. To respond to evidenced economic needs and provide the necessary infrastructure to deliver development;**
- 2. To respond to evidenced social needs;**
- 3. To deliver economic and social needs in a co-ordinated way that respects and enhances Cardiff's environment; and**
- 4. To create sustainable neighbourhoods that form part of a sustainable city.**

1. To respond to evidenced economic needs and provide the necessary infrastructure to deliver development.

- a. To effectively respond to Cardiff's role as capital city for Wales, seat of the National Government and centre of the city-region in terms of providing a range and choice of economic opportunities that will drive the prosperity of the region.
- b. To maximise the economic potential of the city centre of Cardiff as a major financial and service sector opportunity that builds upon its position next to a transport hub of national and regional significance and is readily accessible from all areas within the city and well connected to other UK cities.
- c. To maintain and enhance the vitality, attractiveness and viability of the city centre as a major retail and cultural destination and as a place to work, visit and live.

- d. To continue the successful regeneration of the Cardiff Bay area, maximising opportunities for quality commercial buildings and further development, particularly water and river frontage developments that can provide attractive and distinctive environments.
- e. To promote clusters of specialist sectors and research & development expertise including the following key sectors:
 - o ICT;
 - o Energy and environment;
 - o Advanced materials and manufacturing;
 - o Creative industries;
 - o Life sciences; and
 - o Financial and professional services.
- f. To ensure a range and choice of employment land and business premises at sustainable locations across the city is provided to assist economic competitiveness, encourage entrepreneurship, promote the growth of indigenous businesses of all types and size and attract inward investment.
- g. To assist the promotion of Cardiff as a major tourist destination including the provision of the development of a variety of high quality tourist facilities and visitor accommodation.
- h. To create a physical and economic environment that develops, attracts and retains skilled workers, businesses and entrepreneurs to Cardiff together with maximising links with Universities and supporting indigenous skills and enterprises.
- i. To quantify critical strategic infrastructure required to realise development aspirations and set out clear mechanisms for delivery including sustainable transport solutions for strategic sites.
- j. To establish Cardiff as a sustainable travel city by reducing the need to travel, increasing the use of sustainable travel modes and networks (particularly walking and cycling), decreasing private car use and improving the city's key transport hub based at the adjacent central bus and train stations.
- k. To protect existing mineral resources and ensure an adequate supply of limestone aggregates in the north west of the city for the construction industry and to promote their efficient and appropriate usage, including the use of recycled aggregates where possible.

- l. To support sustainable collection and recycling methods for Municipal Waste by maintaining and improving an integrated network of facilities in Cardiff.
- m. To lead and participate in securing regional facilities for the sustainable treatment and disposal of Municipal Waste in accordance with the Regional Waste Plan and in a manner that follows the waste hierarchy which seeks to maximise the reduction of waste in the first place and thereafter reusing, recovering and recycling options before the disposal of waste material is considered.
- n. To facilitate an integrated network of commercial and industrial sustainable waste management facilities consistent with the needs of the South East Wales area and in a manner that follows the waste hierarchy which seeks to maximise the reduction of waste in the first place and thereafter reusing, recovering and recycling options before the disposal of waste material is considered.

2. To respond to evidenced social needs.

- a. To provide new homes required to support the economic progression of the city and to respond to population change, continued immigration and evidenced demand for affordable and family housing so that social needs can be addressed.
- b. To provide a range and choice of new homes of different tenure, type and location that meets specific needs such as the provision of affordable housing, family accommodation, housing for the elderly, the disabled and students and pitches for the gypsy and traveller community.
- c. To maximise the use of the existing building stock through refurbishment, retro-fitting and empty homes initiatives.
- d. To bring about changes to Cardiff's environment and neighbourhoods that help to tackle health inequalities, promote good health and enable healthier lifestyles to be led by the city's population in line with Cardiff's status as a World Health Organisation, 'Healthy City'.

- e. To bring about changes to Cardiff's environment that create a safer city and reduce the likelihood, fear and consequences of crime.
- f. To create an environment that is made more accessible to all groups in society so that the employment opportunities, facilities and services of the city can be more readily used and enjoyed by all.
- g. To maximise the multi-functional role played by Cardiff's parks, open spaces and allotments together with improving their accessibility for the whole community.
- h. To recognise, support and enhance the key role played by existing District, Local and Neighbourhood Centres as accessible local hubs providing community services, local shops, healthy food choices, businesses, employment and access to public transport.
- i. To support the regeneration of local neighbourhoods including reducing inequalities, particularly areas experiencing high levels of deprivation, areas vulnerable to decline and areas with opportunities for change.
- j. To ensure that the necessary education and training facilities are provided and are accessible to all: to build strong futures for children, provide a diverse range of learning opportunities for all and assist economic progress through the development of required skills.
- k. To develop new cultural, leisure and sporting facilities to meet needs and enhance Cardiff's role as a premier cultural and sporting destination.
- l. To ensure that the necessary community and cultural facilities (community centres, shops with healthy food choices, youth facilities, child care, faith buildings, health centres, etc.) are provided that are accessible to all, especially in areas that are deprived.
- m. To address rising unemployment and provide accessible local job opportunities, particularly in areas of greatest need.
- n. To promote social inclusion, equality of opportunity and access for all.

3. To deliver economic and social needs in a co-ordinated way that respects Cardiff's environment and responds to the challenges of climate change.

- a. To mitigate the effects of climate change through reducing energy demand and increasing the supply of renewable energy.
- b. To ensure that Cardiff adapts to the full anticipated impacts of climate change and that new development and infrastructure is designed to be resilient to possible consequences.
- c. To protect, manage and enhance Cardiff's natural environmental assets, including:
 - o The parks, open spaces and allotments in the city that are highly valued by local communities and an important component of Cardiff's quality of life;
 - o The strategically important river valleys of the Ely, Taff, Nant Fawr and Rhymney that link the city to the countryside and provide a valuable recreational, biodiversity and amenity resource;
 - o Cardiff's countryside, particularly its areas of high landscape value and the coast that provide an important setting to the urban area, provide an agricultural resource and opportunity for recreation;
 - o The city's biodiversity, its internationally, nationally and locally designated sites, wildlife habitats and features that contain important species and networks that link together areas of value;
 - o Natural resources including geodiversity, the best soils, water and air quality including, the reduction of pollution; and
 - o The role that vegetation plays in combating climate change by providing shading, cooling and carbon sinks.
- d. To conserve and enhance Cardiff's built and historic assets that define distinctive character and reflect its past development including:
 - o The city's 27 Conservation Areas;
 - o Its Listed Buildings and Ancient Monuments;
 - o Registered Historic Landscapes and areas of archaeological importance; and

- o Other valued public places and spaces, including parks and amenity spaces, that provide local distinctiveness.
- e. In identifying new sites to meet economic/social needs, to follow a sequence of firstly maximising the contribution of brownfield sites, then identifying greenfield sites that are considered to represent the most appropriate and sustainable locations to accommodate new development.
- f. To have full regard to flood risk when considering the acceptability of development proposals and considering mitigation and adaptation measures.
- g. To maximise opportunities to create a cleaner and more attractive environment that enhances the quality of life and helps Cardiff to become a world-class European capital city.

4. To create sustainable neighbourhoods that form part of a sustainable city.

- a. To ensure that all new development areas (whether greenfield or brownfield) create sustainable neighbourhoods that follow the following principles:
 - o Minimise energy demand and maximise renewable solutions - to deliver more energy-efficient neighbourhoods that utilise existing best practice and embrace new renewable technologies and concepts;
 - o Minimise car travel, maximise sustainable transport use and decrease air pollution by creating accessible, permeable and legible places, preventing predominantly car-based developments and focusing new development in accessible locations which are linked to the strategic cycle network and can be served mainly by effective networks of sustainable transport - walking and cycling and fast and frequent public transport around and beyond the city;
 - o Maximise recycling - to optimise the overall value of waste as a resource, to effectively plan for how new developments can sort and store waste for collection for onward productive use and minimise material needing treatment and final landfill;
 - o Minimise water usage and maximise sustainable drainage - to carefully manage the consumption and drainage of water to

- avoid unnecessary wastage and minimise rapid run-off. To seek opportunities to maximise the positive amenity and biodiversity benefits that sustainable drainage solutions can offer;
- Maximise the early provision of a full range of social facilities and community infrastructure - to provide the full range of necessary facilities that are accessible to all members of society and can be reached within a 15 minute walk. To include the range of social, health, leisure, education necessary for the scale of development proposed and also taking into account other needs within the wider locality;
 - Maximise the additional benefits that new communities can bring to adjoining or surrounding existing communities and minimise any potential negative impacts - to carefully identify positive contributions that can be made and involve local communities in this process;
 - Maximise the diversity of land uses within new development areas – to create more balanced communities offering non-car based options to fully participate in community life. To ensure a range and choice of housing tenures together with local employment opportunities and the full range of community infrastructure;
 - Maximise the contribution of networks of multi-functional and connected open spaces to strategically design networks of open space that are rich in biodiversity and provide safe routes between key locations to encourage healthier lifestyles through promoting walking and cycling. To further encourage healthy lifestyles by providing allotments together with the wider promotion of healthy eating;
 - Maximise the principles of good design - to create places that look good, are of an appropriate and efficient density, fully respect their local context and are successfully integrated with adjoining areas. To design buildings that are resilient and can easily adapt to changing future needs. To design clean and attractive areas where people feel safe and have a sense of ownership; and
 - Maximise community involvement in the planning, design and future management/maintenance of new neighbourhoods. To use the master planning process to establish robust design principles but to also recognise the need to allow some flexibility and managed capacity for change, particularly in larger development areas.

- b. To take opportunities to apply the above principles to existing neighbourhoods in order to create a more sustainable city.

Strategy, Key Policies and Key Diagram

Overview

4.1. This section sets out the overall LDP Strategy to deliver the Plan's vision and objectives. The Strategy contains the 7 elements described below together with a Key Diagram summarising the main spatial components of the Strategy. Collectively, these elements deliver the overarching Plan vision and objectives set out in the previous section. They provide a coherent and evidence-based approach to meeting economic and social needs in a manner which respects Cardiff's environmental qualities and encourages the development of sustainable neighbourhoods as part of a sustainable city.

4.2. Main elements of Strategy:

1. Making provision for new homes and jobs.
2. Putting in place a framework to manage future growth and encourage high quality, sustainable design.
3. Bringing forward new infrastructure.
4. Delivering sustainable transportation solutions.
5. Responding to evidenced economic needs.
6. Responding to evidenced social needs.
7. Respecting Cardiff's environment and responding to climate change.

4.3. Overall, the LDP Strategy responds to the clear evidenced need to make provision for new homes and jobs. It sets a level of growth considered to represent the most robust, balanced and appropriate approach taking into account all relevant factors including the recommendations made by independent population forecasting experts. This approach directly responds to needs from within Cardiff but the delivery of new jobs also helps spread prosperity beyond administrative boundaries. In this respect, the Strategy aims to build upon Cardiff's key role as centre of the city-region which evidence shows is of critical importance to the wider well-being of South East Wales.

4.4. However, the Strategy sets out clear policies and mechanisms which provide a framework designed to effectively manage future growth and encourage high quality and sustainable design. This includes adopting a masterplanning approach based on the sustainable neighbourhood objectives to the development of new sites supported by more detailed design guidance. Additionally, the approach strategically manages growth by designating a Green Wedge and tight settlement boundaries policy to protect large areas of countryside. In this way, new development can be

planned for in a phased manner and designed in a more sustainable way to minimise negative impacts.

4.5. The provision of new infrastructure is an important element of the Strategy as it is recognised that new development must bring with it the timely provision of new supporting community facilities and necessary services. Whilst it is recognised that some significant elements of infrastructure may take many years to complete, the Strategy seeks to ensure that each phase of new development is tied to the provision of necessary infrastructure with each stage of development being able to demonstrate an acceptable level of supporting facilities. This may include the early provision of new facilities along with maximising the potential contribution of existing nearby facilities providing there is capacity and acceptable accessibility.

4.6. The Infrastructure Plan sets out future requirements. Further dialogue and consultation findings will help further develop a detailed list of required infrastructure along with funding opportunities including the roles of Community Infrastructure Levy (CIL) contributions for strategic projects, Section 106 Agreement contributions for local priorities together with identifying other potential funding streams from the public and private sectors.

4.7. Putting in place a Strategy to enable the delivery of more sustainable transportation solutions is also integral to the overall approach. This recognises that development in Cardiff must be integrated with transport infrastructure, that travel demand must be minimised along with providing a range of measures and opportunities which reduce reliance on the car. This approach is fully consistent with on-going work at a city-region scale which seeks to develop a more effective public transport network across the region as a whole. This approach will bring with it significant social benefits by reducing current barriers between homes, jobs and other trips and help spread prosperity around the entire city-region.

4.8. The key economic role performed by Cardiff must be maintained and enhanced for benefits to Cardiff, the city-region and Wales. Evidence demonstrates that Cardiff has consistently delivered a high proportion of jobs in the city-region. The Strategy responds to this by ensuring a full range and choice of economic opportunities across all relevant sectors. The Cardiff Central Enterprise Zone will be a key element of the approach but there is also a need to maintain the roles of the City Centre, Cardiff Bay, existing employment sites together with providing a range and choice of sites to cater for demand across sectors.

4.9. Cardiff experiences some significant social needs, with high housing demand projected to continue over the Plan period. The Strategy aims to

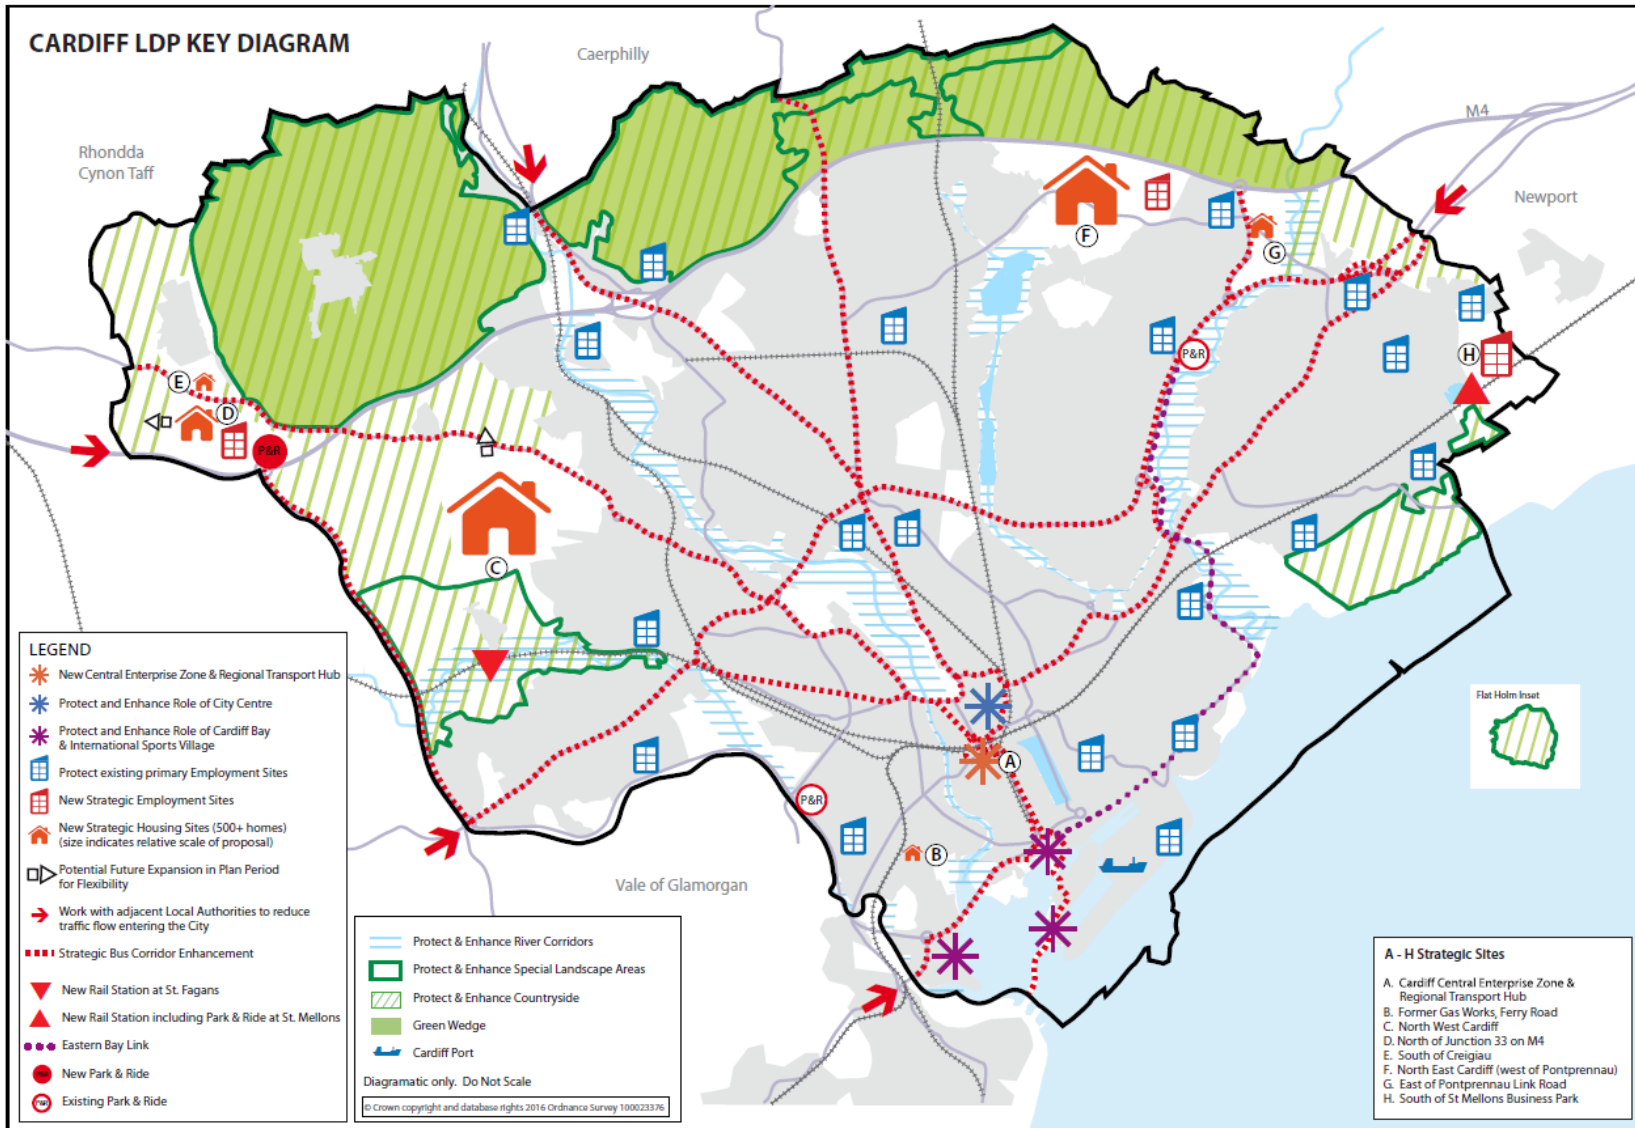

positively respond to these needs by providing a wide range and choice of sites. Importantly, the approach looks to cater for specific needs so targets have been set for the provision of affordable housing, different locations help provide diversity of offer and the needs of the Gypsy and Traveller community are also directly addressed in accordance with national policy and guidance.

4.10. The Strategy also addresses wider social issues and has benefited from the Health and Equality Impact Assessments into the Plan. The approach is very much about promoting more sustainable communities where emphasis is placed on supporting District & Local Centres, encouraging the full range of accessible social, health and educational facilities, together with supporting regeneration initiatives, utilising the potential positive benefits which new developments can bring to adjoining areas.

4.11. Cardiff possesses a unique and particularly distinctive natural and built heritage. The Strategy delivers sustainable development by meeting social and economic needs, but in a managed way which retains, manages and enhances important features of natural and built heritage. Central to this approach is the designation of a Green Wedge to the North of the M4 Motorway, a strict settlement boundary policy together with protection to the river valleys and open spaces. In this way, Cardiff's distinctive environmental qualities can be successfully maintained with further opportunities to enhance their management and increase public enjoyment.

CARDIFF LDP KEY DIAGRAM

Page 1262

Key Policies

1. Making provision for new homes and jobs

KP1: LEVEL OF GROWTH

The Plan makes provision for 45,415 new dwellings (including a 4,000 dwelling flexibility allowance) to deliver a housing requirement of 41,415 new dwellings and 40,000 new jobs in Cardiff between 2006-2026.

4.12. As the LDP has progressed through its numerous stages of preparation, various level of growth options have been considered, consultations have been carried out and expert advice has been sought. The level of growth set out within this Key Policy is considered to best reflect an analysis of all relevant factors. Importantly, it is based on the most up-to-date information reflecting matters raised during the examination process and makes provision (including the flexibility allowance) to deliver the level originally set out in the Preferred Strategy.

4.13. All relevant factors, as set out in Planning Policy Wales and summarised below, have also been carefully considered. In this respect, it should be noted that national guidance states that the official projections should form the starting point for setting levels of growth in LDPs and makes it clear that any departure from these figures should be fully justified by demonstrable evidence. These official figures show a 42% rise in Cardiff's population for the period 2008-2033 and a 33% rise for the Plan period 2006-26 for which the Plan makes provision.

4.14. No other material factors are considered to possess sufficient weight to warrant departure from this level of growth which is considered to:

- Accord with the Wales Spatial Plan aims by supporting Cardiff's role as centre of a networked city-region but not to excessive levels which could prejudice regeneration objectives elsewhere;
- Accord with the Council's vision and LDP objectives;
- Effectively respond to the regional collaborative dialogue which recognised the dangers of artificially restricting growth in Cardiff - there was a clear recognition of the positive 'ripple effects' of providing jobs and homes in Cardiff which improved prosperity in the wider city-region;

- Effectively respond to the clear evidenced need to provide for a significant number of new homes and jobs. The Plan makes provision to deliver the official projections and is considered to strike the right balance having regard to the full range of factors;
- Deliver necessary homes and jobs, but in a managed and controlled manner protecting key elements of Cardiff's environment;
- Meet deliverability and capacity factors - The LDP contains proposals and mechanisms which justify how deliverability and capacity matters can be adequately addressed. The wide range and choice of sites contributing to the provision together with the masterplanning approach which includes addressing the deliverability of supporting infrastructure demonstrates how development can be successfully brought forward in a managed way. (A higher level of growth would be considered difficult to justify in terms of deliverability factors and set an artificially high target for the 5 year supply requirements set out in TAN 1; and
- Respond in an evidence-based manner to the divergence of views expressed in consultation processes.

4.15. The detailed breakdown of how it is intended to provide for the 41,415 new homes over the Plan period is shown in Table 1.

Table 1: Housing Provision over the Plan Period

Row	Topic/Factor	Note/Source	Dwellings
NEW DWELLING REQUIREMENT 2006 – 2026			
1	2006-2026 Dwelling Requirement	As referenced in Policy KP1	41,415
2	2006-2026 Dwelling Requirement per year (20 years)	Row 1 divided by 20 years	2,071
CHANGE IN DWELLINGS 2006 to 2014 AND RESIDENTIAL LANDBANK AT 1st APRIL 2014			
3	Change in Council Tax Dwellings 31 March 2006 to 31 March 2014 (8 years) (138,735 to 150,990)	Official data from ONS/ Valuation Agency http://www.voa.gov.uk/corporate/Publications/statisticsCouncilTax.html	12,255
4	Current Landbank (Under Construction, Not Started and Sites subject to Legal Agreement).		10,885
ADJUSTMENTS FOR CHANGE IN CURRENT DWELLING STOCK			
5	Adjustments (Demolitions, Change of Use from Residential to Other Uses and Residential Conversions)		242
ALLOWANCES			
6	Windfalls (including Change of Use Gains)		5,850
7	15% Flexibility Allowance for possible reduced dwelling yield on Brownfield sites in landbank and some S106 sites not coming forward		-1,043
LDP STRATEGIC SITES*			
8	Units on LDP Strategic Sites	Excludes Strategic Site A - existing commitment in the landbank	13,950
LDP NON-STRATEGIC SITES*			
9	Units on LDP Non-Strategic Sites		572
	*Allowance to avoid double counting on Strategic and Non-Strategic sites in the landbank at 31st March 2014:		-1,256
10	Total Supply		41,456
11	Additional 10% flexibility allowance, as referenced in KP1.		4,000

4.16. The Plan provides an extensive range and choice of opportunities for the creation of new homes and jobs. This is crucial to the overall delivery of homes and jobs by enabling different sites in different locations to be progressed concurrently. It also ensures flexibility as a limited number of sites would carry delivery risks should implementation problems be encountered on specific sites. The masterplanning approach, which also addresses the provision of infrastructure and phasing, puts in place a

framework to ensure the orderly development of sites. Key Policies on masterplanning, design and infrastructure, together with supporting documentation, explain this approach in more detail.

4.17. In terms of the provision of new homes, brownfield sites still contribute over half of the provision, but this is supplemented by new greenfield opportunities offering a fuller range and choice. This provides a much needed catalyst to the local housing market which has seen a recent shortage of greenfield sites and can help meet a growing latent demand. Furthermore, greenfield sites can play a key role in bringing forward high levels of affordable and family housing. Evidence has shown that site viability factors make it difficult for brownfield sites to consistently provide high levels of affordable housing.

4.18. It should also be noted that Cardiff has a finite supply of brownfield sites and that the previous LDP was withdrawn due to the Inspector's concerns that it was a 'brownfield only' Strategy.

4.19. The Plan recognises that there is a limited supply of acceptable brownfield land. It also recognises that not all existing brownfield sites with planning permission will be developed due to changed economic/market conditions.

4.20. However, brownfield sites will continue to play an important role and windfall provisions will form part of the provision for new homes as land uses within the city continue to evolve. For example, the Council is currently strategically assessing its land holdings which, over the Plan period, is likely to generate a wide range and choice of brownfield housing opportunities across the city.

4.21. The provision of a full range and choice of housing options also fully supports the delivery of the Economic Strategy - new homes and supporting community facilities can help attract new investment to the city and stimulate more movement in the housing market. Associated construction jobs would provide an additional benefit to the local economy.

4.22. New greenfield releases also bring with them the ability to contribute towards the wider provision of strategic infrastructure to the benefit of the city and wider city-region as a whole. For example, the delivery of sustainable transportation solutions will have positive

implications for the wider community. In this respect, there are clear benefits of the locations of the strategic sites which offer the opportunity of a joined-up approach to deliver strategically important infrastructure in the North West and East/North East corridors. This assists in prioritising infrastructure provision in a planned and focussed manner.

4.23. In order to deliver the required level of growth over the Plan period, there will be a need for a range and choice of sites to be on stream over the remainder of the Plan period. The masterplanning approach has been adopted to carefully manage this process with Key Policies KP2 (A) to KP2 (H) providing a framework for the delivery of each Strategic Site in this respect. In this way, each site and each phase of development can bring with it the necessary range of supporting infrastructure. It should be noted that the scale of strategic sites open up the opportunity for delivering significant infrastructure benefits. However, some major elements may take a long period to deliver. Therefore, early phases will need to both deliver the infrastructure which is required for that particular phase along with contributing to the provision of wider strategic infrastructure which may be physically provided at a slightly later date. Detailed provisions will be put in place to secure delivery in such instances.

4.24. The Plan is considered sufficiently flexible to respond to changing conditions. This will be kept under review in the Annual Monitoring Reporting process allowing future reviews to address the need for change. Should demand be lower than anticipated, the sequence of provision will remain in place, thereby controlling development in an orderly manner and linking it in with infrastructure provision. However, this scenario would result in the trajectory being followed over a longer period allowing either Plan review or the next Plan to make appropriate judgement on future provision at that time.

4.25. Consideration also needs to be given to demand being higher than expected. This is considered to be a less likely possibility. However, the LDP tests of soundness demand that Plans are sufficiently flexible to be able to positively respond to changes in circumstances. This Policy therefore has a built-in 10% flexibility allowance.

4.26. In this way, if a need is identified in the Annual Monitoring Report before the end of the Plan period, additional land can be brought forward for residential purposes at that point in time in a Plan review. The Plan

demonstrates a clear commitment to a long term direction of travel by identifying geographically defined areas which have been subject to SA/SEA analysis and are well positioned to meet such need, if required.

4.27. Work undertaken as part of this process has shown that there is limited scope for further development areas due to the environmental and other constraints around the city together. There is considered merit in focussing potential additional areas based upon proposed Strategic Sites where there is land available to take advantage of the comprehensive provision of new community and transportation infrastructure and minimising impact on areas of higher environmental sensitivity including land proposed for Green Wedge designation.

4.28. Three areas have been identified to provide ~~good~~ flexibility as just one option may limit the scope for dwellings being delivered should problems be encountered on a particular site. It should also be noted in this respect that each area offers a large gross area with the combined potential to deliver more than just an additional 10% flexibility. The masterplanning of adjoining Strategic Sites will ensure that suitable access is secured and future Plan monitoring will trigger any future detailed consideration of infrastructure and masterplanning requirements should the need for the early release of the identified Search Areas be triggered within the Plan period.

4.29. The areas considered most suitable to deliver this potential need are as follows:

- i. Land North of the North West Cardiff Strategic Site - Up to 57 hectares of land located between Llantrisant Road and the M4 Motorway bounded by the edge of Radyr to the East and the recent development on the former Rhydlafer Hospital to the West. This is a gross figure with the net developable area likely to be a significant reduction due to natural and infrastructure constraints within the site. This could provide a minimum of an extra 1,250 dwellings if required in the later phases of the Plan period but further masterplanning addressing long-term capacity is likely to demonstrate a higher figure is possible and the land is indicated as Search Area A on the Proposals Map;
- ii. Land West of the Strategic Site North of Junction 33 - Up to 41 hectares of land represents a logical extension of this site which

falls between the M4 Motorway and Llantrisant Road. This could provide a minimum of an extra 1,250 dwellings if required in the later phases of the Plan period but further masterplanning addressing long-term capacity is likely to demonstrate a higher figure is possible. The land is indicated as Search Area B on the Proposals Map; and

- iii. North West Cardiff Strategic Site - the overall capacity of this site is considered to be in the order of 6,500-7,000 dwellings depending on the precise configuration of land uses and housing densities. Work undertaken to date suggests that a figure of 5,000 dwellings is appropriate for homes being delivered within the Plan period (by 2026). However, should build rates be faster than anticipated, this site represents an ideal opportunity to help meet any additional need within the Plan period and benefits from the comprehensive masterplanning of the area as a whole which is shown as an allocation in its entirety.

4.30. In a similar way to the provision of new homes, a range and choice of new job opportunities is also proposed. It is important to ensure that a range and choice of employment land and business premises are provided to maintain and improve the competitiveness of the city, promote and protect indigenous business and attract inward investment.

4.31. This approach responds to Cardiff's role as the main economic driver of the city-region accounting for 32% of total employment in South East Wales. At the heart of this approach is recognition that the Cardiff city-region clearly forms a natural economic area and it has consistently made a major positive contribution to the economic growth of Wales. In core city analysis, Cardiff performs well and there is an opportunity to build further on this through continuing to enhance Cardiff's role and also improve linkages and connectivity within the city-region. It is also recognised that there are significant benefits for adjoining areas from Cardiff's success in achieving economic growth.

4.32. The Plan provides a framework for delivering a wide range and choice of employment sites in different locations and for different sectors including the key market sectors of ICT, energy and environmental technologies, advanced materials and manufacturing, creative industries, life sciences and financial and professional services. The range of new sites ensures that Cardiff can deliver the stated level of growth for new

jobs. Importantly, different sites will perform different roles in the strategy. For example, Porth Teigr (Roath Basin) has the potential to become an important location for media and creative industries. Other locations may be better suited to small out of centre employment sites, including offices, creative industries, small workshops, and starter units.

4.33. The geographical spread of the 'Cardiff offer' also addresses the need to provide jobs in accessible locations. In this respect, the key strategic proposal relating to the Cardiff Central Enterprise Zone and Regional Transport Hub represents a highly sustainable and accessible location, close to areas of high unemployment in the city but also readily accessible to the wider region via sustainable modes of transport.

KP2: STRATEGIC SITES

Strategic Sites are allocated as set out below to help meet the need for new dwellings and jobs:

Brownfield Strategic Sites:

- (A) Cardiff Central Enterprise Zone and Regional Transport Hub;**
- (B) Former Gas Works, Ferry Road;**

Greenfield Strategic Sites:

- (C) North West Cardiff;**
- (D) North of Junction 33 on M4;**
- (E) South of Creigiau;**
- (F) North East Cardiff (West of Pontprennau);**
- (G) East of Pontprennau Link Road; and**
- (H) South of St Mellons Business Park - Employment only.**

4.34. Strategic sites are defined as being sites of 500 homes or more and/or with significant employment/mixed uses and which have the potential to deliver significant benefits to the city.

4.35. The purpose of this Policy is to help bring forward appropriate land in sustainable locations to satisfy the identified need for housing, employment and other uses.

4.36. This range and choice of strategic sites brings significant benefits of providing a genuine range and choice, critical to overall Plan delivery. Furthermore, the scale of sites enables more comprehensive solutions to be delivered which can bring about significant infrastructure improvements for the wider city and city-region.

4.37. The anticipated number of dwellings capable of being delivered from each strategic site is summarised in Table 1 (paragraph 4.15) together with Table 2.

Table 2: SUMMARY OF STRATEGIC SITES

Ref	Site	Proposed Use
A	Cardiff Central Enterprise Zone and Regional Transport Hub	Major employment-led initiative including a Regional Transport Hub together with other mixed uses in Cardiff city centre in order to fulfil Cardiff's role as economic driver of the city-region, provide major employment opportunities focused on financial and business services and maximise the advantages of its location adjacent to the Central Station and Cardiff Bus Station. Due to existing commitments which new proposals will update, current evidence suggests no net gain in units to avoid double counting. However any additional units over and above commitments will count as windfalls
B	Former Gas Works, Ferry Road	Housing-based scheme of 500 homes and other associated community uses
C	North-West Cardiff	Comprehensive development of approximately 5,000 homes within the Plan period including employment and other associated community uses
D	North of Junction 33 on M4	Mixed use of approximately 2,000 homes, employment, other associated community uses and a strategic park and ride site
E	South of Creigiau	Housing-based scheme of approximately 650 homes representing a southern extension of the existing village
F	North-East Cardiff (West of Pontprennau)	Comprehensive development of approximately 4,500 homes, employment and other associated community uses
G	East of Pontprennau Link Road	Housing-based scheme of approximately 1,300 with associated community uses
H	South of St Mellons Business Park	Strategic employment site

4.38. The combination of development on these sites will result in the delivery of approximately 13,950 new dwellings together with a range and choice of employment opportunities and a significant amount of supporting infrastructure and community facilities.

4.39. A summary of the key infrastructure requirements relating to the Strategic Sites are provided within KP2(A) to KP2(H). This information will be cross-referenced in the Cardiff Infrastructure Plan which is a, 'living document' sitting alongside the LDP. The Infrastructure Plan is directly linked to the LDP Monitoring Framework and regularly updated in order to effectively respond to changes in baseline information, procedures and legislation. Estimated costs of infrastructure provision and details of estimated square footages of facilities are referenced within the Infrastructure Plan based on current considerations, requirements, and information available at a point in time so represent indicative figures. Future updates to the Infrastructure Plan will allow such information to be regularly updated to reflect prevailing circumstances and show more detail when it is known. Policies KP6 and KP7 relating to new infrastructure and planning obligations provide further policy guidance with regard to the delivery of new infrastructure and are also linked to the Infrastructure Plan and Annual Monitoring Framework.

4.40. Infrastructure requirements for these sites will primarily be delivered through planning obligations/ Section 106 Agreements with policies KP6 and KP7 providing the policy framework. Policy KP6 also outlines other potential funding sources which may be required in addition to developer contributions. Further details as they emerge will be incorporated into the Infrastructure Plan as it is updated in future years as part of the formal LDP monitoring process.

4.41. The masterplanning and good quality & sustainable design principles set out in KP4 and KP5 will be used to provide a framework to consider planning applications relating to all Strategic Sites along with other development as defined in the policies. In addition, the site-specific masterplanning requirements for each Strategic Site are identified within KP2(A) to KP2(H) and depicted, where appropriate, on the indicative Schematic Frameworks. Although only for illustrative purposes, the Schematic Frameworks should be read in conjunction with relevant policies to provide an over-arching context for the future development of the Strategic Sites.

KP2(A): CARDIFF CENTRAL ENTERPRISE ZONE AND REGIONAL TRANSPORT HUB

Land is allocated at Cardiff Central Enterprise Zone, as defined on the Proposals Map, for a major employment-led initiative including a Regional Transport Hub together with other mixed uses in Cardiff City Centre in order to fulfil Cardiff's role as economic driver of the city-region, providing major employment opportunities focused on financial and business services and maximise the advantages of its central location. Supporting essential, enabling and necessary infrastructure will be delivered in a phased manner with specific requirements secured through planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - Central, public transport hub providing access to and interchange between rail network, the rapid transit and strategic bus corridors referred to in Policy T2, the city-wide bus network and the strategic cycle network;
 - Improving existing bus routes and services including bus priority measures between the site, Cardiff Bay and other parts of the city;
 - Rapid Transit- Southern Corridor
- **Walking and cycling:**
 - Enhance pedestrian and cycle access between north and south sides of main railway line including enhanced railway underpasses;
 - Enhance east and west connections through the area connecting developments;
 - Enhanced/ extend Canal Park as a cycling and walking route, creating a new green corridor linking the Bay Waterfront to Callaghan Square, the City Centre and beyond;
 - Integrate site with the Strategic Cycle Network Enfy's including Routes 1,2,3, 4, 5, 6, 9, 90, 34, 35, 50, the city centre 'hub' routes, the Taff Trail and the Bay Trail;
 - Provide a central cycle parking hub with associated facilities as an integral component of the regional public transport hub and of a scale befitting its regional and capital function;

- Provide secure cycle parking and associated facilities in locations which encourage cycling to the city centre and integration with public transport services;
- Improve connections to Millennium Stadium including Gate 5;
- Create continuous river walk on Taff East bank.

Necessary Infrastructure

- Education-1 new Primary School and contribution to existing Secondary Schools;
- Minimum of approximately 7ha Open Space including approximately 3.5ha of formal recreation, 1 playground, 1 teen facility, 1x 40 plot allotment site;
- Contribution to off-site community facility provision;

Development shall accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- Densities will be maximised to make efficient use of city centre land in a highly accessible location. High rise, high density developments at appropriate locations within the site are encouraged and residential densities in excess of 100 dwellings per hectare are not considered unreasonable in principle. Employment densities for B1 office development are expected to be at least 14.5 square metres per employee (gross external area);
- Employment provision to include Grade A office accommodation and developing Callaghan Square as Wales' premier business location. The site will also provide a range and choice of opportunities to meet business needs including start-up businesses, creative workshops and incubator units;
- Create destination spaces with active uses which complement the business offer including Central Square (new public piazza with active ground floor uses), Southern Gateway (new public space south of Central Station), Callaghan Square (greening of spaces whilst maintaining a 'civic' presence), and Taff East Bank (creating active uses and new leisure destination);
- Make improvements to the Arena Area with links to Queen Street Station;
- Ensure that development does not prejudice the future delivery of the Metro by keeping free land required for the project once land requirements are known;

- **Provision of high quality way-finding and clearly defined pedestrian routes to key destinations;**
- **Ensure a consistent approach to the use of high quality street furniture and paving materials;**
- **Improve routes and connections to support the Butetown Regeneration with links to community facilities and services including Loudon Square as a community “hub”;**
- **Maximise linkages to the Taff Trail and Canal Park;**
- **Integrating new development sensitively with new and existing developments and take opportunities for commercial activity along Dumballs Road;**
- **Upgrade site gateways, railway bridges/ underpasses and the public realm;**
- **Effectively responding to landscape and biodiversity assets by:**
- **Maximising the asset of River Taff frontage;**
- **Developing opportunities for natural greenspaces to create urban parkland settings;**
- **Effectively respond to heritage assets by:**
- **Assessing and effectively addressing potential impacts on Conservation Areas and Listed Buildings within and adjoining the site;**
- **Integrating public art and heritage interpretation as part of proposals;**
- **Investigating opportunities for new developments in Dumballs Road to have a separate drainage system , including running surface water to the river and integrating landscaped areas;**
- **Seek to develop opportunities for SUDS to relate to/ extend the “Greener Grangetown” scheme.**

4.42. The Cardiff Central Enterprise Zone is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is the largest brownfield site within the Plan (78.8 ha) and occupies a particularly accessible location in the centre of Cardiff including the major transportation hub around Cardiff Central station. Overall, it represents a significant sustainable regeneration opportunity in the heart of the city and is fully consistent with delivering the Plan’s vision and objectives.

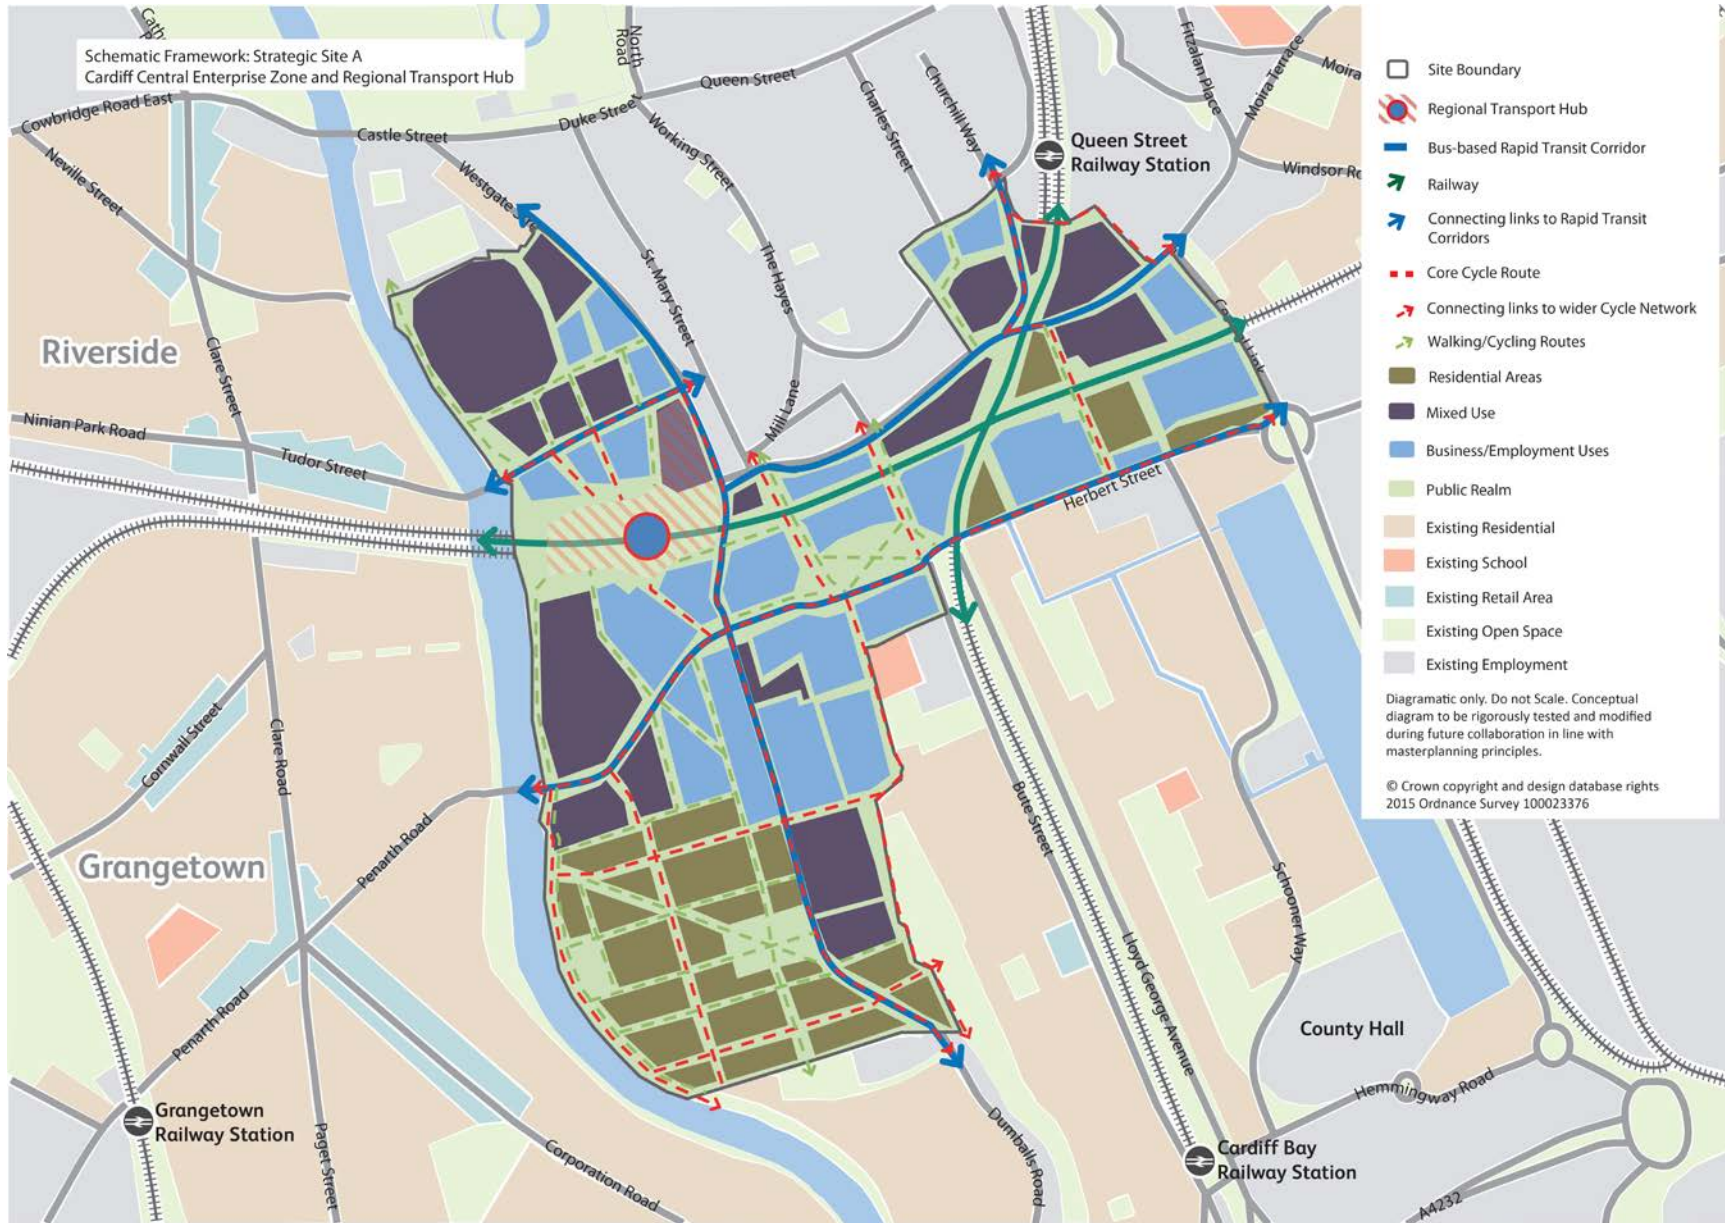

4.43. The land is owned by numerous landowners and will be delivered by a number of different developers operating out of different sites. This policy, together with other relevant policies, will provide the overarching masterplanning and infrastructure planning framework for landowners

and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process. In this respect it should be noted that different potential projects in the area are operating on different timescales so an over-prescriptive approach would not be appropriate.

4.44. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision.

4.45. The site is in a central location with a good level of accessibility by non-car based travel. The transport sustainability of the site will be further enhanced through the development of the regional transport hub linking different sustainable forms of transport and the wider improvements to the strategic public transport network and the walking and cycling networks that will be secured in conjunction with the development of other Strategic Sites and through the Council's own infrastructure programmes.

4.46. Although details of the mode and potential alignments of the Metro are not yet known it is likely that the project will provide access to this Strategic Site. Work undertaken to date by the Welsh Government has not firmed up detailed proposals and there is no current certainty on any detailed alignments so it would be inappropriate to allocate a precise alignment on the Proposals Map but there is a need to ensure future options are not prejudiced. Therefore, this policy references the potential future need to safeguard land required for the Metro project once any land requirements are known. Future Plan reviews and the annual monitoring framework linked to the 'living' Infrastructure Plan provide mechanisms to ensure the LDP process can be further updated in this respect.

KP2(B): FORMER GAS WORKS, FERRY ROAD

Land is allocated at the former Gas Works, Ferry Road, as defined on the Proposals Map, for a housing-based scheme of 500 homes and other associated community uses, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Walking and cycling:**
 - Improve pedestrian access to public transport facilities in the vicinity of the site;
 - Provide new and enhance existing pedestrian/cycle links from the site to the Ely Trail, Grangemoor Park, Cardiff Bay Retail Park and other community facilities within the area including Channel View Centre.

Necessary Infrastructure

- **Contribution to off-site community facility provision;**
- **Education- Contribution to existing Primary and Secondary Schools;**
- **Minimum of 1.2ha Open Space including 1 playground, 1 teen facility, plus contributions to formal open space, allotment provision and play provision**

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Densities will be maximised to make efficient use of this brownfield site with high density residential accommodation of at least 50 dwellings per hectare considered appropriate and in keeping with the characteristics of the area;**
- **The density, design, scale and layout at the northern end of the site should respond effectively to the adjacent Ikea building;**
- **The layout should relate effectively to the railway line forming the western boundary of the site including mitigating any acoustic impacts;**

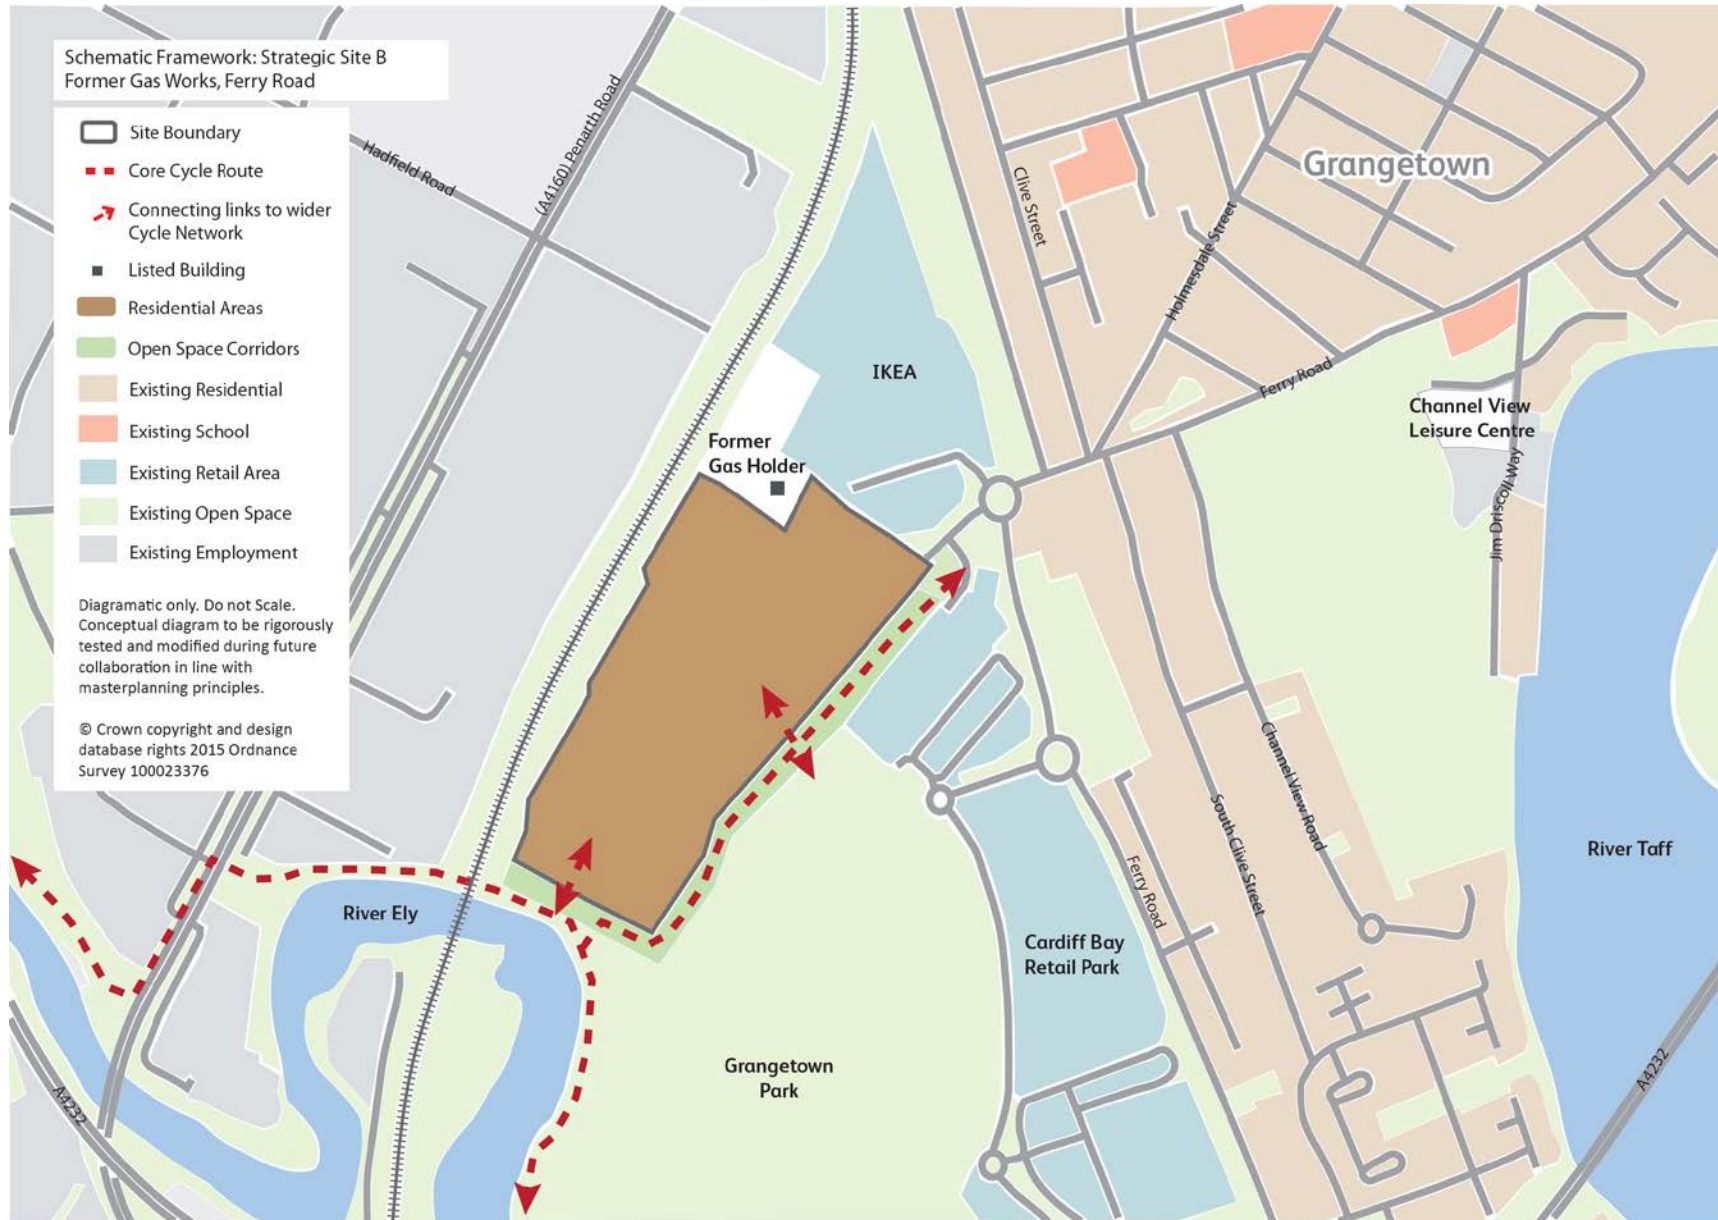

- **Ensure that the cycle trail linking the Ely Trail to Ferry Road is retained and that the layout provides a safe and overlooked solution;**
- **Maximise the relationship between the site, the River Ely and Grangemoor Park including extending the park along the river frontage to create a riverside park with informal play opportunities;**
- **Effectively respond to landscape and biodiversity assets by:**
 - **Mitigating and compensating for reptiles and bats;**
 - **Enhancing the buffer of trees along the railway line;**
 - **Ensuring an adequate buffer from the River Ely Site of Importance for Nature Conservation to protect the river bank and associated vegetation;**
- **Effectively respond to heritage assets by:**
 - **Assessing and effectively addressing potential impacts on the character and setting of the Listed Gas Holder and demonstrating how the proposals can successfully integrate this historic asset;**
 - **Explore the potential to collect methane gas from Grangemoor Park to create a heat and power system together with exploring other potential opportunities such as biomass to create electricity and to heat the site's buildings.**

4.47. The former Gas Works, Ferry Road, is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is a brownfield site (9.9 ha) well-located within the urban area adding to the range and choice of housing offer in the Plan.

4.48. The land is owned by a single landowner and will be delivered in a comprehensive manner. This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

4.49. The relative scale of the site allows for a maximum of 2 outlets at any time with full delivery of the 500 units anticipated between 2017 and 2024. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

4.50. Due to the accessible location of the site and proximity to existing social/ community facilities in the area it is considered appropriate to secure developer contributions to improve nearby facilities as outlined in the policy.

KP2(C): NORTH WEST CARDIFF

Land is allocated at North West Cardiff, as defined on the Proposals Map, for a mixed-use comprehensive development including a minimum of 5,000 homes and local employment opportunities, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - Provision of new bus-based Rapid Transit Corridors through the site providing links between the District/Local Centres and a new Transport Hub in the Easternmost District/Local Centre;
 - Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Western Bus Corridor and other routes within the North West Rapid Transit Corridor;
 - Off-site infrastructure including bus priority enhancements on the Western Bus Corridor and measures to improve linkages into Rhondda Cynon Taf;
 - Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services.
- **Walking and cycling:**
 - On and off-site measures to provide a network of high quality, safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including existing local centres and Schools at Fairwater, Pentrebanne, Danescourt and Radyr;
 - Links to the Taff and Ely Trails;
 - Links to off-site public transport destinations including Radyr, Danescourt and Llandaff Rail Stations.

Necessary Infrastructure

- **1 District Centre and 3 Local Centres (including provision of business and local employment uses), Primary Care facility, Multifunctional community leisure facility including library facility, and financial contribution to upgrading of Fairwater Leisure Centre;**
- **Education-1 new Secondary School, 3-4 new Primary Schools located in or adjacent to District/Local Centres, and financial contribution to existing Primary Schools in earlier phases;**
- **Minimum of 30ha Open Space including 15ha of formal recreation, 6 playgrounds including destination play area, 2 teen facilities plus off-site contribution, and 2x 50 plot allotment sites (through on-site/ off-site provision)**

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Provide a range of densities with high density (minimum of 45-50+ dwellings per hectare) mixed-use development within District/Local Centres and medium to high density (35-50+ dwellings per hectare) along the Rapid Transit Corridors;**
- **Initial phases towards the east and along Llantrisant Road, middle phases towards the centre of the site and later to the west;**
- **Ensure that the potential future delivery of the 'Metro' is not precluded by keeping a corridor alongside and including the disused rail line running through the site (as depicted on the schematic framework) safeguarded from development and also ensuring that land uses, densities and layouts respond positively to its potential future provision;**
- **District/ Local Centres to be accessible by walking, cycling and public transport and accommodate a range of services including convenience goods floorspace plus other retail of a scale and nature which accord with Plan retail policies with the anchor food store to be located within the District Centre towards the east of the site;**
- **Employment provision (B1 & B1(b)(c)) to be located in and adjoining the District/Local Centres amounting to approximately 15,000sqm;**

- **New Schools to be located in and adjoining the District/Local Centres;**

- Provide good land use and transportation integration with the adjoining areas of Pentrebane, Fairwater and Radyr;
- Providing an active frontage onto Pentrebane and Llantrisant Roads;
- Effectively respond to landscape and biodiversity assets by:
- Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:
 - Links between retained woodlands at Coed y Trenches, Coed y Gof, Waterhall, Halfwrt and Coedbychan;
 - Corridor along the valley through the middle of the site;
 - Links to the countryside to the west and south-west;
 - Linking corridors where possible between the above to provide a good network
- Ensuring that there is no detriment to the maintenance of the favourable conservation status of Great Crested Newts on the site including protection of the existing 2 ponds in the Pentrebane Cottages SINC and provision of a minimum of 2 additional ponds in the locality;
- Providing suitable buffers to retained woodlands referred to above and other habitats including hedgerows and streams;
- Effectively respond to heritage assets by:
- Assessing and effectively addressing potential impacts on the St Fagans Conservation Area (retain woodland/hedgerow buffers together with provision of new planting) and the Listed Buildings (together with their settings) within and adjacent to the site;
- Effectively respond to other constraints including Radyr Golf Course (ensuring no conflict with errant golf balls) and existing easements (overhead pylons and underground infrastructure); and
- Ensuring that that development does not adversely affect the water quality of the Nant Rhydlafer.

4.51. North West Cardiff is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is the largest Strategic Site within the Plan (346 ha) and relates to countryside to the west of Radyr, Fairwater and Pentrebane, and to the north of the village of St Fagans.

4.52. The vast majority of the land at North West Cardiff is within the control of the Trustees of St Fagans No. 1 & 2 and No. 3 Trust and will be delivered by a number of different developers operating out of different outlets. This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

4.53. The scale of the site allows numerous outlets to be operating at any one time in different parts of this large site and will provide a wide range and choice of housing offer and opportunities for a variety of different tenures. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

4.54. Rapid Transit Corridors within the site will be bus-based and of sufficient width and otherwise designed, including the control of car parking, to allow the safe two-way passing of the largest vehicles. Bus priority measures will be provided at appropriate locations within the site to allow bus rapid transit to avoid queuing traffic. Bus-based Rapid Transit Corridors will link the site to the Western Bus Corridor with off-site bus priority measures provided to assist the flow of buses. Further off-site corridor enhancements will be provided on the Western Bus Corridor as shown on the Proposals Map and consistent with Policy T2 in order to support delivery of the increased frequency and reliability of services. The integration of housing and supporting services and community infrastructure provides the opportunity for a high proportion of short, local trips to be made by walking and cycling. This will be made possible by integrating networks of high quality walking and cycling routes within development layouts and ensuring that the design of roads, streets, junctions and public spaces accommodate the natural 'desire lines' of people making trips on foot and by bicycle.

4.55. Although details of the mode and potential alignments of the Metro have yet to be defined, it is important that the development of this site does not preclude the potential delivery of this strategic project. Work undertaken to date by the Welsh Government suggests that the disused rail line running through the middle of the site forms the most likely option in this locality but there is currently no certainty on the detailed

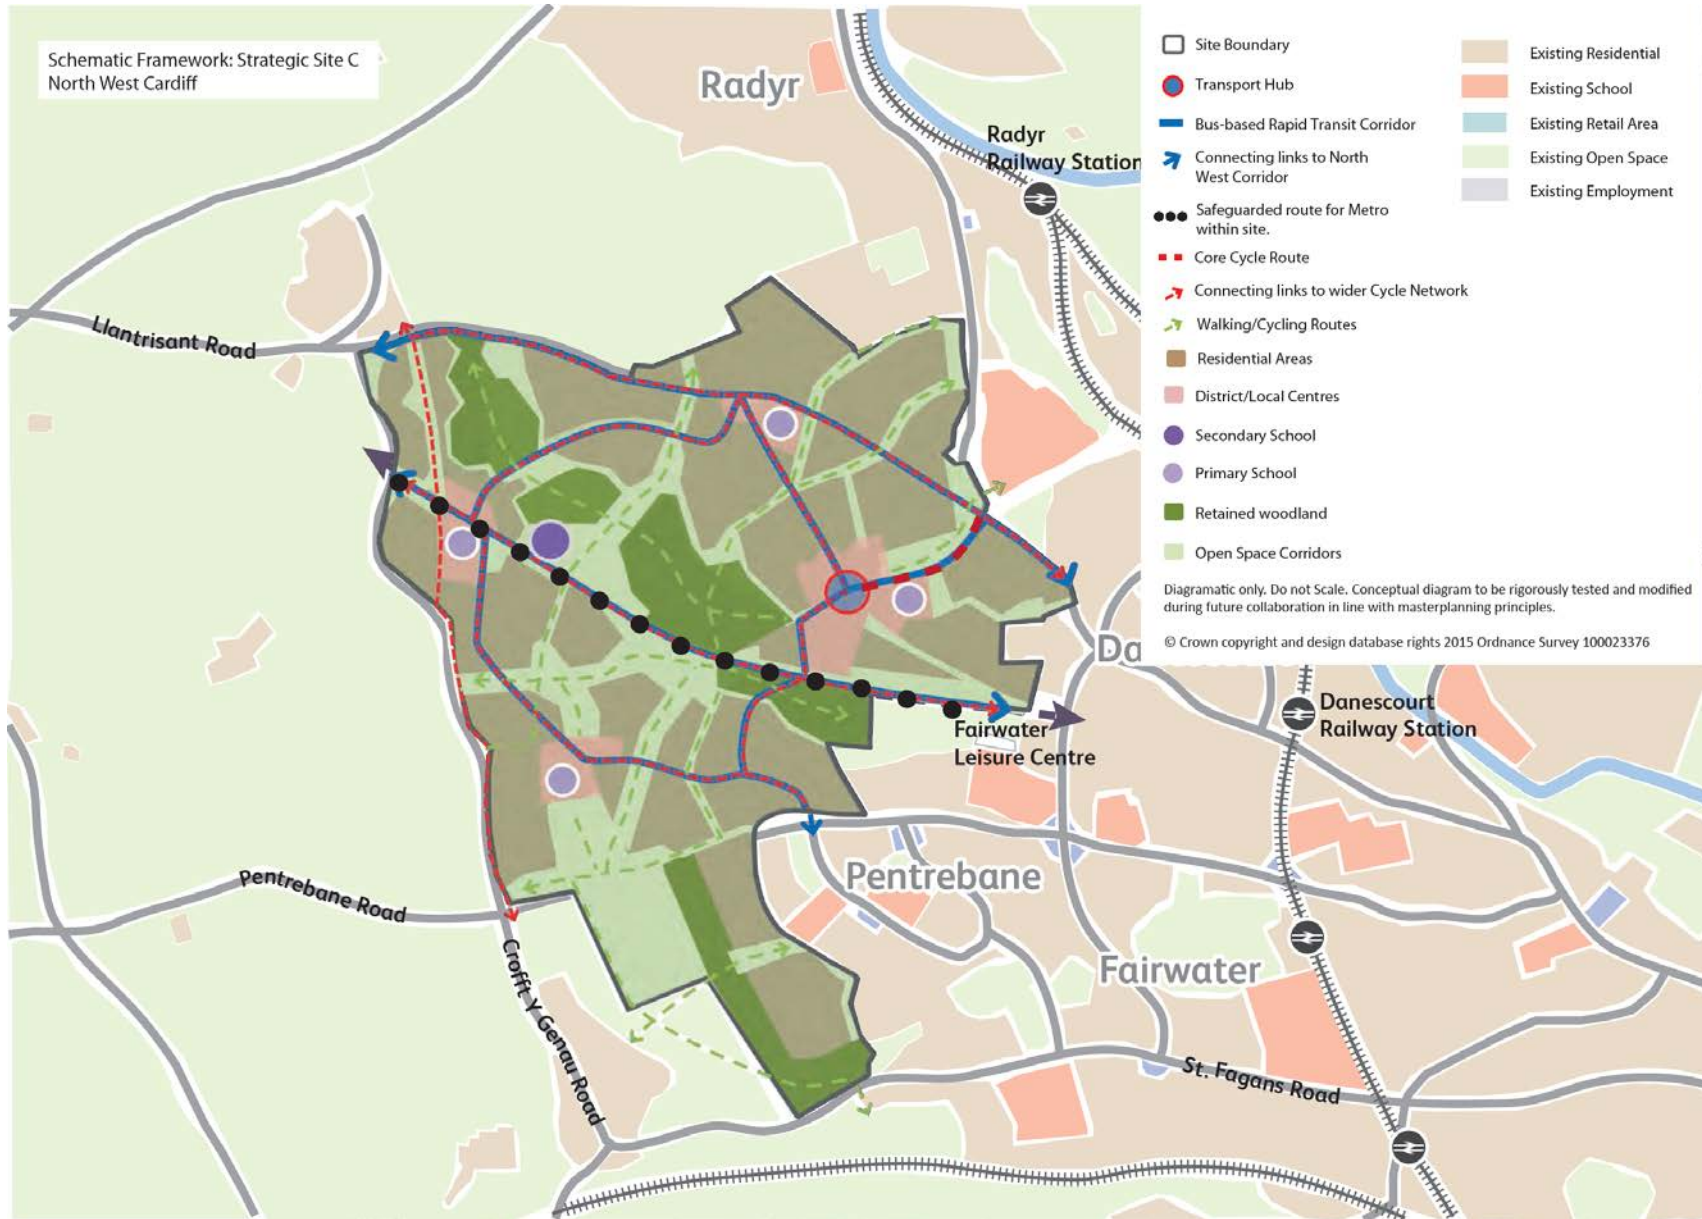

alignment. For example, there is uncertainty of the future mode and whether the route would be based on the existing disused rail line or whether it would be better located either alongside to the north or to the south.

4.56. Therefore, it would be inappropriate to allocate a precise alignment on the Proposals Map but there is a need to ensure future options are not prejudiced. This policy ensures that land is safeguarded from development along the potential Metro corridor and also that land uses, densities and layouts are developed to take account of the potential delivery of this strategic transportation project.

4.57. District and Local Centres will be the focus for community uses and activities including Schools in close proximity. The precise number of Primary Schools (3/4) will depend on the outcomes of future monitoring and delivery options relevant when the details of later phases are being assessed through the Development Management process.

4.58. It should be noted that it is anticipated that the delivery of this large site will extend beyond the plan period (some 1,500 homes are anticipated being delivered post 2026). In this respect, whilst the Schematic Framework relates to the total geographical extent of the overall site area to ensure a high-level consistent approach to addressing site-specific factors, the infrastructure requirements as set out in this policy relate to the number of homes proposed during the plan period (for 5,000 new homes). Future annual monitoring, Plan reviews and ongoing updates to the Infrastructure Plan will ensure that any infrastructure requirements for homes post-2026 are captured at the appropriate juncture and consequently inform any future Development Management activity with regard to homes over and above the 5,000 proposed during the plan period.

4.59. Search Area A (north of Llantrisant Road) is not included within the Strategic Site allocation. This would only be triggered if necessary through future Plan review following annual monitoring indicating that the provision of new homes is proceeding beyond anticipated rates and justifies such a release within the last years of the plan period. Therefore, it is considered premature to factor in potential detailed infrastructure and masterplanning matters at this juncture relating to this land. The formal monitoring framework provides an evidence-based process to inform any decisions on potential release in the last years of the plan period.

KP2(D & E): NORTH OF JUNCTION 33 ON M4 AND SOUTH OF CREIGIAU

Land is allocated:

- (i). North of Junction 33 on the M4, as defined on the Proposals Map, for a mixed-use development of approximately 2,000 homes, employment, other associated community uses and a strategic park and ride site; and**
- (ii). South of Creigiau, as defined on the Proposals Map, for a housing-based scheme of approximately 650 homes representing a southern extension to the village.**

Essential, enabling and necessary supporting infrastructure will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- Transport & Highways:**
 - Provision of new bus-based Rapid Transit Corridors through the site North of Junction 33 linking directly to the Western Bus Corridor;**
 - Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Western Bus Corridor and other routes within the North West Rapid Transit Corridor;**
 - Off-site infrastructure including bus priority enhancements on the Western Bus Corridor and measures to improve linkages into Rhondda Cynon Taf;**
 - Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services;**
 - Strategic park and ride facility North of Junction 33 linked to the Rapid Transit Corridor and public transport node including Bus Gate to provide priority for public transport and limit unauthorised access by car to Junction 33;**
 - Public transport node in close proximity to the employment uses, Park & Ride facility and Local Centre to the south of the site;**
 - Improve the Llantrisant Road/ Cardiff Road junction**

- **Walking and cycling:**
- On and off-site measures to provide a network of high quality, safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including the new neighbourhood centre from the north, improved pedestrian/ cycling links to existing and proposed schools;
- Provide a safe crossing of Llantrisant Road;
- Creating an east-west connection between Public Rights of Way (Footpaths numbered 10 & 18)

Necessary Infrastructure

- 1 Local Centre within Site D including Primary Care facility and multifunctional community leisure facility including library facility;
- Education: 1-2 new Primary Schools with 1 located in or adjacent to Local Centre, and financial contribution to existing Secondary Schools;
- Minimum of 12ha Open Space including 6ha of formal recreation, 3 playgrounds, 1 teen facility, and 1x 40 plot allotment site;
- Improve community facilities in the existing neighbourhood centre in Creigiau to provide new facilities for existing and new residents

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- Provide a range/ gradient of densities across the site with the highest density (minimum of 45-50+ dwellings per hectare) around the Local Centre to the south of the site. Medium density housing (35-45+ dwellings per hectare) will be provided on land close to Llantrisant Road and adjacent to the Rapid Transit Corridors and to the west of the land south of Creigiau. Lower densities will be provided on the elevated land west of Cardiff Road and to the west of the site North of Junction 33;
- Layouts on Sites D and E should reflect the interrelationships between the sites with delivery considered acceptable in tandem through different outlets with initial phases

including the provision of the park and ride facility together with public transport enhancement measures;

- Ensure that the potential future delivery of the 'Metro' is not precluded by keeping a corridor through the sites (as depicted on the schematic framework) safeguarded from development and also ensuring that land uses, densities and layouts respond positively to its potential future provision;
- Exclude vehicular access onto the M4 except for part of the park and ride facility and part of the business area situated adjacent to the junction;
- Exclude through-traffic between both sites;
- Provide future vehicular, walking/ cycling access from the site North of Junction 33 to the 'flexibility allowance land' to the west;
- Facilitate interchange between local bus and rapid transit services;
- Local Centre to be located north of the business land and adjacent to the rapid transit interchange and Primary School and to include convenience goods floorspace plus other retail use of a scale and nature which accords with Plan retail policies;
- High quality business uses to reflect the strategic location of the site (excluding B8 uses) to be located adjacent to Junction 33 and an additional flexible local employment space to be located adjacent to the Motorway to the south west of the site;
- Provide a landscape buffer between employment and residential uses and along the boundary of the M4 to reduce impact;
- Provide safe and convenient pedestrian/ cycle links between the site and Creigiau village including links with existing Public Rights of Way;
- Effectively respond to landscape and biodiversity assets by:
 - Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:
 - Links between retained ancient woodland at Castell y Mynach, marshy area to the north and young woodland buffer strip alongside Llantrisant Road;

- **Links from the Nant Henstaff, through Coed Gwentybwlau, linking to the disused rail line and Pencoed Wood;**
- **Enhancing the disused rail line as a walking/ cycling and ecological corridor;**
- **Links to the countryside to the west;**
- **Linking corridors where possible between the above to provide a good network.**
- **Ensuring that there is no detriment to the maintenance of the favourable conservation status of Great Crested Newts and Dormouse on the site including protection of the existing watercourses and provision of suitable compensatory planting to supplement existing retained habitats;**
- **Providing suitable buffers to retained woodlands and streams referred to above and other habitats including hedgerows within the sites;**
- **Effectively respond to heritage assets by:**
 - **Assessing and effectively addressing potential impacts on known assets including the Listed Buildings of Pencoed House, Church of St Elldeyrn and the Old Forge.**

4.60. North of Junction 33 on the M4 and South of Creigiau are two of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. As the sites are adjacent and separated only by Llantrisant Road, there is considered logic in setting out masterplanning and infrastructure requirements in a comprehensive manner but also including addressing site-specific issues for each site. The sites amounting to 141ha will help bring forward new homes, jobs and supporting infrastructure including a new strategic park and ride facility.

4.61. The masterplanning process to date has reflected joint-working between parties relating to both sites to ensure a comprehensive approach is taken.

4.62. This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

4.63. The scale of the sites allows numerous outlets to be operating at any one time and will provide a wide range and choice of housing offer

and opportunities for a variety of different tenures. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

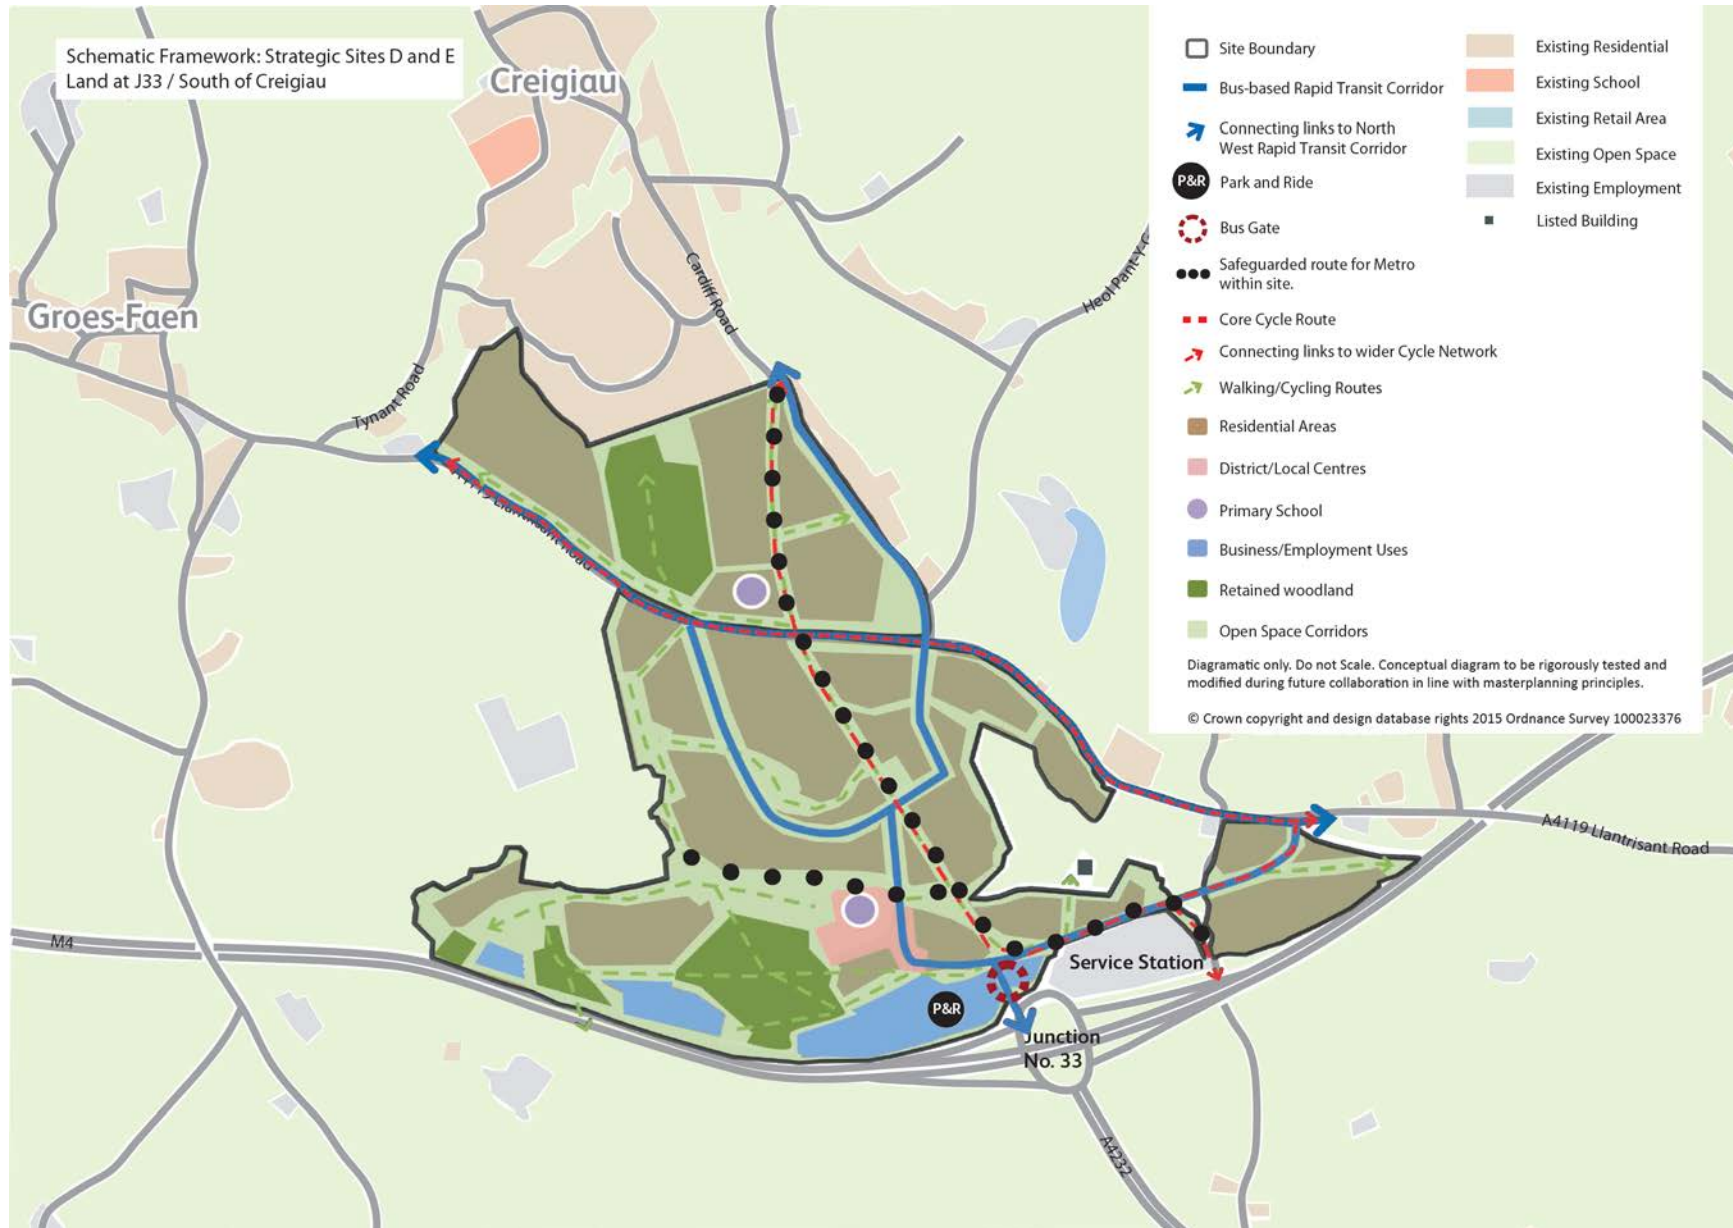

4.64. Rapid Transit Corridors within the site North of Junction 33 will be bus-based and of sufficient width and otherwise designed, including the control of car parking, to allow the safe two-way passing of the largest vehicles. Bus priority measures will be provided at appropriate locations within the site to allow bus rapid transit to avoid queuing traffic. Bus-based Rapid Transit Corridors will link the site to the Western Bus Corridor with off-site bus priority measures provided to assist the flow of buses. Further off-site corridor enhancements will be provided on the Western Bus Corridor as shown on the Proposals Map and consistent with Policy T2 in order to support delivery of the increased frequency and reliability of services. The integration of housing and supporting services and community infrastructure provides the opportunity for a high proportion of short, local trips to be made by walking and cycling. This will be made possible by integrating networks of high quality walking and cycling routes within development layouts and ensuring that the design of roads, streets, junctions and public spaces accommodate the natural 'desire lines' of people making trips on foot and by bicycle.

4.65. Although details of the mode and potential alignments of the Metro have yet to be defined it is important that the development of these sites does not preclude the potential delivery of this strategic project. Work undertaken to date by the Welsh Government suggests numerous potential options in this area and there is currently no certainty on the detailed alignment. For example, there is uncertainty of the future mode and whether the route would be based on the existing disused rail line or whether it would be better routed elsewhere.

4.66. Therefore, it would be inappropriate to allocate a precise alignment on the Proposals Map but there is a need to ensure future options are not prejudiced. This policy ensures that land is safeguarded from development along the potential Metro corridor and also that land uses, layouts and densities are developed to take account of the potential delivery of this strategic transportation project.

4.67. The new Local Centre on Site D and new Primary School to be located within or adjoining it will be a focus for community uses and activities. Facilities will also be improved in the existing neighbourhood centre in Creigiau to provide new facilities for existing and new residents. The precise number of Primary Schools (1/2) will depend on the outcomes of future monitoring and delivery options relevant when the details of later phases are being assessed through the Development Management process. Specifically, consideration will be given to the merits of extending the existing Primary School at Creigiau as an alternative to the provision of a second new school.

4.68. Search Area B (to the west of the site North of Junction 33) is not included within the Strategic Site allocation. This would only be triggered if necessary through future Plan review following annual monitoring indicating that the provision of new homes is proceeding beyond anticipated rates and justifies such a release within the last years of the plan period. Therefore, it is considered premature to factor in potential detailed infrastructure and masterplanning matters at this juncture relating to this land although the schematic framework identifies potential access to the site. However, as a minimum, this policy sets out the need to provide potential future vehicular, walking and cycling access from Site D to the 'flexibility allowance land' to the west. The formal monitoring framework provides an evidence-based process to inform any decisions on potential release in the last years of the plan period.

KP2(F): NORTH EAST CARDIFF (WEST OF PONTPRENNAU)

Land is allocated at North East Cardiff (West of Pontprennau), as defined on the Proposals Map, for a mixed-use comprehensive development of a minimum of 4,500 homes, employment and other associated community uses, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - Provision of new bus-based Rapid Transit Corridors through the site providing links between the District/Local Centres including Bus Gates at access point to Cardiff Gate Business Park and St Mellons Road at the eastern edge of the site;
 - Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Eastern/Northern Bus Corridors and other routes within the North Eastern Rapid Transit Corridor including services linked to Strategic Site G, facilitating transfer/ improving interchange facilities to Rhymney Line rail services at Llanishen Station and Thornhill Station, and, employment facilities at St Mellons Business Park and Strategic Site H;
 - Off-site enhancements including bus priority measures to the Eastern/Northern Bus Corridor;
 - Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services;
- **Walking and cycling:**
 - On and off-site measures to provide safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including existing local centres and Schools at Pontprennau, Pentwyn, Lisvane and Cardiff Gate Business Park;
 - Links to off-site public transport destinations including Llanishen and Thornhill Rail Stations

Necessary Infrastructure

- **1 centrally located District Centre and 1 Local Centre including Primary Care facility, Multifunctional community leisure facility including library facility, and financial contribution to upgrading of Llanishen and Pontprennau Leisure Centres;**
- **Education-1 new Secondary School, 3 new Primary Schools and financial contribution to existing Primary Schools;**
- **Minimum of 26ha Open Space including 13ha of formal recreation, 6 playgrounds including destination play area, 1 teen facility plus off-site contribution, and 2x 50 plot allotment sites**

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- **Provide a range of densities with high density (minimum of 45-50+ dwellings per hectare) mixed-use development within District/Local Centres and along rapid transit corridors. Medium density (35-45+ dwellings per hectare) around the edge of Pontprennau and to the north of the site. Lower densities to be provided around the edge of Lisvane;**
- **Initial phases towards the West of the site with middle phases towards the centre and south (including District/ Local Centres) and later phases to the north and east of the site;**
- **Centrally located District/ Local Centres accessed by rapid transit corridors including interchange facilities between sustainable transport modes and accommodating a range of services including convenience goods floorspace plus other retail of a scale and nature which accord with Plan retail policies;**
- **Introduce measures to reduce impact of noise from the M4;**
- **Effectively integrate existing buildings into the design and layout;**
- **Retain and enhance Public Right of Way network within the site and provide safe, convenient and legible links to the countryside North of the M4, Nant Fawr corridor, Cardiff Gate Business Park and Pontprennau;**

- **Employment provision (B1 & B1(b)(c)) to be located in and adjoining the District Centre and adjacent to Cardiff Gate Business Park amounting to approximately 6.5ha;**
- **Provide good land use and transportation integration with the adjoining areas of Lisvane and Pontprennau;**
- **Effectively respond to landscape and biodiversity assets by:**
- **Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:**
 - **Utilising the stream network (particularly the Nant Ty Draw, Nant Glandulais and Nant y Draenog) as core elements of new ecological corridors through the site;**
 - **Links from the Nant Fawr corridor south west of the site ensuring the corridor links to other open space corridors within the site;**
 - **Links to access points to the countryside to the north west at Lisvane and underpasses below the M4;**
 - **Linking corridors where possible between the above to provide a good network;**
- **Ensuring that there is no detriment to the maintenance of the favourable conservation status of Dormouse on the site including provision of suitable compensatory planting to supplement existing retained habitats including Malthouse Woods, other woodlands and hedgerows;**
- **Providing suitable buffers to the Llanishen Reservoir SSSI, retained woodlands and streams referred to above and other habitats including hedgerows within the site;**
- **Effectively respond to heritage assets by:**
- **Assessing and effectively addressing potential impacts on known assets including Listed Buildings within and near to the site;**
- **No development to take place within the C2 flood zone area forming part of the Nant Glandulais valley.**

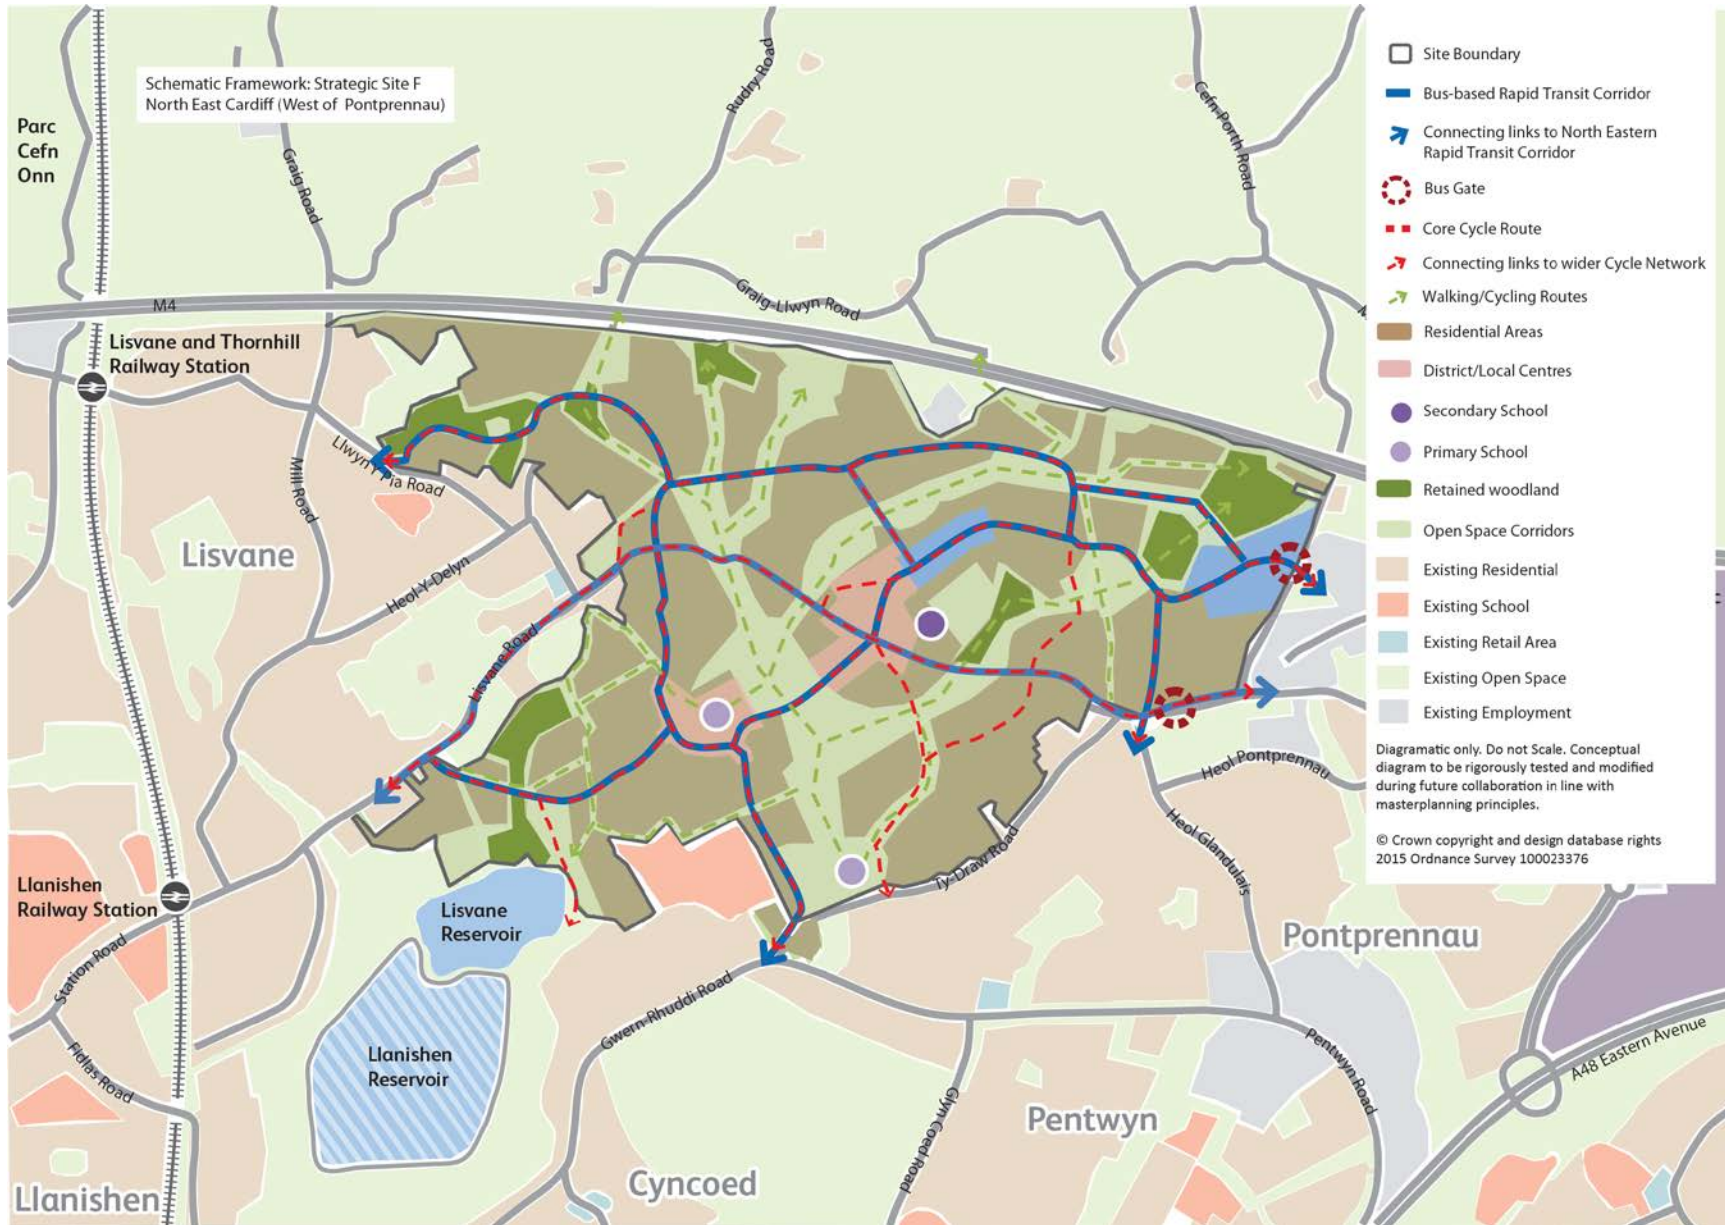

4.69. North East Cardiff (West of Pontprennau) is one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It is the second largest Strategic Site (237 ha) within the Plan and relates to countryside located between Lisvane to the west, Pontprennau to the east and the M4 Motorway to the north.

4.70. The Site will be delivered by a number of different developers operating out of different outlets. This policy, together with other relevant policies, will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process.

4.71. The scale of the site allows numerous outlets to be operating at any one time in different parts of this large site and will provide a wide range and choice of housing offer and opportunities for a variety of different tenures. Planning conditions and Planning Obligations (Section 106 Agreements) will be used to formally tie in the phased delivery of necessary supporting infrastructure with trigger mechanisms and thresholds used to ensure timely provision in relation to completion of new homes.

4.72. Rapid Transit Corridors within the site will be bus-based and of sufficient width and otherwise designed, including the control of car parking, to allow the safe two-way passing of the largest vehicles. Bus priority measures will be provided at appropriate locations to allow bus rapid transit to avoid queuing traffic. Bus-based Rapid Transit Corridors will link the site to the Northern and Eastern Bus Corridors with off-site bus priority measures provided to assist the flow of buses. Further off-site corridor enhancements will be provided on the Northern and Eastern Bus Corridors as shown on the Proposals Map and consistent with policy T2 in order to support delivery of the increased frequency and reliability of services. The integration of housing and supporting services and community infrastructure provides the opportunity for a high proportion of short, local trips to be made by walking and cycling. This will be made possible by integrating networks of high quality walking and cycling routes within development layouts and ensuring that the design of roads, streets, junctions and public spaces accommodate the natural 'desire lines' of people making trips on foot and by bicycle.

4.73. District and Local Centres will be the focus for community uses and activities including schools in close proximity. They will be well located in relation to sustainable transportation options and also link into the network of green corridors largely based on the existing stream network.

KP2(G): EAST OF PONTPRENNAU LINK ROAD

Land is allocated East of Pontprennau Link Road, as defined on the Proposals Map, for a housing-based scheme of a minimum of 1,300 homes with associated community uses, together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - Provision of new bus-based Rapid Transit Corridors through the site including links to the Local Centre and provision of Bus Gates at St Mellons Road at the north western edge of the site and Bridge Road to the south east of the site;
 - Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Eastern Bus Corridors and other routes within the North Eastern/Eastern Rapid Transit Corridor including services linked to Strategic Site F, facilitating transfer/ improving interchange facilities to Rhymney Line rail services at Llanishen Station and Thornhill Station, and, employment facilities at St Mellons Business Park and Strategic Site H;
 - Off-site enhancements including bus priority measures to the Eastern Bus Corridor;
 - Extend bus networks and increase the frequency and reliability of services to serve the site with public transport options for a wide range of journeys including a combination of limited stop and local bus services taking account of links with Strategic Site F;
 - Provide a bus-only route along Bridge Road
- **Walking and cycling:**
 - On and off-site measures to provide a network of high quality, safe, attractive and convenient routes within the site and linking to key local services, facilities and destinations including employment in Pontprennau, Pentwyn and Cardiff Gate Business Park;
 - Improve walking/cycling access at junction of Church Road/ A4232/Heol Pontprennau;
 - Provide a safe, attractive and convenient link from the site to the Rhymney Trail:

- Enhance subway under A48, south of St Edeyrn's Church;
- Provide cycle/pedestrian link between the subway under the A48 and Mill Lane, Llanrumney;
- Upgrade Rhymney Trail to provide shared pedestrian/cycle route between subway under A48, south of St Edeyrn's Church and the subway west of Pentwyn interchange

Necessary Infrastructure

- 1 centrally located Local Centre linked to rapid transit infrastructure and school facilities including Primary Care facility (Branch Surgery linked to Strategic Site F), multifunctional community facility, and financial contribution to upgrading of Pentwyn and Pontprennau Leisure Centres;
- Education-1 new Primary School located in or adjacent to the local Centre and financial contribution to provision of Secondary School at Strategic Site F;
- Minimum of 7.9ha Open Space including 3.9ha of formal recreation, 2 playgrounds, 1 teen facility, and 1x 26 plot allotment site

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

- Provide a range of densities with high density (minimum of 45-50+ dwellings per hectare) alongside rapid transit corridor towards centre of site, medium density (35-45+ dwellings per hectare) towards the north and lower densities alongside the riverside park;
- Initial phases in the south, middle phases towards the centre and later phases to the north;
- Local Centre to accommodate a range of services including convenience goods floorspace and other retail of a scale and nature which accords with Plan retail policies;
- Integrate cluster of low density buildings at St Julian's Manor/ House;
- Effectively respond to landscape and biodiversity assets by:
- Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:

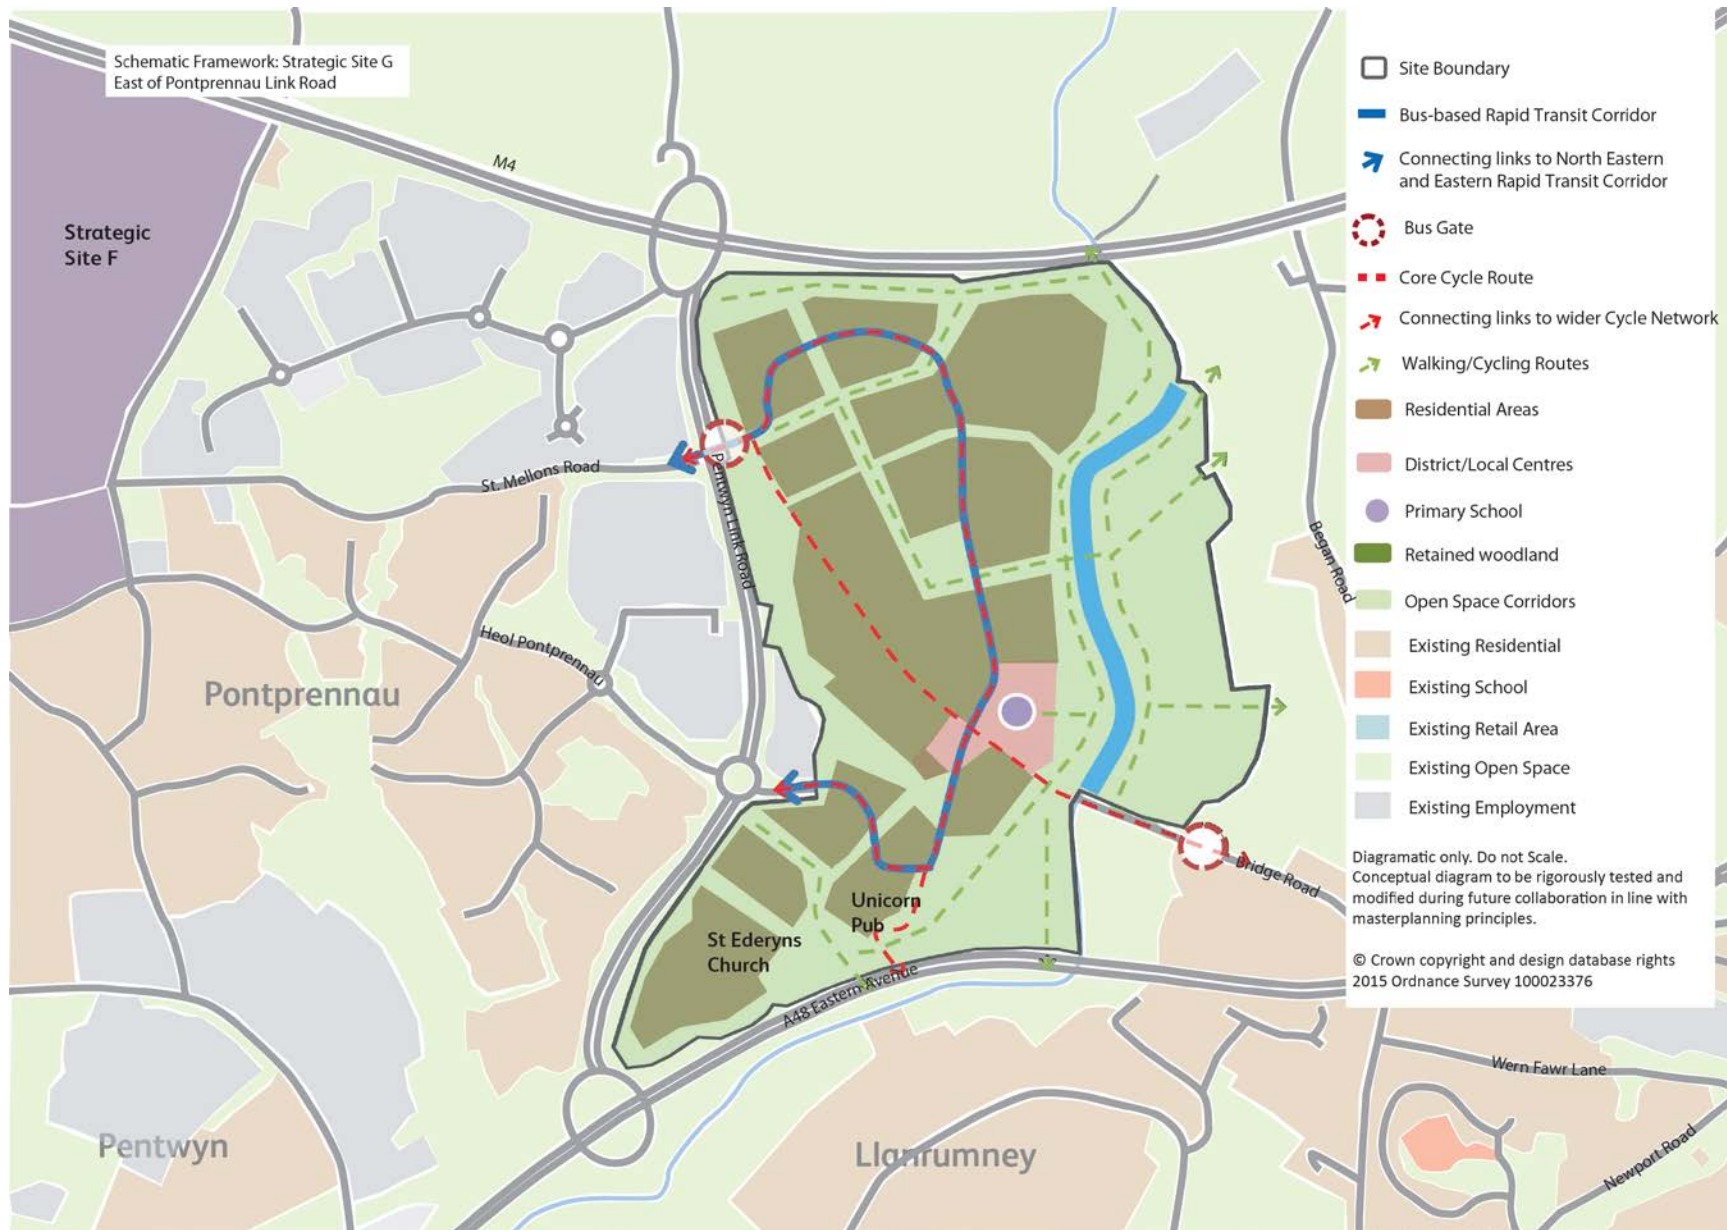

- Creating a riverside park incorporating the Rhymney Trail and other Public Rights of Way on an extensive area of land to the east of the site with links running west into the site;
- Retaining the green buffer along the A4232 (primarily as an ecological resource and landscape role);
- Links from riverside park to countryside to north and Rhymney Valley to south west;
- Linking corridors where possible between the above to provide a good network.
- Ensuring that there is no detriment to the maintenance of the favourable conservation status of Dormouse on the site including provision of suitable compensatory planting to supplement existing retained habitats including compensatory planting on the southern and eastern site boundaries;
- Providing suitable buffers to retained habitats, particularly the hedgerows within the site;
- Effectively respond to heritage assets by:
 - Assessing and effectively addressing potential impacts on known assets including Listed Buildings within and near to the site;
 - Preserving the village character around Llanedeyrn village and effectively integrate existing buildings into layout including protecting view of St Edeyrn's Church from the A48;
 - Effectively respond to heritage assets by:
 - Assessing and addressing potential impacts on the Listed Buildings of Unicorn Public House, Church of St Edeyrn, Bridge House Farm, St Julian's Manor House and associated curtilage structures;
 - Protect water quality of River Rhymney and Nant Mwlán;
 - Address issues with Japanese Knotweed along the River Rhymney;
- No development to take place in C2 flood zone forming part of River Rhymney valley.

4.74. Land East of Pontprennau Link Road forms one of eight Strategic Sites which collectively play a crucial role in delivering the Plan Strategy. It amounts to 80.7 ha and is located in countryside located between the

Pontpennau Link Road to the West, River Rhymney valley to the east, the A48 to the south and the M4 Motorway to the north.

4.75. Most of the land is owned by a single landowner and has the benefit of Outline Planning Permission for 1,020 homes together with supporting infrastructure and facilities. A Section 106 Agreement has been signed and secures the phased delivery of supporting infrastructure and facilities including the provision of a Primary School on site with trigger clauses securing delivery.

4.76. Other parts of the site not covered by the Outline Planning Consent will be considered in the context of this policy, together with other relevant policies which will provide the masterplanning and infrastructure planning framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process

KP2(H): SOUTH OF ST MELLONS BUSINESS PARK

Land is allocated South of St Mellons Business Park, as defined on the Proposals Map, for a strategic employment site together with essential, enabling and necessary supporting infrastructure which will be delivered in a phased manner with specific details formally tied into planning consents including:

Essential/ Enabling Infrastructure

- **Transport & Highways:**
 - Provision of transport hub including new rail station served by relief line rail services connecting to the city centre and services to Cardiff Airport and London via Cardiff Central;
 - Provision of park and ride facility;
 - Off-site infrastructure including bus priority measures to develop bus-based Rapid Transit Corridors integrating with the site, the Eastern Bus Corridors and other routes within the North Eastern/Eastern Rapid Transit Corridor including services linked to the City Centre and Strategic Sites G and F;
- **Walking and Cycling:**
 - Provide high quality on-site and off-site walking and cycling links and facilities to maximise walking and cycling access to the site from neighbouring communities including Trowbridge and St Mellons;
- **Flood mitigation/ defences:**
 - Flood mitigation works including raising the development plateaus and providing compensatory flood storage areas south of the rail line

Necessary Infrastructure

- Retain the area of land to the east of Cypress Drive and Faendre Reen as green space linked with Hendre Lake Park;
- If the infilling of any reen or field ditch proves to be unavoidable at the application stage it should be realigned (with at least an equal capacity) around the perimeter of the development or a compensatory length of ditch should be provided elsewhere within the site

Development shall be undertaken in a comprehensive manner and accord with the following key masterplanning requirements (as depicted, where appropriate, on the Schematic Framework):

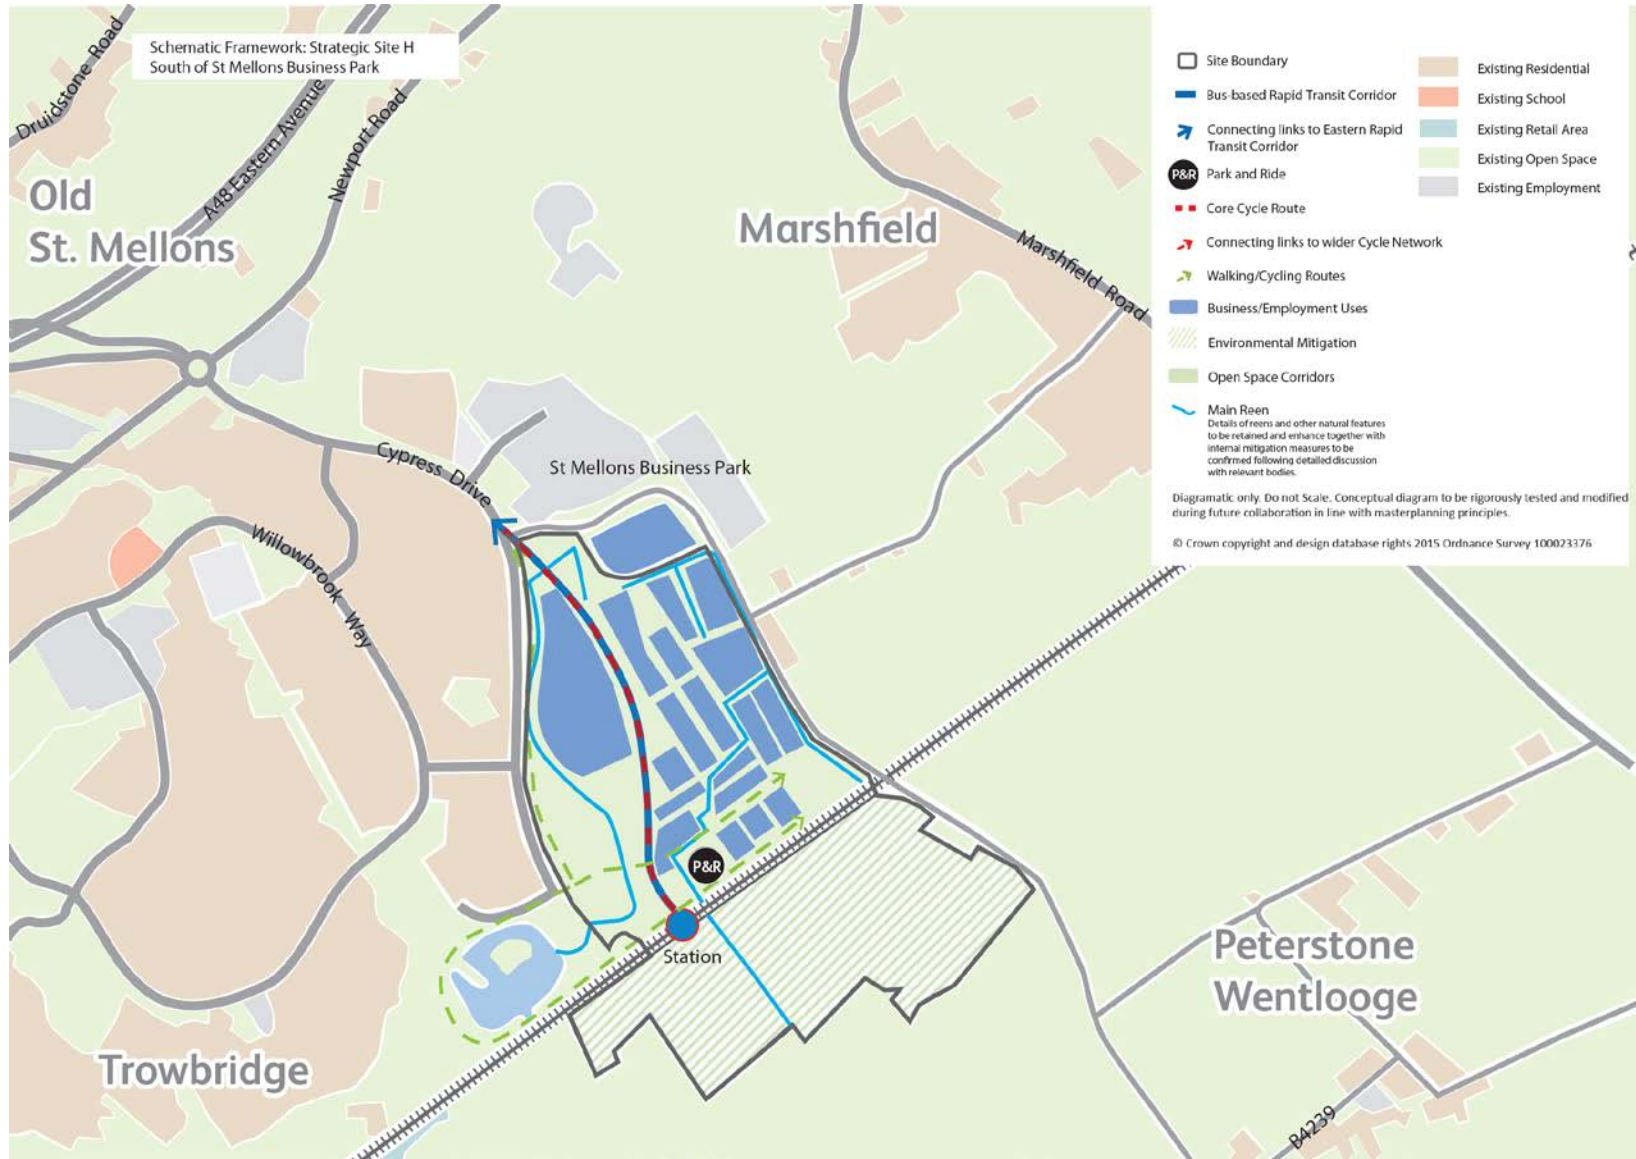

- Provide 44 ha of business land capable of accommodating up to 90,000 square metres campus style high quality development similar to existing business park at St Mellons in a location which benefits from Assisted Area Status;
- Integrate the site with local facilities in the surrounding area;
- Effectively respond to landscape and biodiversity assets by:
 - Protecting the value of the Gwent Levels SSSI with development being a minimum of 12.5 metres from main reens and 7 metres from field ditches;
 - Ensuring that all development accords with the Natural Resources Wales (formerly Countryside Council for Wales) Wentloog Levels guidelines “Nature Conservation and Physical Developments on the Gwent Levels – the current and future implications”;
 - Integrating any landscape natural features, such as existing reens and hedgerows into the design including provision of suitable buffers;
 - Protecting the Marshfield SINIC;
 - Respecting the intricate reen network and exiting hedgerows;
 - Linking retained habitats through the provision of a series of open space corridors providing ecological connectivity, sustainable access routes and opportunities for sustainable drainage including:
 - Links between retained reens and hedgerows;
 - Green links to Hendre Lake Park which respond to the natural landscape value of the area;
 - Ensuring that there is no detriment to the maintenance of the favourable conservation status of the Shrilla Carder Bee by carrying out a survey, and if found, provide appropriate compensatory measures;
 - Ensuring that there is no detriment to the maintenance of the favourable conservation status of European Protected Species including bats, otters and reptiles including provision of suitable compensatory planting to supplement existing retained habitats;
- Effectively respond to heritage assets by:
 - Assessing and effectively addressing potential impacts on known assets including the Wentloog Levels Archaeologically

Sensitive Area and registered Landscape of Outstanding Historic Interest;

4.77. This is an important employment site which contributes to the necessary range and choice of types of employment opportunities in the city. Its location is particularly well placed to provide accessible job opportunities to areas of known deprivation and its position adjacent to the main rail line offers significant opportunities for a new station together with supporting sustainable transportation infrastructure. This proposal is a long-standing proposal in the Regional Transport Plan, is identified in the emerging work on the South Wales Metro concept and has Welsh Government support. However, the precise location of the station is yet to be defined so it would be premature to show a specific allocation for this use on the Proposals Map but it is shown within the Schematic Framework and referenced within the policy.

4.78. It is recognised that the area possesses environmental and flood risk constraints. In terms of environmental issues, the majority of the area is a Site of Special Scientific Interest with the reens forming the major interest. Run-off will enter the River Severn Estuary, a European designated site so drainage and potential disturbance to birds will need to be suitably addressed. The land also meets the qualifying criteria using the LANDMAP landscape methodology for Special Landscape Area status. Furthermore, there are significant historic interests and the land is designated as a Historic Landscape and Archaeologically Sensitive Area.

4.79. These environmental and flood risk constraints have been carefully examined so that the mitigation and enhancement measures embedded within this policy provide an appropriate framework at this level to address these issues. These measures will provide a framework for landowners and developers to prepare Parameter Plans and Masterplans which will inform the Development Management process. In this way, the significant social and economic benefits brought forward by this allocation can be delivered whilst carefully responding to and putting in place the policy framework to effectively address the known constraints relating to the site.

2. Putting in place a framework to manage future growth and encourage high quality, sustainable design

KP3(A): GREEN WEDGE

In order to strategically manage the urban form of Cardiff and to protect the setting of the urban area, a Green Wedge is proposed on land North of the M4 as shown on the Proposals Map. Within this area development which prejudices the open nature of this land will not be permitted. Positive biodiversity, landscape, climate change mitigation and informal recreational management and enhancement measures will be encouraged in this area to further enhance the long term role of the area as a key natural resource benefiting the city.

4.80. Together with Key Policy KP3(B), this Policy seeks to strategically manage the future built form of Cardiff's urban area. The designated area forms land North of the M4 in Cardiff as shown on the Proposals Map. This land unquestionably forms a distinctive, prominent and well known green backdrop to the city forming a strategically important setting to the urban area. The land is also generally well contained by the strong physical boundary of the M4 Motorway to the south.

4.81 PPW provides specific guidance on the consideration of planning applications within the Green Wedge designation.

KP3(B): SETTLEMENT BOUNDARIES

In order to strategically manage the spatial growth of Cardiff, settlement boundaries are proposed as shown on the Proposals Map. In all areas outside the defined settlement boundaries, otherwise referred to as countryside, there will be a corresponding presumption against inappropriate development.

4.82. Cardiff's settlement boundaries are a key mechanism for helping to manage growth by defining the area within which development would normally be permitted, subject to material planning considerations. This Policy compliments the Green Wedge Key Policy (KP3(A)) set out above. The policy will impose a strict control on development of all countryside in

Cardiff outside the identified settlement boundaries as shown on the Proposals Map. Detailed Policy EN1 provides more guidance on the interpretation of this Policy approach.

4.83. Cardiff's countryside is a valuable and finite resource which is under increasing pressure from all kinds of development due to its proximity to the urban area, including farm diversification and equine-related proposals, and because of the large number of properties and small parcels of land in different ownerships spread throughout the countryside. Whilst it is necessary to encourage sensitive proposals that support a working countryside, Cardiff's countryside is particularly vulnerable to the cumulative impact of insensitive new developments that may harm its character and appearance together with 'suburbanising' attractive landscapes. Where it can be demonstrated that development outside settlement boundaries is acceptable in principle, other detailed LDP policies provide the framework to consider the merits or otherwise of proposals along with national planning policy including TAN 6: Planning for Sustainable Rural Communities.

4.84. Cardiff's settlement boundaries have been carefully assessed and follow logical, existing boundaries wherever possible. Full account has been taken of the particular characteristics, usage and degree of openness of specific parcels of land together with their inter-relationships with surrounding land. Proposals located on the urban fringe which have an extant planning permission may have been incorporated within the settlement boundaries. Cardiff's settlement boundaries are illustrated on the Proposals Map.

KP4: MASTERPLANNING APPROACH

Major development should accord with:

(i) The following Masterplanning General Principles:

- 1. Development schemes that are planned in a comprehensive and integrated manner reflecting partnership working and setting out the phasing of development along with a timely provision of supporting infrastructure. Masterplans will need to encompass the whole of a development area regardless of land ownership patterns, and this will require partnership working, involving all relevant parties;**
- 2. High density residential and mixed-use development is focused along public transport corridors and in neighbourhood centres with lower densities provided elsewhere to deliver an overall range and choice to meet different needs;**
- 3. Dedicated sustainable transport corridors including provision for public transport, cycling and walking which will form key elements of the overall master plan and effectively link into the wider network;**
- 4. Walking, cycling and public transport will be attractive, practical and convenient travel choices for all;**
- 5. Provision of a full range of social and community facilities will be concentrated within mixed use neighbourhood centres located along public transport corridors and easily accessed by walking and cycling;**
- 6. The masterplanning process effectively responds to the local context and the context of climate change, to create new well designed neighbourhoods with a distinctive character which residents will be proud of;**
- 7. New development responds to local deficiencies and provides good connectivity to adjoining areas and is informed by feedback from existing communities;**
- 8. Multi-functional and connected green open spaces form strategically important links to the surrounding area to provide routes for people and wildlife and open spaces for sports, recreation and play;**

- 9. Sympathetically integrate existing landscape, biodiversity and historic features of the site into the development taking opportunities to protect, enhance and manage important features along with mitigation and enhancement measures to provide satisfactory compensatory measures;**
- 10. Innovative and creative energy, management of surface water and waste management solutions are adopted to make new developments more environmentally sustainable ; and**

(ii) Guidance set out in Site-Specific Masterplanning Frameworks, where prepared.

4.85. In order to more effectively manage the form, uses, transportation solutions, phasing and appearance of major new developments, the LDP sets out a 'masterplanning approach'. This will provide greater certainty to developers, the public and all other interested parties. The overall aim will be for the Council to set out a broad framework at the outset which will provide an overarching context for more detailed design and implementation work to follow. This Policy relates to all strategic sites and any other major new developments which may emerge over the Plan period.

4.86. With regard to Strategic Sites, policies KP2(A) to KP2(H) set out the infrastructure and masterplanning requirements for each of the sites which are shown indicatively, where appropriate, on Schematic Frameworks. To avoid repetition and unnecessarily long policies, only site-specific and not generic requirements have been articulated and embedded in the policy relating to each Strategic Site.

4.87. The infrastructure requirements contained within policies KP2(A) to KP2(H) reflect the level of detailed information known. Future updates to the Infrastructure Plan will allow such information to be regularly updated to reflect prevailing circumstances and show more detail when it is known. It would be premature and unhelpful to include overly prescriptive directions in the Plan where detailed matters are more appropriately considered through the Development Management process but within the context of the framework embedded within the Plan. In this way, the maximum possible certainty can be given without setting out unsupported aspirations.

4.88. This policy, in conjunction with other relevant policies, will provide the masterplanning framework for landowners and developers to prepare Parameter Plans and Master Plans for major new development proposals, which will inform the Development Management process.

KP5: GOOD QUALITY AND SUSTAINABLE DESIGN

To help support the development of Cardiff as a world-class European Capital City, all new development will be required to be of a high quality, sustainable design and make a positive contribution to the creation of distinctive communities, places and spaces by:

- i. Responding to the local character and context of the built and landscape setting so that layout, scale, form, massing, height, density, colour, materials, detailing and impact on the built and natural heritage are all addressed within development proposals;**
- ii. Providing legible development which is easy to get around and which ensures a sense of continuity and enclosure;**
- iii. Providing a diversity of land uses to create balanced communities and add vibrancy throughout the day;**
- iv. Creating interconnected streets, squares and spaces as distinctive places, which are safe, accessible, vibrant and secure and incorporate public art where appropriate;**
- v. Providing a healthy and convenient environment for all users that supports the principles of community safety, encourages walking and cycling, enables employment, essential services and community facilities to be accessible by sustainable transport and maximises the contribution of networks of multi-functional and connected open spaces to encourage healthier lifestyles;**
- vi. Maximising renewable energy solutions;**
- vii. Achieve a resource efficient and climate responsive design that provides sustainable water and waste management solutions and minimise emissions from transport, homes and industry;**
- viii. Achieving an adaptable design that can respond to future social, economic, technological and environmental requirements;**

- ix. Promoting the efficient use of land, developing at highest practicable densities and where appropriate achieving the remediation of land contamination;"**
- x. Ensuring no undue effect on the amenity of neighbouring occupiers and connecting positively to surrounding communities;**
- xi. Fostering inclusive design, ensuring buildings, streets and spaces are accessible to all users and is adaptable to future changes in lifestyle; and**
- xii. Locating Tall buildings in locations which are highly accessible through walking and public transport and within an existing or proposed cluster of tall buildings.**

4.89. High quality sustainable design is vital if Cardiff is to meet the objectives set out in the Vision and develop as a world-class capital. More specifically, good design plays a number of significant roles: tackling climate change; protecting and enhancing Cardiff's natural and built environment; protecting local distinctiveness; attracting investment and promoting social inclusion, health and quality of life.

4.90. Good design therefore goes beyond traditional aesthetic considerations and should be an aim for all development proposals within Cardiff, regardless of their scale. Together with the masterplanning approach set out in Key Policy KP4, above, and relevant detailed policies, it is considered that the Plan provides a sound policy framework to ensure the best possible design solutions are secured as the Plan is implemented. Implementation of this Policy, which is aimed in part at improving water resource use efficiency, will ensure adequate water supply without adverse impacts on the River Usk and River Wye SACs, thereby helping to avoid the likelihood that this Plan will have a significant effect upon European designated sites. Implementation of this Policy will also reduce emission of air, water and ground pollutants, thereby offsetting increases in pollution arising from implementation of other policies in the Plan. This would contribute to avoiding significant effects upon European Sites.

4.91. A range of design-related SPG for different forms of development. will be updated and consolidated as summarised in Appendix 4 to provide full guidance on the detailed interpretation of this Policy.

3. Bringing forward new infrastructure

KP6: NEW INFRASTRUCTURE

New development will make appropriate provision for, or contribute towards, all essential, enabling and necessary infrastructure required as a consequence of the development in accordance with Planning Policy Guidance. Such infrastructure will be delivered in a timely manner to meet the needs of existing and planned communities and includes the following aspects which may be required having regard to the nature, scale and location of the proposed development:

Essential / Enabling Infrastructure:

- **Transportation and highways including access, circulation, parking, public transport provision, walking and cycling;**
- **Utility services;**
- **Flood mitigation / defences;**

Necessary Infrastructure:

- **Affordable Housing;**
- **Schools and education;**
- **Health and social care;**
- **Community buildings and facilities including District and Local Centre improvements;**
- **Local employment and training including replacement employment opportunities where relevant;**
- **Community safety initiatives;**
- **Open space, recreational facilities, playgrounds, allotments;**
- **Protection, management, enhancement and mitigation measures relating to the natural and built environment;**
- **Public realm improvements and public art;**
- **Waste management facilities including recycling and services;**
- **District heating and sustainable energy infrastructure.**

4.92. Policy KP6 seeks to ensure that new developments, irrespective of their size, location, or land use, make appropriate provision for infrastructure. Specific infrastructure requirements will vary in different locations and be dependent upon the scale and nature of proposed

development. Infrastructure may be required to facilitate development (essential/enabling) or can be required to make a development acceptable (necessary). For example, it may include elements from the list contained as part of the Policy, which is not exhaustive, but gives an indication of the potential scope of infrastructure which may be required.

- Category 1: Essential / Enabling Infrastructure (to facilitate development) - Those items which will need to be delivered prior to, or from the commencement of the relevant phases of development (e.g. transportation / highways infrastructure, utility services and flood mitigation / defences);
- Category 2: Necessary Infrastructure (to make development acceptable) - Items which need to be phased and implemented alongside new development, to ensure that areas are served with appropriate facilities over time (e.g. schools and recreational open space).

4.93. The list serves to give a general indication only as each topic may have complex requirements. For example transportation infrastructure could include elements of the following:

- Routes and facilities for walking and cycling comprising both on-road and off-road improvements;
- Rapid transit corridors, including heavy rail, light rail, tram train and bus rapid transit;
- Key bus corridors and the wider bus network including bus priority measures and passenger facilities;
- The rail network and rail services including new rail stations, station improvements and facilities for rail freight;
- Transport interchanges to support integration between modes including, bus and rail stations, facilities for bus and rail-based park and ride, park and share, passenger drop off, taxis, park and cycle, coach parking, overnight lorry parking and water transport;
- Designated freight routes and freight transfer facilities;
- The road network, particularly measures to make better use of existing highway capacity;
- Transport by river (including Cardiff Bay); and
- Port and shipping facilities.

4.94. With regard to Strategic Sites, policies KP2(A)-KP2(H) provide clear guidance on the Council's infrastructure and masterplanning

requirements. This information will be cross-referenced to the Cardiff Infrastructure Plan which is a 'living document' sitting alongside the LDP. The Infrastructure Plan is directly linked to the LDP Monitoring Framework and will be regularly updated, so as more details are established they can be incorporated into the document.

4.95. The Infrastructure Plan identifies the potential costs of infrastructure provision, potential funding mechanisms / sources of funding and provides an indication of phasing requirements. The diagram set out below shows some of the potential funding sources for infrastructure provision. It is important to note that there are numerous potential funding sources and those shown on the diagram raise peripheral issues which require further discussion and work to investigate the feasibility of securing funding through these means.

4.96. Within larger sites, which are the subject of detailed masterplanning and phasing, it is likely that necessary infrastructure can be delivered as part of comprehensive mixed-use development. This infrastructure could be delivered through planning obligations or by direct intervention from service/infrastructure providers. In all cases, the early identification of infrastructure requirements and a commitment from developers and

service providers to work in partnership will help ensure that all necessary infrastructure can be planned, delivered and managed in an orderly and timely manner.

4.97. The provision of flexible, multi-functional buildings and places will allow for essential services to be provided, whilst allowing communities define and re-define their infrastructure requirements over time. A strong commitment to shared community buildings, services, their management and maintenance will ensure that facilities are at the heart of the community, whilst reducing overall costs to both developers and service providers. The principle of community buildings integrated within multi-function “hubs” (for example, the @Loudoun development in Butetown) is a trend which is set to continue. The Infrastructure Plan provides further information regarding potential opportunities for shared premises as well as an indication of compatible uses and services.

4.98. A Community Infrastructure Levy (CIL) for Cardiff is being progressed. The balance between site masterplanning, planning obligations and CIL to deliver infrastructure will be informed by site viability, dialogue with developers and the availability of other funding sources. Detailed Policy KP7 (Planning Obligations) provides further detail and describes those infrastructure requirements which may be delivered through planning obligations.

KP7: PLANNING OBLIGATIONS

Planning obligations will be sought to mitigate any impacts directly related to the development and will be assessed on a case by case basis in line with Planning Policy Guidance.

4.99. Planning obligations are a means of overcoming obstacles to the grant of planning permission. They are attached to planning permissions and are commitments by developers to undertake necessary works or make financial contributions that cannot be secured by condition or other statutory means.

4.100. New development often generates additional demands upon existing services, facilities, infrastructure and the environment. Planning obligations are a means of seeking contributions from developers towards these demands, as well as negotiating benefits that improve the standard

of development proposals by providing necessary infrastructure and community benefits.

4.101. The legislative and policy framework governing the use of planning obligations is provided in PPW, Community Infrastructure Levy Regulations 2010 (as amended) and Welsh Office Circular 13/97 'Planning Obligations' (or subsequent versions).

4.102. The CIL Regulations require there to be no overlap between infrastructure funded from CIL and what can be delivered through planning obligations. To avoid duplication, and to provide clarity to developers, the Authority will publish a list (Regulation 123 List) of the infrastructure which will be funded through the CIL. For infrastructure not included on the Regulation 123 List, it may be appropriate to secure necessary infrastructure through planning obligations.

4.103. Obligations will be sought from a developer to:

- Restrict the development or use of land;
- Require land to be used in a specific way;
- Require operations or activities to be carried out; or
- Require payments to be made to the authority.

4.104. They will be sought where they are:

- Necessary to make the development acceptable in planning terms
- Directly related to the development; and
- Fairly and reasonably related in scale and kind to the development

4.105. Obligations are normally negotiated under Section 106 of the 1990 Town and Country Planning Act. Agreements can also be entered into under Section 278 of the 1980 Highways Act. These prescribe the highway works required as a result of proposed developments. SPG will be prepared to provide further guidance on the use of planning obligations.

4. Delivering sustainable transportation solutions

KP8: SUSTAINABLE TRANSPORT

Development in Cardiff will be integrated with transport infrastructure and services in order to:

- i. Achieve the target of a 50:50 modal split between journeys by car and journeys by walking, cycling and public transport.**
- ii. Reduce travel demand and dependence on the car;**
- iii. Enable and maximise use of sustainable and active modes of transport;**
- iv. Integrate travel modes;**
- v. Provide for people with particular access and mobility requirements;**
- vi. Improve safety for all travellers;**
- vii. Maintain and improve the efficiency and reliability of the transport network;**
- viii. Support the movement of freight by rail or water; and**
- ix. Manage freight movements by road and minimise their impacts.**

4.106. For Cardiff to accommodate the planned levels of growth, existing and future residents will need to be far less reliant on the private car. Therefore, ensuring that more everyday journeys are undertaken by sustainable modes of transport, walking, cycling and public transport, will be essential.

4.107. The location and form of developments are major determinants of the distance people travel, the routes they take and the modes of transport they choose. Much of the growth in car travel in recent decades can be attributed to developments which have been poorly integrated with the transport network. Integration of land use and transport provision can help to manage travel demand, avoid developments which are car dependent and make it easier to facilitate movements by sustainable modes.

4.108. The purpose of this Key Policy, therefore, is to ensure that developments are properly integrated with the transport infrastructure

necessary to make developments accessible by sustainable travel modes and achieve a necessary shift away from car-based travel.

4.109. In order to mitigate transport impacts and achieve the 50:50 modal split target, the development of strategic sites will be integrated with provision of transport and highways infrastructure referred to in Policy KP6 (New Infrastructure). Such infrastructure will include:

- the walking and cycling infrastructure supported by Policy T1;
- the strategic rapid transit, bus corridor enhancements and wider improvements to the city's bus network supported by Policy T2;
- Transport Interchanges supported by Policy T3; and
- the Regional Transport Hub supported by Policy T4.

4.110 Policies KP2 (A) to KP2 (H) list the 'Essential' and 'Enabling infrastructure' required to support the development of each strategic site's contribution to the delivery of the county-wide 50:50 modal split target.

4.111. Currently (2011) 64% of all weekly journeys (work and non-work related) are made by car, whilst 36% are made by other modes. A central aim of the transport strategy supporting the LDP is to achieve a 50:50 split between travel by car and sustainable travel. This target is not simply a policy aspiration; local knowledge of the transportation network and research of travel behaviour, patterns and trends in combination with modelling work carried out by the Council has shown that achieving this ratio is necessary for the transport network to accommodate movements associated with the growth envisaged within this plan in a way which avoids unmanageable levels of congestion on the highway network.

4.112 A transport model was developed to assess the overall impact of proposed development sites on the highway network in Cardiff in 2026. The model is based on the morning peak periods when pressures on the highway network are greatest. Peak period flows have been modelled on a 2010 base and then compared with 2026 based on the following increases in housing and employment:

- A 25% increase in housing (from 142,382 to 178,594)
- A 20% increase in jobs (from 198,400 to 238,400)

4.113. The 2026 model was based on the 2010 highway network and assumes no changes have been made to accommodate the additional vehicle movements from the development sites; this approach is known as a 'business as usual' scenario. This has enabled the impact of the LDP Strategy to be fully quantified. The key outcomes of the modelling exercise illustrate that:

- The demand for travel by car would increase by 41%;
- 10% of new demand would be unable to travel on the highway network due to lack of capacity so there would be a 32% net increase in traffic;
- Average journey speeds would decrease; and
- Journey times would increase by approximately 41% or 7 minutes (average).

4.114. The Council's modelling assessment demonstrates that the growth projected in the LDP will result in major increase in transport movements generally including significant additional trips on the highway network. Furthermore, that in order to accommodate the additional vehicular trips on the highway network, it will be necessary that at least 50% of all trips on Cardiff's transport network are made by sustainable modes by the end of the Plan period in 2026.

4.115. The results of the modelling and assessment work show that in order to achieve a 50:50 split between car-based and non car-based travel, development proposed in the LDP will need to be supported by significant new transport infrastructure, improvements to existing transport facilities, and measures to manage travel demand and encourage use of sustainable transport both within existing and new communities in Cardiff. In light of the scale of transport impacts highlighted in the transport evidence base, it is essential that in considering planning applications, the Council seeks to secure measures which maximise the accessibility of development schemes by sustainable modes.

4.116. It is accepted that for some development sites it may not be possible to achieve a 50:50 modal split, at least in the short term. However, in light of the scale of transport impacts highlighted in the transport evidence base, it is essential that in considering planning applications, the Council seeks to secure measures which maximise the accessibility of development schemes by sustainable modes.

4.117. For smaller schemes, this could include accommodating through-pedestrian or cycle movements within the development layout or positioning access to the site where it could minimise the walking distance to the nearest bus stop.

4.118. For larger development schemes which have significant transport implications, more substantial measures will be required to address travel impacts and maximise sustainable access. It is important to clarify that achieving the 50:50 modal split target will not be a matter of requiring all new developments within the plan period to achieve a 50:50 modal split. Rather, the target will be achieved by the Council seeking to secure through the development process measures which maximise the possible share of trips made by sustainable modes for all sites. It is accepted that for some developments a 50:50 modal split may not be achievable, at least in the short term. However, for other development sites the Council will seek to secure a higher than 50% share of trips by sustainable modes.

4.119. Planning applications for development schemes at or above the size thresholds specified in TAN18: Transport will need to be supported by a Transport Assessment (TA). The TA will provide the basis for assessing all the potential travel impacts of developments including their effect on the highway network and the likely modal split of the trips that would be generated. This assessment will help establish the gaps in existing transport provision and the measures necessary to make a development accessible by sustainable modes.

4.120. Such measures will be secured as a condition of planning consent and/or by way of planning obligation. In all cases, the nature of the measures sought will be in proportion with the scale of the development and the impacts requiring mitigation.

4.121. For planning applications relating to the LDP strategic sites, the Council will seek to secure the on-site and off-site transport infrastructure identified within Policy KP2. Implementation of this Policy will help to reduce pollution arising from road traffic. This will counteract increases in atmospheric pollution as a result of the Plan, thereby avoiding significant effects upon internationally designated sites.

4.122. The transport aspects of all development proposals will be considered with regard to this key Policy and the detailed transport policies.

5. Responding to evidenced economic needs

KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS

Provision will be made for a range and choice of new employment sites including those identified in KP2 for different types of employment and in different geographical locations to effectively deliver the level of growth set out in the plan together with putting in place a framework to protect the role of existing employment land

4.123. This Policy responds to Cardiff's role as the main economic driver in South East Wales and its operation as a city-region which effectively increases the population to around 1.4 million reflecting its position as capital of Wales and seat of Welsh Government and accounting for 32% of total employment in South East Wales. It delivers the strategic aspirations for economic development in Cardiff through the identification and protection of employment land and premises and opportunities to deliver the key economic growth sectors relating to ICT, energy and environmental technologies, advanced materials and manufacturing, creative industries, life sciences and financial and professional services.

4.124. At the heart of this approach is recognition that the Cardiff city-region clearly forms a natural economic area and it has consistently made a major positive contribution to the economic growth of Wales. In core city analysis, Cardiff performs well and there is an opportunity to build further on this through continuing to enhance Cardiff's role and also improve linkages and connectivity within the city-region. It is also recognised that there are significant benefits for adjoining areas from Cardiff's success in achieving economic growth.

4.125. The economic strategy for the LDP supports inward investment and new business requirements through striking a balance between the supply and demand for employment land and continuing to provide a diverse range of job opportunities. Critical to the economic strategy for the city is an appreciation of the changes in population, labour market and employment base together with achieving the appropriate balance between the provision of new jobs and homes.

4.126. A number of key issues and messages emerge from the supply and demand studies which have implications for Cardiff's economic performance and therefore are critical elements of the economic strategy for the LDP. The evidence points to the need for a Strategy that addresses these three issues:

- Providing a range and choice of new employment land;
- Cardiff Central Enterprise Zone as a core element of the strategy; and
- Recognising the role of existing employment land and premises.

4.127. In terms of providing for new employment land, the LDP sets a framework for delivering a wide range and choice of employment sites in different locations and for different sectors including the key market sectors of ICT, energy and environmental technologies, advanced materials and manufacturing, creative industries, life sciences and financial and professional services. The range of new sites ensures that Cardiff can deliver the stated level of growth for new jobs. Importantly, different sites will perform different roles in the strategy. For example, land at Junction 33 may be better suited to ICT, life sciences, energy and environmental technologies whilst Porth Teigr (Roath Basin) is becoming an important location for media and creative industries. Land south of St Mellons Business Park is also allocated to provide a strategic employment site capable of attracting inward investment opportunities for high value service and knowledge based sectors.

4.128. The provision of employment land as part of wider housing-led comprehensive developments at North West Cardiff, North East Cardiff, Arjo Wiggins and Roath Basin provides an important role in terms of the overall supply and mix of employment land offering a good range and choice of small out of centre employment sites, including offices, creative industries, small workshops, and starter units. This will be essential to

ensure the continued provision of local employment opportunities and address the geographical employment disparities across the county.

4.129. The geographical spread of the 'Cardiff offer' also addresses the need to provide jobs in accessible locations. In this respect, the key strategic proposal relating to the Cardiff Central Enterprise Zone and Regional Transport Hub represents a highly sustainable and accessible location, close to areas of high unemployment in the city but also readily accessible to the wider region via sustainable modes of transport.

4.130. This key site is an integral part of the Council's economic vision to establish Cardiff as a leading European business city over the next two decades and will underpin and promote the financial and professional services sector and create a platform for investment. It will greatly assist promoting Wales' share of UK inward investment which has fallen from previous rates of 20% to just 2%. Furthermore, the scale of this proposal relating to Grade A office space is potentially a real 'game changer' for Cardiff and Wales to compete more effectively with other UK cities.

4.131. It is a long-term proposal which seeks to revitalise up to 140 acres of brownfield city-centre land adjacent to Cardiff Central railway station. It will focus on enhancing Cardiff's growing reputation as a financial and professional services cluster and is a key sustainable regeneration project.

4.132. Integrated transport sits at the heart of the Cardiff Central Enterprise Zone with Central Square becoming the hub of the Enterprise Zone. The proposal represents the next phase of redevelopment of Cardiff city centre and aims to create a modern and high quality gateway to the city whilst extending the function of the city centre south of the railway line, creating a better link between the city centre and Bay and providing a new convention centre to attract business, tourism and promote the city for business. The Cardiff Central Enterprise Zone is one of 7 new Enterprise Zones in Wales designated by the Welsh Government and the only Zone focused on financial and professional services. The Zone came into effect on 1st April 2012 and has a lifespan of 5 years.

4.133. It is important to ensure that a range and choice of employment land and business premises are provided to maintain and improve the competitiveness of the city, promote and protect indigenous business and attract inward investment. There has been growing pressure over recent

years for the development and redevelopment of employment land and premises for alternative uses (predominantly residential), whether still occupied or where current operations have ceased, which offer a greater level of return for investors. Such development proposals can result in significant losses to the county's stock of employment land and premises.

4.134. The loss of employment land can be incremental with the loss of one site setting the precedent for the loss of a series of others in a similar location, leading to a gradual erosion of an employment area. Sometimes alternative uses can also fragment a larger business area or sever links between employment uses in an area. Over time pressure for alternative uses result in a cumulative loss of employment sites to the detriment of the local economy. In addition many existing industrial areas are located within the 'southern arc' of deprivation in areas of greatest need for jobs and it is important to retain employment in these locations due to their accessibility.

4.135. The Strategy seeks to protect existing business and industrial and warehousing land (B1b/c, B2 and B8 uses) to ensure their continued important contribution to providing accessible sources of employment in the city. Similarly, there will be a strong presumption in favour of retaining existing high quality and accessible office accommodation. However, consideration will be given to the change of use (to housing for example) of lower quality office and industrial premises which do not perform an important strategic or local role in terms of the overall range and choice of premises. Where alternative use of land is considered appropriate, priority will be given to mixed-use development comprising employment, housing and community facilities or, where that is not feasible, housing. (This policy position will also help to support future windfall provision over the Plan period) Other proposals will need to demonstrate why a mixed-use of housing and employment schemes cannot be achieved on a site.

4.136. It is also important to recognise the role of the sea port, ABP and its tenants in South Wales directly and indirectly supports over £1.7 billion of gross output in Wales. There are therefore opportunities to continue to support the role of the port, particularly its potential to generate new industry and services (Competitive Capital – The Cardiff Economic Strategy 2007 to 2012, Cardiff Council).

4.137. In addition, in order to maximise the contribution to providing jobs from existing sites and promote the efficient use of land, the strategy seeks to encourage the intensification and refurbishment of existing employment land and premises which are under used, vacant or in decline. The Strategy supports the regeneration of land and property for employment purposes such as Mount Stuart Square as a focus on innovative business.

KP10: CENTRAL AND BAY BUSINESS AREAS

The following uses are considered appropriate within the Central and Bay Business Areas:

- i. New offices, residential and commercial leisure uses within the Central and Bay Business Areas;**
- ii. Enhanced retail and complementary facilities within the Central Shopping Area; and**
- iii. Other uses most appropriately located in city centres.**

4.138. This Policy describes the range of uses appropriate within the Central and Bay Business Areas, as identified on the Proposals Map. It identifies those uses most appropriately located in centres accessible to large numbers of people and encourages a mix of complementary uses to maintain and enhance the vitality, attractiveness and viability of such centres. Identified within the Central Business Area (CBA) is the Central Shopping Area, as defined on the Proposals Map, where new and improved retail uses are most appropriate to maintain a vibrant and vital shopping centre.

4.139. The CBA is the administrative and business heart of the city, and the established focus for major office and commercial leisure developments. The CBA contains the Central Shopping Area, with the recent St. David's redevelopment confirming Cardiff's position at the head of the regional shopping hierarchy. The civic centre is home to the National Museum of Wales and Cardiff University which, along with Cardiff Castle and Bute Park to the north, provide the historic setting for the city

centre. The area has the diversity and attractiveness befitting a European capital city.

4.140. The Bay Business Area (BBA) is the focus for government, tourism and leisure development; with the Senedd, the Wales Millennium Centre and other landmark buildings redefining the architectural quality and attractiveness of the waterfront and its environs. Future development should continue to enhance the waterfront as an attractive and diverse mixed-use location, whilst complementing and supporting the CBA as the economic driver for the city region. The Cardiff Bay Barrage has created a 200 hectare freshwater lake and 13km of waterfront providing opportunities for further tourism and water based recreation as well as attracting significant inward investment in an attractive waterfront location.

4.141. New and improved leisure, recreation and tourist facilities are important for the future development of Cardiff. These uses are major employers in the city centre and generate significant benefits to the local economy. By improving the quality and range of sporting, recreation and leisure facilities, the area is made a more attractive place in which to live, work and visit, thereby helping to attract inward investment and regeneration. These attractions are also important for city marketing and the branding of Cardiff as a major cultural, sporting and leisure destination. Furthermore, it is recognised that these facilities are an important factor in improving the well-being and quality of life of our local communities.

4.142. The Central and Bay Business Areas also contain a significant number of residential premises including high-rise apartment blocks, student accommodation and residential uses above commercial premises. Although the city centre and bay areas have experienced a large increase in residential development over the past 20 years, there remains the potential for further residential development. New residential development within the Central and Bay Business areas will support the delivery of balanced, mixed use areas where, by virtue of their proximity to public transport, leisure, employment and community facilities, can create sustainable urban neighbourhoods and contribute to the daytime and evening economy.

4.143. A series of City Centre Strategies have been prepared since 1997, providing the framework for the strategic regeneration and management

of the city centre. A new Strategy is to be prepared alongside a series of Area Action Plans to define the regeneration activity and infrastructure necessary to deliver, sustain and manage the development of the city centre for present and future generations.

KP11: CRUSHED ROCK AGGREGATES AND OTHER MINERALS

Cardiff will maintain a steady and adequate supply of minerals and contribute to regional aggregate supplies by:

- i. Promoting and supporting the efficient use of minerals and use of alternatives to naturally occurring minerals including the re-use of secondary aggregates;**
- ii. Protecting existing mineral reserves and safeguarding potential resources of limestone, coal and sand and gravel from development that would preclude their future extraction;**
- iii. Maintaining a minimum 10 year land bank of permitted crushed rock aggregate reserves in line with national guidance;**
- iv. Supporting appropriate applications for sand and gravel extraction; and**
- v. Safeguarding wharves from development that would prevent their use for landing marine dredged sand and gravel.**

4.144. Mineral resources are a valuable but finite resource. An adequate and steady supply of minerals is essential to the national, regional and local economy and their exploitation makes a significant contribution to our economic prosperity and quality of life. Cardiff is one of the largest producers and consumers of minerals in the region and those worked in Cardiff at present provide the essential raw materials for our buildings, infrastructure and maintenance. Natural minerals include quarried hard rock (carboniferous limestone and dolomite) and dredged sand landed in Cardiff Docks.

4.145. Crushed rock production in the past has averaged 1 million (mt.) per annum, broadly similar to the County's consumption. In addition approximately 0.3 mt. of sea dredged sand is landed at Cardiff Docks every year. The majority of natural mineral production is used in the construction industry as crushed rock aggregates. Secondary materials,

such as construction and demolition waste, are also used as substitutes for natural aggregates. Cardiff is also an important source of dolomitic and high purity limestone for industrial use in the local steelmaking process. The Regional Technical Statement 1st Review (August 2014) produced by the North and South Wales Regional Aggregates Working Parties states that Cardiff should make provision for 0.86 million tonnes of crushed rock aggregates per year up to 2036, resulting in a total apportionment of 21.5 million tonnes. This requirement is based on average annual production for the period 2001 to 2010 and compares with the existing landbank of 41 million tonnes (as at 31st December 2010) of crushed rock reserves meaning Cardiff, based on current information, has a surplus of permitted reserves when compared to the requirements set out in the Regional Technical Statement 1st Review. This Policy recognises that Cardiff is an important regional provider of minerals and provides for the continuation of its present contribution to regional demand.

4.146. The Policy promotes the increased use of alternatives to naturally occurring minerals. The re-use or recycling of construction and demolition material and industrial waste serves not only to reduce the amount of waste produced but also conserves scarce non-renewable natural mineral resources and minimises environmental damage.

4.147. However, allowing for improvements in recycling and re-use, there will remain a need for primary minerals. It is recognised that natural mineral resources can only be replenished over geological timescales and that they need to be protected for future generations. As minerals can only be worked where they exist, it is important to protect them from inappropriate development, which could effectively sterilise them. The Policy precludes inappropriate development on mineral reserves and resources themselves and allows for buffer zones within which sensitive development will be prevented.

KP12: WASTE

Waste arisings from Cardiff will be managed by:

- i. Promoting and supporting additional sustainable waste management facilities, measures and strategies in accordance with the Collections, Infrastructure and Markets Sector Plan (2012) and TAN 21 (2014) in a**

- manner that follows the waste hierarchy and the principles of an integrated and adequate network of waste installations; nearest appropriate installation; self-sufficiency and protection of human health and the environment;**
- ii. Encouraging the provision of in-building treatment facilities on existing and allocated areas of general industry;**
 - iii. Supporting the provision and maintenance of sustainable waste management storage and collection arrangements in all appropriate new developments; and**
 - iv. Supporting waste prevention and reuse and the provision of facilities that use recycled or composted products.**

4.148. Cardiff produces around a million tonnes of waste each year, varying from harmless inert materials to highly toxic chemical by-products and residues. It is important for the Council to manage the land use implications of this waste in an environmentally acceptable and sustainable way. The Council is moving towards more sustainable waste management practices in line with European and national guidance, by increasing the amount of municipal waste recycled or composted and reducing the amount of biodegradable waste sent to landfill.

4.149. TAN 21 (2014) sets a framework for the delivery of sustainable waste management infrastructure through the planning process. The Collections, Infrastructure and Markets (CIM) (Sector Plan 2012) is intended to deliver the sustainable development outcomes set out in 'Towards Zero Waste' the overarching waste strategy document for Wales. The Council will work with others within the South East Wales region to monitor waste arisings and capacity requirements and respond to identified needs by providing an integrated and adequate network of waste management facilities across the region. Additional treatment and recovery facilities are likely to be required within Cardiff during the Plan period in order to achieve the targets set out in the CIM Sector Plan and the policy principles established in TAN 21 (2014).

4.150. All appropriate new development should include provision for the storage, recycling and management of waste. This will encourage waste reduction, recycling, composting and separation at source, in order to contribute towards meeting waste management targets.

6. Responding to evidenced social needs

KP13: RESPONDING TO EVIDENCED SOCIAL NEEDS

A key part of the successful progression of the city will be to develop sustainable neighbourhoods, tackle deprivation, and improve the quality of life for all. This will be achieved through:

- i. Providing a range of dwelling sizes, types and affordability including seeking to provide a target of 6,646 affordable dwellings over the remaining 12 years of Plan period;**
- ii. Supporting the vitality, viability and attractiveness of existing District and Local Centres and their regeneration, including retail and other commercial development and housing of an appropriate scale;**
- v. Encouraging the provision of a full range of social, health, leisure and education facilities and community infrastructure for both existing and new communities that are accessible to all by walking and cycling and public transport;**
- vi. Supporting the regeneration of deprived communities within the city and maximising the additional benefits that new communities can bring to adjoining or surrounding communities;**
- vii. Encouraging the enhancement of communities through better equality of access to services for all, promoting cultural and wider diversity for all groups in society, and creating places that encourage social interaction and cohesion;**
- viii. Developing new cultural and sporting facilities to build upon Cardiff's role as a major tourist, cultural and sporting destination for visitors and residents alike; and**
- ix. Designing out crime and creating communities which are safer and feel safer.**

4.151. PPW promotes sustainable communities. In delivering sustainable communities, the Council will seek to ensure a range of dwelling sizes, types and affordability is provided in terms of both market and affordable housing to meet identified needs (including supported and sheltered housing and other special needs where appropriate), in safe neighbourhoods. In Cardiff, in line with national trends, average

household size has been declining and in general this has been reflected in an increasing proportion of 1 and 2 bedroom flats in schemes with residential consent.

4.152. Whilst the provision of flats does cater for those seeking smaller units of accommodation, and this may free up other larger units of existing housing, there will still be a need for a range of dwelling types and sizes to be provided on sites that come forward during the Plan period. Whilst flats may be appropriate on some sites, the Council will seek to ensure, particularly in larger schemes, that a range of dwelling types and affordability is provided.

4.153. The affordable housing target (6,646 or 554 units per annum) identifies the number of affordable housing units that it is anticipated will be provided over the remainder of the Plan period 2014 to 2026. The target takes into account the current landbank of affordable units (less an allowance for flexibility) and expected contributions from strategic and non-strategic sites, windfall sites change of use schemes based on the affordable housing target percentages (30% for greenfield sites and 20% for brownfield sites) outlined in Policy H3.. It is also likely that some affordable housing will also come forward from sources other than by the use of planning obligations, for example on sites or in dwellings acquired by social housing providers.

4.155. The Cardiff LHMA assessment sets a requirement over the period 2013-2018 of 3,989 affordable units per year or a total of 19,945. Clearly, the affordable housing target over the Plan period will not meet the need figure as set out in the LHMA and it is not expected to as it is only one of a variety of means to achieving a supply of affordable housing.

4.155. The Plan also supports the viability and attractiveness of District and Local Centres which form an important part of Cardiff's retail hierarchy and of its social, economic and physical fabric. In addition to their primary function of providing local shopping facilities they also accommodate a range of accessible services facilities and employment. This Policy aims to support the retention and provision of local shopping facilities, which remains the primary role of centres and underpins their vitality, attractiveness and viability. Such facilities are also accessible to the local community by public transport, walking and cycling thereby supporting the sustainable transportation objectives set out in the Plan.

Furthermore, the Policy also seeks to encourage investment and renewal of the physical fabric of centres.

4.156. Providing a range of community, health, religious and educational facilities which are accessible to as many people as possible is an essential requirement in order to secure sustainable communities. Such facilities are significant local employers and can contribute towards the regeneration of local areas. Additionally, these services are essential to maintain and improve the quality of life of people living and working in Cardiff.

4.157. The masterplanning approach which has been adopted to provide a framework for the development of strategic sites fully recognises the potential benefits that new development can bring to adjoining areas. Opportunities can be taken to deliver the aims of this Policy by new development enhancing the quality and range of existing provision of a range of facilities and services.

4.158. In order to further support the regeneration of deprived communities within the city the LDP will support implementation of the Council's Neighbourhood Improvement Programme (March 2007) and the Communities First Programme, which aim to close the gap between the most deprived neighbourhoods and the city as a whole.

4.159. In order to secure sustainable communities it is important that the LDP helps promote a culture in which diversity is valued and equality of opportunity is a reality. This can be achieved through a combination of policies within the Plan, particularly those creating places that encourage social interaction and cohesion.

KP14: HEALTHY LIVING

Cardiff will be made a healthier place to live by seeking to reduce health inequalities through encouraging healthy lifestyles, addressing the social determinants of health and providing accessible health care facilities. This will be achieved by supporting developments which provide for active travel, accessible and useable green spaces, including allotments.

4.160. This Policy accords with the aim in PPW to deliver sustainable development through ensuring that health is considered in new developments. It also assists achievement of a number of PPW objectives regarding travel and access to key community facilities. It reflects the direction that *'health considerations can be material considerations in determining planning applications'* (PPW Para. 12.13.8) and accepts that the effect of development on people's health is a key element of sustainable development and its consideration will raise any significant issues which need to be taken into account.

4.161. Implementation of this Policy supports the Cardiff Partnership Strategy (2010-2020) and the population outcome 'people in Cardiff are healthy'. It also contributes to the delivery of a number of objectives regarding healthy lifestyles including physical activity and recreation, in accordance with Our Healthy Future (Welsh Government 2009), Fairer Health Outcomes for All (Welsh Government 2011) and Creating an Active Wales (Welsh Government 2010).

4.162. The Policy reflects evidence provided by 'The Marmot Review: implications for spatial planning' and Barton and Tsourou (2000) 'Healthy Urban Planning' and supports the theme of healthy urban environment and design taken forward by the World Health Organisation and UK Healthy Cities Networks.

4.163. Overall, these policies and guidance conclude that the built and natural environment together with lifestyle behaviours contribute to improving health. Key measures to improve the health of the population include supporting:

- Active travel such as walking and cycling;
- Access to well-maintained open spaces for physical activity and food growing; and
- Access to health care facilities.

4.164. Such measures will assist in:

- Achieving and maintaining a healthy weight;
- Protecting mental health; and
- Reducing stress levels.

4.165. Cardiff has a wealth of open spaces and walking and cycling routes to work/school and for leisure are on the increase and it is important to protect and enhance these assets for health improvement.

7. Respecting Cardiff's environment and responding to climate change

KP15: CLIMATE CHANGE

To mitigate against the effects of climate change and adapt to its impacts, development proposals should take into account the following factors:

- i. Reducing carbon emissions;**
- ii. Protecting and increasing carbon sinks;**
- iii. Adapting to the implications of climate change at both a strategic and detailed design level;**
- iv. Promoting energy efficiency and increasing the supply of renewable energy; and**
- v. Avoiding areas susceptible to flood risk in the first instance in accordance with the sequential approach set out in national guidance; and**
- vi. Preventing development that increases flood risk.**

4.166. A core function of the Plan is to ensure that all development in the city is sustainable, taking full account of the implications of reducing resource use and addressing climate change. This Policy provides a framework for sustainable growth by promoting development that mitigates the causes of climate change and which is able to adapt to its likely effects. This long-term approach is vital if Cardiff is to realise the economic, environmental and social objectives set out in the Vision.

4.167. In the first instance, a reduction in carbon emissions will be achieved by means of controlling the energy demand associated with development through maximising energy efficiency. Secondly, sustainable sources of energy should be incorporated, without reliance on fossil fuels.

4.168. Carbon sinks act as a means of off-setting carbon emissions by natural means. Trees and soils act as substantial reservoirs of carbon, sequestering atmospheric carbon, and contributing substantially to soils, which accrete carbon faster under tree cover than other forms of vegetation. This stored carbon will usually be emitted as a greenhouse gas if trees are removed or damaged, or soils removed, covered or disturbed (by compaction or contamination) during the construction process.

4.169. As far as practicable, trees should be retained and protected, and land kept as functioning vegetated soil open to the fall of organic matter, with new trees and shrubs provided by developers wherever possible. Where trees and shrubs cannot be surrounded by open soil, hard surfaces should not be used unless there is an overriding need, and areas that are not needed for pedestrian or vehicle use should be retained for soft landscape. Cardiff's open spaces, trees and soils play a crucial role in mitigating the effects of climate change at the local level. Open vegetated soils absorb rainfall and runoff.

4.170. Adapting to the implications of climate change will require buildings which are able to cope with the likely increased temperature ranges, more frequent and severe flooding and increased extreme weather events. Buildings and related infrastructure should be designed to be flexible not only to climatic change but also to accommodate a variety of uses over their lifetime rather than being suitable for one sole application. Landscape will be a critical issue with trees providing protection both by shading and active cooling. This cooling will be required particularly in the city centre and District Centres, and where the young children, older people, and people with mobility impairments gather.

4.171. The Council will require high standards of energy efficiency in new development. Implementation of this Policy, which promotes incorporation of renewable energy generation, will also reduce emission of aerial pollutants, thereby offsetting increases in aerial emissions arising from implementation of other policies in the Plan. This would contribute to avoiding significant effects upon European Sites.

4.172. Avoiding unnecessary flood risk will be achieved by strictly assessing the flood risk implications of development proposals within

areas susceptible to tidal or fluvial flooding and preventing development that unacceptably increases risk. In accordance with TAN15: Development and Flood Risk no highly vulnerable development will be permitted in development advice zone C2. Development will only be considered in other areas at high risk of flooding where it can be demonstrated that the site can comply with the justification and assessment requirements of TAN15 (2004 – Section 6, 7 and Appendix 1). Policy EN14 relating to Flood Risk sets out a range of criteria which will be considered when assessing development proposals in areas of high risk of flooding.

KP16: GREEN INFRASTRUCTURE

Cardiff's distinctive natural heritage provides a network of green infrastructure which will be protected, enhanced and managed to ensure the integrity and connectivity of this multi-functional green resource is maintained.

Protection and conservation of natural heritage network needs to be reconciled with the benefits of development. Proposed development should therefore demonstrate how green infrastructure has been considered and integrated into the proposals. If development results in overall loss of green infrastructure, appropriate compensation will be required.

Natural heritage assets are key to Cardiff's character, value, distinctiveness and sense of place. They include the City's:

- i. Undeveloped countryside and coastline (EN1 and EN2);**
- ii. Landscape, geological and heritage features which contribute to the City's setting (EN3);**
- iii. Strategically important river valleys of the Ely, Taff, Nant Fawr and Rhymney (EN4);**
- iv. Biodiversity interests including designated sites and the connectivity of priority habitats and species (EN5, EN6 and EN7);**
- v. Trees (including street trees), woodlands and hedgerows (EN8);**
- vi. Strategic recreational routes, cycleways and the public rights of way network (T5, T6 and T8);**
- vii. Parks, playing fields, green play areas and open spaces (C4 and C5); and**

- viii. **Growing spaces including allotments, community orchards and larger gardens; and**
- ix. **Holistic integrated surface water management systems (EN10).**

4.173. The policy aims to ensure that Cardiff's green infrastructure assets are strategically planned and delivered through a green infrastructure network. Other policies in the Plan provide more detailed guidance on aspects of these assets, together with supporting SPG.

4.174. The green infrastructure network is important for its own sake and for its contribution to the wider quality of life, including the value that people attach to it. It provides a range of economic, social and environmental benefits including reducing impacts of climate change (KP15), enhanced biodiversity habitat and species connectivity (EN5, EN6 and EN7), providing greater opportunities for sports and recreation (C4), contributing to the communities' health and wellbeing (C6) and providing visual benefits for all (KP5).

4.175. Where development is permitted, planning conditions and/or obligations will be used to protect or enhance the natural heritage network. New developments should incorporate new and / or enhanced green infrastructure of an appropriate size, type and standard to ensure no fragmentation or loss of connectivity.

4.176. Where the benefits of development outweigh the conservation interest, mitigation and/or compensation measures will be required to offset adverse effects and appropriate planning obligations sought. The implementation of policies designed to provide and protect public open space throughout Cardiff would also serve to offset any increase in recreational pressure on the Cardiff Beech Woods SAC, thereby helping to avoid likely significant effect upon that site.

4.177. Management of Cardiff's green infrastructure network should be in place prior to development, and appropriate planning obligations sought. SPG on this topic will more fully outline the extent of Cardiff's green infrastructure and how this policy can be implemented in more detail.

Policy KP17: BUILT HERITAGE

Cardiff's distinctive heritage assets will be protected, managed and enhanced, in particular the character and setting of its Scheduled Ancient Monuments; Listed Buildings; Registered Historic Landscapes, Parks and Gardens; Conservation Areas; Locally Listed Buildings and other features of local interest that positively contribute to the distinctiveness of the city.

4.178. This Policy affords strategic policy protection for Cardiff's historic environment as required by legislation and PPW. The historic environment enriches people's lives and the visual appearance of the city. It reflects the diversity and culture of the communities that have formed it over time, provides evidence of Cardiff's past and helps define its present identity and character. An understanding of the historic and cultural significance of the city can provide a context for managing change and creates a backdrop for innovation in the design of new development to shape the future of the city.

4.179. There are currently 28 Scheduled Ancient Monuments in Cardiff. This Policy affords appropriate protection to these monuments and others that may be scheduled over the Plan period, as well as other important archaeological remains identified within the Historic Environment Record. SPG on Archaeologically Sensitive Areas will provide further guidance on four areas of the city where significant finds have been recorded.

4.180. There are currently almost 1,000 buildings in Cardiff on the statutory List of Buildings with Special Architectural or Historic Interest, designated by Cadw on behalf of the Welsh Government. Along with the legislation referred to above, This Policy affords appropriate protection to these statutory listed buildings and others that may be added to the list by Cadw over the Plan period.

4.181. The Council also holds a Local List of Buildings of Merit. This Policy identifies the significance of these locally listed buildings (and others that may be added to the list by the Council over the Plan period) have in forming the character of the area. Welsh Office Circular 61/96 identifies the weight their designation may have in the assessment of development proposals.

4.182. There are currently 27 conservation areas in Cardiff, as identified on the Constraints Map. Along with the legislation referred to above. This

Policy affords appropriate protection to these and other areas that may be designated by the Council over the Plan period. The Policy should be read in conjunction with the adopted Conservation Area Appraisal prepared for each area, including the enhancement proposals included within them.

4.183. Finally, there are currently 19 historic parks and gardens and 1 historic landscape (the Wentloog Levels) included on the Cadw/ICOMOS 'Register of Historic Landscapes Parks, and Gardens'. This Policy affords appropriate protection to these and other historic parks, gardens and landscapes that may be added to the register by Cadw/ICOMOS over the Plan period.

4.184. In seeking to respond to the presence of heritage assets, developers are encouraged to follow a sequence of investigation and assessment to identify the cultural and historic significance of a place before developing proposals for change or alteration. In this way appropriate approaches can be developed to preserve and enhance the historic environment through proposals that respond to and complement their context. The process is commended within Circular 61/96 and advice within BS Standard 7913, 2013.

KP18: NATURAL RESOURCES

In the interests of the long-term sustainable development of Cardiff, development proposals must take full account of the need to minimise impacts on the city's natural resources and minimise pollution, in particular the following elements:

- i. Protecting the best and most versatile agricultural land;**
- ii. Protecting the quality and quantity of water resources, including underground surface and coastal waters;**
- iii. Minimising air pollution from industrial, domestic and road transportation sources and managing air quality; and**
- iv. Remediating land contamination through the redevelopment of contaminated sites.**

4.185. The best and most versatile agricultural land (grades 1, 2 and 3a of the Agricultural Land Classification) is a finite resource. Once lost to development it is rarely practicable to return such land to best quality agricultural production.

4.186. There is no up-to-date definitive map of agricultural land quality for Cardiff as a whole but the best and most versatile agricultural land is known to exist in parts of the west, north and east of Cardiff. In meeting the needs to provide new homes and jobs in this Plan, some high quality land will be lost but taking account of all relevant factors, this loss is considered justified. Moreover, by putting in place a planned and managed approach to meeting future economic and social needs, this adds strength to the protection of good quality land outside these areas.

4.187. Cardiff's rivers, lakes, ponds and water bodies are important for a wide range of uses and users. Development has the potential to affect water quality and quantity. It is important that development is only allowed where there would be no unacceptable harm to the quality or quantity of water resources and where provision can be made for any infrastructure required to safeguard water quality and quantity. New developments should have an adequate water supply and sewerage system to serve the development. This policy, which is aimed in part at improving water resource use efficiency, will ensure adequate water supply without adverse impacts on the River Usk and River Wye SACs, thereby helping to avoid the likelihood that this LDP will have a significant effect upon European designated sites.

4.188. Poor air quality can affect people's health, quality of life and amenity and can impact on nature conservation and built heritage interests. Development has the potential to cause air pollution, or sensitive developments can be affected by existing air quality problems in an area. In Cardiff, transport emissions are one of the main contributors to poor air quality. Development will not be permitted if it would cause or result in unacceptable harm due to air pollution. Implementation of this Policy will also help to counteract any increase in atmospheric pollution as a result of the Plan, thereby helping to avoid the likelihood that this LDP will have a significant effect upon internationally designated sites.

4.189. The redevelopment of sites with land contamination allows such land to be brought back into beneficial use, prevents dereliction and reduces the need to develop greenfield sites. Developers will be required to demonstrate that any actual or potential contamination can be overcome, thereby ensuring that the land is suitable for the development proposed.

Detailed Policies

1. HOUSING

H1: NON-STRATEGIC HOUSING SITES

The following non-strategic sites are allocated for housing:

Table 3: SUMMARY OF NON-STRATEGIC HOUSING SITES

Site Ref.	Site Name	Estimated Units	Site Size (Ha)
H1.1	Land at Areas 9-12, St Mellons	150	3.98
H1.2	Land rear of Clive Street	80	2.87
H1.3	Rookwood Hospital	90	3.40
H1.4	Former Lansdowne Hospital	75	1.51
H1.5	Land at Dan-y-Garth, Pentyrch	47	2.49
H1.6	Land at former St John's College	64	2.50
H1.7	Ely Bridge Farm, Dyfrig Road. Ely	41	0.72
H1.8	Electrocoin Automatics Ltd, Caerphilly Road	20	0.61
H1.9	Land at Mill Road, Tongwynlais	5	0.40

5.1 To help satisfy the new dwelling requirement it is necessary to allocate non-strategic housing sites, as well as taking into account numbers of dwelling units estimated that will come forward from the existing landbank, strategic sites, and allowances for windfalls and changes of use over the Plan period to 2026.

5.2 The non-strategic housing sites listed in this Policy were put forward as candidate sites in the LDP process and are considered acceptable in principle for residential use. The proposed number of units shown for each site is indicative and may be subject to change depending on details of planning applications yet to be submitted and approved.

H2: CONVERSION TO RESIDENTIAL USE

Within the Central Business Area of the city centre, District and Local centres, as defined on the Proposals Map, the conversion of suitable vacant space above commercial premises to residential use will be favoured where:

- i. Adequate servicing and security can be maintained to the existing commercial use(s);**
- ii. Appropriate provision can be made for parking, access, pedestrian access, amenity space, and refuse disposal together with any appropriate external alterations and;**
- iii. The residential use does not compromise the ground floor use.**

5.3. Within the areas identified the Council will encourage the conversion of suitable space above commercial premises to residential use. The conversion of empty space above shops to residential use provides a valuable contribution to the city's housing stock and provides much needed homes. It also positively contributes to the creation of vibrant, mixed use communities where people live and shop. Centres remain busy and populated beyond business hours, increasing surveillance and providing a market for ancillary uses associated with the night-time economy.

H3: AFFORDABLE HOUSING

The Council will seek 20% affordable housing on Brownfield sites and 30% affordable housing on Greenfield sites in all residential proposals that:

- i. Contain 5 or more dwellings; or**
- ii. Sites of or exceeding 0.1 hectares in gross site area; or**
- iii. Where adjacent and related residential proposals result in combined numbers or site size areas exceeding the above thresholds, the Council will seek affordable housing based on the affordable housing target percentages set out above.**

Affordable housing will be sought to be delivered on-site in all instances unless there are exceptional circumstances.

5.4. The aim of this Policy is to assist the Council to meet evidenced housing need by seeking an appropriate affordable housing contribution from new residential developments in the city.

5.5. The Policy will help provide a range and mix of sustainable affordable housing, in line with Policy KP13.

5.6. PPW recognises that a community's need for affordable housing is a material planning consideration. It also promotes mixed and inclusive communities. More detailed guidance in TAN2: Planning and Affordable Housing requires local authorities to include affordable housing policies in their LDPs where a Local Housing Market Assessment (LHMA) has provided the evidence base to support policies to deliver such housing through the planning system. The Cardiff LHMA update (2013) indicates an annual shortfall of 3,989 affordable dwellings per annum.

5.7. The Policy applies to all proposed housing developments covered by the policy thresholds, including proposals on previously undeveloped land, redevelopment schemes, schemes providing specialised accommodation (except those in which residents require a significant element of care), conversions, changes of use, and mixed-use developments containing housing. It responds to the evidenced need for the planning system to help play its part in securing land and units for affordable housing. However, housing specifically designated to cater for students would not be required to contribute an affordable housing element.

5.8. In accordance with Welsh Government guidance, affordable housing encompasses both social rented and intermediate housing where there are secure mechanisms in place to ensure that it is accessible to those who cannot afford market housing, both on first occupation and for subsequent occupiers. In addition, the Council has a duty to have regard to the needs of disabled people and chronically sick, the majority of whom are best housed in the community. Where there is evidence of need for affordable special needs housing it may, subject to Council agreement, be provided as all, or part of, the affordable housing requirement.

5.9. The Council will provide evidence of need based upon the latest Cardiff Local Housing Market Assessment Update, supplemented by current Council and Registered Social Landlord waiting lists and other relevant information. In order to create mixed and balanced communities, provision for affordable housing will be sought 'on site' unless the Council considers that this is impractical or inappropriate. In such exceptional circumstances, affordable housing may either be provided on another site, (location to be agreed with the Council), or a financial contribution may be provided to address affordable housing requirements elsewhere in Cardiff, in any case, provision should address the need identified in relation to the proposed development.

5.10. The targets set out in the Policy are derived from the findings of an affordable housing viability study undertaken by Peter Brett Associates. This study assessed the viability of a range of housing scenarios (including a calculation for necessary infrastructure which could be achieved through S106 and/or CIL, consistent with Policy KP6: New Infrastructure for different development types with varying levels of affordable housing. In order to demonstrate viability, and take account of the higher costs associated with the development of brownfield sites the study recommended a two tiered affordable housing target. The Report confirms that affordable housing is viable at 30% on greenfield sites and at 20% on brownfield sites (based on indicative tenure mixes of 40% social rented, 40% intermediate rented and 20% Low Cost Home Ownership). This is consistent with the recommendations of the Cardiff Local Housing Market Assessment and the Economic Viability Reports of 2013 and 2014 in seeking an appropriate mix of tenures to address evidenced housing need over the Plan period

5.11. In negotiating affordable housing, each proposal's actual contribution will depend on that scheme's capacity for provision. This will ensure that the affordable housing contribution in itself will not make the scheme unviable. The Council will work with developers to agree a contribution in an open and transparent manner. In cases where agreement cannot be reached, an independent assessment will be commissioned to be paid for by the applicant/developer. The assessment should include details and costs of the necessary infrastructure to be delivered either wholly or in part to support the delivery of sustainable neighbourhoods.

5.12. Detailed guidance on the scale, tenure and nature of the affordable housing to be sought, along with information regarding what will be required as part of independent viability assessments, will be set out in the Affordable Housing SPG. The Policy will normally be implemented by the use of a planning obligation in accordance with Policy KP7.

H4: CHANGE OF USE OF RESIDENTIAL LAND OR PROPERTIES

Outside the Central and Bay Business Areas and District and Local Centres, identified on the Proposals Map, conversion or redevelopment of residential properties to other uses will only be permitted where:

- i. The premises or their location are no longer suitable for residential use; or**
- ii. The proposal is for a community use necessary within a residential area.**
- iii. There would be no unacceptable impact on residential amenity.**

5.13. This Policy identifies the circumstances in which proposals for the conversion or redevelopment of residential properties outside the Central and Bay Business Areas and District and Local Centres identified on the Proposals Map, to other use will be permitted.

5.14. As acknowledged in PPW, offices, retail, entertainment and other uses that attract a significant number of visitors, whether by vehicle or on foot, are generally best located in centres where they are most widely accessible, particularly by public transport and have least harmful impact on residential amenity. Within Cardiff, these centres are the Central and Bay Business Areas, Central Shopping Area and District and Local centres identified on the Proposals Map. A range of Plan policies seeks to direct appropriate uses to these centres.

5.15. Outside these centres, proposals for the conversion or redevelopment of residential properties to other use will only be permitted in line with Policy H6 and if no unacceptable harm will be caused to the amenity or health of remaining residences in line with Policy H6.

5.16. There is a range of community uses that are appropriate and necessary, in principle, within residential areas. These include doctors' and dentists' surgeries, residential homes and child-care facilities. Further guidance on the conversion of residential properties to childcare facilities will be set out in SPG.

5.17. In order to safeguard the amenity of residential areas, there will be a general presumption in favour of permitting the range of commercial and community uses in the Central and Bay Business Areas and District and Local Centres identified on the Proposals Map - including by the conversion or redevelopment of existing residential accommodation - subject to relevant policies. Within the Central and Bay Business Areas, proposals will be assessed having regard to Policy KP10 District and Local Centres, proposals will be assessed having regard to Policies R4 & R5.

H5: SUB-DIVISION OR CONVERSION OF RESIDENTIAL PROPERTIES

Proposals for any conversion to flats or Houses in Multiple Occupation will be permitted where:

- i. The property is of a size whereby the layout, room sizes, range of facilities and external amenity space of the resulting property would ensure an adequate standard of residential amenity for future occupiers.**
- ii. There would be no material harm to the amenity of existing, nearby residents by virtue of general disturbance, noise or overlooking.**
- iii. The cumulative impact of such conversions will not adversely affect the amenity and/or the character of the area.**
- iv. Does not have an adverse effect on local parking provision**

5.18. The subdivision of a residential building into smaller residential units can be an important source of housing. It can take different forms such as:

- Subdivision of existing houses into flats and HMOs (Houses in Multiple Occupancy).
- Conversion of HMO's to flats.

5.19. The Council requires all flat conversions and HMOs to be of a high quality and to be well designed.

5.20. The objectives of the Policy are:

- to support the creation of attractive sustainable development for self-contained flats and HMOs;
- to promote good design and layout.

5.21. The subdivision of a building into smaller residential units is a sustainable form of development as it gives a new lease of life to buildings which might be redundant or economically unviable in their current use.

5.22. With sympathetic alterations to the exterior of a building, conversion has a lower visual impact on the street scene by preserving the existing frontage and respecting the character of an area.

5.23. However, unsatisfactory conversion work can result in accommodation which is an over-intensification form of development resulting in inadequate and poor quality accommodation. Occupants may be exposed to problems, such as overlooking, poor outlook, overcrowding and lack of amenity space, noise and disturbance from neighbouring premises, and inconvenient and unsafe access.

5.24. Further information will be given in SPG.

H6: CHANGE OF USE OR REDEVELOPMENT TO RESIDENTIAL USE

Change of use of redundant premises or redevelopment of redundant previously developed land for residential use will be permitted where:

- i. There is no overriding need to retain the existing use of the land or premises and no overriding alternative local land use requirement;**
- ii. The resulting residential accommodation and amenity will be satisfactory;**
- iii. There will be no unacceptable impact on the operating conditions of existing businesses;**
- iv. Necessary community and transportation facilities are accessible or can be readily provided or improved; and**
- v. It can be demonstrated that the change of use to a more sensitive end use has been assessed in terms of land**

contamination risk and that there are no unacceptable risks to the end users.

5.25. This Policy provides a framework for the assessment of applications for the change of use, conversion or redevelopment of redundant previously developed land and premises for residential purposes within settlement boundaries. It is aimed at ensuring that:

- Where necessary, land retains its existing use;
- Land that is no longer required for its existing or former use, if there is no overriding need to retain the existing use of the land or premises and no overriding alternative local land use requirement, contributes to meeting housing requirements, thereby reducing the need to develop previously undeveloped land - which is a fundamental component of the LDP Strategy; and
- New residential accommodation and environments are well-designed, environmentally sound and make a significant contribution to promoting community regeneration and improving the quality of life.

5.26. The Policy responds to evidenced social need for new homes in line with Policy KP1 and relates to Policies EC3 & H2. PPW indicates that such changes of use and redevelopment should be taken into account in housing provision. It defines 'previously developed land'. National guidance and plan policies relevant generally to the countryside will apply outside settlement boundaries. The Policy will also apply to mixed-use development including housing.

5.27. Assessment of whether land or premises are redundant or need to be retained in their former use (criterion '(i)') will include tests identified in relevant policies, notably Policy EC3 Alternative Use of Sites and Premises relating to the protection of employment land and premises.

5.28. Considerations under criterion '(ii)' will include the compatibility of neighbouring uses, preventing insensitive or inappropriate infilling, privacy/amenity, size, density, aspect, scale, layout and requirements for security and amenity space.

5.29. Criterion '(iii)' is intended to ensure that the introduction of residential use into an area or building does not unduly restrict the operating conditions of existing businesses.

5.30. Criterion '(iv)' may involve contributions being sought from developers towards the provision of necessary community and other facilities, in accordance with Policy KP7, delivering necessary infrastructure.

5.31. Where there is a change of use or redevelopment of commercial/industrial units to residential, there needs to be an appropriate assessment for the presence of land contamination. The land contamination standards set for commercial/industrial use are not suitably protective for residential use and therefore unacceptable risks to the end users may be present and will require appropriate remediation, where residential use is proposed.

H7: SITES FOR GYPSY AND TRAVELLER CARAVANS

New sites and extensions to existing sites will be permitted where:

- i. Necessary physical, transport and social infrastructure are accessible or can be readily provided;**
- ii. Environmental factors including flood risk, ground stability, land contamination and proximity of hazardous installations do not make the site inappropriate for residential development;**
- iii. The site is designed with reference to both the Welsh Government Good Practice Guide in Designing Gypsy Traveller Sites and the views of local Gypsies and Travellers;**
- iv. There would be no unreasonable impact on the character and appearance of the surrounding areas including impact on residential amenity of neighbouring occupiers or the operating conditions of existing businesses; and**
- v. In the case of a transit or touring site, it has good access to the primary highway network.**

5.32. This Policy provides a framework for assessing proposals for both new and extensions to existing sites whether for permanent or transit sites.

5.33. Cardiff currently has two Gypsy and Traveller sites, at Rover Way and Shirenewton, providing a total of 80 permanent pitches. To date these two sites have accommodated natural population growth, with some

overcrowding. The latest Gypsy and Traveller Needs Assessment was undertaken in April 2013 and showed a need for 108 permanent Gypsy and Traveller pitches. Local authorities are required to assess the accommodation needs of Gypsy families (Housing (Wales) Act 2014) and submit the assessment to the Welsh Government for approval by March 2016. PPW says that it is important for LDPs to have policies for the provision of sites. Welsh Government Circular 30/2007 indicates that where there is an assessment of unmet need for Gypsy and Traveller accommodation, sufficient sites should be allocated in the LDP to meet needs. A criteria based policy for Gypsy and Traveller sites must also be included in order to meet future need.

5.34. This updated assessment will inform a wider site selection process which will progress over the next two years to meet the short and long term need for Gypsy and Traveller pitches. This process is referenced in the Monitoring Framework and includes the following key outputs and timescales. Sites that come forward through this process, together with any other proposals will be assessed against this policy.

- Agree methodology and project management arrangements by end of 2015
- Undertake Gypsy and Traveller Needs Assessment for both permanent and transit pitches in accordance with Housing (Wales) Act 2014 by February 2016
- Undertake a site search and assessment and secure approval of findings by October 2016
- Secure planning permission and funding (including any grant funding from Welsh Government) for identified sites(s) required to meet the short term need for 43 pitches by May 2017
- Secure planning permission and funding (including any grant funding from Welsh Government) for identified(s) required to meet the long term need for 65 pitches by May 2021

2. ECONOMY

EC1: EXISTING EMPLOYMENT LAND

The city's existing employment areas outside of the Central and Bay Business Areas (as designated on the Proposals Map) will be protected for B Use Class employment generating uses (together with appropriate ancillary and/or complementary uses and

activities as referred to in Policy EC2) as described in the table below.

Site Ref	Site Name	Primary Use/Activity	Status
EC1.1	Ocean Park	B1, B2, B8	Primary
EC1.2	Cardiff Port (& Heliport and surrounds)	B1, B2, B8	Primary (Port related activities)
EC1.3	Rover Way (Celsa Steel Works, Tremorfa Industrial Estate, Seawall Road)	B2, B8	Primary
EC1.4	Wentloog Road (Capital Business Park, Lamby Way Industrial estate, Wentloog Corporate Park, Rail Freight Terminal)	B1, B2, B8	Primary
EC1.5	St Mellons Business Park	B1, B2, B8	Primary
EC1.6	Cardiff Gate Business Park	B1 (offices), ancillary B2	Primary
EC1.7	Cardiff Business Park & Land North of Maes y Coed Road, Llanishen	B1, B2, B8	Primary
EC1.8	Forest Farm, Longwood Drive	B1, B2, B8	Primary
EC1.9	Green Meadow Springs	B1 (offices)	Primary
EC1.10	Penarth Road Area (includes Hadfield Road, Sloper Road, Bessemer Road)	B1, B2, B8	Primary
EC1.11	Ty Nant Road	B1, B2, B8	Local
EC1.12	Crown Way (Companies House)	B1 (offices)	Local
EC1.13	Wentloog Road (North of railway line)	B1, B2, B8	Local
EC1.14	Pentwyn (Panasonic Plant, Avenue Industrial estate)	B1, B2, B8	Local
EC1.16	Eastern Business Park	B1 (offices)	Local
EC1.17	Willowbrook Business Technology Park	B1 (science, research and development)	Local

EC1.18	Excelsior Rod	B1, B2, B8 & complementary trade counter	Local
EC1.19	Norbury Road Industrial Estate	B1, B2, B8	Local
EC1.20	Wroughton Place, Ely	B1, B2, B8	Local
EC1.21	Argyle Way, Caerau	B1, B2, B8	Local
EC1.22	Garth Industrial Estate	B1, B2, B8	Local
EC1.23	Land around Volvo Garage	B1, B2, B8	Local
EC1.24	Alexandra Gate Business Park	B1	Local

5.35. This Policy responds to the economic vision and objectives of the Plan to ensure a range and choice of employment land and premises are available across the city to assist economic competitiveness, encourage entrepreneurship, promote the growth of indigenous businesses of all types and size and attract inward investment.

5.36. A key role for the LDP is to ensure the provision of a portfolio of an appropriate range, quantity and quality of employment land and premises to meet the current and future needs of the city and the city's workforce. One of the main strategies to achieve this aim is the protection of existing employment sites across the city.

5.37. One of the key recommendations of the GVA Grimley Report 'Cardiff Employment Land and Commercial Review' (2009) and Hardisty Jones Associates/Origin 3 Study 'Cardiff Employment Land and Property Study' (April 2012) was to introduce policies to protect nearly all of the remaining employment locations (or allocations that were made in the Local Plan) either because of the important economic role they currently play in the overall employment land portfolio for the city or because of the distribution of this land across the city.

5.38. A critical factor in Cardiff maintaining a supply of employment land will be the ability to protect land and premises for employment from being lost to alternative uses. There has been growing pressure over recent years for the development/redevelopment of employment land and premises for other uses (predominantly residential), whether still occupied or where current operations have ceased. Such development proposals can result in significant losses to the county's stock of employment land and premises.

5.39. The loss of employment land can be incremental with the loss of one site setting the precedent for the loss of a series of others in a similar location, leading to a gradual erosion of an employment site. Sometimes alternative uses can also fragment a larger business area or sever links between employment uses in an area. Over time pressure for alternative uses result in a material aggregate loss of employment sites to the detriment of the local economy.

5.40. The employment sites identified in Policy EC1 display strong potential to continue playing an important economic role, whether this is to provide local employment on smaller sites within key neighbourhoods or whether the sites are more strategic in size, position and function.

5.41. Due to the time that has elapsed since the completion of the GVA Study, the employment sites identified for protection have been reviewed. Some sites have experienced further pressure for alternative uses with additional losses of employment land and their B use class employment function has been all but eroded. These sites, for example North and South of Newport Road and Colchester Avenue are therefore no longer identified for protection for employment purposes. Similarly Cathedral Road and offices adjacent to the River Taff which are characterised by low grade offices with a high level of vacancy are no longer identified for protection and a change of use to housing for example will be given consideration.

5.42. The protection of employment sites also allows for the modernisation and refurbishment of land and property and increasing density of development on site thereby making the most efficient use of land.

EC2: PROVISION OF COMPLEMENTARY FACILITIES FOR EMPLOYEES IN BUSINESS, INDUSTRIAL AND WAREHOUSING DEVELOPMENTS

Provision for open space, public realm, leisure, food and drink, and child-care facilities will be appropriate in office, industrial and warehousing developments, provided, the facility is of an appropriate scale and nature intended primarily to meet the needs of workers in the vicinity, therefore not attracting significant

levels of visitor traffic into the area, or exacerbating existing traffic conditions.

5.43. This Policy seeks to enable the provision of appropriate complementary leisure, food and drink, and childcare facilities in existing and new office, industrial and warehousing areas and helps to deliver Plan objectives. Employees in such areas may require good access to a range of facilities, including food and drink, leisure/recreation and child-care. The absence of such facilities in an employment area can increase travel demand and make the areas less attractive to employers and employees.

5.44. In existing employment areas, change of use of existing premises will be considered for appropriate complementary facilities, including food and drink, leisure and child-care.

5.45. Where new employment areas are proposed, the need for such facilities should be considered as part of the overall development scheme.

5.46. In all cases, only facilities of an appropriate nature and scale to meet the needs of employees will be permitted. Appropriate leisure facilities may include fitness centres/clubs and indoor sports facilities. Provision for accessible open space or public realm improvements may also be appropriate.

EC3: ALTERNATIVE USE OF EMPLOYMENT LAND AND PREMISES

Development of business, industrial and warehousing land and premises for other uses will only be permitted if:

- i. The land or premises are no longer well located for business, industrial and warehousing use; or**
- ii. There is no realistic prospect of employment use on the site and/or the property is physically unsuitable for employment use, even after adaption/refurbishment or redevelopment; or**
- iii. There is no need to retain the land or premises for business, industrial or warehousing use, having regard to the demand for such land and premises and the requirement to provide for a range and choice of sites available for such use; and**
- iv. There will be no unacceptable impact on the operating conditions of existing businesses.**

5.47. This Policy provides criteria against which proposals for the change of use of business and industrial land and premises will be assessed. It will apply to existing, permitted and allocated business, industrial and warehousing land and premises and address:

- The need to retain a range and choice of well-located sites and premises attractive to business, industry and warehousing;
- Making the best use of redundant land and premises for alternative employment purposes; and
- Where land and premises need to be retained because they are of local importance for employment opportunities.

5.48. Criteria for assessing whether land and premises remain well located for business, industrial and warehousing uses will include:

- Accessibility to the primary highway network, rail-freight facilities and the port;
- Accessibility by public transport; and
- Proximity to housing or other sensitive uses.

5.49. The 'robust evidence' for assessing the need to retain land and premises for business, industrial and warehousing use include the following criteria:

- Whether and for how long land or premises have been vacant and actively marketed and the expressions of interest during this period;
- Whether the site offers particular benefits not generally available within the overall land bank;
- Whether the site is within an area of high unemployment and offers realistic prospects of use for appropriate employment purposes;
- Whether the relocation of existing occupiers to other suitable accommodation will be facilitated;
- Whether the proposed development would retain an element of industrial, office or warehousing floorspace; and
- Whether the proposed use need to be accommodated on business, industrial or warehousing land (e.g. transport depots).
- Other priorities, such as housing need, override more narrowly focussed economic considerations.

5.50. Where alternative use of land is considered appropriate, priority will be given to mixed-use development comprising employment, housing and

community facilities or, where that is not feasible, housing. Other proposals will need to demonstrate why a mixed-use of housing and employment schemes cannot be achieved on the site.

5.51. It is also important to ensure that the introduction of residential or other uses into an industrial or warehousing area does not unduly restrict the operating conditions of remaining businesses.

5.52. Where employment land and premises are under development pressure from non-employment uses and it is considered that there still exists an opportunity to make a contribution towards longer term economic development and job retention and growth within an area, developers will be requested to make provision for an appropriate contribution towards bringing forwards compensatory employment opportunities elsewhere in the County in line with Policy KP7 Planning Obligations.

5.53. Where there is the potential to develop residential units on areas previously identified for commercial/ industrial use, there needs to be an appropriate assessment for the presence of land contamination. The land contamination standards set for commercial/industrial use are not suitably protective for residential use and therefore unacceptable risks to the end users may be present which will require appropriate remediation.

5.54. Further guidance on the application of this Policy will be set out in the Protection of Employment Land and Premises for Business, Industry and Warehousing SPG.

EC4: PROTECTING OFFICES IN THE CENTRAL AND BAY BUSINESS AREAS

The alternative use of offices within the Central and Bay Business Areas will only be permitted where it can be demonstrated that there is no need to retain the site or premises for office use having regard to the demand for offices and the requirement to provide a range and choice of sites available for such use.

5.55. This Policy aims to ensure that office sites within the Central and Bay Business Areas identified on the Proposals Map, whether occupied,

vacant, or with permission are protected from inappropriate changes of use. Any proposal involving the loss of offices will need to demonstrate that there is a sufficient range and choice of commercial office floorspace to meet the city's office requirement up to 2026.

5.56. When considering proposals for the alternative use of office accommodation, the following issues will be considered:

- Whether, and for how long the premises have been vacant and actively marketed for office use;
- Whether the development of the site for appropriate uses will facilitate the relocation of existing office occupier/s to other suitable accommodation within the Central or Bay Business Area;
- Whether the proposed development would retain a significant element of office floorspace;
- Whether the proposed use is complementary to an employment use; and
- Whether the proposed development can demonstrate wider economic, social and regeneration benefits.

5.57. The Central and Bay Business Areas contain a wide range of office premises, including modern Grade A accommodation (e.g. Callaghan Square and Assembly Square); high-rise accommodation built in the 1960s and 1970s (e.g. Newport Road); office accommodation above commercial premises (e.g. St. Mary Street and Greyfriars Road); and converted historic villas in the north of the city centre (e.g. Park Place and Windsor Place). Over time, and as the needs of businesses change, premises can fail to meet modern occupier requirements. This has been evidenced recently with changes of use from offices to residential and hotel uses, resulting in a significant reduction in office vacancy levels within the city centre.

5.58. To ensure that Cardiff continues to attract and retain quality businesses, the City Centre must contain sufficient land for new office accommodation, as well as providing a range and choice of office premises for existing and future occupiers, including large Grade A offices, small and medium sized enterprises, incubator units and live-work premises. The Cardiff Central Enterprise Zone along with other planned employment areas provides a range and choice of new business locations.

5.59. It is acknowledged that some office vacancy is necessary to allow for the turnover of businesses and the renovation of premises to meet modern business needs. However, long-term vacancy can have a damaging impact upon the vitality and viability of commercial centres. Office premises that, despite active marketing, have remained unoccupied for over two years will be considered more favourably for changes of use to other, appropriate uses.

5.60. Mixed-use redevelopment proposals that retain a significant element of commercial office floorspace, or those that do not result in any net loss in the level or quality of office accommodation within the City Centre, are likely to be more favourably considered.

5.61. Where proposals involve the loss of office accommodation, they will only be permitted where they do not harm, and are complementary to, the primary office role and function of the area and accord with other Plan policies. Such uses could include childcare facilities, training, tertiary education, residential development, commercial leisure and hotels.

EC5: HOTEL DEVELOPMENT

Proposals for hotel development will be permitted:

- i. Within the Central and Bay Business Areas of the city centre;**
- ii. In appropriate locations for the conversion of suitable residential or commercial properties;**
- iv. At other locations within the urban area, if there is no need to preserve the site for its existing or allocated use, assessed against the relevant policies of the plan;**

Subject to considerations of scale, location, design, amenity and transportation being acceptable.

5.62. This Policy favours hotel development at appropriate locations within the Central and Bay Business Areas.

5.63. The conversion of existing properties to hotels or guest houses contributes to the range of accommodation available for tourists and other visitors to the city. In assessing such proposals, 'appropriate locations' are likely to be on main roads into the city and close to tourist

or business areas, and 'suitable properties' are likely to be larger houses and vacant low grade offices, able to accommodate parking requirements. In terms of both the proposed property and its location, importance will be attached to the need to safeguard amenity of residential areas. Proposals for the change of use of converted hotels in residential areas to uses other than residential or uses acceptable within a residential area will be resisted.

EC6: NON-STRATEGIC EMPLOYMENT SITE

Land is allocated for university related research and development uses at Maindy Road, Cathays (3.3ha).

5.64. This non-strategic site is considered acceptable for university related research and development uses given its close proximity to the existing Cardiff University campus. Dialogue with the University has indicated the merits of university related research and development uses for this site, which can assist in the long term development of Cardiff University and other academic institutions within the city together with wider economic benefits for the region.

5.65. The allocation of the site for university research and development uses supports the LDP vision and the economic objectives which seek to promote clusters of research & development expertise. It also supports policies KP1 and KP9 which promote the provision of range and choice of new employment sites for different types of employment. The site is directly adjacent to the existing Cardiff University and in an accessible location which reduces the need to travel, a key component of developing sustainable communities. The precise nature of research and development uses will be subject to further detailed work.

EC7 EMPLOYMENT PROPOSALS ON LAND NOT IDENTIFIED FOR EMPLOYMENT USE

Proposals for employment use (B Use Class) on unallocated sites will be permitted provided that:-

- i. The proposal cannot reasonably be accommodated on existing employment land and in the case of offices in the Central Enterprise Zone (Policy KP2) and the Central and Bay Business Areas (Policy EC4);**

- ii. The site falls within the settlement boundary and has no specific policy designation;**
- iii. The use is compatible with uses in the surrounding area and;**
- iv. The proposal is well related to the primary highway network and accessible to sustainable modes of transport**

5.66. Policy EC7 provides guidance on how the Council will determine applications for employment development on sites not identified for employment and ensure a sequential approach to site selection is followed, thereby steering employment allocations to the most appropriate locations consistent with national policy (PPW para. 10.2.9 and 10.2.11). This policy is intended to support the economy by allowing for future economic growth which sustains and provides job opportunities within Cardiff which is considered essential in responding to economic uncertainty and fulfils the LDP economic evidenced needs.

5.67. The LPA is not able to fully predict all potential business and operator requirements over the Plan period. Therefore it is important for the policy framework to allow an element of flexibility to enable businesses to locate within the County.

3. ENVIRONMENT

Countryside Protection

EN1: COUNTRYSIDE PROTECTION

Development in the countryside, beyond the settlement boundaries identified on the Proposals Map, will only be permitted where the use is appropriate in the countryside, respects the landscape character and quality and biodiversity of the site and surrounding area and where it is appropriate in scale and design. A landscape assessment and landscaping scheme will be required for significant development proposals. Proposals for new housing, rural diversification and rural enterprise, will only be permitted where they comply with National Planning Policy.

5.68. The countryside in Cardiff is land located outside the settlement boundaries as identified on the LDP Proposals Map. Cardiff's countryside is a valuable and finite resource which is under pressure from all kinds of development. The aim of this Policy is to ensure that development within the countryside is strictly controlled to protect and enhance Cardiff's natural heritage and setting. It further seeks to manage and enhance this rich asset in order to maintain Cardiff's unique distinctiveness whilst helping to mitigate against climate change and also aims to ensure that those uses that do not need to be located in the countryside will be resisted.

5.69. It should be read in conjunction with Policy KP3A and KP3B and aims to ensure that those uses that do not need to be located in the countryside will be resisted. Whilst KP3A provides strict controls in the Green Wedge area for the reasons given, this policy provides further guidance on uses appropriate in the countryside as a whole.

5.70. Although farming and forestry comprise a relatively small part of Cardiff's economy, the economic viability of the countryside around Cardiff remains crucial, with agriculture and forestry playing an important role in both the management and conservation of the countryside. As such, the Council will adopt a positive approach to supporting the rural economy. Development proposals relating to rural diversification and enterprise will be assessed against, (PPW 2014) and TAN 6: Planning for

Sustainable Rural Communities. Farm diversification schemes should remain linked to the existing farm business and maybe subject to planning obligations in accordance with TAN 6: Planning for Sustainable Rural Communities (2010 Para 3.7) and Policy KP7.

5.71. Close proximity to a large urban population brings many pressures to Cardiff's countryside, including outdoor recreation. Whilst its importance for local recreational purposes and tourism is accepted, it is essential to ensure that both these uses, and any built development associated with them, do not cause unacceptable harm to the character and quality of the countryside. Small scale, low impact development associated with activities which need to be located in the countryside, or encourage access to and enjoyment of the countryside, may be acceptable subject to the tests set out in national guidance.

5.72. Planning permission is normally required for the use of land for keeping horses and for equestrian activities, unless they are kept as "livestock" or the land is used for "grazing". The keeping of horses in Cardiff is very widespread, so that land used for grazing, recreation and associated development such as stabling, ménages, fencing, lighting, and car parking is already having a considerable impact on the character of Cardiff's countryside. Whilst it is accepted that these horse related uses can only be accommodated in the countryside, not all locations within the countryside are necessarily appropriate. The overall impact of such proposals will be assessed against the criteria set out in national guidance.

5.73. Additionally there has been an increase in the number of applications for kennels and catteries. Applications for the siting of kennels and catteries outside the curtilage of a dwelling house i.e. in a separate field or paddock will also be subject to the tests set out in national guidance.

5.74. There is continuing pressure on the countryside in terms of residential development; however the LDP has identified sufficient land to meet the foreseeable residential need over the Plan period. As such, new residential development will not normally be permitted in the countryside unless it is justified for agricultural or forestry purposes or other rural enterprises. In these instances, applicants should refer to PPW, 2014 and

TAN 6: Planning for Sustainable Rural Communities (paragraph 4.3 – 4.4).

5.75. Any new development in the countryside should be designed and located to minimise their impact, usually within existing clusters of buildings or farm complexes and/or close to existing infrastructure and public transport. The use of outdoor space associated with development including hard and soft landscaping, means of access, car parking and the treatment of boundaries can all have a significant detrimental effect on the character and quality of the countryside and will therefore be strictly controlled.

5.76. Supplementary information may need to accompany planning applications, explaining how the proposal has considered and responded to criteria outlined in the Policy. Where relevant, information should also be submitted to show how the proposals respond to National Guidance, including TAN 6 Planning for Sustainable Rural Communities. Where appropriate, this information should also explain the reasons for locating the development in the countryside. Significant development proposals in the countryside will be expected to include a landscape assessment and landscaping scheme in accordance with Policy EN3.

EN2: CONVERSION, EXTENSION AND REPLACEMENT BUILDINGS IN THE COUNTRYSIDE

There will be a presumption against conversion, extension and replacement of buildings in Cardiff's countryside except where:

- a. The proposed conversion is demonstrated to:**
 - i. Be structurally sound and capable of being made so without major alterations, reconstructing or extensions;**
 - ii. Be possible without materially changing the existing character of the building or have a harmful effect on the countryside;**
 - iii. Not give rise to a demand for additional buildings; and**
 - iv. Be suitable for the proposed re-use.**

The proposed extension is demonstrated to:

- i. Be the subordinate part of the existing building; and**
- ii. Respect the scale, character and design of the original part of the building within its countryside and landscape setting.**

- c. The proposed replacement building is demonstrated to:**
- i. Not result in any greater impact on the quality and character of the surrounding area in terms of its proposed scale and design, including any residential curtilage;**
 - ii. Be on the footprint of the existing building unless relocation can be justified in terms of either being part of an existing group or improving the countryside or landscape setting; and**
 - iii. Not replace any building of architectural, historic or visual merit.**

All proposals should be of an appropriate scale and design and be at least as sympathetic in its setting as the existing building.

5.77. The aim of this Policy is to ensure that conversions, extensions and replacement of buildings in the countryside conserve the character and quality of Cardiff's countryside and natural heritage value, without being unduly restrictive.

5.78. The Policy contributes towards Plan objectives which supports the re-use and adaption of existing rural buildings to help meet the needs of commercial and industrial development, as well as for tourism, sport and recreation. Reference should also be made to KP3A with regard to the consideration of proposals in the Green Wedge area.

5.79. The scale and design of some individual buildings is already having a detrimental effect on the character and quality of Cardiff's countryside. Although small-scale extensions, conversions and replacement buildings may be acceptable, all development in the countryside will be strictly controlled to prevent unacceptable harm. Where permissions are granted, permitted development rights may also be removed.

5.80. With regard to conversions, it is recognised that many buildings have and continue to fall into disrepair meaning that they become unfit for the original purpose they were intended for. Whilst the re-use and adaptation of such buildings may prevent existing building stock from going to waste, a balance is required to protect the character and quality of the countryside. However, proposals for the conversion of rural buildings will only be permitted where they conform to the criteria set out above and the other relevant policies of the Plan. In addition to this, any access, hard-standing, boundary treatment, landscaping or other external

features associated with the proposals should not result in the loss of fields or have a detrimental impact on the character of the surrounding area.

5.81. In the case of proposed residential conversions, the applicant should demonstrate that they have made every effort to secure suitable business re-use and that the application is supported by a statement of the efforts they have made. The creation of new gardens and garden extensions will not normally be considered appropriate due to their individual and cumulative detrimental impact on the quality and character of the countryside and landscape.

5.82. Extensions to existing buildings will also be strictly controlled to limit their individual and cumulative impact. Proposals for extensions should ensure that the existing building remains the dominant form. In the case of buildings that have had previous extensions, the proposals should have regard to the scale and character of the original part of the building. The tendency to seek successive extensions to individual buildings will be resisted.

5.83. The demolition and replacement of buildings will generally only be permitted on the footprint of an existing building or relocated elsewhere on the site where their scale and design, including residential curtilage, does not result in any greater impact on the quality and character of the area. The replacement of non-residential buildings with dwellings will be resisted. In general, the re-use or adaptation of existing buildings will normally be favoured in preference to new development.

EN3: LANDSCAPE PROTECTION

Development will not be permitted that would cause unacceptable harm to the character and quality of the landscape and setting of the city.

Particular priority will be given to protecting, managing and enhancing the character and quality of the following Special Landscape Areas:

- i. St Fagans Lowlands and the Ely Valley;**
- ii. Garth Hill and Pentyrch Ridges;**
- iii. Fforest Fawr and Caerphilly Ridge;**

iv. **Wentloog Levels; and**

v. **Flat Holm.**

vi.

A landscape assessment and landscaping scheme will be required for significant development proposals.

5.84. The aim of this Policy is to ensure that those features of the landscape that contribute to its character, value, distinctiveness, sense of place, and quality, with particular priority given to SLAs (as identified on the Proposals Map) are protected from inappropriate development. It seeks to manage and enhance this rich asset in order to maintain Cardiff's unique distinctiveness whilst helping to mitigate against climate change.

5.85. This Policy applies to the whole county, acknowledging that the urban area also contains features of landscape importance. When dealing with planning applications that affect Cardiff's landscape, unacceptable harm will be assessed in relation to:

- The impact of the proposed development on key features of the landscape in terms of physical character, vegetation and habitats, land use and settlement patterns, visual character, historical character and cultural associations;
- The need for the proposed development in relation to its impact;
- The availability of alternative locations; and
- The ability to provide appropriate mitigation measures.

5.86. Wherever possible, development will be expected to maintain and strengthen positive attributes of the landscape and seek to mitigate or remove, rather than compound negative influences. Reference should also be made to KP3A with regard to the consideration of proposals in the Green Wedge area.

5.87. The scale, location and design of development proposals should respect their landscape context. Where large scale development is proposed, or where development may impact significantly on the landscape character or key features of an area, a landscape assessment should be submitted with the planning application and, where appropriate, a landscaping scheme.

5.88. Where landscape assessments or landscaping schemes are required they should set out the impact of the development on key features,

landscape character and qualities and should explain how the design solution proposed addresses both its positive and negative attributes and associated landscape and visual impacts effects, including cumulative effects where appropriate. Assessments and schemes should include the landscape baseline information from all five LANDMAP¹ layers and should

¹ Further information can be found at <http://landmap.ccw.gov.uk/map/Map.aspx>

focus on the relevant aspect areas, their descriptions, and evaluations. Design solutions should clearly demonstrate how the strategic landscape assessment and site appraisal have informed the detailed design and location of the development and planting proposals. Schemes should generally be implemented prior to all or part of the site coming into beneficial use. The management of landscape features of importance will also be encouraged.

5.89. TACP Consultants were appointed by the Council in September 2007 to undertake a review of the existing proposed Special Landscape Areas (SLAs) and Landscape Character Areas (LCAs) previously defined as Combined Aspect Areas, based on the original Landscape Study of Cardiff undertaken by Atlantic Consultants, using the LANDMAP methodology developed by the Countryside Council for Wales. In addition, the St Fagans Lowlands and Ely Valley proposed boundary took into account the detailed work undertaken by Wardell Armstrong in 2006.

5.90. The 2008 reviews used the updated LANDMAP information methodology system established in 2003 and as recognised in PPW. A key output from this exercise has been the preparation of supplementary advice on SLAs including evidence satisfying the selection and extent of candidate SLA areas with a description of key landscape characteristics and consideration of five discrete aspect topic layers: geological landscapes, landscape habitats, visual and sensory landscapes, historic landscapes and cultural landscapes based upon an all-Wales set of criteria.

5.91. SLAs are designated to protect areas that are considered to be important to the overall landscape of the County due to their visual and sensory, geological, cultural, historical and habitat landscapes. They are intrinsic to the overall character of the area and provide a living history of the evolution of the area's landscape as well as a cultural backdrop and visual setting.

5.92. Development proposals within SLAs will be assessed against the same criteria as those set out above. However, greater weight will be given to landscape consideration within SLAs and to the special character and quality of the particular area. Development proposals will also be required to address any relevant key issues identified in the Review of Special Landscape Areas and Landscape Character Areas. In addition landscape assessments and schemes are more likely to be required to accompany applications for development in these areas.

5.93. Although, SLA designations will not unduly restrict acceptable development in the countryside, there will be a presumption against urban expansion or other development within SLAs that would cause unacceptable harm to the character and quality.

5.94. Quarries, for example, have been included within proposed designations because they reflect the underlying geology as well as the history of mining within the area and form a distinctive element of the areas, but settlements lying within SLAs have been excluded from the proposed designations. Development proposals within these settlements, or within close proximity to an SLA including allocations will need to have regard to their potential impact on the character and quality of the SLA.

EN4: RIVER CORRIDORS

The Natural Heritage, character and other key features of Cardiff's river corridors will be protected, promoted and enhanced, together with facilitating sustainable access and recreation.

5.95. The Policy provides a planning framework within which the Council can protect, promote and enhance the river corridors.

5.96. It will be used as a mechanism to implement the Council's aims with regards to the river corridors. The Policy helps to deliver Plan objectives relating to social needs and natural environment together with according with PPW (Para 5.1, 5.4 and 5.5) which values the importance of the natural heritage of Wales including non-statutorily designated sites and seeks to conserve and enhance this heritage in ways which bring benefits to the local community.

5.97. Cardiff contains the four river corridors of the Taff, Ely, Rhymney and Nant Fawr. They make a unique contribution to the character and form of the city providing continuous green corridors between the Severn Estuary and the countryside beyond the urban edge. The watercourses and adjoining open spaces possess high recreational, biodiversity, historic, cultural and landscape value. Additionally, they are located close to local communities and offer excellent opportunities for off-road access routes that can provide part of the wider strategic recreational routes and everyday network of routes.

5.98. This Policy aims to protect and enhance the features of Cardiff's river corridors, whilst also facilitating sustainable access and recreation opportunities.

5.99. The extent of Cardiff's river corridors within the urban area are illustrated on the Proposals Map. They include the rivers together with adjoining open space and other predominantly open land that together form the strategically important corridor of mixed open spaces that run through the heart of the urban area. The Policy also applies to the river corridors outside the urban area (as defined by the settlement boundaries). Such land is protected from inappropriate development through other Policies. However, this Policy will also apply and aims to ensure the strategic role played by the river corridors is continued from the urban area, through the surrounding countryside up to the County boundary. In this respect it is considered inappropriate to designate an arbitrary boundary to a notional river corridor running through farmland. Any proposals will be assessed to ensure the aims of this Policy are met and not prejudiced.

5.100 This Policy provides a planning framework within which the Council can protect, promote and enhance the river corridors. It will be used as a mechanism to implement the council's aims with regards to the river corridors and will be used in conjunction with the River Valleys Initiative that was established in 2004/ 05 in order to develop a more joined up approach to the planning and management of Cardiff's river valleys. The River Valleys Initiative brings together a wide range of organisations who have roles to undertake within the river valleys. One of the key outcomes of this process to date is an agreement to develop Action Plans for each of the three main river valleys. Action Plans have been prepared and are implemented, monitored and reviewed in partnership with a wide range of

organisations, overseen by a steering group. There are River Corridor Action Plans for the Ely Valley, Taff Corridor and Rhymney Valley and Nant Fawr Corridor. Projects that implement the objectives set out in the Action Plans, and Cardiff's Countryside Strategy are undertaken by a variety of organisations, individually and in partnership using funding from a range of sources, including the partnership programme with the Natural Resources Wales, other Cardiff Council funding and planning obligations.

5.101. Proposals for development within the river corridors will be assessed against other relevant policies in the Plan. New development within, or adjacent to the river corridors may be required to contribute to projects which help to achieve the objectives set out in the River Corridor Action Plans. Where appropriate, planning obligations may be required in accordance with Policies relating to the provision of new infrastructure.

5.102. Progress on achieving this Policy will be monitored through the existing River Valley Action Plans process which can in turn inform the wider LDP monitoring.

EN5: DESIGNATED SITES

Development will not be permitted that would cause unacceptable harm to sites of international or national nature conservation importance.

Development proposals that would affect locally designated sites of nature conservation and geological importance should maintain or enhance the nature conservation and/or geological importance of the designation. Where this is not the case and the need for the development outweighs the conservation importance of the site, it should be demonstrated that there is no satisfactory alternative location for the development which avoids nature conservation impacts, and compensation measures designed to ensure that there is no reduction in the overall nature conservation value of the area or feature.

5.103. The purpose of Policy is to ensure that the Council fulfils its obligations in respect of protecting sites of nature conservation importance from harmful development.

5.104. Where development is proposed which may have an effect on a site of international or national importance for nature conservation, sufficient information will be required of all applicants to enable a full assessment of the proposal to be carried out. The need for such assessments will not be limited to development located within the designated areas as, depending on the nature of the development and of the nature conservation interest, significant effects may occur even if the development is some distance away.

5.105. Assessment of unacceptable harm will be in accordance with the criteria set out in the legislation which establishes the sites of international or national importance for nature conservation, and which are expanded upon in Chapter 5 of Planning Policy Wales (2012) and Sections 5.3, 5.4 and Annex 3 of Technical Advice Note (Wales) 5: Nature Conservation and Planning (2009).

5.106. In the case of developments required to be assessed under the Conservation of Habitats & Species Regulations 2010 (as amended), where an initial determination of likely significance has indicated that the proposal may be likely to have a significant effect, or the decision as to whether or not the development would have a significant effect on the designated site is inconclusive, an appropriate assessment under Regulation 61(1) will be required and further information may be required from the applicant or other parties.

5.107. Where development proposals may be likely to result in disturbance or harm to a European or UK protected species or its habitat, additional information will be requested of applicants

5.108. If planning permission is granted it may be the subject of appropriate conditions, or management agreements or planning obligations will be sought to secure appropriate protection, monitoring, mitigation or compensation and favourable management.

5.109. The network of SSSIs/SACs/SPAs and Ramsar Sites alone is not sufficient to maintain the biodiversity of Cardiff. It is therefore important to identify other locally designated wildlife sites such as Sites of Importance for Nature Conservation (SINC's) and Local Nature Reserves (LNR's). Cardiff currently has 177 SINC's and 6 LNR's.

5.110. Geological and geomorphological sites of importance that do not merit notification as a SSSI may also be designated as a SINC or Regionally Important Geological Site (RIGS). Such sites define the most important places for geology and geomorphology outside those that are statutorily protected. Geological sites within Cardiff will be designated during the Plan period. The aim of this Policy is to protect the LNRs, SINC and RIGS referred to above.

5.111. The Policy will contribute to the protection and enhancement of Biodiversity interests in accordance with Policy EN6 and will work towards delivering the Plan's objective of protecting and enhancing features of Cardiff's natural environment and heritage.

5.112. Chapter 5 of PPW and TAN 5 provide guidance on planning policies to protect biodiversity interests. In accordance with this guidance, the Council will carefully assess proposals for development affecting non-statutory and locally designated sites by evaluating whether:

- the need for the proposed development is considered to outweigh the importance of the particular nature conservation interest and any harm likely to be caused to it;
- the proposed development can be more satisfactorily accommodated elsewhere; and appropriate mitigation or compensation measures are proposed.

5.113. Where development is proposed which may have an effect on a non-statutory or locally designated site, sufficient information will be required from all applicants to enable a full assessment of the proposals to be carried out. The need for such assessments will not be limited to development located within the designated areas as, depending on the nature of the development and the nature conservation interest, significant effects may occur even if the proposed development is located some distance from the conservation interest. The required assessments, including ecological surveys, will need to be undertaken at the appropriate time of the year. Further guidance will be available in the Biodiversity SPG.

5.114. Where planning permission is granted, it may be the subject of appropriate conditions or management agreements to ensure suitable protection, monitoring, mitigation or compensation and favourable

management. Where compensatory provision is required, it should be of the same standard and size to that lost as a result of the development. In such cases, details of the type and level of provision will be provided, and agreed by the case officer, prior to determination of the planning application. This may also be required for outline planning applications where appropriate. Where necessary, planning obligations may be sought in accordance with Policy KP7.

5.115. SINC's will be measured in accordance with the annual review of SINC's and additionally reported on in the LDP Annual Monitoring Report.

5.116. The Designated Sites identified in this Policy are defined on the Constraints Map and listed in Appendix 7. (It should be noted that although this information is accurate at the time of adoption, potential changes to designated areas are possible over the plan period. The Council will keep an up to date record of the boundaries of all designated sites which can be accessed via the Council website.

EN6: ECOLOGICAL NETWORKS AND FEATURES OF IMPORTANCE FOR BIODIVERSITY

Development will only be permitted if it does not cause unacceptable harm to:

- i. Landscape features of importance for wild flora and fauna, including wildlife corridors and 'stepping stones' which enable the dispersal and functioning of protected and priority species;**
- ii. Networks of importance for landscape or nature conservation.**

Particular priority will be given to the protection, enlargement, connectivity and management of the overall nature of semi natural habitats. Where this is not the case and the need for the development outweighs the nature conservation importance of the site, it should be demonstrated that there is no satisfactory alternative location for the development and compensatory provision will be made of comparable ecological value to that lost as a result of the development.

5.117. This Policy aims to protect Cardiff's ecological networks and landscape features that are important for biodiversity. It accords with Policy KP16 by protecting and enhancing Cardiff's natural heritage, including its biodiversity. The Policy also contributes to the aims and objectives of the Plan by ensuring that Cardiff's biodiversity and abundance of wildlife habitats and native species are protected and enhanced.

5.118. Wild species, whether legally protected or not, are often widely dispersed in the landscape, with significant populations being isolated from each other. In such cases, landscape features may provide wildlife corridors for some species, as well as links or 'stepping-stones' between habitats. Whilst it is crucial to maintain and enhance a network of sites to safeguard current levels of biodiversity, this cannot be achieved without also safeguarding and managing the intervening habitats and areas.

5.119. The protection, management and enhancement of ecological networks are identified as being particularly important in Article 10 of the EU Habitats Directive. Regulation 39(3) of The Conservation of Habitats and Species Regulations 2010 (as amended) requires planning authorities to encourage the positive management of landscape features which make up this network and are of importance for wild flora and fauna. This is also reinforced in PPW and the associated Companion Guide (2006) in that it advises LDP's to safeguard and manage landscape features of major importance for nature conservation.

5.120. For the purposes of this Policy, features of the landscape which are of importance for wild flora and fauna are those, by virtue of their linear and continuous structure (such as rivers with their banks or the traditional systems of marking field boundaries) or their function as stepping stones (such as ponds or small woods), that are essential for the migration, dispersal and genetic exchange of wild species.

5.121 Where development is proposed which may cause unacceptable harm to such networks or features, information will be required of all applicants to enable a full assessment of the proposal to be carried out. Such assessments, including ecological surveys will need to be undertaken at the appropriate time of year. . Further guidance will be available in the Biodiversity SPG.

5.122. If there are overriding material planning considerations in favour of development, then the Council will seek to secure reasonable measures from developers to minimise or offset any impacts or loss of habitat features or species present on a site. Such measures will be agreed prior to the commencement of development and will be secured through appropriate planning conditions and/or planning obligations. Planning Obligations will be secured in accordance with Policy KP7.

EN7: PRIORITY HABITATS AND SPECIES

Development proposals that would have a significant adverse effect on the continued viability of habitats and species which are legally protected or which are identified as priorities in the UK or Local Biodiversity Action Plan will only be permitted where:

- i. The need for development outweighs the nature conservation importance of the site;**
- ii. The developer demonstrates that there is no satisfactory alternative location for the development which avoids nature conservation impacts; and**
- iv. Effective mitigation measures are provided by the developer.**

Where harm is unavoidable it should be minimised by effective mitigation to ensure that there is no reduction in the overall nature conservation value of the area. Where this is not possible compensation measures designed to conserve, enhance, manage and, where appropriate, restore natural habitats and species should be provided.

5.123. This Policy is in accordance with the aims and objectives of the Plan by protecting and enhancing the features of Cardiff's natural heritage, including its biodiversity and abundance of wildlife habitats and native species. More specifically, it will help protect the current Priority Habitats and Species as defined in the Local Biodiversity Action Plan 2008. The Policy also helps to deliver Policy KP16.

5.124. The presence of a species protected under European or UK legislation is a material consideration in considering development proposals which would be likely to result in disturbance or harm to the species or its habitat. Appropriate surveys to confirm if a protected species is present and an assessment of the likely impact of the development on a protected species may therefore be required from applicants. Thereafter the development proposals will be assessed in accordance with criteria set out in sections 5.5.11 and 5.5.12 of Planning Policy Wales 2012 and Chapter 6 of Technical Advice Note (Wales) 5: Nature Conservation and Planning (2009).

5.125. Development proposals that have the potential to cause a significant adverse effect on priority habitats and species will need to be accompanied by an ecological survey and an assessment of the likely impact of the development on the protected species. The need for such assessments will be undertaken at the appropriate time of year. Further guidance will be available in the Biodiversity SPG.

5.126 In considering any significant adverse effect on the Priority Habitat or Species, the Council will look at:

- The current distribution and status of the priority habitat or species within Cardiff as informed by the Cardiff Biological Database as well as other sources of data that may be relevant, accurate and practical to use for such purposes in the future;
- Whether the development proposals are likely to have a significant effect on the priority habitats/ species; and
- Whether effective mitigation measures have been provided.

5.127 Where planning permission is granted, the Council may attach conditions or enter into agreements that would overcome the potentially damaging effects of development on the habitats or species of conservation importance. The Council will encourage the applicant to identify and include measures that contribute to the restoration or expansion of important habitats, and these will be set out in the landscaping and planting conditions that accompany the planning permission. Any planning obligations required will be in accordance with Policy KP7.

5.128 Where there is a significant adverse effect on a significant population of the Priority Habitat or Species and where planning

conditions and/ or planning obligations cannot adequately protect the interest, it may be necessary to refuse development proposals.

5.129 Priority Habitats and Species are monitored as part of the 3 yearly review of the UK and Local Biodiversity Action Plans.

EN8: TREES, WOODLANDS AND HEDGEROWS

Development will not be permitted that would cause unacceptable harm to trees, woodlands and hedgerows of significant public amenity, natural or cultural heritage value, or that contribute significantly to mitigating the effects of climate change.

5.130 The purpose of the Policy is to protect trees, woodlands and hedgerows with natural heritage or amenity value.

5.131 It responds to Plan objectives relating to the natural environment and climate change and accords with PPW which emphasises the protection and preservation of trees and woodlands against inappropriate development.

5.132 Trees, woodlands and hedgerows offer multiple benefits, including visual amenity, defining a sense of place, providing places for relaxation and recreation, habitats for wildlife, improved health and wellbeing and mitigating the effects of climate change. To maintain these benefits, the protection and enhancement of a sustainable urban forest is critical. A sustainable urban forest adapted to meet the challenges of climate change and exotic pest and disease outbreaks will contain a diverse age range and species mix of trees, though large, long-lived trees will be favoured for protection and planting due to the increased benefits they offer in mitigating the effects of climate change.

5.133 In order to determine unacceptable harm to trees, woodland and hedgerows within or bounding a site, applicants must assess them in accordance with the current British Standard 5837. The assessment must inform design, and in considering hedgerows, regard will be given to their landscape, historical and ecological value, as well as their function as boundaries. Further guidance and advice will be contained in SPG relating to Trees and development.

5.134 The value of trees, woodlands and hedgerows in sequestering carbon and mitigating the effects of climate change will be ascertained partly by the British Standard 5837 assessment, and partly by how effectively they are integrated into a sustainable urban forest as defined in paragraph 5.83.

5.135 To prevent damage to trees, woodlands and hedgerows during development, schemes of protection will normally be required, in accordance with the current British Standard 5837.

5.136 Trees are the largest and longest living organisms in Cardiff. When considering developments that may affect them, regard will be given to potential short and long-term impacts. Where trees are lost, new planting will be sought that is provided with sufficient usable soil volume, aeration and irrigation to ensure healthy long-term growth. Although younger trees are more easily replaced, the Council will seek to ensure that sufficient young trees survive to maturity, having regard to the number of developments that may occur during their natural lifespan. Proposals that create spaces for larger tree species to grow to maturity will be favoured over proposals for scattered smaller trees.

5.137 Ancient woodlands are irreplaceable habitats of high biodiversity value which will be protected from development that would result in significant damage. Veteran trees and ancient hedgerows cannot be recreated and developments will be expected to retain them. Where appropriate, Tree Preservation Orders will be served to protect important amenity trees from removal or harm. The amenity value of trees will be assessed in accordance with government guidance and nationally recognised systems of amenity evaluation.

The Historic Environment

EN9: CONSERVATION OF THE HISTORIC ENVIRONMENT

Development relating to any of the heritage assets listed below (or their settings) will only be permitted where it can be demonstrated that it preserves or enhances that asset's architectural quality, historic and cultural significance, character, integrity and/or setting.

- i. Scheduled Ancient Monuments;**
- ii. Listed Buildings and their curtilage structures;**
- iii. Conservation Areas;**
- iv. Archaeologically Sensitive Areas;**
- v. Registered Historic Landscapes, Parks and Gardens; or**
- vi. Locally Listed Buildings of Merit and other historic features of interest that positively contribute to the distinctiveness of the city.**

5.138. This Policy aims to set out the criteria against which proposals affecting Cardiff's heritage assets will be assessed. The Heritage assets identified in this Policy are defined on the Constraints Map and in Appendix 6 with the exception of Statutory Listed Buildings and Locally Listed Buildings of Merit which can be viewed on the Council website.

5.139. It should be noted that although this information is accurate at the time of adoption, potential changes to designated areas are possible over the plan period. The Council will keep an up to date record of the boundaries of all designated sites which can be accessed via the Council website.

5.140. Occasionally built heritage will be a constraint, the need for preservation outweighing the benefit of development. More often, a heritage asset will be an opportunity for retaining local identity through the repair and reuse of historic assets and strengthening this through respect for local characteristics of design, for the interpretation of hidden heritage assets, or for the enhancement of the characteristic natural environment. All new developments within historic areas should be designed in such a way as to preserve or enhance their special character.

Scheduled Ancient Monuments

5.141. PPW, Chapter 3 Conserving the Historic Environment and Welsh Office Circular 60/96: Planning and the Historic Environment: Archaeology (scheduled to be replaced by a Technical Advice Note within the plan period) set out clear statements of national development management policy for archaeological remains and should be referred to accordingly.

Listed Buildings

5.142. Once a building is listed (or is subject to a Building Preservation Notice) no work to the interior or exterior of the building, or to structures within its curtilage, that would affect the special architectural or historic interest of the building can be undertaken without Listed Building Consent. This can include work that would not require planning permission under the provisions of the Planning Acts.

5.143. Listed building control is subject to the provisions of the Planning (Listed Buildings & Conservation Areas) Act 1990. Advice is set out in Circular 61/96 (scheduled to be replaced by a Technical Advice Note within the plan period). There is no statutory requirement to have regard to the provisions of the development plan when considering an application for listed building consent. It is strongly recommended, however, that owners or developers seek early advice from the Council prior to undertaking any works or making an application for listed building consent.

5.144. Where Policy EN9 is particularly relevant is in the case of development that affects the setting of a listed building or in the consideration of an associated planning application for a change of use.

5.145. Listed building consent is not required if the development is beyond the curtilage of the listed building and only affects its setting. However, considerable damage can be done to the architectural or historic interest of the listed building if the development is insensitive in design, scale or positioning. The setting of a listed building is often an essential feature of its character. The setting may be limited to the immediate surroundings, but it can extend for a considerable distance. A proposed development might affect the gardens or parkland of a major house, the rural characteristics of a farmstead or the street setting of an urban building that forms an important visual element of that street. Policy EN9 requires that development proposals take full account of the setting of any listed building in the vicinity and that developers demonstrate that the setting will not be harmed.

5.146. In terms of associated planning applications for changes of use of a listed building, the Council will expect applicants to demonstrate how their proposals have been arrived at in the context of the PPW aim to identify the optimum viable use that is compatible with the character and setting of the listed building.

Conservation Areas

5.147. The adopted series of Conservation Area Appraisal (CAA) documents seek to provide a sound basis for managing development proposals and for progressing initiatives to preserve and enhance each conservation area, in line with advice in PPW and Circular 61/96. The documents were adopted following extensive local consultation and provide a clear and agreed definition of those elements which contribute to the special character and historic interest of the area.

5.148. The findings of the CAAs need to be fully taken into account when considering development proposals. The design and access statement accompanying any application for planning permission should, where relevant, clearly set out how the development preserves or enhances the conservation area. In the assessment of planning applications, the Council will wherever feasible seek to enhance the special character of each area as defined and promoted by each adopted CAA.

5.149. It is recommended that owners or developers seek early advice from the Council prior to making an application for demolition or development within a conservation area.

5.150. The Council will continue to review its conservation area designations, boundaries and CAAs as required and against recognised national criteria in PPW and Circular 61/96, in addition to those characteristics identified within the approved Conservation Area Strategy (Sept 1997) to determine whether an area is of special interest.

Archaeologically Sensitive Areas

5.151. Four archaeologically sensitive areas have been identified in Cardiff. The purpose of this non-statutory designation is to assist those who are planning development in areas where there is a known archaeological resource or where it is likely that remains may be sensitive to development pressures. SPG on Archaeologically Sensitive Areas will provide further guidance and information.

Registered Historic Landscapes Parks and Gardens

5.152. The landscapes, parks and gardens on the register have no statutory protection, but they must be taken into account when development proposals are made that either affect them directly or that affect their setting.

Locally Listed Buildings of Merit and other historic features of interest

5.153. Many buildings, structures and archaeological remains that do not meet the very special criteria to merit scheduling or inclusion on the statutory list are nevertheless of value to the identity of the city for their contribution to local built character and/or social and historical associations.

5.154. Heritage and culture is an important social aspect and contributes to creating places where people want to live and work. Historic assets can create focal points and are useful in identifying the vernacular characteristics of an area that create distinctive places. Restoration and re-use is also a basic principle of developing sustainably. Standing buildings represent an investment of material and embodied energy that should not be ignored. Their removal, disposal and subsequent site works require further energy and creates waste.

5.155. These assets may be noted within the Council's list of buildings of local merit, embodied in the unscheduled archaeological record maintained by the Glamorgan Gwent Archaeological Trust or may yet to be registered or listed but still worthy of retention for their contribution to local character or identity.

5.156. While inclusion on the local list does not currently afford any additional statutory protection to the buildings, it is the intention of Policy EN9 to ensure that full consideration is given to the conservation and continued use of such buildings, as part of the protection and enhancement of the special identity of Cardiff.

Natural Resources

EN10: WATER SENSITIVE DESIGN

Development should apply water sensitive urban design solutions (the process of integrating water cycle management with the built environment through planning and urban design). To include the management of:

- i. Water demand and supply;**
- ii. Waste water and pollution;**
- iii. Rainfall and runoff;**
- iv. Watercourses and water resource;**
- v. Flooding; and**
- vi. Water pathways.**

5.157. Increasing pressures on urban drainage systems and challenges of water management highlight the need to redress the balance of the water cycle. Recent climate change studies have identified that Wales can expect more extreme weather events including an increase in the frequency of intense rainfall. Natural Resources Wales and Welsh Water support these findings.

5.158. There is a need for an approach where the whole urban water cycle is incorporated into a holistic system. Water sensitive design focuses on managing water locally and reducing demands on the strategic network.

5.159. Such examples of integrated water cycle management include Sustainable Urban Drainage Systems (SUDS); water recycling; and the holistic integration of surface water systems designed into the development layout, as well as into networks of green spaces applicable at a range of spatial scales, such as gardens, green roofs, streets, car parks and river corridors.

5.160. There is a need for all those involved in the water industry and built environment to work together to create a sustainable strategy for expanding the water ecosystem whilst providing opportunities for wildlife, adaptable landscapes, health and exercise. Implementation of this Policy, which is aimed in part at improving water resource use efficiency, will counteract increases in water demand arising from the implementation of other policies in the Plan, thereby avoiding likely significant effect upon the River Usk and River Wye SACs.

5.161. The benefits of a water sensitive urban design initiative are; reduction of flood risk; security of water supply; better watercourse health, more affordable water bills; improved health and well-being, celebration of environment, local character and community; delivery of green infrastructure and efficiencies; creation of attractive places and improved ecosystem health.

EN11: PROTECTION OF WATER RESOURCES

Development will not be permitted that would cause unacceptable harm to the quality or quantity of underground, surface or coastal waters.

5.162. This Policy expands on Policy KP18 and its purpose is to maintain and enhance the quality and quantity of water resources, including rivers, lakes, ponds and other water bodies, which are important for a wide range of uses and users. Poor and deteriorating water quality and compromised water quantity can affect the supply of water resources for industrial and domestic consumption, fisheries, amenity, recreation and nature conservation.

5.163. The EU Water Framework Directive (2000/60/EC) establishes a strategic approach to water management and a common means of protecting and setting environmental objectives for all ground waters and surface waters. It aims to protect and restore clean water and ensure its long-term sustainable use. PPW emphasises that planning controls should be used to prevent the location of incompatible land uses and development close to potential sources of pollution.

5.164. Development will only be allowed where provision is made for the necessary infrastructure to protect water quality and quantity. Planning permission may be granted subject to conditions to secure the necessary measures, or developers may be required to enter into planning obligations. Applications that cannot provide adequate protection of watercourses, ground and surface water will be refused. New development that:

- Poses an unacceptable risk to ground water or water courses;
- Poses an unacceptable risk of ground water pollution, depletion or obstruction; and

- Incorporates inappropriate measures to prevent pollution

will be refused planning permission, unless appropriate measures to prevent pollution can be incorporated into the development proposal.

5.165. Future development will be limited to areas where adequate water resources exist or they can be reasonably provided without adversely affecting existing abstractions, river flows, water quality, agriculture, fisheries, amenity or nature conservation and where provision coincides with the timing of development. Existing groundwater and river levels must be maintained, and water pollution must be avoided.

5.166. Natural Resources Wales is responsible for protecting and improving the water environment. The Council will consult NRW and Caldicot and Wentlooge Levels Internal Drainage Board, where necessary, on any proposal that is likely to affect the supply of water, the quality of water, or is likely to be affected by, or cause flooding. Levels of impact and risk will be assessed through consultation with these bodies.

5.167. Planning permission will not be granted for development that, in the opinion of the Council, following consultation with NRW and the Caldicot and Wentlooge Levels Internal Drainage Board, would adversely affect the quality, quantity or supply of surface water or groundwater as a result of:

- The nature of the surface or waste water discharge; or
- Unsatisfactory agreements for the disposal of foul sewerage, trade effluent or surface water; or
- The spillage or leakage of stored oil or chemicals.

5.168. Planning permission will not be granted for developments involving local abstraction of surface or ground water which, in the opinion of the Council, following consultation with Natural Resources Wales and the Caldicot and Wentlooge Levels Internal Drainage Board, would:

- Increase requirements for water, unless an adequate water supply already exists or would be provided in time to serve the development; or
- Pose an unacceptable risk to the current supply of water uses.

5.169. Developments that improve the quality of the water environment or help to prevent water pollution or flooding will be favoured.

Implementation of this Policy, which is aimed in part at improving water resource use efficiency, will counteract increases in water demand arising from implementation of other policies in the Plan, thereby avoiding likely significant effect upon the River Usk and River Wye SACs.

EN12: RENEWABLE ENERGY AND LOW CARBON TECHNOLOGIES

Development proposals are required to maximise the potential for renewable energy.

The Council will encourage developers of major and strategic sites to incorporate schemes which generate energy from renewable and low carbon technologies. This includes opportunities to minimise carbon emissions associated with the heating, cooling and power systems for new development.

An independent energy assessment investigating the financial viability and technical feasibility of incorporating such schemes will be required to support applications.

5.170. The UK government has committed to sourcing 15% of its energy from renewable sources by 2020. Modelling undertaken on behalf of the Department for Energy and Climate Change (DECC)¹

suggests that by 2020, this could mean that more than 30% of our electricity and 12% of our heat, may be generated from renewable sources. These targets are presented as the lead scenario, which relies on strong, co-ordinated efforts from several sectors including local authorities.

5.171. PPW enables Local Planning Authorities to assess strategic sites to identify opportunities to require higher sustainable building standards (including zero carbon) where requirements are demonstrated to be evidence-based and viable. Particular reference is made to opportunities for minimising carbon emissions associated with the heating, cooling and power systems. This includes utilising new or existing low and zero carbon energy supply systems (such as district heating systems), encouraging the development of new opportunities to supply proposed and existing development, and maximising opportunities to co-locate potential heat customers and suppliers.

5.172. In preparing the LDP, Cardiff Council has undertaken a Renewable Energy Assessment (REA). The REA aims to identify the potential energy capacity of renewable and low carbon technologies in the local authority area and consider the contribution these can make towards Cardiff's future heat and electricity energy requirements. The REA was prepared in accordance with the Welsh Government Practice Guidance "Planning for Renewable and Low Carbon Energy – A Toolkit for Planners". Findings within the REA suggest that by 2020 the percentage of Cardiff's electricity and heat met by renewable energy sources is likely to be 24% and 6% respectively. Both of these figures are below the guide targets in the UK Renewable Energy Strategy. The REA (and future updates) can assist in identifying which renewable energy technologies may be appropriate in particular locations.

¹ UK Renewable Energy Strategy (DECC, 2009)

5.173. The co-location of high density and mixed-use development can present significant opportunities for utilising renewable and low carbon technologies, including energy supply systems. Both major development sites and the identified strategic sites will form a large percentage of future development in Cardiff and are likely to play a significant role in Cardiff meeting its renewable energy potential identified in the REA. Major development sites are taken to be those of 100 dwellings and above, or, commercial developments of 1,000 square metres or more.

5.174. Developers are expected to submit an independent energy assessment investigating the financial viability and technical feasibility of incorporating such schemes. Statements should be submitted at the planning application stage to ensure that any viability assessment reflects technological developments and economic circumstances. Developers should refer to the Council's REA and Preliminary Heat Opportunities Plan in undertaking their energy assessments to identify possible opportunities for renewable and low carbon technologies. In implementing this Policy it is expected that developers follow the energy hierarchy as advocated by national policy (TAN 12). Further guidance in relation to energy

assessments will be issued in the form of SPG. This will specify what is expected of developers to meet the requirement of Policy EN12.

5.175. PPW contains national policy relating to climate responsive development and specifies the current sustainable building standards in Wales. Section 12.10.1 contains national development management policy in relation to planning applications for renewable and low carbon energy development and associated infrastructure. Accordingly, developers should refer to this for further guidance. Implementation of this Policy, which promotes incorporation of renewable energy generation, will also reduce emission of aerial pollutants, thereby offsetting increases in aerial emissions arising from implementation of other policies in the Plan. This would contribute to avoiding significant effects upon European Sites.

Pollution

EN13 AIR, NOISE, LIGHT POLLUTION AND LAND CONTAMINATION

Development will not be permitted where it would cause or result in unacceptable harm to health, local amenity, the character and quality of the countryside, or interests of nature conservation, landscape or built heritage importance because of air, noise, light pollution or the presence of unacceptable levels of land contamination.

5.176. The purposes of the Policy are to ensure that:

- Developments that would generate unacceptable levels of air, noise or light pollution are appropriately located and controlled;
- Incompatible land uses and development are not located close to potential sources of pollution; and
- Developments are suitable for the proposed end use and that any actual or potential land contamination can be overcome, thereby

ensuring that there is no unacceptable harm to human health or the environment.

5.177. PPW emphasises that whilst planning controls should be used to control the above matters, they should not be used to control matters that are the proper concern of pollution control regimes.

5.178. Poor air quality can harm people's health, quality of life and amenity, as well as nature conservation and built heritage interests. Poor air quality is a problem in certain areas of Cardiff. Current air quality assessments have identified four areas of the County where statutory air quality standards are being exceeded. The Council has identified these as Air Quality Management Areas:

- Cardiff City Centre;
- Ely Bridge;
- Stephenson Court, Newport Road; and
- Cardiff Road, Llandaff.

5.179. These areas suffer from high levels of pollution caused by road traffic. As part of its statutory monitoring of air quality within the city the Council will annually review air quality and may revoke or declare additional Air Quality Management Areas as appropriate. In determining planning applications, consideration will be given to a development's likely effect in terms of air pollution it may cause directly, but also in terms of any increase or decrease in traffic it may generate.

180. Where a development is likely to affect air quality significantly (i.e. where air quality standards are, or are likely to be breached or a new residential development gives rise to the need for a new Air Quality Management Area to be declared by introducing residents to areas where air quality standards are already being breached) then an application may be approved subject to conditions mitigating its impact on air quality, or refused where appropriate.

5.181. Noise can have a harmful impact on people's health and quality of life. Developments such as housing, schools and hospitals can be particularly sensitive to noise, as can areas of landscape, nature or built heritage importance. Where possible, new developments that are particularly noise-sensitive should be located away from existing or proposed sources of significant noise. This assessment can be informed

by information on noise complaints being collated by the Council as part of an on-going initiative to reduce noise nuisance.

5.182. Major transport routes (road, rail and air) and some industrial and commercial activities can generate particularly high noise levels. There is specific guidance within TAN 11 that specifies Noise Exposure Categories that assists with proposed residential development near transport related noise.

5.183. In addition to this, Welsh Government as part of its statutory duties under the Environmental Noise Directive has designated areas within Cardiff Noise Action Planning Priority Action Areas. The aim of the Directive is to define a common approach intended to avoid, prevent or reduce on a prioritised basis the harmful effects, including annoyance, due to exposure to environmental noise. The Directive defines environmental noise as unwanted or harmful outdoor sound created by human activities, including noise emitted by means of transport, road traffic, rail traffic, air traffic, and from sites of industrial activity.

5.184. Under the Regulations, the Welsh Ministers had an obligation to make strategic noise maps for:

- **agglomerations** (large urban areas with populations of more than 100,000);
- **major roads** (those with more than three million vehicle passages per year); and
- **major railways** (those with more than 30,000 train passages per year).

5.185. The noise maps have been published by the Welsh Government.

5.186. Mitigating noise issues after they have arisen can be a lot more expensive than avoiding them in the first place. It is therefore desirable to seek interventions that bring multiple benefits, such as reducing people's exposure to air pollutants, making buildings more energy-efficient, encouraging safer driving or improving the road surface for drivers and cyclists at the same time as decreasing noise levels.

5.187. A current list of Noise Action Planning Priority Areas is available on the Welsh Government website.

5.188 Special consideration is required where noise-generating development is proposed in or near special areas such as urban quiet areas, which are tranquil urban green spaces designated by the Welsh Government under the Environmental Noise Directive.

5.189. There are currently 6 quiet areas within Cardiff, namely:

- Heath Park;
- Park Cae Delyn;
- Roath Park;
- Roath Park Pleasure Garden;
- Roath Park Recreational Ground; and
- Thompson Park.

5.190. There are a further 6 candidate quiet areas in Cardiff which the Welsh Government are currently consulting upon, these are:

- Bute Park;
- Fairwater Park;
- Insole Court;
- Llanishen Park;
- Splott Park; and
- Victoria Park.

5.191. Quiet Areas have been designated as part of the implementation of the Environmental Noise Directive.

5.192. Necessary new development that would give rise to high noise levels, including proposed transport schemes, should be located and designed so as to minimise their noise impact. Where noise-sensitive development needs to be located close to transport infrastructure for access reasons, it should be designed to reduce noise impact. Where necessary, developers will be required to provide an assessment of noise impact, together with proposals for mitigation.

5.193. The provision of lighting can help prevent crime and the fear of crime, enhance safety and security, and facilitate some sport and recreational activities. However, it can also be intrusive, cause glare and have a harmful impact on natural and built heritage assets, the amenity of neighbouring land uses and traffic safety.

5.194. Where new lighting constitutes development (e.g. floodlighting) it is principally controlled through the planning system. Planning permission can be refused if the design of proposed lighting systems is not considered satisfactory in order to prevent light pollution. Where necessary, planning permission will be conditioned to ensure that the design and operation of lighting systems are satisfactory and/or to prevent light pollution.

5.195. As detailed in PPW, where significant contamination is likely to be present, the local planning authority will require evidence of a detailed investigation and risk assessment prior to the determination of the application to enable beneficial use of land. Where acceptable remedial measures can overcome such contamination, planning permission may be granted subject to conditions specifying the necessary measures. If contamination cannot be overcome satisfactorily, the authority may refuse planning permission.

5.196. The onus will remain with the developer to ensure that the development of the site will not result in designation as a site with land contamination under Part 2A of the Environmental Protection Act 1990, thus ensuring the land is suitable for its proposed use.

EN14: FLOOD RISK

Development will not be permitted:

- i. Within tidal or fluvial flood plains unless it can be demonstrated that the site is justified in line with national guidance and an appropriate detailed technical assessment has been undertaken to ensure that the development is designed to alleviate the threat and consequences of flooding over its lifetime;**
- ii. Where it would increase the risk of flooding from fluvial and/or tidal flooding or from additional run-off from the development in any location;**
- iii. Where it would hinder future maintenance or improvement schemes of flood defences and watercourses;**
- iv. Where it would cause adverse effects on the integrity of tidal or fluvial defences;**

v. Where ground floor bedrooms are proposed in areas at high risk of flooding.

Where appropriate the developer should demonstrate that they have considered the need to incorporate environmentally sympathetic flood risk mitigation measures such as Sustainable Urban Drainage Systems (SUDS).

5.197. The purpose of this Policy is to avert development from where it would be at risk from river, ordinary watercourse, coastal, surface water flooding or where it would increase the risk of flooding or additional run off from development elsewhere.

5.198. The Policy will help deliver LDP objectives relating to flood risk and reflects advice set out in PPW and Technical Advice Note 15: Development and Flood Risk (July 2004).

5.199. TAN15 states that the development advice maps are based on the best available information considered sufficient to determine when flood risk issues need to be taken into account in planning future development. Development advice zones C1 and C2 of the maps show high flood risk areas and are based on Natural Resources Wales extreme flood outlines for tidal and fluvial flooding. These areas are shown on the Constraints Map based on information from the latest development advice maps (2015).

5.200. The Council is required to consult Natural Resources Wales and Caldicot and Wentloog Levels Internal Drainage Board on planning applications that have any flooding implications. It must have good reasons if it does not intend to follow Natural Resource Wales advice as it forms a material consideration.

5.201. The Flood and Water Management Act (FWMA) that was introduced in 2010, places a duty on Cardiff Council to prepare a Local Flood Risk Management Strategy (LFRMS) that sets out how the Council will proactively seek to minimise flood risk and prepare our communities.

5.202. Cardiff Council is now a Lead Local Flood Authority (LLFA) as defined by the new Flood and Water Management Act 2010. The FWMA aims to provide better, more comprehensive management of flood risk for people, homes and businesses. This role includes ensuring that flood risk

from all sources is suitably managed and aims to promote an integrated approach to planning and managing all forms of flood risk.

5.203. Cardiff Council in general are opposed to the culverting of watercourses because of the adverse ecological, flood risk and other effects that are likely to arise. Culverting can exacerbate the risk of flooding and increase the maintenance requirements for a watercourse. It also destroys wildlife habitats, damages a natural amenity and interrupts the continuity of the linear habitat of a watercourse. It is recognised there are various reasons why in some instances landowners, developers and local authorities believe that open watercourses should be culverted. However, Cardiff Council considers any benefits are usually outweighed by the potential problems in managing the system, the loss of habitats and difficulty in pollution detection.

5.204. New developments will only be permitted where the Council is satisfied that they will not result in adverse effects on the quality and/or quantity of surface waters or groundwater resources. Where detailed information in respect of flood risk is not available, developers will be required to carry out a Flood Consequence Assessment (FCA) to evaluate the extent of risk and ensure that no unacceptable development occurs within the flood risk area identified.

5.205. Managing flooding is an important part of contributing towards achieving sustainability. Developers, wherever necessary and appropriate, are required to incorporate environmentally sympathetic mitigation measures into their proposals. This would include such measures as Sustainable Urban Drainage Systems (SUDS). SUDS are seen as a means to control surface water which provide a valuable amenity asset and new habitats for wildlife.

5.206. In general, development will be resisted in identified flood plains or areas at unacceptable risk from flooding or where third parties may be adversely affected by an increased flood risk. Proposals involving bedrooms on ground or lower floors in areas liable to flood will not be acceptable. Development will only be permitted if the risks and consequences can be demonstrated to be managed to an acceptable level in line with national planning policy, in particular the tests set out in TAN 15.

5.207 Further guidance on the application of this Policy will be set out in SPG.

4. TRANSPORT

T1: WALKING AND CYCLING

To enable people to access employment, essential services and community facilities by walking and cycling the Council will support developments which incorporate:

- i. High quality, sustainable design which makes a positive contribution to the distinctiveness of communities and places;**
- ii. Permeable and legible networks of safe, convenient and attractive walking and cycling routes;**
- iii. Connections and extensions to the Cardiff Strategic Cycle Network and routes forming part of the Cardiff Walkable Neighbourhoods Plan;**
- iv. Measures to minimise vehicle speed and give priority to pedestrians and cyclists;**
- v. Safe, convenient and attractive walking and cycling connections to existing developments, neighbourhoods, jobs and services;**
- vi. Infrastructure designed in accordance with standards of good practice including the Council's Cycling Design Guide;**
- vii. Supporting facilities including, signing, secure cycle parking and, where necessary, shower and changing facilities; and**
- viii. The provision of Car-Free Zones.**

5.208. Research undertaken by Sustrans and Socialdata in 2011 revealed that a large proportion of car trips in Cardiff are relatively short: just over half are no further than 5 km and nearly a third are no further than 3km (under 2 miles). Many of these trips could be undertaken by foot or by bicycle.

5.209. The purpose of this Policy is to exploit this potential by favouring developments which include design features and facilities that make it easy for people to walk and cycle for everyday journeys instead of travelling by car. Encouraging 'active travel' will help to minimise car use

and support the Council in fulfilling its legal duty under the Active Travel (Wales) Act 2013 to develop, improve and maintain local walking and cycling networks.

5.210. The Council has produced a plan for the development of the city's Strategic Cycle Network known as 'Enfys'. The plan defines a core network of numbered cycle routes connecting to different parts of Cardiff. The Council is building the Enfys cycle network through a rolling programme of infrastructure schemes. Developments brought forward through the LDP will provide the opportunity to extend and enhance the network through the provision of new links and incorporating sections of the network within development schemes.

5.211. The Council is also developing a Walkable Neighbourhoods Plan. This will set out a programme of area-based measures to improve the local walking environment and make it easier and safer for people to reach local services and facilities on foot. New developments will provide the opportunity to extend these improvements and provide walking connections which help to integrate new neighbourhoods with existing communities.

5.212. Car-Free Zones provide a particular opportunity which can help to successfully deliver this Policy. They could form part of wider development areas adding to the range and choice of available housing. Located in areas with good public transport and other sustainable transport options, together with good access to local facilities, such areas are likely to be attractive to many potential occupiers of all ages. In designing such Zones it will be important to ensure the needs of disabled people are taken into account.

5.213 The Policy will be implemented through the development process. In considering proposals, the Council will seek to ensure that developments give priority to walking and cycling within their design and layout. High quality design which makes a positive contribution to the distinctiveness of communities and places will be essential to make walking and cycling attractive and popular travel options.

5.214 The Policy will be a key consideration in the master planning of strategic sites and should be read in conjunction with the strategic site master planning general principles and those included within the

schematic master planning frameworks for those sites. Provision of infrastructure will be secured through planning conditions, planning obligations and resourced through Community Infrastructure Levy and matching transport funding. Implementation of this Policy will help to reduce pollution arising from road traffic. This will counteract increases in atmospheric pollution as a result of the Plan, thereby avoiding significant effects upon internationally designated sites.

T2: STRATEGIC RAPID TRANSIT AND BUS CORRIDORS BUS CORRIDOR ENHANCEMENTS

- i. City Centre Bus Routes;**
- ii. Eastern Bus Corridor (A48, A4232 from the A48 to Junction 30 of the M4 Motorway, A48M Trunk Road, Southern Way and A4161 Newport Road);**
- iii. Northern Bus Corridor (A470 North Road/ Manor Way and A469 Caerphilly Road/A470 Trunk Road to the County Boundary);**
- iv. Western Bus Corridor (Cowbridge Road, A48, A4055 Cardiff Road; A4119 Llantrisant Road from the County Boundary to Cowbridge Road and A4232 Trunk Road from Culverhouse Cross to Junction 33 of the M4 Motorway) and**
- v. Southern Bus Corridor (Lloyd George Avenue, Lloyd George Avenue to the County Boundary via A4232 and Cogan Spur and via the Cardiff Barrage).**

Provision will be made to facilitate the functional integration of these corridors and associated services with the wider transport network including the bus network and local walking and cycling routes. The trunk road sections of the Bus Corridor Enhancements are the responsibility of the Welsh Government. Cardiff Council will work with the Welsh Government to identify appropriate measures on the trunk road sections of these routes.

Improvements to the city's wider bus network, including the provision of new infrastructure and the introduction of new routes and services will be supported where these are necessary to provide sustainable travel options and address the movement impacts of new development.

Rapid Transit Corridors

5.215. Four Rapid Transit Corridors have been identified based on four broad geographical channels feeding in towards the city centre. The Rapid Transit Corridors can be defined as the collection of high frequency public transport services which will run along on-road and off-road infrastructure linking neighbourhoods to the city centre and wider public transport network offering shorter journey times than conventional bus services. The Bus Corridor Enhancements referenced in paragraph 5.218 are largely located within the Rapid Transit Corridors but are specifically highlighted as the key bus-based corridors with important cross-boundary linkages and will therefore be a focus for future enhancements. Each corridor will include improvements that give rapid transit and bus services increased priority over general traffic and improved accessibility to a wider range of destinations.

5.216. This Policy provides for the development of four principal rapid transit corridors that will serve the main LDP strategic sites. The mode of rapid transit could take one of the following forms or another form of technology that provides for the same purpose:

- heavy rail;
- light rail;
- tram;
- tram/train running on segregated rails;
- tram/train combining running on segregated rails and on-street running;
- conventional buses operating a limited stop express service using carriageway space on the public highway used by general traffic;
- conventional buses using dedicated bus lanes and assisted by other bus priority measures in combination with use of other carriageway space on the public highway; or
- conventional buses or guided buses using busways completely segregated from the main highway along their entire length or for short sections in combination with use of the public highway/bus priority measures on the public highway.

5.217. Some elements of the rapid transit corridors will be provided within the strategic sites. However, the alignment and mode of rapid transit and how they connect to and interchange with the public transport network is not yet known and cannot be defined precisely on a map. The

need for the rapid transit corridors is included in the key policies on Strategic Sites. The mode of rapid transit that can be accommodated on each corridor will be determined through further technical assessment work including work undertaken as part of the detailed master planning of the strategic sites and in support of planning applications. This will help inform the precise mode, route alignments and land take requirements. Therefore, for these reasons the rapid transit routes are not shown on the Proposals Map.

Bus Corridor Enhancements

5.218. The Bus Corridor Enhancements listed in Policy T2 are defined as the strategic bus routes that connect Cardiff to the region. These corridors form a central element of the city's strategic public transport network. Around 80% of daily inbound commuter journeys to Cardiff from the region are by car. These movements create congestion on the city's strategic highway network which makes bus journeys longer and services less reliable. This Policy seeks to address these issues by making provision for improvements to maximise the efficiency and attractiveness of bus services through reducing journey times and improving journey time reliability. The corridors are shown on the Proposals Map.

5.218 Sufficient carriageway space will be required to facilitate the expeditious passage of buses (including express services with limited stops), minimising journey times and maximising journey time reliability. Where necessary to meet these requirements, the Council will seek to remove pinch points and to remove and/or relocate on street parking. The Council will also use a range of tools and measures to change travel behaviour by helping to make sustainable travel an attractive choice, managing the network and influencing travel demand. Some of these measures include for example, providing high quality walking, cycling and public transport infrastructure, improvements associated with development, reallocating road space, route improvements serving key destinations and developments, interchange/transport hub facilities, bus stops, cycle stands, improvements in accessibility, parking controls and policies, parking pricing, parking enforcement, moving traffic offences, bus priority, bus gates, junction controls, traffic signal control, managing road speed limits, high quality signage and road markings, designing for active travel, shared cycling and walking routes, partnership working with transport providers (e.g. encouraging new, express and cross-city bus

routes), travel information, promotional initiatives, personalised travel planning, road safety initiatives, collaborative working cross-boundary with other authorities and with key transport stakeholders, road safety and transport infrastructure maintenance.

Improvements to the Wider City Bus Network

5.220. Ensuring the bus is a more attractive and practical travel option is crucial to reducing car dependency, improving accessibility and effecting modal shift. Cardiff has an extensive local bus network serving most parts of the city. However, the bus is not an attractive travel option for many journeys in Cardiff. For example, most routes on the network are radial and converge on the city centre. This means that people have to travel into the city centre in order to access bus services to another part of the city. Consequently, the car is the preferred mode of travel for many relatively short journeys. To address this problem this Policy supports the expansion and improvement of Cardiff's local bus network, in conjunction with the development of Rapid Transit Corridors and Bus Corridor Enhancements. Technical work carried out by the Council indicates that re-configuring the network and introducing new orbital routes and points of interchange between routes and services would enable a much wider range of journeys within Cardiff to be undertaken by bus, thus reducing reliance upon the car.

5.221. Routes forming part of rapid transit corridors, strategic bus corridors and the wider city bus network will be connected in many locations across the public transport network. This offers the opportunity for interchange between services. Facilitating interchange with high quality passenger facilities and travel information will form an important element of enhancements to the to the city bus network.

5.222. Central to the delivery of this Policy will be detailed master plans for the LDP strategic sites and the provisions they make for public transport infrastructure and its phasing. Site master plans will be expected to meet the requirements of this Policy and be consistent with general master planning principles for strategic sites - both key considerations in planning applications on strategic sites. Provision of infrastructure will be secured through planning conditions, planning obligations and resourced through Community Infrastructure Levy and matching transport funding.

5.223. Implementation of this Policy will require the Council to exercise its statutory powers to carry out improvements to highway infrastructure. Measures will include provision of dedicated bus lanes and bus priority at key junctions. In some areas this will require on-street parking arrangements to be reviewed and modified. The location and nature of improvements will be informed by modelling and technical assessment work relating to specific corridors and Cardiff's wider transport network, as well as the detailed assessment of travel impacts of individual development sites and planning applications. Infrastructure measures will generally be resourced through the Community Infrastructure Levy and matching transport funding. In most cases they will be implemented by the Council as the highway authority.

5.224. Implementation of this Policy will help to reduce pollution arising from road traffic. This will counteract increases in atmospheric pollution as a result of the Plan, thereby avoiding significant effects upon internationally designated sites.

T3: TRANSPORT INTERCHANGES

In order to facilitate the transfer between transport modes and help to minimise travel demand and reduce car dependency, the following developments will be supported:

- i. New rail stations which can be easily accessed by walking, cycling and local bus services, facilitate rail park and ride, where appropriate, and meet the access needs of all users;**
- ii. Improvements to existing rail and bus interchanges, including measures to facilitate access by active travel modes and disabled people with particular access needs;**
- iii. Measures to support interchange between local bus services, including facilities to accommodate bus layover and driver facilities;**
- iv. Strategically located park and ride facilities, supported by attractive, frequent and reliable bus or rapid transit services;**
- v. High quality passenger facilities including but not limited to seating, information, toilet facilities and cycle parking;**
- vi. Facilities for park and share;**
- vii. Facilities for coach parking, taxis and passenger drop off;**

- viii. Facilities for overnight lorry parking and freight transfer; and**
- ix. Facilities for interchange with water-based transport.**

5.225. Providing for interchange between transport modes is essential to the efficient functioning of the transport network and making sustainable travel options more practical and attractive. This is particularly important in relation to the public transport network. This Policy provides support for all forms of transport interchange that help meet these requirements and deliver the modal shift objectives of the LDP. It is important that these interchanges are accessible to disabled travellers and people with prams/young children.

5.226. Implementation of this Policy will help to reduce pollution arising from road traffic. This will counteract increases in atmospheric pollution as a result of the Plan, thereby avoiding significant effects upon internationally designated sites.

T4: REGIONAL TRANSPORT HUB

Support will be given to the development of infrastructure and facilities in and around Cardiff Central Railway Station which:

- i. Facilitate the easy interchange of passengers between national, regional and local rail and bus services;**
- ii. Provide high quality passenger facilities, including but not limited to seating, information, toilet facilities and cycle parking;**
- iii. Can be easily accessed by walking and cycling and meets the access needs of all users;**
- iv. Is well integrated with development in the surrounding area and facilitates easy access to the centre of the city, Cardiff Bay and the Enterprise Zone;**
- v. Complement the development and regeneration of land north and south of Central Railway Station and the wider Enterprise Zone;**
- vi. Provide a public transport gateway of a high aesthetic and functional quality, which is commensurate to Cardiff's status as a European capital city; and**
- vii. Provides an attractive, legible and vibrant environment.**

5.227. The development of a central public transport interchange focussed on land in and around Cardiff Central Railway Station and the Central Square area is a longstanding objective of the Council. Cardiff is located on the south Wales main railway line and forms the central hub of regional Valley Lines rail network – all scheduled for electrification by 2020.

5.228. The provision of a central public transport interchange to facilitate transfer between national, regional and local rail and bus services is essential for Cardiff to fulfil its role as a growing capital city and an employment and service centre for a major city region. It is also critical to achieving the transport connectivity required to sustain Cardiff's economic competitiveness with other UK cities and city regions and maintain its attractiveness to business investors.

5.229. This Policy sets out the Council's requirements with regard to the functionality and aesthetic quality of a central interchange and its integration with existing and future development within the Cardiff Central Enterprise Zone. The Policy will be implemented through a process of master planning undertaken in collaboration between the Council, developers, transport providers, the public and key stakeholders.

T5: MANAGING TRANSPORT IMPACTS

Where necessary, safe and convenient provision will be sought in conjunction with development for:

- i. Pedestrians, including people with prams and/or young children;**
- ii. Disabled people with mobility impairments and particular access needs;**
- iii. Cyclists;**
- iv. Powered two-wheelers;**
- v. Public transport;**

- | |
|--|
| <p>vi. Vehicular access and traffic management within the site and its vicinity;</p> <p>vii. Car parking and servicing;</p> <p>viii. Coach parking; and</p> <p>ix. Horse-riders.</p> |
|--|

5.230. The purpose of this Policy is to ensure that all new developments for which planning permission is required:

- i. Properly address the demand for travel and its impacts;
- ii. Contribute to reducing reliance on the private car, in line with national planning policies and the strategic transport objectives and policies of the LDP;
- iii. Make satisfactory provision for access, parking and circulation, particularly by pedestrians, cyclists, public transport users and disabled people with mobility impairments and particular access needs; and
- iv. Avoid unacceptable harm to safe and efficient use and operation of the road, public transport and other movement networks and routes.

5.231. Measures appropriate to a particular development will depend on its scale, location and use(s). They may include providing for and/or improving, as appropriate:

- The needs of disabled people with mobility impairments and particular access needs;
- The needs of people with prams and/or young children;
- Safe and convenient pedestrian access to and movement within the development, including pedestrian priority measures, lighting, security, and weather protection;
- Walking links to existing pedestrian routes and networks, District and Local centres, open space and other community facilities; (e.g. safe routes to school) - for access and recreational purposes - and designed for use by everyone;
- The strategic recreational routes;
- Cycling links to existing cycle routes and networks, District and Local centres and community facilities designed for use by everyone;
- Secure cycle parking and changing facilities in accordance with guidelines set down in SPG;

- Management of conflict between modes of access, including vehicles, pedestrians and cyclists;
- Public transport, including bus stops, bus lanes and interchange facilities;
- Safe vehicular access to the site that does not unreasonably restrict the flow of traffic on the adjoining highway network;
- Traffic and speed management measures; and
- Car and coach parking and servicing facilities in accordance with revised guidelines set down in supplementary planning guidance.

5.232. Parking and servicing will be provided, where appropriate in accordance with the Council's adopted standards.

User Hierarchy

5.233. In assessing the transport and access aspects of proposals the Council will be more likely to give favourable consideration to developments which through their design and layout give priority to movements by sustainable travel modes and reflect the user hierarchy in Department for Transport Manual for Streets, namely:

Consider First	Pedestrians
V	Cyclists
V	Public Transport Users
V	Specialist Service Vehicles (e.g. emergency services, waste etc.)
Consider Last	Other motor traffic

Sustainable Travel Choices

5.234. Where necessary to mitigate travel impacts, development will need to be supported by actions designed to manage travel demand, minimise private car use and increase the proportion of journeys made by walking, cycling and public transport. Such measures will include although not be restricted to:

- Area based personalised travel planning projects and programmes;

- Travel Plans including measures to support sustainable travel to/from residential areas, workplaces, schools and other significant trip generators; Car Clubs and Car Share Schemes; Cycle Training; and
- Promotional/marketing initiatives and campaigns to encourage sustainable travel.

5.235. These will be secured by way of planning condition and/or a Section 106 planning obligation. Where necessary, planning agreements will secure resources for survey and monitoring activity required to support delivery of specific interventions.

5.236. Implementation of this Policy will help to reduce pollution arising from road traffic. This will counteract increases in atmospheric pollution as a result of the Plan, thereby avoiding significant effects upon internationally designated sites.

T6: IMPACT ON TRANSPORT NETWORKS AND SERVICES

Development will not be permitted which would cause unacceptable harm to the safe and efficient operation of the highway, public transport and other movement networks including pedestrian and cycle routes, public rights of way and bridle routes.

5.237. The purpose of this Policy is to protect the transport network and its users from developments which may otherwise cause unacceptable harm to the operation and use of key transport networks and routes.

T7: STRATEGIC TRANSPORTATION INFRASTRUCTURE

Support will be given to the development of the following elements of strategic transportation infrastructure:

- i. Eastern Bay Link;**

- ii. St Mellons rail interchange including Park and Ride; and**
- iii. New sustainable transport corridor in North West Cardiff.**

5.238. This Policy provides support for three key elements of strategic transport infrastructure which are illustrated on the Constraints Map with further detailed work informing the precise land take requirements.

5.239. The Eastern Bay Link Road is a longstanding aspiration of the Council and is featured in the South East Wales Transport Alliance (Sewta) Regional Transport Plan (RTP). The road would complete a peripheral distributor road running between M4 Junction 33 in North West Cardiff and Llanedeyrn Interchange in the East of the city. It would provide additional capacity for road-based access to the Cardiff Central Enterprise Zone from the East and supporting development in that area. A scheme is currently being promoted and developed by the Welsh Government. Details of proposed works are not currently available so the Constraints Map indicates the extent of the Eastern Bay Link running from the Queensgate Roundabout to the A48, Eastern Avenue.

5.240. The proposal for a rail station at St Mellons is included in the Sewta RTP and Sewta Rail Strategy (2013). The station would potentially serve the strategic development site south of St Mellons Business Park. It could also form part of a future South Wales Metro network including rail or rapid transit connections linking central Cardiff to strategic developments in and around Newport. Initial work to investigate the technical feasibility of a station at St Mellons is currently underway.

5.241. The strategic development sites proposed to the West of Pentreban and North of the M4 Junction 33 will require effective public transport connections. The potential exists to develop a dedicated public transport corridor connecting Cardiff city centre to the strategic sites in North West Cardiff and strategic development areas beyond Cardiff's boundary in Rhondda Cynon Taff. Such a link can be incorporated within the master plans for the strategic sites and form an essential component of those developments. Its extension into growth areas within Rhondda Cynon Taff also makes the corridor strategically important within a regional context. As such it would form a key corridor within a future South Wales Metro network.

T8: STRATEGIC RECREATIONAL ROUTES

A strategic network of recreational routes will be maintained and developed to link Cardiff's coast, river corridors, open spaces, countryside, and the regional network of routes, facilitating access to them by local communities, and forming an integral part of the wider cycling and walking network in Cardiff.

The core strategic network will comprise:

- i. The Taff Trail;**
- ii. The Ely Trail;**
- iii. The Rhymney Trail;**
- iv. The Nant Fawr Trail;**
- v. The Bay Trail;**
- vi. The Wales Coast Path; and**
- vii. The Glamorgan Ridgeway Walk**

5.242. This Policy sets out the Council's desire to develop a network of recreational routes that will allow everyone in Cardiff to gain easy access to local green spaces, and the wider coast and countryside.

5.243. The Policy helps to deliver Plan objectives and also accords with PPW which seeks to promote provision of safe accessible, convenient and well-signed walking and cycling routes and to protect and enhance the national cycle network and long-distance routes and footpaths that are important tourism and recreation facilities, both in their own right and as a means of linking other attractions and local communities.

5.244. Wherever possible, the strategic network will make provision for access by walkers, cyclists and horse riders, (although access for all is limited by practicalities). The core strategic network will be linked to local communities and other routes, including permissive paths, public rights of way, and open spaces. This will help to provide a range of routes and enable everyone to use and enjoy Cardiff's natural heritage, whilst also linking Cardiff to the wider regional network. Local opportunities are important for both health and well-being and sustainability reasons.

5.245. The development of the coast and river corridor routes are particularly important for people living in the southern arc of Cardiff where the choice of open spaces, public rights of way network and access

to the countryside is more limited. The development of a network of safe, convenient attractive routes through green spaces will also provide the opportunity for more people to use them as part of their everyday journeys - to school, work and local community facilities. Development of cross border routes into other authority areas together with within County routes contribute towards the city's green tourism offer.

5.246. New developments including the proposed Strategic sites, adjacent to, the main strategic routes, public rights of way or other recreational routes will be expected to respect their existence and contribute to their development, or links to them where applicable.

5.247. The current extent of the existing core recreational strategic network are shown on the Constraints Map, proposals for development of these routes including creation of 'missing' links are shown on the Proposals Map. Where details of proposed new routes are not yet fully worked up and agreed with relevant parties, such as the Taff Ely Link, routes will not be shown on the Plan Maps but further work will continue to explore their future implementation.

5.248. The usage of routes will be monitored through cycle counter data where deployed together with wider feedback through the Cardiff River Valleys initiative.

T9: CARDIFF CITY REGION 'METRO' NETWORK

The Council will seek to facilitate the development of a future regional 'Metro' network of integrated public transport routes and services within Cardiff and connecting the city with the wider south east Wales region, including the development and/or enhancement of the following on-highway and off-highway infrastructure components:

- i. Existing and new heavy rail routes**
- ii. New light rail routes**
- iii. Tram**
- iv. Tram/train on segregated rails and/or running on street**
- v. Conventional buses, or guided buses using busways completely segregated from the main highway along their entire length or for short sections, in combination with**

- use of the public highway/bus priority measures on the public highway.**
- vi. Conventional buses using dedicated buses lanes and assisted by other bus priority measures, in combination with use of other carriageway space on the public highway; and**
- vii. Conventional buses using carriageway space on the public highway used by general traffic.**

Where the alignment of a future route which is likely to form part of a 'Metro' network falls within any part of a development site, the Council will, through the development management process, seek either to secure provision of the necessary infrastructure as part of the development, or otherwise, safeguard the land and space required to accommodate the route and potential mode options in the future. This will include requiring a development to be designed in a way which does not prejudice the future development of the 'Metro' route and would enable it to be incorporated within the development at a later date.

5.249. The Cardiff City Region Metro is a proposal for a metropolitan-style, integrated public transport network extending across Cardiff and South East Wales. The 'Metro' is likely to be developed in phases over a number of years. Its purpose is to significantly enhance public transport accessibility across the region. This would be achieved by the physical and operational integration of routes for different public modes (rail-based and bus-based) and enabling provision of frequent, fast and efficient public transport services connecting principal settlements and trip destinations in the region. A 'Metro' network would include points of interchange and be supported by integrated timetables and ticketing with a common branding. In combination, these elements would enable people to make daily journeys and reach key trip destinations without the need for a car. This enhanced connectivity would have significant economic benefits for Cardiff and the wider City Region, as well as easing pressures on key strategic transport corridors within and beyond Cardiff boundaries.

5.250. Potential routes/corridors which would make up the 'Metro' network have been identified in a series of investigative studies in recent years. Future technical work will be led by the Welsh Government in consultation with local authorities, land owners, communities and the transport industry. Welsh Government's National Transport Finance Plan

2015 (July 2015) includes a commitment to progress this work which will determine the form of the network and the mix of public transport modes on each corridor/route.

5.251. It is important that development that takes place within the plan period does not prejudice the delivery of this regionally important future asset.

5.252. Policies KP2 (A) to KP2(H) include references to improvements to the strategic public transport network within the supporting lists of 'Essential' and 'Enabling' transport infrastructure for the individual LDP strategic sites. A number of these measures will potentially form part of the future 'Metro' network.

5.253. Policy T9 augments Policy KP2 by providing general support for the future delivery of the 'Metro' and the means by which the Council can, through controls exercised through the development management process:

- secure infrastructure forming part of the network; or
- otherwise, safeguard the route alignment, potential mode options and physical space requirements for future 'Metro' routes/corridors.

5.254. This protection will be integrated within the design and layout of approved developments. The policy also provides the basis for resisting developments which would prevent or compromise future delivery of a 'Metro' route.

5. RETAIL

R1 RETAIL HIERARCHY

Retail proposals, (including changes of use, redevelopment and extensions) will be considered in accordance with the retail hierarchy which comprises Central Shopping Area (CSA) at the head of the regional hierarchy supported by a range of district centres and smaller local centres as identified on the Proposals Map. Retail proposals outside centres identified on the Proposals Map will be assessed against Policy R4: Retail Development (Out of Centre). or Policy R7: Retail Provision within Strategic Sites where they form part of an allocated housing led strategic site.

5.255. This policy is a central component of the retail strategy which aims to:

- Sustain and enhance the role of the Central Shopping area at the head of the regional shopping hierarchy;
- Sustain and enhance the vitality, viability and attractiveness of district and local centres identified on the Proposals Map.
- Promote good accessibility to a range of shopping facilities by all sections of the community and reduce dependence on car travel for shopping trips; and
- Control the amount, size and nature of out-of-centre retail.

5.256. The policy establishes the existing hierarchy of centres in line with national guidance and favours new and improved retail facilities within the Central Shopping Area and at an appropriate scale, within district and local centres, whilst non shopping uses will be controlled. This ensures that a sequential approach is adopted which means first preference for retail proposals should be in existing centres and then for sites immediately adjoining these centres. If there are no suitable sites in these locations, only then will out-of-centre sites in locations that are accessible by a choice of means of transport be considered.

5.257. Proposals outside centres identified on the Proposals Map will be assessed against Policy R4: Retail Development (Out of Centre).

5.258. District and Local Centres within allocated housing led strategic sites that develop over the plan period in accordance with Policy R7: Retail Provision within Strategic Sites will become designated centres within the retail hierarchy and defined on the Proposals Map as part of the LDP review.

R2: DEVELOPMENT IN THE CENTRAL SHOPPING AREA

Development proposals within the Central Shopping Area (CSA) will be assessed against the following criteria:

- i. Whether the proposal involves the loss of shop uses (Class A1) from within Protected Shopping Frontages;**
- ii. Whether the proposal involves retail and other uses which enhance the vitality, viability and attractiveness of the city centre;**
- iii. Whether the development allows for, or retains the effective use of, upper floors; and**
- iv. Supports the regeneration, renewal and enhancement of the city centre.**

5.259. The purpose of this Policy is to allow, monitor and manage the diversity of uses within the Central Shopping Area identified on the Proposals Map.

5.260. The Central Shopping is the head of the retail hierarchy for Cardiff and South East Wales. It offers a range and quality of shopping facilities unrivalled in the region, together with a diversity of complementary service, leisure, residential and business uses, within a compact and accessible area. Despite this, the area is not invulnerable to trends in retail location and shifts in consumer demand and expenditure, including competition from out-of-centre locations and internet shopping. There is a continuing need to improve facilities within the Central Shopping Area in order to provide a quantity and quality of shops that will enhance its primary shopping role and character, and its vitality, attractiveness and viability.

5.261. An appropriate mix of non-shop uses can contribute to vitality, attractiveness and viability by introducing a diversity of compatible uses within the Central Shopping Area. However, too many can harm the primary shopping role and character of shopping streets by reducing their attractiveness to shoppers, undermining the viability of remaining shop units and reducing the prospect of attracting new retailers and retail investment.

R3: PROTECTED SHOPPING FRONTAGES

Development proposals involving the loss of Class A1 (shop) uses within Protected Shopping Frontages will be assessed against the following criteria:

- i. The balance and distribution of existing and committed non-shop uses;**
- ii. The amount of A1 floorspace and frontage length being lost;**
- iii. Whether, and for how long, the premises have been vacant and actively marketed;**
- iv. The location, character and prominence of individual premises or frontages;**
- v. The nature of the proposed use, including whether an appropriate shop front and window display is to be provided; and**
- vi. The impact of the proposed use upon the amenity of adjacent or nearby residents.**

5.262. This Policy provides an enhanced level of protection for the City Centre's most important shopping streets. The protected frontages are identified on the Proposals Map. Further guidance will be set out in SPG.

5.263. Proposals will be assessed in terms of their impact cumulatively with other existing and committed non-shop uses. Where the application frontage is closely related to surrounding frontages (e.g. in narrow or pedestrianised streets or arcades) it will be appropriate to consider the proposal's impact on both the application frontage and surrounding frontages.

5.264. The Policy allows for other uses (including A2 and A3) at appropriate locations within Protected Frontages, provided those uses do not, either alone or cumulatively with other non-shopping uses, undermine the primary shopping role and character of those frontages or groups of frontages. This is intended to maintain the centre's retail offer whilst providing complementary services during normal shopping hours, generating pedestrian flows and providing visually interesting and active frontages.

5.265. Like offices, it is acknowledged that an element of retail vacancy can be created by the natural turnover of businesses or through refurbishment. However, long-term vacant shop floorspace is a strong

indicator of decline, adversely impacting upon perceptions of the high street to shoppers and investors. Proposals which seek to bring back into beneficial use retail premises which have remained vacant, despite active marketing, will be more favourably considered. Temporary or “meanwhile” uses can enliven city streets and provide short-term retail, business incubation or exhibition space, whilst reducing management and maintenance costs to landowners.

R4: DISTRICT CENTRES

Retail, office, leisure and community facilities will be favoured within the following District Centres identified on the Proposal Map:

- (1) Albany Road / Wellfield Road**
- (2) City Road**
- (3) Clifton Street**
- (4) Cowbridge Road East**
- (5) Crwys Road/ Woodville Road**
- (6) Bute Street/James Street**
- (7) Merthyr Road, Whitchurch**
- (8) Penarth Road/Clare Road**
- (9) St Mellons**
- (10) Thornhill**
- (11) Whitchurch Road**

This will be subject to:

- (i) The proposal being of a scale appropriate to the particular centre;**
- (ii) The location of business offices (Class B1) above the ground floor,**
- (iii) Proposals not impeding the effective use of upper floors.**
- (iv) Proposals for uses other than Class A1 being permitted at ground floor level if they would not cause unacceptable harm to the predominant shopping role and character of the centre, the vitality, attractiveness and viability of a specific frontage or group of frontages;**

Unacceptable harm should take account of:

- **The existing level and nature of non-shopping uses within the centre as a whole**
- **The size of the retail unit in relation to the overall size of a centre or a specific group of frontages; and**
- **The distribution and proximity of non-shopping uses within a frontage.**

Proposals that result in, or add to a continuous stretch of non-shopping uses (3 or more units in non-shopping use) will be less favourably considered.

Applications for changes of use that involve new non-shopping uses in vacant premises will be considered in light of the following:

- **The vacancy rate in the surrounding area; and**
- **Whether, and for how long, the premises have remained vacant whilst being actively marketed for their existing or previous use.**

5.266. The aim of this Policy is to promote and protect the shopping role of District Centres while supporting a mix of appropriate uses. The District Centres identified in Policy R4 are defined on the Proposals Map (and in Appendix 8)

5.267. PPW acknowledges that a range of uses as well as shops are appropriate within centres. These include financial and professional services (A2) and food and drink uses (A3). In general, proposals for such uses will be permitted where they would not cause unacceptable harm to the primary shopping function of the centre or the vitality, attractiveness or viability of its shopping frontages, by virtue of their number or location. What is deemed as unacceptable harm will depend upon the nature of each centre which will have its own individual characteristics.

5.268. The size and character of District Centres means that they are more likely to be able to satisfactorily accommodate a greater range and mix of non-retail uses including businesses, offices and commercial leisure facilities.

5.269. Where a change of use from an A1 retail unit to a non-shopping use (use class other than A1) is proposed, the assessment in terms of unacceptable harm should take account of:

- The existing level and nature of non-shopping uses within the centre as a whole (This should also take into consideration the number of premises, and
- whether any have unimplemented planning consent for non-shopping uses);
- The size of the retail unit (frontage length and floorspace) in relation to the overall size of a centre or a specific group of frontages; and
- The distribution and proximity of non-shopping uses within a frontage.

5.270. It is important that non-shopping uses are dispersed as much as possible in order to limit harm to the shopping role and character of a centre. Proposals that result in, or add to a continuous stretch of non-shopping uses (3 or more units in non-shopping use) will be less favourably considered, as they will fragment the shopping frontage.

5.271. A high level of vacancy is often an indicator of poor retail performance, reduced levels of demand and/or investor confidence, and can be harmful to the vitality, attractiveness and viability of an area in the long-term. Applications for changes of use that involve new non-shopping uses in vacant premises will, therefore, be considered in light of the following:

- The vacancy rate in the surrounding area; and
- Whether, and for how long, the premises have remained vacant whilst being actively marketed for their existing or previous use.

5.272. This Policy will favour business class offices above ground floor level within District Centres. At ground floor level, only professional and financial (A2) offices with a shop front will be acceptable. B1 uses do not provide an active frontage or service to visiting members of the public.

5.273. The provision of residential accommodation at upper floors within centres can support their vitality, attractiveness and viability. However, it is recognised that District Centres cannot offer the same degree of amenity as purely residential areas. To enable opportunities for offices and other appropriate business uses at upper floors within District

Centres, it may be necessary to allow the change of use of premises in residential use.

5.274. A District Centres Strategy has been prepared to raise the profile of District Centres within Cardiff and provide a framework and justification for the preparation of individual Action Plans for priority District Centres. This Strategy also acts as a reference point for co-ordinated working between service providers; a mechanism for attracting inward investment and securing funding for improvements within these designated centres.

R5: LOCAL CENTRES

Retail, office, leisure and community facilities will be favoured within the following Local Centres identified on the Proposal Map:

- (1) Birchgrove**
- (2) Bute Street (Loudoun Square)**
- (3) Cathedral Road**
- (4) Countisbury Avenue**
- (5) Caerau Lane**
- (6) Fairwater Green**
- (7) Gabalfa Avenue**
- (8) Grand Avenue**
- (9) High Street, Llandaff**
- (10) Maelfa, Llanedeyrn**
- (11) Newport Road, Rumney**
- (12) Rhiwbina Village**
- (13) Salisbury Road**
- (14) Splott Road**
- (15) Station Road, Llanishen**
- (16) Station Road, Llandaff North**
- (17) Station Road, Radyr**
- (18) Tudor Street**
- (19) Willowbrook Drive**
- (20) Wilson Road**

This will be subject to:

- (i) The proposal being of a scale appropriate to the particular centre;**
- (ii) The retention of residential accommodation at upper floors;**
- (iii) Proposals for uses other than Class A1 (except business offices class B1) being permitted at ground floor level if they would not cause unacceptable harm to the predominant shopping role and character of the centre, the vitality, attractiveness and viability of a specific frontage or group of frontages;**

Unacceptable harm should take account of:

- The existing level and nature of non-shopping uses within the centre as a whole**
- The size of the retail unit in relation to the overall size of a centre or a specific group of frontages; and**
- The distribution and proximity of non-shopping uses within a frontage.**

Proposals that result in, or add to a continuous stretch of non-shopping uses (3 or more units in non-shopping use) will be less favourably considered

Applications for changes of use that involve new non-shopping uses in vacant premises will be considered in light of the following:

- The vacancy rate in the surrounding area; and**
- Whether, and for how long, the premises have remained vacant whilst being actively marketed for their existing or previous use.**

5.275. The aim of this Policy is to promote and protect the shopping role of Local centres while supporting a mix of appropriate uses. The Local Centres identified in Policy R5 are defined on the Proposals Map (and in Appendix 8)

5.276. PPW acknowledges that a range of uses as well as shops are appropriate within centres. These include financial and professional services (A2) and food and drink uses (A3). In general, proposals for such uses will be permitted where they would not cause unacceptable harm to the primary shopping function of the centre or the vitality, attractiveness or viability of its shopping frontages, by virtue of their number or location.

What is deemed as unacceptable harm will depend upon the nature of each centre which will have its own individual characteristics.

5.277. Local Centres are generally smaller in size and variety of uses. Local Centres are generally more residential in nature than District Centres and do not have the scale or variety of retail and non-retail uses. As a consequence proposals other than A1 may be more difficult to satisfactorily accommodate than in District Centres. Within Local Centres, the policy stance is to discourage significant office or commercial leisure developments and give greater emphasis to safeguarding residential amenity. At ground floor level, only professional and financial (A2) offices with a shop front will be acceptable, provided they do not cause unacceptable harm to the vitality, and viability of the centre. In relation to A3 uses more emphasis will be placed on closing times, and the type of premises.

5.278. Where a change of use from an A1 retail unit to a non-shopping use (use class other than A1) is proposed, the assessment in terms of unacceptable harm should take account of:

- The existing level and nature of non-shopping uses within the centre as a whole (This should also take into consideration the number of premises,
- whether any have unimplemented planning consent for non-shopping uses);
- The size of the retail unit (frontage length and floorspace) in relation to the overall size of a centre or a specific group of frontages; and
- The distribution and proximity of non-shopping uses within a frontage.

5.279. It is important that non-shopping uses are dispersed as much as possible in order to limit harm to the shopping role and character of a centre. Proposals that result in, or add to a continuous stretch of non-shopping uses (3 or more units in non-shopping use) will be less favourably considered, as they will fragment the shopping frontage.

5.280. A high level of vacancy is often an indicator of poor retail performance, reduced levels of demand and/or investor confidence, and can be harmful to the vitality, attractiveness and viability of an area in the long-term. Applications for changes of use that involve new non-shopping

uses in vacant premises will, therefore, be considered in light of the following:

- The vacancy rate in the surrounding area; and
- Whether, and for how long, the premises have remained vacant whilst being actively marketed for their existing or previous use.

5.281. Loss of residential units will generally be resisted at upper floors in Local Centres where the characteristics of the premises and their location remain suitable for residential use.

5.282. In addition to local centres identified on the proposals Map, there are numerous smaller groups of shops and individual 'corner shops' across the county that provide valuable shopping facilities to surrounding communities. Proposals that could lead to the loss of such local shops will be assessed having regard to the role of those shops in meeting local shopping needs and the viability of the premises for continued shopping use. Planning Policy Wales recognises the important economic and social role of such local shopping facilities to communities.

R6: RETAIL DEVELOPMENT (OUT OF CENTRE)

Retail development will only be permitted outside the Central Shopping Area, District and Local Centres identified on the Proposals Map if:

- i. There is a need for the proposed floorspace (with precedence accorded to establishing quantitative need);**
- ii. That need cannot satisfactorily be accommodated within or adjacent to the Central Shopping Area, within a District or Local Centre;**
- iii. The proposal would not cause unacceptable harm to the vitality, attractiveness or viability of the Central Shopping Area, a District or Local centre or a proposal or strategy including the Community Strategy, for the protection or enhancement of these centres;**
- iv. The site is accessible by a choice of means of transport; and**
- v. The proposal is not on land allocated for other uses. This especially applies to land designated for employment and**

housing, where retail development can be shown to limit the range and quality of sites for such use.

5.283. This Policy identifies the criteria against which proposals for retail development outside the Central Shopping Area, District and Local Centres identified on the Proposals Map will be assessed in line with PPW 'Planning for Retailing and Town Centres'.

5.284. This Policy relates to any proposals that introduce additional retail floorspace, including redevelopment, extensions (including mezzanine floors, where permission for this is required); subdivision; changes of Use Class and; variations of planning conditions. The aim is to control the nature and size of out- of-centre retail development so as to minimise competition with, and impact on the vitality and viability of shopping centres identified in the Plan.

5.285. This Policy contributes to protecting and enhancing designated shopping centres and resisting out-of-centre retail development that could be harmful to District and Local shopping facilities. It supports sustainability objectives by encouraging the grouping of retail facilities together in easily accessible locations and reducing dependence on private transport for shopping trips and helps deliver the strategy by developing sustainable communities

5.286. The sequential test as detailed in PPW aims to direct retail developments to existing centres wherever possible or to the edges of such centres if sites within the centres are not available. Only where need for additional retail floorspace has been demonstrated and there are no locations in or adjacent to designated centres that could accommodate that need, should out-of centre locations be considered. In Cardiff the order of preference is:

- Within the Central Shopping Area;
- On the edge of the Central Shopping Area;
- Within a District or Local Centre;
- On the edge of a District of Local Centre;
- An out-of-centre location accessible by a choice of means of transport.

5.287. PPW acknowledges that some types of retailing, for example selling bulky goods and requiring large showrooms, may not be able to find appropriate sites in town centres. Such stores should be grouped

together at locations accessible by a choice of means of transport, encouraging linked trips and a reduction in dependence on car travel. Where bulky goods development is proposed and it passes the need and sequential tests, it will be directed towards existing concentrations of bulky goods retailers wherever possible. Similarly, re-use of vacant out-of-centre units at locations accessible by a choice of means of transport is preferable to new out-of-centre development. Where applications are made to reuse vacant units, applicants will be expected to demonstrate how they intend to improve the pedestrian environment and linkages.

5.288. Impact will be assessed in terms of both the direct commercial impact of a proposal on neighbouring designated centres and of the impact on the retail strategy itself. All proposals for out-of-centre development that satisfy the tests of retail need and the sequential approach must demonstrate that they would not harm designated shopping centres or the retail strategy, either in their own right, or in conjunction with other recent developments or unimplemented permissions.

5.289 Where permission is granted for out-of-centre retail development or, in some instances, edge-of-centre development, conditions will be attached to control the nature and scale of the retail activity and minimise any potential impact on designated centres or the retail strategy.

5.290. Contributions will be negotiated from out of centre retail developments towards environmental improvement in the nearest District or Local Centre to mitigate adverse impacts, in line with the policy on Planning Obligations. Further details are provided in the District and Local Centre Strategy.

5.291. The Council monitors the vitality, attractiveness and viability of designated centres. All applications for out-of-centre retailing will be expected to examine the health of centres, including shopping parades most likely to be affected and their likely impact.

5.292. Proposals for out-of-centre retail development are likely to require assessment against a range of other Policy considerations including traffic and transportation implications.

R7: RETAIL PROVISION WITHIN STRATEGIC SITES

Retail development which forms part of the allocated housing led Strategic Sites will be assessed against Policy R4 (Retail Development (Out of Centre) and will be supported where:

- i. It is of appropriate scale which satisfies an identified need;**
- ii. It will not negatively impact on the vitality and viability of designated centres;**
- iii. It is located along public transport corridors and easily accessible by walking and cycling; and**
- iv. It forms part of a planned centre which reinforces a sense of place.**

5.293. It is recognised that there will be a need for retail provision close to where people live to meet the everyday needs of future large scale new communities. Such facilities often include a range of small shops, serving the local catchment including small supermarkets, newsagents and food and drink outlets. The provision of future local shopping within the housing development should not negatively impact on the vitality and viability of existing designated District or Local Centres. Planning applications should also demonstrate that this is the most appropriate location for local shopping provision, in relation to public transport and design and layout.

R8: FOOD AND DRINK USES

Food and Drink Uses are most appropriately located in:

- i. The City Centre (Central Business Area)**
- ii. The inner harbour/waterfront area of Cardiff Bay (Bay Business Area)**
- v. District and Local Centres**

Subject to amenity considerations, highway matters, crime and fear of crime considerations, and where they do not cause unacceptable harm to the shopping role and character of designated centres. Food and drink uses are unlikely to be acceptable within or adjacent to residential areas, where they would cause nuisance and loss of amenity, or result in the loss of a residential property.

5.294. Food and drink uses, including restaurants and hot food take-aways, are better located in designated centres where they can complement and enhance the existing shopping role, increase footfall and are accessible by public transport. Such uses are better located in designated centres than residential areas because of the impact they can have in terms of vehicular and pedestrian traffic, noise, fumes, litter and late night disturbance. The Central and Bay Business Areas, and District Centres are more likely to be able to satisfactorily accommodate A3 uses without causing unacceptable harm, due to their size and character. However, concentrations of such uses in centres can cause harm, either to residential amenity within or adjoining the centre, or to the predominant shopping role and character of the centre and its vitality, attractiveness and viability.

5.295. Food and drink uses are acceptable in principle, within the City Centre. It is recognised that such uses can contribute to the range and choice of facilities available to residents, promote the evening economy and may also support tourism. However, new A3 proposals at ground and upper floor level will need to be assessed against Policy R3 Protected Shopping Frontages. This Policy is intended to ensure that food and drink uses as well as other non-shopping uses, do not harm the shopping role, character and vitality of the City Centre.

5.296 Food and drink uses are also complementary, in principle, to the main shopping role of District and Local Centres, so long as they do not adversely affect the living environment of nearby residents, or with other non-shopping uses, reach such a level that they undermine the shopping character of the area in accordance with Policies R4 District Centres and R5 Local Centres.

5.297. Local Centres and smaller neighbourhood centres are generally more residential in nature, and do not have the scale or variety of retail and non-retail uses of larger centres. Therefore, A3 proposals may be more difficult to accommodate, and are less likely to be acceptable on amenity grounds (e.g. potential noise and disturbance, anti-social behaviour and litter associated with this type of development proposal). As a consequence more emphasis will be placed on protecting residential amenity within these centres through restricting closing times and the type of A3 premises.

5.298. Outside District and Local Centres and the Central and Bay Business Areas proposals for A3 uses are unlikely to be acceptable in, or adjacent to, predominantly residential areas because of their impact on residential amenity and potential to cause nuisance from noise and odour.

5.299. Food and drink proposals within existing employment areas will be considered against Policy EC2 Provision of Complementary Facilities for Employees in Business, Industrial and Warehousing Development.

5.300. Further guidance on the application of this Policy will be set out in the Food and Drink Uses in SPG.

6. COMMUNITY

C1: COMMUNITY FACILITIES

Proposals for new and improved community facilities, health and religious facilities will be encouraged, subject to the following criteria being satisfied:

- i. The facility would be readily accessible to the local community it is intended to serve by public transport, walking and cycling;**
- ii. The facility would not unduly prejudice the amenities of neighbouring and nearby residential occupiers;**
- iii. The facility would not detract from the character and appearance of a property or the locality;**
- iv. The facility will not lead to unacceptable parking or traffic problems;**
- v. The facility is designed with the greatest possible flexibility and adaptability to accommodate additional community uses without compromising its primary intended use.**

5.301. For the purpose of this Policy, community facilities are defined as non-commercial facilities used by local communities for leisure and social purposes. This constitutes community centres and meeting places,

community halls, community learning, leisure centres, libraries and youth centres. Religious facilities also often provide for wider community provision. Health facilities would include doctors and dentists surgeries which serve the local community.

5.302. Other uses of a commercial nature within the D1/D2 use class should be located within the Central and Bay Business Areas, and in District and Local centres of an appropriate scale.

5.303. If development occurs without consideration being given to the adequacy of existing community facilities, this can place a strain on existing facilities, to the detriment of the local community. As a result, there is a need to ensure that adequate local facilities are provided to meet the future demands of local communities.

5.304. The provision of community facilities should go hand in hand and be integrated with new development. Providing a range of community facilities that are accessible to as many people as possible is fundamental in terms of securing sustainable communities. Such facilities are valuable not only in terms of the amenity they provide, but are also important in generating employment and attracting people to live within an area. Whilst, it is recognised that there are many competing needs for the development and use of land, the Council is committed to ensuring that there are adequate facilities to serve residents within new strategic housing allocations.

5.305. New strategic housing developments allocated in Policy KP2 will be required to ensure that sufficient new community facilities are provided and integrated within the development to serve the needs of future and existing residents. This will be achieved through planning obligations or the community infrastructure levy as appropriate (see Policies KP6 and KP7).

5.306. On all other significant residential developments, the Council will seek to enter into negotiations with prospective developers to secure land, buildings and or financial contributions towards community facilities arising from the needs of residential development. This is because the increased population will result in increased demand for local community facilities. Further guidance on this will be set out in SPG.

5.307. Community facilities, health uses and religious facilities will be favoured within District or Local Centres where appropriate, however, where such uses cannot be satisfactorily accommodated within centres, proposals on the edge of centres or within residential areas (to include the conversion or redevelopment of existing residential premises) will be favourably considered provided that issues of residential amenity, urban design (Policy KP5), and transportation are appropriately addressed. Furthermore, if the residential area falls within a Conservation Area, the proposed development should not detract from its character, nor should it have any negative impact on the built heritage assets (Policy KP17).

C2: PROTECTION OF EXISTING COMMUNITY FACILITIES:

Proposals involving the loss or change of use of buildings currently or last used for community facilities will only be permitted if:

- i. An alternative facility of at least equal quality and scale to meet community needs is available or will be provided within the vicinity or;**
- ii. It can be demonstrated that the existing provision is surplus to the needs of the community.**

5.308. Existing community facilities are widely available throughout the City. Ensuring an adequate provision is maintained, is very important in order to encourage social interaction, improve health and well-being and reduce inequalities between different communities. The retention of existing facilities will therefore be sought unless it can be demonstrated that the above criteria can be met.

5.309. Whilst this policy will apply to both commercial and non-commercial uses which provide a social or welfare benefit to the community, community land and buildings are of particular importance. This includes land and buildings that are managed and used primarily by the voluntary and community sector for community-led activities.

5.310. In order to satisfy criterion ii) of the policy it will be necessary to demonstrate that continued use as a community facility is no longer viable giving consideration to; appropriate marketing, and local need and demand for the existing community facility.

C3: COMMUNITY SAFETY/CREATING SAFE ENVIRONMENTS

All new development and redevelopment shall be designed to promote a safe and secure environment and minimise the opportunity for crime. In particular development shall:

- i. Maximise natural surveillance of areas which may be vulnerable to crime such as publicly accessible spaces, open space, car parking areas and footpaths;**
- ii. Have well defined routes, spaces and entrances that provide convenient movement without compromising security;**
- iii. Maintain perceptible distinction between public and private spaces through well-defined boundaries and defensible space;**
- iv. Provide a good standard of lighting to public spaces and routes while minimising energy use and light pollution; and**
- v. Be designed with management and maintenance in mind, to discourage crime in the present and future.**

5.311. The aim of this Policy is to achieve a uniform and consistent standard of security through considerate design without compromising the character or attractiveness of the local area. Incorporating security considerations into the design of new developments and redevelopments will enable natural surveillance and create a sense of ownership and responsibility.

5.312. Designing out crime contributes to Policy KP5. Further detailed information relating to the objectives of this Policy can be found at www.securedbydesign.com

5.313. The Council has responsibility under section 17 of the Crime and Disorder Act (1998) to take account of the need to deter and prevent crime in carrying out all its responsibilities, which include planning. Used sensitively, the planning system can be influential in producing active,

well managed environments that help to discourage crime and disorder by encouraging developers to adopt designs for new development that take the security of people and property into account. Developments should be encouraged to incorporate the principles and practices of the 'Secured by Design' Award Scheme, and reflect both the safety of people and the security of property.

5.314. Any design solution or security measures should remain sensitive to local circumstances and their degree and application should reflect the characters and amenity of the area. There should be a balanced approach to design which attempts to reconcile the visual quality of a development with the needs of crime prevention. Developments can be made secure without resorting to razor wire, grilles, bars, unsightly types of fencing and other visually intrusive security measures, if safety and security is considered at an early stage of the design process.

5.315. Prior to submitting detailed proposals, developers are encouraged to seek advice by engaging in pre-application discussions with the South Wales Police Crime Prevention Design Officer on designing out crime, and any recommendations received should be taken into consideration in relation to the development proposal. Where there are other significant interests (for example, the setting of Listed Buildings) a balanced compromise must be agreed. Developers are further encouraged to submit statements in conjunction with planning applications that emphasise and clearly demonstrate the proposed measures taken to design out crime.

5.316. In appropriate cases, where crime prevention or the fear of crime is considered material to a proposed development the Council may consider imposing community safety conditions or seek developer contributions via legal agreements for crime prevention through environmental design (CPTED), community safety initiatives, improved street lighting, alley gating, provision of CCTV, landscaping improvements or other necessary security measures. This is in accordance with Policy KP7.

5.317. Terrorist attacks within the UK have become a distinct possibility in recent years, posing a real and serious threat. Measures to mitigate against the occurrence and effects of terrorism attacks should be designed in from the outset of a development proposal. For example,

through protection from flying glass and vehicle access controls to underground car parks and areas of potential high risk. These measures must be balanced with good design principles to ensure against the creation of a "fortress" appearance. It is recommended that where major development is proposed within a place defined by the Home Office as a "crowded place", the design statement accompanying the application should set out the measures undertaken to meet these principles. It is recommended that advice is sought from a Counter Terrorism Security Advisor during the design stage. (Refer to WECTU (Wales Extremism and Counter Terrorism Unit) for further advice).

C4: PROTECTION OF OPEN SPACE

Development will not be permitted on areas of open space unless:

- i. It would not cause or exacerbate a deficiency of open space in accordance with the most recent open space study; and**
- ii. The open space has no significant functional or amenity value; and**
- iii. The open space is of no significant quality; or**
- iv. The developers make satisfactory compensatory provision; and, in all cases;**
- v. The open space has no significant nature or historic conservation importance.**

5.318. The aim of this Policy is to protect open space that has significant functional, conservation, environmental or amenity value. It applies to all areas of open space within the County.

5.319. The Policy will help protect the current network of open spaces in Cardiff and work toward delivering Policy KP13 and LDP objectives related to maintaining and enhancing a network of green space and corridors.

5.320. The Policy is in accordance with the Wales Spatial Plan, PPW and Technical Advice Note 16: Sport Recreation and Open Space (2010) which requires that all types of open space are protected, particularly where it has a strategic countywide importance.

5.321. The various types of open space in Cardiff will be listed and explained in detail in the Cardiff Open Space SPG. For the purposes of this

policy functional green space includes land that can accommodate formal and / or informal recreational uses including sporting use and children's play.

5.322. Proposals for development on areas of open space will be assessed against a functional green space requirement of 2.43 hectares per 1,000. This is explained in more detail under Policy C5.

5.323. In assessing the functional and amenity value of an area of open space, regard will also be given to whether it serves a purely local function or has more strategic countywide importance. Special protection will be afforded to open space that has strategic countywide importance whether for functional, amenity or wildlife purposes.

5.324. The quality of an area of open space will be assessed having regard to issues such as:

- Accessibility;
- Biodiversity;
- Facilities;
- Management and maintenance;
- Contribution to local amenity;
- Contribution to recreation; and
- Strategic value.

5.325. Where a development proposal involving the loss of open space would exacerbate a local or countywide deficiency of functional open space, **compensatory provision** for open space or alternative provision of equivalent community benefit may be acceptable. This will be explained further in the Open Space SPG.

5.326. The appropriateness of compensatory open space or replacement facilities will be assessed having regard to the importance of the resource to be lost and the needs of the locality. Compensatory provision should:

- Contribute towards meeting the needs of the local community;
- Be of at least equal value to that being lost;
- Be reasonably related to the original site to serve the population affected by the loss;
- Be provided in accordance with the Open Space SPG; and
- Be agreed between the Council and the developer.

5.327. Corridors and networks of open space, like the river valleys, have strategic importance in terms of recreation, amenity and wildlife. The corridors of the rivers Ely, Taff, Rhymney and the Nant Fawr (identified on the Proposals Map) are a particularly important resource within both the urban and rural context, linking the waterfront and the urban area with the countryside. Specific protection of river valleys is set out in Policy EN4.

5.328. Many areas of open space have value for nature conservation. Some are designated for their international, national or local importance, while others contribute more generally to biodiversity. Some areas also have historic conservation importance. These include Historic Gardens and Parks, land within Conservation Areas and land that provides the setting for Ancient Monuments or other archaeological remains.

5.329. The implementation of policies designed to provide and protect public open space throughout Cardiff would also serve to offset any increase in recreational pressure on the Cardiff Beech Woods SAC, thereby helping to avoid the likelihood that this LDP will have a significant effect upon this site.

5.330. The protection of open space policy will be assessed each year in the Annual Monitoring Report. The loss of open space is a Core Indicator required by Welsh Government and will be monitored on an annual basis, forming part of the Open Space Assessment.

C5: PROVISION FOR OPEN SPACE, OUTDOOR RECREATION, CHILDREN'S PLAY AND SPORT

Provision for open space, outdoor recreation, children's play and sport will be sought in conjunction with all new residential developments. This policy is aimed at securing the provision or improvement of open space and other appropriate outdoor recreation and sport in conjunction with all new residential developments over 8 units and on site provision of functional open space in conjunction with all new residential developments over 14 units. The appropriate amount of multi-functional green space is based on a minimum of 2.43 hectares of functional open space per 1,000 projected population. All other open space provision will be in addition to the provision of multi-functional green space.

5.331. This Policy will help enhance the existing network of green spaces and provide increased opportunities for healthy recreation and leisure activities in line with LDP objectives for sustainable living. Improving the provision of open space is particularly important in some areas of South Cardiff where communities have poorer access to areas of open space.

5.332. Obtaining functional open space and appropriate provision for sport through the development process is provided for in PPW. It explains that Local Planning Authorities may be justified in seeking Section 106 Planning Agreements to contribute to the maintenance of safe and attractive facilities and open space, and to meet the needs of new communities.

5.333. This Policy applies to all new proposed housing developments, redevelopment schemes, conversions and mixed-use developments containing housing, sheltered housing and student accommodation over 8 units.

5.334 The Open Space SPG will set out detailed guidance on how the provision of functional open space, outdoor recreation, children's play and sport in new residential developments will be assessed and managed. It will explain that the amount of open space provision generated by a housing proposal will be assessed in relation to its type and density. Consideration will also be given to the availability and adequacy of existing functional open space within the surrounding area. The Council will therefore seek to secure a range of improvements for accessible, high quality open space, sport and outdoor recreation provision, as appropriate to the particular site and development proposal.

5.335. These may include one or more of the following:

- Provision of as much necessary open space provision as possible, on site or on readily accessible sites;
- Contribution towards the improvement of existing open space facilities on readily accessible sites;
- Improvements to the network of recreational routes and open spaces; and
- Improvements to the public realm (in line with Policy KP5: High Quality and Sustainable Design) and improved public access to waterfront areas.

5.336. Due to the shortage of open space and recreation facilities in central and inner parts of the city and the limited opportunities for improvement, provision for open space and/or improving links with nearby open spaces may be sought on large-scale commercial developments in accordance with Policy KP7 on Planning Obligations.

5.337. As a general rule, provision of a satisfactory level and standard of open space will be sought on all new residential developments. For those developments of **14 or more dwellings** the amount of on-site open space provision is calculated from the projected population of the development and the application of the minimum standard of 2.43 hectares of functional open space per 1,000 population. However this standard will be applied flexibly in recognition that:

- In certain circumstances, provision of all-weather facilities can be more effective than traditional pitches;
- Changing trends in sport, recreation and leisure and the importance of providing outdoor and indoor facilities; and
- Achievement of provision in strict accordance with the standard can sometimes be impractical and/or inappropriate on previously developed sites.

5.338. Open spaces should be designed in line with Cardiff Open Space SPG guidelines to create a landscaped open space which fulfils its function with efficiency, can be maintained in a viable condition and contributes to the welfare and appearance of the environment. Functional open spaces can fulfil a number of roles including minimising vandalism, increasing privacy, providing wildlife habitats and minimising the intrusion of noise and air pollution.

5.339. The implementation of policies designed to provide and protect public open space throughout Cardiff would also serve to offset any increase in recreational pressure on the Cardiff Beech Woods SAC, thereby helping to avoid the likelihood that this LDP will have a significant effect upon this site.

C6: HEALTH

Priority in new developments will be given to reducing health inequalities and encouraging healthy lifestyles through:

- i. Identifying sites for new health facilities, reflecting the spatial distribution of need, ensuring they are accessible and have the potential to be shared by different service providers; and**
- ii. Ensuring that they provide a physical and built environment that supports interconnectivity, active travel choices, promotes healthy lifestyles and enhances road safety.**

5.340. This Policy aims to improve the health of Cardiff's population by seeking to secure new health facilities in areas most at need, requiring that the built environment fosters healthy lifestyles, and ensuring that health is a key consideration in new developments.

5.341. The Policy seeks to address health inequalities in Cardiff where the difference in life expectancy between some wards is up to 12 years (Welsh Index of Multiple Deprivation 2011). It gives greater detail on the Key Policy KP14 on Health and helps work towards delivering LDP objectives relating to health and one of the main strategic outcomes of the Cardiff Partnership Strategy 'people in Cardiff are healthy'.

5.342. It accords with the aim of PPW in delivering sustainable development by ensuring that health is taken account of in new developments and assists a number of PPW objectives regarding travel and access to key community facilities. It also helps deliver a number of objectives regarding healthy lifestyles, sport and recreation in accordance with Our Healthy Future (Welsh Government 2009) and Fairer Health Outcomes for All (Welsh Government 2011).

5.343. This Policy reflects the fact that 'health considerations can be material considerations in determining planning applications.' (PPW 12.13.8). The effect of development on people's health is a key element of sustainable development and its consideration will raise any significant issues which need to be taken into account.

5.344. It is recognised that not all new developments will be able to identify land for new health facilities. This largely depends on the scale of development and will be applied flexibly as a result. It is recommended that the local health board is contacted for further advice on this matter. Relevant documents are 'Together for Health' (Welsh Government 2012)

and 'Setting the Direction Primary and Community Services Strategic Delivery Programme' (Welsh Government 2010).

5.345. For a description of appropriate locations to provide health facilities, see Policy C1 on Community Facilities. In addition, a number of other issues relating to the effect of new development on health including design, open space/community growing and transport are referred to in the respective policies.

5.346. Further details on this Policy will be set out in a Health SPG.

C7: PLANNING FOR SCHOOLS

Where a need has been identified for new and improved school facilities as a result of development, the Council will seek contributions towards the cost of additional education provision. Negotiated contributions will be fairly and reasonably related in scale and kind to the proposed development. Where appropriate on site provision will be required.

Development of nursery, primary, secondary and sixth form education should:

- i. Be well designed, well related to neighbourhood services and amenities, and easily accessible by sustainable transport modes; and**
- ii. Include, where appropriate, provision for other appropriate community uses in addition to their educational use.**

5.347. The Council has a statutory duty as local education authority to ensure that there is a sufficient number and variety of school places at primary and secondary level, available to meet the needs of the population of the County.

5.348. Although the supply and demand for school places varies by area, it is anticipated that there will be no overall surplus school places at entry to the primary sector in 2015, nor in the secondary sector in 2019. This takes account of existing school investment proposal and projections based upon health service (GP) and school roll data. Additional primary and secondary education provision will therefore be required to serve the

new pupils generated as a result of greenfield or brownfield housing developments that come forward during the plan period.

5.349. The Council will seek financial contributions (See Policy KP7 Planning Obligations), towards the cost of providing additional or improved primary and/or secondary school facilities from developers proposing housing developments that would generate a requirement for school places that cannot be reasonably met by existing schools because:

a. the capacity at the school(s) in whose catchment area (s) new housing development are proposed would as a result of the development be exceeded by demand; and/or

b. there is a surplus capacity in such schools to accommodate some or all of the projected number of pupils generated from the proposed development but investment is required to make it suitable.

5.350. The Council will also seek the provision of land and/or premises, depending on scale and location of development. Please refer to Key Policy KP6 New Infrastructure.

5.351. It is recognised that the future additional pupils generated from strategic housing allocations (D-H) could not be accommodated in existing schools. The Council requests that developers set aside appropriate sites and provide school facilities in the initial phases of development aligned with the construction process, and additional forms of entry made available where necessary (210 primary school places plus nursery provision, 150 secondary school places plus sixth form provision) following completion of each 700 dwellings.

5.352. There will also be a need to address school provision in catchment areas where there is little or no existing capacity to accommodate the additional demand likely to arise from housing development on previously developed land (including strategic sites) or other in-fill sites. With limited exceptions financial contributions will be sought from developers towards the provision of new classroom accommodation, in accordance with the needs which arise from the proposed development.

5.353. In the event of the Council being allocated developer contributions to expand existing provision, the phasing of contributions over the period of construction will need to be in line with those set out in SPG, and will require careful consideration to ensure that the supply of school places is

aligned with the construction process and occupancy of dwellings. Monitoring of take-up of school places will be a key consideration in order to inform existing and future needs.

5.354. Opportunities should be taken to share school buildings and facilities, or co-locate on shared sites with other Council Service areas and selected external services. This would serve to maximise the use of the land and provide an integrated citizen focused resource for the whole community. Opportunities for shared facilities could include libraries, community centres, leisure centres, indoor recreation facilities, play centres, adult education facilities, integrated childcare facilities, adjoining natural habitat, health care facilities.

5.355. Dependant on geographical constraints, opportunities should be taken to explore shared school facilities/playing fields with other schools (e.g. a Primary and Secondary School sharing fields) or continuous ages 3-19 school provision.

5.356. Further guidance on the application of this Policy will be set out in SPG.

7. MINERALS

M1: MINERAL LIMESTONE RESERVES AND RESOURCES

Mineral reserves with planning permission will be safeguarded from development that would prevent their extraction at:

- i. Creigiau Quarry;**
- ii. Taffs Well Quarry;**
- iii. Ton Mawr Quarry; and**
- iv. Blaengwynlais Quarry.**

Preferred Areas of known resources suitable for the future working of Limestone have been identified as extensions to:

- v. Creigiau Quarry; and**
- vi. Ton Mawr Quarry.**

5.357. The aim of this Policy is to protect identified mineral limestone reserves and resources from incompatible forms of development that could cause sterilisation and prevent them from being worked, so that they remain available for future generations.

5.358. This Policy expands on Policy KP11 and aims to protect existing mineral reserves and potential resources from development that would preclude their future extraction. It corresponds with guidance contained in PPW, a key principle of which is to provide mineral resources to meet society's needs and to safeguard resources from sterilisation.

5.359. Mineral reserves are sites with planning permission for mineral working. Cardiff has several mineral reserves, which are identified on the Proposals Map. These are limestone quarries which are active at present, or those which have planning permission for the working of limestone. Preferred Areas of known resources are sites within the County considered suitable for the future working of limestone. These areas are identified on the Proposals Map.

5.360. Permanent development on, or close to, mineral reserves or resources can mean that the minerals become sterilised or future extraction hindered. The identified reserves and resources will be protected from incompatible forms of development in order to prevent this. Incompatible forms of development include premature in-filling with waste or other material, and permanent building development. Policy M4 on Minerals Buffer Zones further protects such areas by defining buffer zones around identified reserves and resources, within which neither mineral working nor housing and other similarly sensitive development will be permitted.

M2: PREFERRED ORDER OF MINERAL RESOURCE RELEASE

The extension or deepening of existing mineral workings will be favoured in preference to the release of new sites and, with the exception of the lateral extensions of Creigiau and Ton Mawr Quarries referred to in Policy M1, deepening will be preferred to lateral extension. Applications to extend or deepen mineral workings will be permitted where it can be demonstrated that:

- i. There are environmental improvements at the site which can be justified by the addition of new reserves, or traded off by the giving up of existing reserves, or;**
- ii. The addition of new reserves preserves the productive capacity of Cardiff to meet its sub regional apportionment commitments; or**
- iii. There are operational benefits in permitting further reserves that will lead to more efficient exploitation of the resource;**
- iv. It should also be demonstrated that such an approach will not cause unacceptable harm to the environment, including consideration of impacts relating to access, noise, air quality, landscape and visual effects, ecology, soil resources, hydrology and hydrogeology, blast vibration and cultural heritage, and in the case of Creigiau Quarry, the objectives of Policy M3 are delivered as part of an extension or deepening application.**

5.361. The extent of Cardiff's existing minerals landbank means it is unlikely that there will be a need to grant any further permissions for mineral resource release within the Plan period. The Regional Technical Statement 1st Review (August 2014) states that based on current information Cardiff has a surplus of permitted reserves and no further allocations are necessary. However, it also notes that these conclusions do not take into account all factors that may be material to ensuring an adequate and steady supply of aggregates for appropriately located sources including the technical capability of one type of aggregate to interchange for another, the relative environmental cost of substitution of one type of aggregate by another, the relative environmental effects of changing patterns of supply and whether adequate production capacity can be maintained to meet the required level of supply. The purpose of this Policy is to set out the sequential test approach which would be used to guide the future release of mineral resources, should this be necessary.

5.362. This Policy expands on Policy KP11 and promotes and supports the efficient use of minerals. The Policy accords with guidance contained in PPW which recognises that extensions to existing minerals workings are often more generally acceptable than new greenfield sites

5.363. Generally, the continuation of quarrying at existing sites is preferable to the environmental and financial upheaval of shifting production to new sites. In addition, the deepening of sites is preferred to lateral extension as it minimises the area of land given over to working and ensures the best use of existing reserves. However, in determining the best option, consideration will need to be given to possible environmental and restoration implications and for this reason an exception is made for Creigiau quarry where the objectives of Policy M3 to swap reserves for less environmentally sensitive reserves will be delivered as part of an extension or deepening application.

5.364. The life of any reserves released will be restricted to enable new technology and new environmental expectations to be reflected, without compromising the ability of operators to amortise their investment in plant. In addition, reserves will not be released prematurely to avoid sterilisation of land, and to ensure operators maximise the use of the existing site before moving into new areas. This will also help ensure the older site can be restored earlier.

5.365. In determining the best option, consideration will need to be given to the possible impact on the environment, natural heritage and built heritage.

M3: QUARRY CLOSURES AND EXTENSION LIMITS

Measures to prevent further mineral working and, where appropriate, to secure restoration and landscaping works at the earliest opportunity, will be sought at the following sites:

- i. Cefn Garw Quarry, Tongwynlais;**
- ii. Highland Park Brickworks, Ely;**
- iii. West End Brickworks, Ely; and**
- iv. Southern and western parts of Creigiau Quarry.**

5.366. The aim of this Policy is to introduce measures to prevent further extraction of minerals at the sites above, as shown on the Proposals Map, as mineral working is no longer considered appropriate at these locations.

5.367. This Policy expands on Policy KP11. It accords with guidance contained in PPW, which states that inactive sites with planning permission for future working which are considered unlikely to be activated for the foreseeable future should be identified in the development plan and should be the subject of a suitable strategy.

5.368. The Policy identifies three mineral sites ((i) to (iii) above) and parts of Creigiau Quarry where mineral working is no longer considered appropriate by modern standards.

5.369. Cardiff contains several quarries for limestone or brick-earth that have not been worked for many years and in many cases have either re-vegetated naturally or have been put to alternative uses. For example, the part of Ely Brickworks within Cardiff has now been largely covered by the Ely Link Road. Despite long periods of disuse or alternative uses of some sites, planning permissions for mineral extraction still exist and could be reactivated at these sites. The sites identified have been effectively abandoned by the minerals industry for many years. By today's environmental standards, they are no longer suitable for mineral working and so are not needed for mineral purposes.

5.370. To eliminate any doubt over possible re-working at the sites outlined in (i) to (iv) above, measures to prevent further extraction and secure restoration and landscaping works will be pursued. Measures will include the use of Prohibition Orders to ensure that no further working can take place at Cefn Garw Quarry, Tongwynlais, Highland Park Brickworks, Ely and West End Brickworks, Ely and closure of the southern and western parts of Creigiau quarry through a legal agreement with the site owners to relinquish these areas in favour of a new area set out in Policy M1 of the Plan and identified on the Proposals Map.

M4: MINERALS BUFFER ZONES

Within the minerals buffer zones no mineral working, housing or other sensitive development will be permitted.

5.371. The aim of this Policy is to provide an explanation of the minerals buffer zones identified on the Proposals Map. The purpose of the buffer zones is to protect identified mineral reserves and resources from incompatible development which could sterilise them, and to reduce the

environmental impact of quarrying by separating sensitive developments and mineral working.

5.372. This Policy expands on Policy KP11 and aims to protect existing mineral reserves and potential resources from development that would preclude their future extraction. Guidance contained in PPW indicates that buffer zones should be defined in order to provide areas of protection around permitted and proposed mineral working. MTAN1: Aggregates indicates a minimum set distance for buffer zones of 200m, and that within buffer zones no new sensitive development or mineral extraction should be approved.

5.373. Buffer zones have been drawn around all minerals reserves (sites with planning permission for mineral working) and resources (sites identified as suitable for future mineral working) indicated on the Proposals Map. The purpose of buffer zones is to protect identified mineral reserves and resources from incompatible development which could sterilise them, and to ensure a separation distance between potentially conflicting land uses. The size of each buffer zone is appropriate to the environmental impact of the quarry, particularly the effects of ground vibration from blasting operations.

5.374. Sensitive development includes land uses most susceptible to adverse impact from quarrying, such as housing, schools and hospitals. These uses will be resisted within buffer zones. Some less sensitive development, where a lower standard of amenity could be tolerated, such as industrial land uses, offices and developments ancillary to the mineral working may be considered acceptable within buffer zones. Buffer zones also ensure that the environmental impact of quarrying on residents is minimised, particularly where mineral working and new residential developments are separated.

5.375. Since minerals can only be worked where they occur, this policy will be afforded greater weight than policies favouring quarry-sensitive development that could be located elsewhere.

M5: RESTORATION AND AFTER - USE OF MINERAL WORKINGS

Proposals for mineral working or for related plant and buildings will be permitted only where firm proposals are included for the

reinstatement of the site to a condition fit for an appropriate after-use supported, where relevant, by adequate after-care proposals. Appropriate reinstatement and after-care proposals will similarly be required when existing controls are reviewed. In drawing up restoration proposals, mineral operators will be encouraged to:

- i. Undertake progressive restoration;**
- ii. Make beneficial use of mineral waste generated by mineral operations;**
- iii. Consider whether restoration can contribute to nature conservation targets set out in the Local Biodiversity Action Plan.**
- iv. New uses of former mineral workings other than those appropriate to a rural area will not be permitted without special justification. Proposals to carry out safety works at derelict or dormant sites will be favoured.**

5.376. The aim of this Policy is to ensure that all proposals for mineral working or related development are accompanied by plans for restoration and suitable after-use of the site, or after-care where appropriate.

5.377. This Policy expands on Policy KP11. The policy accords with objectives contained in PPW and MTAN 1: Aggregates which aim to achieve a high standard of restoration and aftercare, and provide for beneficial after-uses when mineral working has ceased.

5.378. This Policy will be applied in order to avoid dereliction and uncertainty by requiring all applications for mineral working, including reviews of existing permissions, to be accompanied by effective proposals to ensure restoration and after-care of the site once mineral working finishes. This applies equally to ancillary plant and buildings and to secondary industry, whose presence is normally only justified by the existence of the mineral working site. It is essential to avoid dereliction and uncertainty once mineral working ends, and to ensure the site is left in a safe and usable condition and restored to a high standard suitable for its agreed after-use. Operators will generally be expected to agree the broad aims of the restoration scheme at the outset, to keep those aims under regular review throughout working and to implement the scheme forthwith. The choice of after-use will depend on many issues including

the location, final landform, availability and quality of soils or other restoration materials, and neighbouring land uses.

5.379. Where restoration is to agricultural or amenity use, appropriate after-care proposals will be needed. A separate planning permission is likely to be required for any after-use except agriculture, forestry, nature conservation or certain forms of informal recreation which do not normally require planning permission.

5.380. Proposals for new quarries or major extensions will be expected to be accompanied by detailed soil and habitat surveys. Comprehensive programmes for the stripping and storage of topsoil, subsoil and conservation of other soil-making materials should form part of the initial restoration proposals, which will be expected to provide for phased and progressive restoration of worked out areas.

5.381. Restoration can provide opportunities for creating and enhancing sites for nature conservation and contributing to the targets in the UK Biodiversity Action Plan and Local Biodiversity Action Plan.

M6: SAND WHARF PROTECTION AREAS

The sand wharves shown on the Proposals Map will be protected against development which would prejudice their ability to land marine dredged sand and gravel. Proposals for the provision and improvement of landing and distribution facilities for marine dredged aggregates within the sand wharves shown on the Proposals Map will be favoured where there will be no unacceptable harm to the environment.

5.382. Marine sources currently supply the majority of fine aggregate construction needs for Cardiff. This Policy provides a framework for the protection of existing wharves and the assessment of applications for new or improved sand and gravel wharves and related facilities.

5.383. This Policy expands on Policy KP11. The Policy accords with guidance contained in Interim Marine Aggregates Dredging Policy (2004) which indicates that the use of marine dredged sand and gravel will

continue for the foreseeable future where this remains consistent with the principles of sustainable development. It accords with the Regional Technical Statement 1st Review (2014) which requires the protection of existing and potential wharves.

5.384. Although marine dredging is outside the control of the Council, it is necessary to ensure that existing wharves are protected and that appropriate landing and distribution facilities are provided to ensure this important source of construction materials remains available. Without it, the County would have to accept greater demands on land-based sources and more costly imports.

5.385. In response to concerns about the long-term effects of dredging on coastal erosion, Interim Marine Aggregates Dredging Policy (2004) proposes a more cautious approach to dredging and seeks a more balanced approach to the sourcing of supplies for fine aggregates in South Wales. Although this may lead to long-term changes in supply patterns, in the short term the present pattern of supply is likely to continue, and it is therefore prudent to ensure that facilities which enable current levels of supply to be maintained are protected and new facilities favoured.

5.386. Operations involving the trans-shipment of minerals do not normally need specific planning permission within the operational area of the port. However, secondary processes including the manufacture or treatment of mineral products usually need permission. Where proposals are submitted they will need to demonstrate minimal impact on the environment. Where proposals are likely to have significant effects upon the environment, applications may be subject to Environmental Impact Assessment. Additionally, proposals will need to have regard to the Severn Estuary SSSI/SAC/SPA and Ramsar site and where proposals are likely to have a significant effect on an international site, an appropriate assessment of the proposal would be undertaken.

M7: SAFEGUARDING OF SAND AND GRAVEL, COAL AND LIMESTONE RESOURCES

Development will not be permitted within the Sand and Gravel, Coal and Limestone Safeguarding Areas shown on the Proposals Map that would permanently sterilise these mineral resources unless:

- i. The applicant can demonstrate to the satisfaction of the Local Planning Authority that the mineral concerned is no longer of any resource value or potential resource value; or**
- ii. The mineral can be extracted satisfactorily prior to the incompatible development taking place; or**
- iii. The incompatible development is of a temporary nature and can be completed and the site restored to a condition that does not either sterilise the resource or inhibit extraction within the timescale that the mineral is likely to be needed; or**
- iv. There is an overriding need for the incompatible development which overrides the need for the resource, including a requirement for prior extraction if practicable.**

5.387. The aim of this Policy is to ensure that the sand and gravel, coal and limestone safeguarding areas identified on the Proposals Map are protected from development that would cause its sterilisation and safeguarded for the future, should a need for these resources arise. In order to ensure this the Policy sets out a range of criteria against which proposals for development will be assessed.

5.388. This Policy expands on Policy KP11 in that it protects potential resources from development. The Policy accords with guidance contained in PPW which requires Mineral Planning Authorities to safeguard access to mineral deposits which society may need. It also accords with MTAN1: Aggregates which states that land based sand and gravel resources must be safeguarded for potential use by future generations in view of their relatively limited regional availability and MTAN2: Coal which requires the safeguarding of mineral resources.

Sand and Gravel Safeguarding Area

5.389. At present, marine dredged sources provide the majority of fine aggregate required to meet construction needs within Cardiff. In the short term this supply pattern is unlikely to change significantly. In view of the existing pattern of dredged aggregate supply, it is very unlikely that sand and gravel resources will need to be released for development within the Plan period. However, in light of concerns regarding the sustainability of the current pattern of marine dredged aggregate supplies, it is necessary for land-based sand and gravel resources to be safeguarded for potential use in the future. This Policy will be used to resist all forms of permanent

development in the sand and gravel resource area shown on the Proposals Map. Land-based sand and gravel could only be worked where it is found, so this Policy represents a long-term strategy to protect existing resources, as they could become a strategic resource in the future. This Policy will carry more weight than policies favouring development that could be located elsewhere.

Coal Safeguarding Area

5.390. Current energy supply does not necessitate the working of coal resources within Cardiff, and this situation is highly unlikely to change in the short term. Consequently, it is unlikely that it will be necessary to release coal resources for working to provide for energy needs in the Plan period. However, it is prudent to ensure that the coal resources identified are protected from sterilisation to maintain their potential for use in the future, should this become necessary.

5.391. In accordance with guidance set out in MTAN2: Coal all international and national designations of environmental and cultural importance have been excluded from the Coal Safeguarding Area and a 200 metre margin has been included to protect the setting of Ancient Monuments. All coal resources outside these designations are identified on the Proposals Map. Where safeguarded coal resources abut defined settlement boundaries, a 500m area where coal working will not be acceptable has been shown. Although this area includes safeguarded coal resources, it identifies the area of land within which future coal extraction will generally not be acceptable, subject to the exceptions in paragraph 49 of MTAN2: Coal. Further details are set out in Policy M8: Areas where Coal Working is not Acceptable.

5.392. Coal could only be worked where it is found, so this Policy represents a long-term strategy to protect existing resources as they could become a strategic resource in the future. This Policy will carry more weight than policies favouring development that could be located elsewhere.

Limestone

5.393. Currently there is a sufficient landbank of limestone reserves in the County for the Plan period and, should the landbank not prove

sufficient, the limestone resource areas identified in Policy M1 would be considered before any of the safeguarded areas shown on the Proposals Map. Given this, it will not be necessary to release any of the safeguarded areas for working to provide for aggregates needs over the Plan period. However, it is prudent to ensure that the limestone resources identified are protected from sterilisation to maintain their potential for use in the future, should this become necessary.

5.394. The designation as a safeguarded area does not indicate an acceptance of sand and gravel, coal or limestone working in that area.

5.395. In addition to the resources outlined above the Aggregates Safeguarding Maps of Wales identifies a small amount of Category 1 Sandstone HSA (High Specification Aggregate) resources in the extreme north west of the County. As this area lies wholly within the Coal Safeguarding Area outlined above it is not identified separately on the Proposals Map as it is already protected from sterilisation and safeguarded for the future, should a need for these resources arise.

M8: AREAS WHERE COAL WORKING WILL NOT BE ACCEPTABLE

Future coal extraction will not be permitted within the Areas where Coal Working will not be Acceptable as shown on the Proposals Map unless exceptional circumstances show a smaller area is appropriate.

5.396. The aim of this Policy is to protect the amenity of existing residential areas and international and national designations of environmental and cultural importance by ensuring that an appropriate area where coal working will not be acceptable is maintained between future coal working and residential areas and environmental and cultural designations are protected. The Policy accords with guidance contained in PPW and MTAN2: Coal.

5.397. All coal resources outside international and national designations of environmental and cultural importance up to settlement boundaries are identified on the Proposals Map and the policy identifies the area of land within which future coal extraction will generally not be acceptable by

defining a 500m area where coal working will not be acceptable from existing residential areas. This accords with guidance set out in MTAN2: Coal which states that Coal working will generally not be acceptable within 500 metres of settlements unless there are exceptional circumstances and that an area where coal working will not be acceptable should be shown on the Proposals Map.

5.398. MTAN2: Coal sets out factors that could justify exceptional circumstances where a smaller area where coal working will not be acceptable may be appropriate. These include:

- Where coal working provides the most effective solution to prevent risks to health and safety arising from previous mineral working;
- To remediate land damaged by shallow coal workings or mine waste, where coal extraction appears to be the most sustainable option;
- Where topography, natural features such as woodland, or existing development, would significantly and demonstrably mitigate impacts;
- Where major roads or railways lie between the settlement and the proposed operational area and coal working would not result in appreciable cumulative and in-combination effects;
- Where the surface expression of underground working does not include the significant handling or storage of the mineral or waste;
- When the proposal is of overriding significance for regeneration, employment and economy in the local area; or
- Where extraction would be in advance of other, permanent, development which cannot reasonably be located elsewhere.

5.399. In accordance with guidance in MTAN2: Coal where such exceptions justify surface working within 500m of a settlement, the area of working should be restricted to the area reasonably necessary for remediation and the best balance between the scale, working-method and the timing of individual phases, the opportunities for early restoration and aftercare, and hours of working will be sought. In order to justify working within 200 metres of a settlement strong evidence of the necessity for remediation, including the evaluation of options will be required and the social and environmental impacts on the affected settlement must be carefully weighed.

8. WASTE

W1: SITES FOR WASTE MANAGEMENT FACILITIES

Proposals for the development of waste management facilities will be permitted where:

- i. There is a demonstrable need assessed against regional requirements;**
- ii. They conform with the waste hierarchy and the principles contained in the Waste Framework Directive of An Integrated and Adequate Network; Nearest Appropriate Installation; Self Sufficiency and Protection of Human Health and the Environment;**
- iii. They would not cause unacceptable harm to the environment, built heritage or to human health;**
- iv. They include acceptable proposals for restoration, aftercare and after-use, including the beneficial after-use of by-products;**
- v. They would not endanger aviation safety;**
- vi. They include acceptable proposals for the protection of adjoining and nearby land from landfill gas and leachate migration or contamination;**
- ii. They are not located within an area at risk from flooding;**
- iii. They would not cause unacceptable air, noise or light pollution, dust, vibration or odours, or attract excessive vermin;**
- iv. They provide safe means of access to the highway and adequate on-site parking and turning facilities; and**
- v. They are accompanied by a Waste Planning Assessment containing sufficient information to enable an assessment of the proposal.**

Facilities for the handling, treatment and transfer of waste will generally be encouraged towards existing use class B2 general industrial land.

5.400. The purpose of this Policy is to provide a framework for the assessment of planning applications for waste management facilities.

5.401. This Policy expands on Policy KP12. The Policy accords with the National Waste Strategy for Wales: Wise About Waste (2002); Towards Zero Waste (2010); The Collections, Infrastructure and Markets Sector Plan (2012) and TAN 21: Waste (2014).

5.402. It is anticipated that applications will come forward within the Plan period for new waste management facilities. Applications are likely to include waste disposal, processing, recycling and transfer of waste. The need for waste facilities will be assessed against the Collections, Infrastructure and Markets Sector Plan and capacity requirements established through regional monitoring, as set out in TAN 21.

5.403. The 'waste hierarchy' advocates a sequential approach to waste management. At the top of the hierarchy is waste prevention and re-use, followed by preparation for reuse, recycling, recovery and finally (i.e. least favoured) disposal.

5.404. Waste facilities will generally be encouraged towards existing general industrial areas (use class B2), unless it can be demonstrated that they could be acceptably located elsewhere, or unless assessment of the proposal indicates that more onerous locational standards should apply.

5.405. The Regional Waste Plan 1st Review (2008) contains Areas of Search Maps which TAN 21 indicates remain relevant for use in identifying potential new sites for in-building and open-air waste management/resource recovery facilities. Developers are encouraged to use the recommendations to assist in the identification of suitable sites.

5.406. Planning applications for waste management facilities should be accompanied by a Waste Planning Assessment containing sufficient information to enable an assessment of the application and its contribution to meeting the requirements set out in the Collections, Infrastructure and Markets Sector Plan. Information to be provided should include:

- Waste Policy Statement (contribution to the CIM Sector Plan, need and locational requirements, demand, identification of markets, current shortfall in treatment capacity, consultation);
- Time-scale (lifespan of the operation, days and hours of operation);
- Types and quantities of waste to be managed;

- Design, layout, buildings and plant;
- Amenity and nuisance;
- Air pollution;
- Energy efficiency.

5.407. Further details are contained in Annex B of TAN 21 (2014). Where appropriate, proposals should be accompanied by a formal environmental assessment and Health Impact Assessment. In assessing such proposals, close consultation will be undertaken with Natural Resources Wales and conditions will be attached to any permissions and/or legal agreements sought to ensure adequate environmental safeguards and controls.

5.408 Further guidance on the application of the Policy will be set out in the Locating Waste Management Facilities SPG.

W2: PROVISION FOR WASTE MANAGEMENT FACILITIES IN DEVELOPMENT

Where appropriate, provision will be sought in all new development for facilities for the storage, recycling and other management of waste.

5.409. The purpose of this Policy is to ensure that adequate provision is made for waste management facilities within new developments, in order to aid the Council in meeting the challenging waste recycling targets set by European and national targets.

5.410. The Policy accords with TAN21: Waste, The National Waste Strategy for Wales: Wise About Waste (2002) and Towards Zero Waste (2010).

5.411 Targets set out in Wise About Waste (2002) mean that the Council is required to be more proactive in managing waste. It is important that new development is designed to incorporate facilities for waste management to encourage waste reduction, recycling, composting and separation at source. This Policy will be used to ensure that adequate storage and collection facilities are provided in all appropriate new developments.

5.412. The general requirement for all developments will be to provide:

- On-site waste, recycling and composting, separation and storage facilities;
- Communal waste, recycling and composting, separation and storage facilities for larger developments;
- Access arrangements for refuse vehicles and personnel for collection purposes.

5.413. Facilities provided should be secure, unobtrusive and easily accessible. Further detailed guidance on matters such as the types of facilities required and their design will be set out in SPG.

6. Monitoring and Implementation

6.1. Monitoring the effect of planning policies is the principle way through which the effectiveness of implementing the LDP can be assessed. The monitoring process helps to positively identify key issues and questions such as:

- Which policies are being implemented successfully – i.e. their effectiveness in determining planning applications and in withstanding appeals.
- Whether policies are having their intended output.
- If policies are not working well, what actions are needed to address them?
- What changes to the evidence base has occurred or needs to take place?
- What gaps can be identified that should be addressed by the LDP?
- If an amendment of policies or complete review of the LDP is required.

6.2. The Council is required to submit an Annual Monitoring Report (AMR) to Welsh Government by 31st October each year following adoption of the LDP as set out in Section 37 of the Town and Country Planning (Local Development Plan) Regulations 2005 (the Regulations). Having a clear mechanism for the monitoring of the LDP is one of the 'Tests of Soundness' considered in the Examination of the LDP by the Planning Inspector.

6.3. The LDP Manual explains that the Annual Monitoring Report process should not just be about data collection, but about taking a forward looking action-orientated approach which may raise issues that need to be addressed and will help form the basis for a review of the LDP.

6.4. The LDP is subject to a four year review period with an interim target therefore of Autumn 2019. However, a full revision of the LDP is only likely to be required in certain circumstances, for example where new legislation or guidance is released, significant changes to forecasts occur or where LDP objectives are not being effectively delivered. It is a combination of all of these factors, together with the issues raised in the AMR which may warrant consideration of a partial or full review. It would not be based solely on whether an individual target was being met or policy having a specific outcome.

6.5. The LDP Manual acknowledges that data cannot be collected for every policy in the Plan; it would lead to an unnecessarily large and complicated document. It suggests that key policy areas are monitored consistently to allow for trends to be recognised. Where possible, use will be made of existing information being collected.

6.6. It is important to recognise that the monitoring process can be a complex task, particularly where there is a lack of consistent data or if there is doubt an outcome can be solely attributed to development plan policies. There may also be difficulties in monitoring certain impacts on an annual basis when some changes take a longer time to materialise. Therefore, careful attention has been given to gathering the right volume and grain of data.

6.7. A set of indicators have been comprised which will act as a benchmark in measuring performance. Indicators will be noted as either 'Contextual', 'Core' or 'Local'.

- Contextual Indicators – These are broad indicators which help monitor the effectiveness of the LDP at a strategic level and are designed to give an overall picture of how Cardiff as a whole is performing.
- Core Indicators – The Local Development Plan Manual (2006) sets out a number of core output indicators which are considered to be essential for assessing implementation of national policy.
- Local Indicators – The Council has identified local indicators which are more specific to Cardiff and considered important in monitoring the effectiveness of the LDP.

6.8. All indicators are linked to monitoring targets which set out the position that needs to be achieved in order to help deliver the LDP Strategy. If monitoring targets are not being met, trigger points are included to assess the extent to which circumstances have diverged from the target. The trigger points will indicate if certain parts of the Plan are not achieving their desired outcomes. If these trigger points are activated then the AMR will consider the necessary action which is required.

6.9. In setting trigger points, the principle adopted has been to set strict activation points rather than building in wide margins of delivery significantly below or above the target based on Plan policies. Therefore,

where trigger points are based on numerical delivery rates, a trigger of 10% above or below the target has been adopted. In this way trigger activation enables the understanding of the reasons lying behind and consideration of whether any improvements can be made to make Plan implementation as effective as possible.

6.10. In this respect, careful consideration will be given to the likely underlying reasons for the activation of any trigger points. This will inform whether reasons reflect external factors or national trends largely outside the scope of the effectiveness of LDP policy implementation or whether reasons may be more directly related to the Plan or local factors. In such situations a range of appropriate corrective actions can be considered. Such actions are set out in more detail fully below.

6.11. Options are available to the Council with respect to each indicator, monitoring target and trigger point. The AMR will assess the severity of the situation associated with each indicator and recommend an appropriate response in accordance with the following table:

Continue Monitoring (Green)
Where indicators are suggesting the LDP Policies are being implemented effectively and there is no cause for review.
Training Required (Blue)
Where indicators are suggesting that LDP policies are not being implemented as intended and further officer or Member training is required.
Supplementary Planning Guidance Required (Purple)
Indicators may suggest the need for further guidance to be provided in addition to those already in the Plan.
Further Research (Yellow)
Where indicators are suggesting the LDP policies are not being as effective as they should, further research and investigation is required.
Policy Review (Orange)
Where indicators are suggesting the LDP policies are failing to implement the strategy a formal review of the Policy is required. Further investigation and research may be required before a decision to formally review is confirmed.
Plan Review (Red)
Where indicators are suggesting the LDP strategy is failing and a formal review of the Plan is required. This option to fully review the Plan will need to be fully investigated and undertaken following serious consideration.

Appendix 2: National and Regional Policy Framework

Introduction

2.1 Cardiff's LDP must take into account relevant policies and guidance relating to Wales, the city-region and other approved policies relating to the local area.

LDP legislation and guidance

2.2 Every local planning authority in Wales must prepare a LDP for its area. This is known as a 'plan-led' system and together with other relevant plans, strategies and policies, provides the framework for planning in Cardiff. The main relevant legislation and guidance relating to LDPs is as follows:

- Planning and Compulsory Purchase Act 2004- Requires the Council to prepare a LDP and, in doing so, to have regard to its Community Strategy and national policy including the Wales Spatial Plan (WSP);
- The Town and Country Planning (Local Development Plan) (Wales) Regulations 2005- Outlines the details of how the LDP system will be operated. This includes the need for LDPs to have regard to the Waste Strategy for Wales, Regional Waste Plans, Regional Transport Plan and Local Housing Strategies; and
- Additional guidance on the preparation of LDPs has been prepared by the Welsh Government and includes:
 - Local Development Plans Wales (2005)
 - Local Development Plan Manual (2006)
 - Planning Your Community: A Guide to Local Development Plans (2006)
 - Guide to the examination of Local Development Plans (2006)

National policy framework

2.3 The Welsh Government's national land use policies are set out in **Planning Policy Wales (Edition 5, November 2012)** and **Mineral Planning Policy Wales (2001)**. These are supplemented by Technical Advice Notes and Circulars. Planning Policy Wales sets out how the land use planning system can help achieve the Welsh Government's goals of:

- Sustainable Development - meeting the needs of the present without compromising the ability of future generations to meet their own needs;
- Building a dynamic and advanced economy - supporting economic regeneration, creating wealth and good quality jobs;
- Tackling social disadvantage - developing an inclusive society where everyone has the chance to fulfil their potential; and
- Equal Opportunities - promoting a culture in which diversity is valued and equality of opportunity is a reality.

2.4 Chapter 2 of PPW sets out further information on Development Plan coverage.

2.5 People Places Futures: The Wales Spatial Plan (2008 update) provides a strategic framework to guide future development and policy interventions across Wales, beyond the scope of formal land use planning control. The Spatial Plan places Cardiff at the centre of the South East - 'Capital Network' - area of Wales, for which its vision is of, " An innovative skilled area offering a high quality of life – international yet distinctively Welsh. It will compete internationally by increasing its global visibility through stronger links between the Valleys and the coast and with the UK and Europe, helping to spread prosperity within the area and benefiting other parts of Wales".

2.6 The Spatial Plan acknowledges that it is important for Wales as a whole that Cardiff becomes significant internationally and that, to achieve this, the city needs to be the focal point of a coherent and successful urban network in south east Wales. Integrated transport is identified as being crucial to the area effectively functioning in this way; and achieving this in ways which reduce reliance on private cars, through improved public transport links.

2.7 Of particular relevance, the Spatial Plan also identifies:

- The City Coastal Area will function as a networked city-region, on a scale to realise its international potential, its national role and to reduce inequalities;
- The success of the City Coastal Area relies on Cardiff developing its capital functions, together with strong and distinctive roles of other towns and cities;
- The overall priority is to make better use of the area's existing transport infrastructure to deliver more sustainable access to jobs and services;
- The pressure to provide more housing and employment should be managed so as to fit in compatibly with conservation of the landscape, environment and community strength of this area; and
- Substantial growth of housing in the coastal zone should also be compatible with the health of housing markets in the Heads of the Valleys and Connections Corridor.

2.8 The **Environment Strategy for Wales (2006)** outlines the Welsh Government's long-term strategy for the environment of Wales, setting out the strategic direction for the next 20 years. The purpose of the Strategy is to provide a framework within which to achieve an environment that is clean, healthy, biologically diverse and valued by the people of Wales. Welsh Government wishes to see the environment

thriving and contributing to the economic and social well-being and health of all of the people of Wales.

2.9 One Wales, One Planet (2009) sets out the Welsh Government's vision of a sustainable Wales and the priority it attaches to sustainable development. This builds on the Welsh Government's legal duty to deliver sustainable development and requires all organisations in Wales to actively commit to sustainable development.

2.10 Economic Renewal: A New Direction (2010) is the Welsh Government's Strategic Framework for economic development. It sets out a vision for making Wales *'one of the best places in the world to live and to work'*. The strategy outlines the Welsh Government's following priorities, which are; investing in high quality sustainable infrastructure; making Wales a more attractive place to do business; broadening and deepening the skills base; encouraging innovation and targeting support for business.

2.11 One Wales: Connecting the nation – The Wales Transport Strategy (2008) is the Welsh Government's strategy for transport. It sets out how the Welsh Government intends to achieve certain social, economic and environmental outcomes. Five key areas are identified for progress:

- Reducing greenhouse gas emissions and other environmental impacts;
- Improving public transport and better integration between modes;
- Improving links and access between key settlements and sites across Wales and strategically important all-Wales links;
- Enhancing international connectivity; and
- Increasing safety and security.

2.12 The National Transport Plan (2010) sets out in detail how the Welsh Government proposes to deliver the Wales Transport Strategy One Wales: Connecting the Nation over the next 5 years. The National Transport Plan builds on previous plans, adding and integrating public and community transport, walking and cycling so that investments help to deliver One Wales. The National Transport Plan sits alongside the Regional Transport Plans in delivering the Wales Transport Strategy to ensure consistency of service provision across the transport network. Together the national and regional plans seek to strengthen local service delivery and improve access to essential services such as health and education.

Regional Policy Context

2.13 A Regional Transport Plan (RTP) (2010) has been prepared by the regional transport consortium, the South East Wales Transport Alliance (Sewta), which is made up of 10 local authorities including Cardiff

and other transport stakeholders. The Sewta RTP was approved by the Welsh Government in January 2010. Under the provisions of the Transport (Wales) Act 2006, the RTP replaces the Local Transport Plans formerly produced by each local authority in Wales. Welsh Government guidance requires the RTP to support the delivery of the strategic objectives of the WSP and the Wales Transport Strategy. The RTP is a material consideration in the formulation of LDPs and decisions on land use where there is a transport dimension.

2.14 The Sewta RTP sets out a vision of, “A modern, accessible, integrated and sustainable transport system for south east Wales which increases opportunity, promotes prosperity for all and protects the environment; where walking, cycling, public transport and sustainable freight provide real travel alternatives”. To deliver this vision the RTP identifies a range of strategic objectives, policies, and actions, together with a five year rolling programme of schemes to develop and improve the transport network.

2.15 Managing demand for private car travel, making better use of the existing transport network and encouraging use of sustainable and active transport modes are key themes of the RTP which will provide the strategic framework for regional and local level transport improvements across the region.

2.16 The RTP recognises the critical relationship between land use and transport provision and how each affects the other. In tune with Welsh Government RTP guidance, it advocates a process of information sharing, joined-up thinking and integration to establish a consistency between the RTP and LDPs across the south east Wales region. These interactions need to embrace both LDP and Development Management elements of land use planning.

2.17 **The South East Wales Regional Waste Plan, First Review (RWP) (2008)** provides a land use framework to facilitate the development of an integrated network of facilities to treat and dispose of waste in south east Wales in a way that has regard for the Waste Strategy for Wales, satisfies modern environmental standards and meets targets set by European and national legislation. The document was subject to a 1st Review, the contents of which have been approved by the constituent authorities of south east Wales including Cardiff in July 2008. The Review sets out a Regional Waste Strategy indicating the preferred mix of waste management/resource recovery technologies and capacities for managing the forecast arisings of all controlled waste streams and a spatial element that guides the location of new facilities. In identifying suitable locations for new waste facilities, the LDP waste policies will assist in the development of an integrated network of facilities to treat and dispose of waste in ways that will satisfy modern environmental standards. A grouping of the authorities (Caerphilly, Cardiff,

Monmouthshire, Newport and the Vale of Glamorgan) has been formed through Prosiect Gwyrdd to tackle the issue.

2.18 The Regional Technical Statement (1st Review) (RTS) (2014) has been prepared in response to Minerals Technical Advice Note 1: Aggregates (MTAN1), issued by Welsh Government in March 2004. This has a primary objective of seeking to ensure a sustainably managed supply of aggregates that are essential for construction, by striking the best balance between environmental, economic and social costs. To achieve that objective, the RTS has been prepared by consultants on behalf the South Wales and North Wales Regional Aggregates Working Party (RAWP) to provide a strategic basis for aggregates supply for LDPs in the south Wales region until 2036. As appropriate, local planning authorities will then be expected to include allocations for aggregates provision in their area as part of the LDP process. The RTS was endorsed by Welsh Government and the constituent authorities including Cardiff in August 2014. 1.19 The main recommendations arising out of the RTS for Cardiff's LDP to effectively address are:

- Confirmation that the current aggregate reserves with planning permission are sufficient to meet the 10 year landbank requirements of MTAN1;
- The need to safeguard the marine dredging wharves within Cardiff Docks; and
- The need to safeguard for potential use by future generations the one potential sand and gravel resource block within Cardiff.

Appendix 3: The Cardiff context and key issues the plan must address

Introduction

3.1 It is important that the Plan is informed by relevant information relating to Cardiff. Extensive work has been undertaken to develop a comprehensive and robust evidence base. This section summarises some of the key issues which have been identified following analysis of the information collected. Further detailed information and technical data is contained in the supporting documents which accompany this document.

The Cardiff Context

3.2 The county covers some 143 square kilometres, and is the largest urban area in Wales. Approximately 53% of the county is urban with the remaining 47% formed by countryside and strategic river valleys which embraces a diverse pattern of landscapes and wide range of resources.

3.3 Cardiff is the key driver of the city-region economy in south east Wales which has a total population of 1.4 million. It is also the capital city of Wales and seat of National Government which further enhance Cardiff's nationally important role. This role is reinforced through its excellent range of retail, cultural, further education and sporting facilities.

3.4 LDPs within south east Wales local planning authorities (LPAs) have progressed at different timescales with four of the 10 LPAs having adopted LDPs, but with the majority still under preparation. The current situation is summarised in Table 1, below.

Table 1: South east Wales local authority LDP progress and overall levels of growth (as at Deposit).

Local Authority	Stage of Preparation	Plan Period	Overall level of growth (dwellings proposed)
Blaenau Gwent	Adopted	2006-21	3,500
Bridgend	Deposit	2006-21	9,000
Caerphilly	Adopted	2006-21	8,625
Merthyr Tydfil	Adopted	2006-21	3,800
Monmouth	Deposit	2011-21	4,000
Newport	Deposit	2011-26	8,750
Rhondda Cynon Taff	Adopted	2006-21	14,385
Torfaen	Deposit	2006-21	5,000
Vale of Glamorgan	Deposit	2011-26	9,950

3.5 In order to assist the LDP in meeting the tests of soundness relating to cross boundary issues and compatibility with LDPs prepared by neighbouring authorities, a Working Group was set up in November 2011, made up of the 10 south east Wales LPAs and other participating organisations in the South East Wales Strategic Planning Group (SEWSPG). The South East Wales Economic Forum (SEWEF) and the South East Wales Transport Authority (Sewta) were also invited to participate. The purpose of the working group was to discuss the cross-boundary implications of the emerging issues involved in the preparation of the LDP.

Key Social Trends and Issues

3.6 Cardiff is the most populated local authority in Wales, with 345,400 people living in the county in 2011 (Office of National Statistics 2012) - over 11% of the total population of Wales. Some 1.4 million people live within a 45 minute drive time of the city. Cardiff's **population** has increased steadily over the past 20 years (by about 2,400 people per year) but much more rapidly since 2001 (about 3,500 per year). Welsh Government projections indicate that the number of households in Cardiff will significantly increase by 37% between 2008 and 2026 from 136,741 to 187,302 households. According to the Welsh Government projections, this is driven partly by in-migration (particularly net international migration), partly by natural population increase (births less deaths), and partly by a decline in average household size with over three quarters of the growth being for 1 and 2 person households.

3.7 In recent years a high proportion of new **housing** has been built on brownfield land. This has contributed to the development of many apartments and the relative under-provision of family housing. On average around 1,476 new dwellings have been built each year for the last 10 years. 14% of those were affordable (213 p.a.). 68% (1,001) p.a. were flats or apartments. Much of this development has been within the city centre and bay area and has helped to revitalise these areas and provide high quality opportunities for urban living. This is demonstrated by the fact that 94% of housing completions in the last 10 years have been on brownfield land compared to 6% on Greenfield sites.

3.8 The affordability of housing - particularly family housing - remains an issue that will continue to need to be addressed. At present (April 2013) there are 9,710 on the combined housing waiting list; 545 families are in temporary accommodation. These facts help indicate the scale of the **affordable housing** requirement. The Cardiff Local Housing Market Assessment update (LHMA July 2013) indicates that, based on the Welsh Government formula, 3,989 affordable dwellings are required in Cardiff for each of the next 5 years to deal with need. The social and economic importance of providing a range and choice of homes, particularly affordable housing is fully recognised in the Welsh Government White

Paper Homes for Wales, "A White Paper for Better Lives and Communities" (May 2012).

3.9 There are two **Gypsy and Traveller** sites in Cardiff (Rover Way and Shirenewton) providing a total of 80 pitches. The population in these sites is growing and there is a demand for new sites. The Council has a legal duty to meet the need for Gypsy and Traveller sites in the Local Development Plan (Welsh Government Circular 30/2007). The latest study in 2013 found a need up to 2026 for an additional 108 pitches plus 10 transit pitches.

3.10 Compared with Wales and the UK, Cardiff has a higher percentage of population in age groups 15-39 years but a lower percentage in age groups from 40 upwards. The impact of the **student** population is particularly significant. According to latest data for 2010-11, the growing student resident population of 37,400 comprised around 10.8% of the city's total population (Higher Education Statistical Authority 2012 and National Statistics).

3.11 The **health** of Cardiff's population is not significantly different from the Welsh average. However, this headline conceals large variations in health status between richer and poorer areas. There is a north-south divide across Cardiff with a difference in life expectancy of nearly 12 years between the poorest and most affluent wards (Cardiff What Matters Headline Needs Assessment 2010¹). Health inequality – the avoidable difference between the least and most advantaged populations - is thus evident in parts of the population. Opportunities for health are less in disadvantaged areas and health outcomes such as cardiovascular mortality are poorer.

3.12 In Cardiff, the greatest causes of death in people aged less than 75 years are cancer, circulatory disease and respiratory disease. Many chronic conditions are preventable by ensuring the environment is health enhancing and through the adoption of healthy lifestyles. However, over half of Cardiff's adults are clinically overweight or obese, just a quarter (25%) of adults meet recommended physical activity guidelines of undertaking at least 30 minutes of moderate intensity physical activity on five or more days per week (the lowest across Welsh local authorities) and 35% of adults eat the recommended 5 or more portions of fruit and vegetables each day (Welsh Health Survey 2011²).

3.13 The built and natural environment together with lifestyle behaviours contribute to improving health. Walking and cycling, access to well-maintained open spaces for physical activity and food growing plus easy access to health care facilities by active travel impact on the health of the population. Achieving and maintaining a healthy weight, protecting

¹ http://www.cardiffproudcapital.co.uk/content.asp?nav=2,260&parent_directory_id=2&id=612&d1p1=1

² <http://gov.wales/docs/statistics/2012/120919healthsurvey2011en.pdf>

mental health and reducing stress levels are supported by this approach. Cardiff has a wealth of open spaces and walking and cycling rates to work/school and for leisure are increasing; there is the opportunity to protect and enhance these assets for health improvement.

3.14 The 2011 census statistics indicate that 16.2% of the population of Cardiff have one or more skills in the Welsh Language (ability to read, write or/and understand Welsh) and 11.1% of the County's population are able to speak Welsh. This compares with a national average of 19.0%. However there are substantial variations between the proportion of Welsh speakers in different communities in Wales, varying from below 8% to above 65%.

3.15 The Welsh Language Board approved Cardiff Council's revised Welsh Language Scheme 2009 to 2012 in July 2009. The Council has adopted the principle that in the conduct of public business and administration of justice in Wales, it will treat the English and Welsh languages on a basis of equality. This scheme sets out how the Council will give effect to that principle when providing services to the public in Cardiff.

3.16 **Community safety** is one of the top issues raised in successive Ask Cardiff Surveys. Between 2010 and 2011, Cardiff had the second highest recorded crime rate in Wales and 50 per cent higher than the average for Wales. These include violence against the person, burglary, vehicle and other theft and criminal damage. However, Cardiff's total recorded crime rate has fallen over the past eight years (with some fluctuations) and is now less than two-thirds of the figure of eight years ago. There was a 12% reduction in total crime between 2009/2010 and 2010/2011 (Home Office Statistics).

3.17 While Cardiff is generally a prosperous city offering a high quality of life for residents; **deprivation** (in terms of housing, physical environment, employment income, educational achievements, health) still remains an important issue that needs to be addressed. Of the 10% most deprived LSOAs (Lower Layer Super Output Area) in Wales, 15.8% are in Cardiff (Welsh Index of Multiple Deprivation 2011). Parts of Ely, Butetown and Splott are the most deprived areas of Cardiff.

3.18 9.5% of the total population of Cardiff live in the 10% most health deprived LSOAs (Lower Super Output Areas) in Wales (i.e. those ranked 1-190). However, this proportion varies greatly across the neighbourhood areas. Cardiff South West (23.2%) has the highest proportion of its residents living in these most deprived areas, followed by City & Cardiff South (19.0%) and Cardiff South East (14.6%). In contrast, Cardiff West (0.0%) has no areas of this kind, while just 1.5% of Cardiff North's population reside within these LSOAs. For Cardiff East the figure is 8.0%.

3.19 When looking at those living within the 20% most health deprived LSOAs in Wales (i.e. those ranked 1-380), it can be seen that 21.7% of

Cardiff's total population live within these areas. The disparities across the city's neighbourhood areas also become more apparent. More than two-fifths (43.9%) of Cardiff South West's population live in these LSOAs, while Cardiff East (38.2%), Cardiff South East (29.9%) and City & Cardiff South (24.0%) also have proportions above the Cardiff average. In contrast, just 5.5% of Cardiff North's and 7.3% of Cardiff West's residents live in the 20% most health deprived areas.

3.20 **Ethnic minorities** comprise 15.5% of Cardiff's population broadly similar to the average for England and Wales (14.0%) but higher than the Wales average (4.4%) with a higher concentration of ethnic groups in Grangetown, Butetown, Riverside Adamsdown and Plasnewydd than elsewhere (ONS 2011).

3.21 In terms of **education, training and skill base** the proportion of Cardiff's working age population lacking any qualifications has hovered at around 13% for the past five years. However, Cardiff performs particularly well with regards to high-level skills with 39.8% of 16 to 64 year olds having NVQ level 4 or equivalent, putting Cardiff significantly above the Wales (29.3%) and UK (32.7%) averages (Annual Population Survey, 2011). In addition, 39% of Cardiff's workforce is educated to NVQ level 4 or above compared with Wales (29%) and UK (33%) (Annual Population Survey January 2011) a reflection of the four universities located within the city. However, as with other areas in the UK, it is important to recognise the link between low educational achievement and deprivation.

Key Economic Trends and Issues

3.22 The economy of Cardiff is generally strong and buoyant, reflecting its position as Capital of Wales, seat of Welsh Government and the regional centre and economic driver for the wider south east Wales economy, accounting for 32% of total employment in south east Wales. Commuting patterns into Cardiff demonstrate the city's importance to the **regional economy** and the Wales Spatial Plan and Economic Renewal Programme acknowledge that maintaining Cardiff's performance is vital for the economic well-being of the region and Wales as a whole.

3.23 Cardiff's **employment workforce** totals 188,977 (Employee Jobs Business Register and Employment Survey 2012, ONS) approximately 40% are daily in-commuters – 88% are employed in the service sector, 6% in construction and 6% in manufacturing. Gross Value Added (GVA) is an economic measure of the value of goods and services produced in an area. In 2009 Cardiff and the Vale of Glamorgan generated £9,615 million – 22% of Welsh GVA. GVA per head in Cardiff and the Vale stood at £20,864 in 2009 – higher than both the Welsh and UK averages (ONS 2011). Unemployment in Cardiff was 4.5% in March 2013 (10,617) (Claimant Count ONS). Between 2001 and 2009 employment in Cardiff expanded by 16% compared to an overall growth of 4% in the wider

south east Wales region (Source DTZ Validation of Cardiff Labour Market and Employment Scenarios, June 2011). The economic recession over the last few years has contributed to the net loss of approximately 4,733 jobs in Cardiff between 2008 and 2010 (Source ONS Business Register and Employment Survey).

3.24 A key challenge for the LDP is planning for the economy and meeting the need for **future jobs** within the city and the wider south east Wales region through striking a balance between the supply and demand for employment land and continuing to provide a diverse range of job opportunities. Likely future growth sectors in Cardiff over the plan period include specialist sectors relating to ICT, energy and environment, advanced materials and manufacturing, creative industries, life sciences and financial and professional services. It is essential that the location, amount and nature of employment land allocated and protected ensures Cardiff fulfils its economic potential and also the success of the south east Wales region. This includes, for example, the designation in 2012 of a Cardiff Central Enterprise Zone providing a much needed boost to the supply of Grade A office stock for the city.

3.25 **Employment land** take up data for the period July 2001-July 2010 can be summarised as follows. Average take up for offices (B1a) was 28,200 square metres per annum. Average land take up was 8.1 hectares per annum for industrial and warehousing (B1b/c, B2 and B8) (Cardiff Employment Land Study Demand Assessment, DTZ, June 2011). Industrial supply currently comprises 69.7 hectares. Office supply currently comprises 426,971 square metres (Cardiff Employment Land Study Gap Analysis, Hardisty Jones Associates, April 2012).

3.26 Total **industrial** stock in Cardiff is approximately 19.2 million square feet of which 43% is warehousing stock, with the remainder providing more traditional industrial accommodation. However, the quality of stock has become a major issue, with only 6.1% being less than five years old. Many of the buildings within the current stock are reaching functional obsolescence and there is very little new floorspace to satisfy the emerging knowledge and technology services, which are driving demand for high specification industrial buildings, rather than the older, larger premises. Existing general industry and warehousing land is largely concentrated to the east of the city, within or in close proximity to the southern arc of deprivation which geographically contains some of the most deprived wards in Wales. Key strategic locations include Ocean Park, Splott, Capital Business Park and Wentloog Corporate Park. The Penarth Road/Leckwith area also continues to perform an important employment function, with good linkages to the south and west of the city. As a distribution location, Cardiff's location towards the western end of the UK's major transport axis means it struggles to compete against locations further to the east (Newport, Chepstow, Bristol) for major transport and distribution functions.

3.27 In terms of **office supply** the city centre and Bay Business Area remain the principle locations. These are also the most accessible in the city, in terms of public transport and for those commuting into the city. Out of centre growth has focused at Green Meadow Spring, Coryton, Cardiff Gate, Pontprennau, and St Mellons Business Park. Lack of grade A office space has been addressed to a degree with the development of Callaghan Square, Fusion Point and Caspian Point. However, of the 1.5 million square feet of office space available in Cardiff only 7% is grade A (DTZ Supply Audit, 2011).

3.28 Cardiff city centre is the main **shopping** centre for south east Wales and over the last 3 years (2009 to 2011) has been ranked the 6th top retail centre in the UK (Experian rankings). District and Local Centres provide important local facilities to the local community. However, they are particularly vulnerable to out of centre competition and changing shopping habits. As a consequence the range and quality of retail provision is under pressure in many centres. There has been a 4% reduction in terms of net retail floorspace between 2005 and 2008.

3.29 The regeneration of **Cardiff Bay** represents a major success story with major redevelopment and infrastructure projects being undertaken over the past two decades. Whilst significant progress has been made a number of sites remain to be implemented including the completion of developments at the International Sports Village and the media/creative industries cluster, residential development and associated uses at Roath Basin (Porth Teigr).

3.30 Cardiff's leisure and tourism sector generates significant economic and cultural benefits for the city through the staging of major international events at world class venues such as the Millennium Stadium and Wales Millennium Centre. Cardiff's diverse leisure and tourism offer also embraces a proud heritage, boasting a number of castles, two national museums, two cathedrals, Roman remains and acres of parks and gardens. In 2010 the city attracted a total of 18.3 million visitors (STEAM, 2010), a 25% growth since 2009. Cardiff came in at 11 in Visit Britain's rankings for overseas visits to towns and cities in 2012. The Welsh capital had 301,000 visits, and was just ahead of Leeds (299,000) and behind Brighton (345,000).

Key Transportation Trends and issues

3.31 **Traffic** on Cardiff's roads grew on average by 9% between 2002 and 2012 (Cardiff Annual Traffic Flow Surveys, calculated using 5yr Rolling Averages). Around 56% of employed Cardiff residents travel to work by car; with 17% walking; 10% travelling by bus; 10% by cycle; 6% by rail; and the remaining 1% by other means. This compares with travel by non-car means for other journey purposes as follows: Shopping 53%; Education 59%; and Leisure 57% (Ask Cardiff Survey 2012). A large proportion of car journeys are relatively short: 25% of trips being

no longer than 2km and 58% no longer than 5km (Census 2001 excluding working from home). Overall **vehicle occupancy** has increased from 1.37 per private car in 2008 to 1.41 in 2011 (Cardiff Annual Traffic Flow Surveys).

3.32 Cardiff has consistently experienced the highest levels of daily **inbound commuters** of any other local authority in Wales. As of 2011, this equates to nearly 77,900 people travelling into Cardiff each day by all modes, and representing around 37% of the city's total workforce. The largest numbers commute from the adjoining areas of The Vale of Glamorgan (20,500), Rhondda Cynon Taff (18,800) and Caerphilly (9,700). A total of 27,900 Cardiff residents commute outside of the authority on a daily basis, giving a net inflow of around 50,000 commuters (Annual Population Survey, 2011).

3.33 In terms of transport interchanges Cardiff benefits from having a co-located **central rail and bus station** within the heart of the city and within 2 hours rail travel time from London. Central rail station is used by approximately 5.75 million people each year (Source: Office of Rail Regulation, 2011-12 Station Usage Report) and significant improvements are planned for both the bus station and rail station. Its sustainable location within the heart of the city enables it to perform an important role for the south east Wales region in providing easy access to jobs and services.

3.34 Travel on **rail services** into Cardiff has increased considerably, with passenger numbers at Cardiff stations having increased by 82% between 2001 and 2011. Cardiff Central and Cardiff Queen Street Station alone have experienced an increase in patronage during this period of 100% and 53%, respectively. (Cardiff Annual Patronage Surveys, calculated using 5yr Rolling Averages). Significant enhancements to rail services are planned during the plan period with electrification of the main line from Cardiff to London approved for completion in 2017. Proposals for also electrifying the Valley line network and main line to Swansea are currently being considered by UK and Welsh Governments. In addition, work on enhancing the capacity between Central and Queen Street stations, including additional platforms for both, has been approved for completion in 2014.

3.35 With respect to other modes, **cycle usage** within the city centre has seen an increase of 10% between 2001 and 2011, while overall **bus patronage** numbers across the city have decreased from 2001 to 2011 (Cardiff Annual Patronage Surveys, calculated from 5yr rolling averages). Use of the Cardiff East Park and Ride site after opening in October 2009 has increased from approximately 69,500 in 2009/10 to 84,700 in 2012/13 (22% growth) and rail based park and ride in Cardiff remains over-subscribed.

3.36 **Cardiff International Airport** plays an important role in international connectivity for both Cardiff and the wider region and consideration needs to be given to improving the role and links to the airport.

3.37 The **port facilities** within Cardiff docks are important in terms of international freight movement for both Cardiff and the wider region and it is important that these facilities are maintained and improved where necessary. Associated British Ports (ABP) and its tenants at South Wales directly and indirectly support over £1.7 billion of gross output in Wales. There are therefore opportunities to develop the role of the port, particularly concerning its potential to generate new industry, services and accelerate economic growth.

Key Environmental Trends and Issues

3.38 Cardiff is located on the coastal plain of the Severn Estuary. The southern rim of the south Wales coalfields in Caerphilly and Rhondda Cynon Taff provide a strong imposing backdrop to the north of the city, dramatically broken by the River Taff at Tongwynlais. The Rivers Ely and Rhymney also converge on the city from the west and east, respectively. To the south west the Leckwith Escarpment in the Vale of Glamorgan provides another strong backdrop. By contrast, the flat land to the south east, adjacent to the Severn Estuary and Newport forms part of the Gwent Levels. This undeveloped coastline contrasts with the developed coastline further west which includes Cardiff Bay and the barrage and associated fresh water lake. This setting has influenced the city's development to date with its distinctive urban form and will continue to do so in the future.

3.39 **Landscape** studies undertaken in 1997 and 2007 have recognised the particular value of five areas of countryside: St Fagans Lowlands and the Ely Valley; the Garth Hill Uplands and the Pentyrch Ridges and Valleys; the Fforest Fawr and Caerphilly Ridge; the Wentloog Levels; and Flat Holm. In addition Cardiff's three river valleys of the Taff, Ely, and Rhymney (including Nant Fawr) play an important strategic role as wildlife and recreation corridors linking the urban area with the countryside.

3.40 Cardiff has a strong and rich built heritage and many designations have been made to identify interests of **historic conservation** importance in Cardiff which need to be protected and include:

- 28 Scheduled Ancient Monuments and 4 archaeologically sensitive areas;
- Almost 1000 Listed Buildings;
- 27 Conservation Areas;

- 19 Historic Parks, Gardens and Landscapes including part of the Gwent Levels which are included in the Register of Landscapes of Outstanding Historic Interest in Wales; and
- Local buildings of merit.

3.41 The city has a particularly rich Victorian and Edwardian legacy that is reflected in the city centre, its inner suburbs and in the civic centre and religious building. Churches and chapels, schools and public houses remain prominent and often create focal points on streets and junctions. As Cardiff continues to grow, high quality **design** will be required which takes this local distinctiveness into consideration.

3.42 **Open spaces** are important as they improve people's mental and physical health, encourage physical activity, are attractive, support biodiversity, act as a carbon sink, and can help to adapt to climate change. Cardiff has over 400 hectares of recreational open space, 2000 hectares of amenity open space and 200 hectares of education open space. Cardiff has a good coverage of Accessible Natural Greenspace, with over two thirds of the population living within a 400m distance of access to green space. Cardiff has more green space per person than any of the other UK core cities; a situation to be protected and promoted.

3.43 Cardiff has a diverse and widespread collection of species and sites of Local, UK and European **biodiversity** importance which need to be protected. Including:

- 4 sites designated for their international importance – the Severn Estuary Special Protection Area (SPA), Severn Estuary Special Area of Conservation (SAC) and Ramsar sites, and Cardiff Beech Woods Special Area of Conservation (SAC);
- 17 Sites of Special Scientific Interest (SSSIs);
- 6 Local Nature Reserves (LNRs);
- 177 Sites of Importance for Nature Conservation (SINCs) and 4 more pending designation (subject to approval by Cardiff Biodiversity Partnership);
- European protected species occurring in Cardiff include the Great Crested Newt, otter, dormouse as well as several species of bat; and
- A number of the Cardiff priority habitats and species have been identified by UKBAP, Section 42 and Local Priority.

3.44 Good quality **agricultural land** is known to exist within the rural area of Cardiff. The best and most versatile agricultural land is a finite resource. Areas within the city known to contain some good (Grade 1, 2 and 3a) quality agricultural land include agricultural land in the west, north and north east of the city.

3.45 **Flooding** poses a particular threat to Cardiff because of its coastal location, low-lying areas and rivers, and it is inevitable that climate change will increase flood risk in the city. The Environment Agency advises planning authorities on flooding issues and also gives advice in the form of River Catchment Management Plans. It has identified areas of Cardiff – mainly in the south of the county (Wentloog Levels, Pengam Area) and the river valleys (the Taff, Ely and Rhymney) – which are at high risk of flooding (either with or without defences) or which have a history of flooding. In order to build on this baseline information the Council has undertaken a Strategic Flood Consequence Assessment which assessed fluvial and tidal influences on flood risk within the city for both the present day and in the next 75 and 100 years taking account of climate change and in particular predicted sea level rise. In terms of present day flood risk the findings of this work reinforce the Environment Agency data. However for future flood risk in 75 and 100 years the findings show significantly increased flood risk in the Pengam Green area and Wentloog Levels area south of Rumney and Trowbridge due to the impact of climate change and in particular predicted sea level rise. The need for the plan to respond to these findings is clearly a major issue.

3.46 In order to combat **climate change** a key issue for the plan to address is reducing greenhouse gas emissions which are the key cause of global warming. Cardiff's per capita average CO₂ emissions were estimated at 6.8 tonnes in 2009. The majority of these emissions resulted from industry (45%), domestic sources (30%) and road transport (25%) (Department for Energy and Climate Change). The Welsh Government target is to reduce CO₂ emissions by 80% by 2050.

3.47 The Council is currently undertaking a Renewable Energy Assessment and initial findings show that current production of **renewable energy** in Cardiff is low. The European Union target is to source 15% energy from renewable sources by 2020. (European Directive 2009/28/EC).

3.48 In 2011/12 municipal **waste** arisings in Cardiff totalled 169,216 tonnes. Over the last 10 years the recycling and composting rate of household waste in Cardiff has risen from 4% to 55% meaning the Council is on target to reach the Welsh Government target of 58% by 2016, 64% by 2020 and 70% by 2025. For municipal waste that cannot be recycled or composted the Council is currently working with other authorities in the region through Prosiect Gwyrdd to secure a long term solution to turn waste into energy. In February 2013 Viridor was announced as Preferred Bidder to deliver an environmentally sustainable waste management solution for the Partnership. Viridor's solution, is based on an energy from waste facility located at Trident Park.

3.49 Cardiff has significant, good quality **mineral reserves** (mainly carboniferous limestone) which are an important source of aggregates for

the region. A supply of aggregates should be maintained, so mineral reserves need to be safeguarded against inappropriate development. Currently Cardiff has approximately 41 million tonnes of limestone reserves which represent a supply of 69 years, well beyond the plan period. There is also a potential sand and gravel resource adjacent to the Rhymney River in the north east of the county, and potential coal resources in the north west of the county, which are unlikely to be required within the Plan period but which need to be safeguarded for potential future use.

3.50 As a result of past activities including industry, mining, quarrying, dockland and waste disposal there is a range of undeveloped potentially **contaminated land** within the city. However the majority of these undeveloped sites are either protected as areas of open space or for nature conservation purposes or are required for operational purposes such as quarrying activity or port related activities.

3.51 In common with other towns and cities in the UK, the predominant local source of emissions which affects **air quality** is road traffic and the pollutant of concern is nitrogen dioxide. Cardiff currently has three AQMAs including St Mary Street, Ely Bridge and Stephenson Court (on Newport Road near Cardiff Royal Infirmary).

3.52 **Water quality** in the rivers Taff, Ely and Rhymney is improving, but falls below the requirements of the Water Framework Directive. In total the status of watercourses (percent of river lengths achieving good ecological status) in Cardiff using data collected under the Water Framework Directive is 1.8 km Good, 33.7 km Moderate, 7.6 km Poor and 4.2 km Bad. The groundwater around Taff Gorge / Creigiau area is vulnerable.

3.53 In order to meet the needs of new development proposed in the plan new **water supply** infrastructure will be required but dialogue with Welsh Water has demonstrated a commitment to address this issue.

Appendix 4: – Supplementary Planning Guidance (SPG)

The Table below provides a list of SPG to support the Plan with a timetable for preparation. This list will be kept under review in light of changing priorities for preparation and the need for additional SPG. The requirement for preparation/review of SPG is linked to the Monitoring Framework.

Supplementary Planning Guidance	Current Status /Proposed Action	Relevant Plan Policy	Indicative Date for Production
Design and Parking Guidance (incorporating Access, Circulation and Parking Requirements SPG and sustainable design guidance)	Current adopted SPG to the Local Plan To be revised to link to adopted LDP updated and extended. New planning obligations SPG to pick up S106 issues from Transportation SPG	T5	Within 6 months of adoption
Affordable Housing	Current adopted SPG to the Local Plan To be revised to link to adopted LDP New planning obligations SPG to pick up S106 issues	H3	Within 6 months of adoption
Open Space	Current adopted SPG to the Local Plan To be revised to link to adopted LDP New planning obligations SPG to pick up S106 issues	C4, C5	Within 6 months of adoption
Houses in Multiple Occupation	New SPG	H5	Within 6 months of adoption
Planning Obligations Incorporating Developer Contributions for	New SPG	KP7	Within 12 months of adoption

<p>Transport facilities and relevant sections from the following SPGs:</p> <ul style="list-style-type: none"> • Affordable Housing • Access, Circulation and Parking Requirements • Open Space • Schools • Public Art • PROW • Community Facilities • Trees and Development • Waste Collection and Storage Facilities • Biodiversity

Appendix 6: Heritage Assets Areas of Protection

Policy EN9 (i): Cadw Scheduled Ancient Monuments in Cardiff

Proposals Map Reference	Monument Name
1	Cae-yr-Arfau Burial Chamber
2	Caer Castell Camp
3	Caerau Camp
4	Cardiff Castle and Roman Fort
5	Castell Coch
6	Castell Morgraig
7	Castle Field Camp E Of Craig-Llywn
8	Cooking Mound East of Taff Terrace
9	Cross in Llandaff Cathedral
10	Dominican Friary
11	Ely Roman Villa
12	Ely Tidal Harbour Coal Staithe Number One
13	Five Round Barrows on Garth Hill
14	Flat Holm Coastal and Anti-aircraft Defences
15	Leckwith Bridge
16	Llandaff Cathedral Bell Tower
17	Llwynda-Ddu Camp
18	Melingriffith Water Pump
19	Morganstown Castle Mound
20	Old Bishop's Palace, Llandaff
21	Pen y lan Roman Site
22	Queen Alexandra Dock Harbour Defence Gun Emplacement
23	Relict Seawall on Rumney Great Wharf
24	St Mellons Churchyard Cross
25	The Wreck of the "Louisa"
26	Three Palmerstonian Gun Batteries, Flat Holm
27	Twmpath, Rhiwbina
28	Wenallt Camp, Rhiwbina

Policy EN9 (ii): Listed Buildings

Refer to the online mapping portal <http://ishare.cardiff.gov.uk/>

Policy EN9 (iii): Conservation Areas in Cardiff

Proposals Map Reference	Name (designation date(s))
1	Cardiff Road Conservation Area (July 1975)
2	Cathays Park Conservation Area (June 1978)
3	Cathedral Road Conservation Area (April 1972; amended June 2007)
4	Charles Street Conservation Area (October 1988)
5	Church Road, Whitchurch (August 2006)
6	Churchill Way Conservation Area (December 1991)
7	Conway Road Conservation Area (June 2007)
8	Gwaelod-y-Garth Conservation Area (Sept 1970; amended Oct 2007)
9	Insole Court Conservation Area (May 1992)
10	Llandaff Conservation Area (March 1968)
11	Melingriffith Conservation Area (Aug 1975; amended Oct 2007)
12	Mount Stuart Square Conservation Area (July 1980; amended June 2009)
13	Oakfield Street Conservation Area (February 1992)
14	Old St. Mellons Conservation Area (July 2007)
15	Pentyrch (Craig-y-Parc) Conservation Area (July 1991; amended Oct 2007)
16	Pentyrch (St. Catwg's) Conservation Area (Mar 1973; amended Oct 2007)
17	Pierhead Conservation Area (June 1984; amended June 2009)
18	Queen Street Conservation Area (May 1992)
19	Rhiwbina Garden Village Conservation Area (February 1977)
20	Roath Mill Gardens Conservation Area (January 1988)
21	Roath Park Conservation Area (January 1973)
22	Roath Park Lake and Gardens Conservation Area (November 1976)
23	St. Fagans Conservation Area (July 2007)
24	St. Mary Street Conservation Area (July 1975)
25	Tredegarville Conservation Area (March 1981 amended Dec 2008)
26	Windsor Place Conservation Area (August 1975)
27	Wordsworth Avenue Conservation Area (February 1974)

Policy EN9 (iv): Archaeologically Sensitive Areas in Cardiff

Proposals Map Reference	Area
1	Llandaff
2	St Fagans/Michaelstone-super-Ely

3	The City Centre
4	The Wentloog Levels

Policy EN9 (v): Cadw / ICOMOS UK Registered Historic Parks and Gardens in Cardiff

Proposals Map Reference	Site Name
1	Cardiff Castle and Bute Park
2	Cathays Cemetery
3	Cathays Park
4	Cefn Mably
5	Coryton House
6	Craig y Parc
7	Fairwood House, Cardiff
8	Grange Gardens
9	Insole Court
10	Parc Cefn Onn
11	Pontcanna Fields and Llandaff Fields
12	Roath Park
13	Rookwood Hospital
14	Sophia Gardens
15	St. Fagan's Castle
16	Thompson's Park (Sir David's Field)
17	Victoria Park
18	Waterloo and Roath Mill Gardens
19	Whitchurch Hospital

Policy EN9 (v): Cadw/NRW Registered Landscapes of Historic Interest in Cardiff

1	Gwent Levels (part City of Cardiff, part Newport CC) - Landscape of Outstanding Historic Interest
---	---

<http://www.ggat.org.uk>

Policy EN9 (vi): Locally Listed Buildings of Merit and other features of interest

Locally Listed Buildings: Please refer to the online mapping portal <http://ishare.cardiff.gov.uk/>

Historic Environment Record (HER): The Glamorgan-Gwent Archaeological Trust's Historic Environment Record (HER) is the official register of archaeological sites in Southeast Wales. <http://www.ggat.org.uk>

Appendix 7: Designated Sites

Proposals Map Reference	Sites of Special Scientific Interest (SSSI)
1	Caeau Blaen-Bielly
2	Castell Coch woodlands and road section
3	Coad Y Bedw
4	Cwm Cydfin, Leckwith
5	Ely Vally
6	Fforestganol a Chwm Nofydd
7	Flat Holm
8	Garth Wood
9	Glamorgan Canal / Long Wood
10	Gwent Levels - Rumney and Peterstone
11	Lisvane Reservoir
12	Llanishen and Lisvane reservoir embankments
13	Penylan Quarry
14	Rhymney River Section
15	Rumney Quarry
16	Severn Estuary
17	Ton Mawr and Taffs Well quarries
18	Ty Du Moor

5	Hermit Wood
6	Howardian

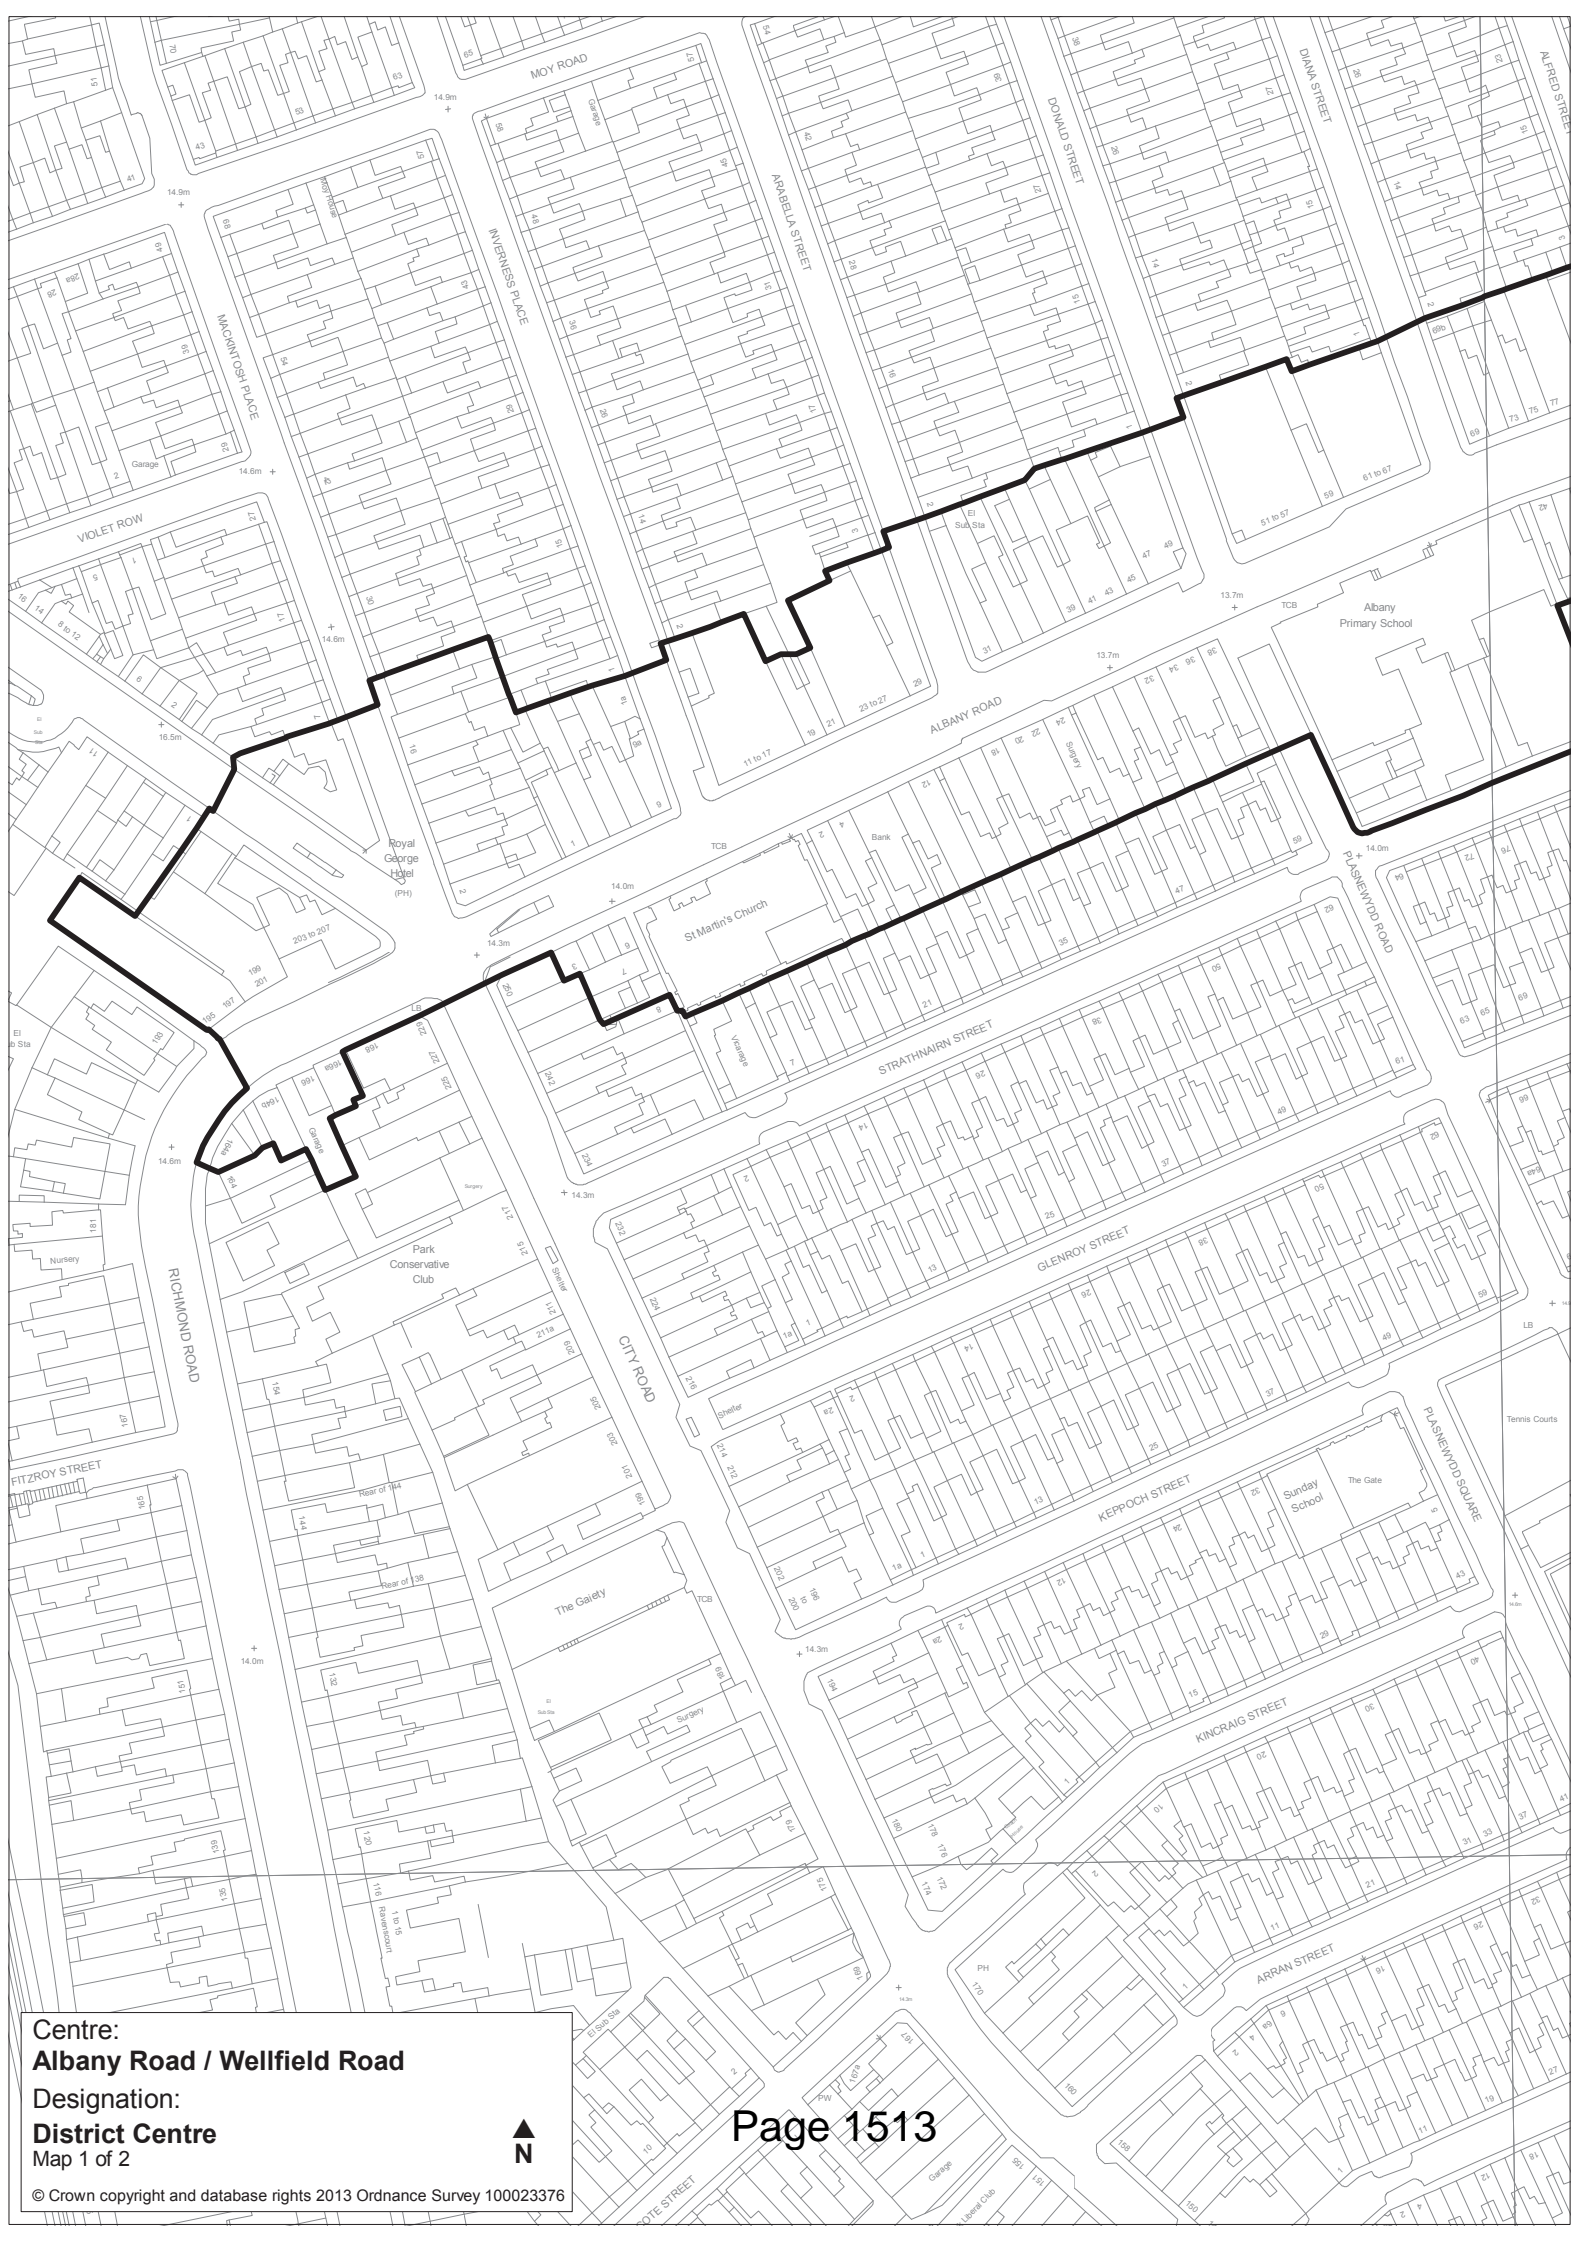

Appendix 8: District and Local Centres

Policy R4 refers to District Centres as defined on the Proposals Map: The District Centres detailed on the following plans are:

- (1) Albany Road/Wellfield Road
- (2) City Road
- (3) Clifton Street
- (4) Cowbridge Road East
- (5) Crwys Road/Woodville Road
- (6) Bute Street/James St
- (7) Merthyr Road, Whitchurch
- (8) Penarth Road/Clare Road
- (9) St Mellons
- (10) Thornhill
- (11) Whitchurch Road

Policy R5 refers to Local Centres as defined on the Proposals Map: The Local Centres detailed on the following plans are:

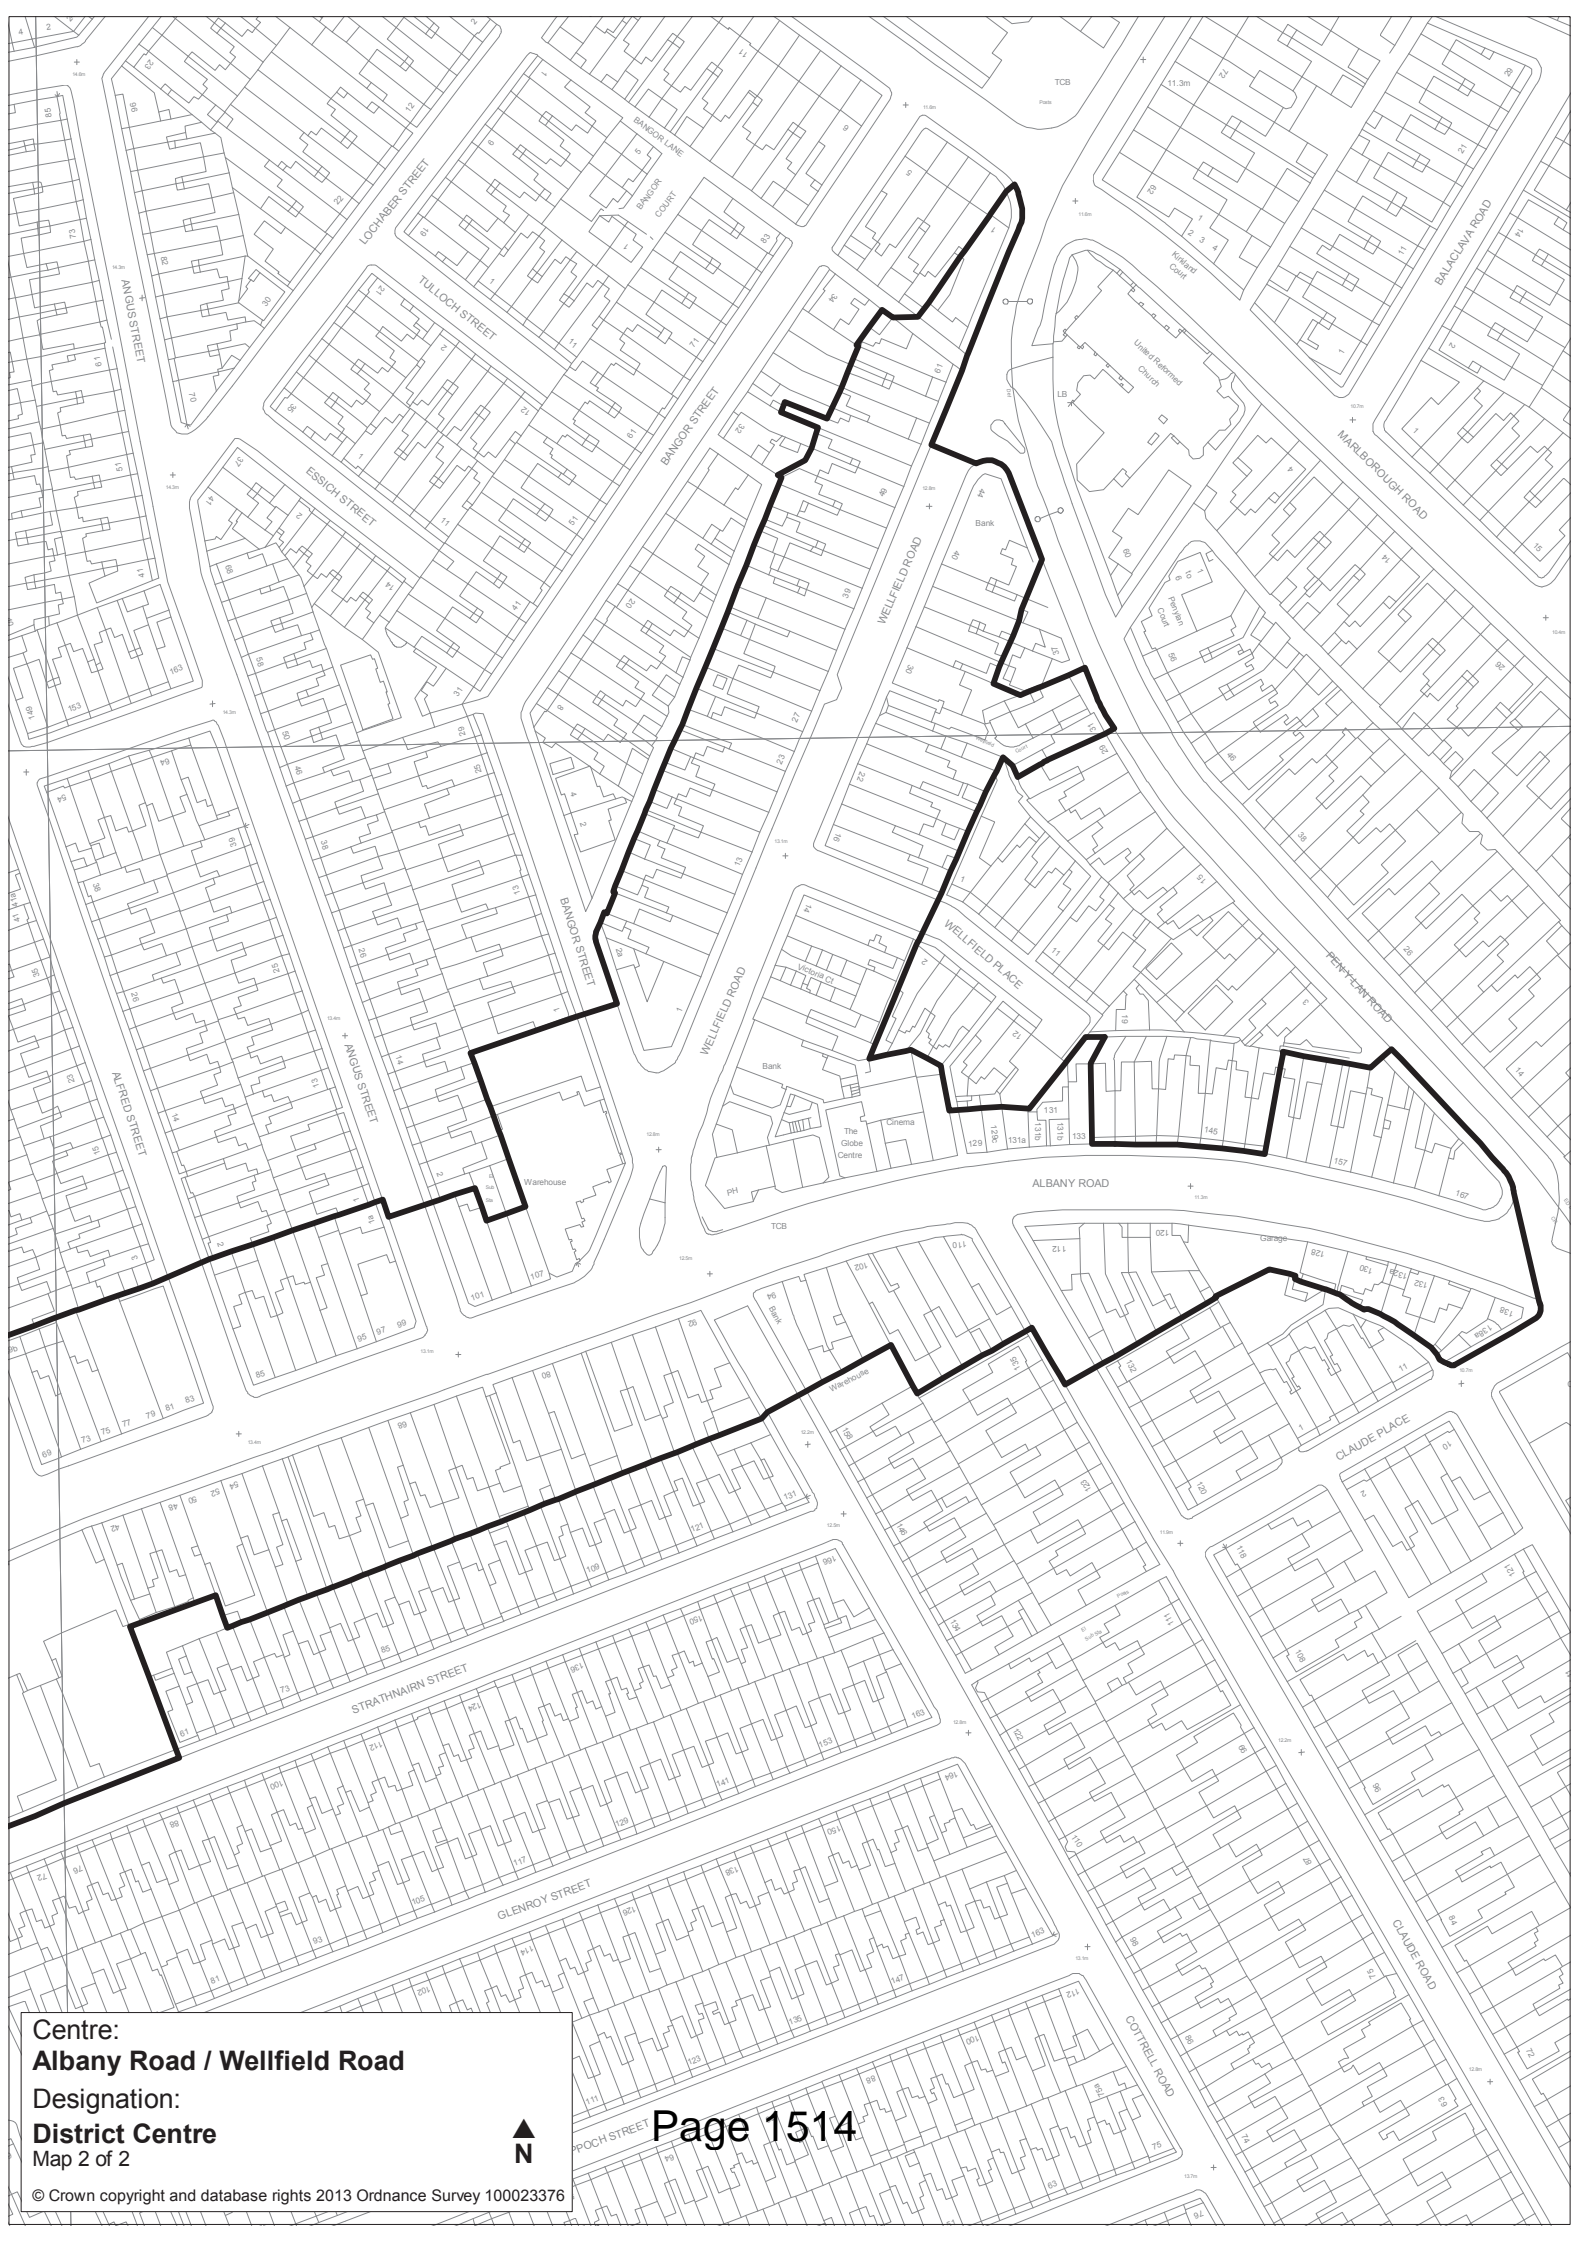

- (1) Birchgrove
- (2) Bute Street (Loudoun Square)
- (3) Cathedral Road
- (4) Countisbury Avenue
- (5) Caerau Lane
- (6) Fairwater Green
- (7) Gabalfa Avenue
- (8) Grand Avenue
- (9) High Street, Llandaff
- (10) Maelfa, Llanedeyrn
- (11) Newport Road, Rumney
- (12) Rhiwbina Village
- (13) Salisbury Road
- (14) Splott Road
- (15) Station Road, Llanishen
- (16) Station Road, Llandaff North
- (17) Station Road, Radyr
- (18) Tudor Street
- (19) Willowbrook Drive
- (20) Wilson Road

Appendix 10: Summary of LDP process including glossary of technical terms

Summary of LDP Process

Introduction

4.1 As Wales has a plan-led system, it means that the LDP will be very important when making planning decisions. It sets out the Council's proposals and policies for future development and use of land in its area. Once the plan has been adopted, decisions on planning permissions will be mostly based on the LDP. The LDP will therefore provide a measure of certainty about what kind of development will and will not be permitted during the plan period.

Stage 1: Delivery Agreement

4.2 The Delivery Agreement sets out how and when you can contribute to the LDP preparation process. It has two parts:

- A timetable for producing the LDP; and
- A Community Involvement Scheme - this explains how developers, the public and interested groups can contribute to plan preparation. It also explains how responses will be treated and what feedback you will receive.

4.3 A revised version of the Delivery Agreement was agreed by the Welsh Government in December 2011 and can be viewed on the Council's website (http://www.cardiff.gov.uk/ObjView.asp?Object_ID=19592) or is available for public inspection at County Hall.

Stage 2: Gathering evidence base

4.5 The LDP needs to be a sound document. This means that it *shows good judgement and can be trusted*. In order to achieve a sound plan, the Council has gathered economic, social and environmental information in order to provide an evidence base for the plan. The evidence base is set out in Appendix 13 and has informed the development of the vision and objectives for the plan and the Preferred Strategy.

Stage 3: Preferred Strategy

4.6 The Preferred Strategy outlines the overall objectives for the plan and the strategy for growth or change, including preferred options for major development sites. The Preferred Strategy is informed by the evidence base for the plan and consultation undertaken in 2010/11 on the vision

and objectives and strategic options and sites. The Council consulted on the Preferred Strategy in November/December 2012.

Stage 4: Deposit plan

4.7 The Deposit Plan (a full draft of the LDP) will be based on the evidence base for the plan and will be informed by comments received in response to the Preferred Strategy. This Deposit Plan presents the Preferred Strategy as agreed or amended, proposals for key areas of change, regeneration or protection and specific sites to be used for particular purposes and other specific policies and proposals. It will be accompanied by a Consultation Report outlining how comments at the previous stage have influenced the plan. Once the LDP is placed on 'Deposit' for six weeks consultation the Council cannot change it. Any changes to the plan are a matter for an Independent Inspector who will examine the plan to determine whether it is 'sound'. This is the stage the plan has now reached and there will be a six week consultation period to allow comments to be made on the plan.

Stage 5: Alternative Sites

4.8 During the six week consultation period on the Deposit Plan objectors may suggest alternative sites or boundaries for development to be considered. After this consultation period the Council will publish any alternative sites or boundaries that have been suggested and a further six week consultation period will be allowed for people to comment on the alternative sites and boundaries.

Stage 6: Examination of the plan

4.9 Once the consultation periods are over, the Council will consider the representations and produce a final Consultation Report. Each of the main issues raised will be summarised in this report. Then the Planning Inspectorate (on behalf of the Welsh Government) will examine the report, all of the deposit representations, the Deposit Plan with its background evidence and the Sustainability Appraisal Report. The examination ensures that the LDP is based on 'sound' information and thinking, and that the views of those with concerns about the plan have been considered. The Inspector will decide what issues will be discussed at the examination and how they will be heard. The LDP is due to be submitted for examination in August 2014.

Stage 7: Inspector's Report

4.10 After the examination, the Inspector will review all the relevant information and consider what changes the Council should make to the LDP. He or she will then publish the Inspector's Report outlining these

changes and explaining the reasons for them. The Inspector's views are binding, the local planning authority must make any changes recommended.

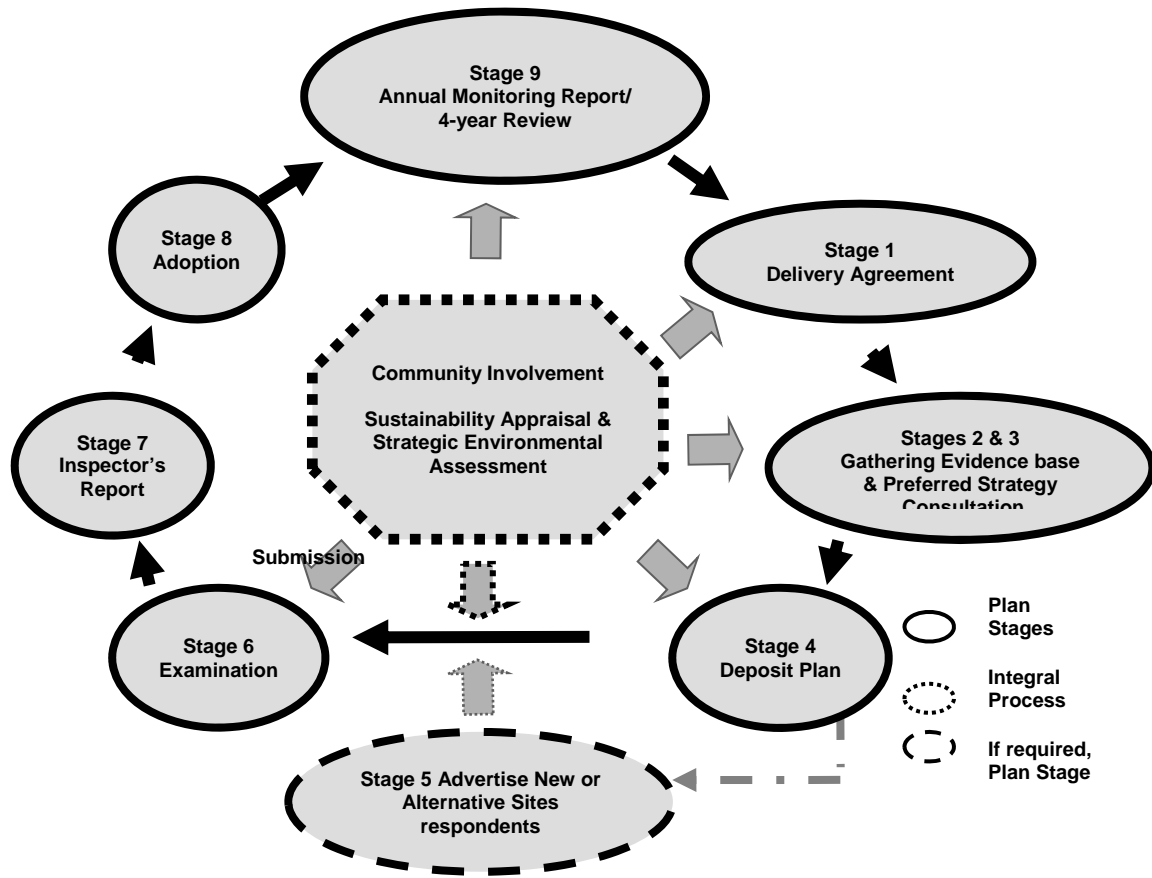

Stage 8: Adoption

4.11 Within eight weeks of receiving the Inspector's Report the Council must advertise the fact that the LDP has been adopted and where it can be inspected. From the date of adoption, the High Court allows six weeks for anyone to challenge it on legal grounds.

Stage 9: Monitoring and review

4.12 Once the Local Development Plan is adopted, the Council must send an Annual Monitoring Report to the Welsh Government each year. This will consider how successful the LDP has been in meeting the plan's objectives and means that the Council will be able to compare the actual effects of the LDP against what was intended. There will be a major review of the LDP at least every four years. This may involve rewriting sections of the plan, or replacing it.

Diagram showing LDP Preparation Process

Glossary of Technical Terms

Adopted Plan

The final, statutorily approved legal version of the Local Development Plan.

Adoption

The final confirmation of a development plan status by a local planning authority (LPA).

Affordable Housing

Housing, whether for rent, shared ownership or outright purchase, provided at a cost considered affordable in relation to incomes that are average or below average, or in relation to the price of general market housing.

Annual Monitoring Report (AMR)

A report submitted to the Welsh Government by the local planning authorities which assess the effectiveness of the LDP against a set of indicators and targets.

Air Quality Management Area (AQMA)

The Environment Act 1995 requires local authorities to review and assess the quality of air in the areas against national air quality standards and objectives. Where the UK air quality objectives are not being met and members of the public are affected they are required to declare an AQMA.

Baseline

A description of the present state of the area against which to measure change.

Biodiversity

A term used to describe the variety of life on Earth, including the wide variety of ecosystems and living organisms, animals, plants, their habitats and their genes

Brownfield Land/Site

Land which is, or was, previously occupied by a permanent structure (excluding agriculture or forestry buildings) and associated fixed surface infrastructure. This includes the curtilage of development, defence buildings and land used for mineral extraction and waste disposal where provision for restoration has not been made.

Candidate Sites

The LDP Manual (Welsh Government 2006) recommends that local planning authorities engage with developers and landowners at the evidence gathering stage of the LDP process to obtain information about

potential development sites that may be included in the plan. Accordingly, in November 2010, the Council formally invited developers, landowners, agents, Council departments and others with an interest in land to submit sites they wished to be considered for development or reuse through the LDP, for a range of uses, including housing, employment, retail, leisure, waste, transport (e.g. park and ride sites), open space and other community uses.

Citizens Panel

The Citizens Panel is made up of a representative sample of over 1,000 local residents from across Cardiff who have agreed to give their views on a number of consultation topics throughout the year. Panel members share their views by completing surveys and occasionally taking part in other activities like focus groups, workshops, or forums.

Climate Change

Long-term changes in temperature, precipitation, wind and all other aspects of the Earth's climate. Often regarded as a result of human activity and fossil fuel consumption.

Commitments (or committed development)

All land with current planning permission or allocated in adopted development plans for development (particularly residential development).

Community

People living in a defined geographical area, or who share common interests.

Community Involvement Scheme (CIS)

The CIS identifies how the LPA intends to involve consultation bodies and the public in the preparation of the LDP. The CIS is submitted to the Welsh Government as part of the Delivery Agreement for its agreement.

Community Infrastructure Levy (CIL)

CIL is a method of securing generalised contributions from developers. The Government legislated for CIL in the 2008 Planning Act. Implementing Regulations followed, and CIL came into force in England and Wales on 6 April 2010.

Community Strategy

Local authorities are required by the Local Government Act 2000 to prepare these, with the aim of improving the social, environmental and economic well being of their areas.

Consultation

Formal process where comments are invited on a particular topic or set of topics, or a draft document.

Conservation Area

Areas of special architectural or historic interest, the character or appearance of which it is desirable to preserve or enhance.

Conservation Area Character Appraisal

A published document defining the special architectural or historic interest that warranted the area being designated.

Conversions

Generally means the physical work necessary to change of use of a building from a particular use, classified in the use classes order, to another use. Can also mean the sub-division of residential properties into self-contained flats or maisonettes.

Delivery Agreement

A document comprising the local planning authorities timetable for the preparation of the LDP together with its Community Involvement Scheme, submitted to the Welsh Government for agreement.

Deposit

A formal stage of consultation in which comments are invited on the full draft LDP.

Deposit LDP

A full draft of the Local Development Plan which undergoes a formal consultation period.

Development

Development, as it is defined in planning law is the 'carrying out of building, engineering, mining or other operations in, on, over or under land.' (Section 55 of the 1990 Planning Act as amended).

Employment Land/Site

Land used for employment purposes by one or more of the following: offices, manufacturing, research and development, storage and distribution.

Enterprise Zones

A specially designated area within which businesses are granted numerous advantages and incentives such as income tax credits, equipment tax refunds and property tax credits. At its core, the enterprise zone is a means to targeting a specific geographical area for economic

revitalisation. Creating an enterprise zone encourages investment and promotes economic growth in that area.

Evidence Base

The information and data gathered by the LPA to justify the "soundness" of the policy approach set out in the Local Development Plan, including physical, economic, and social characteristics of an area.

Examination

Examination is carried out by the Planning Inspectorate on behalf of the Welsh Government and involves the examination of the report, all the deposit representations, the Deposit Local Development Plan with its background evidence and the Sustainability Appraisal Report. It ensures that the LDP is based on sound information and thinking, and that the views of those with concerns about the plan have been considered.

Expressions of Interest

Representations or comments on the development plan, including requests for alteration, inclusion or removal of policies or sites for development.

Final Sustainability Report

A term used to refer to the Sustainability Appraisal Report, produced at the deposit stage. It shows how SA/SEA has informed the preparation of the LDP and details the methodology, process and results of the LDP against the Sustainability Objectives identified in the SA/SEA Scoping Report.

Greenfield Land/Site

Land that has not been previously developed, usually farmland, grassland or heath.

Gross Value Added (GVA)

This is a measure in economics of the value of goods and services produced in an area, industry or sector of an economy.

Habitat Regulation Assessment (HRA)

A HRA is a requirement of European Directive 92/43/EEC which assesses the potential effects a Local Development Plan may have on one or more European sites (Natura 2000 sites). The assessment should conclude whether or not a proposal or policy in a Development Plan would adversely affect the integrity of the site in question.

Housing Land Availability (HLA)

The total amount of land reserved for residential use awaiting development.

Infrastructure

Infrastructure includes services such as roads, transport facilities, water supplies, sewerage and associated waste water treatment facilities, waste management facilities, energy supplies (electricity and gas) and distribution networks and telecommunications infrastructure. Soft infrastructure includes ICT and telecommunications.

Initial Sustainability Appraisal Report

A term used to refer to the Sustainability Appraisal Report, produced at the Preferred Strategy stage. This assesses the LDP options against the Sustainability Appraisal framework. The report is then expanded at the Deposit LDP stage and finalised alongside the Adoption Statement.

Inspector's Report

The findings of the Inspector, following an independent examination of the LDP, set out in a report that is binding upon the LPA.

Key Diagram

The diagrammatic interpretation of the LDP's spatial strategy.

LANDMAP

LANDMAP is the national information system, devised by the Countryside Council for Wales, for taking landscape into account in decision-making (<http://landmap.ccw.gov.uk/>).

Listed Building

A building of special architectural or historic interest. Listed buildings are graded I, II* or II with grade I being the highest. Listing includes the interior as well as the exterior of the building, and any buildings or permanent structures.

Local Development Plan (LDP)

The required statutory development plan for each local planning authority area in Wales under Part 6 of the Planning and Compulsory Purchase Act 2004. A land use plan that is subject to independent examination, which will form the statutory development plan for a local authority area. It should include a vision, strategy, area wide policies for development types, land allocations, and where necessary policies and proposals for key areas of change and protection.

Local Development Plans Wales (LDPW)

Planning policy guidance document from the Welsh Government on the preparation of Local Development Plans.

Local Listing (or Building of Local Importance).

A locally important building valued for contribution to local scene or for local historical situations but not meriting listed building status.

Local Nature Reserve (LNR)

Non-statutory habitats of local significance designated by local authorities where protection and public understanding of nature conservation is encouraged.

Local Planning Authority (LPA)

A planning authority responsible for the preparation of the LDP.

Master Planning

In land-use planning, a government entity's plan for the overall utilisation of a particular area, including its allocation for residential or manufacturing uses and the corresponding environmental impacts.

Minerals Aggregates Technical Advice Note (MTAN1)

This was issued by the Welsh Government in March 2004. MTAN1 and sets an overarching objective which seeks to ensure a sustainably managed supply of aggregates (which are essential for construction), striking the best between environmental, economic and social costs.

Mitigation

Measures to avoid, reduce or offset significant adverse effects.

Mixed Use

Developments or proposals comprising more than one land use type on a single site.

National Vocational Qualifications (NVQs)

NVQs are work based awards that are achieved through assessment and training.

Objectives and Indicators

Objectives are what the LDP is trying to achieve, and indicators are measures that show whether or not objectives are being achieved. They can be used to help show whether planning policy is effective, or be used in helping to conduct a Sustainability Appraisal.

Office of National Statistics (ONS)

The **ONS** is the executive office of the UK Statistics Authority, a nonministerial department which reports directly to the Parliament of the United Kingdom.

Open Space

All space of public value including public landscaped areas, playing fields, parks and play areas, and also including areas of water such as rivers, canals, lakes and reservoirs, which can offer opportunities for sport and recreation or can also act as a visual amenity and a haven for wildlife.

Participation Phase

Period prior to the pre-deposit Local Development Plan when stakeholders and the public will have the opportunity to influence the issues, options and policies for future growth and development to be included.

Phasing

The development of a site in gradual stages over a period of time rather than all at once.

Planning Gain

The benefits or safeguards, often for community benefit, secured by way of a planning obligation as part of a planning approval and usually provided at the developer's expense. For example, affordable housing, community facilities or mitigation measures.

Planning Obligations and Agreements

Legal agreements between a planning authority and a developer, or undertakings offered unilaterally by a developer, that ensure that certain extra works related to a development are undertaken. For example, the provision of highways. Sometimes called "Section 106" agreements.

Planning Policy Wales (PPW)

Issued by the Welsh Government setting out its national land use policies on different areas of planning.

Population Projection

The prediction of future populations based on the present age-sex structure, and with the present rates of fertility, mortality and migration.

Pre Deposit proposals documents

These include the vision, strategic options, preferred strategy, key policies, and the Sustainability Appraisal report

Pre deposit stage

The strategic Options and Preferred Strategy stage of LDP preparation.

Proposals Map

A component of the Local Development Plan showing the location of proposals on an Ordnance Survey base map.

Prosiect Gwyrdd

Prosiect Gwyrdd is a partnership between, Caerphilly Borough County Council, The County Council of the City and County of Cardiff, Monmouthshire County Council, Newport Council and Vale of Glamorgan Council. The combined municipal waste of the five authorities makes up 40% of the total municipal waste of Wales. Prosiect Gwyrdd is committed

to looking for the best environmental, cost effective and practical solution for waste after recycling and composting has been maximised in each area (<http://www.caerphilly.gov.uk/prosiectgwyrdd/english/home.html>).

Protected Species

Plants and animal species afforded protection under certain Acts and Regulations.

Ramsar Sites

Sites designated under the Ramsar Convention to protect wetlands that are of international importance, particularly as waterfowl habitats.

The Regional Technical Statement (RTS)

The RTS is produced by the South Wales Regional Aggregates Working Party and sets out a regional plan for aggregate provision in south Wales and is a requirement of the Minerals Aggregates Technical Advice Note (MTAN1).

Regional Transport Plan (RTP)

Regional Transport Plan prepared by Sewta

Representations

Comments in support of, or in opposition, to the deposit Local Development Plan.

United Kingdom Biodiversity Action Plan (UKBAP)

This is the governmental response to the Convention on Biological Diversity signed in 1992. As of 2009 1,150 species and 65 habitats are identified as needing conservation and greater protection and are covered by UK BAPs.

Unitary Development Plan (UDP)

A plan prepared under the previous plan making system which reached Deposit stage in Cardiff.

Scheduled Ancient Monument

Nationally important monuments usually archaeological remains, that enjoy greater protection against inappropriate development through the Ancient Monuments and Archaeological Areas Act 1979.

Scoping SA

The process of deciding the scope and level of detail of a Sustainability Appraisal, including sustainability effects and options which need to be considered, the assessment methods to be used, and the structure and contents of the SA Report.

Section 106 Agreement

A legal agreement under section 106 of the 1990 Town & Country Planning Act. Section 106 agreements are legal agreements between a planning authority and a developer, or undertakings offered unilaterally by a developer, that ensure that certain extra works related to a development are undertaken.

South Wales Regional Aggregates Working Party (RAWP)

The SWRAWP is a technical working group with membership drawn from officers of the 18 Mineral Planning Authorities in South Wales, representatives of the Quarry Products Association, British Aggregates Association, Environment Agency Wales, Countryside Council for Wales, Welsh Assembly Government, Office of the Deputy Prime Minister, Cuddy Demolition, Welsh Environment Trust and British Geological Survey (<http://www.swrawpwales.org.uk/>).

South East Wales Economic Forum (SEWEF)

The Forum is a regional partnership bringing together the ten local authorities, the Welsh Government, the private sector, universities and the third sector to discuss and address the regional economic matters of south east Wales (<http://www.sewales-econforum.co.uk/home>).

South East Wales Strategic Planning Group (SEWSPG)

Membership of the group comprises officer and political representation from the ten local authorities in the South East Wales area. The principal aim of the Group is to meet to discuss regional issues and provide an interface between the Wales Spatial Plan strategy and individual authority development plans.

South East Wales Transport Alliance (Sewta)

Sewta is a consortium established on 1st April 2003 by the ten authorities in south east Wales to carry out their functions in relation to public transport and some other transport matters. Sewta works in close liaison with partners representing public transport operators and users (<http://sewta.net/>).

Sites of Importance for Nature Conservation (SINC)

Locally important sites of nature conservation adopted by local authorities for planning purposes. (See also Local Nature Reserve).

Site of Special Scientific Interest (SSSI)

A site identified under the Wildlife and Countryside Act 1981 (as amended by the Countryside and Rights of Way Act 2000) as an area of special interest by reason of any of its flora, fauna, geological or physiographical features.

Soundness

To be considered sound, a Local Development Plan must be justified (founded on robust and credible evidence and be the most appropriate strategy) and effective (deliverable, flexible and able to be monitored). There are ten tests of soundness set out in guidance issued by the Welsh Government and the Planning Inspectorate against which the LDP will be assessed.

Special Area of Conservation (SAC)

A site designated under the European Community Habitats Directive, to protect internationally important natural habitats and species.

Special Protection Areas (SPA)

Sites classified under the European Community Directive on Wild Birds to protect internationally important bird species.

Stakeholders

Interests directly affected by the LDP (and/ or SEA) - involvement generally through representative bodies.

Strategic Environmental Assessment (SEA)

Generic term used to describe environmental assessment as applied to policies, plans and programmes. The SEA Regulations require a formal "environmental assessment of certain plans and programmes, including those in the field of planning and land use.

Strategic Opportunity Area (SOA)

Strategic Opportunity Areas (SOAs) offers potential regional benefits from its sustainable development. SOAs are intended to bring greater coherence to their development, and enable public transport links to be strengthened.

Submission

Formal stage when the LDP is submitted to the Welsh Government for independent examination by a government-appointed planning inspector.

Supplementary Planning Guidance (SPG)

Supplementary Planning Guidance may cover a range of issues, both thematic and site specific and provide further detail of policies and proposals in a development plan.

Sustainability Appraisal (SA)

A tool for appraising policies and proposals to ensure they reflect sustainability development objects (i.e. social, environmental and economic factors). Each LPA is required by S62(6) of the Act to undertake an SA of the LDP. This form of SA fully incorporates the requirements of the SEA Directive. The term used in the LDP includes Strategic Environmental Assessment, unless otherwise made clear.

Sustainable Development

Development that meets the needs of the present without compromising the ability of future generations to meet their own needs.

Sustainable Transport

Often meaning walking, cycling and public use of transport (and in some circumstances 'car sharing'), which is considered to be less damaging to the environment and contributes less to traffic congestion than one-person car journeys.

Technical Advice Notes (TANS)

Documents produced by the Welsh Assembly Government to supplement Planning Policy Wales, which give detailed technical guidance to Local Planning Authorities on particular planning issues. They should be taken into account by LPAs in the development plan preparation process.

Transport Corridor

An area of land in which at least one main line for transport, (road, rail, canal etc.) has been built. Often new transport lines are built alongside existing ones to minimise the area affected by pollution

Transport Hub

A place where passengers and cargo are exchanged between vehicles or between transport modes. Public Transport Hubs include train stations, rapid transit stations, bus stops, tram stop, airports and ferry slips

Travel Plan

A travel plan is a package of actions designed by a workplace, school or other organisation to encourage safe, healthy and sustainable travel options. By reducing car travel, Travel Plans can improve health and wellbeing, free up car parking space, and make a positive contribution to the community and the environment

Wales Spatial Plan (WSP)

A plan prepared and approved by the Welsh Government under S60 of the Act, which sets out a strategic framework to guide future development and policy interventions, whether or not these relate to formal land use planning control. Under S62 (5) (b) of the Act a local planning authority must have regard to the WSP in preparing an LDP.

Welsh Index of Multiple Deprivation (WIMD)

The official measure of deprivation in small areas in Wales. It is a relative measure of concentrations of deprivation at the small area level. It looks at issues such as income, housing, employment, access to services, health, environment, education and community safety.

Windfall Site

A site not specifically allocated for development in a development plan, but which unexpectedly becomes available for development during the lifetime of a plan. Most "windfalls" are referred to in a housing context.

Appendix 11: Tests of Soundness Self-Assessment

11.1 When the Council has finalised its LDP, it must place it on deposit for public inspection and the submission of representations, and then submit it to the Welsh Government for examination by an independent inspector. The inspector appointed by the Welsh Government (WG) must determine whether the plan is fundamentally sound having regard to ten tests of soundness set out in guidance issued by the Welsh Government and the Planning Inspectorate *A Guide to the Examination of Local Development Plans, Planning Inspectorate Wales, 2007*.

11.2 The following table sets out the ten tests of soundness and the Council's assessment of its progress to date in meeting each of them.

Procedural Tests		
P1	It has been prepared in accordance with the Delivery Agreement including the Community Involvement Scheme	<p>The Delivery Agreement (DA) contains a timetable for LDP production and the Community Involvement Scheme (CIS) that sets out how and when stakeholders and the community can contribute to preparing the LDP and its Sustainability Appraisal (SA). Cardiff's DA was originally approved by Council on 23rd September 2010 and agreed with the WG on 15th October 2010. The DA is kept under continual review. On 5th December 2011 WG agreed amendments to the timetable for preparing and adopting the plan. Consulting on the Deposit Plan in October 2013 fully accords with the adopted timetable. Additionally, it should be noted that the procedural requirements of the Town and Country Planning (Local Development Plan) (Wales) Regulations have been conformed with in preparing the plan.</p> <p>In accordance with the DA, the Council engaged with a wide range of groups, organisations and the wider public to assist developing a consensus on the generation of alternative strategies and options together with identifying key issues. Specific measures undertaken included:</p> <ul style="list-style-type: none"> • Invitation to submit Candidate Sites - December 2010: Invitations were sent out inviting developers, landowners and others with an interest in land to submit sites they wished to be considered for development or reuse through the LDP. In addition a notice was placed in the South Wales Echo and placed on the Council website;

		<ul style="list-style-type: none"> • Consultation on SA/SEA Scoping Report - November/December 2011; • Consultation on vision and objectives – November/December 2010: In order to inform the preparation of LDP vision and objectives an extensive consultation and engagement exercise was carried out. This included: <ul style="list-style-type: none"> ○ A Stakeholder Consultee Conference which was held on 25th November 2010; ○ 4 Public Consultee Conferences held at venues around the city; ○ Questionnaire contained in the November Capital Times; ○ Questionnaire available on-line via the Council’s website; ○ ‘Ask Cardiff’ random postal questionnaire to 5,000 households; ○ Citizens’ Panel questionnaire to 1,000 households; and ○ E-mail responses to website and other publicity. • Consultation on strategic options and sites – May/June 2011: In order to inform the preparation of the Preferred Strategy a consultation exercise on strategic options and sites was undertaken between 9th May and 10th June 2011. During this period members of the public and stakeholders were asked to give views on a series of strategic growth options for housing and employment and on candidate sites that had been put forward by developers and landowners to deliver this growth. The consultation included: <ul style="list-style-type: none"> ○ A Stakeholder Consultee Conference which was held on 16th May 2011; ○ 13 Public Consultee Conferences held at venues around the city; ○ Publicity in Capital Times;
--	--	---

		<ul style="list-style-type: none"> ○ Representation form available on-line via the Council's website; ○ Citizens' Panel questionnaire to 1,000 households; and ○ E-mail responses to website and other publicity. <p>Consultation on the Preferred Strategy – November/December 2012. In accordance with Regulation 15 of the Local Development Plan Regulations the Council undertook 6 weeks consultation on the Preferred Strategy and the Initial Sustainability Appraisal between 1st November and 14th December 2012. During this period members of the public and stakeholders were asked to give views on how the Preferred Strategy proposed to address the key environmental, economic and social issues affecting the city and how development needs will be met including the proposed broad locations of new housing, employment and other strategic requirements.</p> <ul style="list-style-type: none"> • A Stakeholder Consultee Conference which was held on 2nd November 2012; • 4 Public Consultee Conferences held at venues around the city; • 14 drop-in exhibitions at venues throughout the city; • Publicity in Capital Times; • Representation form available on-line via the Council's website; • Citizens' Panel questionnaire to 1,000 households; and • E-mail responses to website and other publicity. • Consultation on Masterplanning principles – March 2013. A series of consultation events were held during March 2013 to seek feedback from stakeholders, developers and members of the public on the LDP Masterplanning Approach. • Engagement with key stakeholders through the preparation of various local and regional strategies –ongoing; • Deposit Plan consultation arrangements: When the Deposit Plan is issued, extensive consultation arrangements have been put
--	--	--

		<p>in place including the facility for on-line representations using the Objective Publishing system, public exhibitions, centre-page insert into, 'The Capital Times' that is delivered to every house in Cardiff, production of a user-friendly leaflet that provides a non-technical summary of the LDP and how to make representations, and relevant documents will be made available via the website.</p>
P2	<p>The Plan and its policies have been subjected to Sustainability Appraisal including Strategic Environmental Assessment</p>	<p>Following stakeholder engagement and consultation, a Scoping Report for Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA) of the Cardiff LDP was adopted by the Council's Executive and published in January 2011. An Initial Sustainability Appraisal Report was prepared in October 2012 to accompany the Preferred Strategy Consultation and assessed the Preferred Strategy against the Sustainability Objectives identified in the SA/SEA Scoping Report.</p> <p>A Full Sustainability Appraisal Report has been prepared and published for consultation as part of the Council's Deposit proposals. It sets out an assessment of the Deposit Plan against the Sustainability Objectives identified in the SA/SEA Scoping Report.</p> <p>The SA/SEA work has been undertaken in-house using its Sustainable Development Unit and employed Levett-Therivel Sustainability Consultants to quality assure the work undertaken (process and content), and provide advice at key stages including how to comply with the strategic Environmental Assessment Regulations.</p>

Consistency Tests		
C1	<p>It is a land use plan which has regard to other relevant plans,</p>	<p>The Deposit Plan has regard to other relevant plans, policies and strategies. Section 2 of the Plan specifically identifies the national, regional</p>

	<p>policies and strategies relating to the area or adjoining areas</p>	<p>and local policy framework within which it has been prepared.</p> <p>The Deposit Plan also has regard to the plans of adjoining authorities, namely the adopted Newport and Vale of Glamorgan Unitary Development Plan and adopted Caerphilly and Rhondda Cynon Taff Local Development Plan.</p> <p>Technical Appendix 1 of the SA/SEA Scoping Report includes a review of plans, policies and programmes from all levels of government (European, national, regional and local) that have been considered in undertaking SA/SEA of the Preferred Strategy. The Deposit Plan Strategy identifies and takes account of those aspects that are of significance.</p> <p>The Deposit Plan has regard to national policy set out in the Wales Spatial Plan which places Cardiff at the centre of the South East - 'Capital Network' - area of Wales. In this regard the plan recognises that it is important for Wales as a whole that Cardiff becomes significant internationally and that, to achieve this, the City needs to be the focal point of a coherent and successful urban network in South East Wales. In order to ensure the region functions in this way the Plan recognises that it is important to provide an integrated transport solution for the region linked to an appropriate balance of development throughout the region.</p>
C2	<p>It has regard to national policy</p>	<p>The Deposit Plan is consistent with national planning policy. Section 2 of the Preferred Strategy identifies the main elements of national policy which the Council has had regard to in its preparation.</p> <p>Technical Appendix 1 of the SA/ SEA Scoping Report includes a review of all national plans, policies and programmes that have been considered in undertaking SA/SEA of the Plan.</p> <p>The Deposit Plan takes account of those aspects of national policy that are of significance.</p>

C3	It has regard to the Wales Spatial Plan	<p>The Deposit Plan is considered to be consistent with the Wales Spatial Plan. Section 2 of the LDP directly references People Places Futures: The Wales Spatial Plan.</p> <p>The Deposit Plan reflects the Spatial Plan's vision, strategy, propositions and actions for Cardiff and the South East Wales Area (The Capital Network).</p> <p>The level of growth in jobs and housing proposed in the plan together with transportation improvements will help deliver the Spatial Plan's vision to place Cardiff at the centre of the South East - 'Capital Network' - area of Wales, helping to spread prosperity within the area and benefiting other parts of Wales.</p>
C4	It has regard to the Community Strategy	<p>The Deposit Plan has full regard to the Council's Community Strategy. Section 3 (Vision and Objectives) of the Plan directly references the 'What Matters' Strategy 2010-2020', and Section 3 and the Plan builds upon it. In particular, the Preferred Strategy vision is based on the economic, social and environmental vision for Cardiff as set in the Strategy. These high level visions have been translated into spatial priorities to deliver the vision and provide the context for the strategic objectives and sub objectives that lie at the heart of the plan. The Deposit Plan sets out the means of delivering these objectives.</p>

Coherence and Effectiveness Tests		
CE1	The plan sets out a coherent strategy from which its policies and allocations clearly flow and, where cross boundary issues are relevant, it is compatible with the development plans prepared by	<p>Section 4 of the Deposit Plan sets out a coherent Strategy which flows from the key issues identified through the review of the national, regional and local policy framework, including the Wales Spatial Plan and the Community Strategy, and the evidence base.</p> <p>The strategy takes into account work undertaken at the regional level with neighbouring local authorities on spatial plan area groups and studies. This includes, the recommendations of</p>

	<p>neighbouring authorities</p>	<p>the Collaborative working Group, the Regional Waste Plan and Regional Transport Plan. This process ensures that cross boundary issues for the Deposit Plan Strategy are consistent with the development plans prepared by neighbouring authorities.</p> <p>In particular, the overall Strategy and level of growth proposed is considered to strike the right balance having regard to the evidence base and also taking account of Cardiff's wider regional responsibilities in adopting an approach that still allows other authorities to fulfil their objectives, and those set out in the Wales Spatial Plan.</p>
CE2	<p>The strategy, policies and allocations are realistic and appropriate having considered the relevant alternatives and are founded on a robust and credible evidence base</p>	<p>The Deposit Plan is considered realistic and appropriate having considered all reasonable alternatives (in accordance with the SEA Regulations). A multitude of options and alternatives have been considered as part of the SA/SEA process.</p> <p>The Deposit Plan is founded on a robust and credible evidence base and draws upon the available evidence base, including the national regional and local policy context. The key Issues section of the Deposit Plan sets out the assumptions and background to which the Plan's policies and proposals are based. The Deposit Plan is supported by evidence from the evidence base and background technical papers</p> <p>Technical Appendix 2 of the SA/SEA Scoping Report also includes a review of the evidence base that has been considered in undertaking the SA/SEA of the Deposit Plan.</p> <p>The preparation process has also been participative, with the views of key stakeholders being tested through a series of consultation events and the Council's Citizens Panel.</p> <p>The extensive process of collecting relevant evidence has demonstrated that it is not always possible to reach absolute consensus on all issues and in some cases, different evidence sources may point to different conclusions. However, the Deposit Plan has taken full account of all relevant information available and where judgements have made been made, full</p>

		reasoning is set out within the document and supporting information to demonstrate how conclusions are realistic and appropriate having regard to the evidence base.
CE3	There are clear mechanisms for implementation and monitoring	The Annual Monitoring Report is the principle mechanism through which the implementation of policies in the LDP are measured. The general approach to this is set out in Appendix 8 to the Deposit Plan.
CE4	It is reasonably flexible to enable it to deal with changing circumstances	<p>The Deposit Plan has been specifically designed to provide a flexible policy framework. It is considered sufficiently flexible to deal with unexpected changes in circumstances and has been prepared during a period that has seen economic changes, thereby allowing consideration of the flexibility of the policy response.</p> <p>Finally, the AMR provides a key mechanism to monitor the delivery of the LDP. This will be used to assess whether a review is necessary in case of a change in circumstances.</p>

Appendices (in separate files)

- A. Policy review
- B. Baseline
- C. Consultees' responses on Scoping Report
- D. Appraisal of LDP vision and objectives
- E. Appraisal of LDP strategic options
- F. Criteria used in candidate site appraisals
- G. Appraisal of LDP key and detailed policies
- H. Consultees' responses to Initial Sustainability Appraisal Report
- I. Sustainability Appraisal response to Matters Arising Changes

1. Introduction and Key Outcomes

Introduction

- 1.1 This Sustainability Appraisal (SA) Report forms part of the Council's documents for the Cardiff Local Development Plan (LDP) revised to reflect the May 2015, October 2015 and January 2016 Matters Arising Changes following the public Examination. The purpose of sustainability appraisal is to identify the LDP's likely significant economic, environmental and social effects, and to suggest measures to minimise any negative effects and maximise the positive ones. Sustainability appraisal helps to foster a more inclusive and transparent process of producing a LDP, and helps to ensure that the LDP is integrated with other policies.
- 1.2 Section 121 of the Government of Wales Act 1998 and section 79 of the Government of Wales Act 2006 place a duty on the National Assembly to promote sustainable development. Section 39 of the Planning and Compulsory Purchase Act¹ requires that the body producing a LDP (in this case Cardiff Council) must contribute to achieving sustainable development. In October 2006 Cardiff Council adopted its Sustainable Development Policy Statement which states that, "sustainable development is a guiding principle for all of the Council's activities ... [including] strategy and policy development".
- 1.3 This report:
- Summarises and updates key aspects of the previously published Scoping Report;
 - Assesses the vision, objectives, strategic options, candidate sites and key policies for the Cardiff LDP (with reference to the detailed policies when necessary), and the cumulative effects of the LDP;
 - Where the LDP would have significant negative impacts, identifies possible methods to mitigate adverse impacts;
 - Proposes a process of monitoring the LDP's actual impacts; and
 - Provides appendices providing more detailed information on various aspects of this report.

How this sustainability appraisal was undertaken including difficulties faced

- 1.4 The Council has undertaken its own sustainability appraisal (integrating Strategic Environmental Assessment) of its LDP and has retained Levett – Therivel Sustainability Consultants to ensure quality, and to provide technical assistance at key stages of the process. Much of the SA was carried out by the sustainability appraisal team – the Council's sustainability officers and the consultants – with the results being passed to, and responded to, by the Council's planning team. Several appraisal workshops were attended by

¹ www.legislation.gov.uk/ukpga/2004/5/contents

officers from other Council departments. The last stages, updating between the October 2012 Preferred Strategy and the August 2013 Deposit LDP, and then to take account of the May 2015, October 2015 and January 2016 Matters Arising Changes following the public Examination, were largely carried out as a desk study by the consultants, with input from the Council's officers.

- 1.5 Some difficulties were faced in carrying out the SA. First, the LDP has gone through several versions, and many policies are based on ones in the 2009 version which was subsequently withdrawn: care had to be taken to ensure that each round of appraisal was consistent with earlier ones while reflecting changes in context including information on employment, the housing market, and flood risk as well as changes to the plan itself. Changes in order and numbering, drafting 'churn', repetition and wordiness, have added to the difficulty keeping track of material and ensuring consistency. (For clarity, this report uses the latest policy names and numbers even when referring to earlier versions which used different ones. Paragraph 8.1 should resolve any uncertainties about references.)
- 1.6 Second, the back-and-forth nature of the appraisal, with SA comments being actively considered and acted upon by the planning officers (a very good thing which has helped to ensure that the SA findings really have informed the LDP), also made it difficult to ensure consistency.
- 1.7 These two factors together mean that the process of evolution of plan policies, and of appraisal of them, has often been complex and convoluted. As the process has gone on, increasing care has been needed to show the 'audit trail' leading to the current position without confusing and cluttering the assessment of it. The current round of documents give priority to presenting the clearest possible assessment of the LDP as it now stands at the end of the process. To this end, detailed accounts of earlier rounds of comments, suggestions and changes that are now superseded have been minimised in the main report. They are of course all still available in the public domain, either as appendices or in earlier appraisal documents.
- 1.8 Third, the appraisal criteria for individual candidate sites agreed between the SA and the planning teams took into account measures that developers might take to reduce any identified negative impacts. This approach is not consistent with the remainder of the SA appraisal process, which does not assume any mitigation measures, and accounts for discrepancies between the site pro formas (which include mitigation measures) and the SA appraisals (which do not).
- 1.9 Finally, in many cases assumptions had to be made about the type of development that would take place in response to the LDP (for instance the ratio of housing v. employment development) and the type and efficacy of measures to reduce negative impacts. Inevitably uncertainty will remain until detailed planning proposals are put forward by developers.

Significant effects of the LDP

- 1.10 Overall the LDP would have significant benefits in providing the housing and employment land that Cardiff's current and future residents will need. It will help to improve access to good quality jobs, services and infrastructure for Cardiff's residents, although it is unlikely to fully redress the imbalance between the 'southern arc' of deprivation and other areas of the city. Better housing, access to open space, and walking and cycling facilities should make residents' health and wellbeing better than it would be without the LDP. The new development may draw in people who currently live or work in the Valleys, and so have indirect impacts on neighbouring authorities.
- 1.11 The sheer volume of development which the LDP has to provide for will inevitably result in increased total air pollution, greenhouse gas emissions, use of natural resources and waste because of increased traffic, houses and employment. The LDP includes many enlightened policies to reduce these impacts. If these are fully, thoroughly and promptly implemented they could substantially reduce per capita impacts. Changes following the public Examination included welcome strengthenings of some of these. However many are still framed in terms of 'encouraging', 'supporting' or 'investigating' rather than 'requiring' specific actions, so their effectiveness is uncertain.
- 1.12 The LDP provides for development of several major Greenfield sites amounting to about 902 hectares. The largest of these are located far from Cardiff city centre, so will increase transport impacts unless sustainable transport provision is made before occupants move in; and several would affect areas that are designated for their landscape or biodiversity importance. Even with the mitigation measures contained in the policies biodiversity and landscape quality are likely to decrease significantly. Any significant development of strategic Site H (South of St Mellons Business Park) is particularly problematic.

Changes made to the LDP in response to the Sustainability Appraisal

- 1.13 The planning team have been open and responsive to the SA process, and the SA has resulted in many changes to the LDP which have helped to improve its sustainability:
- Rewording of several LDP sub-objectives and one headline objective, including division of one sub-objective into three sub-objectives to more adequately cover waste issues; and greater emphasis on healthy food choices (see Table 5.2);
 - Stronger and more systematic consideration of sustainability issues in the process of sifting and choosing between potential candidate development sites by the planning team;
 - Removal of a key policy that duplicated another one;

- Greater emphasis to reducing the need to travel by car, making facilities accessible by walking and cycling, ensuring good public transport before remote greenfield sites are occupied, and resilience to climate change (Table 8.2);
- Reference to industrial and domestic sources of air pollution as well as transport pollution, and promotion of remediation of contaminated land (Table 8.3).

1.14 Matters Arising Changes have now made some further improvements which the SA had recommended, notably tightening of the requirements for sustainable transport infrastructure, for delivery of the 50-50 modal split target and for consideration of renewable energy in major developments, and removal of repetition. However they have also weakened the long term environmental protection by replacing the proposed Green Belt with a Green Wedge.

2. Appraisal Methodology

Legislative Requirements

- 2.1 Section 62(6) of the Planning and Compulsory Purchase Act 2004 requires the Council to appraise the sustainability of the LDP and prepare a report of the findings as an integral part of the process of plan preparation. The Welsh Government Local Development Plan Manual² defines sustainability appraisal as a: “tool for appraising policies to ensure they reflect sustainable development objectives (i.e. social, environmental and economic factors)”. Sustainability appraisal helps to demonstrate that the LDP is sound by ensuring that it reflects sustainable development objectives, and contributes to the reasoned justification of policies.
- 2.2 Welsh Government guidance indicates that sustainability appraisal must include the requirements of the Strategic Environmental Assessment (SEA) Regulations³. The SEA Regulations transpose into Welsh law the requirements of the European Union Directive 2001/42/EC (the SEA Directive) which requires formal environmental assessment during production of certain plans and programmes (including LDPs) which are likely to have significant effects on the environment. In preparing its LDP, the Council must comply with the SEA Regulations.

Stages of Appraisal

- 2.3 This SA report updates and builds on a Scoping Report⁴ which the Council produced in October 2010. The Scoping Report reviewed the policy context for the LDP and described the economic, social and environmental issues affecting Cardiff. It also proposed a Sustainability Appraisal Framework of Objectives which is used in this report to assess the impacts of the LDP policies. Figure 2.1 shows the stages of the Scoping Report.
- 2.4 This report then considers the impacts of the LDP vision and objectives, strategic options, candidate sites, and key and detailed policies. Figure 2.2 shows the steps followed for this report. Steps B3 – B5 were carried out iteratively responding to, and helping inform, successive versions of the Plan. This report is substantially based on the one published in October 2012 with the LDP Preferred Strategy.
- 2.5 Table 2.1 shows how this report and the Scoping Report together meet the requirements of the SEA Regulations. The legal requirements for Sustainability Appraisal and Strategic Environmental Assessment of the Cardiff LDP are fulfilled by the Scoping Report and this report, which have been prepared in

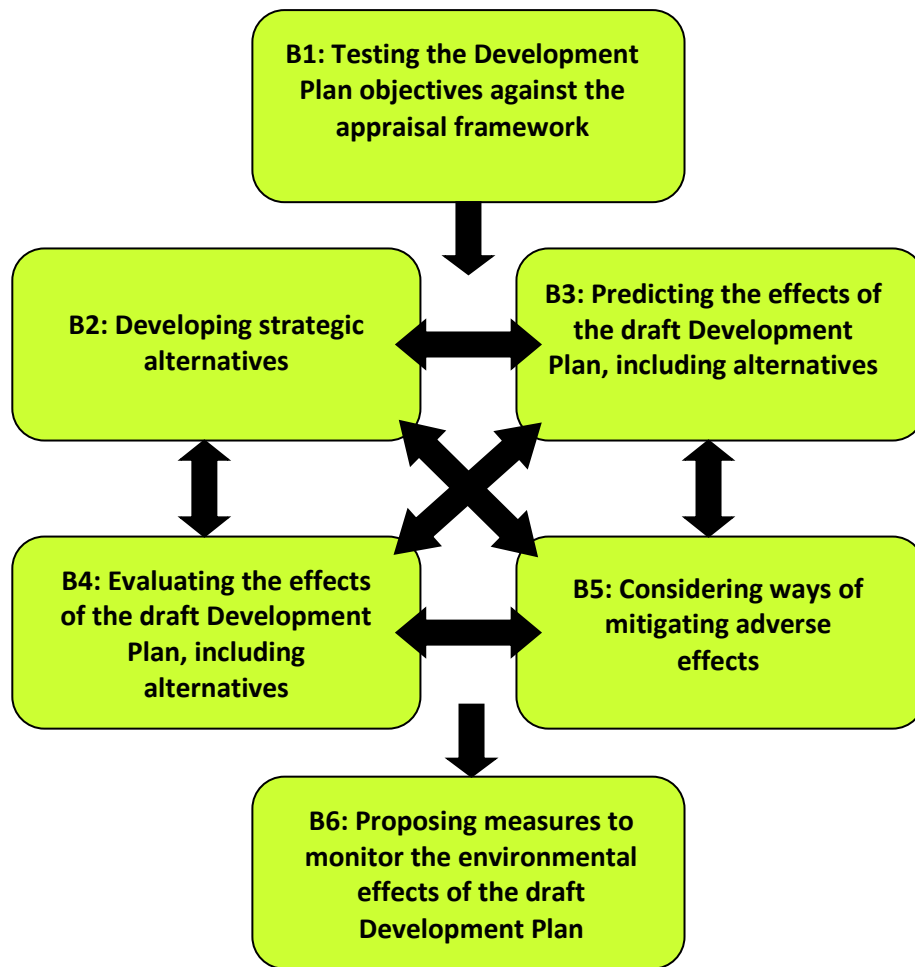

Figure 2.2 Appraisal and mitigation stages

Table 2.1 ENVIRONMENTAL REPORT REQUIREMENTS

Stages of Environmental Report	Where covered
1. An outline of the contents and main objectives of the plan or programme, and of its relationship with other relevant plans and programmes.	Chapter 3
2. The relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan or programme.	Chapter 4, Appendix B
3. The environmental characteristics of areas likely to be significantly affected.	Chapter 4, Appendix B
4. Any existing environmental problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Council Directive 79/409/EEC on the conservation of wild birds and the Habitats Directive.	Chapter 4, Appendix B
5. The environmental protection objectives, established at international, Community or Member State level, which are relevant to the plan or programme and the way those objectives and any environmental considerations have been taken into account during its preparation.	Chapter 4, Appendix A
6. The likely significant effects on the environment, including short, medium and long-term effects, permanent and temporary effects, positive and negative effects, and secondary, cumulative and synergistic effects, on issues including (a) biodiversity; (b) population; (c) human health; (d) fauna; (e) flora; (f) soil; (g) water; (h) air; (i) climatic factors; (j) material assets; (k) cultural heritage, including architectural and archaeological heritage; (l) landscape; and (m) the inter-relationship between the issues referred to in sub-paragraphs (a) to (l).	Chapter 5 (LDP vision and objectives) Chapter 6 (LDP options) Chapter 7 (candidate sites) Chapter 8 (key and detailed policies) Chapter 9 (overall impacts of the LDP)
7. The measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme.	
8. An outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken including any difficulties encountered in compiling the required information.	Chapter 6 (LDP options) Chapter 7 (candidate sites) The site pro formas give more detailed information on the impacts of each candidate site. The LDP gives more details on the reasons for the choice of preferred options.
9. A description of the measures envisaged concerning monitoring in accordance with regulation 17.	Chapter 10
10. A non-technical summary of the information provided under paragraphs 1 to 9.	Separate non-technical summary

3. The Local Development Plan

3.1 The LDP sets out:

- the key trends and issues that have informed the Plan, which were identified through preparation of the SA/SEA Scoping Report and a review of social, economic and environmental information;
- the national, regional and local policy context;
- the Council’s vision for future development of Cardiff with seven desired strategic outcomes, and its objectives for delivering sustainable development and addressing the key trends and issues identified;
- the strategic growth options that the Council has considered in determining its Preferred Strategy;
- the strategic sites and alternatives that the Council has considered;
- the overall Strategy to deliver the Plan vision and objectives; and
- key and detailed policies for implementing the Strategy.

LDP vision and outcomes

3.2 The 10 year Integrated Partnership Strategy, *Cardiff: What Matters (2010 – 2020)*, combines the Community Strategy (which provided the vision for the previous withdrawn LDP), Children & Young People’s Plan; Health Social Care & Wellbeing Strategy and the Community Safety Strategic Assessment programmes into one consolidated document. This Strategy provides an overarching strategic framework and the Vision for the LDP.

3.3 That vision is “By 2020... Cardiff will be a world class European capital city with an exceptional quality of life and at the heart of a thriving region”. The Vision will be realised through seven outcomes, shown at Figure 3.1.

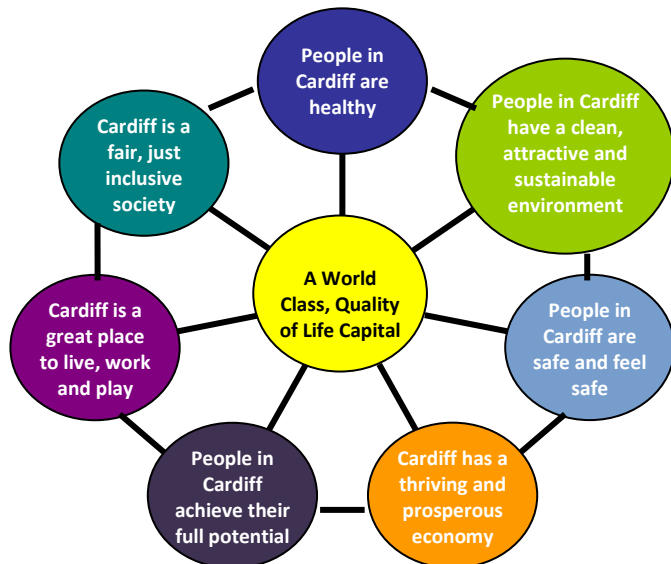

Figure 3.1 LDP vision and outcomes

LDP objectives

3.4 The LDP's objectives are:

1. To respond to evidenced economic needs and provide the necessary infrastructure to deliver development

- a. To effectively respond to Cardiff's role as capital city for Wales, seat of the National Government and centre of the city-region in terms of providing a range and choice of economic opportunities that will drive the prosperity of the region
- b. To maximise the economic potential of the city centre of Cardiff as a major financial and service sector opportunity that builds upon its position next to a transport hub of national and regional significance and is readily accessible from all areas within the city and well connected to other UK cities
- c. To maintain and enhance the vitality, attractiveness and viability of the city centre as a major retail and cultural destination and as a place to work, visit and live
- d. To continue the successful regeneration of the Cardiff Bay area, maximising opportunities for quality commercial buildings and further development, particularly water and river frontage developments that can provide attractive and distinctive environments
- e. To promote clusters of specialist sectors and research & development expertise including the following key sectors: ICT, energy and environment, advanced materials and manufacturing, creative industries, life sciences, financial and professional services
- f. To ensure a range and choice of employment land and business premises at sustainable locations across the city is provided to assist economic competitiveness, encourage entrepreneurship, promote the growth of indigenous businesses of all types and size and attract inward investment
- g. To assist the promotion of Cardiff as a major tourist destination including the provision of the development of a variety of high quality tourist facilities and visitor accommodation
- h. To create a physical and economic environment that develops, attracts and retains skilled workers, businesses and entrepreneurs to Cardiff together with maximising links with Universities and supporting indigenous skills and enterprises
- i. To quantify critical strategic infrastructure required to realise development aspirations and set out clear mechanisms for delivery including sustainable transport solutions for strategic sites
- j. To establish Cardiff as a sustainable travel city by reducing the need to travel, increasing the use of sustainable travel modes and networks (particularly walking and cycling), decreasing private car use and improving the city's key transport hub based at the adjacent central bus and train stations
- k. To protect existing mineral resources and ensure an adequate supply of limestone aggregates in the north west of the city for the construction industry and to promote their efficient and appropriate usage, including the use of recycled aggregates where possible
- l. To support sustainable collection and recycling methods for Municipal Waste by maintaining and improving an integrated network of facilities in Cardiff
- m. To lead and participate in securing regional facilities for the sustainable treatment and disposal of Municipal Waste in accordance with the Regional Waste Plan and in a manner that follows the waste hierarchy which seeks to maximise the reduction of waste in the first place and thereafter reusing, recovering and recycling options before the disposal of waste material is considered
- n. To facilitate an integrated network of commercial and industrial sustainable waste management facilities consistent with the needs of the south east Wales area and in a

manner that follows the waste hierarchy which seeks to maximise the reduction of waste in the first place and thereafter reusing, recovering and recycling options before the disposal of waste material is considered

2. To respond to evidenced social needs

- a. To provide new homes required to support the economic progression of the city and to respond to population change, continued in-migration and evidenced demand for affordable and family housing so that social needs can be addressed
- b. To provide a range and choice of new homes of different tenure, type and location that meets specific needs such as the provision of affordable housing, family accommodation, housing for the elderly, the disabled and students and pitches for the gypsy and traveller community
- c. To maximise the use of the existing building stock through refurbishment, retro-fitting and empty homes initiatives
- d. To bring about changes to Cardiff's environment and neighbourhoods that help to tackle health inequalities, promote good health and enable healthier lifestyles to be led by the city's population in line with Cardiff's status as a World Health Organisation, 'Healthy City'
- e. To bring about changes to Cardiff's environment that create a safer city and reduce the likelihood, fear and consequences of crime
- f. To create an environment that is made more accessible to all groups in society so that the employment opportunities, facilities and services of the city can be more readily used and enjoyed by all
- g. To maximise the multi-functional role played by Cardiff's parks, open spaces and allotments together with improving their accessibility for the whole community
- h. To recognise, support and enhance the key role played by existing District, Local and Neighbourhood Centres as accessible local hubs providing community services, local shops, healthy food choices, businesses, employment and access to public transport
- i. To support the regeneration of local neighbourhoods including reducing inequalities, particularly areas experiencing high levels of deprivation, areas vulnerable to decline and areas with opportunities for change
- j. To ensure that the necessary education and training facilities are provided and are accessible to all: to build strong futures for children, provide a diverse range of learning opportunities for all and assist economic progress through the development of required skills
- k. To develop new cultural, leisure and sporting facilities to meet needs and enhance Cardiff's role as a premier cultural and sporting destination
- l. To ensure that the necessary community and cultural facilities (community centres, shops with healthy food choices, youth facilities, child care, faith buildings, health centres etc) are provided that are accessible to all, especially in areas that are deprived
- m. To address rising unemployment and provide accessible local job opportunities, particularly in areas of greatest need
- n. To promote social inclusion equality of opportunity and access for all

3. To deliver economic and social needs in a co-ordinated way that respects Cardiff's environment and responds to the challenges of climate change

- a. To mitigate the effects of climate change through reducing energy demand and increasing the supply of renewable energy
- b. To ensure that Cardiff adapts to the full anticipated impacts of climate change and that new development and infrastructure is designed to be resilient to possible consequences

- c. To protect, manage and enhance Cardiff's natural environmental assets, including:
 - The parks, open spaces and allotments in the city that are highly valued by local communities and an important component of Cardiff's quality of life;
 - The strategically important river valleys of the Ely, Taff, Nant Fawr and Rhymney that link the city to the countryside and provide a valuable recreational, biodiversity and amenity resource;
 - Cardiff's countryside, particularly its areas of high landscape value and the coast that provide an important setting to the urban area, provide an agricultural resource and opportunity for recreation;
 - The city's biodiversity, its internationally, nationally and locally designated sites, wildlife habitats and features that contain important species and networks that link together areas of value;
 - Natural resources including geodiversity, the best soils, water and air quality including the reduction of pollution; and
 - The role that vegetation plays in combating climate change by providing shading, cooling and carbon sinks
- d. To conserve and enhance Cardiff's built and historic assets that define distinctive character and reflect its past development including:
 - The city's 27 Conservation Areas;
 - Its Listed Buildings and Ancient Monuments;
 - Registered Historic Landscapes and areas of archaeological importance; and
 - Other valued public places and spaces, including parks and amenity spaces, that provide local distinctiveness
- e. In identifying new sites to meet economic/social needs, to follow a sequence of firstly maximising the contribution of brownfield sites, then identifying greenfield sites that are considered to represent the most appropriate and sustainable locations to accommodate new development
- f. To have full regard to flood risk when considering the acceptability of development proposals and considering mitigation and adaptation measures
- g. To maximise opportunities to create a cleaner and more attractive environment that enhances the quality of life and helps Cardiff to become a world-class European capital city

4. To create sustainable neighbourhoods that form part of a sustainable city

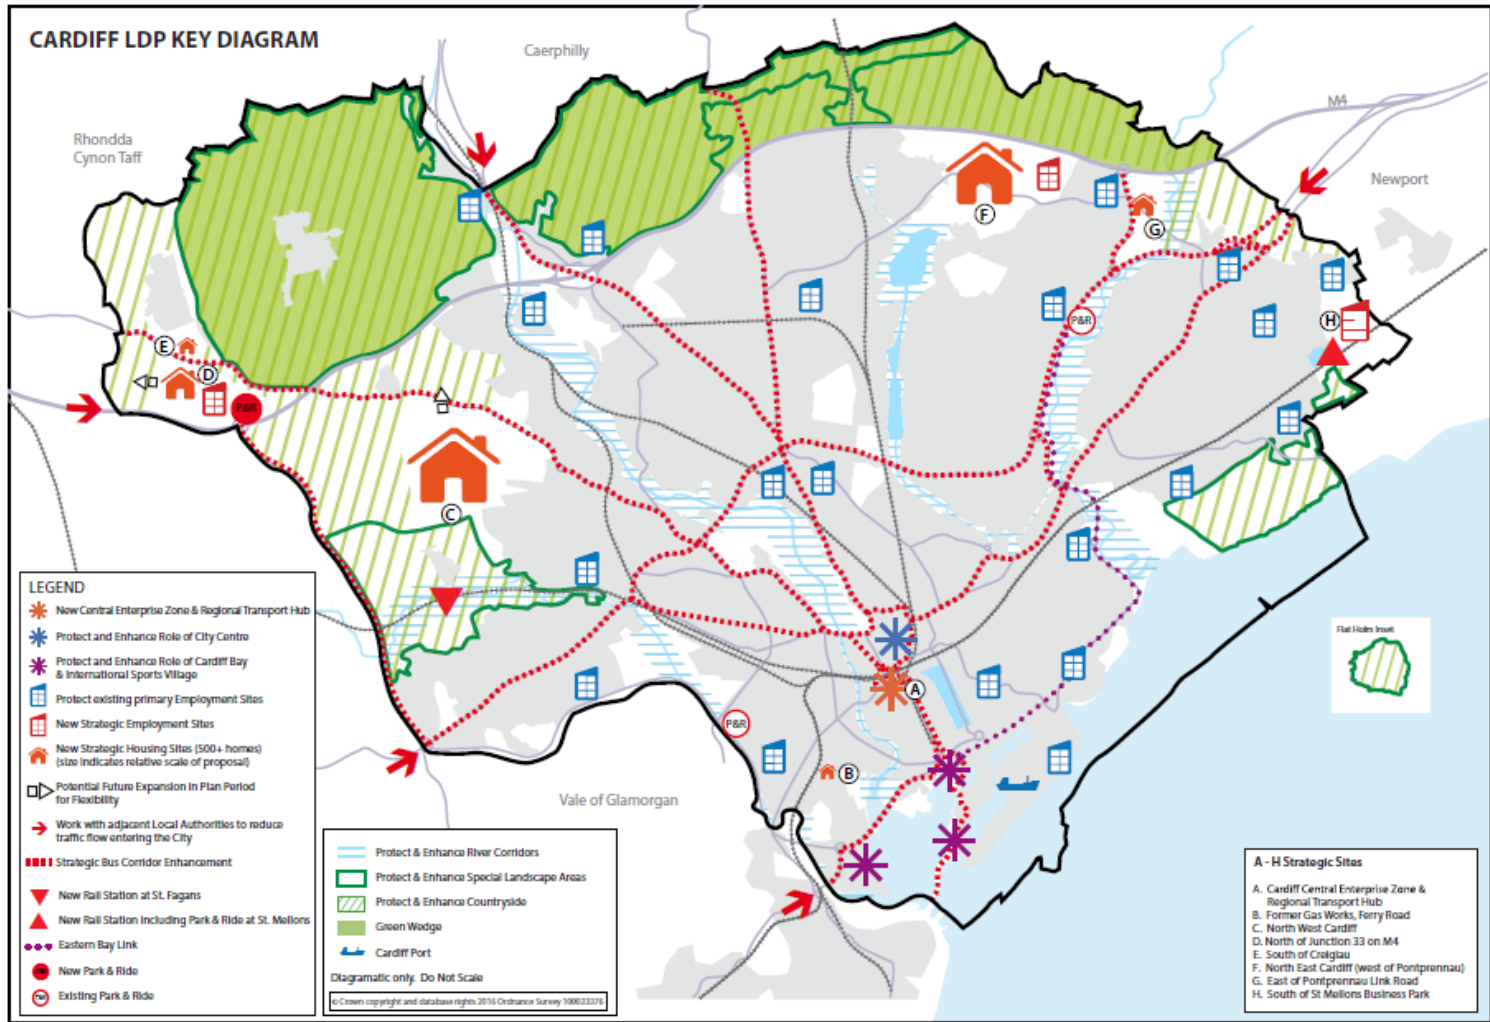

- a. To ensure that all new development areas (whether greenfield or brownfield) create sustainable neighbourhoods that follow the following principles:
 1. Minimise energy demand and maximise renewable solutions- to deliver more energy-efficient neighbourhoods that utilise existing best practice and embrace new renewable technologies and concepts;
 2. Minimise car travel, maximise sustainable transport use and decrease air pollution by creating accessible, permeable and legible places, preventing predominantly car-based developments and focusing new development in accessible locations which are linked to the strategic cycle network and can be served mainly by effective networks of sustainable transport- walking and cycling and fast and frequent public transport around and beyond the city;
 3. Maximise recycling- to optimise the overall value of waste as a resource, to effectively plan for how new developments can sort and store waste for collection for onward productive use and minimise material needing treatment and final landfill;

4. Minimise water usage and maximise sustainable drainage- to carefully manage the consumption and drainage of water to avoid unnecessary wastage and minimise rapid run-off. To seek opportunities to maximise the positive amenity and biodiversity benefits that sustainable drainage solutions can offer;
 5. Maximise the early provision of a full range of social facilities and community infrastructure- to provide the full range of necessary facilities that are accessible to all members of society and can be reached within a 15 minute walk. To include the range of social, health, leisure, education necessary for the scale of development proposed and also taking into account other needs within the wider locality;
 6. Maximise the additional benefits that new communities can bring to adjoining or surrounding existing communities and minimise any potential negative impacts- to carefully identify positive contributions that can be made and involve local communities in this process;
 7. Maximise the diversity of land uses within new development areas- to create more balanced communities offering non-car based options to fully participate in community life. To ensure a range and choice of housing tenures together with local employment opportunities and the full range of community infrastructure;
 8. Maximise the contribution of networks of multi-functional and connected open spaces to strategically design networks of open space that are rich in biodiversity and provide safe routes between key locations to encourage healthier lifestyles through promoting walking and cycling. To further encourage healthy lifestyles by providing allotments together with the wider promotion of healthy eating;
 9. Maximise the principles of good design- to create places that look good, are of an appropriate and efficient density, fully respect their local context and are successfully integrated with adjoining areas. To design buildings that are resilient and can easily adapt to changing future needs. To design clean and attractive areas where people feel safe and have a sense of ownership; and
 10. Maximise community involvement in the planning, design and future management/maintenance of new neighbourhoods. To use the master planning process to establish robust design principles but to also recognise the need to allow some flexibility and managed capacity for change, particularly in larger development areas.
- b. To take opportunities to apply the above principles to existing neighbourhoods in order to create a more sustainable city

LDP key diagram

- 3.5 The LDP key diagram is at Figure 3.2. The LDP is also supported by a range of technical papers, of which this Sustainability Appraisal is one.

Figure 3.2 LDP key diagram

4. Sustainability Context, Baseline and Objectives

4.1 This section summaries and updates the main findings of the Scoping Report (see Figure 2.1), and says how the LDP has taken these findings into account.

Identifying other plans, programmes and strategies (Task A1)

“an outline of the contents, main objectives of the plan and *relationship with other relevant plans and programmes*”
(SEA Directive Annex I(a))

“*the environmental protection objectives, established at international, Community or Member State level, which are relevant to the plan and the way those objectives and any environmental considerations have been taken into account during its preparation*”
(SEA Directive Annex I(e))

4.2 The Scoping Report's analysis of policies, plans, programmes and strategies relevant to the LDP included:

- an explanation of the methodology used;
- a list of the documents reviewed; and
- how the LDP accords with the guidance and regulations.

4.3 Since the Scoping Report was published in 2010, the following significant policy changes have occurred:

- **Planning Policy Wales** (Edition 5, November 2012) consolidates previous changes and gives strong and detailed emphasis to climate change (both reduction and adaptation);
- **Technical Advice Note 22: Sustainable Buildings** (Welsh Assembly Government 2010) provides guidance and advice on sustainable buildings, standards of assessment and design solutions, including for low carbon buildings;
- **One Wales: One Planet** (2011), Welsh Government Discussion Paper, signals the government's intention to legislate to give more impetus and leverage to accelerate progress toward sustainable development;
- **Consultation on a Sustainable Development Bill** (consultation on a White Paper with implementation proposals closed in March 2013) would make sustainable development the central organising principle of the Welsh Government and most public bodies in Wales;
- **National Strategy for Flood and Coastal Erosion Risk Management in Wales** (Welsh Government November 2011) sets out the framework for “Risk Management Authorities” to allow them to deliver their flood and coastal risk management functions;
- **Energy Wales: A Low Carbon Transition** (Welsh Government 2012) states the Welsh Government’s commitment to ‘create a sustainable, low carbon economy for Wales’ featuring low carbon energy and energy efficiency;
- **City Regions Final Report** (Welsh Government, May 2012) recommends recognising a South East Wales (ie Cardiff centred) city region, with an over-arching city region strategic planning tier;

- **Cardiff: What Matters 2010:2020** combines four previous strategies into one with clear quality of life and environmental outcome goals;
- **Cardiff Municipal Waste Management Strategy 2011 – 16** describes how waste will be collected and processed to meet ambitious targets for reuse, recycling and composting.

4.4 **Appendix A** shows the full, updated policy analysis. Table 4.1 summarises, by topic, the key aims of the policy documents reviewed, how the LDP could assist in delivering these aims, and to what extent these considerations have been taken into account during its preparation.

Collecting baseline information (Task A2)

“The relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan”

“the environmental characteristics of areas likely to be significantly affected”

“The relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan”

(SEA Directive Annex I(b and c))

4.5 Section 3 of the Scoping Report sets out how baseline information about Cardiff was collected, and a list of the indicators that will be used to monitor change over time. This has been updated in **Appendix B**. The main changes between October 2010 and August 2012 were:

- The recession has dampened house prices more than earnings, making housing more affordable than a few years ago (measured by the ratio of average earnings to average house price);
- Two of Cardiff’s four Air Quality Management Areas have improved enough to be discontinued, but a new third one had to be added in 2010;
- Traffic in Cardiff is continuing to decline gently;
- Domestic energy use is slowly decreasing;
- Greenhouse gas emissions are therefore probably slowly declining too, though post-2010 direct data is not available;
- Almost all new housing has been on brownfield land;
- The city’s population and number of households continues to grow;
- Domestic waste reuse, recycling and composting performance has continued to improve strongly: Cardiff has now overtaken the Wales average.

4.6 Between October 2012 and August 2013 the Council commissioned further research which indicated population growth and housing demand was likely to be lower than previously estimated. The research and its implications for the LDP are explained at 4.12-4.26 in the Deposit LDP and paras 6.12-6.15 in this report.

Table 4.1 Key messages of policy review

SA/SEA topic	Policy aims and how the LDP might support them	Considerations included in the LDP
<p>Access and equality</p>	<p>Policy aims:</p> <ul style="list-style-type: none"> ● Ensure that everyone has access to good quality housing sufficient for their needs, employment, shopping, education, training, health, community, leisure and sports facilities and open and green space. ● Secure a safer and more accessible environment for everyone. ● Promote social inclusion and equality of opportunity. <p>How the LDP might assist in delivering policy aims:</p> <ul style="list-style-type: none"> ● Foster improvements to transport facilities and services which maintain or improve accessibility to services and facilities, secure employment, economic and environmental objectives, and improve safety and amenity. ● Promote mixed use developments. ● Ensure new development is located and designed to provide attractive, accessible, safe, secure and sustainable environments for everyone including people with special access requirements and those who do not have access to a private car. ● Promote and safeguard opportunities for improved public transport and measures to assist pedestrians and cyclists. 	<p>Objectives</p> <p>The LDP contains objectives under ‘Respond to evidenced social needs’ including objectives on:</p> <ul style="list-style-type: none"> ● Social and affordable housing ● Creating an environment and services that are accessible to all ● Maximising early provision of full range of social facilities and community infrastructure...within a 15 minute walk ● Maximising access to parks and open spaces ● Ensuring accessibility of necessary educational facilities for all ● Creating a safer city <p>Policies</p> <p>KP1 aims to ensure sufficient housing is built. KP2 and H1 designate sites. The masterplanning principles (KP4) and their application to strategic sites (KP2) aim to maximise accessibility to services and facilities, and provide alternatives to car travel.</p> <p>KP5 promotes sustainable design including attractive, accessible, safe, secure and sustainable environments.</p> <p>KP6 aims to provide social infrastructure for new development</p> <p>KP13 supports sustainable neighbourhoods and aims to secure social provision in new development</p> <p>The housing policies H2, H4, H5 and H6 govern conversions to and from residential use.</p> <p>H3 sets targets for affordable housing.</p> <p>H7 makes provision for gypsies and travellers.</p> <p>R1 to R8 aim to provide accessible retail at appropriate levels including neighbourhood and local centres</p> <p>C1 seeks provision of community facilities in new development</p> <p>C7 seeks provision of schools to meet needs</p>

SA/SEA topic	Policy aims and how the LDP might support them	Considerations included in the LDP
Air Quality	<p>Policy aims:</p> <ul style="list-style-type: none"> Take account of the effects of development upon air quality and vice versa, and meet mandatory standards for air quality. <p>How the LDP might assist in delivering policy aims:</p> <ul style="list-style-type: none"> Include policies on the location of potentially polluting developments, make provision for types of development that may cause pollution and separate incompatible land uses. Locate development so as to minimise travel demand, particularly by cars and other motor vehicles, and where it is accessible by a range of forms of travel/transport, including walking, cycling, use of public transport and alternatives to movement of freight by road. 	<p>Objectives</p> <p>The LDP aims:</p> <ul style="list-style-type: none"> To protect, manage and enhance Cardiff's natural environmental assets, including: -...Natural resources including geodiversity, the best soils, water and air quality including the reduction of pollution; To decrease air pollution....by preventing predominantly car-based developments and focusing on accessibility of locations to sustainable transport networks. <p>Policies</p> <p>KP5 promotes sustainable design including minimising emissions.</p> <p>The transport policies KP8 and T1-T9 aim to provide alternatives to car travel</p> <p>EN13 opposes development that would cause unacceptable pollution.</p>
Biodiversity, flora and fauna	<p>Policy aims:</p> <p>Protect and enhance biodiversity, natural habitats and wild fauna and flora, including:</p> <ul style="list-style-type: none"> International, national and local designated sites; and Protected species and species and habitat types identified as priorities for biological conservation. <p>How the LDP might assist in delivering policy aims:</p> <ul style="list-style-type: none"> Include detailed policies for the conservation and, where appropriate, enhancement of international, national and local designated sites, reflecting their relative significance. Undertake Appropriate Assessment in accordance with the requirements of the Habitats Directive (1.7) to assess the implications of the plan for European sites (including any in neighbouring authorities) whose integrity may be adversely affected by the plan. Provide for the conservation and, where appropriate, enhancement of biodiversity outside statutorily designated sites, in particular identifying opportunities to conserve important local habitats and species, and to safeguard and manage landscape features of major importance for nature conservation. 	<p>Objectives</p> <p>The LDP also includes objectives:</p> <ul style="list-style-type: none"> To protect city's natural environmental assets, including local, national and internationally important nature sites To provide, manage and enhance networks that link areas of value <p>Policies</p> <p>KP3a, KP3b and EN1 aim to protect the countryside from non essential development.</p> <p>EN5 protects locally designated sites of nature conservation importance.</p> <p>EN6 protects ecological networks and features of importance for biodiversity</p> <p>EN7 protects priority habitats and species</p> <p>EN8 protects trees, woodlands and hedgerows</p>

SA/SEA topic	Policy aims and how the LDP might support them	Considerations included in the LDP
Climate change	<p>Policy aims:</p> <ul style="list-style-type: none"> • Reduce greenhouse gas emissions by 3% per year except for heavy industry and power generation, with overall reductions of at least 40% by 2020 • Plan for and respond to climate changes already underway • Minimise the risk to people and property from flooding <p>How the LDP might assist in delivering policy aims:</p> <ul style="list-style-type: none"> • Promote energy efficiency and renewable methods of energy production • Promote other measures that mitigate the causes of climate change (e.g. the protection/enhancement of carbon sinks) • Ensure that the location and design of new development has regard to the potential risk, causes and consequences of flooding • Ensure that existing communities, infrastructure and other assets (including those alongside new developments) are considered with regard to potential risk, causes and consequences of flooding. • Consider additional flood risk assessments, mapping and related responsibilities that are emerging as the result of recent legislation • Locate and design development so as to minimise travel demand, particular by motor vehicles, and promote accessibility by a range of forms of transport • Promote mixed use development • Promote opportunities to benefit from climate change, e.g. tourism-related development, outdoor recreation 	<p>Objectives</p> <p>The LDP has objectives:</p> <ul style="list-style-type: none"> • To mitigate and adapt to the causes and consequences of climate change through reduced energy demand and increasing the supply of renewable energy • To have full regard to flood risk <p>Policies</p> <p>KP3a and KP3b aim to keep development within settlement boundaries , reducing the need for travel.</p> <p>The masterplans for strategic sites (KP2) seek to provide sustainable transport options for the new greenfield sites.</p> <p>KP5 promotes sustainable design including minimising emissions.</p> <p>The transport policies KP8 and T1-T9 aim to provide alternatives to car travel</p> <p>KP15 says development should ‘take into account’ reducing carbon emissions, promoting energy efficiency and renewables, adaptation and avoidance of unnecessary flood risk.</p> <p>EN12 promotes renewable energy and low carbon approaches.</p> <p>EN14 opposes development with unacceptable flood risk, or that would increase flood risk.</p>

SA/SEA topic	Policy aims and how the LDP might support them	Considerations included in the LDP
<p>Cultural Heritage & the Historic Environment</p>	<p>Policy aims:</p> <ul style="list-style-type: none"> ● Protect the historic environment and cultural heritage and foster local diversity. ● Strengthen Wales’ cultural identity and have regard to the needs of the Welsh language. ● Enhance Cardiff’s status as a centre of cultural excellence, particularly for the arts, sport and leisure, and realise its potential to become a world-class European Capital City, delivering for Wales as the cultural driver of an internationally competitive city region. <p>How the LDP might assist in delivering policy aims:</p> <ul style="list-style-type: none"> ● Include policies for the protection and enhancement of sites of archaeological interest and their settings, listed buildings, conservation areas and historic parks and gardens, identifying the factors to be taken into account in assessing planning applications. ● Promote development for cultural purposes. ● Promote good design that respects Cardiff’s local distinctiveness. 	<p>Objectives</p> <p>The LDP aims:</p> <ul style="list-style-type: none"> ● To conserve and enhance Cardiff’s built and historic assets that define distinctive character and reflect its past development including: <ul style="list-style-type: none"> ➢ The city’s 27 Conservation Areas; ➢ Its Listed Buildings and Ancient Monuments; ➢ Registered Historic Landscapes and areas of archaeological importance; and ➢ Other valued public places and spaces, including parks and amenity spaces, that provide local distinctiveness ● To develop new cultural, leisure and sporting facilities...to enhance Cardiff’s role as a premier cultural and sporting destination <p>Policies</p> <p>KP17 aims to protect the city’s built heritage. EN9 conserves the historic environment.</p>
<p>Economy</p>	<p>Policy aims</p> <ul style="list-style-type: none"> ● Promote Cardiff’s role as a world-class Capital City and the economic and cultural driver for Wales by developing a diverse, competitive, high added value economy ● Enhance employment opportunities for all ● Ensure that development for enterprise and employment uses is in line with sustainability principles and respects the environment ● Secure accessible, efficient and competitive retail provision and support town centres <p>How the LDP might assist in delivering policy aims:</p> <ul style="list-style-type: none"> ● Ensure that there is a sufficient range and choice of land allocated for economic development and employment purposes in accessible locations ● Improve access to employment opportunities particularly for deprived communities ● Support the vitality, attractiveness and viability of centres, and regeneration of deprived areas ● Allocate sites for new retail, leisure and other uses best located in town centres where there is assessed need, using the sequential approach 	<p>Objectives</p> <p>The LDP includes a suite of objectives under “Respond to evidenced economic needs” aimed at meeting the economic needs of the city and helping to stimulate greater economic activity. Individual objectives aim:</p> <ul style="list-style-type: none"> ● To maximise the economic potential of the city centre ● To create a physical and economic environment that develops, attracts and retains skilled workers ● To ensure adequate infrastructure is in place to support sustainable economic development. <p>Policies</p> <p>KP1 and KP9 aim to provide for enough new jobs. The strategic sites in KP2 aim to provide land for economic needs, including supporting continued regeneration of the Bay area KP10 supports development in the Central and Bay Business Areas EC1-5 aim to keep land for economic uses as appropriate</p>

SA/SEA topic	Policy aims and how the LDP might support them	Considerations included in the LDP
<p>Health & Well-Being</p>	<p>Policy aims</p> <ul style="list-style-type: none"> ● Improve health and well-being, and tackle poverty and health inequalities ● Increase participation in sport and physical activity ● Provide adequate, attractive, multi-use open space to support the above aims ● Ensure that everyone has good quality housing sufficient for their needs, and good access to employment, the full range of services and facilities, and open space ● Improve quality of life and enable social progress for everyone <p>How the LDP might assist in delivering policy aims:</p> <ul style="list-style-type: none"> ● Ensure new development is located and designed to provide attractive, accessible, safe and sustainable environments ● Help to implement the standards set in TAN16 (open space) and Cardiff allotments strategy ● Promote walking, cycling and public transport ● Promote access to and enjoyment of the countryside, coastline and river valleys ● Ensure that new development has regard to the potential causes, risks and consequences of flooding, contaminated land, odour, air and water pollution, and noise 	<p>Objectives</p> <p>The Preferred strategy includes objectives:</p> <ul style="list-style-type: none"> ● To regenerate local neighbourhoods ● To reduce deprivation and inequalities and provide open space for recreation ● To ensure the provision of housing and health care ● To tackle health inequalities and promote good health <p>Policies</p> <p>The masterplanning principles (KP4) and their application to strategic sites (KP2) aim to maximise accessibility to services and facilities, and provide alternatives to car travel.</p> <p>KP5 promotes sustainable design including attractive, accessible, safe, secure and sustainable environments.</p> <p>KP6 aims to provide social infrastructure for new development.</p> <p>KP13 supports sustainable neighbourhoods and aims to secure social provision in new development</p> <p>KP14 aims to reduce health inequalities and promote healthy living including active travel.</p> <p>EN13 opposes development that would cause unacceptable pollution.</p> <p>C3 promotes safe environments.</p> <p>C4 protects open space and C5 seeks new provision.</p> <p>C4 defines levels of provision for children’s play in new developments.</p>

SA/SEA topic	Policy aims and how the LDP might support them	Considerations included in the LDP
Landscape	<p>Policy aims</p> <ul style="list-style-type: none"> • Protect and enhance the landscape, including the countryside, the undeveloped coast, river valleys and other green spaces. <p>How the LDP might assist in delivering policy aims:</p> <ul style="list-style-type: none"> • Include policies to protect the countryside, undeveloped coast and river valleys from inappropriate development • Include policies to protect the quality and character of the landscape and townscape, and provide guidance on design, access, density, off-street parking and open space provision • Avoid development of greenfield sites where possible and appropriate, by giving preference to the re-use of suitable previously developed land • Promote good design and public art 	<p>Objectives</p> <p>The Preferred strategy has objectives:</p> <ul style="list-style-type: none"> • To conserve and enhance historic landscapes and Cardiff's 4 Strategically Important River Valleys • To protect, manage and enhance Cardiff's countryside, particularly its areas of high landscape value and the coast <p>Policies</p> <p>KP16, EN3 and EN4 aim to protect the city's landscape assets. EN1 aims to protect the countryside from inessential development.</p>

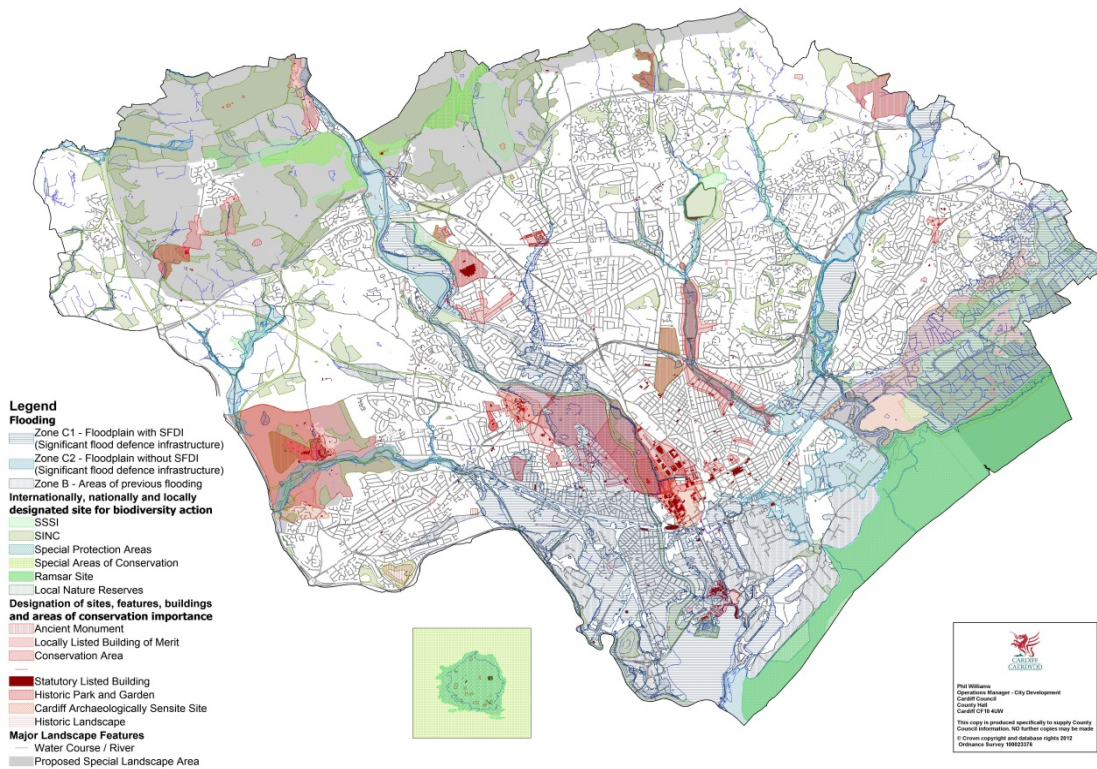

SA/SEA topic	Policy aims and how the LDP might support them	Considerations included in the LDP
<p>Natural resources</p>	<p>Policy aims</p> <ul style="list-style-type: none"> ● Minimise the use of non-renewable resources and, where necessary, use them efficiently, and encourage the use of renewal resources ● Conserve and, where possible, enhance the countryside and its resources, including the best and most versatile agricultural land ● Promote urban regeneration and the re-use of previously developed land ● Promote increased efficiency and demand management of water resources ● Minimise adverse impacts on water quality, the ecology of rivers and on groundwater ● Safeguard mineral resources from sterilisation and encourage their efficient and appropriate <p>How the LDP might assist in delivering policy aims:</p> <ul style="list-style-type: none"> ● Avoid development of greenfield sites where possible and appropriate, by giving preference to the re-use of suitable previously developed land ● Give considerable weight to protecting the best and most versatile agricultural land ● Plan new development in discussions with water and wastewater companies and the Environment Agency Wales, to ensure that water resources are adequate and water quality is maintained ● Promote energy efficiency, energy conservation, and the production of renewable energy ● Safeguard mineral resources from sterilisation, provide minerals in line with Cardiff's minerals apportionment, and encourage efficient and appropriate use of minerals and the re-use and recycling of suitable materials encourage efficient and appropriate use of minerals and the re-use and recycling of suitable materials ● Promote and facilitate the re-use and re-cycling of waste 	<p>Objectives</p> <p>The Preferred Strategy includes objectives:</p> <ul style="list-style-type: none"> ● To conserve, manage and enhance Cardiff's natural resources including geodiversity, the best soils, water and air quality ● To protect existing mineral resources <p>Policies</p> <p>KP18 aims to protect Cardiff's natural resources. EN10 promotes sustainable water management. EN11 protects water resources</p> <p>The minerals policies M1-M8 define how mineral reserves should be maintained for the future.</p>

SA/SEA topic	Policy aims and how the LDP might support them	Considerations included in the LDP
<p>Population</p>	<p>Policy aims</p> <ul style="list-style-type: none"> ● Provide for an adequate and continuous supply of land, available and suitable for development to meet society’s needs – including homes, infrastructure, investment and jobs - in a way that is consistent with sustainability objectives. ● Ensure that everyone has good quality housing sufficient for their needs and access to employment, shopping, education, training, health, community, leisure and sports facilities and open and green space. <p>How the LDP might assist in delivering policy aims:</p> <ul style="list-style-type: none"> ● Identify requirements for market and affordable housing, taking into account household projections ● Allocate land for housing, favouring the re-use of previously developed land and buildings within settlements before settlement extensions and new development around settlements with good public transport links ● Include policies for affordable and special needs housing (including Gypsies and Travellers) where there is identified need ● Indicate where developer contributions and/or community infrastructure levies will be expected towards infrastructure, facilities (including open space) and affordable housing 	<p>Objectives</p> <p>The Preferred Strategy includes objectives on housing and employment needs to provide for anticipated trends in population growth.</p> <p>Policies</p> <p>The policies listed under ‘access and equality’ and ‘economy’ constitute the LDP’s response to projected population growth.</p>
<p>Waste</p>	<p>Policy aims</p> <ul style="list-style-type: none"> ● Promote the waste hierarchy: reduce, reuse, recycle, recover energy and only then landfill ● Meet targets set by European and national legislation ● Manage waste without endangering human health and the environment <p>How the LDP might assist in delivering policy aims:</p> <ul style="list-style-type: none"> ● Ensure that waste management infrastructure is adequate to accommodate proposed development while minimising adverse impacts on health, the environment and communities ● Identify sites for waste management facilities or areas where such facilities may be suitable ● Incorporate adequate and effective waste management facilities in new developments 	<p>Objectives</p> <p>The LDP includes objectives to:</p> <ul style="list-style-type: none"> ● Support the waste hierarchy ● Support sustainable collection and recycling methods ● Ensure the provision of waste facilities ● Promote resource efficiency in new developments and neighbourhood regeneration projects ● Facilitate an integrated network of waste management with the needs of south east Wales <p>Policies</p> <p>KP12 supports sustainable waste treatment facilities following the waste hierarchy. Sustainable waste collection will be supported in all new developments, as will waste minimisation and the provision of facilities that use recycled or composted products.</p> <p>W1 specifies provision for waste management facilities.</p> <p>W2 calls for provision for waste handling in development.</p>

4.7 **Appendix B** shows how the indicators perform when compared to local, regional or national targets. Alternatively, where comparators are not available, historical trends are used to show how an indicator is performing. An explanation is also given of the quality of the data: for example an indicator that uses good quality local data will carry more weight than an indicator that uses national data as a proxy source.

4.8 Figure 4.1 summarises the key constraints to development in Cardiff.

Figure 4.1 Constraints to development

Identifying sustainability issues and environmental problems (Task A3)

Any existing environmental problems which are relevant to the plan including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC (SEA Directive Annex I(d))

4.9 Section 4 of the Scoping Report set out the key issues affecting Cardiff and the methodology used to identify them. Table 4.2 summarises the main sustainability issues affecting Cardiff. Some of the key problems are in the 'southern arc' of deprivation: Figure 4.2 shows the Index of Multiple Deprivation 2011, and Cardiff's 'southern arc' of deprivation.

Figure 4.2 Index of Multiple Deprivation 2011 and 'southern arc' of deprivation

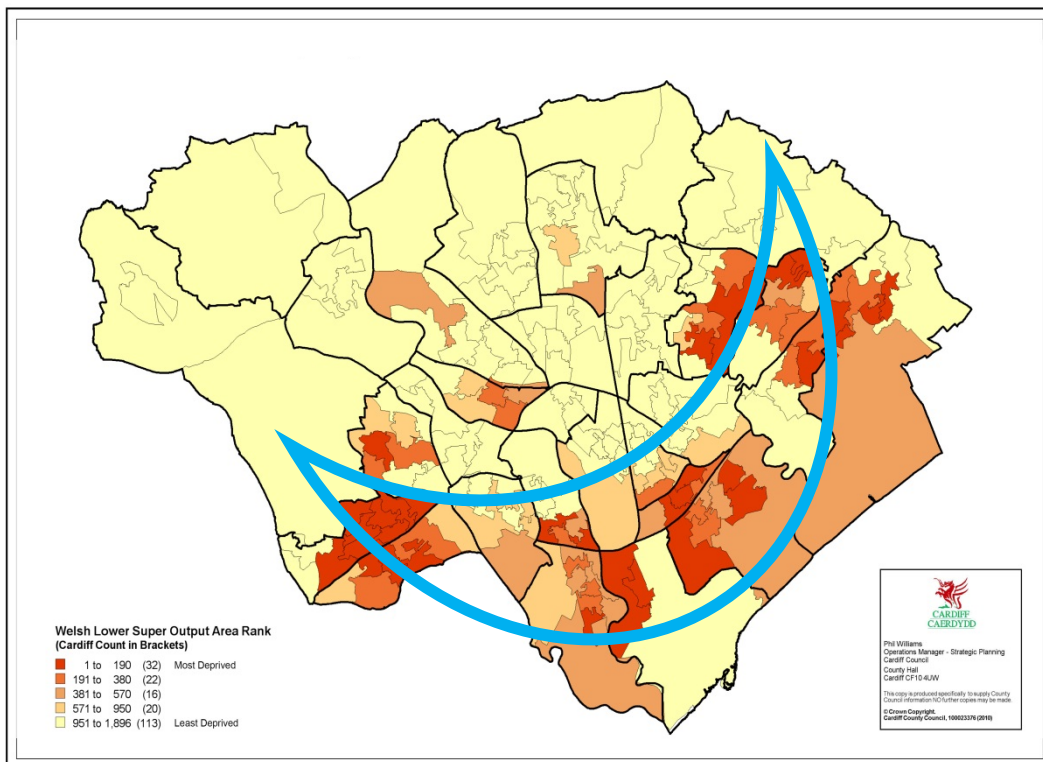

Table 4.2 Sustainability issues affecting Cardiff

1. Access and equality
<ul style="list-style-type: none"> • Cardiff contains some of the most deprived areas in Wales - geographically there is a concentration of deprivation in the 'southern arc' although hotspots exist elsewhere. • The cost of housing - particularly family housing - is excluding those on low incomes from entering the housing market. • Cardiff has a significant number of homeless people. • At a city-wide scale Cardiff has good levels of access for key services (GPs, schools, libraries, leisure centres etc). However access deficiencies exist at the local level. • The educational, training and skill base of Cardiff's population varies significantly.
2. Air quality
<ul style="list-style-type: none"> • There are currently three air quality management areas in Cardiff based on nitrogen oxide levels. There were four in 2006, this went down to two and then a third AQMA was designated in December 2010. • Levels of other air pollutants are within current standards.
3. Biodiversity, flora and fauna
<ul style="list-style-type: none"> • Cardiff has a wide range of sites designated for their biodiversity value including the Severn Estuary and Cardiff Beech Woods European sites. The Great Crested Newt, Otter, Dormouse and Bats are European protected species which are known to exist in Cardiff. • Targets have been set for maintaining and enhancing the range, size/population, and condition of many vulnerable habitats and species. • Cardiff's biodiversity resource is vulnerable to new developments and land management practices which could result in habitat loss and fragmentation.
4. Climate change
<ul style="list-style-type: none"> • Carbon dioxide emissions are now reducing after decades of continuing growth, although the reduction is probably largely due to the economic recession and to importing rather than making more goods. The Welsh Government (WG) has set challenging new greenhouse gas emission targets. • Traffic flows into and within the city centre are decreasing, but those outside the city centre are increasing. Cardiff is a major attractor of in-commuters from other parts of South East Wales. Traffic management is a consistently high priority for Cardiff's residents, based on the Ask Cardiff surveys. • Energy use in buildings is responsible for about one-third of Cardiff's greenhouse gas emissions. WG policies will require buildings to become more energy efficient. • Cardiff is subject to a significant threat of flooding due to its low lying nature. The Wentloog levels, Taff at Morganstown, Taff/Ely area, North East Cardiff and the Bay area to Pengam Green are at particular risk of flooding. • Little renewable energy is currently being produced in Cardiff.
5. Cultural heritage and the historic environment
<ul style="list-style-type: none"> • Cardiff contains a wide range of areas, buildings and monuments with historic value designated at both a statutory national and local level. • In 2010, slightly over 3% of listed buildings were not in a favourable condition. • Cardiff's cultural and historic attractions, including important historic landscape areas, attract large numbers of visitors each year and perform an important national / regional role. Cardiff should promote and facilitate a wider range of cultural and sporting facilities for economic and

quality of life reasons.

6. Economy

- Attracting and retaining jobs is a consistently high concern for Cardiff's residents.
- Commuting patterns into Cardiff demonstrate the city's importance to the regional economy and the Wales Spatial Plan acknowledges that maintaining Cardiff's performance is vital for the economic well-being of the region and Wales as a whole.
- Cardiff experienced strong jobs growth and growth in Gross Value Added in the decade to 2008, significantly higher than the Welsh and UK average. Employment has since dropped as a result of the economic recession, and Cardiff struggles to match its employment growth with a growth in pay.
- Cardiff's workforce is polarised between the more highly qualified and low or unskilled workers; there are significant concentrations of unemployment in parts of the city. The Community Strategy emphasises the need to support small businesses and local enterprise.
- Significant areas of employment land have changed to other uses (notably housing) in recent decades as a result of changing employment patterns and market conditions.
- Innovative solutions to Cardiff's congestion and parking problems are needed - e.g. rapid transit or light rail, park and ride, improved parking enforcement – as well as improved access to Cardiff International Airport.
- Various policies promote high value, low carbon jobs for Cardiff; links between the universities and businesses; and support for the creative industry.

7. Health and well-being

- Community safety is the top issue raised in successive Ask Cardiff surveys. Crime levels in Cardiff have remained broadly steady over time.
- The health of Cardiff's population is generally slightly better than the Welsh average but getting slightly worse over time.
- Over half of Cardiff's adults are clinically overweight or obese, less than a third meet recommended physical activity guidelines (the worst of the Welsh authorities), and this is worsening over time.
- There has been a steady decline in traffic accidents.
- Life expectancy and crime levels vary sharply across the city, with the worst wards being in the 'southern arc' of deprivation. There is a more than 10 year difference between the best and the worst wards in terms of life expectancy.

8. Landscape

- Cardiff's setting is very distinctive with the ridge to the north (the Garth, Caerphilly Mountain and Graig Llanishen), Leckwith escarpment to the west, low-lying Gwent Levels to the east, Severn Estuary to the South, and three river valleys running through the City.
- The Cardiff Landscape Study has proposed five areas as Special Landscape Areas.
- More than two-thirds of Cardiff's area is within easy walking distance to natural green spaces, but only two out of Cardiff's 29 wards meet the nationally recommended open space targets. The most central wards fare the worst. Open spaces are important because they improve people's mental and physical health, encourage physical activity, are attractive, support biodiversity, act as a carbon sink, and can help to adapt to climate change.
- Cardiff's landscape qualities are vulnerable to insensitive new development and land management practices.

9. Natural resources

- In recent years almost all new housing has been built on brownfield land. Much has been apartments, relatively little family housing.
- Cardiff's industrial past has left a legacy of many potentially contaminated sites. These are being remediated as they are redeveloped.
- Good quality agricultural land is known to exist within Cardiff but no survey has been undertaken using the latest agricultural land classification.
- Cardiff's allotments are important for people's health and food security, but they are already oversubscribed, and many more will be needed.
- Cardiff has significant, good quality mineral reserves (mainly limestone) which are an important source of aggregates for the region; however dredging from the Estuary has potential erosion impacts.
- Water quality in the rivers Taff, Ely and Rhymney is improving, but is far from achieving the requirements of the Water Framework Directive. The groundwater around Taff Gorge / Creigiau area is vulnerable.
- Abstraction from the Rivers Usk and Wye is a concern, and this will be exacerbated by population growth and climate change.

10. Population

- Cardiff's population has increased steadily over the past 20 years (by about 400 people per year) but much more rapidly since 2001 (about 2,400 per year). Welsh Government projections indicate that the number of households in Cardiff will increase by more than 32% between 2006 and 2026, from 132,108 to 174,471 households. This is driven partly by immigration, and partly by a decline in married couples and an increase in one person households, lone parents and cohabiting couples.
- Research commissioned by the Council in early 2013 suggests that growth may be slower than previously projected. However, providing an appropriate range and choice of housing for this population growth in a sustainable way (including services and infrastructure) remains the key sustainability issue raised by Cardiff's planners.
- Cardiff has a higher proportion of young adults and ethnic minorities, and a lower proportion of older age groups, compared to the national average.

11. Waste

- Street cleaning, litter and recycling are consistently high priorities for Cardiff's residents, based on the Ask Cardiff survey.
- Construction/demolition waste is the largest contributor to the waste stream, followed by commercial/industrial and municipal (household) waste. Municipal waste production has dropped sharply in the last five years, and the proportion of that waste that is recycled and composted grew from 3% to 49% between 2001 and 2012.

Developing SEA and SA objectives (Task A4)

“the environmental protection objectives, established at international, Community or Member State level, which are relevant to the plan or programme and the way those objectives and any environmental considerations have been taken into account during its preparation”

(SEA Directive Annex I(e))

4.10 Section 5 of the Scoping Report sets out the sustainability appraisal framework and the methodology used to develop it. The framework consists of 11 objectives and related sub-objectives and indicators. The sub-objectives provide further information on how to interpret the headline objectives and are designed to guide the assessment. The indicators will show changes on the ground once the LDP is implemented. Table 4.3 shows the sustainability objectives, sub-objectives and indicators.

Consulting on the scope of SEA and SA (Task A5)

4.11 Consultation on the Scoping Report took place from 1 November to 6 December 2010. Comments were received from 14 consultees - a variety of stakeholders, statutory consultees and individuals. **Appendix C** shows the full list of comments. The consultees mostly suggested minor amendments to the Scoping Report and associated appendices (mainly additions to the policy review or baseline data); or else their comments were directed at the LDP rather than at the SA. Amendments to the SA were made where appropriate. Where, instead, the comments related to LDP issues, then these were noted and passed onto the LDP Team for consideration as part of the preparation of the LDP.

Table 4.3 Sustainability appraisal framework for Cardiff

Sustainability objective	Sub Objective: Will the LDP strategic option, objective, strategy, policy or allocation...	Indicators
1. Help deliver equality of opportunity and access for all	1.a Address existing imbalances of inequality, deprivation and exclusion 1.b Improve access to education, life-long learning and training opportunities 1.c Improve accessibility to affordable housing and employment opportunities, particularly for disadvantaged sections of society 1.d Improve access to community facilities and services 1.e Secure a more accessible environment	1.1 Number and percentage of Cardiff's lower super output areas in the most deprived 10% lower super output areas for Wales 1.2 Average house price compared to average annual salary 1.3 Number and percent of domestic units that are provided for affordable housing per year 1.4 The number of homelessness presentations received by Cardiff Council per 1000 households annually 1.5 Percentage of population of a working age qualified to NVQ level 4+ or equivalent
2. Maintain and improve air quality	2.a Reduce the need to travel through the location and design of new development, provision of public transport infrastructure and promotion of cycling and walking 2.b Avoid locating new development where air quality could negatively impact upon peoples' health	2.1 Number of air quality management areas
3. Protect and enhance biodiversity, flora and fauna	3.a Maintain and achieve favourable condition of international and national sites of nature conservation importance (SACs, SPAs and SSSIs) 3.b Maintain extent and enhance the quality of locally designated sites (LNRs and SNCIs) and LBAP priority habitats 3.c Protect and enhance protected species and LBAP priority species 3.d Maintain and enhance connectivity of corridors of semi-natural habitats 3.e Provide opportunities for people to experience wildlife and habitats	3.1 Number and extent (in hectares) of designated sites of importance (SACs, SPAs, SSSIs, LNRs and SNCIs) 3.2 Area (in hectares) of ancient woodland cover 3.3 Total extent (in hectares) of LBAP priority habitats 3.4 Percentage of features of internationally and nationally designated sites in favourable condition (SACs, SPAs, SSSIs)

Sustainability objective	Sub Objective: Will the LDP strategic option, objective, strategy, policy or allocation...	Indicators
4 Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	4.a Support energy conservation and energy efficient design 4.b Promote renewable energy generation 4.c Promote efficient land use patterns that minimise the need to travel 4.d Promote sustainable modes of transport and integrated transport systems 4.e Ensure that a precautionary approach is applied, and ensure that the location and design of new development manages the potential risks and consequences of flooding down to an acceptable level. 4.f Promote sustainable drainage systems in new development 4.g Reduce vulnerability of the built environment to the effects of climate change	4.1 Annual emissions of greenhouse gases by end use and sector 4.2 Cardiff's ecological footprint 4.3 Traffic growth: traffic volumes entering the County and city centre 4.4 Traffic volumes (billion vehicle Km) 4.5 Mode of travel to the city centre for all purposes 4.6 Average household energy consumption (kWh) 4.7 Percentage of major developments that generate a percentage of their energy from renewable sources 4.8 Number of properties at risk from river and coastal flooding 4.9 Percentage of new development with sustainable urban drainage systems (SUDS) 4.10 Number of new housing units approved in C1 and C2 flood risk areas
5. Protect and enhance historic and cultural heritage	5.a Protect and enhance historic and cultural assets including scheduled ancient monuments, listed buildings, historic parks and gardens, historic landscapes and conservation areas 5.b Encourage access to the historic and cultural heritage 5.c Support local character and distinctiveness through good design	5.1 Number of paid attendances for cultural venues in Cardiff 5.2 Percentage of conservation areas with an appraisal undertaken in the last 10 years 5.3 Percentage of listed buildings 'at risk'

Sustainability objective	Sub Objective: Will the LDP strategic option, objective, strategy, policy or allocation...	Indicators
6. Help deliver the growth of a sustainable and diversified economy	6.a Increase the number and range of employment opportunities 6.b Support and enhance the role of Cardiff as the economic driver of South East Wales city region 6.c Provide good quality employment opportunities accessible to all sections of the population by a variety of travel modes 6.d Promote and support city and local centres, local employment opportunities and mixed use development 6.e Support the regeneration of deprived areas 6.f Promote and support the rural economy	6.1 UK Competitiveness Index 6.2 Number of jobs in Cardiff 6.3 Gross Value Added (GVA) per head of local population 6.4 Full time gross median pay (£/week) 6.5 Percent of residents working age population in employment 6.6 The percentage of unemployed people claiming benefits who have been out of work for over a year 6.7 Proportion of residents on Jobseeker's Allowance 6.8 Amount of land (in hectares) available for employment
7. Improve health and well-being	7.a Promote healthy living and reduce health inequalities 7.b Encourage and facilitate walking and cycling 7.c Improve access to open space, the countryside and other opportunities for physical activity 7.d Improve environmental quality by minimising adverse impacts on health and wellbeing from pollution, flooding and waste management disposal 7.e Promote good design that minimises adverse impacts on health and wellbeing from crime and road traffic accidents	7.1 Prevalence of key illnesses 7.2 Gap between wards with the highest and lowest life expectancy 7.3 Percent of adults who are overweight or obese 7.4 Adults who reported meeting physical activity guidelines in the past week 7.5 No. people killed or seriously injured in traffic accidents 7.6 Notifiable offences
8. Protect and enhance the landscape	8.a Protect and enhance the landscape including the countryside, areas of landscape value, river valleys, greenspaces and the undeveloped coastline 8.b Protect and enhance geologically important sites 8.c Promote access to areas of landscape value 8.d Promote high quality design in keeping with its landscape context	8.1 Length of coast with formal public access 8.2 Area (in hectares) of landscape protected by local landscape designations (Green Belt, special landscape area and conservation areas) 8.3 Achievement of recreational open space requirements 8.4 Area of Cardiff within 400m of accessible natural green space

Sustainability objective	Sub Objective: Will the LDP strategic option, objective, strategy, policy or allocation...	Indicators
9. Use natural resources efficiently and safeguard their quality	9.a Re-use derelict and other previously developed land 9.b Remediate contaminated land 9.c Safeguard soil quality including the best and most versatile agricultural land, and protect and enhance allotments 9.d Safeguard mineral resources and encourage their efficient and appropriate use 9.e Conserve water resources and increase water efficiency 9.f Improve the water quality of rivers, lakes, groundwaters and coastal areas	9.1 Percent of housing on previously developed land 9.2 Number and area (in hectares) of potentially contaminated sites 9.3 Area (in hectares) of grades 1, 2 and 3a agricultural land 9.4 Number and area of allotments, number of plots 9.5 Landbank (in years) of mineral reserves 9.6 Percent of river lengths achieving good ecological status or potential 9.7 Total non-tidal water abstractions 9.8 Percentage of Cardiff's rivers achieving Good General Quality Assessments
10. Respond to demographic changes in a sustainable way	10.a Meet the need of Cardiff's population for homes, jobs and community facilities	10.1 Total population size 10.2 Number of households and average household size
11. Minimise waste, increase re-use and recycling	11.a Promote resource efficiency and the use of secondary and recycled materials 11.b Promote waste reduction, re-use, recycling and recovery	11.1 Commercial and industrial waste arising per year 11.2 Construction and demolition waste arising per annum 11.3 Municipal waste arising per year 11.4 Number of planning applications with site waste management plans 11.5 The percentage of municipal waste composted or recycled 11.6 Number of bring sites and large household recycling centres

5. Appraisal of the Vision and Objectives

“the likely significant effects on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors”

(SEA Directive Annex I(f))

“the measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme”

(SEA Directive Annex I(g))

- 5.1 This is the first of four chapters which appraise, respectively, the sustainability impacts of the LDP vision and objectives, strategic options considered for the LDP, individual candidate sites for development, and key and detailed policies. The SA framework of Table 4.3 was used as the basis for each appraisal. For the strategic options and candidate sites, the appraisal helped to inform the decision of which options to choose. For the vision, objectives, and key and detailed policies, the appraisal helped to fine-tune each element of the LDP.
- 5.2 The Local Development Plan Manual states that the purpose of the appraisal at this stage is to predict the likely economic, environmental and social effects of the options being considered. The Practical Guide to the Strategic Environmental Assessment Directive states that “predictions do not have to be expressed in quantitative terms ... quantification is not always practicable, and qualitative predictions can be equally valid and appropriate”.
- 5.3 This chapter discusses the appraisal of the LDP Vision and Objectives - which were shown at Chapter 3.

Sustainability Appraisal of the LDP vision

- 5.4 The appraisal of the LDP vision showed that the vision would primarily have positive impacts. It highlighted a number of issues that were not explicitly addressed through the LDP vision. Features such as landscape could also be strengthened to improve the sustainability of the vision. The detailed assessment of the LDP vision can be found in **Appendix D**.

Appraisal of the LDP Objectives

- 5.5 Table 5.1 summarises the results of the appraisal of the LDP objectives, and **Appendix D** shows the full appraisal. The LDP objectives mostly have positive sustainability effects. However in some cases, although per capita impacts are likely to reduce, overall impacts are likely to worsen as a result of Cardiff's increasing population.
- 5.6 Rewording was suggested for several sub-objectives and one headline objective. For instance, it was suggested that Sub-Objective 1.12 should be divided into three separate objectives to more adequately cover waste issues;

and that provision of healthy food choices should be stressed more. Most of these changes were subsequently made, as shown in Table 5.2. Where proposed changes were not implemented, reasons for this have been documented in the final column of Table 5.2.

Table 5.1 Summary appraisal findings for the LDP objectives

SA Objective	LDP Objectives
1.Help deliver equality of opportunity and access for all	✓ The LDP Objectives aim to provide affordable housing and access to education, employment, facilities and services, and promote social inclusion, equality of opportunity and access for all. Location of development is key for achieving sustainable transport solutions and networks.
2.Maintain and improve air quality	✓ / ? – per capita, ? / ✗ – city wide The LDP Objectives help to improve air quality through the provision of sustainable transport solutions, and by aiming to reduce the need to travel. However, whilst per person emissions may reduce as a result of the LDP, it is a plan for the growth of Cardiff and therefore it is unlikely that, overall, the city’s emissions to air will decrease.
3.Protect and enhance biodiversity, flora and fauna	✓ The LDP Objectives aim to protect and enhance biodiversity not only at designated sites but also in areas without designation or of unknown biodiversity value.
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓ - per capita, ✗ - city wide The LDP Objectives assist and support in reducing carbon emissions by reducing the need to travel, encouraging a modal shift in transport, aiming to provide sustainable transport solutions and aiming to adapt to and mitigate the effects of climate change, including flooding. However although carbon emissions per person may reduce as a result of the LDP, this is a plan for the city’s growth and as such it is unlikely that the city’s overall carbon emissions will decrease.
5. Protect and enhance historic and cultural heritage	✓ The LDP Objectives help to protect and enhance historic assets, to ensure that new development is respectful to existing character, and to provide accessible cultural facilities for all communities.
6. Help deliver the growth of a sustainable and diversified economy	✓ The LDP Objectives help to provide a range of employment land, promote specialist sectors to support economic diversity, and provide good transport links. Location of development will be key to delivering sustainable economic growth.
7. Improve health and well-being	✓ The LDP Objectives assist in the promotion of more healthy lifestyles by increasing the provision of cycle and walk ways, aiming to protect public open spaces such as parks, and including healthier food choices as part of community centres and facilities.
8. Protect and enhance the landscape	✓ The LDP Objectives help to protect Cardiff’s distinctive landscape features, both designated and undesignated. They also aim to safeguard geodiversity and important geological sites.
9. Use natural resources	✓/? The LDP Objectives aim to protect Cardiff’s mineral supply, protect and

SA Objective	LDP Objectives
efficiently and safeguard their quality	enhance water and soil quality, increase water efficiency and promote good design with resource efficiency. However, there may be issues with sustainably sourcing appropriate building materials for development.
10. Respond to demographic changes in a sustainable way	✓ The LDP Objectives aim to meet the needs of Cardiff's growing population both socially and economically. However, whilst per person resource use and emissions are expected to decrease over the plan period, their absolute levels will probably increase as a result of growth of the city and its population.
11. Minimise waste, increase re-use and recycling	✓ - per capita, ✗ - city wide The LDP Objectives aim to minimise waste, maximise recycling and reuse and promote good design, which may reduce the waste generated by developments. However, whilst the LDP will help to reduce the amount of waste from development and per capita, the total waste arisings will probably increase over the plan period in Cardiff as a result of growth.

Table 5.2 Changes resulting from appraisal of LDP objectives

Original LDP Strategic Objectives and Sub-Objectives	Change proposed by SA team	Response to proposed change
1. To respond to evidenced economic needs and provide the necessary infrastructure to deliver development	Reword: 'to deliver sustainable and accessible...'	Change rejected as suggested additional wording duplicates other sections and is considered superfluous.
1.2 To maximise the economic potential of the city centre of Cardiff as a major financial and service sector opportunity that builds upon its position next to a transport hub of national and regional significance and is readily accessible from all areas within the city	Reword: 'and well connected to other UK cities'.	1.2 changed to ' <u>and well connected to other UK cities.</u>
1.10 To establish Cardiff as a sustainable travel city by increasing the use of sustainable travel modes (particularly walking and cycling), decreasing private car use and improving the city's key transport hub based at the adjacent central bus and train stations	Reword: 'by reducing the need to travel... sustainable travel modes and networks...'	1.10 To establish Cardiff as a sustainable travel city by <u>reducing the need to travel</u> , increasing the use of sustainable travel modes <u>and networks</u> (particularly walking and cycling)...
1.12 To support the reduction of waste together with reducing the need to transport waste through providing an integrated network of waste management facilities consistent with the needs of the South East Wales area and the waste hierarchy	Suggest 1.12 is divided into 3 separate waste objectives.	<p>1.12 To support sustainable collection and recycling methods for Municipal Waste by maintaining and improving an integrated network of facilities in Cardiff</p> <p>1.13 To lead and participate in securing regional facilities for the sustainable treatment and disposal of Municipal Waste in accordance with/ in line with the Regional Waste Plans and the waste hierarchy which seeks to maximise the reduction of waste in the first place and thereafter reusing, recovering and recycling options before the disposal of water material is considered.</p> <p>1.14 To facilitate an integrated network of</p>

Original LDP Strategic Objectives and Sub-Objectives	Change proposed by SA team	Response to proposed change
		commercial and industrial sustainable waste management facilities consistent with the needs of the south east Wales area and in a manner that follows the waste hierarchy which seeks to maximise the reduction of waste in the first place and thereafter reusing, recovering and recycling options before the disposal of waste material is considered.
2.6 To create an environment that is made more accessible to all groups in society so that the facilities and services of the city can be more readily used and enjoyed by all	Reword: 'so that the employment opportunities...'	2.6 To create an environment that is made more accessible to all groups in society so that the <u>employment opportunities</u> ,...
2.8 To recognise, support and enhance the key role played by existing District, Local and Neighbourhood Centres as accessible local hubs providing community services, local shops, businesses, employment and access to public transport	Reword: added 'healthy food choices...'	2.8 ... accessible local hubs providing community services, local shops, <u>healthy food choices</u> ,...
2.10 To ensure that the necessary education and training facilities are provided and are accessible to all: to build strong futures for children, provide a diverse range of youth/adult learning opportunities and assist economic progress through the development of required skills	Reword: Remove 'youth/adult', add 'opportunities <u>for all</u> '.	2.10 ...provide a diverse range of youth/adult learning opportunities <u>for all</u> and assist economic progress through the development of required skills
2.12 To ensure that the necessary community facilities (community centres, youth facilities, child care, faith buildings, health centres etc) are provided that are accessible to all	Reword: Add 'and cultural facilities', 'shops with health food choices' and 'especially in areas that are deprived'.	2.12 To ensure that the necessary community <u>and cultural</u> facilities (community centres, <u>shops with healthy food choices</u> , youth facilities, child care, faith buildings, health centres etc) are provided that are accessible to all, <u>especially in areas that are deprived</u>
3.1 To mitigate the effects of climate change through reducing energy consumption and increasing the supply of renewable energy	Reword: Remove 'consumption' and replace with 'demand'	3.1 To mitigate the effects of climate change through reducing energy consumption <u>demand</u> and increasing the supply of renewable energy
3.3 To protect, manage and enhance Cardiff's natural environmental assets, including:...	Reword: 4 th bullet point 'networks that...'	<ul style="list-style-type: none"> The city's biodiversity, its internationally, nationally and locally designated sites, wildlife habitats

Original LDP Strategic Objectives and Sub-Objectives	Change proposed by SA team	Response to proposed change
<ul style="list-style-type: none"> The city's biodiversity, its internationally, nationally and locally designated sites, wildlife habitats and features that contain important species and link together areas of value; and Natural resources including geodiversity, the best soils, water and air quality including the reduction of pollution 	<p>Add 6th bullet point 'The role that vegetation plays in combating climate change by providing shading, cooling and carbon sinks'.</p>	<p>and features that contain important species and <u>networks that</u> link together areas of value; and</p> <ul style="list-style-type: none"> Natural resources including geodiversity, the best soils, water and air quality including the reduction of pollution <u>The role that vegetation plays in combating climate change by providing shading, cooling and carbon sinks.</u>
<p>3.4 To conserve and enhance Cardiff's built and historic assets that help give a distinctive character to the city and reflect its past development including:</p> <ul style="list-style-type: none"> The city's 27 Conservation Areas; Its Listed Buildings and Ancient Monuments; Registered Historic Landscapes and areas of archaeological importance; and Other valued public places and spaces that provide local distinctiveness and are well used by the community 	<p>Reword: main objective 'define Cardiff's distinctive character...'</p> <p>Reword: 4th bullet point 'including parks and amenity', remove 'and are well used by the community'.</p>	<p>3.4 To conserve and enhance Cardiff's built and historic assets that help give a define Cardiff's distinctive character to the city and reflect its past development including:</p> <ul style="list-style-type: none"> The city's 27 Conservation Areas; Its Listed Buildings and Ancient Monuments; Registered Historic Landscapes and areas of archaeological importance; and Other valued public places, <u>including parks and amenity</u> spaces that provide local distinctiveness and are well used by the community
<p>4.1.2. Minimise car use and maximise sustainable transport solutions to create accessible, permeable and legible places- to avoid creating predominantly car-based developments in remote or inappropriate locations by focusing new development in accessible locations. To encourage greater use of sustainable modes of transport- walking, cycling (ideally linked to the strategic cycle network) and via fast and frequent public transport that provides an effective network around and beyond the city;</p>	<p>Reword: Added 'and decrease air pollution'.</p> <p>Remove 'ideally linked to the strategic cycle network'</p> <p>Suggest that objective is strengthened to "prevent" car based developments.</p>	<p>4.1.2. Minimise car use <u>travel</u>, and maximise sustainable transport solutions-use and decrease air pollution by <u>to</u> creating accessible, permeable, and legible places, preventing to avoid creating predominantly car-based developments in remote or inappropriate locations <u>by and</u> focusing new development in accessible locations <u>which are</u> To encourage greater use of sustainable modes of transport- walking, cycling (linked to the strategic cycle network <u>and can be served mainly by effective networks of sustainable transport – walking cycling and</u> via fast and frequent public transport that</p>

Original LDP Strategic Objectives and Sub-Objectives	Change proposed by SA team	Response to proposed change
<p>4.1.3. Minimise waste and maximise recycling- to minimise waste at the outset but to recognise the value of waste as a resource and effectively plan for how it can be collected and productively used;</p>	<p>Suggested alternative: '4.1.3. To effectively plan for how business and neighbourhoods can sort and store for collection for onward productive use; to Minimise waste to landfill and maximise recycling whilst seeking to optimise the overall value of waste as a resource and ensure proper provision for new developments is made through developer proposals'</p>	<p>provides an effective network around and beyond the city;</p> <p>4.1.3. To maximise recycling- to minimise waste at the outset <u>optimise</u> but to recognise the <u>overall</u> value of waste as a resource and to effectively plan for how it can be collected and productively used <u>new developments can sort and store waste for collection for onward productive use and minimise material needing treatment and final landfill.</u></p>

6. Appraisal of Strategic Options

“the likely significant effects on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors”

(SEA Directive Annex I(f))

“an outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information”

(SEA Directive Annex I(h))

- 6.1 This section discusses the sustainability impacts of the strategic options considered for the 2012 LDP Preferred Strategy: levels of housing and jobs growth, and broad spatial options for housing delivery. The impacts of individual candidate sites for development are discussed at Chapter 7.
- 6.2 The SEA Directive requires an environmental report to describe and evaluate the environmental impacts of the plan 'and reasonable alternatives taking into account the objectives and the geographical scope of the plan' (Article 5.1), and to include 'an outline of the reasons for selecting the alternatives dealt with' (Annex I(h)). The Welsh Assembly Government's LDP Manual explains that:
- “The purpose of this task is to predict the social, environmental and economic effects of the options being considered in the LDP preparation process. The main technique is to predict both positive and negative effects of each option on the environmental baseline and objectives set out in the SA framework. The performance of each option can then be compared, taking account where necessary of the “business as usual” scenario, i.e. how sustainability would change under the current development plan”* (Sec. 6.4.1).

Options considered

- 6.3 A range of options had already been considered and appraised during the development of the (now withdrawn) 2009 version of the LDP: whether or not to include an International Business Park in the LDP; different scales of housing and jobs growth; whether new growth should be accommodated in one large Greenfield site, several smaller Greenfield sites, or only on previously developed land; and whether or not to include a Green Technology Park in the LDP.
- 6.4 The economic and political situation in 2013 is different from that in 2009, so many of these options are no longer relevant. In particular, development on only brownfield sites is no longer felt to be a reasonable option. However these early options and their appraisals informed the options considered for this LDP.

Options for growth

6.5 Cardiff's population is growing, due to both natural population increase and immigration. Demographic changes such as divorce and people living longer means that household size is decreasing, so more homes will be needed to accommodate these additional households. A 'zero growth' option is thus not reasonable. The LDP team considered a range of options of future homes and jobs growth in Cardiff, shown at Table 6.1.

Table 6.1 Options for growth

Option	Housing/ employment growth	New dwelling requirement per annum	Evidence
A High	About 54,400 new homes and 55,000 new jobs	2,720 (2006-2026) 2,976 (April 2010 – 2026)	Based on the Welsh Government's 2008 population and household projection figures.
B Medium	About 45,400 new homes and 40,000 new jobs	2,270 (2006 – 2026) 2,214 (April 2010 – 2026)	Based on the Welsh Government's 2008 population and household projection figures recalculated using local robust data.
C Low	About 36,500 new homes and 26,000 new jobs	1,825 (2006 – 2026) 1,858 (April 2010 – 2026)	Based on long term net migration rates and housing completion rates over the last 8 years.

Spatial options for delivery

6.6 Different spatial options were considered to deliver the level of growth set out in the plan. Developers' responses to a call for candidate sites helped to indicate the broad range of potential development areas, namely:

- Dispersed brownfield sites;
- Greenfield sites west of Pentreban;e;
- Greenfield sites south of Creigiau/ north of Junction 33;
- Greenfield site north of M4 at Thornhill;
- Greenfield sites west and east of Pontprennau;
- Greenfield sites around Old St Mellons village;
- Greenfield sites in the east- largely employment uses; and
- Dispersed smaller greenfield sites.

6.7 Given the scale of development being considered in growth Options A, B and C, it is inevitable that more than one of these areas is likely to contain sites allocated for development. Therefore, the potential 'in combination' effects of several candidate sites together, and of enlarged or reduced candidate site areas, were also considered.

Appraisal methodology

6.8 Initial appraisal workshops were held in June 2011 to evaluate the LDP strategic options, and the appraisals were later refined by the SA team. The appraisals were undertaken using the SA framework of Table 4.3. For each option, the appraisers considered what the issues and opportunities were, and possibilities for improving the sustainability of the option. The appraisals of options for delivering growth later helped in developing the LDP Preferred Strategy by identifying key sustainability issues for different areas of the City before detailed site assessments began.

Appraisal results

Options for growth

6.9 **Appendix E** shows the appraisal of the different options for growth, and Table 6.2 summarises these findings.

Table 6.2 Summary appraisal findings for the options for growth

SA objective	1. Equality	2. Air quality	3. Biodiversity	4. Climate change	5. Heritage	6. Economy	7. Health and wellbeing	8. Landscape	9. Natural resources	10. Demographic change	11. Waste
A. High growth: total	✓✓	xx	xx	xx	x	✓✓	✓x	xx	✓?	✓x	xx
per capita				✓?							✓?
B. Med. growth: total	✓	x	x	x	x	✓	✓x	x	✓x?	✓	x
per capita				✓?							✓?
C. Low growth: total	x?	x?	x?	x	x?	✓?	✓x?	x?	✓?	?	x
per capita				✓?							✓?

6.10 Option A would provide the greatest social and economic benefits to the city whilst having the most detrimental impacts on the natural and historic environment. Conversely Option C would provide fewer social and economic benefits whilst preserving more of Cardiff's natural environment resources. The impacts of Option B are between those of Options A and C.

6.11 More specifically issues and opportunities include:

- Options A and B could help to address existing socio-economic issues within the city, including the need for affordable homes and accessible community and health care facilities, by providing new large coherent developments and a high number of employment opportunities. The level of growth provided under Option C is less likely to deliver these kinds of social and economic benefits. It may not be able to deliver new developments that support the necessary population thresholds to provide new community and health facilities.

- Options A and B, and to a lesser extent Option C have the potential for significant negative environmental effects. Option A would require the majority of the development land available in the city, leaving little residual land for mitigation measures: this would lead to significant and widespread loss of habitats and severe disruption of habitat connectivity across the city. The lower scale of development under Options B and C could provide opportunities to integrate the landscape into new developments whilst Option A is likely to have unavoidable significant negative impacts on Cardiff's landscape setting.
- All three options have the potential to have negative impacts to the city's air quality due to increased transport and economic activity. This effect could be mitigated by providing mixed use, self-contained developments that reduce the need to travel and incorporate sustainable transport solutions. The impact of Option C on air quality is harder to predict: whilst the effect on air quality would be lower than for Options A or B, the reduced provision of housing could lead to an increase in commuting e.g. from the Valleys by car.
- Over the plan period, for any of the options, citywide greenhouse gas emissions and waste arisings are likely to increase: all the options support a significant growth of the population, and thus consumption, waste and other activities such as transport. There is potential under all of the options to decrease the per capita emissions through the design of new developments e.g. integrating sustainable transport and waste (reuse: recycling: reduction) solutions. Options A and B would involve development on large Greenfield sites, which currently provide important carbon sinks for the City. Their loss would exacerbate the carbon emissions arising from growth. Additionally green spaces help to reduce the impacts of climate change by providing land drainage and reducing the urban heat island effect.
- All of the options have the potential to impact negatively on historic and cultural assets and local character. This is particularly true for Option A where the level of growth is high and almost all of the available land in Cardiff would be developed. These impacts could be mitigated by ensuring that design of new developments is sympathetic to local character and distinctiveness, and that the cultural and historic assets are protected.
- Cardiff needs to be able to respond, sustainably, to future demographic changes. Option C provides a level of growth that is consistent with the last 8 years of demographic change in the city based on local data. Beyond the LDP's plan period (20 years) there would be sufficient development land remaining in the city for further growth if this trend in population increase continues. Under Option A almost all of the available development land would be filled within the plan period and it is uncertain how future demographic changes could be accommodated beyond the plan period. Option B provides housing and employment but leaves some residual development land beyond the plan period.

- 6.12 Option B formed the basis of the October 2012 Preferred Strategy. However Policy KP1 of the Deposit LDP reduces the dwellings figure to 41,100, roughly midway between Options B and C. (The jobs figure remains 40,000 as in Option B). The reasons for this are explained in detail in paras 4.12 to 4.26 of the Deposit LDP. The decisive point is that more recent modelling of the kind that informed the earlier choice of Option B, using more up to date information, indicates that both migration and household formation rates now appear likely to be lower than previously projected.
- 6.13 However, given the uncertainties, KP1 also includes provision to deliver an additional 4,000 homes (ie back to almost Option B) later in the plan period if monitoring indicates this is necessary.
- 6.14 This new option has not been formally appraised. Given that it lies between two options, B and C, which were appraised, that their scores were similar, and that the revised population modelling means that the new option should perform as well as B did previously on the two criteria (1 equality and 10 population) where it might have been expected to do worse, this is not a problem.
- 6.15 The roughly 10% reduction in housing was not accompanied by any pro rata reduction in the areas of land allocated for development. (An apparent small reduction in area was due to two brownfield sites included in earlier drafts of the LDP being removed because they have planning permission and development is already proceeding.) This means that, if and when the extra 4000 dwellings are needed, they will need additional sites: ie that the same quantum of development would now be around 10% less dense and take around 10% more greenfield land than was envisaged in the Preferred Strategy. When the appraisal queried this, the LDP team responded that their more detailed masterplanning had revealed that community facilities, open space and environmental protection were going to require more land than had previously been estimated, so the reduction in density was going to be needed to comply with other LDP objectives and policies anyway.
- 6.16 Following the public Examination, the housing provision was reviewed. Several different adjustments and updates together resulted in a small increase in the total, to 41,415. It was also made more explicit how the additional 4000 dwellings could potentially be accommodated by faster building out of one strategic site and extensions to two others which have been appraised. These changes do not warrant any change in the overall appraisal.

Spatial options for delivery

- 6.17 **Appendix E** shows the appraisal of the different spatial options for delivery, and Table 6.3 summarises these findings.

Table 6.3 Summary appraisal findings for the spatial options for delivery

SA objective	1. Equality	2. Air quality	3. Biodiversity	4. Climate change	5. Heritage	6. Economy	7. Health and wellbeing	8. Landscape	9. Natural resources	10. Demographic change	11. Waste
Dispersed brownfield sites	Too varied and diffuse to effectively appraise at the strategic level										
Greenfield sites west of Pentrebane	✓ xx	x?	x	✓x	x?	✓	✓?	x/ xx?	x	✓✓	x
South of Creigiau / north of Junction 33	x	x/ xx	xx	✓x	?	✓✓	✓?	xx	x	✓✓	x
Greenfield sites west and east of Pontprennau	✓x	x?	x	x	?	✓✓	✓?	x/ xx?	x	✓✓	x
Greenfield site north of M4 at Thornhill	x	x/ xx	x	x	x	0	✓x	xx	x	✓	x
Greenfield sites around Old St Mellons Village	x	x/ xx	x?	x?	0	0	✓x	0	x	✓?	x
Greenfield sites in the east	✓	x?	xx	xx	x	✓✓	x?	xx	x	✓	x
Dispersed Greenfield sites	Too varied and diffuse to effectively appraise at the strategic level										

- 6.18 All the large Greenfield sites would have negative impacts on biodiversity and landscape because they would take up large areas of greenfield land. Air quality would worsen under all of the options because they would increase the use of cars: North of Junction 33, North of the M4 at Thornhill, and sites at Old St Mellons would have particularly negative impacts due to their location in less central locations poorly served by public transport. All new development sites will use natural resources and generate waste, but these are negative impacts of the overall level of development which will not in general differ significantly between locations.
- 6.19 All the large Greenfield sites would respond to demographic change by providing needed housing and employment land. Several would also provide health benefits in the form of improved access to open space, encouragement for walking and cycling, and/or improved health facilities.
- 6.20 The sites' impacts on heritage, equality and climatic factors depends on whether the sites include any aspects of cultural/heritage importance, whether they are located near the 'southern arc' of deprivation, whether they would provide facilities for existing communities, and whether they have the potential to provide renewable energy. Several include areas that are prone to flooding.

6.21 Having considered these points, the planning team’s main reasons for including or not including the main strategic sites in the LDP are:

Dispersed brownfield sites	Generally have few constraints and are considered acceptable in principle . Most of the sites have been taken forward, providing for 27,615 homes – about 65% of the overall housing provision.
Greenfield sites west of Pentreban	Included: Some environmental constraints with protected species on site and close to a Site of Special Scientific Interest, no flood risk implications, a large site with the potential to bring forward a comprehensive range of supporting social and community facilities. Suitable mitigation measures will need to be identified.
Greenfield sites south of Creigiau / north of Junction 33	Included: Contains several Sites of Importance for Nature Conservation, no flood risk implications, a strategically important and visible location in a well used transport corridor adjacent to a proposed Special Landscape Area, can help to deliver wider transport strategy (provision of Park & Ride/Share facility, new rapid transport bus corridor etc.)
Greenfield sites west and east of Pontprennau	Included: Contains several Sites of Importance for Nature Conservation, some flood risk implications, no strategic landscape importance, possibility of integrating existing natural features (stream, woodlands, hedgerows) into any new development, a large site with the potential to bring forward a comprehensive range of supporting social and community facilities, including a primary school for Pontprennau and public open space.
Greenfield site north of M4 at Thornhill	Not included: Crosses a well defined urban edge (the M4), forms part of the strategically important green countryside backdrop to Cardiff, has some biodiversity and landscape importance, relatively isolated from existing community facilities and without the critical mass necessary to effectively deliver on-site provision.
Greenfield sites around Old St Mellons Village	Not included: A relatively isolated area with no notable existing social/community facilities and served by narrow lanes. Additional development would be highly car-based. The disjointed nature of submissions mitigates against a comprehensive approach to dealing with these limitations.
Greenfield sites in the east	Included: Significant environmental constraints: most of the area is a Site of Special Scientific Interest, the adjoining estuary is an internationally important site for birds, it is a Historic Landscape and Archaeologically Sensitive Area, the site meets the criteria for Special Landscape Area status, and flood risk is a major concern. Suitable mitigation measures will need to be identified.

Dispersed Greenfield sites	Generally cause concern because of their isolated and piecemeal nature. More information on these sites can be found at the 2012 LDP Preferred Strategy Background Technical Paper No. 8.
----------------------------	---

7. Appraisal of Candidate Sites for Development

“the likely significant effects on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors”

(SEA Directive Annex I(f))

“an outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information”

(SEA Directive Annex I(h))

- 7.1 This section discusses how the specific candidate sites that were proposed for development in Cardiff were identified and appraised.
- 7.2 In determining where housing and employment growth could be directed spatially, the planning team considered the existing land bank of housing and employment land, scheduled completions, windfall sites and information received from landowners and developers on potential candidate sites. This resulted in 112 possible development sites.
- 7.3 Various combinations of sites were also considered:
- North west transport corridor- Candidate sites south of Creigiau, north of Junction 33 of the M4, sites to west of Fairwater and Radyr
 - North east- Several candidate sites located between Lisvane and Pontprennau plus the site located east of the Pentwyn Link Road
 - St Mellons Village- A collection of relatively small candidate sites in a well-defined area around the fringes of St Mellons Village which collectively cover about 57 hectares
 - Land north of Junction 33 of M4 / south of Creigiau
 - Land south of St Mellons Business Park.
- 7.4 The following enlarged sites were also appraised:
- North west Cardiff submission extended slightly to the west up to Croft Y Genau Road
 - North west Cardiff extended north towards M4
 - North west Cardiff extension to the west
 - Land north of Junction 33
 - Cardiff Central Enterprise Zone – Since the candidate sites were submitted, the Welsh Government have designated the Cardiff Central Enterprise Zone in April 2012. This covers a much larger geographical area than the 3 small candidate sites previously submitted.

Appraisal methodology

- 7.5 A modified approach was taken to the appraisal of individual candidate development sites. It is not possible, at the plan-making stage, to know

precisely what kind of development will go on each site, for instance what combination of housing, employment and infrastructure a developer will propose when they make a planning application; or what site layout and development design they will propose. For other aspects of sustainability, like waste management, the choice of development sites will not affect the impact. As a result these topics were not assessed for individual sites. On the other hand, detailed information is available on some other sustainability topics: for instance, whether they are near sites of nature conservation importance or in areas of flood risk.

- 7.6 To ensure full integration between the plan-making and SA processes, one joint planning/SA pro forma was agreed by the SA and planning teams, and was filled in by the planning team for each candidate development site. The pro forma takes into account the feasibility and applicability of potential mitigation measures. **Appendix F** shows the SA criteria used in the pro formas, and these are summarised at Table 7.1 .

Table 7.1 Appraisal criteria used for candidate sites: links to the site pro forma

SA Objective	Corresponding factor in the candidate site pro forma
1. Help deliver equality of opportunity and access for all	C1: Transport context: is the site near a train station or bus stop, is it easily accessible by foot or cycling etc. D2: Community facilities: is a good range of community facilities near the site, reducing the need to travel
2. Maintain and improve air quality	F1: Air quality: is the site in an Air Quality Management Area, does it pose concerns about air quality etc.
3. Protect and enhance biodiversity, flora and fauna	A1: Biodiversity/geology: is the site on or near any nature conservation designations, have protected species been found on the site etc.
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	B1: Existing flood risk: does the site lie in the floodplain E3: Scope for renewable energy solutions
5. Protect and enhance historic and cultural heritage	A3: Historic, cultural and built environment: is the site on or near any historic designations, could it affect the cultural heritage etc.
6. Help deliver the growth of a sustainable and diversified economy	Not applicable for assessment at location level
7. Improve health and well-being	F2: Health and wellbeing : could development at the site affect the health of existing or future residents etc.
8. Protect and enhance the landscape	A2: Landscape: is the site on or near any landscape designations or would it otherwise affect the townscape or landscape
9. Use natural resources efficiently and safeguard their quality	A4: Natural resources: is the site on high quality agricultural land, are mineral resources on the site etc. A5: Contaminated land: does the site offer the potential to clear up contaminated land
10. Respond to demographic changes in a sustainable way	Not applicable for assessment at location level

SA Objective	Corresponding factor in the candidate site pro forma
11. Minimise waste, increase re-use and recycling	

7.7 After the planning team filled in the pro formas, the SA team checked the pro formas for consistency and logic, and discussed any concerns with the planning team. The main problem identified was that the planners' assumptions about potential mitigation measures meant that almost none of the candidate sites were found to have biodiversity or landscape impacts, even when they were on Greenfield land or designated nature conservation sites. This led to the planners revising many of the pro formas in response to the SA, including:

- Changing many of the planners' neutral impacts on biodiversity or landscape to negative impacts. In the absence of certainty that mitigation measures would be implemented and be successful, a more precautionary approach was felt to be more appropriate;
- Changing some of the planners' positive impacts on health to neutral impacts because of concerns about the air pollution generated by traffic from the site;
- Changing some of the planners' neutral impacts on equality of opportunity to positive impacts because of the site's proximity to existing services and public transport.

7.8 In other cases, this review by the SA team led the planning team to more clearly explain in the pro forma the reasons for deciding that the site would have specific impacts.

7.9 Table 7.2 shows the results of the candidate site appraisal process for both individual sites and combinations/extensions of sites, and also shows whether the site is included in the plan or not. More information on the choice of preferred candidate sites is available in the Preferred Strategy , and in the pro formas at the 2012 LDP Preferred Strategy Background Technical Paper 8 / Appendix 3.

8. Appraisal of Key and Detailed Policies

“the likely significant effects on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors”

(SEA Directive Annex I(f))

“the measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme”

(SEA Directive Annex I(g))

8.1 This section discusses the main sustainability impacts of the LDP’s policies. The following list shows the key and detailed policies of the LDP with the Matters Arising Changes (with additions since the Deposit plan underlined and deletions crossed through).

KEY POLICIES

KP1: LEVEL OF GROWTH

KP2: STRATEGIC SITES

KP2 (A): CARDIFF CENTRAL ENTERPRISE ZONE AND REGIONAL TRANSPORT HUB

KP2 (B): FORMER GAS WORKS, FERRY ROAD

KP2 (C): NORTH WEST CARDIFF

KP2 (D & E): NORTH OF JUNCTION 33 ON M4 AND SOUTH OF CREIGIAU

KP2 (F): NORTH EAST CARDIFF (WEST OF PONTPRENNAU)

KP2 (G): EAST OF PONTPRENNAU LINK ROAD

KP2 (H): SOUTH OF ST MELLONS BUSINESS PARK

KP3 (A): GREEN BELT WEDGE

KP3 (B): SETTLEMENT BOUNDARIES

KP4: MASTERPLANNING APPROACH

KP5: GOOD QUALITY AND SUSTAINABLE DESIGN

KP6: NEW INFRASTRUCTURE

KP7: PLANNING OBLIGATIONS

KP8: SUSTAINABLE TRANSPORT

KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS

KP10: CENTRAL AND BAY BUSINESS AREAS

KP11: ~~MINERALS AND~~ CRUSHED ROCK AGGREGATES AND OTHER MINERALS

KP12: WASTE

KP13: RESPONDING TO EVIDENCED SOCIAL NEEDS

KP14: HEALTHY LIVING

KP15: CLIMATE CHANGE

KP16: GREEN INFRASTRUCTURE

KP17: BUILT HERITAGE

KP18: NATURAL RESOURCES

DETAILED POLICIES

HOUSING

H1: NON-STRATEGIC HOUSING SITES

H2: CONVERSION TO RESIDENTIAL USE
H3: AFFORDABLE HOUSING
H4: CHANGE OF USE OF RESIDENTIAL LAND OR PROPERTIES
H5: SUB-DIVISION OR CONVERSION OF RESIDENTIAL PROPERTIES
H6: CHANGE OF USE OR REDEVELOPMENT TO RESIDENTIAL USE
~~H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S)~~
H8: SITES FOR GYPSY AND TRAVELLER CARAVANS

ECONOMY

EC1: EXISTING EMPLOYMENT LAND
EC2: PROVISION OF COMPLEMENTARY FACILITIES FOR EMPLOYEES IN BUSINESS, INDUSTRIAL AND WAREHOUSING DEVELOPMENTS
EC3: ALTERNATIVE USE OF EMPLOYMENT LAND AND PREMISES
EC4: PROTECTING OFFICES IN THE CENTRAL AND BAY BUSINESS AREAS
EC5: HOTEL DEVELOPMENT
EC6: NON-STRATEGIC EMPLOYMENT SITE
EC7: EMPLOYMENT PROPOSALS ON LAND NOT IDENTIFIED FOR EMPLOYMENT USE

ENVIRONMENT

Countryside Protection

EN1: COUNTRYSIDE PROTECTION
EN2: CONVERSION, EXTENSION AND REPLACEMENT BUILDINGS IN THE COUNTRYSIDE

The Natural Environment

EN3: LANDSCAPE PROTECTION
EN4: RIVER ~~VALLEYS~~ CORRIDORS
EN5: ~~LOCAL NATURE RESERVES AND NON-STATUTORY SITES OF NATURE CONSERVATION AND GEOLOGICAL IMPORTANCE~~ DESIGNATED SITES
EN6: ECOLOGICAL NETWORKS AND FEATURES OF IMPORTANCE FOR BIODIVERSITY
EN7: PRIORITY HABITATS AND SPECIES
EN8: TREES, WOODLANDS AND HEDGEROWS

The Historic Environment

EN9: CONSERVATION OF THE HISTORIC ENVIRONMENT

Natural Resources

EN10: WATER SENSITIVE DESIGN
EN11: PROTECTION OF WATER RESOURCES

Renewable Energy

EN12: RENEWABLE ENERGY AND LOW CARBON TECHNOLOGIES

Pollution

EN13: AIR, NOISE, LIGHT POLLUTION AND ~~CONTAMINATED LAND~~ CONTAMINATION

Flood Risk

EN14: FLOOD RISK

TRANSPORT

T1: WALKING AND CYCLING
T2: STRATEGIC RAPID TRANSIT & BUS CORRIDORS
T3: TRANSPORT INTERCHANGES
T4: CENTRAL TRANSPORT HUB
T5: MANAGING TRANSPORT IMPACTS
T6: IMPACT ON TRANSPORT NETWORKS AND SERVICES
T7: STRATEGIC TRANSPORTATION INFRASTRUCTURE
T8: STRATEGIC RECREATIONAL ROUTES
T9 CARDIFF CITY REGION 'METRO' NETWORK

RETAIL

~~R1: RETAIL PROVISION WITHIN STRATEGIC SITES~~
R1 RETAIL HIERARCHY

8.2 All the key and detailed policies were appraised in August 2013 using the SA framework of Table 4.3. For the many policies repeated from the Preferred Strategy with only minor changes, the appraisals already done in June and July 2012 were reviewed and tweaked as necessary. Appraisals of new policies in the Matters Arising Changes were added in May 2015, and the earlier appraisals revised or deleted as necessary. Further minor changes were made to take account of the further Matters Arising Changes in October 2015 and January 2016. The results for the key policies are summarised in Table 8.1. The full appraisals for all policies are in **Appendix G**. Table 8.1a summarises the impacts of the strategic sites in Key Policy 2.

8.3 Overall, the appraisal found that the LDP policies would have mostly positive or neutral impacts. The impacts were particularly positive with regard to social and economic issues such as equality, economic growth and response to demographic change. The main negative effects would be caused by the policies that promote housing and economic growth and specific development locations, notably Policies KP1 and KP2. Together these would have significant impacts on air quality, biodiversity, the historic and cultural heritage, the landscape and waste production. The LDP's overall impacts are discussed in more detail at Chapter 9.

8.4 A range of changes to key policies were suggested as a result of the appraisal. The planning team put in place most of these changes in the 2012 Preferred Strategy, although some changes were not made for planning reasons. Table 8.2 summarises the suggested changes and shows how they were taken into account. (For ease of reference, policy numbers have been changed to refer to where the relevant material now appears.) As a result of these changes, the LDP policies have become less repetitive, give greater emphasis to reducing the need to travel by car and making facilities accessible by walking and cycling, have increased emphasis on resilience to climate change, and focus more on remediating contaminated land.

8.5 The planning team made two major changes between the Preferred Strategy and Deposit Plans. The first was the 10% reduction in housing provision. This

was a direct response to a downward revision in projected population growth, so the revised policy scores the same against the social and economic objectives as the previous one did. Since the same land will be allocated for development (for the reasons explained at 6.15), the scores against environmental objectives are also unchanged. Further detailed review of housing projections in spring 2015 resulted in a 1% upward adjustment of the provision as a Matters Arising Change.

- 8.6 The second change was the addition of Key Policies KP3a and KP3b designating a green belt and restricting development outside existing settlements. These policies improve the LDP's performance against environmental objectives, with a very small social and economic penalty from restricting development.
- 8.7 A number of smaller changes were also made. Many made no difference to the appraisal. Some, in response to appraisal recommendations, improved the LDP's sustainability performance. A few weakened it.
- 8.8 Further changes were made after the public Examination. These are summarised in Appendix I. Many of these were concerned with clarifying drafting, improving alignment with guidance, updating references or rearranging material, and will make no significant difference to the Plan's sustainability impacts. Some will improve the Plan's impacts, notably by providing more explicitness and certainty over requirements for sustainable transport infrastructure, development densities, meeting the 50:50 modal split target, considering renewable energy opportunities in major developments, and preventing loss of needed community facilities. However very few of these were significant enough to require changes in policy appraisal scores.
- 8.9 Two changes had significant negative effects. The most important was the replacement of the Green Belt policy KP3a with one for Green Wedge. The boundaries and level of protection are unchanged. The change matters because of the loss of permanence. Planning Policy Wales says: 'the boundaries of Green Belts should be altered only in exceptional circumstances and land within a Green Belt should be protected for a longer period than the current development plan period' (para 4.8.5). In contrast, 'Green Wedge policies should be reviewed as part of the development plan review process.' (para 4.8.12.) This means that the Green Wedge would have to be re-argued at each LDP review. It could even be rolled back during the Plan period if, for example, annual monitoring revealed a serious shortfall in housing construction and developers blamed lack of attractive sites.
- 8.10 This creates the possibility of a perverse incentive on developers to hold back from progressing the kinds of development the Plan seeks to encourage (such as brownfield regeneration) in the hope of using underperformance as an argument for rolling back the Green Wedge policy to allow further greenfield development. The change from Green Belt to Green Wedge therefore

potentially weakens the Council's ability to deliver the spatial strategy which underpins the Plan, and which performs well against the SA/SEA objectives.

- 8.11 The second significant negative change is the deletion of a former policy on provision of allotments and community gardens which scored very positively on a number of environmental and social criteria.

Table 8.2 Changes resulting from the appraisal of LDP key policies

LDP Key Policy	Change proposed by SA team	Response to proposed change
<p>KP2. In addition to a wide range of brownfield site commitments, the following Strategic Sites (500 homes or more) and/or significant employment/mixed use sites are proposed:...</p>	<p>Provide more detail about individual sites in Policy KP2 - e.g. number of affordable homes sought, precise infrastructure to be provided etc. – to ensure that policy is implemented as expected.</p>	<p>Suggested changes rejected. Policy wording unchanged.</p> <p>The role of the LDP Preferred Strategy is to set a strategic framework to inform more detailed work at the master and infrastructure planning stages. At this stage it would be difficult to set out the number of jobs, affordable housing, etc without being too prescriptive. General principles covering these issues are set out in other policies notably KP13 which includes a target for affordable housing on new housing developments (30% on Greenfield sites and 20% on brownfield sites, with a total of 6973 affordable homes built by 2026) and Policy KP14 which sets out principles of sustainable neighbourhoods including the provision of a full range of accessible social, health, leisure and education facilities and community infrastructure for the new communities proposed in the LDP.</p>

LDP Key Policy	Change proposed by SA team	Response to proposed change
	<p>Ensure that the Habitats Regulations Assessment has appraised the impacts of the individual strategic development sites in Policy 2, and has confirmed that these can be developed without significant 'in combination' impact on the integrity of any SPA, SAC or Ramsar site.</p> <p>In particular, development of the land south of St. Mellons Business Park is currently expected to involve land raising, which could have significant impacts on water quality and hydrology of the Severn Estuary SPA/ SAC/ Ramsar site.</p>	<p>The HRA has appraised all of the Key Policies, Strategic Options, Spatial Options and Vision Outcomes within the LDP, and performed a test of likely significance (TOLS) both alone and in-combination.</p> <p>This site has been assessed in the HRA, and because of its distance from the foreshore, we do not believe that development thereon is likely to have a significant effect upon the Severn Estuary designations. The soil recycling facility south of Wentloog Avenue involves spreading large amounts of soil over fields of a similar area to this Candidate Site, but despite concerns over water quality in the SSSI, CCW have not raised any issues over the effects on water quality in the estuary itself.</p>
<p>KP2C. North West Cardiff – comprehensive development including approximately 7,500 homes, employment and other associated uses;</p>	<p>Include in the LDP description that the disused railway line will be safeguarded, including wide green buffers to allow for a wildlife corridor, walking/cycling trail, and possible future reinstatement of the railway line.</p>	<p>Not appropriate at this stage to include specific details about the site in the key policy. These issues can be considered in the more detailed master planning and infrastructure planning stages.</p>

LDP Key Policy	Change proposed by SA team	Response to proposed change
	<p>Include in the LDP description that a segregated rapid bus lane towards the city centre is expected to be in place before the first house on any part of the site is moved into. If this does not happen, then people who move into the homes in the early stages of development will become used to travelling in their cars. Also there might otherwise be the temptation to develop parts of the site – with different planning applications for different parts of the site - without these essential pieces of infrastructure being delivered.</p>	<p>Policy KP8 on Sustainable Transport amended to include statement that ‘Development in Cardiff will be integrated with transport infrastructure and services in order to: ... (i) Achieve the target of a 50:50 modal split between journeys by car and journeys by walking, cycling and public transport’ and proposed sustainable transport infrastructure and service provision in individual masterplans. Commitment added to the site specific principles to ‘ensure frequent public transport provision is in place prior to residential occupation of the site’.</p>
<p>KP2D. North of Junction 33 on M4 – mixed use of approximately 2,000 homes, employment and other associated community uses and a strategic Park and Ride site;</p> <p>KP2E. South of Creigiau – housing-based scheme of approximately 750 homes with associated community uses;</p>	<p>Include in the LDP description that a segregated bus route or tram/railway line to the city centre via North West Cardiff is expected to be in place before the first house on any part of the site is moved into. This may mean that this site cannot be developed until North West Cardiff is developed. If this does not happen, then people who move into the homes in the early stages of development will become used to travelling in their cars. Also there might otherwise be the temptation to develop parts of the site – with different planning applications for different parts of the site - without this essential piece of infrastructure being delivered.</p>	<p>Policy KP8 on Sustainable Transport amended to include statement that ‘Development in Cardiff will be integrated with transport infrastructure and services in order to: ... (i) Achieve the target of a 50:50 modal split between journeys by car and journeys by walking, cycling and public transport’ and proposed sustainable transport infrastructure and service provision in individual masterplans. Commitment added to the site specific principles to ‘ensure frequent public transport provision is in place prior to residential occupation of the site’.</p>

LDP Key Policy	Change proposed by SA team	Response to proposed change
	Include in the LDP description that the Park and Ride site is expected to be in place early in the project development, for the same reasons as the segregated bus/tram route	Policy KP8 on Sustainable Transport amended to include statement that 'Development in Cardiff will be integrated with transport infrastructure and services in order to: ...(i) Achieve the target of a 50:50 modal split between journeys by car and journeys by walking, cycling and public transport' and proposed sustainable transport infrastructure and service provision in individual masterplans. Commitment added to the site specific principles to 'ensure frequent public transport provision is in place prior to residential occupation of the site'.
KP2H. South of St Mellons business park	From an environmental perspective, this is a very poor site and it is recommended that it is avoided. Its only real benefit is that it will provide land for the kinds of jobs that would not easily be accommodated in the city centre, and that these may be accessible for residents of Trowbridge and Rumney. From a transport perspective, it would be more sustainable to provide several smaller employment sites scattered across the city.	Although significant mitigation measures are required on this site in order to bring it into use i.e. site raising, flood prevention measures, transport, it is considered feasible due to the strategic nature of the site. It will provide a significant number and range of jobs which is one of the key objectives of the LDP.
3.* Cardiff Central Enterprise Zone A Central Enterprise Zone and Regional Transport Hub is proposed in Cardiff city centre in order to fulfil Cardiff's role as economic driver of the city-region, provide major employment opportunities focused on financial and business services and maximise the advantages of its location adjacent to the Central Station and Cardiff Bus Station.	Remove this policy as it duplicates Policy KP2A.	Policy removed, and all subsequent policies renumbered
KP9. There will be a strong presumption in favour	...retaining and encouraging the	Suggested changes rejected. Policy wording unchanged

LDP Key Policy	Change proposed by SA team	Response to proposed change
of retaining and encouraging the intensification and refurbishment of existing industrial and warehousing land....	intensification and refurbishment... recommended to be replaced by ...retention, enhancement, and efficient use.	
KP13.Encouraging the provision of a full range of accessible social, health, leisure and education facilities and community infrastructure for both existing and new communities;	Meaning of 'accessible' expanded to that are 'accessible to all and by walking and cycling' and moved to end of point.	Agree policy amended.
KP14. Cardiff will be a made a healthier place to live by seeking to reduce health inequalities, encouraging healthier lifestyles and providing accessible and usable green spaces including allotments. In particular Cardiff...	Add: ...usable green spaces including allotments , and providing accessible health facilities	Agree policy amended.
KP8. Through their location and design reduce car use and dependency by enabling residents to access employment, shopping, medical, educational and other essential services and community facilities by sustainable travel modes;	Add: reduce the need to travel, and.... after Through their location and design....	KP8 says 'Development in Cardiff will be integrated with transport infrastructure and services in order to: ... (ii) Reduce travel demand and dependence on the car'. The key sustainability aim of reducing the <i>need</i> to travel remains as objective 1(j), but there is now no policy or supporting text explicitly directed to achieving it.
17.* Travel Plans will include practical and deliverable measures designed to stimulate the use of sustainable travel choices by residents or users of a development. Including, although not restricted to:	Add: and neighbouring communities afterusers of a development.	Suggested changes rejected. Policy wording unchanged. Now no reference to travel plans in any policy text, only in supporting text (para 5.245 of Deposit LDP).
19 (vii)* Car parking and servicing. Car parking will be minimised in line with improvements to access by sustainable transport, in particular, reducing long stay parking for commuters;	Add: (whilst still providing for disabled users);	No reference to minimising car parking anywhere now. Supporting text states that parking and servicing will be provided in accordance with the Councils adopted standards.
KP5(ix) Promoting the efficient use of land;	Add: 'and where appropriate the remediation of contaminated land;'	Agree policy amended.

LDP Key Policy	Change proposed by SA team	Response to proposed change
KP5(x) Ensuring no undue effect on the amenity of neighbouring properties;...	Add: 'and connecting positively to surrounding communities;'	Agree policy amended.

*Numbers retained from 2012 Preferred Strategy because there is no corresponding material in the Deposit LDP

8.12 In addition to reviewing policies, the sustainability appraisal identified some gaps where the Deposit Draft policies did not fully cover the SA objectives. These are shown at Table 8.3, along with the planning team's response to the SA comments. Some of these have now been overtaken by the Matters Arising Changes summarised in Appendix I.

Table 8.3. Changes resulting from the appraisal of gaps in the LDP policies

Comments on gaps in the LDP policies	LDP response
<p>Air quality / climate change: The LDP notes that 45% of air pollution is from industry, 30% is from domestic sources and 25% is from road. However by far the greatest focus has been on pollution from cars. Does the LDP need to say something about emissions from homes and industry, e.g. sustainable home standards?</p>	<p>Policy KP18 on Natural Resources changed to: "<u>(iii) Minimising air pollution from industrial, domestic and road transportation sources and managing air quality.</u>"</p> <p>Policy KP5(vii) on Good Quality and Sustainable Design changed to: "Achieving a resource efficient and climate-responsive design that provides sustainable water and waste management solutions, minimises water usage and maximises sustainable drainage <u>and minimises emissions from transport, homes and industry;</u>"</p>
<p>Renewable energy: Overall the LDP says little on the subject of renewables. This may be because the Council is conducting a Renewable Energy Assessment. Should/can the LDP be more proactive here? Can the LDP identify development sites where renewables would be expected to be provided? Can the LDP identify sites especially for renewables?</p>	<p>Criterion (iv) of policy KP15 states that the LDP will seek to increase the supply of renewable energy and criterion (vi) of Policy KP5 states that the LDP will seek to maximise renewable solutions. This is supported by policy EN12 on renewable energy and low carbon technologies</p>
<p>Biodiversity and landscape: The LDP explicitly states that brownfield sites will not be sufficient so greenfield will have to be used. Given this and a general shortage of discussion on biodiversity in the LDP, biodiversity and the landscape are generally not well treated in the plan</p> <p>Should there be greater consideration of biodiversity protection, specification of what biodiversity enhancement would be provided at each strategic housing site, offsetting of biodiversity impacts where these are unavoidable, creation and designation of new biodiversity sites etc?</p>	<p>Policy KP5 on good quality and sustainable design changed to: "<u>(x) Ensuring no undue effect on the amenity of neighbouring properties and connecting positively to surrounding communities</u>".</p> <p>In terms of biodiversity the Natural Environment section of the LDP emphasises the strategic importance of protecting Cardiff's natural environmental assets – including its countryside, landscape and biodiversity. This is supported by Policies EN3-8. These principles have been applied in the detailed master planning to protect biodiversity interests of the strategic sites.</p> <p>Given this, it is considered the plan addresses biodiversity issues adequately and the necessary hooks are in place to enable this issue to be picked up in more detail as the LDP progresses.</p>

<p>Contaminated land The LDP does not promote the remediation of contaminated land</p>	<p>Policy KP5 on good quality and sustainable design changed to: "(ix) Promoting the efficient use of land <u>and where appropriate achieving the remediation of contaminated land;</u>"</p>
<p>Housing density The LDP says little about housing density. It refers to 'appropriate and efficient density' (Objective 4.9), notes that efficient use of land is desirable, and states that developers should 'respond to the local character and context...' (including density) in their development proposals. However it gives no indication of what typical density would be expected, or what the high and low ranges would be. This could encourage low density development, particularly on the outlying Greenfield sites.</p>	<p>Policy KP5 includes: (ix) Promoting the efficient use of land, developing at highest practicable densities.</p> <p>General Masterplanning Principle 2 sets out a high level aspiration to focus high density development along public transport corridors and in neighbourhood centres with lower densities provided elsewhere to deliver an overall range and choice to meet different needs.</p> <p>The Masterplanning General Principles have informed the Site Specific principles and Schematic Frameworks for the strategic sites and will be used by the Council through the planning and design process to work with developers to design detailed masterplans. This work will include identifying appropriate densities across the strategic sites.</p>

9. Overall Effects and Mitigation

“the likely significant effects on the environment, including on issues such as biodiversity, population, human health, fauna, flora, soil, water, air, climatic factors, material assets, cultural heritage including architectural and archaeological heritage, landscape and the interrelationship between the above factors”

(SEA Directive Annex I(f))

“the measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme”

(SEA Directive Annex I(g))

- 9.1 The Local Development Plan Manual states that a sustainability appraisal should include an evaluation of the significance of the predicted effects including “the probability, duration, frequency and reversibility ... [and] secondary, cumulative and synergistic effects”. The Practical Guide to the Strategic Environmental Assessment (Office of the Deputy Prime Minister et al 2005) states that the nature of the effects should be assessed.

Impact prediction and evaluation

- 9.2 The LDP was evaluated to establish what its probable effects would be on the indicators identified in the Scoping Report, including
- short-term impacts (0-5 years), expected to be mostly related to construction of new developments
 - medium term impacts (6-10 years)
 - long term impacts (11-20 years), expected to be mostly related to operation of new developments.
- 9.3 Table 9.1 brings together the previous appraisals of Chapters 5-8 to show what the overall/cumulative impacts of the LDP would be. Table 9.2 goes into further detail on the overall impacts of the LDP (the final row of Table 9.1), with a particular emphasis on the impacts of the proposed strategic development sites.
- 9.4 Overall the LDP would have significant benefits in providing the housing and employment land that Cardiff's current and future residents will need. It will help to improve access to good quality jobs, services and infrastructure for Cardiff's residents, although it is unlikely to fully redress the imbalance between the 'southern arc' of deprivation and other areas of the city. Residents' health should improve in response to better housing, access to open space, and walking and cycling facilities. The new development may draw in people who currently live or work in the Valleys, and so have indirect impacts on neighbouring authorities.

Table 9.2 Overall sustainability impacts of the LDP: short, medium and long term impacts

SA Objective	Overall impacts			
	S	M	L	
1. Help deliver equality of opportunity and access for all	✓ ?	✓ ?	✓ *	<p>Policy KP1 aims to deliver about 40,000 new jobs and 41,415 new dwellings, and Policy KP2 supports this by identifying strategic sites to deliver this growth. Policy KP13 supports the delivery of affordable housing, and promotes sustainable neighbourhoods. The proposed sites together would provide substantial additional housing and employment land.</p> <p>However several of the strategic sites are out of the existing urban area and only a few would support regeneration of the 'southern arc' of deprivation. The large strategic sites would have poor public transport accessibility unless and until substantial new investments were made. The addition to the site specific principles of the requirement to 'ensure frequent public transport provision is in place prior to residential occupation of the site' will help.</p> <p>Inequalities are likely to increase over time as the residents of outlying Greenfield sites drive through existing more deprived areas to access the city centre.</p>
2. Maintain and improve air quality	* ?	* ?	* ?	<p>Policy KP18 on Natural Resources aims to minimise air pollution and manage air quality. Policy KP8 amplified by policies T1-T8 aspires to reduce travel demand and car dependence, support the delivery of high quality public transport, deliver improved bus corridors and Park and Ride/ Share schemes, and support walking and cycling. T9 seeks to work towards developing a new 'metro' network.</p> <p>However the scale of growth envisaged for Cardiff will inevitably lead to more air pollution from traffic, homes and businesses. The largest strategic sites are on the edge of Cardiff, far from the city centre, and likely to be heavily car dependent. Where these sites provide for both housing and employment, the need to travel may be reduced if residents both live and work in the same area. Stronger commitments in the MACS to ensure sustainable transport infrastructure is in place early in development and to deliver a 50:50 modal split are welcome.</p>

SA Objective	Overall impacts			
3. Protect and enhance biodiversity, flora and fauna	*	**	**	<p>Policy KP16 on Green Infrastructure aims to protect and enhance Cardiff's areas of biodiversity, including designated sites. However the scale of development being proposed, and the amount of development that is expected to be on Greenfield sites, means that Cardiff's biodiversity will be significantly negatively affected by the LDP.</p> <p>Strategic site H would be 99 hectares entirely in a Site of Special Scientific Interest (SSSI). Several strategic sites would affect Sites of Importance for Nature Conservation (SINCs), though satisfactory mitigation is expected to be possible for most of these:</p> <ul style="list-style-type: none"> • Site C would affect one SINC • Sites D and E would affect 8 SINCs and are adjacent to a river SSSI • Site F would affect 9 small SINCS, is adjacent to two SSSIs, and a river valley runs through the middle of the site. <p>Several sites also include protected species such as bats and dormice.</p> <p>Site H would have by far the most significant impacts.</p>
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	* ?	* ?	* ?	<p>Policy KP15 aims to reduce greenhouse gas emissions and adapt to climate change, including flooding. Policies T1-T9 on transport aim to support a modal change from car use to walking, cycling and public transport.</p> <p>However the scale of growth envisaged for Cardiff will inevitably lead to more greenhouse gas emissions from traffic, homes and businesses. The largest strategic sites are on the edge of Cardiff, far from the city centre, and likely to be heavily car dependent. Where these sites provide for both housing and employment, the need to travel may be reduced if residents both live and work in the area. However the aspiration for a 50:50 modal split is unlikely to be achieved unless the LDP requires specified sustainable transport infrastructure and services to be in place before the sites are occupied. The addition to the site specific principles of the requirement to 'ensure frequent public transport provision is in place prior to residential occupation of the site' will help.</p> <p>Of the strategic sites,</p> <ul style="list-style-type: none"> • Most of Site A is in flood risk zone C1 (served by significant infrastructure) • Part of Site B is in zone C1 • Some of Site F is in zone C2 (not served by significant infrastructure) • All of site H is in zone C1: the initial suggestion is that development would require land raising and improvements to the sea wall to respond to this.

SA Objective	Overall impacts			
5. Protect and enhance historic and cultural heritage	0?	0?	x ?	<p>Policy KP17 on Built Heritage aims to protect and enhance Cardiff's heritage assets. Most of the proposed development sites will have no effect on the historic and cultural heritage, provided that harm to the setting of nearby historic buildings is avoided through good design. Of the strategic sites:</p> <ul style="list-style-type: none"> • Site B would affect one Grade II listed building • Site C would affect two Grade II listed buildings and St. Fagans conservation area • Sites D&E contain one Grade II listed building • Site F contains one Grade I and one Grade II listed building • Site G contains three Grade II and II* listed buildings plus other historic records • Site H is located within an archaeologically sensitive site and most of it is in a registered Landscape of Outstanding Historic Interest <p>It would probably not be possible to mitigate the historic/ cultural impacts of Site H.</p>
6. Help deliver the growth of a sustainable and diversified economy	✓	✓ ✓?	✓✓	<p>Policy KP1 aims to deliver about 40,000 new jobs. Policy KP9 promotes new employment sites and protects existing ones. Policy KP10 supports economic development in the city centre and Bay Business Area.</p> <p>Cumulatively, the proposed development sites will diversify and support the city's economy. Some strategic sites outside the existing urban area may undermine the vitality and viability of the city centre, although where both housing and employment land are provided on the same site this could help to provide for a diversified economy.</p>
7. Improve health and well-being	?	✓ ?	✓ x ?	<p>Policy KP13 supports the provision of affordable housing, which would help to improve health, and encourages the provision of adequate community facilities and infrastructure, including health facilities. Policy KP14 supports healthy living by seeking to reduce health inequalities and provide accessible green spaces. Policy T1 supports walking and cycling. Policy T8 safeguards strategic recreational routes. Some of the proposed development sites will support regeneration, and new community facilities are proposed as parts of the 'package' for some larger sites which currently lack them. One of the non-strategic sites, site 18, could also provide additional community facilities for its area.</p> <p>Development sites outside the urban area are likely to increase car dependency, with health disbenefits. Several of the strategic sites have longer term flood risks (see 4.), and increasing air pollution would have a negative impact on people's health (see 2.).</p>

SA Objective	Overall impacts			
8. Protect and enhance the landscape	<div style="background-color: yellow; text-align: center;">✓ x</div>	<div style="background-color: orange; text-align: center;">x</div>	<div style="background-color: red; text-align: center;">x x</div>	<p>Policy KP16 on Green Infrastructure aims to protect and enhance the natural heritage, and Policy KP18 on Natural Resources aims to protect the city's natural resources: both will also have landscape benefits. Policy EN3 aims to protect five Special Landscape Areas. Policy KP5 on High Quality and Sustainable Design will help to ensure that new development protects and enhances the landscape.</p> <p>Many of the proposed development sites have been previously developed, and their development would have a neutral or positive effect on the landscape.</p> <p>Regeneration of the Cardiff Central Enterprise Zone (strategic site A) would be particularly beneficial. However most of the area of proposed development is Greenfield, which would have significant negative landscape impacts. Overall, the preferred strategy would lead to the development of more than 900 hectares of Greenfield land.</p> <p>Strategic sites D, E and H are adjacent to a potential Special Landscape Area, and site H has been identified as a high quality landscape by a study undertaken in 2008. Site H is adjacent to the Newport Green Belt, and most of the site is in a registered Landscape of Outstanding Historic Interest.</p>
9. Use natural resources efficiently and safeguard their quality	<div style="background-color: yellow; text-align: center;">✓ x</div>	<div style="background-color: yellow; text-align: center;">✓ x</div>	<div style="background-color: yellow; text-align: center;">✓ x</div>	<p>Policy KP11 aims to promote the efficient use of minerals, and Policy 25 aims to protect natural resources in the city by protecting agricultural land, water resources, and air and water quality, and remediating contaminated land.</p> <p>Of the strategic sites:</p> <ul style="list-style-type: none"> • Sites A and B have been previously developed, and their re-use would make efficient use of land. • Site C may include contaminated land and Site G includes two areas of landfill: redevelopment of these sites would help to clean up this contamination. • Sites C, D, E, F and H are Greenfield sites with no record of contamination, and in several cases significant amounts of high quality agricultural land would be lost. • Water quality at the Severn Estuary SPA/SAC/Ramsar site and in the historic reens of the Wentloog Levels could be significantly affected by development at Site H. Mitigation of these impacts would be difficult if the site was built on raised land. Sites B, D,E and F have rivers running through/adjacent to them: careful mitigation will be needed to maintain river quality.

SA Objective	Overall impacts			
10. Respond to demographic changes in a sustainable way	✓	✓✓	✓✓?	<p>Policy KP1 is for the delivery of about 40,000 new jobs and 41,415 new dwellings, and Policy KP2 supports this by identifying strategic sites to deliver this growth. The sites would help respond to clear existing demand for housing and employment sites, including identified demand for Greenfield sites.</p> <p>Supporting text to KP1 explains how the additional 10% flexibility allowance could, if required, be accommodated on one of the strategic sites and extensions to two others.</p> <p>The significant growth proposed for Cardiff could affect development of the Valleys, since it could draw people away from the Valleys to take up work or housing in Cardiff.</p>
11. Minimise waste, increase re-use and recycling	✗ ?	✗ ?	✗	<p>Policy KP12 on waste aims to reduce the generation of waste and provide adequate waste management facilities. This is amplified by the waste policies W1 and W2. However the LDP generally says relatively little about reducing waste, or promoting reuse and recycling. The scale of growth proposed in the LDP would lead to the generation of considerably more waste than at present, during both construction and operation.</p>

9.5 Environmentally, the LDP would have some significant negative impacts. The sheer volume of development which the LDP has to provide for will inevitably result in increased total air pollution, greenhouse gas emissions, use of natural resources and waste because of increased traffic, houses and employment. The LDP includes many enlightened policies to reduce these impacts. If these are fully, thoroughly and promptly implemented they could substantially reduce per capita impacts. Some of the Matters Arising Changes provide welcome strengthenings in commitments to implementation but their effectiveness is still uncertain.

9.6 The LDP provides for development of several major Greenfield sites amounting to about 902 hectares. The largest of these are located far from Cardiff city centre, so will increase transport impacts even if sustainable transport provision is made before occupants move in; and several would affect areas that are designated for their landscape or biodiversity importance, and even with the mitigation measures contained in the policies biodiversity and landscape quality are likely to decrease significantly.

9.7 Strategic Site H is particularly problematic. It comprises 99 hectares fully in a Site of Special Scientific Interest, archaeologically sensitive site, and Landscape of Outstanding Historic Interest (national level designations). It is susceptible to flooding, and so the initial proposal is to raise the land and make improvements to the sea wall to protect the development from flooding. However this would affect the hydrology and water quality of the historic reens (ditches) in the area. The reens

drain to the Severn Estuary SPA/SAC/Ramsar sites, and so water quality problems in the reens could affect the integrity of those sites.

Mitigation measures

9.8 Measures previously suggested to avoid or reduce the impact of individual LDP policies or proposed development sites are listed at Tables 5.2, 8.2 and 8.3. Table 9.3 proposes measures to avoid or reduce additional plan-wide impacts of the LDP. It also makes suggestions for how to improve the benefits of the LDP.

Table 9.3. Changes proposed to the LDP in response to cumulative/overall impacts

Significant overall / cumulative impacts of the LDP	Suggestions for avoiding or minimising negative impacts or enhancing positive ones	LDP response
Existing deprivation and inequalities unlikely to be significantly reduced by the LDP	Give greater emphasis to providing housing and employment sites in the 'southern arc' of deprivation, and improving community facilities and green areas there.	Policy KP13 of the Plan relating to sustainable neighbourhoods seeks to support the regeneration of deprived communities within the city and enhance communities through better equality of access to services. 65% of the need for new dwellings over the Plan period will be met from brownfield sites. Many of these sites are in the existing landbank and are located in the "southern arc of deprivation" where development will aid the regeneration. The LDP also protects existing employment land located within this area with resultant community benefits.
The LDP could attract people from the Valleys to live and work in Cardiff	Consult with local authorities in the Valleys to help minimise any negative impacts on Valley communities	Surrounding Local Authorities have been consulted on the preparation of the plan from the first stages of development. During a regional collaborative exercise at Preferred Strategy stage there was support from these authorities for the level of growth proposed in the LDP. The findings of this collaborative work are set out in the Supporting Document No. 17.
Air pollution and greenhouse gas emissions likely to increase due to remoteness of large Greenfield sites and their expected car dependence	Provide employment sites in many smaller rather than a few larger clusters, to prevent them becoming 'trip attractors'	The LDP provides for a range of both large and small employment sites and seeks to protect existing employment sites within the city to ensure a good spread across the city of employment opportunities.
	Include requirement for relevant sustainable transport infrastructure and services to be implemented before any development is occupied in strategic site masterplans	LDP Policies KP4 and KP6 require sustainable transport infrastructure and services to be delivered in a timely manner to meet the needs of existing and planned communities, and the strategic site policies under KP2 now specify infrastructure to be provided before or at the start of development.

Significant overall / cumulative impacts of the LDP	Suggestions for avoiding or minimising negative impacts or enhancing positive ones	LDP response
Significant impacts on biodiversity from development on Greenfield sites, particularly Strategic site H	Remove Strategic site H from the plan	See response below.
	Include a policy in the LDP requiring strategic sites to have no net biodiversity loss – this will require them to provide biodiversity benefits (perhaps off site) to offset any biodiversity losses	<p>The need to protect and enhance biodiversity and landscape features is identified in Masterplanning General Principle 9 and Policies KP4 (9) KP16, EN1, EN5, EN6 and EN7 of the LDP.</p> <p>The Masterplanning General Principles have informed the Site Specific Principles and Schematic Frameworks for the strategic sites which also recognise the need to protect and enhance biodiversity. These will be used by the Council through the planning and design process to work with developers to design detailed masterplans.</p> <p>In addition Masterplanning General Principle 8 promotes strategic green connected open spaces which will aim to protect areas of biodiversity value and provide connectivity to enable movement of wild species. Again this principle has informed the site specific Principles and Schematic frameworks which identify such features.</p>

Significant landscape and historical impacts from development on some of the Greenfield sites, particularly Strategic site H	Remove Strategic site H from the plan	The Site Specific Principles on page 57 of the Masterplanning Framework which forms a Supporting Document to the LDP state that the Wentloog Levels Landscape of Outstanding Historic Interest and Archaeologically Sensitive area will be protected. In order to ensure this it is important that the development of the site is undertaken in a sensitive manner to minimise harm. These principles will be used by the Council through the planning and design process to work with developers to design detailed masterplans.
Cumulative impact on water resources is unclear	Confirm with Dŵr Cymru that water provision and wastewater treatment infrastructure will be adequate for the amount of development being proposed	Dwr Cymru have been consulted on the preparation of the LDP from the early stages of development and have not raised any significant issues relating to capacity.
Other possibilities	Consider developing mini-	Given the non-strategic sites which are

for improving benefits or reducing impacts	masterplans for the non strategic sites where these sites are near to each other and could jointly provide benefits or reduce costs in a way that they could not do individually.	allocated in the Deposit Plan are not directly adjacent each other this approach is not considered appropriate.
--	---	---

10. Next Steps

- 10.1 This chapter discusses what happens next: post-adoption explanation of how the SA influenced the LDP, and monitoring of the LDP's significant effects.

Post adoption 'SEA statement'

- 10.2 Once the LDP is adopted, Cardiff Council will publish an 'SEA statement' which explains how the sustainability appraisal influenced the LDP. Publication of such an SEA statement is required by the SEA Directive (Article 9.1b). Most of that information is already available in this SA report, but the SEA statement will also include information on how further rounds of SA, and consultation comments on this report and any further SA rounds, were taken into account by the planning team.

Monitoring

"a description of the measures envisaged concerning monitoring" (SEA Directive Annex I(i))

- 10.3 Once a plan is adopted, the SEA Regulations require local authorities to "monitor the significant environmental effects of the implementation of each plan or programme with the purpose of identifying unforeseen adverse effects at an early stage and being able to undertake appropriate remedial action" (Reg. 17), and the environmental report should describe how this might be carried out.
- 10.4 Much monitoring is already carried out in Cardiff for other purposes, for instance traffic counts for transport planning, and reviews of landscape and nature conservation designations as an input to national level monitoring. **Appendix B** shows the current situation in Cardiff, based on existing monitoring data.
- 10.5 The SA process has identified a range of significant environmental effects, as well as underlying assumptions of the LDP which, if they do not work out in practice, could lead to adverse effects. Table 10.1 proposes a framework to monitor these impacts. It shows:
- monitoring indicators that aim to measure likely effects of the LDP identified in the SA;
 - who would monitor the indicators and how frequently;
 - targets (positive) that the LDP will try to achieve;
 - information about why the indicator has been proposed.
- 10.6 Most of the data is already being collected through existing monitoring systems. The previous proposals have been tweaked to use indicators that will be reported as part of the LDP's own monitoring for the sake of efficiency and consistency: these are identified by their 'monitoring reference' in chapter 6 of the LDP below. However the overlap is only partial. LDP monitoring concentrates on the *implementation* of policies (for example, whether planning permissions are granted

that would damage designated sites) while SA monitoring is primarily concerned with *outcomes* (for example the condition of designated sites.) Some new monitoring is proposed here that would measure specific aspects of the LDP that are important for the sustainability of future development in Cardiff.

Table 10.1. SA monitoring framework

SA objective	1. Indicator	2. Who monitors	3. Target	4. Reason for monitoring
1. Help deliver equality of opportunity and access for all	The percentage of population in the 100 most deprived wards in Wales	<i>Contextual</i>	Reduction	Cardiff has more deprived areas than the Welsh average. The LDP aims to help redress this.
	The number of net additional affordable dwellings built	<i>OB2 SO3</i>	6,646 net affordable units over the remaining Plan period (representing an average of 22.8% of total housing provision)	Provision of affordable housing is an ongoing problem in Cardiff, with more than 10,000 applicants on the council housing register and more than 300 households in temporary accommodation in mid-2010
	Total number of Gypsy and Traveller pitches for residential accommodation	<i>OB2 SO10</i>	Net increase	Identified as being a problem by the Equalities Impact Assessment
2. Maintain and improve air quality	NO2 levels	Cardiff Council Pollution Control	40µg/m ³	Many areas of the city already exceed legal standards
3. Protect and enhance biodiversity, flora and fauna	Number and extent of designated sites of importance (SACs, SPAs, SSSIs, Ramsars, LNRs and SINCs, ancient woodland)	Cardiff Council / CCW	No loss of area	Many of the development sites proposed in the LDP are adjacent to or include designated biodiversity sites, or include LBAP priority habitats. These should be protected as part of development of the sites
	Condition of SSSIs	CCW	No reduction in condition	
	Extent of Local Biodiversity Action Plan priority habitats	Cardiff Local Biodiv. Action Plan	No reduction in extent	
4. Reduce emissions of greenhouse gases	Traffic volumes (vehicle-km)	Welsh Government		The LDP aims to reduce travel demand, particularly by car, in part by improving the balance between

SA objective	1. Indicator	2. Who monitors	3. Target	4. Reason for monitoring
that cause climate change and adapt to its effects	% of people walking, cycling, travelling by bus and train for each journey purpose	<i>OB1 EC15-18</i>		homes and jobs in Cardiff, and in part by providing jobs and services where people can reach them by non-car modes
	No. residents working in Cardiff, no. people commuting out of Cardiff, no. people commuting into Cardiff	Welsh Government		
	Modal split	<i>OB1 EC14</i>	'at least 50% of all trips on Cardiff's transport network ... made by sustainable modes by the end of the Plan period in 2026'	Several of the large Greenfield sites proposed in the LDP – notably west of Pentrebanne, north of J33, and west and east of Pontpennau – are in relatively inaccessible locations and can only be sustainable if a high proportion of journeys can be made by modes other than car. This is unlikely to be achieved unless relevant transport infrastructure is delivered in advance of people moving into the development.
	Delivery of transport infrastructure as part of key strategic sites	Cardiff Council Transport Policy Team	As per the LDP and site masterplans	
	Permissions granted for highly vulnerable development in C1 and C2 flood risk areas	<i>OB3 EN1 and EN2</i>	0	
5. Protect and enhance historic and cultural heritage	Number of listed buildings, conservation areas, etc.	Cardiff Council Conservation Team	No reduction	Several of the development sites proposed in the LDP could affect the historic and cultural heritage
6. Help deliver the growth of a sustainable and diversified economy	Net job creation over the remaining Plan period	<i>OB1 EC9</i>	40,000 net additional jobs over plan period, 20,900 between 2006 and 2015	A key expected outcome of the LDP is delivery of 40,000 new jobs

SA objective	1. Indicator	2. Who monitors	3. Target	4. Reason for monitoring
7. Improve health and well-being	Delivery of community infrastructure as part of key development sites	Part of <i>OB4 SN12</i>		Provision of new community facilities – many of which can also improve the well-being of existing communities – is expected to be a key benefit of new development.
	% of journeys made by walking/cycling	Parts of <i>OB1 EC15-18</i>	Increase	Physical activity is a key component of good health. Several LDP policies aim to increase the proportion of Cardiff residents who walk and cycle.
	Percentage of population in the 100 most deprived wards in Wales in the 10% most deprived wards in Wales for physical environment	Local Government Data Unit	Reduction	People's physical environment, and their ease of access to recreational open space, are key contributors to health and well-being
8. Protect and enhance the landscape	Achievement of functional open space requirements	<i>OB3 EN13</i>	2.43ha per 1000 population	
	Special Landscape Areas	Cardiff Council Planning Policy Team	Five SLAs designated by plan adoption	Policy EN3 is for the designation of five SLAs
9. Use natural resources efficiently and safeguard their quality	Percent of housing on previously developed land	Cardiff Council Housing Monitoring	60%	Development on previously developed land is generally more sustainable than development on Greenfield land.
	Average density of new development	Cardiff Council Planning Policy Team		Although very high density development may not be appropriate for many locations, low density development is not a good use of land and tends to increase car use.
	Area of contaminated land cleared up	Cardiff Council Pollution Control	>0	A significant benefit of several of the proposed development sites is that they would lead to the remediation of contaminated land.

SA objective	1. Indicator	2. Who monitors	3. Target	4. Reason for monitoring
10. Respond to demographic changes in a sustainable way	Total population	Cardiff Council Planning Policy Team	n/a	The LDP aims to respond to changes in the population. If actual population levels are significantly different from those assumed for the LDP, then parts of the LDP may need to be reconsidered.
	No. homes in Cardiff	Cardiff Council Planning Policy Team	45,400 net additional homes by 2026	A key expected outcome of the LDP is delivery of 41,100 new homes
11. Minimise waste, increase re-use and recycling	Waste reduction rate	<i>Contextual</i>	Reduction per household	The scale of growth envisioned by the LDP would have significant impacts on overall waste generated. Reducing the amount of waste generated per household will help to reduce the impacts associated with managing this waste.

Cardiff Council & Levett-Therivel Sustainability Consultants

**Sustainability Appraisal and Strategic Environmental Assessment of
the Cardiff Local Development Plan**

Non Technical Summary

**Final Sustainability Appraisal Report of the Cardiff Local
Development Plan**

January 2016

Introduction

This Sustainability Appraisal (SA) Report tests how sustainable the Cardiff Local Development Plan (LDP) is. SA of LDPs is required by the Planning and Compulsory Purchase Act 2004 and the European Strategic Environmental Assessment (SEA) Directive. SA identifies the LDP's likely significant economic, environmental and social effects, and aims to minimise any negative effects and maximise positive ones.

Cardiff Council carried out the SA with the help of consultants. The SA findings were taken into account by the planning team, who changed parts of the LDP in response to the SA. The planning team also attended several SA workshops.

Figure 1 shows the SA process. A Scoping Report of October 2010 reviewed background policies and baseline information, and described the economic, social and environmental issues affecting Cardiff. It set up an appraisal framework which was then used to assess different alternatives to the LDP and parts of the LDP. Where the LDP would have negative impacts, suggestions were made for reducing them. The process was repeated several times as the LDP was developed.

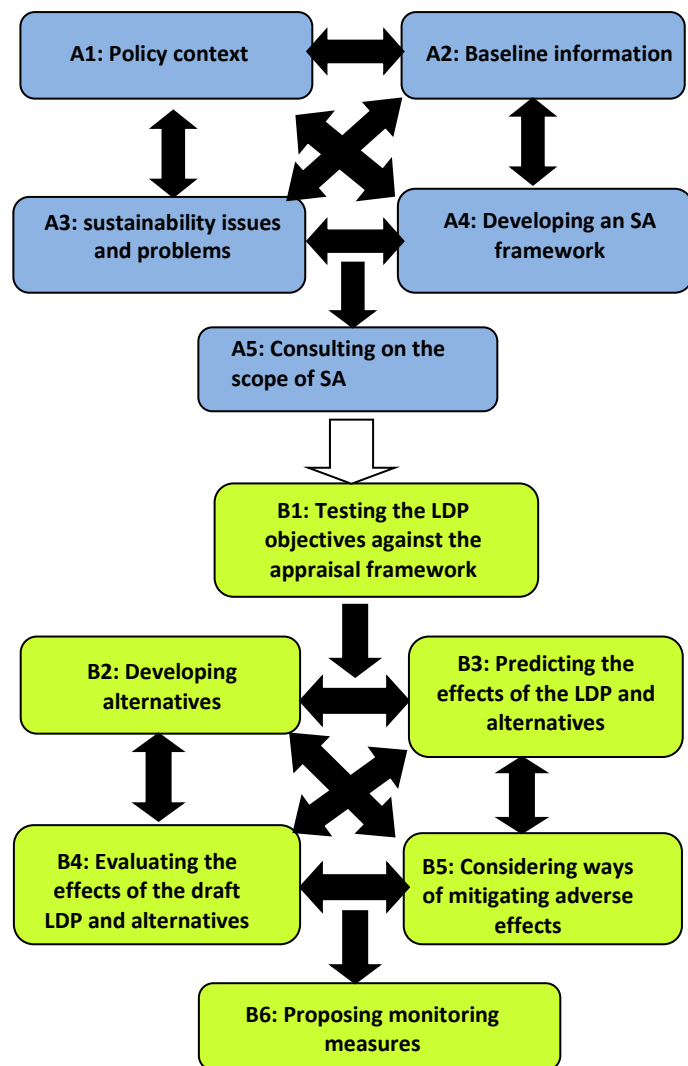

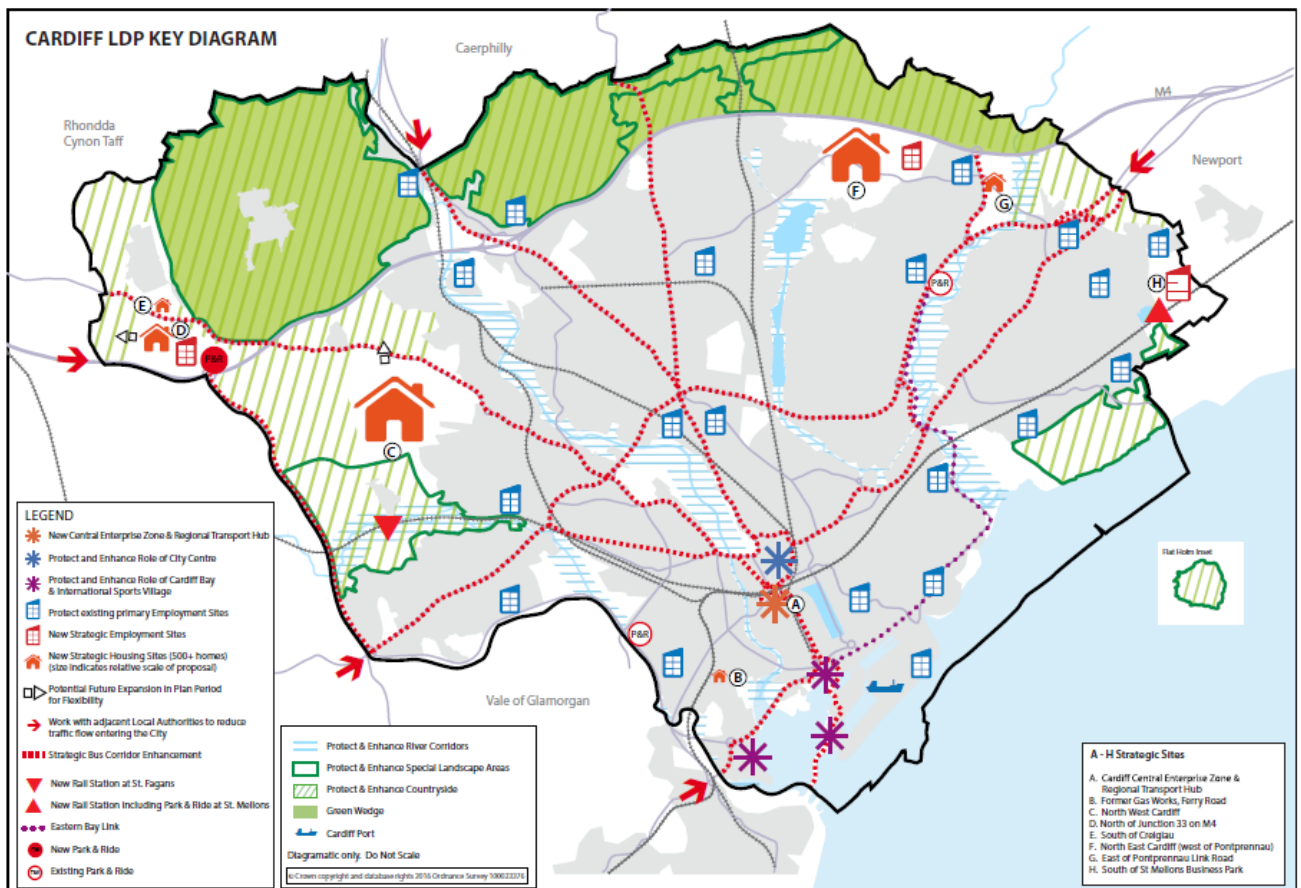

Figure 1. The sustainability appraisal process

The Local Development Plan

The LDP sets out:

- the key trends, issues and policies that have informed it;
- the Council’s vision and objectives for future development of Cardiff;
- the growth options and sites that the Council has considered for development;
- the kinds, amounts and locations of development that will be provided for over the plan period, including a Key Diagram (Figure 2);
- Policies setting out detailed standards and requirements for how development will be done, supporting infrastructure provided, and the environment protected.

Figure 2. LDP key diagram

A1. Policy context

Many policies and plans, from the international to the local level, influence Cardiff's LDP. These include the recent Planning Policy Wales 2012 edition; consultation on a Sustainable Development Bill for Wales; and National Strategy for Flood and Coastal Erosion Risk Management in Wales. Key messages from this policy context are that the LDP should:

1. Access and equality	<ul style="list-style-type: none"> • Ensure that everyone has access to good quality housing, jobs, services and facilities. • Secure a safer and more accessible environment for everyone. • Promote social inclusion and equality of opportunity.
2. Air quality	<ul style="list-style-type: none"> • Take account of the effects of development on air quality and vice versa, and meet air quality standards.
3. Biodiversity, flora & fauna	<ul style="list-style-type: none"> • Protect and enhance biodiversity, natural habitats and wild fauna and flora.
4. Climate change	<ul style="list-style-type: none"> • Reduce greenhouse gas emissions by 3%, with overall reductions of at least 40% by 2020. • Plan for and respond to climate changes, including flooding.
5. Cultural and historic	<ul style="list-style-type: none"> • Protect the historic environment and cultural heritage. • Strengthen Wales' cultural identity including the Welsh language. • Enhance Cardiff's status as a centre of cultural excellence.
6. Economy	<ul style="list-style-type: none"> • Promote Cardiff's role as a world-class Capital City by developing a diverse, competitive, high added value economy. • Enhance employment opportunities for all. • Ensure that employment development respects the environment. • Secure good retail provision and support town centres.
7. Health and well-being	<ul style="list-style-type: none"> • Improve health and well-being, and tackle poverty and inequality. • Increase participation in sport and physical activity. • Improve quality of life and enable social progress for everyone.
8. Landscape	<ul style="list-style-type: none"> • Protect and enhance the landscape, including the countryside, the undeveloped coast, river valleys and other green spaces.
9. Natural resources	<ul style="list-style-type: none"> • Minimise the use of non-renewable resources, use resources efficiently, and encourage the use of renewable resources. • Protect the countryside and good quality agricultural land. • Re-use previously developed land. • Reduce the need for water resources and use water efficiently. • Minimise impacts on water quality, river ecology and groundwater. • Safeguard mineral resources and encourage their efficient use.
10. Population	<ul style="list-style-type: none"> • Provide an adequate supply of land to meet society's needs. • Ensure that everyone has good quality housing and access to jobs, facilities and services.
11. Waste	<ul style="list-style-type: none"> • Promote the waste hierarchy: reduce, reuse, recycle, recover energy and only then landfill. • Manage waste without harming human health or the environment.

A2. Baseline information

Much information about Cardiff's economic, social and environmental condition was collected as part of the SA. Figure 3 shows the main constraints to development in Cardiff: environmental, landscape and historic designations and areas of flooding. Figure 4 shows, in darker shades, Cardiff's 'southern arc' of more deprived wards.

Figure 3. Constraints to development

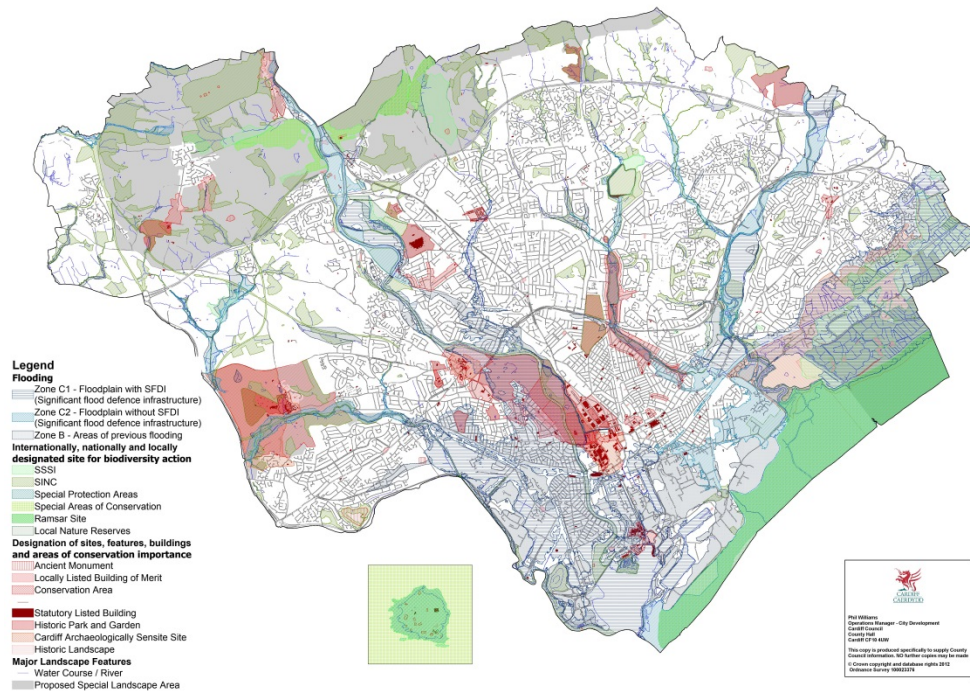

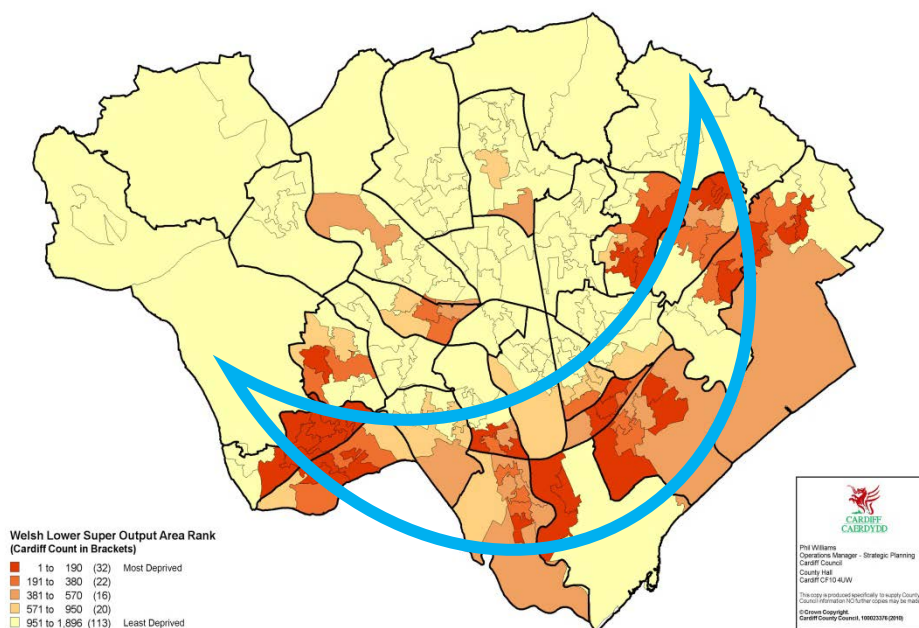

Figure 4. Index of Multiple Deprivation 2011

A3. Sustainability issues and problems

The main economic, environmental and social issues affecting Cardiff are:

1. Access and equality	Cardiff contains some of the most deprived areas in Wales and a significant number of homeless people. The cost of housing - particularly family housing - is excluding those on low incomes from entering the housing market.
2. Air quality	Cardiff has three air quality management areas. Levels of other air pollutants are within current standards.
3. Biodiversity, flora and fauna	Cardiff has many sites designated for their biodiversity. Cardiff's biodiversity is vulnerable to habitat loss and fragmentation through new development.
4. Climate change	Carbon dioxide emissions are going down after decades of growth, although this is probably largely due to the economic recession and to importing rather than making more goods. Traffic flows into and within the city centre are going down, but those outside the city centre are increasing. Many people commute into Cardiff from other parts of South East Wales. Energy use in buildings causes about one-third of Cardiff's carbon dioxide emissions. Much of Cardiff is low-lying and at risk of flooding. Little renewable energy is being produced in Cardiff.
5. Cultural and historic	Cardiff contains many buildings and monuments with historic value. About 3% of listed buildings are not in a favourable condition.
6. Economy	Cardiff is important to the regional economy. Jobs in Cardiff grew rapidly in the decade to 2008. Employment has since dropped as a result of the recession, and Cardiff struggles to match its employment growth with a growth in pay. Much employment land has recently changed to housing.
7. Health and well-being	Cardiff's population is healthier than the Welsh average but over half of Cardiff's adults are overweight, and less than a third are active enough. Life expectancy and crime levels vary sharply across the city: residents of the best wards live on average 10 years longer than those of the worst wards.
8. Landscape	Five areas have been proposed as Special Landscape Areas. More than two-thirds of Cardiff's area is within easy walking distance to natural green spaces, but only two of Cardiff's 29 wards meet national open space targets.
9. Natural resources	Recently almost all new housing has been built on previously developed (brownfield) land. Much has been apartments with relatively little family housing. Cardiff's industrial past has left many potentially contaminated sites. Cardiff provides minerals (aggregates) for the region. Water quality in Cardiff's rivers is improving, but is far from achieving the requirements of the Water Framework Directive. Over-

	abstraction of water from Cardiff's rivers is a concern.
10. Population	Cardiff's population has increased steadily over the past 20 years, and the number of households in Cardiff is expected to rise from 132,108 in 2006 to 174,471 in 2026. Providing a good choice of housing (and associated services and infrastructure) for this population growth will be a challenge.
11. Waste	The largest source of waste in Cardiff is construction/demolition, followed by commercial/industrial and then household waste. Household waste has dropped sharply in the last five years, and the proportion of waste that is recycled and composted grew from 3% to 49% between 2001 and 2012.

A4. SA framework

An 'SA framework' was developed to help identify the impacts of various parts of the LDP. The framework is basically a series of questions about the LDP's sustainability. The main questions are:

Does the LDP (or a particular part of the LDP):
1. Help deliver equality of opportunity and access for all?
2. Maintain and improve air quality?
3. Protect and enhance biodiversity, flora and fauna?
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects?
5. Protect and enhance historic and cultural heritage?
6. Help deliver the growth of a sustainable and diversified economy?
7. Improve health and well-being?
8. Protect and enhance the landscape?
9. Use natural resources efficiently and safeguard their quality?
10. Respond to demographic changes in a sustainable way?
11. Minimise waste, increase re-use and recycling?

A5. Consultation on the Scoping Report

A Scoping Report with this information was sent out for consultation in November 2010. Fourteen comments were received on the report. The report was then changed to take these comments into account, and was updated again in August 2012.

B1. Testing the LDP objectives against the SA framework

The LDP vision and objectives were tested against the SA framework and broadly found to have positive impacts. Some suggestions were made to further improve the objectives. The planning team made most of the suggested changes.

B2. Developing alternatives

Several strategic alternatives were considered for the LDP, and their impacts were identified using the SA framework.

Different levels of future growth

- High growth: about 54,400 new homes and 55,000 new jobs
- Medium growth: about 45,400 new homes and 40,000 new jobs
- Low: about 36,500 new homes and 26,000 new jobs

No growth was not considered reasonable because Cardiff's population is expected to rise, and the number of households is expected to rise even faster due to people living longer, divorcing etc. The medium growth option was preferred because it would provide the best balance of social and economic benefits versus environmental costs. In the light of further population modelling which predicted lower growth than before, this was revised down to 41,415 new homes though with flexibility to go back up to 45,415 towards the end of the plan period if needed.

Different broad locations for housing and employment development

- Dispersed brownfield sites;
- Greenfield sites west of Pentrebanne;
- Greenfield sites south of Creigiau/ north of Junction 33;
- Greenfield site north of M4 at Thornhill;
- Greenfield sites west and east of Pontprennau;
- Greenfield sites around Old St Mellons village;
- Greenfield sites in the east- largely employment uses; and
- Dispersed smaller greenfield sites.

Of these, north of M4 at Thornhill and Old St Mellons were not included in the Preferred Strategy because they are in relatively isolated locations, would not provide adequate services, and be mostly car-based. North of M4 would also have significant landscape impacts.

Different specific sites for development

Based on information received from landowners and developers, and planners' expert knowledge, a total of 112 sites were considered, plus different combinations of these sites. A pro forma was prepared for each site to show its size, constraints and opportunities, and whether (and why) it is included in the Preferred Strategy or not.

B3./B4. Predicting and evaluating the impacts of the alternatives and draft LDP

The impacts of all the alternatives and of each policy were appraised using the SA framework. Table 1 shows what the overall impacts of the LDP would be, and Table 2 provides further details on these.

Overall the LDP would have significant benefits in providing the housing and employment land that Cardiff's current and future residents will need. It will help to improve access to good quality jobs, services and infrastructure for Cardiff's residents, although it is unlikely to fully redress the imbalance between the 'southern arc' of deprivation and other areas of the city. Residents' health should improve in response to better housing, access to open space, and walking and cycling facilities. The new development may draw in people who currently live or work in the Valleys, and so have indirect impacts on neighbouring authorities.

Cumulative impacts		✓	x	xx	x	0?	✓✓	✓	x	✓x	✓✓	x

Environmentally, the LDP would have some significant negative impacts. The sheer volume of development which the LDP has to provide for will inevitably result in increased total air pollution, greenhouse gas emissions, use of natural resources and waste because of increased traffic, houses and employment. The LDP includes many enlightened policies to reduce these impacts. If these are fully, thoroughly and promptly implemented they could substantially reduce per capita impacts. Some of the Matters Arising Changes provide welcome strengthenings in commitments to implementation, but their effectiveness is still uncertain, and the downgrading of the former Green Belt policy to Green Wedge may in the longer term weaken the Council’s ability to push development to more sustainable brownfield sites within the city.

The LDP provides for development of several major Greenfield sites amounting to about 902 hectares. The largest of these are located far from Cardiff city centre, so will increase transport impacts even if sustainable transport provision is made before occupants move in; and several would affect areas that are designated for their landscape or biodiversity importance, and even with the mitigation measures contained in the policies biodiversity and landscape quality are likely to decrease significantly.

Strategic Site H is particularly problematic. It comprises 99 hectares fully in a Site of Special Scientific Interest, archaeologically sensitive site, and Landscape of Outstanding Historic Interest (national level designations). It is susceptible to flooding, and so the initial proposal is to raise the land and make improvements to the sea wall to protect the development from flooding. However this would affect the hydrology and water quality of the historic reens (ditches) in the area. The reens drain to the Severn Estuary SPA/SAC/Ramsar sites, and so water quality problems in the reens could affect the integrity of those sites.

Table 2. Overall sustainability impacts of the LDP

SA objective	Overall impact of LDP	
1. Help deliver equality of opportunity and access for all	✓	The LDP aims to deliver about 40,000 new jobs and 41,415 new dwellings, supports the delivery of affordable housing, and promotes sustainable neighbourhoods. The proposed sites together would provide much new housing and employment land. However several of the strategic sites are out of the existing urban area and only a few would support regeneration of the 'southern arc' of deprivation. Inequalities are likely to increase over time as the residents of outlying Greenfield sites drive through, and use the services of, existing more deprived areas.
2. Maintain and improve air quality	✗	The LDP aims to minimise air pollution; promote walking, cycling and public transport; and aspires for less than half of journeys from new developments to be by car. However the scale of growth envisaged for Cardiff will inevitably lead to more air pollution from traffic, homes and businesses. The large strategic development sites are on the edge of Cardiff, far from the city centre, and likely to be heavily car dependent.

3. Protect and enhance biodiversity, flora and fauna	xx	The LDP aims to protect and enhance Cardiff's areas of biodiversity. However the scale of development being proposed, including more than 900 hectares of Greenfield sites, means that Cardiff's biodiversity will be significantly negatively affected by the LDP. Strategic site H would be 99 hectares entirely in a Site of Special Scientific Interest, and is by far the most problematic site. Several other strategic sites would affect Sites of Importance for Nature Conservation.
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	x	The LDP aims to reduce greenhouse gas emissions and adapt to climate change, including flooding. Its transport policies support a change from car use to walking, cycling and public transport. However the scale of growth envisaged for Cardiff will inevitably lead to more greenhouse gas emissions from traffic, homes and businesses. The largest strategic sites are on the edge of Cardiff, far from the city centre, and likely to be heavily car dependent even if the sustainable transport infrastructure and services planned are delivered. Parts of strategic sites B and F are in flood risk zones, as is all of site H.
5. Protect and enhance historic and cultural heritage	0?	The LDP aims to protect and enhance Cardiff's heritage assets. Most of the proposed development sites will have little or significant effect on the historic and cultural heritage: about a dozen listed buildings would be affected, and Site H is in the Wentloog Levels Archaeologically Sensitive Area and Landscape of Outstanding Historic Interest.
6. Help deliver the growth of a sustainable and diversified economy	✓✓	The LDP aims to deliver about 40,000 new jobs, promote new employment sites, and protect existing ones. The proposed development sites will diversify and support the city's economy. Some strategic sites outside the existing urban area may undermine the vitality and viability of the city centre, although where both housing and employment land are provided on the same site this could help to make the economy more sustainable.
7. Improve health and well-being	✓	The LDP supports the provision of affordable housing, good community facilities, green spaces, and routes for walking and cycling. All of these would help to improve health. Some of the proposed development sites will help to regenerate existing communities, and new community facilities are proposed as parts of the 'package' for some larger sites which currently lack them. Several of the strategic sites have longer term flood risks, and increasing car use and air pollution would harm people's health.
8. Protect and enhance the landscape	x	The LDP aims to protect and enhance the natural heritage, designate new Special Landscape Areas, and promote high quality and sustainable design. Some of the proposed development sites have been previously developed, and would have a neutral or positive effect on the landscape. Regeneration of the Cardiff Central Enterprise Zone (strategic site A) would be particularly beneficial. However most of the area of proposed development – more than 900 hectares - is Greenfield, which would have significant negative landscape impacts. Site H is in a Landscape of Outstanding Historic Interest (Wentloog Levels).

9. Use natural resources efficiently and safeguard their quality	✓*	The LDP aims to promote the efficient use of minerals, remediate contaminated land, and protect agricultural land, water resources, and air and water quality. Where proposed development sites are on previously developed land or include contaminated land, their redevelopment would have a positive effect. Sites C, D, E, F, and H are Greenfield sites with no record of contamination, and several include high quality agricultural land. Water quality could be significantly affected by development at Sites B, D, F and H.
10. Respond to demographic changes in a sustainable way	✓✓	The LDP aims to deliver about 40,000 new jobs and 41,415 new dwellings. This would help respond to clear existing demand for housing and employment sites, including identified demand for Greenfield sites. The significant growth proposed for Cardiff could draw people away from the Valleys to take up work or housing in Cardiff.
11. Minimise waste, increase re-use and recycling	*	The LDP aims to reduce the production of waste and provide adequate waste management facilities. However it says relatively little about reducing waste, or promoting reuse and recycling. The scale of growth proposed in the LDP would lead to considerably more waste being produced than at present, during both construction and operation.

B5. Considering ways of mitigating adverse effects

The appraisal process resulted in many suggestions for reducing the negative impacts of the LDP and enhancing its benefits. Most of these suggestions led to changes in the LDP, including:

- Rewording of LDP objectives, to better cover waste issues and give more emphasis to healthy food choices;
- Stronger and more systematic consideration of sustainability issues in the process of sifting and choosing between potential candidate development sites by the planning team;
- Removal of a key policy that duplicated another one;
- Greater emphasis to reducing the need to travel by car, making facilities accessible by walking and cycling, ensuring good public transport before remote greenfield sites are occupied, and resilience to climate change;
- Reference to industrial and domestic sources of air pollution as well as transport pollution, and promotion of remediation of contaminated land.

B6. Proposing monitoring measures

Once the LDP is adopted, its actual impacts will be monitored to make sure that unexpected effects are identified and dealt with. Much monitoring is already carried out in Cardiff for other purposes, for instance traffic counts for transport planning. This can also be used to monitor the effects of the LDP. However some new monitoring is proposed here that would measure important sustainability aspects of the LDP.

Next steps

Once the LDP is adopted, Cardiff Council will publish an 'SEA statement' which explains how the sustainability appraisal influenced the LDP.

Cardiff Council & Levett-Therivel Sustainability Consultants

**Sustainability Appraisal and Strategic Environmental Assessment of
the Cardiff Local Development Plan**

Appendix A: Policy Review

**Final Sustainability Appraisal Report of the Cardiff Local
Development Plan**

January 2016

Appendix A. Policy Review

This appendix contains the reviews of all plans, policies, programmes and strategies listed in Table 2.1 of the Scoping Report. It should be read together with the updated Scoping Report (and Appendix 2) and the Initial Sustainability Appraisal Report.

An earlier version of this Appendix, covering nearly 100 policies, plans and programmes, was produced in 2006. This was comprehensively updated in autumn 2010 and again in August 2012 with focused updates in August 2013. It was also rationalised by removing redundant and less relevant policies, plans and programmes, so as to focus on those policies that are most significant and recent. It is thus not an exhaustive review of all potentially relevant policy documents, but rather a sufficient, 'fit for purpose' review which sets out the main 'policy landscape' within which the LDP is being prepared. The Council will keep the policy landscape under review and up date as and when necessary.

General / overarching PPPs	Implications for the LDP
UK	
<p>Planning Act 2008 Introduces a new process for deciding planning permission for nationally significant infrastructure projects, and power for planning authorities to charge a Community Infrastructure Levy (CIL) on most types of new development.</p>	<p>LDP team should contribute to Infrastructure Planning Commission consultations to seek to secure decisions consistent with LDP aims</p> <p>Consider whether charging a CIL could help achieve LDP objectives</p>
<p>Community Infrastructure Levy Regulations 2011 Provide for the imposition of a CIL.</p>	<p>LDP team should consider whether and how CIL can be used to help fund and deliver infrastructure in Cardiff.</p> <p>Additionally, an infrastructure delivery plan will need to be developed in tandem with the LDP to ensure that infrastructure is delivered appropriately and sustainably throughout the plan period and to ensure that CIL and S106 funding can be directed and fully utilised.</p>
Wales	
<p>One Wales: One Planet, a new Sustainable Development Scheme for Wales (Welsh Assembly Government 2009) Sets out WAG's vision of a sustainable Wales:</p> <ul style="list-style-type: none"> • Sustainable development will be the central organising principle of the WAG • Within a generation, Wales should only use its fair share of the earth's resources • Wales should have healthy, functioning ecosystems that are biologically diverse and productive and managed sustainably • Wales should have a resilient and sustainable economy that is able to develop whilst stabilising, then reducing, its use of natural resources and reducing its contribution to climate change • Wales should have safe, sustainable, attractive communities in which people live 	<p>The LDP can assist sustainable development objectives through a wide range of measures identified alongside policy documents dealing with specific topics/issues</p>

General / overarching PPPs	Implications for the LDP
<p>and work, have access to services, and enjoy good health and can play their full roles as citizens</p> <ul style="list-style-type: none"> Wales should be just and bilingual. All citizens should be empowered to determine their own lives, shape their communities and achieve their full potential 	
<p>A Sustainable Wales: Better Choices for a Better Future: Consultation on proposals for a Sustainable Development Bill (Welsh Government December 2012) builds on earlier consultations to propose ‘a stronger duty that requires specified public service organisations [including local authorities] to embed sustainable development as their central organising principle’, with supporting measures</p>	<p>Indicates continuing commitment to sustainable development and proposes further strengthening of local authorities’ powers and duties to promote it.</p>
<p>Natural Resource Management Programme (Welsh Government 2013)</p> <p>The programme will include:</p> <ul style="list-style-type: none"> Natural resource management policy, including the setting of national priorities the Environment Bill embedding the ecosystem approach, including associated demonstration projects which will showcase the benefits this approach can bring, and from which we can learn about how and when the approach can be used working with Natural Resources Wales and coordinating performance management arrangements communications, engagement and knowledge sharing. 	<p>The ecosystem approach systematically identifies the benefits from the environment that matter for human wellbeing, and what needs to be done to maintain or compensate for them.</p> <p>It offers a basis for setting constraints and conditions for development, including offsetting and compensation, to ensure no net loss of public benefits.</p> <p>It is potentially a powerful tool for making operational the LDP’s environmental aims. Masterplanning of one or more of Cardiff’s strategic sites could make an interesting demonstration project, and the results of this programme should inform the later stages of development of all of them.</p>
<p>Wales Spatial Plan 2008 Update (Welsh Assembly Government 2008)</p> <p>The National Vision is: <i>"We will sustain our communities by tackling the challenge presented by population and economic change. We will grow in ways which will increase Wales' competitiveness while assisting less well-off areas to catch up on general prosperity levels and reducing negative environmental impacts. We will enhance the natural and built environment and we will sustain our distinctive identity"</i>.</p> <p>Subsections of the plan involve:</p> <ul style="list-style-type: none"> building sustainable communities promoting a sustainable economy 	<p>LDPs must have regard to the Wales Spatial Plan. For Cardiff, the plan priorities are:</p> <ul style="list-style-type: none"> The area will function as a networked city region, on a scale to realise its international potential, its national role and to reduce inequalities A fully integrated high quality transport system is necessary for this to happen. Over the 20 year horizon of the Wales Spatial Plan, all the Area’s key settlements should be linked to Cardiff or Newport by suitable high capacity public transport The success of the Area relies on Cardiff developing its capital functions, together with strong and distinctive roles of other towns and cities

General / overarching PPPs	Implications for the LDP
<ul style="list-style-type: none"> • valuing our environment • achieving sustainable accessibility • respecting distinctiveness <p>The Plan also includes a distinct vision for each area of Wales. The vision for the Capital Region which includes Cardiff is for <i>"An innovative skilled area offering a high quality of life – international yet distinctly Welsh. It will compete internationally by increasing its global visibility through stronger links between the Valleys and the coast and with the UK and Europe, helping to spread prosperity within the area and benefiting other parts of Wales."</i></p>	<p>It sets as measures of success for the Capital region:</p> <ul style="list-style-type: none"> • A working city region that can adapt creatively to economic change and innovate to improve • A learning city region that grows talent, provides lifelong opportunities and attracts talent from elsewhere • A connected city region that aids accessibility for goods and people and encourages sustainable transport choices • A living city region that provides a high quality natural and built environment complemented by high quality green space, promoting healthy, strong communities and a strong civic culture. Achieving a networked environment region will be a key part of this • A lively city region that provides a “buzz” in culture, tourism, shopping and leisure • A low-carbon city region that reduces its resource use, energy and travel footprint and greenhouse gas emissions • A well-governed city region with community involvement and strategic national engagement
<p>Planning Policy Wales (Welsh Assembly Government 2011)</p> <p>Replaces Planning Policy Wales 2002 and previous Ministerial Interim Planning Policy Statements. Sets out WAG’s land use planning policies and how these can help achieve its goals for:</p> <ul style="list-style-type: none"> • Planning for sustainability • Conserving and improving natural heritage and the coast • Conserving the historic environment • Supporting the economy • Transport • Housing • Planning for retailing and town centres • Tourism, sport and recreation • Infrastructure and services • Minimising and managing environmental risks and pollution <p>Gives strong and detailed emphasis to climate change (reduction and adaptation)</p>	<p>States that every local planning authority in Wales must prepare an LDP, which will set the structure for a plan-led planning system</p> <p>The LDP can assist sustainable development objectives through a wide range of measures identified alongside policy documents dealing with specific topics/issues</p>
<p>Environment Strategy for Wales (Welsh Assembly Government 2006)</p> <p>Sets out the Welsh Government’s long-term strategy for the environment of Wales and sets the strategic direction until 2026. The Vision is “By 2026, we want to see our distinctive Welsh environment thriving and contributing to the economic and social wellbeing and health of all</p>	<p>Through this strategy the Welsh Government are committed to tackling climate change, conserving and enhancing biodiversity, land, resources and heritage, and the built environment through policy. Additionally there are priorities that direct implications for the community strategy, which the LDP must have regard for.</p>

General / overarching PPPs	Implications for the LDP
of the people of Wales”	The statutory consultees, the Wales Local Government Association and many other organisations are committed to progressing this strategy through its action plans.
Cardiff	
<p>Cardiff Integrated Partnership Strategy: What Matters 2010:2020 The 10 Year Strategy: Cardiff’s What Matters Strategy (2010 – 2020) combines the Community Strategy, Children & Young People’s Plan; Health Social Care & Wellbeing Strategy and the Community Safety Strategic Assessment programmes into one consolidated document. The vision of What Matters is “By 2020... Cardiff will be world class European capital city with an exceptional quality of life and at the heart of a thriving region”</p> <p>Under the vision there are 7 outcomes, these are:</p> <ul style="list-style-type: none"> • People in Cardiff are healthy; • People in Cardiff have a clean, attractive and sustainable environment; • People in Cardiff are safe and feel safe; • Cardiff has a thriving and prosperous economy; • People in Cardiff achieve their full potential; • Cardiff is a great place to live, work and play; and • Cardiff is a fair, just and inclusive society 	The LDP takes its vision and the basis for its strategic objectives from this document. The vision and direction of What Matters is central to the vision for Cardiff and is key material consideration for the LDP.
<p>Cardiff A Proud Capital: Cardiff Community Strategy 2007-2017 (Cardiff Council 2007) The vision is "To ensure that Cardiff is a world class European capital city with an exceptional 'quality of life' and at the heart of a competitive city region". Includes an economic, social and environmental vision, and 'Cardiff connections' about public services.</p>	<p>S62 of the Planning and Compulsory Purchase Act 2004 prescribes that LDPs must have regard to the Community Strategy for the area of the plan. Planning-related themes of the strategy include:</p> <ul style="list-style-type: none"> • Improvement and expansion of Cardiff's cultural and sporting offer • Enhanced collaboration between Cardiff and other local authorities to promote the regeneration of south-east Wales • Establishment of Cardiff as a hub for high growth, knowledge-intensive sectors • Development of Cardiff as a leading tourism, leisure and conference destination • Improved, sustainable transport
<p>Cardiff Council Sustainable Development Policy Statement and Action Programme 2009-2012(Cardiff Council 2009) States the Council’s commitment to sustainable development.</p>	Promotes a range of sustainable development priorities for Cardiff, including sustainable design, increased recycling and composting, carbon reduction and energy efficiency

Access and equality PPPs	Implications for the LDP
Wales and South East Wales	
<p>Wales Transport Strategy (ESG, 2008) Sets out the role that transport can play in delivering WAG's agenda of integrating transport with spatial planning, economic development, education, health, social services, environment and tourism. Main expected outcomes are:</p> <ul style="list-style-type: none"> • Improved access to a range of services and facilities • Encouragement of healthy lifestyles • Improvements in the safety of travel • Improved connectivity within Wales and internationally • Improved movement of freight and people • Reduced impacts on climate change, air quality, the local environment, heritage and biodiversity <p>It emphasises the importance of Cardiff International Airport, and public transport links to the airport.</p>	<p>In preparing the LDPs the Council should:</p> <ul style="list-style-type: none"> • Integrate with transport policy and traffic management; and have regard to road traffic reduction targets, air quality requirements and Local Transport Plan proposals • Foster improvements to transport facilities and services which maintain or improve accessibility to services and facilities, secure employment, economic and environmental objectives, and improve safety and amenity • Promote measures to facilitate public transport, walking and cycling, and movement of freight by rail and ship • Locate development, particularly major generators of travel demand, so as to minimise that demand, particular by cars and other motor vehicles, and where it is accessible by a range of forms of travel/transport • Promote mixed use developments • Promote good design that provides an environment that is accessible for everyone <p>As above</p>
<p>Technical Advice Note 18: Transport (Welsh Assembly Government 2007) Provides guidance on how land use planning can promote more sustainable travel demand and forms of transport.</p>	
<p>Wales: National Transport Plan (March 2010)</p> <p>The National Transport Plan sits alongside the regional transport plans in assisting the delivery of the Wales Transport Plans. The National Transport Plan concentrates on delivering transport integration across Wales and ensuring that provision is consistent including measures such as ticket integration, local guidance on speed limits, and the appropriate direction of new transport infrastructure.</p> <p>The National Transport Plan includes actions for Wales as a whole and specific actions for strategic transport connections.</p>	

Access and equality PPPs	Implications for the LDP
<p>South East Wales Regional Transport Plan (South East Wales Transport Alliance 2010) Replaces the Cardiff Local Transport Plan. Its priorities are to (in priority order):</p> <ol style="list-style-type: none"> 1. improve access for all to services, facilities and employment, particularly by walking, cycling and public transport 2. increase the proportions of trips undertaken by walking, cycling and public transport 3. minimise demand on the transport system 4. develop an efficient, safe and reliable transport system, with improved links between the 14 key settlements in South East Wales, and between South East Wales and elsewhere 5. encourage healthy and active lifestyles 6. reduce significantly the emission of greenhouse gases and the impact of the transport system on local communities 7. ensure developments are accessible by sustainable transport and make sustainable transport an integral component of regeneration schemes 8. make better use of the existing transport system 	
Cardiff	
<p>Cardiff Sustainable Travel City</p> <p>In March 2009 the Welsh Government designated Cardiff as Wales' first Sustainable Travel City (STC) and a pathfinder for a wider initiative.</p> <p>Initiatives to help make sustainable modes of travel easier to use include:</p> <ul style="list-style-type: none"> • improving bus access in the city centre • making St Mary Street more pedestrian friendly • improving links between the city centre and Cardiff Bay • expanding the Cycling Network • the Pont-y-Werin Bridge, linking Penarth to the International Sports Village • Bus Corridors and other infrastructure to support public transport • new Park and Ride/ Park and Share scheme • Civil Parking Enforcement (CPE) • a Smart City Hub which will help to keep the transport infrastructure in the city flowing. 	<p>The LDP should both support and exploit these measures.</p>

Air quality PPPs	Implications for the LDP
International	
<p>EC Directive 1966/62/EC on Ambient Air Quality and Management (as amended by Directives 1999/30/EC, 2000/69/EC and 2002/3/EC) Establishes mandatory standards for air quality and set limits and guide values for air pollutants.</p>	<p>Locational policies in LDPs should take account of the effects of development on air quality and vice versa. The LDP should include:</p> <ul style="list-style-type: none"> • Strategic policies on the location of potentially polluting developments and criteria by which applications for such developments should be determined • Realistic provision for the types of industry or facility that may be a potential source of pollution • Policies and proposals to ensure that incompatible uses of land are separated, in order to avoid potential conflict <p>The LDP can also contribute to maintaining and improving air quality by locating development so as to minimise travel demand, particularly by motor vehicles, and where it is accessible by a range of forms of travel/transport, including walking, cycling, public transport and alternatives to movement of freight by road.</p>
Wales	
<p>Air Quality Standard (Wales) Regulations 2010 Implements the European standards in Wales</p>	As above

Biodiversity, flora and fauna PPPs	Implications for the LDP
International	
<p>EC Directive 1992/43/EEC on Conservation of Natural Habitats and of Wild Fauna and Flora (Habitats Directive) Protects important habitats and species through the establishment of a European network of Natura 2000 sites. Establishes process of Appropriate Assessment for considering the impact of plans and projects on European sites.</p>	<p>Appropriate Assessment / Habitats Regulations Assessment must be undertaken during LDP preparation, to assess the implications of the plan for SPAs, SACs and Ramsar sites (including any in neighbouring authorities) whose integrity may be adversely affected by the plan. Appropriate assessments are also required for all projects that have the potential to affect site integrity.</p>
<p>EC Directive 1979/409/EEC on the Conservation of Wild Birds (Birds Directive) Protects Europe's wild birds including through the establishment of a European network of Special Protection Areas (SPAs).</p>	<p>In addition, the LDP should:</p> <ul style="list-style-type: none"> • Include detailed policies for the conservation and, where appropriate, enhancement of international, national and local designated sites, reflecting their relative significance • Provide criteria against which developments affecting the different types of designated site will be assessed • Identify the areas to which such policies apply
<p>Convention on Wetlands of International Importance especially as a Waterfowl Habitat (Ramsar Convention 1971 as amended) Requires signatories to designate and protect wetlands of international importance, to promote wetlands generally and to foster the wise use of wetland areas, in recognition of their importance as a habitat for waterfowl.</p>	
UK	

Biodiversity, flora and fauna PPPs	Implications for the LDP
<p>Conservation (Natural Habitats, &c) Regulations 1994 (amended 2007) Implements the Habitats Directive.</p>	As above
<p>Wildlife and Countryside Act 1981 (as amended by Schedule 9 of the Countryside and Rights of Way Act 2000) Places a duty on all public bodies, including local planning authorities to further the conservation and enhancement of the features by reason of which a Site of Special Scientific Interest is of special interest.</p>	<p>Policies and proposals in LDPs must be informed by international obligations and the Assembly's objectives for the conservation and improvement of the natural environment and biodiversity, including the proper protection of statutorily designated sites and species. The LDP should:</p> <ul style="list-style-type: none"> • Include detailed policies for the conservation and, where appropriate, enhancement of international, national and local designated sites, reflecting their relative significance • Provide criteria against which developments affecting the different types of designated site will be assessed
<p>Countryside and Rights of Way Act 2000 Places a duty on the National Assembly to take (or encourage others to take) reasonably practicable steps to further the conservation, restoration or enhancement of those species and habitat types identified by the Assembly as priorities for biological conservation.</p>	
<p>NERC Act (Natural Environment and Rural Communities Bill) 2006 Section 40(1) of the NERC Act places a duty upon public bodies, in carrying out their function, to regard the conservation of biodiversity. The key target for this act is Local Authorities.</p>	<p>DEFRA guidance on the biodiversity duty for local authorities sets out the importance of planning system for the conservation of biodiversity.</p> <p>The LDP should consider impacts on biodiversity and this will be achieved through the statutory requirement for SEA.</p>
Wales	
<p>Technical Advice Note 5: Nature Conservation and Planning (Welsh Assembly Government 2009) Provides advice about how the land use planning system should contribute to protecting and enhancing biodiversity and geological conservation. The planning system should:</p> <ul style="list-style-type: none"> • work to achieve nature conservation objectives through a partnership between local planning authorities, CCW, the Environment Agency Wales, voluntary organisations, developers, landowners and other key stakeholders • integrate nature conservation into all planning decisions, looking for development to deliver social, economic and environmental objectives together • ensure that the UK's international and national obligations for site, species and habitat protection are fully met in all planning decisions • look for development to provide a net benefit for biodiversity conservation with no significant loss of habitats or populations 	<p>The LDP should:</p> <ul style="list-style-type: none"> • Develop an ambitious vision that includes healthy, functioning ecosystems, a wealth of native wildlife and natural features, and the habitats and natural processes on which they will depend • Incorporate international and Welsh Assembly Government nature conservation objectives into its plan objectives • Have regard to other plans and strategies such as Shoreline, Estuary, Integrated Coastal Zone and River Basin Management Plans <p>The LDP should include policies that:</p> <ul style="list-style-type: none"> • Set out criteria against which development proposals will be tested for their compatibility with nature conservation objectives and/or sustainable development principles • Give local expression to the protection and, where possible, enhancement of species, habitats, and designated sites • Provide for the conservation, enhancement, management and, where appropriate, restoration of woodlands, veteran trees and other trees of nature conservation value;

Biodiversity, flora and fauna PPPs	Implications for the LDP
<p>of species, locally or nationally</p> <ul style="list-style-type: none"> • help to ensure that development does not damage, or restrict access to, or the study of, geological sites and features or impede the evolution of natural processes and systems especially on rivers and the coast • forge and strengthen links between the planning system and biodiversity action planning, particularly through LDP policies and the preparation of supplementary planning guidance • accommodate and reduce the effects of climate change by encouraging development that will reduce damaging emissions and energy consumption and that help habitats and species to respond to climate change 	<p>locally distinctive natural habitats; and networks of habitats including wildlife corridors</p> <ul style="list-style-type: none"> • Encourage the conservation and management of features of the landscape of major importance for wild flora and fauna • Draw attention to the requirement for appropriate assessment of projects likely to have a significant effect on an internationally designated site • Create strong links to national and local Biodiversity Action Plans and help to meet their targets by habitat creation and management • Address the implications of climate change, including potential effects of habitat change, the risks of coastal flooding and erosion and river basin flood management issues • Propose necessary new development in ways and at locations that are consistent with nature conservation objectives
South East Wales	
<p>Severn Estuary European Marine Site Management Scheme (Natural England, CCW, WAG 2009)</p> <p>A management scheme for the Severn Estuary SAC/SPA/Ramsar site aimed at ensuring that relevant authorities undertake their statutory duty to deliver the requirements of the Habitats Directive to conserve the species and habitats of the designated area.</p>	<p>Appropriate Assessment / Habitats Regulations Assessment for the LDP and projects that could affect the integrity of the Severn Estuary SAC/SPA/Ramsar site must take account of this management scheme</p>
Cardiff	
<p>Cardiff Local Biodiversity Action Plan (CCW, Cardiff Council, CBP, WAG 2008)</p> <p>Sets targets for many of the most important species and habitats in Cardiff: calcareous grassland, gardens and allotments, maritime cliffs and slopes, neutral grassland, ponds, reedbeds, purple moor grass and rush pasture, woodland, bats, chiding pink, dormouse, great crested newt, hawfinch, otter, pied flycatcher, reptiles, silver-washed fritillary, stag beetle, water vole, waxcap species. It promotes the maintenance of extent and distribution of habitats, and an improvement in their condition; and the maintenance of the range and population of species, and an improvement over time.</p>	<p>The LDP should:</p> <ul style="list-style-type: none"> • Support the achievement of LBAP targets • Provide for the conservation and, where appropriate, enhancement of biodiversity outside statutorily designated sites, in particular identifying opportunities to conserve important local habitats and species, and to safeguard and manage landscape features of major importance for nature conservation • Provide the opportunity for people to access biodiversity in Cardiff

Climate change PPPs	Implications for the LDP
UK	
<p>Climate Change Act 2008 Gives the UK government a statutory duty to reduce greenhouse gas emissions by 80% between 1990 and 2050, and by at least 34% by 2020. It also establishes a carbon budgeting system which caps emissions over five-year periods.</p>	<p>The LDP should play its part in delivering these targets by:</p> <ul style="list-style-type: none"> • Promoting renewable methods of energy production and their use in new development • Promoting energy efficiency and energy conservation in new development • Promoting other measures that mitigate the causes of climate change (e.g. the protection/enhancement of carbon sinks) • Ensuring that the location and design of new development has regard to the potential risk, causes and consequences of flooding • Locating and designing development so as to minimise travel demand, particular by cars and other motor vehicles, and where it is accessible by a range of forms of travel/transport • Promoting mixed use development
<p>Flood Risk Regulations (2009) The European draft Directive 2007/60/EC on the assessment of flood risks (the flood directive) is transposed in to UK, and Welsh, law through the Flood Risk Regulations (2009).</p> <p>These Regulations require that the competent authorities produces the following documents:</p> <ul style="list-style-type: none"> • Preliminary flood risk assessments (by December 2011) • Flood hazard maps (by December 2013) • Flood risk management plans (by December 2015). 	<p>The LDP team will need to refer to and consider the flood risks highlighted in these documents as they emerge.</p>
<p>Flood and Water Management Act (DEFRA 2010) The Flood and Water Management Act sets out specific provisions on:</p> <ul style="list-style-type: none"> • roles and responsibilities for flood and coastal erosion risk management • reservoir safety • flood resilience within properties • sustainable drainage systems • drought measures • development of a project based delivery approach for large infrastructure projects in the water sector 	<p>The LDP Should:</p> <ul style="list-style-type: none"> • consider flood and coastal erosion risk • consider flood risk to new developments and existing properties <p>The Flood and Water Management Acts places the responsibility upon responsible authorities (The Environment Agency and Local Authorities) to develop flood strategies.</p>

Wales	
<p>Climate Change Strategy for Wales (Welsh Assembly Government, 2010) Sets a greenhouse gas reduction target of 3% per year on all emissions except heavy industry and power generation, with overall reductions of at least 40% by 2020. Areas of focus will be:</p> <ul style="list-style-type: none"> • behaviour change • leading by example by WAG and the public sector • increased energy efficiency, making low carbon transport a reality, and building the skills needed to ensure that Wales can make the most of opportunities from a low carbon economy • ensuring that approaches to R&D, technology, innovation and skills help Wales gain maximum benefit from climate change related business and research • supporting adaptation • ensuring that land use planning promotes sustainable development and enables a move towards a low carbon economy 	<p>The LDP should:</p> <ul style="list-style-type: none"> • Ensure that buildings are energy efficient, resilient to climate change, and in sustainable locations • Support the development of renewable energy • Support local food production • Encourage low carbon and resource efficient businesses • Support public transport, walking and cycling
<p>National Strategy for Flood and Coastal Erosion Risk Management in Wales (Welsh Government November 2011) Sets out the framework for “Risk Management Authorities” to allow them to deliver their flood and coastal risk management functions (as prescribed by the Welsh Government). The strategy provides a set of overall strategic objectives/outcomes along with a more specific objectives and actions for the management of flood and coastal erosion risk management.</p> <p>Overarching objectives:</p> <ul style="list-style-type: none"> • reducing the consequences for individuals, communities, businesses and the environment from flooding and coastal erosion; • raising awareness of and engaging people in the response to flood and coastal erosion risk; • providing an effective and sustained response to flood and coastal erosion events; and • prioritising investment in the most at risk communities 	<p>The LDP should:</p> <ul style="list-style-type: none"> • “include adequate provisions in respect of flood and coastal erosion” • Include policies on effective land use management <p>- In line with the National Flood and Coastal Erosion Risk Management Objectives and Actions for the Development of LDPs and spatial planning.</p>

<p>A Low Carbon Revolution - The Welsh Assembly Government Energy Policy Statement (Welsh Assembly Government 2010) Acknowledges 'both a moral and a practical imperative to move rapidly to ... a low carbon economy' and proposes actions on (1) energy saving and energy efficiency, (2) resilient low carbon energy production, both centralised and localised, (3) exploiting economic opportunities.</p>	<p>The LDP should:</p> <ul style="list-style-type: none"> • help to support a step-change in the energy efficiency performance of all housing stock • progressively increase the standards for new-build housing towards zero-carbon aspirations • support small-scale renewable developments and other forms of local energy generation • support anaerobic digestion, biomass, and other larger renewable energy generation projects
<p>Technical Advice Note 8: Planning for Renewable Energy (Welsh Assembly Government 2005) Provides guidance on land use planning considerations relating to renewable energy provision and how LDPs can help achieve national targets for renewable energy generation.</p>	
<p>Energy Wales: A Low Carbon Transition (Welsh Government 2012) States the Welsh Government's commitment to 'create a sustainable, low carbon economy for Wales' featuring low carbon energy and energy efficiency, by, among other things, ensuring that planning and regulations are supportive, ensuring communities benefit, and supporting appropriate infrastructure.</p>	<p>Further confirms the need for the LDP to support energy efficiency and low carbon energy.</p>
<p>Technical Advice Note 15: Development and Flood Risk (Welsh Assembly Government 2004) Provides guidance on flood risk (including land at risk of flooding) and how such risk should be addressed and managed. Aims to reduce the risk to people and development from flooding in line with a precautionary framework.</p>	<p>The LDP should:</p> <ul style="list-style-type: none"> • Take a precautionary and strategic approach to flood risk, having regard to WAG guidance, the potential consequences of flooding and the extent and location of unobstructed floodplains • Ensure that the location and design of new development has regard to the potential risk, causes and consequences of flooding

Cultural / historic PPPs	Implications for the LDP
Wales	
<p>Welsh Office Circular 60/96 Planning and the Historic Environment: Archaeology (1996) Sets out advice on legislation and procedures relating to archaeological remains.</p>	<p>The LDP must take account of the need to conserve the historic environment. It should:</p> <ul style="list-style-type: none"> • Include policies for the protection and enhancement of sites of archaeological interest and their settings • Identify scheduled archaeological remains and, where appropriate, unscheduled remains of local importance
<p>Welsh Office Circular 61/96 Planning and the Historic Environment: Historic Buildings and Conservation Areas (1996) Sets out advice on legislation and procedures relating to historic buildings and conservation areas. (Likely to be updated and consolidated with Circular 60/96 in forthcoming Wales)</p>	<p>The LDP must take account of the need to conserve the historic environment, including:</p> <ul style="list-style-type: none"> • Policies for the preservation and enhancement of listed buildings and their settings, conservation areas and historic parks, gardens and landscapes, and the factors to be taken into account in assessing planning applications that

Cultural / historic PPPs	Implications for the LDP
Heritage Bill.)	<p>could affect these</p> <ul style="list-style-type: none"> Proposals for re-use or new development affecting historic areas and buildings Policies for demolition, alteration, extension or re-use of listed buildings and their curtilages Criteria to be applied to development proposals impinging upon listed buildings.
<p>Technical Advice Note 12: Design (Welsh Assembly Government 2009) Provides guidance about how 'Promoting sustainability through good design' may be facilitated through the planning system.</p>	<p>The LDP should promote and support the 5 aspects of good design:</p> <ul style="list-style-type: none"> Ensuring access for all Sustaining and enhancing local character Ensuring attractive, safe public space Environmental sustainability Providing sustainable means of travel <p>To do this it should</p> <ul style="list-style-type: none"> Include design policies, area wide and/or for specific places as appropriate Consider producing topic based, area based or site specific SPGs

Economy PPPs	Implications for the LDP
Wales	
<p>Economic Renewal: A New Direction (Welsh Assembly Government 2010) Sets out the Assembly's proposed strategy for moving Wales out of the recession and to future economic growth. The vision is of "a Welsh economy built upon the strengths and skills of its people and natural environment; recognised at home and abroad as confident, creative and ambitious; a great place to live and work". Its five priorities are to:</p> <ul style="list-style-type: none"> Invest in high quality and sustainable infrastructure Make Wales a more attractive place to do business Broaden and deepen the skills base Encourage innovation Target business support 	<p>The LDP can support economic development objectives by supporting:</p> <ul style="list-style-type: none"> the roll-out of Next Generation Broadband the planning and delivery of infrastructure low-waste low-carbon employment links between universities and businesses
<p>Technical Advice Note 4: Retailing and Town Centres (Welsh Assembly Government 1996) Provides detailed advice on the collection of retail information and assessment of retail and town centre development proposals.</p>	<p>The LDP should:</p> <ul style="list-style-type: none"> Identify and support the retail hierarchy of centres Support the vitality, attractiveness and viability of centres Allocate sites for new retail and leisure facilities and other uses best located in town centres where there is assessed need and using the sequential approach Include criteria for the assessment of proposals

Economy PPPs	Implications for the LDP
	on unallocated sites
<p>Technical Advice Note 13: Tourism (Welsh Assembly Government 1997) Provides guidance on how the planning system can encourage sustainable forms of tourism and maximise economic and employment benefits while improving and safeguarding the environmental interests of local communities.</p>	<p>The LDP should provide a strategic framework for tourism developments having regard to the tourism potential of the area and the need to limit the impact on the environment, conservation interests and local communities</p>
SE Wales	
<p>South East Wales Development Strategy (South East Wales Economic Forum 2005) An economic development framework for South East Wales mapping out a comprehensive approach to achieving the forum's vision for the region to become one of the most prosperous in Europe.</p>	<p>The LDP can support economic development objectives by:</p> <ul style="list-style-type: none"> • Ensuring that there is a sufficient range and choice of land allocated for economic development and employment purposes in accessible locations • Improving access to employment opportunities particularly for communities with high levels of economic inactivity, unemployment and deprivation • Supporting the vitality, attractiveness and viability of centres
<p>City Regions Final Report (Welsh Government, May 2012) Product of a task and finish group set up by WG; strongly recommends recognising a South East Wales (ie Cardiff centred) city region, with an over-arching city region strategic planning tier, and strengthened governance, transport, infrastructure and financing, to remedy underperformance of Wales' cities</p>	<p>If the recommendations are adopted, the Cardiff City LDP would need to form a subordinate tier contributing to wider city region objectives, and with stronger emphasis on cross boundary co-ordination.</p>
Cardiff	
<p>Competitive Cardiff, The Cardiff Economic Strategy 2007-2012 (Cardiff Council 2007) It vision is "To ensure that Cardiff, as an International Capital, is an inclusive, vibrant and thriving city in which to live and work, with a skilled creative workforce and a buoyant business environment".</p>	<p>The LDP can support these objectives by:</p> <ul style="list-style-type: none"> • Maintaining and improving the city's cultural, leisure and sporting facilities • Developing Cardiff's retail, conference and office offer • Providing a range of premises and facilities for different business sizes and types, including incubation and growth facilities • Protecting employment land • Focusing on high value added, knowledge based sectors, and the creative industries • Facilitating the roll-out of high speed broadband • Regenerating neighbourhoods • Improving Cardiff's accessibility through an integrated transport infrastructure and improved airport connectivity • Supporting links between the universities and businesses, and between businesses • Ensuring a match between skills supply and business provision

Economy PPPs	Implications for the LDP
<p>Central Cardiff Enterprise Zone was designated in 2012 to ‘attract and grow the financial and professional services sector’</p>	<p>The LDP can support the Enterprise Zone objectives by seeking to provide land, infrastructure and supporting services attractive to financial and professional services in the city centre.</p>

Health and wellbeing PPPs	Implications for the LDP
<p>Wales</p>	
<p>'Climbing Higher': The Welsh Assembly Government Strategy for Sport and Physical Activity (Welsh Assembly Government 2005) Sets targets that, by 2025,</p> <ul style="list-style-type: none"> • The percentage of people in Wales using the Welsh natural environment for outdoor activities will increase from 36% to 60% • 95% of people in Wales will have a footpath or cycle path within a 10 minute walk • No-one should live more than a 6 minute walk (300metres) from their nearest natural green space • All public sector employees and 75% of all other employees will have access to sport and physical activity facilities at, or within 10 minutes walk of the workplace <p>'Climbing Higher: Next Steps' (Welsh Assembly Government 2006) outlines investment priorities to deliver Climbing Higher.</p>	<p>The LDP should provide a framework for sport and recreation and set out a strategic approach to such development. It should:</p> <ul style="list-style-type: none"> • Promote active travel through land uses and coordinated infrastructure to make walking and cycling practicable, convenient and attractive wherever possible • Protect areas of open space that have recreation, amenity and/or conservation value • Identify standards of open space and recreational provision • Promote measures to assist walking and cycling <p>The LDP should support the achievement of the 'Climbing Higher' targets. This will have implication on open space and footpath/bridlepath provision.</p>
<p>Technical Advice Note 16: Sport Recreation and Open Space (Welsh Assembly Government 2009) Provides guidance on planning for sport, recreation and informal open spaces, as well as protecting existing facilities and open spaces. Includes guidance on developing Open Space Assessments and standards of provision and the links between health and well being, sport and recreational activity and sustainable development.</p>	<p>The LDP should provide a framework for sport and recreation and set out a strategic approach to such development. It should aim to:</p> <ul style="list-style-type: none"> • Provide the 'benchmark standard' of, per 1000 population: 1.2 ha of land for playing pitches; 1.6 ha of land for all outdoor sport; 0.25ha children's designated equipment playing space; 0.55ha for children's informal playing space; and 0.80 ha for children's playing space • Provide 'local areas' for play or informal recreation within 100 metres of homes; 'locally equipped or landscaped areas' within 400 metres; and 'neighbourhood equipped areas' within 1000 metres • Protect areas of open space that have recreation, amenity and/or conservation value
<p>Technical Advice Note 11: Noise (Welsh Assembly Government 1997) Provides advice on how the planning system can minimise the adverse impact of noise without placing unreasonable restrictions on development or unduly adding to the costs and administrative burdens of business.</p>	<p>Policies and proposals in LDPs should:</p> <ul style="list-style-type: none"> • Locate noise sensitive developments away from existing or planned sources of significant noise • Locate potentially noisy developments where noise will not be such an important consideration • Promote design that minimises or mitigates

Health and wellbeing PPPs	Implications for the LDP
	noise generation
Cardiff	
Cardiff Physical Activity and Health Strategy 2008 – 2011 (Cardiff Health Alliance 2008) Aims to improve the health of Cardiff's residents through physical activity. (Time expired but evidently not replaced or withdrawn)	Policies and proposals in LDPs should provide opportunities for physical activity, e.g. through green infrastructure and other opportunities for walking and cycling
Allotment strategy for Cardiff (Cardiff Council 2005) Sets a strategy for the improvement of Cardiff's allotments, and to ensure that there are enough allotments to meet local demand.	Policies and proposals in the LDPs should: <ul style="list-style-type: none"> • Safeguard existing allotments wherever possible • Aim to provide at minimum 15 allotment plots per 1000 households

Landscape PPPs	Implications for the LDP
International	
The European Landscape Convention (2004) Promotes the protection, management and planning of European landscape and organises European cooperation on landscape issues. The convention provides a set of guidelines to be transposed into national, regional and local regulations.	The LDP should: <ul style="list-style-type: none"> • consider landscape strategies • recognise the value of landscapes both ordinary and unique/ historical • assist in achieving landscape quality objectives.
Cardiff	
Countryside Strategy Review (Cardiff Council 2005) Sets out the Council's vision for Cardiff's countryside under five key themes: awareness of the countryside, access, biodiversity, landscape and supporting a working countryside.	The LDP can support the Strategy by: <ul style="list-style-type: none"> • Giving considerable weight to protecting the best and most versatile agricultural land • Avoiding development of greenfield sites by giving preference to the re-use of suitable previously developed land • Promoting conservation and enhancement of the countryside and strictly control development in the open countryside • Promoting farm diversification and sustainable rural development • Protecting biodiversity, and the quality and character of the landscape • Promoting access to and enjoyment of the countryside
River Taff Corridor Action Plan (Cardiff Council, CCW, WAG 2007)	The LDP can support the action plans by: <ul style="list-style-type: none"> • Supporting the enhancement, extension and maintenance of the Taff Trail, Rhymney Trail
River Ely Corridor Action Plan (Cardiff Council, CCW, WAG 2006)	

Landscape PPPs	Implications for the LDP
<p>River Rhymney and Nant Fawr Corridor Action Plan (Cardiff Council, CCW, WAG 2009)</p>	<p>and the Nant Fawr Corridor and networks</p> <ul style="list-style-type: none"> • Providing access to all to the river corridors, maximising the use of open spaces, and maximising the range of activities • Managing and enhancing the landscape and biodiversity in the river corridors and gorges • Ensuring that new and existing developments enhance and do not harm the qualities of the valley • Maximising the tourism potential of the Taff Corridor • Maximising the afteruse value of the Lamby Way landfill site

Natural resources PPPs	Implications for the LDP
International	
<p>EC Water Framework Directive (2000/86/EEC) Establishes a strategic framework for managing surface water and groundwater. The core aims are to:</p> <ul style="list-style-type: none"> • Prevent deterioration of aquatic ecosystems • Protect, enhance and restore polluted waters • Comply with water related standards and objectives for environmentally protected areas • Progressively reduce pollution from priority substances • Prevent or limit input of pollutants to groundwater 	See Severn River Basin Management Plan below
<p>EC Directive 1991/271/EEC on Urban Waste Water Treatment (as amended by EC Directive 1998/15/EEC) Protects the environment from the adverse effects of discharges of urban waste water and of waste water from industrial sectors of agro-food industry. Sets standards for wastewater collection and treatment.</p>	<ul style="list-style-type: none"> • Locational policies to take account of the effects of development on water quality and seek improvements • Planners should discuss wastewater treatment arrangements with sewerage authorities and the Environment Agency Wales • Location and design policies should also promote Sustainable Urban Drainage Systems
Wales	
<p>Technical Advice Note 14: Coastal Planning (Welsh Assembly Government 1998) Provides guidance on:</p> <ul style="list-style-type: none"> • Planning the coastal zone • Recreation • Heritage coasts and non statutory coastal groupings • Shoreline management plans 	<p>The LDP must have regard to:</p> <ul style="list-style-type: none"> • Other plans and policies with implications for the coastal area • Existing policies for coast protection and defence and Shoreline Management Plans • Coastal and marine designations <p>The LDP should:</p> <ul style="list-style-type: none"> • Include specific policies for coastal areas • Show locations suitable/unsuitable for

Natural resources PPPs	Implications for the LDP
	<p>development and relevant designations on the Proposals Map</p> <ul style="list-style-type: none"> Promote conservation and enhancement of the undeveloped coast
<p>Technical Advice Note 22: Sustainable Buildings (Welsh Assembly Government 2010) TAN22 provides guidance and advice on:</p> <ul style="list-style-type: none"> Sustainable buildings and standards of assessment The design solutions that may be used to meet these standards Further design guidance on delivering low carbon buildings 	<p>This technical advice note has guidance for LDPs, highlighting the potential opportunities for local authorities to impose specific local requirements for strategic sites identified.</p> <p>The LDP should:</p> <ul style="list-style-type: none"> Encourage high sustainable building standards Promote the delivery of low carbon buildings Identify areas that are most suitable for development with high sustainability standards.
<p>Minerals Planning Policy Wales (Welsh Assembly Government 2001) Provides land use guidance on mineral extraction and related development – includes all minerals and substances in, on or under land extracted either by underground or surface working.</p>	<p>The LDP should:</p> <ul style="list-style-type: none"> Provide for aggregate needs in accordance with the agreed regional apportionment Encourage efficient and appropriate use of minerals and the re-use and recycling of suitable materials Safeguard mineral resources from sterilisation Limit the impact of mineral extraction on the environment and interest of conservation importance Promote high standard restoration and beneficial after-use
<p>Minerals Technical Advice Note 01: Aggregates (Welsh Assembly Government 2004) Provides detailed guidance to ensure that:</p> <ul style="list-style-type: none"> Aggregates supply is managed in a sustainable way so that the best balance between environmental, economic and social considerations is struck The environmental and amenity impacts of any necessary extraction are kept to a level that avoids causing demonstrable harm to interests of acknowledged importance. 	
<p>Water is Precious, Water for people and the environment: Water Resources Strategy for Wales (Environment Agency 2009) This document sets out the Environment Agency’s approach to the overall management of water resources in Wales.</p> <p>The strategy sets out a series of strategic actions for adapting to climate change, protecting the water environment (including conservation and water quality) and the management of water resources with regard to development and future demand.</p>	<p>The LDP should:</p> <ul style="list-style-type: none"> Take the strategy’s strategic actions into account Support water efficiency measure in new developments Consider how the water environment can cope with the additional demand placed upon it by proposed developments.
SE Wales	
<p>Severn River Basin Management Plan (Environment Agency 2009) Prepared under the Water Framework Directive, it describes the river basin district</p>	<p>The LDP should:</p> <ul style="list-style-type: none"> Include strong water efficiency policies Take the Management Plan’s objectives into

Natural resources PPPs	Implications for the LDP
(which includes Cardiff's rivers), pressures on it, and what actions will be taken to address the pressures. It sets out what improvements are possible by 2015 and how the actions will make a difference to the local water environment.	<p>account</p> <ul style="list-style-type: none"> • Reduce the physical impacts of urban development in artificial or heavily modified waters • Implement surface water management plans, increasing resilience to surface water flooding and ensuring water quality is considered on a catchment basis • Promote sustainable drainage • Include Water Cycle Studies in growth or high risk areas
<p>Severn Estuary Shoreline Management Plan (Severn Estuary Coastal Group with DEFRA and NAW 2000)</p> <p>Provides the basis for sustainable coastal defence policies in the Severn Estuary and sets objectives for the future management of the shoreline. A revised version of this plan is currently out for consultation</p>	<p>In preparing the LDP the Council must have regard to:</p> <ul style="list-style-type: none"> • Other plans and policies with implications for the coastal area • Existing policies for coast protection and defence and Shoreline Management Plans • Coastal and marine designations <p>The LDP should:</p> <ul style="list-style-type: none"> • Include specific policies for coastal areas; • Show locations suitable/unsuitable for development and relevant designations on the Proposals Map
Cardiff	
<p>Rhymney Catchment Abstraction Management Strategy (Environment Agency Wales 2006)</p> <p>Ebbw and Lwyd Catchment Abstraction Management Strategy (Environment Agency Wales 2006)</p> <p>Taff and Ely Catchment Abstraction Management Strategy (Environment Agency Wales 2006)</p> <p>Describes how much water is available within the catchments, areas where water resources are constrained, and the Environment Agency's proposed options for managing this water now and in the future.</p>	<p>The LDP should:</p> <ul style="list-style-type: none"> • Promote the efficient use of water • Include policies on the location of potentially polluting developments and criteria by which applications for such developments should be determined • Ensure that incompatible uses of land are separated, in order to avoid potential conflict <p>Locational policies in the LDP should take account of the effects of development upon water quality and vice versa. Location and design policies should also promote sustainable water provision and use in new developments including Sustainable Urban Drainage Systems.</p>

Population PPPs	Implications for the LDP
Wales	
<p>Better Homes for People in Wales: A National Housing Strategy for Wales (The National Assembly for Wales 2001)</p> <p>Provides a vision for the future of Welsh housing and a policy framework to facilitate action at the local level. Aims to provide:</p> <ul style="list-style-type: none"> • Homes that are in a good condition in safe neighbourhoods • Better housing services and a greater 	<p>The LDP should:</p> <ul style="list-style-type: none"> • Identify the requirement for market and affordable housing • Allocate land for housing, favouring the re-use of previously developed land and buildings within settlements before settlement extensions and new development around settlements with good public transport links

Population PPPs	Implications for the LDP
<p>choice for people over the types of housing and locations they live in</p>	<ul style="list-style-type: none"> • Provide guidance on design, access, density, off-street parking and open space provision • Include policies for affordable and special needs housing where there is identified need • Indicate where developer contributions will be expected towards infrastructure, community facilities and affordable housing
<p>Improving Lives and Communities – Homes in Wales (Welsh Assembly Government 2010) Aims to respond to existing housing problems, including demand outstripping supply, increasing demand for affordable housing, ageing population, and age and quality of the current social housing stock. Aims to:</p> <ul style="list-style-type: none"> • Provide more housing of the right type and offer more choice • Improve homes and communities, including the energy efficiency of new and existing homes • Improve housing-related services and support 	<p>The LDP should:</p> <ul style="list-style-type: none"> • Provide sufficient housing of the right type to meet people's needs • Provide sufficient affordable homes • Support energy efficiency of new and existing homes, and ensure that local authority and housing association homes meet the Welsh Housing Quality Standard
<p>Housing White Paper, “Homes for Wales” , Welsh Government, May 2011, outlines the key role of planning in increasing the supply of housing.</p>	
<p>Technical Advice Note 1: Joint Housing Land Availability Studies (Welsh Assembly Government 2006) Provides guidance on the preparation of Joint Housing Land Availability Studies, the purpose of which is to monitor the provision of market and affordable housing.</p>	<p>The LDP should:</p> <ul style="list-style-type: none"> • Identify the requirement for market and affordable housing • Ensure that there is land genuinely available to provide a 5 year supply of land for housing • Allocate land for housing, favouring the re-use of previously developed land and buildings within settlements before settlement extensions and new development around settlements with good public transport links
<p>Technical Advice Note 2: Planning and Affordable Housing (Welsh Assembly Government 2006) Aims to ensure the provision of enough affordable housing.</p>	<p>The LDP should:</p> <ul style="list-style-type: none"> • Be informed by a Local Housing Market Assessment • Include an affordable housing target, based on the need identified in the local housing market assessment • Indicate how the target will be achieved • Monitor the provision of affordable housing against the target and where necessary take action to ensure that the target is met
<p>Household Projections for Wales (2008-Based) (Welsh Assembly Government 2010) Suggests that the number of households in Cardiff will rise from 137,000 in 2008 to 179,000 in 2023.</p>	<p>The LDP should take these projections into consideration when planning for future housing numbers</p>
South East Wales	

Population PPPs	Implications for the LDP
<p>South East Wales Regional Housing Apportionment Memorandum of Understanding (SPWSPG 2007) Allocates 26,070 new houses to Cardiff to 2021 to implement the Wales Spatial Plan 2024.</p>	As above
<p>Cardiff</p>	
<p>Local Housing Strategy 2012-17 (Cardiff Council 2012) Sets out the key issues facing housing in Cardiff and outlines priorities for the strategy period. Highlights the importance of increasing the number of homes available to people who cannot afford a home of their own through the housing market.</p>	<p>The LDP Regulations (WAG 2005) prescribe that LDPs must have regard to the Local Housing Strategy. The LDP should help to:</p> <ul style="list-style-type: none"> • Increase the supply of quality affordable and sustainable homes, including through S106 obligations • Aim to meet the Welsh Housing Quality Standard by 2012 • Implement neighbourhood regeneration and environmental schemes • Improve energy efficiency of homes • Provide adequate homes for vulnerable groups, including Gypsies and Travellers, migrant workers and homeless people

Waste PPPs	Implications for the LDP
<p>International</p>	
<p>Waste Framework Directive (2008/98/EC) Requires member states to:</p> <ul style="list-style-type: none"> • Apply the waste hierarchy (reduce, reuse, recycle, recover) • Apply the proximity principle • Promote high quality recycling • Set up separate collections • Reuse and recycle 50% of household paper, metal, plastic and glass by 2020 • Recover 70% of construction and demolition waste by 2020 • Establish plans, programmes, targets and facilities for waste prevention and disposal 	<p>The LDP should help to meet the WFD targets by:</p> <ul style="list-style-type: none"> • Ensuring that infrastructure for waste management is adequate to accommodate proposed development while minimising adverse impacts on health, the environment and communities • Identifying sites for waste management facilities, including recycling and recovery, or areas where such facilities may be suitable • Incorporating adequate and effective waste management facilities in proposed new developments • Using S106 and planning conditions where appropriate to improve waste reduction, reuse and recycling during construction and operation of developments
<p>EC Landfill Directive 1999/31/EC Sets targets to reduce the amount and negative impacts of waste going to landfill and promoting recycling and recovery:</p> <ul style="list-style-type: none"> • By 2010 to reduce BMW to 75% of that produced in 1995 • By 2013 to reduce BMW to 50% of that produced in 1995 • By 2020 to reduce BMW to 35% of that produced in 1995 	<p>The LDP should help to meet these challenging targets</p>
<p>Wales</p>	
<p>Towards Zero Waste: The Overarching Waste</p>	<p>The LDP should ensure that waste management</p>

Waste PPPs	Implications for the LDP
<p>Strategy Document for Wales (Welsh Assembly Government 2010) Long-term framework that aims to set Wales on a path towards zero waste by 2050. Aims to reduce waste arisings across all sectors by around 1.5% per year.</p>	<p>infrastructure supports the strategy's proposals for more reuse and recycling of waste, anaerobic digestion and other forms of waste treatment</p>
<p>Technical Advice Note 21 Waste (Welsh Assembly Government 2001) Provides detailed guidance on how land use planning can assist sustainable waste management.</p>	<p>The LDP should:</p> <ul style="list-style-type: none"> • Take account of the waste hierarchy, proximity principle, regional self-sufficiency, best practical environmental option, and sustainable transport • Ensure that infrastructure for waste management is adequate to accommodate proposed development while minimising adverse impacts on health, the environment and communities • Identify sites for waste management facilities, including recycling and recovery, or areas where such facilities may be suitable • Incorporate adequate and effective waste management facilities in proposed major new developments • Promote reuse and recycling commitments from developers during construction
SE Wales	
<p>South East Wales Regional Waste Plan 1st Review (Consultation version) (Welsh Assembly Government with local authorities 2008) Identifies the facilities needed to treat and dispose of waste in South East Wales to 2013 and beyond, in order to:</p> <ul style="list-style-type: none"> • Achieve the Landfill Directive 2020 targets by 2013 principally through maximising recycling and composting • Achieve 50% 'front end' recycling and composting for municipal waste in 2013 • Ensure that targets for the management of other controlled waste streams are met 	<p>The plan identifies the need for additional waste management facilities on a sub-regional basis. Further discussions and consultation will be needed to identify local authority specific facilities. The LDP should help to provide these facilities once the plan is agreed.</p>
Cardiff	
<p>Cardiff Municipal Waste Management Strategy 2011 – 16 Outlines the changes planned for Cardiff's waste service over next 5 years. It details:</p> <ul style="list-style-type: none"> • How much waste is produced in Cardiff • What waste will be collected and when • How waste will be treated or recycled • How Cardiff's waste will be managed sustainably • How litter and other environmental 	<p>The Municipal Waste Management Strategy relies on the LDP to provide the policy framework to support the transition to more sustainable waste management methods. It also relies on the LDP to identify locations that are suitable for waste management facilities.</p> <p>The LDP should:</p> <ul style="list-style-type: none"> • Look to develop policy that facilitates and/or promotes the use of the waste hierarchy • Enable the infrastructure required for sustainable waste management

Waste PPPs	Implications for the LDP
issues such as fly tipping will be addressed

Sustainability Appraisal and Strategic Environmental Assessment of the Cardiff Local Development Plan

Appendix B: Baseline

Final Sustainability Appraisal Report of the Cardiff Local Development Plan

January 2016

Contents

	Page
Preface	1
1. Access and equality	3
• Introduction	3
• Cardiff contains some of the most deprived areas in Wales - geographically there is a concentration of deprivation in the 'southern arc' although 'hotspots' exist elsewhere	3
• Lack of affordable housing units - particularly family housing – is excluding those on low income from entering the housing market	6
• Cardiff has a significant number of homeless people	7
• Cardiff has good access to services although deficiencies still exist at a local level	8
• The educational, training and skill base of Cardiff's population is good overall but varies significantly across the County	10
2. Air quality	12
• Introduction	12
• Levels of benzene, 1, 3 butadiene, carbon monoxide, lead and sulphur dioxide are within current standards	12
• Nitrogen dioxide is the main cause of air pollution 'hot spots' in Cardiff	12
3. Biodiversity, flora and fauna	15
• Introduction	15
• Cardiff has a wide range of sites designated for biodiversity, including two European Designated Sites (the Severn Estuary and Cardiff Beech Woods)	15
• The city hosts protected and rare species including the Great Crested Newt, Otter, Dormouse and Bat	17
• Cardiff has many existing corridors and networks of mixed habitats providing good connectivity for species	19
• The condition of designated sites is a concern	20
• Cardiff's biodiversity resource is vulnerable to new developments and land management practices which may result in habitat loss and fragmentation	20

4. Climate change	21
• Introduction	21
• Cardiff's CO2 emissions per person are decreasing, particularly due to reductions in industrial and commercial emissions	21
• Traffic flows in the city are decreasing, but outside the city it is increasing, contributing to increased greenhouse gas emissions and congestion	23
• Domestic energy use is responsible for almost one third of Cardiff's CO2 emissions	26
• Flooding poses a particular threat to Cardiff due to its coastal location, low lying areas and rivers	27
5. Cultural heritage and the historic environment	31
• Introduction	31
• The City's cultural and historic attractions perform an important national and regional role attracting large numbers of visitors each year	31
• Cardiff contains a wide range of areas, buildings and monuments designated for historic value befitting of its Capital City status	32
• Some designated buildings/features are not in a favourable condition	33
6. Economy	35
• Introduction	35
• Cardiff is the key economic driver for south-east Wales	35
• Cardiff has strong economic growth (reduced by the recession) and relatively high employment	36
• Manufacturing industries are in decline, and service sector industries and private sector employment are growing	40
• The workforce is polarised between qualified graduates and low skilled workforce	40
• Significant areas of employment land have changed to alternative uses (notably housing) although land for employment is still available	42
7. Health and wellbeing	43
• Introduction	43
• The health of Cardiff's population is generally better than the Welsh average although considerable discrepancies exist at ward level	43
• Health varies considerably across the City	44
• Over half of Cardiff's adults are clinically overweight or obese	47
• Under a third of Cardiff's adults get the exercise they need	47
• Road safety has generally improved	48
• Crime rates have also broadly improved or remained steady	49
• Environmental quality – a determinant of health – varies greatly within Cardiff	50

8. Landscape	53
• Introduction	53
• Cardiff has a very strong and distinctive landscape backdrop	53
• Three major river valleys run through the city	55
• The coastline presents complex issues and opportunities	55
• Five areas have been proposed as SLAs	57
• Cardiff is generally well served by open spaces within the urban area, but some areas are under-provided	57
• Cardiff's landscape qualities are vulnerable to insensitive new development and land management practices	58
9. Natural resources	60
• Introduction	60
• Recent years have seen a high percent of housing completions on previously used (brownfield) land	60
• As a result of Cardiff's industrial past, many sites could potentially be contaminated	61
• Good quality agricultural land is known to exist in Cardiff but no comprehensive survey has been undertaken recently	62
• Cardiff's allotments are important for people's health and food security, but they are oversubscribed	62
• Cardiff has sufficient mineral reserves to last about 30 years	63
• Chemical and biological water quality of the rivers Taff, Ely and Rhymney is 'fair to good' and water quantity is satisfactory	64
10. Population	68
• Introduction	68
• Cardiff's population has increased steadily over the past 20 years but much more rapidly since 2001 reaching 341,100 in 2010	68
• Population and household numbers will increase in South East Wales, and Cardiff's proportion of this is increasing	69
• Average household size is decreasing, with a decline in married couples but an increase in one person, lone parents and cohabiting couples	71
• Cardiff has a relatively high proportion of young adults and a low proportion of older age groups compared to Wales as a whole	72
• Ethnic groups as a proportion of Cardiff's population are higher than for Wales as a whole	73

11. Waste	74
• Introduction	74
• Construction and demolition waste is currently the biggest component of waste in South East Wales	75
• Recycling rates are improving rapidly following the completion of a new recycling facility and rolling out a recycling scheme	77
• It is unclear how Cardiff's waste will change in the future	78

Preface

This Appendix was initially produced in 2007; it was updated in autumn 2010 and summer 2012, and should be read together with the updated Scoping Report and Initial Sustainability Appraisal Report. This appendix sets out the main environmental, social and economic issues that are or are likely to affect Cardiff over the life of the Plan. Section 4 of the Scoping Report summarises the issues that are covered in this appendix, which were identified through:

- Discussions with the planning team
- Workshop and meetings with key consultees, stakeholders and other interest groups
- Consultation on the 2007 Scoping Report
- Desk based research

Indicators

This appendix includes a set of indicators that are used to show change over time in the issues identified. Some of the indicators are of more direct relevance to the LDP while others are contextual and will be used to provide a more general picture of the conditions which the plan should take into account. The indicators are shown in table format under the relevant issue and topic headings. The key to the indicator table is as follows:

Local, Welsh or UK data: This is used to compare Cardiff's situation to that of Wales and the UK. It also highlights gaps (at any level).

UK data:

Target: Targets to achieve, based on the policy analysis of Appendix 1. These can be local targets or regional and national ones that Cardiff Council are obliged to work towards.

Trend:

↑	Indicator is moving towards a more sustainable position
↔	Indicator is staying roughly steady
↓	Indicator is moving towards a less sustainable position.
?	Indicator trend is unclear or cannot be assessed due to lack of data

Note that an indicator can be increasing (e.g. car use) but be going in a less sustainable direction.

Indicator status:

+	Indicator is equal to or better than target or equivalent regional/national/international performance. Alternatively (where comparators are not available) historical trends show that the situation is improving.
-	Indicator is below target or equivalent regional/national/international performance. Alternatively (where comparators are not available) historical trends show that the situation is getting worse
!	Indicator is significantly below target or equivalent regional/national/international performance and is a priority for action
?	Indicator status is unclear and cannot be assessed due to lack of data

Commentary:

A commentary on the data set. Includes reasons for gaps, any anomalies, what the trends suggest and why.

Data quality:

0	National data only; no data identified from public sources
1	Good quality local data, recent measurement and historical trend
2	Local data for recent period only (i.e. no trend), uses proxy data to derive local data or good quality regional data, recent measurement and historical trend
3	Regional data for recent period only (i.e. no trend)

Data source:

Web links, hard copy sources, Council officers etc

1. Access and equality

Introduction

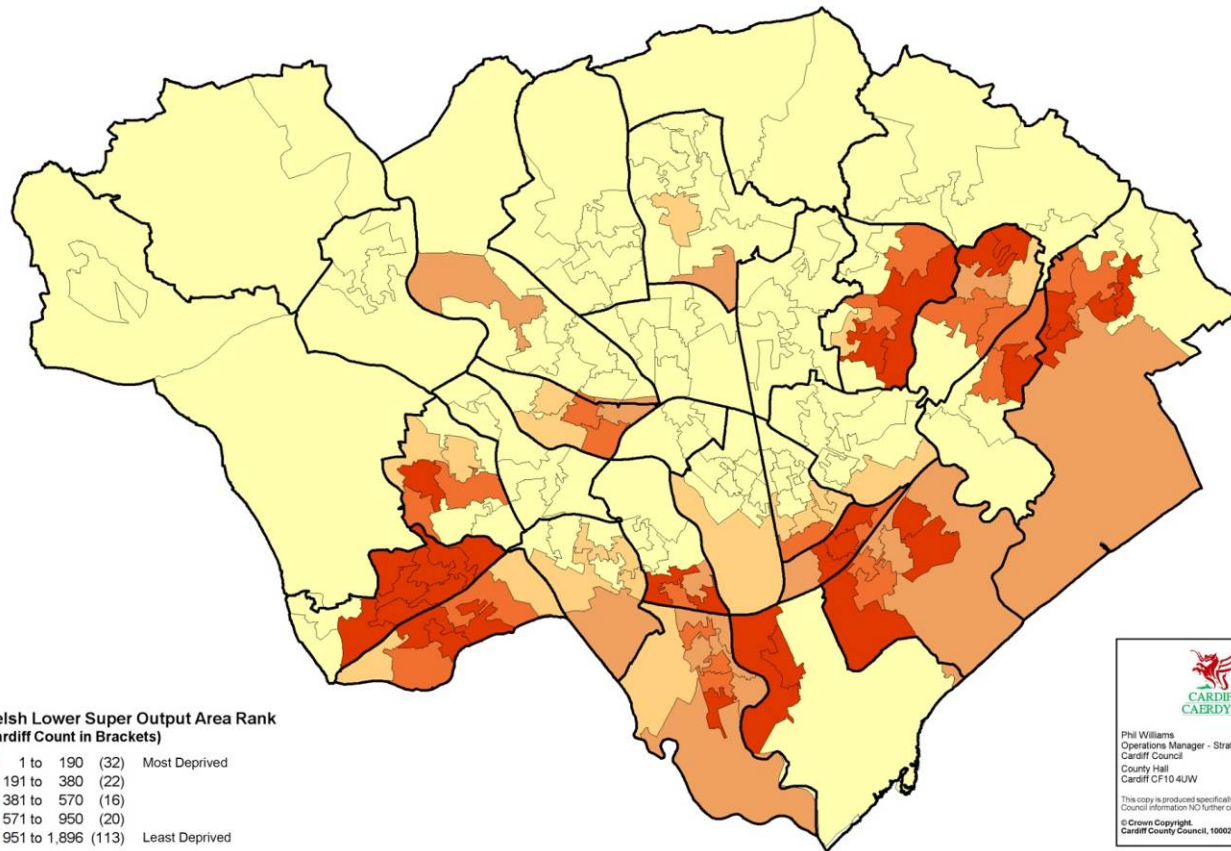

1.1 Over the last decade, Cardiff has experienced strong economic growth and increasing levels of prosperity, and major redevelopment has permeated the city. Yet this prosperity has not been evenly distributed. There are considerable variations within and between localities, with people in some parts of Cardiff experiencing deprivation that is amongst the worst in Wales.

Cardiff contains some of the most deprived areas in Wales - geographically there is a concentration of deprivation in the ‘southern arc’ although ‘hotspots’ exist elsewhere

1.2 The Welsh Index of Multiple Deprivation (WIMD) is a measure of the relative levels of deprivation in local areas of about 1500 people (called Lower Level Super Output Areas). 8 individual measures of deprivation are combined to make up the index covering income, employment, health, education, housing, access to services, environment and crime. In the most recent WIMD 2011, 21.2% (or 40 out of 190) of the 10% most deprived areas in Wales, are in Cardiff. This is higher than any other Welsh local authority except Blaenau Gwent (21.3%). However, fewer than 50% of Cardiff’s LSOAs (46.3%) are in the 50% most deprived, indicating that Cardiff has more prosperous as well as well as more deprived areas than average for Wales. Deprivation is concentrated mainly in the ‘southern arc’ of Cardiff (see Map 1.1) which includes Ely, Butetown, Splott, Riverside, Adamsdown, Caerau, Grangetown, Trowbridge, Rumney, Llanrumney, Pentwyn and Fairwater.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
1.1	Number and percent of Cardiff’s lower super output areas in the 10% most deprived lower super output areas for Wales	40 out of 190 21%	190 out of 1896 10%	Not applicable	Decrease percent of LSOAs in most deprived 10%	↓ 33 in 2005	-		1	Local Govt. 1.3. When the WIMD was calculated, Cardiff accounted for 10.7% of the population of Wales, but accounted for more than 10.7% of the population living in the most deprived communities for all WIMD indicators except employment and access to services: see Figure 1.1. Cardiff had more than twice the expected share of population living in the most deprived communities in terms of education, housing and community safety.

1.4. Deprivation is not restricted to the southern arc of Cardiff. The disaggregated Index domains show that deprivation is spread across the city (see Maps 1.1, 1.2, 1.3, 6.1, 6.2, 7.1, 7.3).

Figure 1.1. Cardiff residents living in the 10% most deprived communities in Wales as a percent of the Wales total in 10% most deprived (Cardiff Council, 2010, Joint Needs Assessment)

Lack of affordable housing units - particularly family housing – is excluding those on low income from entering the housing market

1.5. In May 2012, the average price of a house for Cardiff was slightly less than £145,000, down from £150,000 in 2006. The average annual salary in 2011 was £24,362. In 2012, the ratio of house price to annual salary was just under 6, down from 6.75:1 in 2006 and a little under the UK average.

1.6. Provision of enough affordable housing is an ongoing problem in Cardiff. In mid-2010, there were 10,491 applicants on the council housing register, of which 47% required family housing. For the financial year, 2009/10, 463 new domestic units (53% of the total) were available as affordable housing, far below the levels needed. However even this is an anomaly: for the previous decade, affordable housing comprised about 10% of all new housing.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
1.2	Average house price compared to average salary	May 2012 house price £144,844 Annual salary 2011 £24,362 Ratio 5.95: 1	England and Wales House price £161,677 Annual salary £26,623 Ratio 6.07: 1		No target	↑ 6.75 in 2005, though will worsen if house prices rise again	-	The recession has dampened house prices more than earnings, making housing more affordable than a few years ago.	1	Land Registry (Res Prop Price Reports) ¹ Annual Survey of Hours and Earnings (ONS) ²
1.3	Number and percent of domestic units that are provided for affordable housing per year	127 or 22.7% (2011/12) 147 or 15.3% (2010/11) 303 or 35% (2009/10) 212 or 14% (2008/09)	Not available		352	↔ 202 in 2005/06 346 in 2006/07 194 in 2007/08	-	Several large Registered Social Landlord schemes were completed in 2009/10, as well as some 'credit crunch' windfalls and housing built with additional strategic capital funding from WAG.	1	Cardiff Council, housing monitoring 2009 Housing Strategy Officer, July 2012

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
						212 in 2008/09				

1.7. The quality of housing in Cardiff is very variable, with housing in the 'Southern arc of deprivation' being more likely to be overcrowded and without central heating than elsewhere in Cardiff (WIMD 2008).

Cardiff has a significant number of homeless people

1.8. Homeless people are especially vulnerable and there are a significant number of them living in Cardiff. A number of hostels and lodging houses are concentrated around the city centre. Cardiff also attracts a high number of young people who have left home, absconded from care, or are vulnerable in other ways. During 2008-09, Cardiff Council received 2,916 enquiries from homeless people or those at risk of homelessness, and accepted 618 households as being eligible for assistance. In April 2010, there were 361 households in temporary accommodation in Cardiff, waiting for a permanent home.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
1.4	The number of homelessness presentations received by the local authority during the year per 1000 households.	2916 enquiries out of 137,000 households = 21.3 per 1000 people	Not available		8.5 (Cardiff Council)	↓ 10.3 in 2005/06 2418 inquiries in 2007/08 2916 in 2008/09	!	The increase in the number of enquiries reflects the impact of the wider economic climate on households and on their individual housing situations.	1	Cardiff Council Affordable Housing Delivery Statement 2007/08 – 2010/11

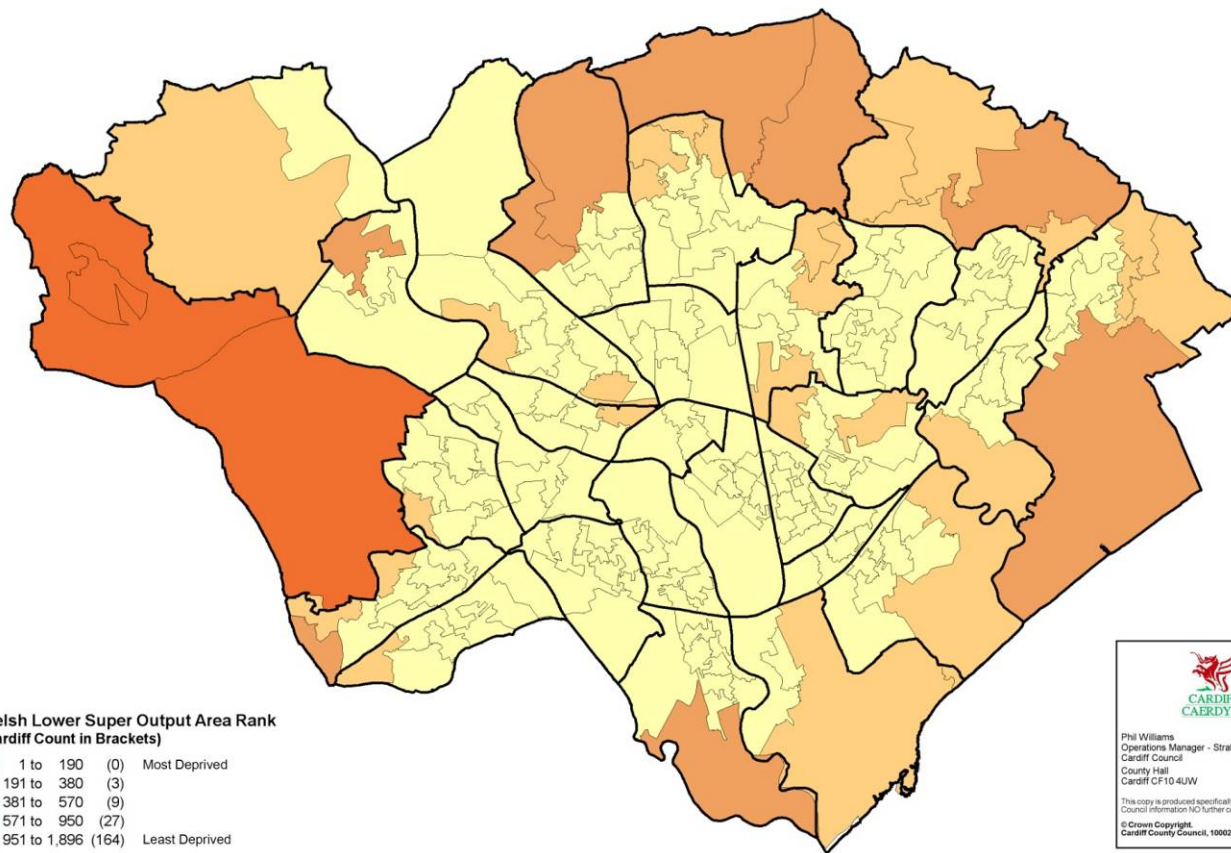

Cardiff has good access to services although deficiencies still exist at a local level

1.9. As would be expected for a compact city, the Welsh Index of Multiple Deprivation indicates that Cardiff has good access to services³. Nowhere in Cardiff is in the worst 10% for Wales in terms of access. However, the less central parts of Cardiff have comparatively poor access, notably Creigiau and St. Fagans, Lisvane, Rhiwbina, Pontprennau and Trowbridge (see Map 1.2).

1.10. The Needs Assessment also identified a number of vulnerable groups such as ethnic minority populations, the homeless and asylum seekers where access to services is restricted as a result of social and cultural issues (Cardiff Council and Local Health Board 2004).

³ The access to services index is comprised by calculating the average time it would take to access 8 key services (food shop, GP surgery, primary school, post office, public library, leisure centre, NHS dentist, secondary school, and a transport node)

MAP 1.2: Welsh Index of multiple deprivation 2011 - Access to services

Cardiff County Council, 100023376 (2010)

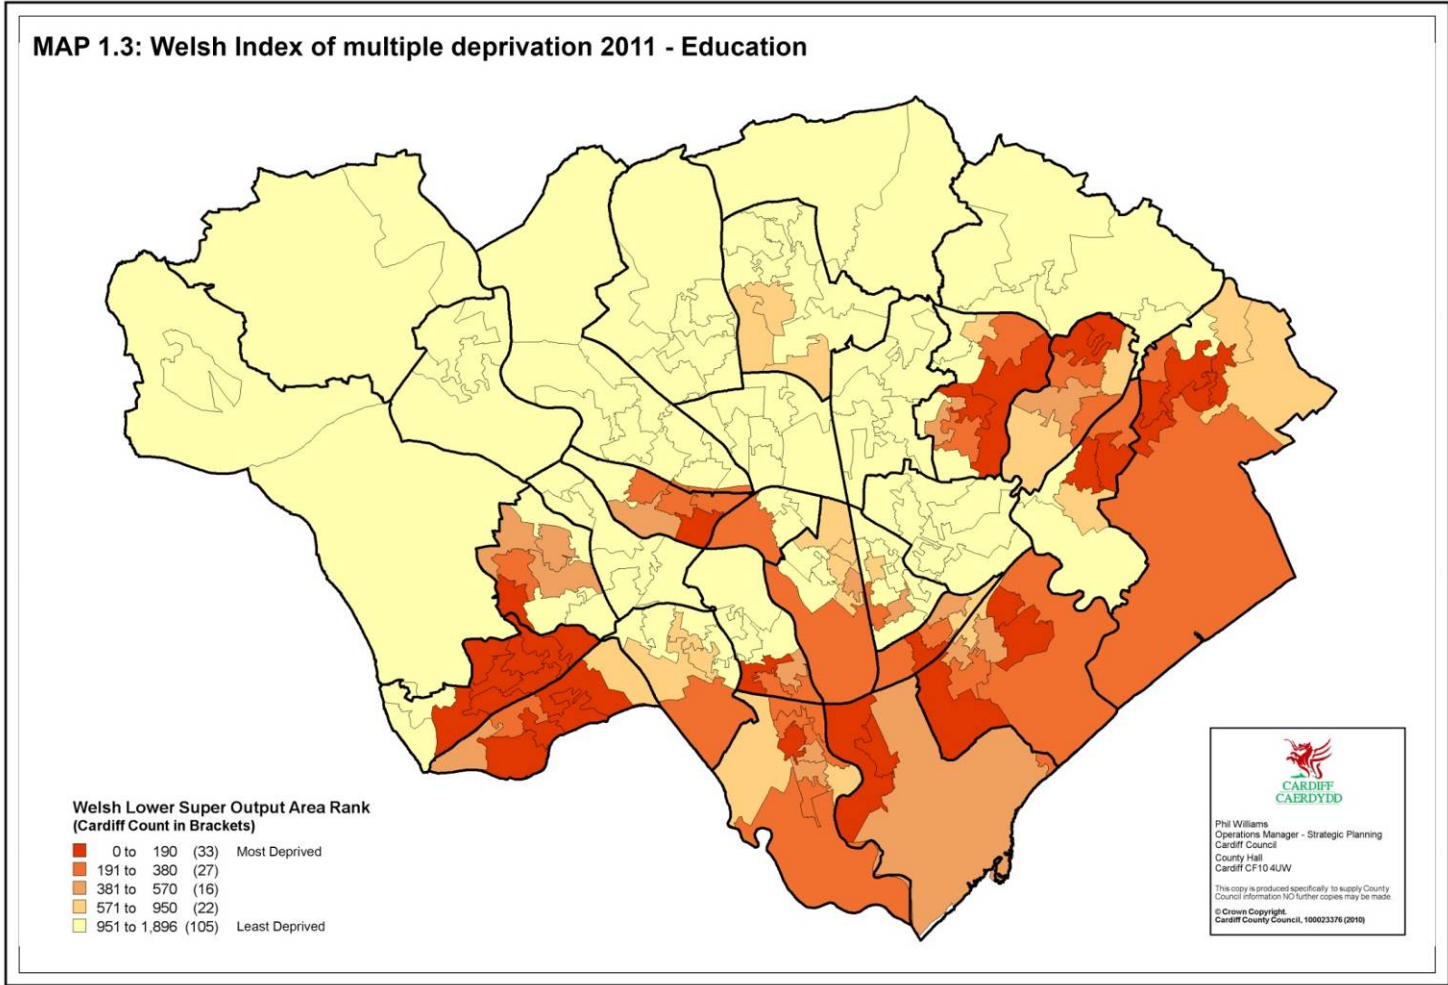

The educational, training and skill base of Cardiff's population is good overall but varies significantly across the County

1.11. Cardiff's population consistently outperforms the Wales and UK averages in terms of education and skills. This is partly determined by demographics, with Cardiff's relatively young population and the existence of several universities. However, Cardiff also has more than 20% of the 10% most deprived lower super output areas in Wales for education (Local Government Data Unit 2008). These are mostly concentrated in the south and east part of the city, as shown by Map 1.3. Low educational achievement and deprivation are linked⁴, creating a vicious cycle of poor attainment and low skilled employment opportunities.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
1.5	Percent of population of working age qualified to NVQ level 4+ or equivalent	39.8% (2010)	28.4%(2010) (Wales)	31.3% (2010) (GB)	No target identified	↔ 34.0% in 2005	+		1	Local Area Labour Force Statistics (National Statistics - Nomis)

⁴ The Townsend index shows that as deprivation increases so educational attainment decreases. This correlation was demonstrated in the Cardiff Community Profile 2002. The data used to prove the correlation was old though there is no evidence to suggest that the relationship has changed.

MAP 1.3: Welsh Index of multiple deprivation 2011 - Education

2. Air quality

Introduction

2.1. There is a direct link between air pollution and human health, Cardiff Council periodically reviews and assesses air quality for compliance with objectives set down in the Air Quality (Wales) Regulations 2000. The following pollutants have been reviewed and assessed:

- Benzene
- Lead
- Particulates
- 1,3 Butadiene
- Nitrogen dioxide (NO_x)
- Sulphur dioxide
- Carbon monoxide

Levels of benzene, 1, 3 butadiene, carbon monoxide, lead and sulphur dioxide are within current standards

2.2. The 2009 Air Quality Updating and Screening Assessment (Cardiff Council, 2009) concludes that there are no 'hotspots' for five of the seven pollutants. Particulate matter (PM₁₀), currently meets UK standards but there is doubt that provisional EU objectives would be achieved across the city.

Nitrogen oxides is the main cause of air pollution 'hot spots' in Cardiff

2.3 Table 2.1 shows monitored NO₂ levels at various locations in the city centre. Many of these exceed the legal threshold (40 µg/m³). Modelling showing predicted breaches led to four Air Quality Management Areas being declared: Newport Road, Philog and Cardiff West in 2000, and St Mary Street in 2002. The first two were revoked in 2007, and the area of the Cardiff West AQMA (renamed Ely Bridge) was reduced. An Air Quality Action Plan for St. Mary Street was adopted in early 2010. In December 2010 the Stephenson Court AQMA was declared due to

Year	2002	2003	2004	2005	2006	2007	2008	2009
Threshold (µg/m ³)	43	42	41	40	40	40	40	40
Frederick Street	31	36	30	34	30	32	29	31
Terminus building	48	60	48	55	-	-	-	-
St Mary Street	59	61	58	62	60	58	51	-
Westgate Street	41	43	45	49	48	48	39	48

3. Biodiversity, flora and fauna

Introduction

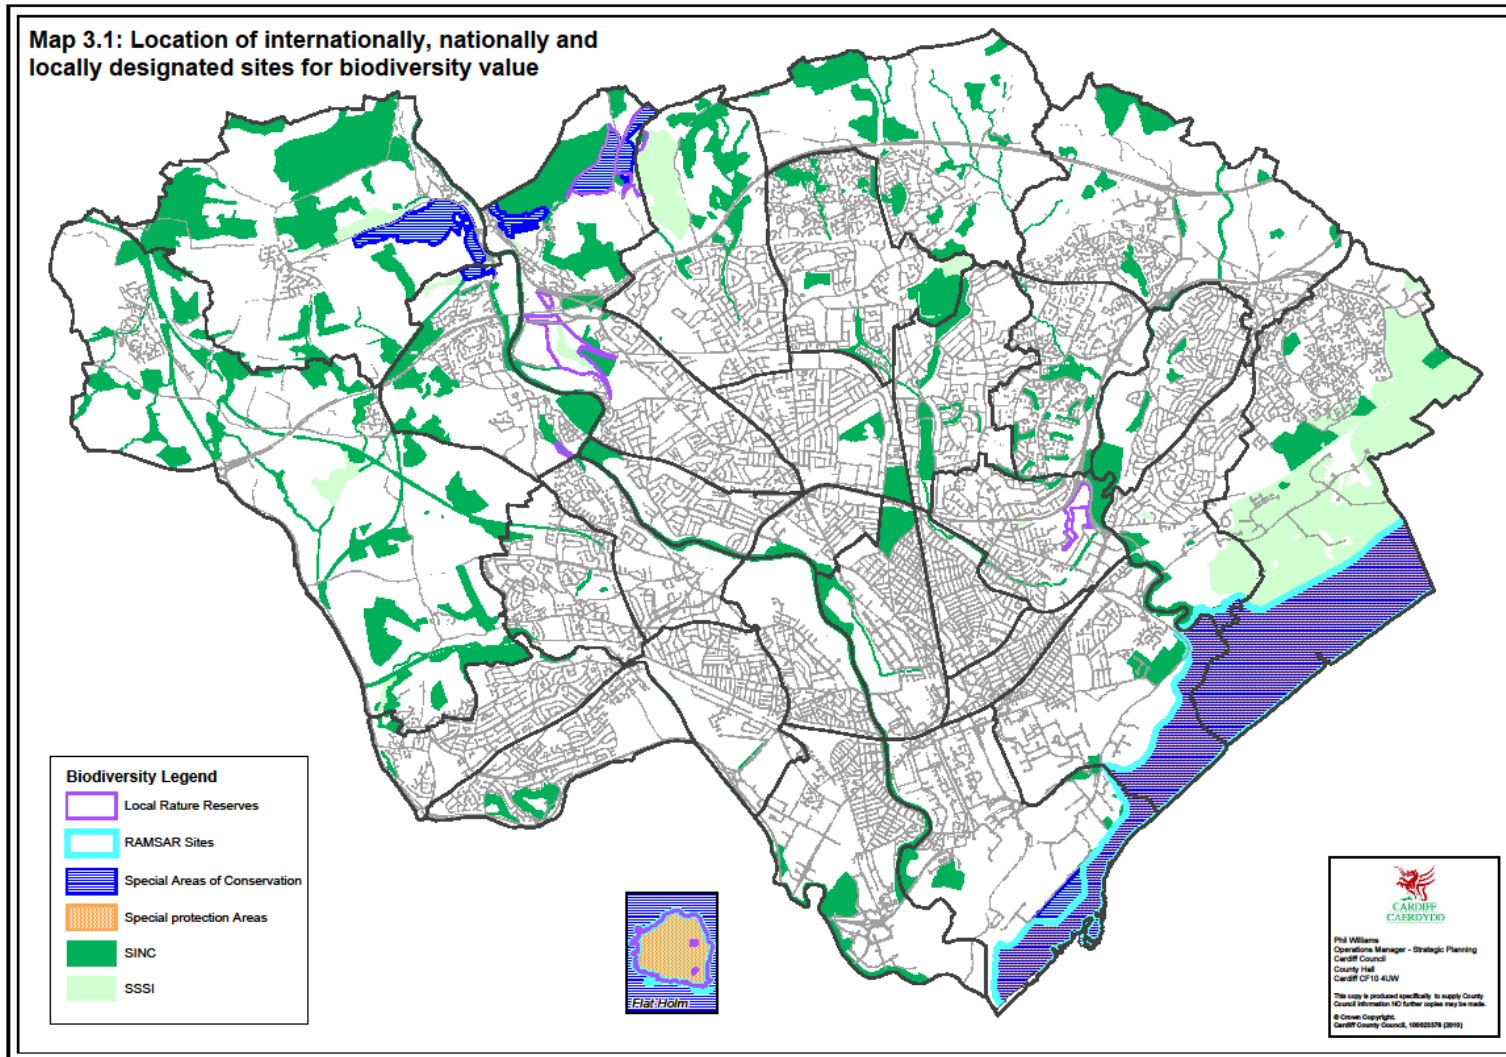

3.1. Cardiff has a wide range of biodiversity interests which extend from Flat Holm Island in the Severn Estuary to the hills forming the northern edge of the city, a thousand feet above sea level. Habitats and species have developed in response to local conditions and represent Cardiff's biodiversity resource. Cardiff Council's Local Biodiversity Action Plan (LBAP) was prepared in 2005 and revised in 2008. It includes Action Plans for 19 habitats and species, developed in partnership with other organisations.

Cardiff has a wide range of sites designated for biodiversity, including two European Designated Sites (the Severn Estuary and Cardiff Beech Woods)

3.2. Map 3.1 shows the extent of designated sites in Cardiff. It reveals a good distribution across the city, including sites within the urban area and several strategically important corridors.

3.3 The Severn Estuary Special Area of Conservation (SAC), Special Protection Area (SPA) and Ramsar Site consists of intertidal mudflats, sandflats, saltmarsh, shingle and rocky shoreline. These habitats support internationally important populations of waterfowl. The estuary is also important for the run of migratory fish and has an immense tidal range. The Cardiff Beech Woods SAC is one of the largest concentrations of beech forests in Wales, and represents the habitat close to western limit of its past native range in both the UK and Europe.

3.4 There are 15 Sites of Special Scientific Interest (SSSIs) in Cardiff ranging from woodland, aquatic, marsh and grassland habitats to sites of geological interest. Five Local Nature Reserves provide good opportunities to access local wildlife and there are many additional Sites of Importance for Nature Conservation (SINCs). Since 2007, several new sites of nature conservation importance have been designated in Cardiff, an encouraging trend.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
3.1	Number and extent of designated sites of importance (SACs, SPAs, SSSIs, Ramsars, LNRs and SINCs)	SAC – 803.31 ha (2 sites) SPA – 701.5 ha (1) Ramsar – 696ha SSSI – 1470.4 ha (15) LNR – 150.31 ha SINC – 1581.5 ha	Not applicable		No net loss (Cardiff Council)	↑ Severn Estuary SAC and Blaen Bielly SSSI added since 2006; increase of SAC from 115ha, SSSI from 1461.7ha, SINC from 1391.3ha	+	Additionally, Nant Fawr is in the process of being designated as a new LNR (20.8ha)	1	Cardiff Council officers

The city hosts protected and rare species including the Great Crested Newt, Otter, Dormouse and Bat

3.5. European protected species occurring in Cardiff are the Great Crested Newt, Otter, Dormouse and Bats. Otters are now present on all three main rivers and have also extended to tributaries and other water bodies. Dormice require a woodland habitat and are known to primarily exist across the northern ridge and east of the city. All species of bats are protected and their distribution varies: some are widespread such as the Pipistrelle whilst others are localised.

3.6. UK protected species and habitats, as set out in the Wildlife and Countryside Act 1981 (as amended), are also present in Cardiff. Table 3.1 summarises the status of these species and habitats. Action plans have been established for Cardiff's lowland calcareous grassland, gardens and allotments, maritime cliff and slope, neutral grassland, ponds, reedbeds, purple moor grass and rush pasture, woodlands, bats, Chiding Pink, dormouse, Great Crested Newt, Hawfinch, otter, Pied Flycatcher, reptiles, Silver-Washed Fritillary, Stag Beetle, water vole, and waxcap mushrooms. All of the plans involve, at minimum, maintaining the current range and/or population of the species or habitat.

Table 3.1 UK Biodiversity Action Plan species in Cardiff (Cardiff Biodiversity Action Plan 2008)

Insects	
Date-Coloured Waxcap	Known from 1 site in Bute Park but not recorded since 2004
Garden Tiger	
Small Heath	
Small Blue	
Ghost Moth	
Grayling	Found on brownfield sites in the south but scarce
Wall	
Stag Beetle	Formerly known from a garden in Roath but grubs recently found at Forest Farm
White Letter Hairstreak	
Chalk Carpet	After an absence of 80 years has recently been found in the Taff Gorge
Cinnabar	
Birds	
Skylark	Resident, breeds in grassland throughout Cardiff
Tree Pipit	Passes through Cardiff on migration
Lesser Redpoll	Winter visitor, no longer breeding in the area
Common Linnet	Common resident, particularly in the bay area
Twite	Not recorded in Cardiff since 1989
Ringed Plover	Common winter/passage visitor along the coast
Hawfinch	Secretive and scarce species apparently confined to forestry above the M4. Cardiff is the stronghold of the species in the Glamorgan area
Common Cuckoo	Recorded in Spring but increasingly scarce. No longer breeds in Cardiff
Lesser Spotted Woodpecker	A secretive species, but breeding has been confirmed in recent years. Most reliability recorded in Bute Park but also present north of the M4
Yellowhammer	A scarce species, mainly found in the north and east particularly near the Caerphilly ridge. Breeding status unknown
Reed Bunting	Common resident breeder
Kestrel	Common resident breeder
Pied Flycatcher	Breeding restricted to Coed-y-Bedw
Black-headed Gull	Common winter visitor

Birds cont.	
Herring Gull	Abundant. Breeds on roofs in the city centre & several hundred pairs breed on Flat Holm
Bar-tailed Godwit	Spring and Autumn migrant on passage
Black-tailed Godwit	Spring and Autumn migrant on passage
Grasshopper Warbler	Last recorded in Cardiff in 2000
Amphibians and reptiles	
Slow-worm	Widespread but under-recorded
Common Toad	Widespread but under-recorded
Common Lizard	Widespread but under-recorded
Grass Snake	Widespread but under-recorded
Great Crested Newt	
Adder	
Habitats	
Wood pasture & parkland; upland oak woodland; lowland beech & yew woodland; wet woodland	Total 600 hectares (ha)
Hedgerows	unknown amount
Arable field margins	unknown amount
Coastal and floodplain grazing marsh	520 ha
Neutral grassland	291 ha semi-improved
Lowland meadows	4 ha
Calcareous grassland	1 ha
Acid grassland	6 ha
Purple moorgrass and rush pastures	12 ha
Rivers	unknown extent
Ponds	186 ponds
Maritime cliff and slope	2.64 ha coastal grassland; 1.1 ha hard cliff
Sebellaria alveolata reefs	unknown amount
Coastal saltmarsh	34 ha
Intertidal mudflats	unknown amount

Cardiff has many existing corridors and networks of mixed habitats providing good connectivity for species

3.7. The three main river valleys of the rivers Taff, Ely and Rhymney form strategically important corridors of open space containing a wide variety of habitats that run through the city from the countryside to the Severn Estuary. These provide valuable wildlife corridors and connectivity between habitats that are important for many species. Feeder tributaries and streams generally run from higher ground to the north and feed into the main rivers, providing a similar function. Features such as woodlands, hedgerows, marshlands, alder carrs and disused rail lines are common in the countryside surrounding the urban area. This patchwork of varied habitats provides a good resource for biodiversity. However Cardiff's woodland cover is fragmented, with few areas larger than 5 hectares. Management plans have been prepared for the three river valleys.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
3.2	Area (in hectares) of ancient woodland cover	Total: 674.7 ha Semi-natural: 442.3 Planted: 232.4	Not applicable		No net loss (Cardiff Council)	↔	+	Includes semi-natural ancient woodland and planted ancient woodland. Most planted ancient woodland is being restored to semi-natural. Only detailed data from 2006 available.	2	Forestry Commission data on Council GIS
3.3	Total extent (in hectares) of Local Biodiversity Action Plan priority habitats	See Table 3.1	Not applicable		Broadly no net loss, and growth over time (varies by habitat)	?	+	At present there is no trend data. Trend data will become available in the future as surveys are carried out.	2	Cardiff Local Biodiversity Action Plan 2008

The condition of designated sites is a concern

3.8. Up to date information relating to the condition of all designated sites is not known. However, measures are in place to address this and ensure that any future changes in condition can be accurately monitored.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
3.4	Percent of features of internationally and nationally designated sites in favourable condition (SACs, SPAs, SSSIs)	20% of all SAC, SPA & SSSI in favourable condition. However only about half of sites assessed, so figure is 41% of sites assessed.	Not applicable		UK / WAG target: 95% to be in favourable condition by 2015	?	?	35 features, of which the condition is known for only 17 (49%). Of these 9 are evidence based, 7 judgement based and 1 provisional assessment. Only data from 2006 available.	2	CCW, based on limited assessment only

Cardiff's biodiversity resource is vulnerable to new developments and land management practices which may result in habitat loss and fragmentation

3.9. As an expanding capital city, new developments within and outside the settlement boundary have the potential to harm Cardiff's biodiversity resource. Brownfield sites can contain significant biodiversity interest and it is important that these are recognised and protected where possible. Similarly, the river valleys and countryside are vulnerable to insensitive development and changing agricultural and land use practices.

4. Climate change

Introduction

4.1. Climate change is probably the greatest long-term challenge facing the human race, and is a serious and urgent issue. The climate is already beginning to change as a result of past greenhouse gas emissions and this trend shows no sign of abating. Publications by Nicholas Stern (2006) and Intergovernmental Panel on Climate Change (IPCC) (2007) highlight the urgent need to take action now. This section begins with causes of climate change – emissions of greenhouse gases - and continues with how Cardiff is dealing with climate change.

Cardiff's CO2 emissions per person are decreasing, particularly due to reductions in industrial and commercial emissions

4.2. Globally, greenhouse gas emissions have increased steadily since the industrial revolution. The Stern Report states that greenhouse gas concentrations in the atmosphere now stand at around 430ppm CO₂ equivalent, compared with only 280ppm before the Industrial Revolution. The stock is rising, driven by increasing emissions from human activities, such as energy generation, increased amounts of movement and land-use change. Emissions have been strongly correlated with GDP across time and countries, although this is now changing. UK emissions of the 'basket' of six greenhouse gases covered by the Kyoto Protocol decreased by 12% between 2006 and 2009, including an 8.6% drop between 2008 and 2009, some of which is probably due to the effects of the economic recession (DECC UK emission statistics, 2010).

4.3. Carbon dioxide (CO₂) accounts for most greenhouse gas emissions, and is the only gas measured on a local authority basis. In Cardiff, CO₂ emissions decreased by 22% between 2005 and 2009. About 44% of Cardiff's CO₂ emissions are generated by industry, 30% by domestic uses, and 25% by traffic.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
4.1	Annual emissions of CO ₂ per person	6.8 tCO ₂ per capita in 2009 (2.9 industry and commercial, 1.9 domestic, 1.9 road	9.5 tCO ₂ per capita in 2009	7.4 tCO ₂ per capita in 2009	WAG target: 40% cut by 2020 (2000 baseline)	↓ down from 8.1 tCO ₂ in 2005	+ 22% reduction 2005 - 2009	Industrial and commercial emissions decreased particularly quickly, from 3.9 tCO ₂ in 2005 to 2.9 in 2009.	1	Per capita reduction in CO ₂ emissions in the local authority areas (DECC)

		transport)			Cardiff target: 26% cut by 2020 citywide per capita emissions (2005 baseline)		Much of this is probably due to the recession, and there is a long way to go	National statistics do not say how much of this was due just to shrinkage or relocation of industry. This data does not include other greenhouse gases, or CO2 emissions over which local authorities have no control (e.g. aviation and shipping)		
--	--	------------	--	--	---	--	--	--	--	--

4.4. Ecological footprinting is a tool to measure how much land area is required for an average citizen (of a geographically specific area) for everything they consume (products and resources) and produce (waste and emissions) per year. In 2001 Cardiff's ecological footprint was 5.59 gha⁵ per person. This means that, in 2001, Cardiff required more than 125 times its land area or 82% of the land area of Wales for the resources it consumed. If every person on the planet had the same lifestyle as someone from Cardiff almost three planet earths would be required to support their lifestyles. The breakdown of Cardiff's footprint shows that the biggest contributors are food and drink (24%), energy use (18%), passenger travel (18%) and the city's infrastructure and housing (16%) (Cardiff Council *et al* 2005). No similar analysis has been carried out since then.

No.	Indicator	Cardiff data	Wales / UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
4.2	Cardiff's ecological footprint	5.59 gha per person in 2001, of which: Food and drink – 24% Energy use – 18% Passenger travel – 16% Infrastructure and housing - 16%	5.25 gha per person in 2001	Reduce growth in footprint	?	!	There are no plans at present to carry out another ecological foot print study of Cardiff. However, this does provide a	2	SDU, Cardiff Council; BRASS Research Centre (Cardiff University); and Stockholm

⁵ A footprint is expressed in global hectares (gha) of 'earthshare'. By dividing the bio-productive land and sea on the planet by the number of people who use it a total of a fair earthshare is calculated (1.89gha per person)

		Consumables and durables – 11% Other – 14%					contextual indicator.		Environment Institute
--	--	---	--	--	--	--	-----------------------	--	-----------------------

Traffic flows in the city are decreasing, but outside the city it is increasing, contributing to increased greenhouse gas emissions and congestion

4.5. In Cardiff, traffic accounts for about 32% of CO2 emissions. Traffic on Cardiff's roads grew by 12% between 1997 and 2007, an average annual increase of 1.8%. While traffic volumes entering the City Centre have decreased by 18% since 1994, traffic crossing the County boundary and across the River Taff screenline have both increased over this period, by 37% and 13% respectively.

No.	Indicator	Cardiff data	Wales and UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
4.3	Traffic growth: Traffic volumes entering the County and city centre	Observed two-way 12 hour Counts, 2009 (circa, in vehicles): City Centre Cordon 2009 - 129,100 County Cordon 2009 - 308,000 River Taff Screenline 2009 - 174,900 Cardiff Bay Cordon (new) 2007 - 51,500 2009 - 49,200	Not applicable	To be determined	City Centre Cordon ↑ down from 157,800 in 1994* County Cordon ↓ 225,200 in 1994* River Taff ↓ 154,500 in 1994* No 1994 figures for Cardiff Bay Cordon * 5 year rolling average	- !	Each cordon count is surveyed annually on a single weekday between 7.00am and 7.00pm. The counts may be affected by seasonal factors or local incidents and are thus only a snapshot of traffic conditions. For this reason, where possible flows are averaged across 5 years to give a more reliable rolling average	1	Road Traffic Reduction Act Cordon and Screenline annual traffic survey data Infrastructure, Cardiff Council LTP APR Monitoring
4.4	Traffic volumes (billion vehicle km)	2.81 in 2010	Not applicable, though Welsh trend is towards an increase over time		↔ up from 2.74 in 2000, but gently declining since	-	Traffic in Cardiff is declining gently though a little faster than the rest of Wales,		Transport Statistics Wales 2011

				2007		but there is still a long way to go.		
--	--	--	--	------	--	--------------------------------------	--	--

4.6. Journeys into the city centre continue to change in favour of more sustainable modes of travel. The proportion of people choosing to travel into the city centre by car decreased by around 7% between 1994 and 2006, while the proportion of those travelling on foot, by bicycle, bus and rail all increased over the same period. Local Transport Services grants in Cardiff increased by over 37% in cash terms between 2004-05 and 2011-12, from £566,000 to £778,010 (Transport Statistics Wales).

2010	152,900	198,400	124,200	28,800	74,200

Table 4.1 People working and commuting in Cardiff (Cardiff Today - Key Economic Statistics, 2010 edition; Statistics on Commuting in Wales 2010)

Domestic energy use is responsible for almost one third of Cardiff's CO2 emissions

4.8. Cardiff's domestic energy use is slightly lower than the Welsh average, and comparable with that of other large UK cities: see Figure 4.2

4.2. Cardiff's footprint analysis indicates that existing housing stock is responsible for 98.7% of the ecological impact of the total for housing.

Figure 4.2 Domestic energy use in major UK cities
(GVA Grimley, 2009, *Cities, Commerce and Carbon*)

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources

Feasibility of this indicator to be investigated			Increase	Current data gap		Building regulations require developers to submit target energy use and CO2 emissions for their building(s). This can be used to calculate a percent of the demand to be met by renewables.	Current data gap	Part L2A revision of the building regulations

Flooding poses a particular threat to Cardiff due to its coastal location, low lying areas and rivers

4.9. The following risks are associated with climate change (Welsh Local Government Association (2008) Changing Climate: Changing Places):

- Increased risk of flooding and erosion
- Increased pressure on drainage systems
- Drier soils and subsidence
- Significant habitat and species changes and loss
- Water quality issues in rivers and lakes
- Greater incidence of drought and problems with water supply
- Lower air quality
- Acidification of the sea
- Health issues in the summer
- Reduced energy demand in winter but increased demand in summer
- Increased prevalence of insect and water borne diseases
- Vulnerability of transport, waste and energy infrastructure
- Increase in demand for, and cost of, water
- Increased insurance costs and decreased property values
- Increased risk of forest and heathland fires
- Changes in the landscape
- Increased tourism due to warmer weather

4.10. Secondary effects of flooding include subsidence, spreading of contaminants, increased insurance premiums and damage to the image of Cardiff. The Cardiff area is likely to be subject to greater increases in temperature as a result of climate change than most of the rest of the UK (UKCIP 2009).

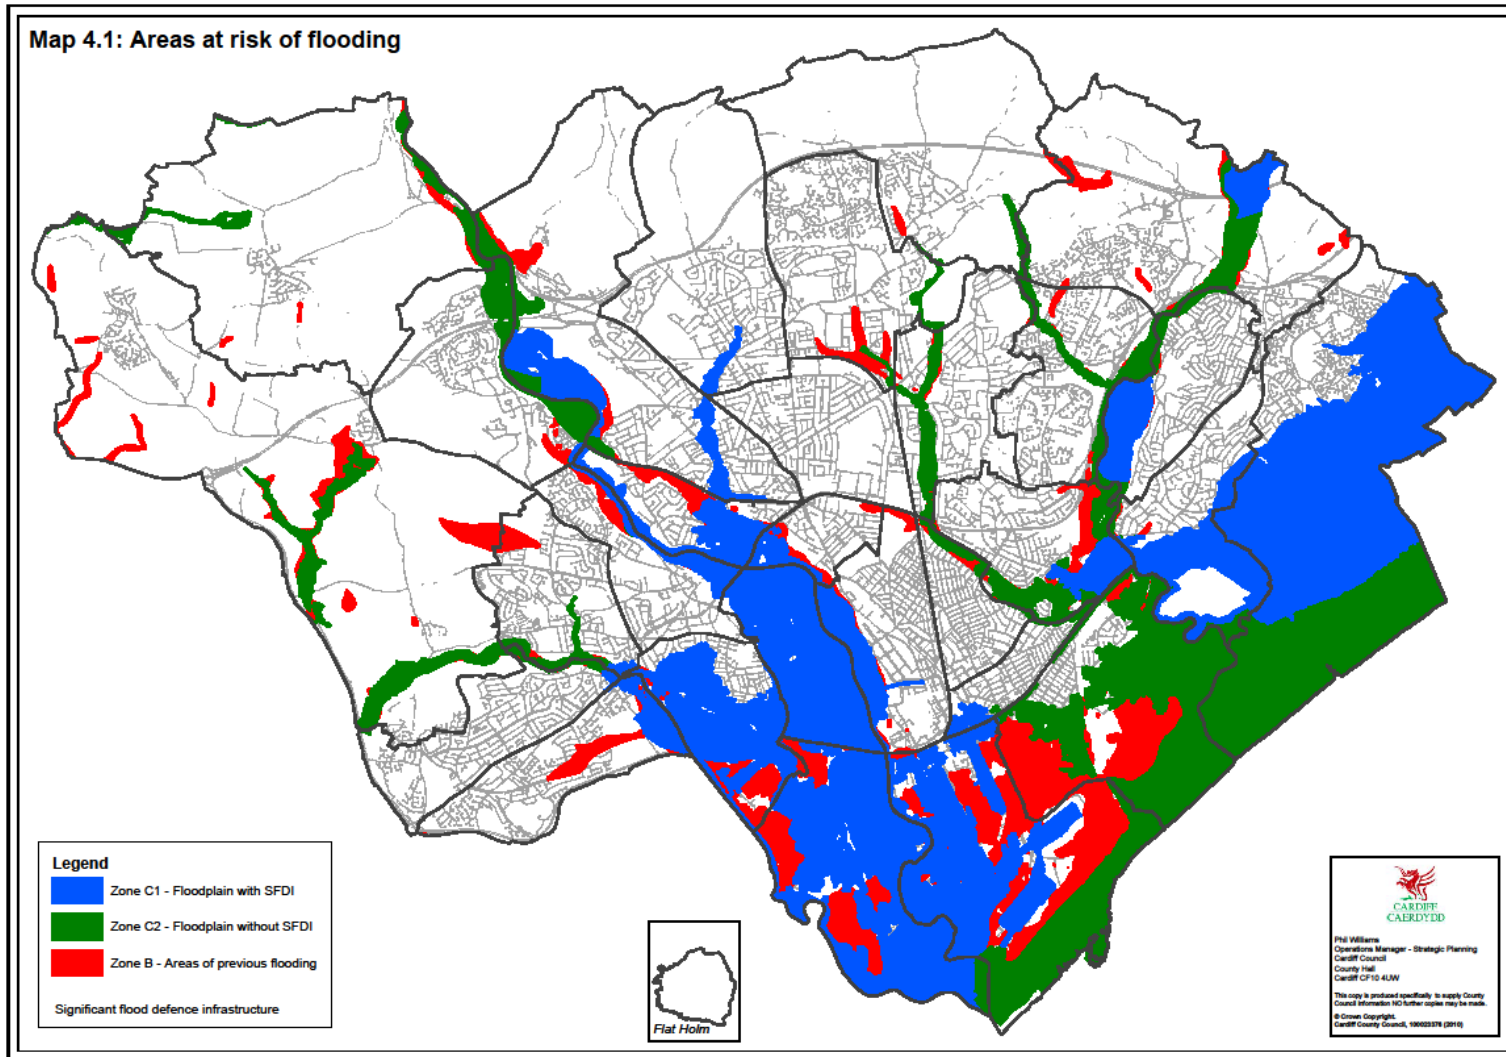

4.11. Flood risk is potentially the most serious of the problems associated with climate change, due to Cardiff’s unique geography and distinctive location. Map 4.1 shows areas of Cardiff at risk of flooding. A more detailed flood risk consequences report of late 2009 focused on nine areas of Cardiff (Table 4.2).

Key:

Wentloog tidal	Briwnant & Tongwnlais	Area of Junction 33, M4 Motorway
Rhydney North Pontprennau	Taff at Morganstown	Taff/Ely 2d modelled area
NE Cardiff – Roath Brook & Nant Glandulais	Cardiff West	Bay Area to Pengam Green

High risk
Medium risk
Low risk
Risk varies from low to high

Table 4.2 Flood risk in selected areas (Atkins (2009) Cardiff Strategic Flood Consequences Assessment)

4.12 The following factors also affect flood risk in Cardiff:

- The completion of the Barrage enclosing Cardiff Bay has provided protection against tidal inundation for Cardiff Bay. During storm surges the sluices for regulating the water level within the Bay must be kept closed creating a “tidal lock”. During times of tidal lock the water level in the Bay will steadily increase as both the Rivers Taff and Ely discharge into it. With sea levels predicted to increase as climate change occurs, the time the bay experiences tidal lock will grow, increasing the likelihood that the Taff and Ely will start to back up. This could have major implications for the Bay and development along the lower stretches of the Taff and Ely, particularly during times when the rivers are transporting large volumes of water as a result of heavy rainfall
- Wentloog is at risk from inundation due to its low lying nature, predicted sea level rise, and some areas where coastal defences are at risk of overtopping. This will place the mud flats and sea wall under increasing pressure particularly during storm surges due to the tidal nature of the Severn Estuary. Several sites in the Wentloog area have extant planning permission.
- The lower reaches of the River Rymney are at particular risk of flooding during the storm surges when the level of the estuary can rise dramatically, combined with predicted sea level rises and the increased flow volumes of the Rymney.

5. Cultural heritage and the historic environment

Introduction

5.1. The city as seen and experienced today reflects a wealth of influences as it developed from a small community on the banks of the River Taff. Evidence still exists from Roman times and other key stages in the city's development. Most notably, the era of mining in the South Wales Valleys saw an unprecedented boom for Cardiff in terms of its economic and physical growth. Cardiff performed a vital role both as a port and commercial centre. The Victorian and Edwardian legacy in terms of street patterns and buildings is still clearly evident and provides a very distinctive character to large areas of the city. A range of formal designations have been used to help identify and protect the most important features of Cardiff's historic and architectural heritage. Whilst Cardiff continues to develop, it is important that its rich cultural, historic and architectural legacy is fully understood, protected and managed.

The City's cultural and historic attractions perform an important national and regional role, attracting large numbers of visitors each year

5.2. In 2010/11, St. David's Hall, New Theatre and Cardiff Castle each had more than 200,000 paid visitors. This reflects the importance nationally and regional of Cardiff's cultural and historic attractions.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
5.1	Number of paid attendances for cultural venues in Cardiff	Attendance in 2010/11: St. David's Hall (not including conferences): 235,950 New Theatre: 230,971 Cardiff Castle: 212, 804	Not applicable		400,000 (Cardiff Council)	↔ Attendance in 2009/10: St. David's Hall: 224,038 New Theatre: 239,350 Cardiff	+	Trend information will become available over the life of the plan as more data collected.	2	Managers of St. David's Hall, New Theatre and Cardiff Castle

					Castle: 234,224				
--	--	--	--	--	--------------------	--	--	--	--

Cardiff contains a wide range of areas, buildings and monuments designated for historic value befitting of its Capital City status

5.3. There are 28 Scheduled Ancient Monuments in Cardiff. Archaeological remains provide important, often irreplaceable, information about the past. Their investigation and, where appropriate, preservation is important in its own right and can provide an invaluable educational and tourism resource. Four archaeologically sensitive areas have been identified in Cardiff. They represent the most likely areas where the effect of development on the archaeological resource may be an issue during the determination of a planning application. They are:

- The City Centre
- St Fagans/Michaelstone-super-Ely
- The Wentloog Levels
- Llandaff

5.4. Cadw has listed 855 buildings or structures in Cardiff as being of Special Architectural or Historic Interest. Cardiff also has 27 conservation areas (covering 811.7ha in total) designated for their special historic or architectural interest. They vary greatly in size and character and range from the villages of St Fagans and old St Mellons, to the more recent Victorian and Edwardian suburbs which developed during Cardiff's 'boom years.'

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
5.2	Percent of conservation areas with an area appraisal undertaken in the last 10 years	27 appraisals have been completed since 2005 (August 2012)	Not applicable		100% (Cardiff Council)	↑ (9 undertaken by March 2007)	+	A management plan is being prepared for the last conservation area	1	Conservation Team, Cardiff Council;

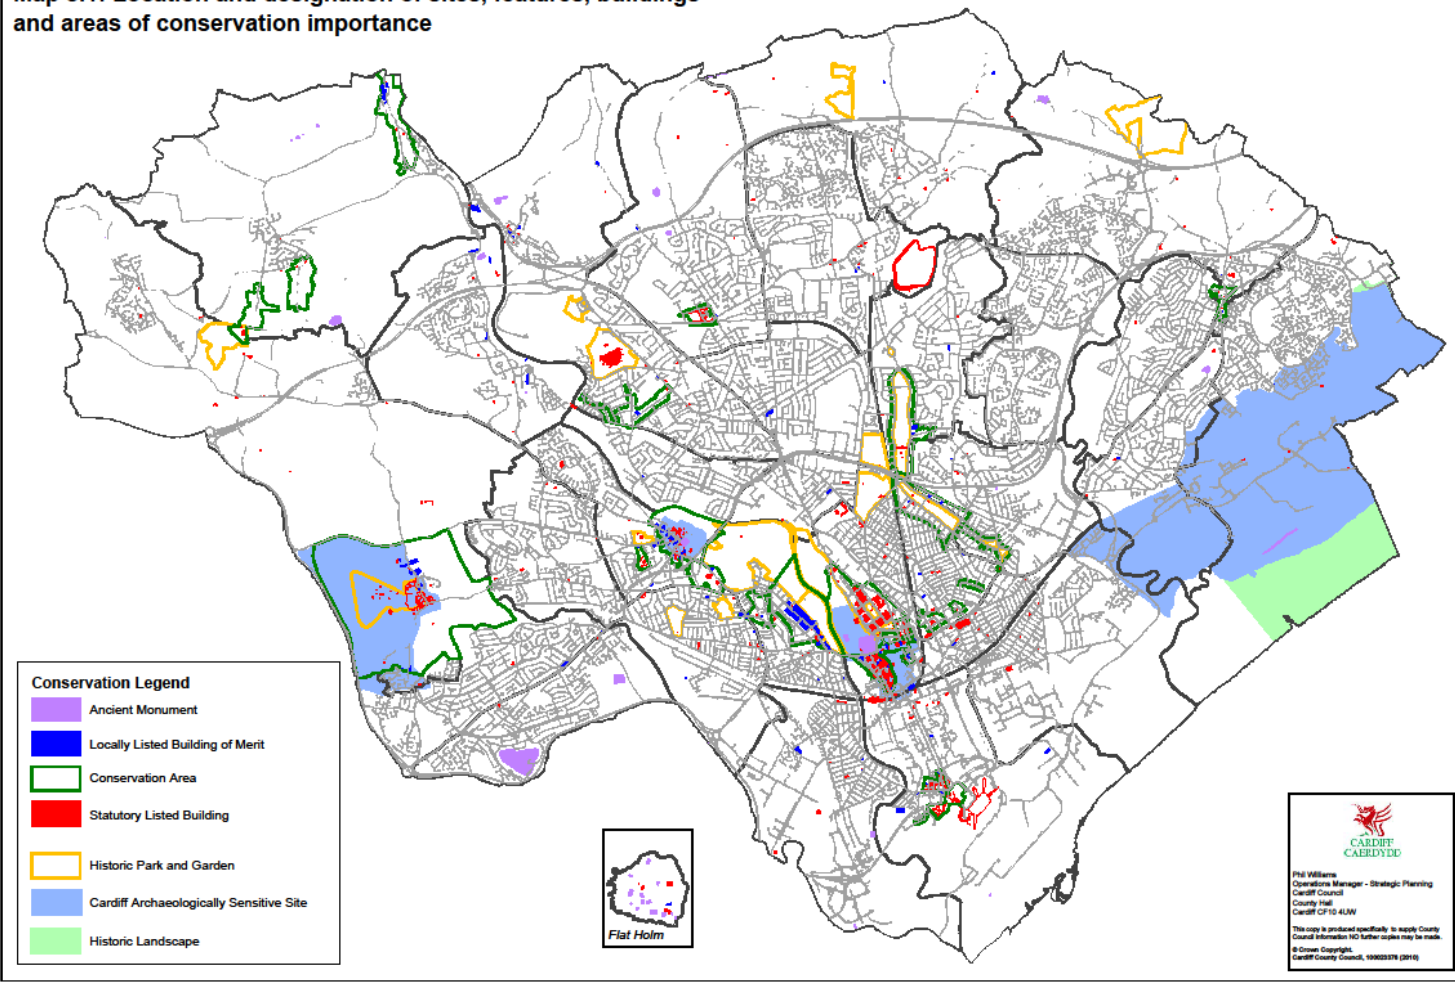

5.5. Cardiff has 15 Historic Parks and Gardens that cover 468 hectares. They are widely spread and of contrasting character. Some of the larger historic parks reach from the city centre to the outer suburbs. Cardiff's heritage extends well beyond those identified in statutory protections. All of the city's historic built fabric helps define the character of the city and the diverse cultural backgrounds of its residents and visitors. Map 5.1 shows the extent of designated sites, features, buildings and areas.

Some designated buildings/features are not in a favourable condition

5.6. In 2009, 29 of Cardiff's listed buildings were at risk (Cardiff Council 2010). This represents 3.4% of the current listed building stock in Cardiff. Three buildings have been taken off the 'at risk' list since 2006.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
5.3	Percent of listed buildings at risk	29 buildings, 3.4% of the total (November 2009)	Not available		0% (Cardiff Council)	↑ (32 buildings, 3.75% of the total, at risk in March 2006)	-		1	Buildings at risk register, Conservation Team, Cardiff Council

Map 5.1: Location and designation of sites, features, buildings and areas of conservation importance

6. Economy

Introduction

6.1. Cardiff has undergone major changes over the last century with the decline of the coal industry, the increasing dominance of the service sector, and devolution combining to shape the city into what it is today.

Cardiff is the key economic driver for south-east Wales

6.2. Today, Cardiff is the main driver of the South Wales economy. Cardiff's population is more than 346,000⁶, more than 45% of whom are in employment. Cardiff employs more than 200,000 people, of whom about 70,900 (40%) commute into Cardiff for work. Overall, about one-third of the South East Wales workforce work in Cardiff (see Table 4.1). It is one of the UK's more competitive cities, and well ahead of the Welsh average. However the city struggles to convert this into outcomes for citizens, such as increased earnings; the recession has affected Cardiff like elsewhere; and the economic benefits of the last decade have not been felt universally across the city.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
6.1	UK competitiveness Index	100.2 in 2010 (130th out of 379 local areas)	83.9 in 2010 (lowest of the UK regions)	100	No target identified	↔ 100.9 in 2006; 99.9 in 2009	+	The UK Competitive Index brings together a range of economic indicators. Cardiff performs much better than the Welsh average.	1	UK Competitiveness Index 2010

⁶ 2011 census, www.statswales.wales.gov.uk/TableViewer/tableView.aspx?ReportId=40221

Cardiff has strong economic growth (reduced by the recession) and relatively high employment

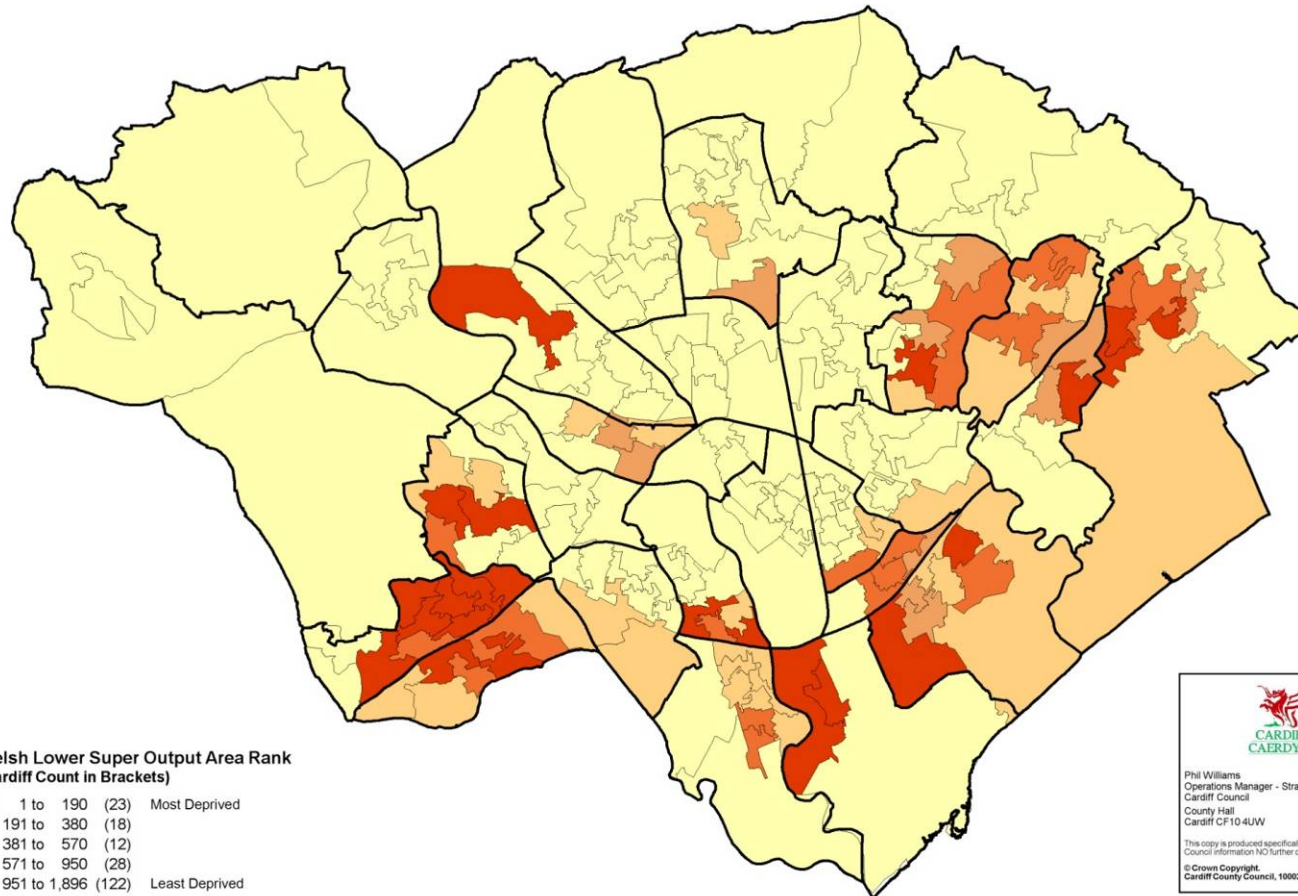

6.3. Cardiff experienced strong growth in employment and Gross Value Added in the decade to 2007. Although the number of jobs has since fallen, Cardiff is still significantly outperforming the Welsh and UK average. In 2009, Cardiff generated 17% of the Welsh Gross Value Added, at over £22,000 per person. Average salaries are slightly above the UK average although significantly above the Welsh average. Employment levels have fallen since the recession, and currently (autumn 2010) stand between the UK and Welsh averages.

6.4. Maps 6.1 and 6.2 show areas of high and low employment and income in Cardiff. Again, these are generally concentrated in the 'southern arc of deprivation', particularly Ely, Butetown, Caerau, Grangetown, Splott, Llanrumney, Pentwyn, Rumney and Trowbridge.

MAP 6.2: Welsh Index of multiple deprivation 2011 - Income

Manufacturing industries are in decline, and service sector industries and private sector employment are growing

6.5 Table 6.1 shows that key sectors in the city include financial and business services, and public administration, health and education. The service industry accounts for almost 90% of the jobs in the city, and almost one in three Cardiff residents work in the public sector. Finance, IT and other business activities increased by more than 60% between 1998 and 2008, and account for one quarter of the employment in Cardiff. Manufacturing jobs in Cardiff have declined rapidly from over 20% thirty years ago, and are low compared to the Welsh and Great Britain average (Nomis, 2010; Cardiff Council Economic Needs Assessment, 2010).

	Cardiff (employee jobs)	Cardiff (%)	Wales (%)	Great Britain (%)
Manufacturing	11,200	5.9	13.7	10.2
Construction	11,400	6.0	5.2	4.8
Services	167,800	87.9	79.1	83.5
Distribution, hotels & restaurants	39,000	20.4	23.0	23.4
Transport & communications	9,300	4.9	4.3	5.8
Finance, IT, other business activities	48,700	25.5	14.1	22.0
Public admin, education & health	59,000	30.9	32.9	27.0
Other services	11,800	6.2	4.8	5.3
Tourism-related	15,700	8.2	8.6	8.2

Table 6.1 Jobs in Cardiff, 2008 (Nomis, 2010)

The workforce is polarised between qualified graduates and low skilled workforce

6.6. Cardiff has the most skilled workforce in the region, with almost 40% educated to a degree level or above. Cardiff has three higher education institutions, Cardiff University, the University of Wales Institute Cardiff and the Welsh College of Music and Drama, providing about 4,000 new graduates each year.

6.7. However areas of the city are still experience significant deprivation and low educational achievement, as is shown at Maps 1.3 and 1.4. 17.2% of unemployed people claiming benefits have been unemployed for more than a year. The 'southern arc of deprivation' has a particularly high proportion of Job Seekers Allowance claimants (Map 6.3): in May the claimant rate in Butetown stood at 8.4%, seven and a half times the claimant rate of 1.1% in Lisvane. More significantly, the number of young people aged 18-24 claiming benefits for over 6 months has increased rapidly since the start of the recession (Figure 6.1) (Cardiff Economic Needs Assessment, 2010; Nomis, 2010).

Map 6.3 Claimant proportion by ward Darker = higher proportion (January 2010) (Cardiff Trends 2010)

-----	--	------------------	------------------	------------------	----------------------	-----------------------	---	---	---	--------------------------------------

Significant areas of employment land have changed to alternative uses (notably housing) although land for employment is still available

6.8. Changing market conditions (as described above) have resulted in a shift in demand away from manufacturing towards alternative uses such as housing. Examples of this include the Arjo Wiggins site at Ely Bridge, AWE site on Caerphilly Road, and Maes y Coed Road. This trend has slowed due to the economic recession. Currently the employment land bank stands at 97.79 hectares.

7. Health and wellbeing

Introduction

7.1. Although Cardiff generally has above average health and social conditions compared to the rest of Wales, there are considerable variations between and within localities, with people in some electoral divisions experiencing health deprivation that is amongst the worst in Wales. In 2009 Cardiff was awarded Healthy City Status by the World Health Organisation, which demonstrates a commitment to improve the health and well being of local people.

The health of Cardiff's population is generally better than the Welsh average although considerable discrepancies exist at ward level

7.2. Life expectancy is determined by a range of factors and gives an indication of the comparative wellbeing of the population up to now⁷. A range of factors can influence life expectancy, including lifestyle, income, employment, access to services and the wider environment. Life expectancy at birth for Cardiff's residents is currently 76.6 years for men and 81.7 for women. Of the 404 local authorities in England and Wales, Cardiff ranks 301 for men and 240 for women: its women's life expectancy is roughly that of the Welsh average of 81.4, but men's life expectancy is less than the Welsh average of 77.0 (Office for National Statistics, 2009).

7.3. 23% of men and 22% of women in Cardiff have a limiting long-term illness. This compares well with the Welsh average of 26% (men) and 29% (women) (Welsh Health Survey 2008/09).

⁷ It does not provide an indication of the life expectancy for people born today. For this measure to accurately predict the life expectancy of existing residents two variables would need to remain constant: i) all people to live in the same area for their whole lives, and ii) the health of the population in the area to remain exactly the same for the next 80 years. These two conditions are obviously unlikely to be met.

7.4 The single largest cause of death in Cardiff is cardiovascular disease. Two major determinants of cardio vascular disease are smoking and diabetes. Cardiovascular diseases have been decreasing over time (as have other smoking related diseases) as smoking rates have declined. The smoking ban in public places means that the number of people smoking is likely to continue to decrease.

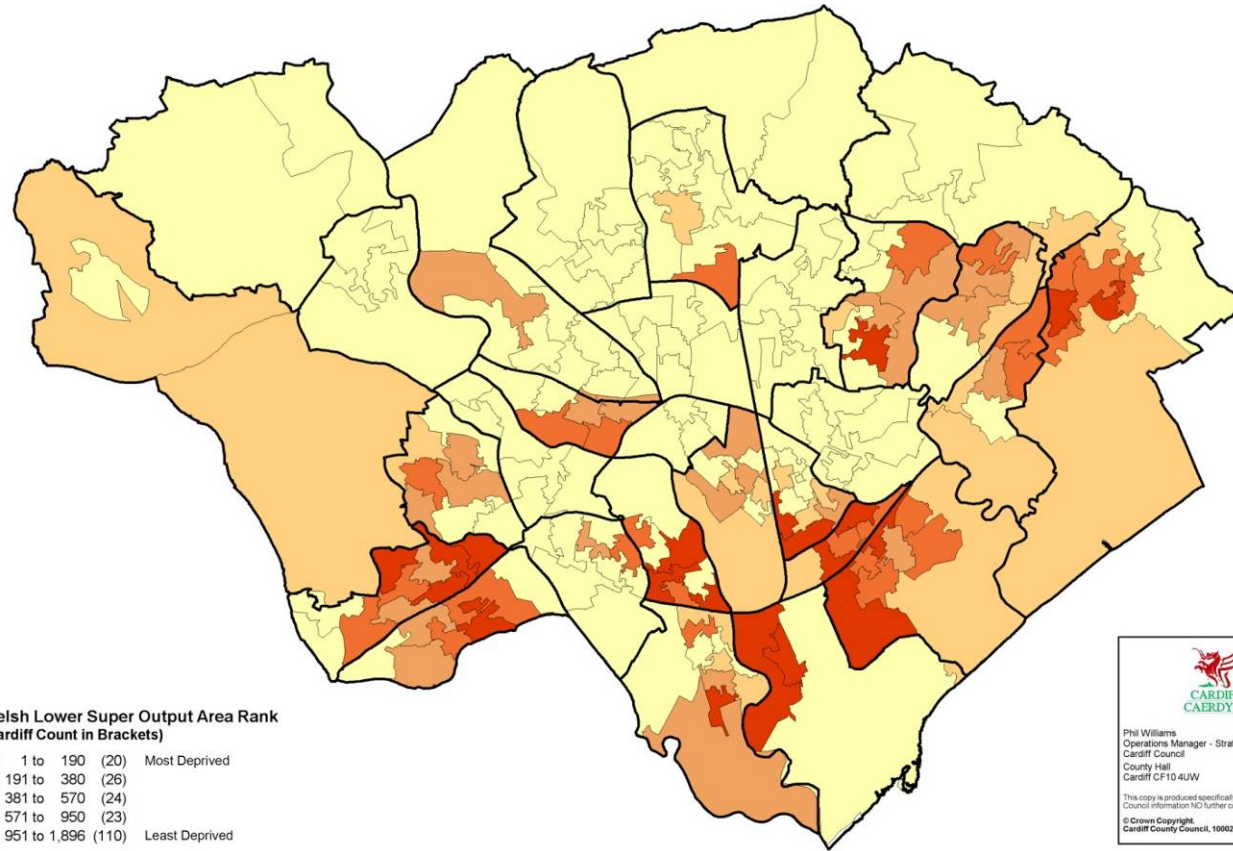

Health varies considerably across the City

7.5. Considerable differences exist between individual areas within Cardiff. Map 7.1, which shows the health component of the Welsh Index of Multiple Deprivation 2011, suggests that residents of Plasnewydd, Grangetown and Adamsdown have worse than average health. The WIMD health component brings together data on cancer incidence, death and long term limiting illness. In 2005-9 the difference in life expectancy between the best fifth of Cardiff wards and the worst fifth was about 13 years for men and 10 for women. This was about the same as in 1999-2003 and a much bigger difference than the Welsh average.

Over half of Cardiff's adults are clinically overweight or obese

7.6. Obesity among UK children and adults is increasing, and evidence suggests that this trend will continue in the future. In Cardiff 57% of men and 46% of women were overweight or obese in 2008/09, up 2% from three years earlier.

Under a third of Cardiff's adults get the exercise that they need

7.7. Government guidelines recommend that adults should undertake 30 minutes or more of at least moderate intensity physical activity on five or more days a week (Department of Health 2004). Only one in three men and one in five women in Cardiff reported meeting these levels. Cardiff ranks second lowest of the Welsh authorities for men, and joint lowest for women on this basis. Access to recreational open space is an important determinant of good health: open space provision is discussed in Chapter 8 (landscape).

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources

Road safety has generally improved

7.8. Figure 7.1 shows that there continues to be a downward trend in the number of road casualties over time. Taking a five year rolling average, the total number of casualties for 2009 decreased by 23% from the 1998 baseline year. Similarly, there has been a decrease in the number of killed or seriously injured (KSI) casualties between 1998 and 2009 of 39%. There have been no child fatalities since 2007, however 6 serious child casualties occurred during 2009 and 10 in 2010.

7.9. Of all accident casualties (killed, seriously injured and slightly injured) in 2008, 18% were pedestrians, 8% cyclists, 5% motor-cyclists, 63% car users, and 7% other.

Figure 7.1 Accident trends for Cardiff

No.	Indicator	Cardiff data	Wales data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
7.5	No. people killed or seriously injured in traffic accidents	2005-2009 5 year average All: 92 Children: 15	1247 people were killed or seriously injured in 2011. This is up from 1087 in 2010, the first increase after steady reductions from 1871 in 1999. The 1994-1998 average was 2008.	40% fewer killed or seriously injured by 2010s (LTP t PI 3.1) 50% fewer children under the age of 16 killed or seriously injured by 2010 (LTP PI 3.2)	↑ on target: 39% decrease from 127 average 1994-1998	+	The number of fatal, serious and slight casualties continues to fall. The rate of slight casualties to total volume of road traffic saw a 26% decrease between the 5 year rolling average of 1994-98 and 2005-09.	1	Police Accident Statistics / Department for Transport Road Safety Cardiff Infrastructure, Cardiff Council LTP APR Monitoring LTP PI 3.1 and 3.2

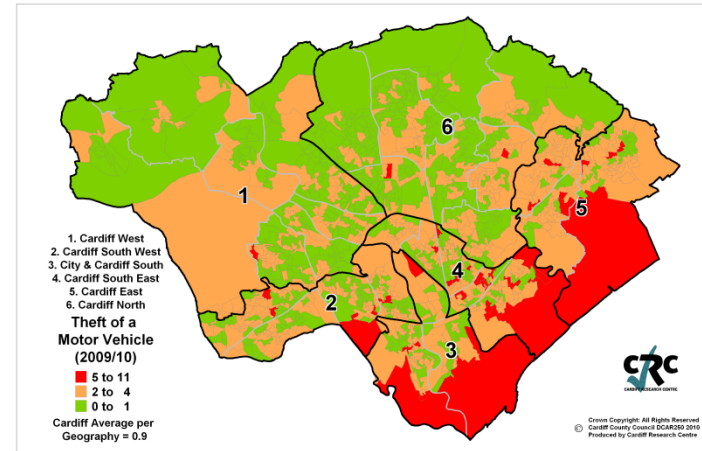

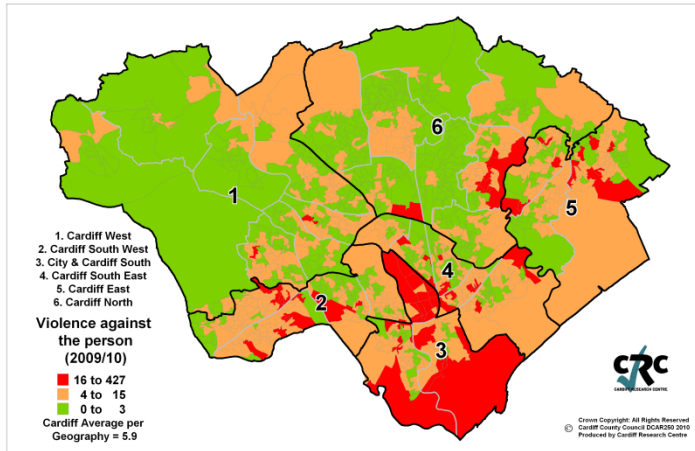

Crime levels have also broadly improved or remained steady

7.10. There were more than 30,000 notifiable offences in Cardiff in 2009/10, with criminal damage, violence against the person and theft from motor vehicles being the most prevalent. Overall crime levels have stayed broadly level over the last decade, with a reduction in burglaries and theft, but more variability amongst other forms of crime. The south and east of the city is subject to higher levels of crime than elsewhere, and Cathays ward (includes city centre) sees a particularly high number of criminal damage, violence against the person, and drug offences – see Map 7.3 (Cardiff Needs Assessment, 2010).

Environmental quality – a determinant of health – varies greatly within Cardiff

The Welsh Index of Multiple Deprivation brings together information about air quality, air emissions, flood risk, and proximity to waste disposal and industrial sites into a physical environment index. Map 7.3 shows that, under this index, Butetown, Splott and Adamsdown fare particularly badly, as does Whitchurch and Tongwynlais.

MAP 7.3: Welsh Index of multiple deprivation 2011 - Physical environment

8. Landscape

Introduction

8.1. Cardiff has a unique landscape setting comprising of an island, coastline, three major river valleys and a countryside backdrop of distinctive topography. A landscape study (Cardiff Council *et al* 1999) using the Countryside Council for Wales LANDMAP methodology was completed in 1996 for Cardiff's countryside. The study identified fourteen areas of distinctive landscape character ('Combined Aspect Areas') and also proposed five of these areas as Special Landscape Areas (SLAs) to be considered for formal designation, in 2007 the 1999 landscape study was updated and extended to include more of the river corridors. Landscape interests also extend into the urban area, principally through the important strategic role played by the river valleys of the Taff, Ely, and Rhymney together with other valued areas of open space within the urban fabric. Map 8.1 shows some of the features that contribute to Cardiff's unique landscape. The main issues relating to Cardiff's landscape resource concern the effective protection, management and enhancement of this unique resource.

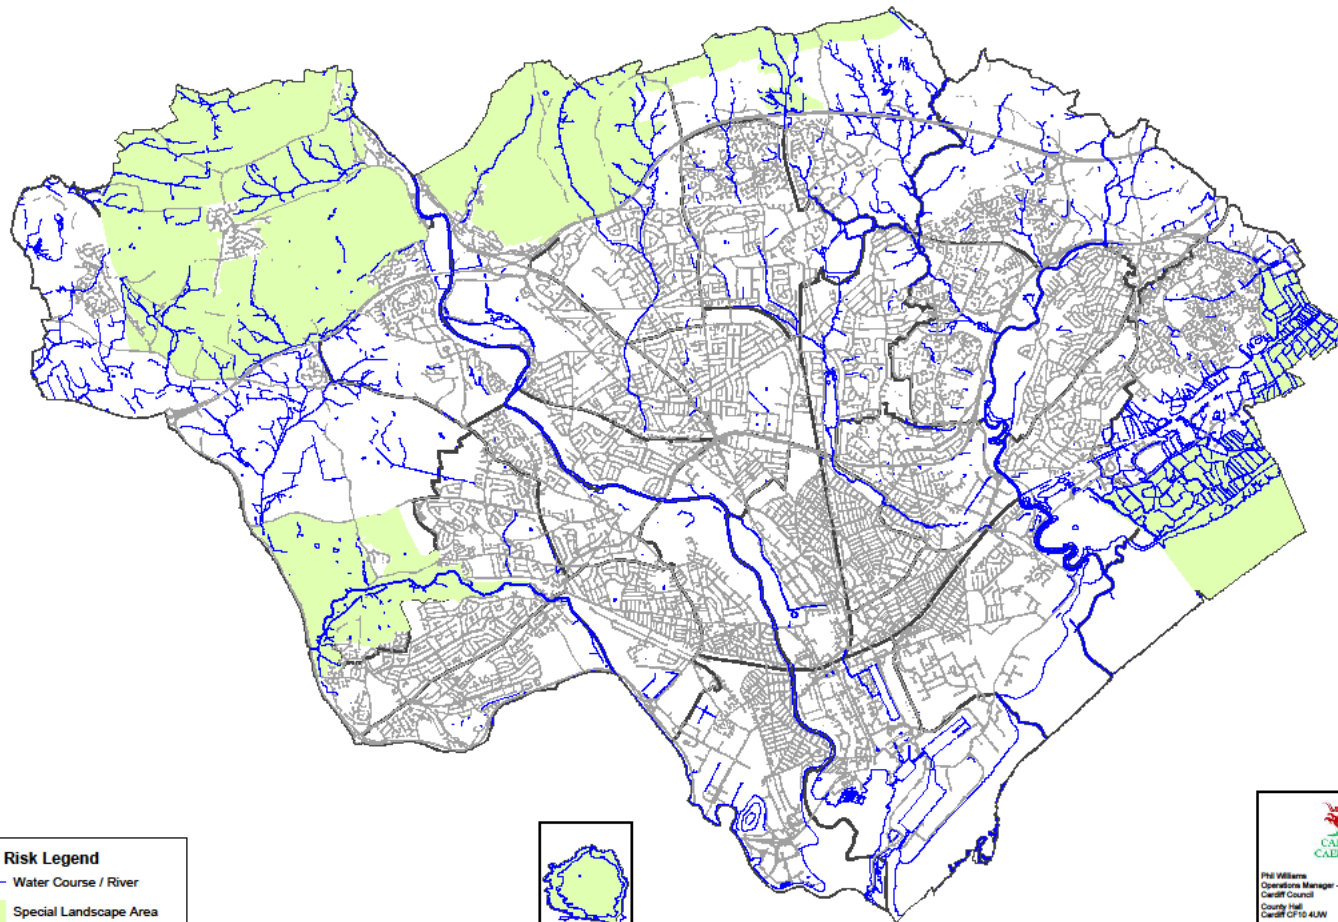

Cardiff has a very strong and distinctive landscape backdrop

8.2. Garth Mountain, Caerphilly Mountain and Graig Llanishen provide a strong and imposing backdrop along the northern edge to the city. The ridge rises to a thousand feet above sea level on the summit of Garth Mountain and has a pronounced escarpment together with lower slopes leading down to the M4 and northern edge of the urban area. The ridge, forming the southern rim of the South Wales coalfields, is dramatically broken where the River Taff breaks through, forming the Taff Gorge at Tongwnglas.

8.3. Much of the west of the urban area is enclosed by the Leckwith Escarpment. This forms a strong physical and visual backdrop for land immediately outside the administrative area and within the Vale of Glamorgan.

8.4. In contrast to the strong topography to the north and west, the eastern edge of the city, adjacent to the Severn Estuary, is flat. It forms part of a much larger historic landscape unit, the Gwent Levels, which extends alongside the River Severn beyond Newport.

Three major river valleys run through the city

8.5. Three major river valleys run through Cardiff. The valleys contain large areas of open space and are a significant determinant of the urban form of the city. They also provide a valued resource for biodiversity, recreational, historic and cultural interests.

8.6. The River Taff valley has strong historic links as it provided an important corridor for the movement of goods between Cardiff Docks and the South Wales Valleys. It is well accessed by local communities along its whole length and a National Cycleway, the Taff Trail, follows its length in Cardiff and beyond to the Brecon Beacons. It forms a significant and well-known feature, passing through Llandaff, the City Centre and Cardiff Bay.

8.7. The River Ely merges with the Taff in Cardiff Bay and forms the administrative boundary with the Vale of Glamorgan for its lower length. Although not containing the same scale of open spaces and adjoining communities as the River Taff, the Ely Valley performs an important strategic and local role. Its western section in the vicinity of St Fagans is of particularly high landscape, biodiversity and historic value.

8.8. To the east of the city, the River Rhymney forms a well defined valley and contains the only tidal estuary in the city (as the Taff and Ely run into Cardiff Bay that is held within a barrage to the Severn Estuary). Visually, the valley is very prominent as the A48, a main route into the city, follows the western edge of the valley into the city.

8.9. Tributaries to the rivers also add to Cardiff's range of landscape features. Most are small streams with catchments from within the city. However, some have become important corridors in their own right such as the Nant Fawr which contains a range of well-used open spaces including Roath Park, a major attraction of Green Flag status. Action plans have been prepared for all three river valleys detailed above.

The coastline presents complex issues and opportunities

8.10. Cardiff has a coastline on the River Severn Estuary with its huge tidal range, but its characteristics and accessibility are very mixed. The Cardiff Bay Barrage provides public access to the coast in the west but the shoreline to the east along the operational dock area and to the south of the steel works/ sewerage station is not currently accessible. To the east of the Rhymney estuary lies the Lamby Way landfill site, and part of a much longer stretch of undeveloped coastline running to Newport.

8.11. The undeveloped coast contains mudflats and rapidly eroding saltings below the high water mark. A sea wall then runs along the whole length of coast to Newport. The flat land behind forms part of the Gwent Levels, an area of land reclaimed from the sea in Roman times that is drained by a complex of ditches known as reens. This land is below high water level, hence the need for a sea wall.

8.13 Flat Holm Island is a Special Landscape Area (SLA) situated approximately 5 miles from Cardiff and Barry. Flat Holm is a locally, nationally and internationally designated site due to the unique assemblages of flora and fauna it supports plus historic interests.

8.12. The Wales Assembly Government announced in late 2006 its aim of improving public access to the coast. The Wales Coast Path (WCP) was from the border near Chester to Chepstow officially opened on 5th May 2012. The Cardiff section links to the Vale of Glamorgan at the Barrage in the west and Newport boundary along the seawall in the east, total route is 15.60km

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
8.1	Length of coast with formal public access	WCP route 15.60 km, inc 5.64 km (2012) PRoW 0.35 km (2012) Park 1.73 km (2010) 1.04 km (2006)	Not applicable Wales Coast Path total route 1,400 km		To increase - Achieved	↑ 1.73km in (2010) 1.04km in 2006	+	New Creation orders for Public Rights of Way total 5.64km (inc 0.94km Dedication by DCWW & 1.41km as PRoW Bridleway) and 0.35km on Parks land (Parc Tredelerch). Five areas have been proposed as SLAs

8.13. The Cardiff Landscape Study (Cardiff Council *et al* 1999, updated 2007) considered that 5 of the 14 landscape character areas were of sufficient quality to be proposed for Special Landscape Area status (SLA). They indicate parts of Cardiff's landscape that are considered to be of quality meriting local designation. The areas are:

- Garth Hill & Pentyrch Hills
- St Fagans
- Flat Holm
- Caerphilly Mountain
- Gwent Levels

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
8.2	Area (in hectares) of landscape protected by local landscape designations	Proposed SLAs - 2409 ha Proposed Greenbelt - 1468 ha	Not applicable		No target	?	?	Areas of SLA and Green Belt are those proposed in the deposit copy of the UDP	1	Deposit copy UDP, Cardiff Council

Cardiff is generally well served by open spaces within the urban area, but some areas are under-provided

8.14. Green/open spaces are important because they improve people's mental and physical health, encourage physical activity, are attractive, support biodiversity, act as a carbon sink, and can help to adapt to climate change. There are several ways of testing the adequacy of open space provision:

- *Accessibility*: Distance to green areas influences how often people visit them. A survey of 2007 showed that 69% of Cardiff's area (not its population) is within 400 metres – about a six minute walk – of a green area, and only 1% is more than 2 kilometres from a green area. Whilst Pentwyn, Llanrumney, Llanishen, Pentyrch and Fairwater all have more than 85% of their area within 400m of an accessible natural green space, the areas of Roath, Birchgrove, Ely, Canton and particularly Adamsdown and Plasnewydd have limited areas within 400m of green spaces (CCW and Cardiff Council (2008) Analysis of Accessible Natural Greenspace Provision in Cardiff).
- *Amount*: The Welsh Assembly Government recommends that 2.43 hectares (6 acres) of open space should be provided per 1000 population, divided into formal, informal and children's play areas. Only two of Cardiff's 29 wards – Caerau and Riverside - meet these standards. The wards of

Adamsdown, Cyncoed, Ely, Fairwater, Gabalfa, Lisvane, Llandaff, Pentwyn, Penylan, Plasnewydd all have less than one-third of their open space requirements – see Map 8.2 (Cardiff Open Space Survey 2009).

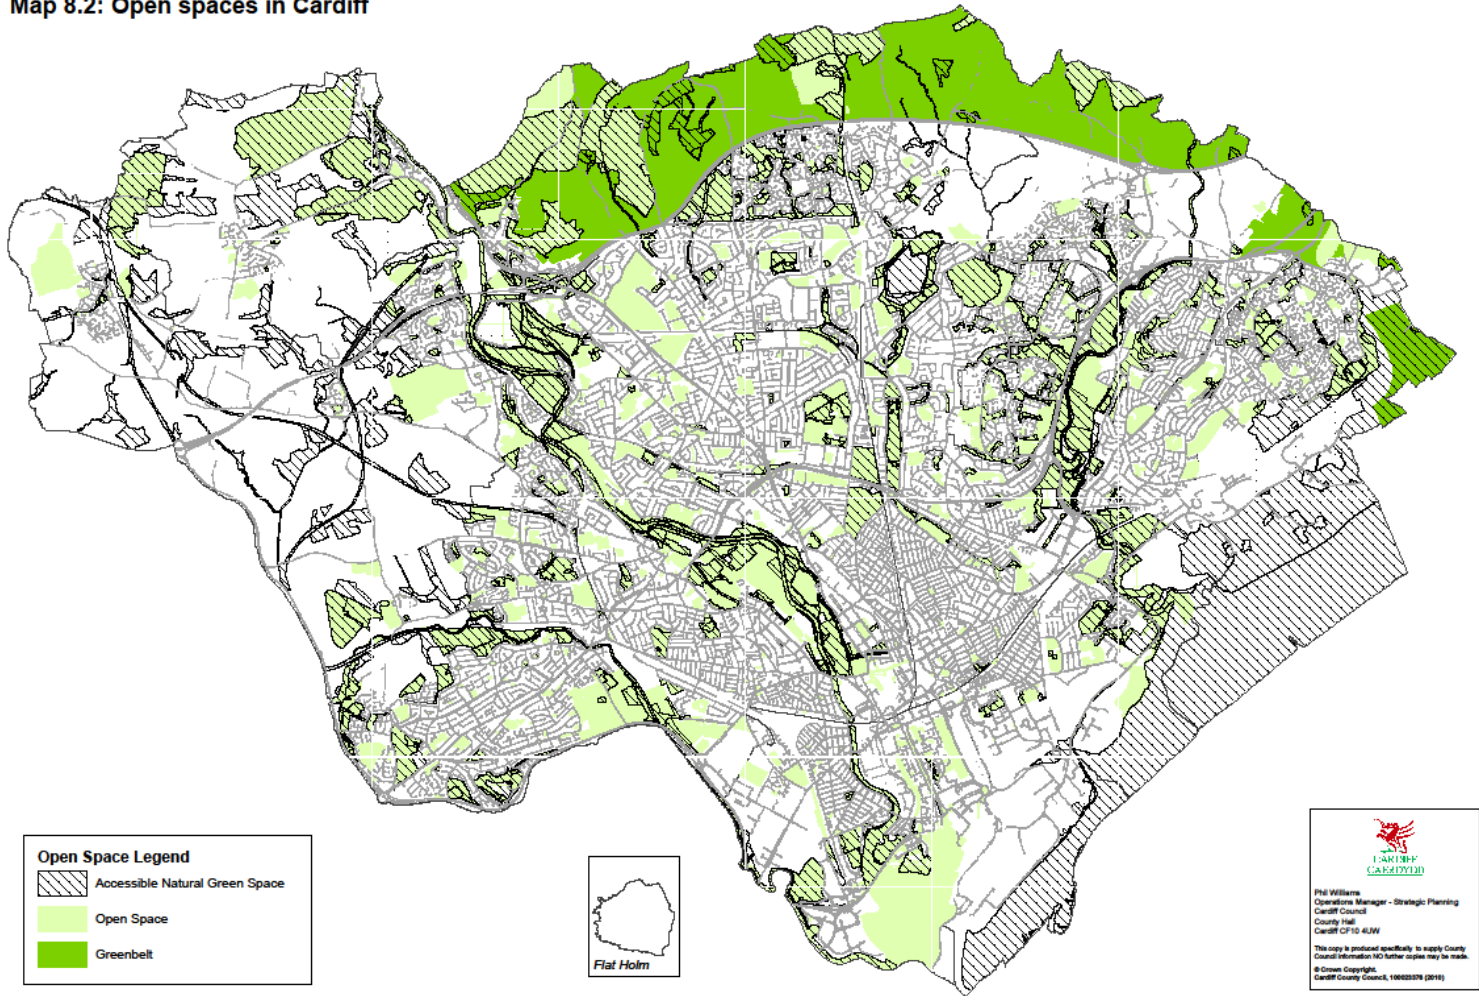

- *Quality:* A survey of 2007 which analysed the quality and value of Cardiff's open spaces found that the Ely, Gabalfa, Llandaff North and Adamsdown, which contained no sites designated for nature and built environment conservation purposes, were the worst wards in terms of their average value ratings. Wards with open space of both high quality and value are concentrated at the heart of the city, with quality scores ranging from 43% to 64%. Open spaces in the eastern and western sides of the city were more likely to have lower scores, with the exception of Creigiau and St. Fagans. In terms of overall quality and value, Plasnewydd came out on top with an average of 64%, whilst Grangetown had the lowest average score of 55% (Cardiff Open Space Survey 2007).

Cardiff’s landscape qualities are vulnerable to insensitive new development and land management practices

8.15. The Landscape Study (Cardiff Council *et al* 1999) identified a number of negative attributes and detractors that have and could adversely affect landscape quality in the city.

9. Natural resources

Introduction

9.1. Cardiff has developed over the centuries utilising the natural resources available within the area and from beyond. As the city continues to develop, it is important that its natural resources are used prudently. Land is a key resource in the city as it is an essential requirement for development, but also the basis for agriculture, open spaces and biodiversity interests. Approximately two thirds of the administrative area is built up, and a third is countryside or open space. Whilst there is physical capacity for greenfield expansion, account needs to be taken of the wider role and value of the land. Agricultural land and allotments help to provide local food, as well as improving residents' physical and mental health. Brownfield land offers opportunities for development, although remediation may be required on contaminated sites resulting from previous industrial activities. Water resources are becoming an increasingly important issue in the light of climate change. Water quality is improving in the rivers, but it is important that vulnerable aquifers are suitably safeguarded and that the water resource as a whole is properly managed.

Recent years have seen a high proportion of housing completions on previously used (brownfield) land

9.2. New housing built in 2011/12 was almost solely on brownfield sites. During the last decade, the use of predominantly brownfield sites has contributed to the development of a large proportion of apartments, particularly in the Cardiff Bay and central areas of the city (Local Housing Strategy 2010). Whilst this has reduced the demand on greenfield sites, they have also affected the range and choice of housing on supply, with implications for the provision of affordable housing, family housing and affordability in general. Additionally, the development of many brownfield sites may have implications for local employment if existing business premises are being lost to housing.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
9.1	Percent of housing on previously developed land	98.6% (2011/12)	Not available		60% (DCLG)	↑ 94.7% in 2005/06, 36.4% in 1997/98	+		1	Housing Monitoring, Cardiff Council

As a result of Cardiff's industrial past, many sites could potentially be contaminated

9.3. Past industrial activities have led to land to become contaminated in various ways over many years. Cardiff Council is aware of about 1410 hectares of potentially contaminated land, including industrial, mining and quarrying, dockland and former waste disposal sites. Some contaminated land sites only come to the Council's attention when developers undertake site investigations on land being considered for future development, so this number could increase in the future.

9.4 In recent years Cardiff has undergone a significant amount of redevelopment works which has seen many remediation projects occurring. Development of contaminated land has the advantage of cleaning up land and securing regeneration although this incurs additional costs. When brownfield sites are redeveloped, they are usually done so on a 'suitable for use' basis, and as such the remediation undertaken on the sites depends on the proposed end use⁸. Most of the remediation that is undertaken involves engineering practices, for instance capping over the existing contaminated land with imported clean soils, thus encapsulating the contamination. Whilst this is an effective remediation methodology in that it breaks the pathways and exposure to the contamination, it does not reduce/ breakdown or remove the contamination from the site.

9.5. The Council has prepared a Contaminated Land Inspection Strategy (Cardiff Council 2010) that sets out how the Council will deliver its statutory duties and provides a framework to identify, inspect and remediate contaminated land.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
9.2	Number and area (in hectares) of potentially contaminated sites	Approx. 1410 ha (10% of Cardiff area), 2010	Not applicable		Reduce area of potentially contaminated land (Cardiff Council)	? unclear due to how sites are identified	?	The sites have been identified (predominantly) by looking at past industrial activities and identifying those activities that could have resulted in contamination.	2	Cardiff Pollution Control Division

⁸ For instance, the remediation undertaken on a site for commercial/industrial development would not be suitable to accommodate residential purposes, so if such a site was considered for residential development in the future, some form of additional remedial works would probably be required.

Good quality agricultural land is known to exist in Cardiff but no comprehensive survey has been undertaken recently

9.6. The latest Agricultural Land Classification (ALC) criteria adopted in 1976 classifies land into 5 grades. The 'best and most versatile land' is defined as Grades 1, 2 and 3a. This is the land which is most flexible, productive and efficient in response to inputs and which can deliver future crops for food and non food uses such as biomass, fibres and pharmaceuticals. Old ALC records (before the subdivision of Grade 3) show areas of grade 2 and 3 at locations outside the urban area. The best quality land is located within the Rhymney valley to the north east of the city and is known to have supported arable use in recent years. Other farmland outside the urban edge to the north and west was classified within Grade 3 but no known comprehensive survey has been undertaken to classify under the 1976 criteria. The ridge to the north of the city and levels to the east are considered less likely to fall within the best and most versatile land under the criteria.

9.7. Agricultural land values have risen sharply in recent years, particularly in Wales. A survey by Savills suggests that land values in Wales rose by more than 80% between 2003 and 2008 - more than twice as fast as the Great Britain average - driven in part by a sharp reduction in the land available for sale, and the higher values that non-farmers are willing to pay (Savills Agricultural Land Market Survey 2009).

9.3	Area (in hectares) of grades 1, 2 and 3a agricultural land	Current data gap				?	?	No recent survey of agricultural land (last survey occurred prior to the 1976 revision of ALC).	Current data gap	

Cardiff's allotments are important for people's health and food security, but they are oversubscribed

9.8. Allotments play an important part in improving people's health. Not only do they offer the opportunity to grow food but they also provide an excellent form of outdoor activity, exercise, relaxation, and a place where people can meet each other. Cardiff's allotments strategy suggests that a minimum of 15 plots should be provided per 1000 households⁹. This would mean 2055 plots for Cardiff's current population, and almost 2700 for its future population¹⁰.

⁹ This is equivalent to the 1993 average for England (Cardiff allotments strategy 2005).

¹⁰ The Welsh Assembly Government's Household Projections for Wales 2010 predict that Cardiff will have 179,000 households in 2023

Although Cardiff currently has about 2000 plots, allotments in Cardiff are already often difficult to obtain due to long waiting lists: in 2009, only three of the council's sites had plots available (Cardiff Council allotment categories and prices, 2010).

No.	Indicator	Cardiff data	Wales / UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
9.4	Number and area of allotments, number of plots	Between 25 and 28 allotments (more than 2000 plots) covering between 65 and 79 hectares, depending on the data source used. 24 sites fully let with a total of 2015 tenants; waiting list over 1000	Not applicable	15 plots per 1000 households (Cardiff Allotment Strategy 2005) No loss of area of allotments (Cardiff Biodiversity Action Plan) "ensure that statutory allotments ... are sufficient to meet the demands of local residents wishing to cultivate them" (TAN 16)	?	-	Different data sources provide different information about allotments. Long waiting lists at many sites.	2	Cardiff Allotment Strategy 2005 Draft Allotment Strategy 2010 Cardiff Biodiversity Action Plan Cardiff Open Space Survey 2007

Cardiff has sufficient mineral reserves to last about 30 years

9.9. Mineral resources are a valuable but finite resource. They provide the essential raw materials for our buildings, infrastructure and their maintenance. An adequate and steady supply of minerals is essential to the national, regional and local economy and their exploitation makes a significant contribution to economic prosperity and quality of life.

9.10. Cardiff is one of the largest producers and consumers of minerals in the region. Natural minerals in Cardiff include quarried hard rock (carboniferous limestone and dolomite) and dredged sand landed in Cardiff Docks. In 2004, crushed rock production in Cardiff was just over half a million tonnes (mt) per year, and about 0.2 mt of sea dredged sand is landed at Cardiff Docks each year¹¹. Most of this natural mineral production is used in the construction

¹¹ South Wales Regional Aggregates Working Party, Annual Reports 2004, 2008 and 2010

industry as aggregates. Secondary materials also substitute for natural aggregates. Approximately 0.1 mt of steelworks slag is used per year for construction purposes, and a significant quantity of construction and demolition waste is recycled as aggregate.

9.11. Cardiff's permitted reserves of hard rock minerals represented about 69 years of supply at the then current output rates in 2010, up from 33 years in 2008 and 53 years in 2004¹². This variation reflects changes in rates of use in development. The land bank will continue to decrease as the reserves are quarried, highlighting the need to protect them from inappropriate development. However, they still represent a significant land bank.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources

Chemical and biological water quality of the rivers Taff, Ely and Rhymney is 'fair to good' and water quantity is satisfactory

9.12. Cardiff contains the three major river valleys of the Taff, Ely and Rhymney together with other watercourses such as the Nant Fawr. Historically, the rivers' water quality has been degraded due to mining activities, urban run-off and extensive physical modifications. However water quality has dramatically improved in recent years as improvements have been made to drainage systems and mining related activities have ceased upstream. This has allowed the return of salmon and sea trout, with some tributaries providing spawning and nursery areas.

9.13. However Cardiff's rivers are still vulnerable to overflows from abandoned mine workings, and diffuse and intermittent pollution from urban and industrial development. The South East Valleys catchment, of which they are part, is one of the worst catchments of the ten that comprise the Severn River Basin. In the catchment overall, only 6% of river length is achieving good ecological status or potential, as required by the Water Framework Directive. The Environment Agency does not expect this to change by 2015. Proposed action to tackle problems in the river catchment include improvements to sewer overflows and sewage treatment works discharges to reduce pollution by ammonia and other substances, pollution monitoring and habitat improvements (Environment Agency, 2009, River Basin Management Plan Severn).

¹² *ibid.*

9.14. Abstraction in the lower Taff catchment is dominated by the exempt abstraction at Blackweir that supplies Cardiff docks, while the licensed abstractions sum to a comparatively small total. Water resources in the Ely catchment are currently not fully utilised. The main abstractions in this unit are industry related (Environment Agency Wales 2006).

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources

10. Population

Introduction

10.1 Cardiff has unique population characteristics that are different to those experienced within the South East Wales region and Wales as a whole. Its population has grown rapidly over the last 20 years, and this rapid growth is expected to continue.

Cardiff's population has increased steadily over the past 20 years but much more rapidly since 2001 reaching 345,400 in 2011

10.2. Figure 10.1 shows the change in Cardiff's population over the last 29 years. The average growth rate over this period was 0.57%. Analysis of the components of population change (births, deaths and net migration) are shown at Figure 10.2. This reveals relatively stable birth and death rates resulting in an average natural change of 1,000 persons per year over the past 29 years. Migration trends fluctuate more considerably but the overall trend between 1981 and 2009 shows a net migration of 700 persons per year.

10.3. The average annual population increase over the period 2001-2009 was 3,300 per year, approximately 83% above the average for 1981-2009 and approximately 181% above the average for 1981-2009. This reflects the trend for population to increase mostly from net migration rather than from relatively stable natural increase. The last 4 years have seen a net in migration of approximately 2,800 per year.

Figure 10.1 Cardiff's population (000s), 1981-2009 (National Statistics)

10.4. The population of the South East Wales region has increased from 1.37 million in 1981 (48.8% of the Wales total) to 1.45 million in 2009 (48.2% of the Wales total). However within the region, the coastal areas have seen an increase in populations whilst the valley authorities have experienced a loss of share (and amount) to varying degrees. For example, Cardiff has experienced a 17.2% growth in population over the period 1981-2009, whilst Merthyr Tydfil has experienced a loss of 8.1% over the same period.

Figure 10.2 Births, deaths and net migration, 000s
(National Statistics)

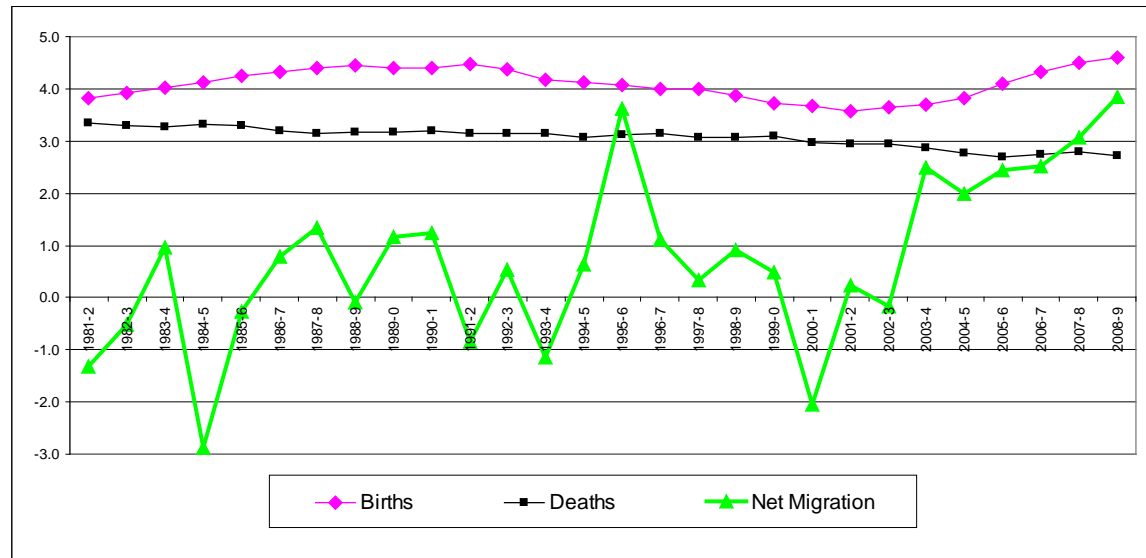

Figure 10.3 Population (%) by local authority in South East Wales 2009 (total 1.45 million) (National Statistics)

Population and household numbers will increase in South East Wales, and Cardiff's proportion of this is increasing

10.5. The Welsh Assembly Government's population projections suggest that Cardiff's population will increase by 22% to 2023, from 336,200 to 410,500. Predictions of household numbers are for a 31% increase between 2008 and 2023, from 137,000 households to 179,000 (WAG Household and Population Projections for Wales (2008-Based), 2010).

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
10.1	Total population	341,100 population (2010)	3,006,400	60,462,600	No target	Increase	contextual indicator	Cardiff's population and number of households has increased steadily over the past 29 years but much more rapidly since 2001.	1	Office for National Statistics
10.2	Number of households and average household size	Households 142,100 (2010) Average size 2.34 (2010)	1,318,500 (2010) Average size 2.26 (2010) 2.75 (1981)	England and Wales Households - 218,680,00 (2008) Average size -2.30 (2008) 2.65 (1981)	Accommodate LDP household projections	number up, size down: 2.45 (2001) 2.54 (1991) 2.75 (1981)	contextual indicator	The number of households is increasing year on year in Cardiff, Wales and the UK. Average household size is decreasing.	1	DCLG and WAG projections

Average household size is decreasing, with a decline in married couples but an increase in one person, lone parents and cohabiting couples

10.6. Cardiff's average household size has been consistently higher than that for Wales and England & Wales, but it has been decreasing in line with national rates. Household size is diminishing due in part to a marked decline in the proportion of married couple households and an increase in single households and cohabiting couple households. The latest WAG 2006 based household projections indicates that Cardiff's predominant sizes of household is of 1 or 2 people (64% of households). Based on past trends, it is projected that this will increase to 68% of all households by 2026: see Table 10.1.

Cardiff: Projected Households by Type - Thousands (WAG 2006 based projections)					
Household Type	Year		Change		
	2006	2026	No	%	% of total change
1 person	40.5	59.0	18.5	45.7	51.2
2 person (no children)	37.1	44.5	7.4	19.9	20.5
2 person (no children)	5.6	10.1	4.5	80.4	12.5

5+ persons (1 adult, 4+ children)	0.7	1.3	0.6	85.7	1.7
All Household Types	130.7	166.8	36.1	27.6	100

Table 10.1 Projected households by type for Cardiff, 000s (WAG 2006 based projections)

Cardiff has a relatively high proportion of young adults and a low proportion of older age groups compared to Wales as a whole

10.7. Figures 10.4 and 10.5 provide a summary of the population age structure for Cardiff and South East Wales. Cardiff's population distribution contrasts markedly from that of South East Wales (and UK, which are similar to each other). Cardiff has a higher percent of population in age groups 15-39 years but relatively lower percent in older age groups from 40 years upwards.

10.8. Of particular significance is the effect of Cardiff's student population who represent around 10% of the city residents. Most full-time students are aged between 18 and 29 years old. Almost 19% of Cardiff's population falls within the 20-29 age range compared with less than 12% for South East Wales as a whole.

Figure 10.4 Cardiff age structure in 2010 (National Statistics)

Figure 10.5 South East Wales age structure in 2010 (National Statistics)

Ethnic groups as a proportion of Cardiff's population are higher than for Wales as a whole

10.9. Figure 10.6 shows that Cardiff's population profile in terms of ethnic group is quite different to the Wales average but much closer to England and Wales combined. At the time of the 2001 population census, Cardiff's white population accounted for 91.6% of the total, compared to Wales (97.9%) and England & Wales (91.3%). The ethnic minority populations tend to live in the poorest inner city areas that rank amongst the most deprived areas in Wales (see Map 1.1).

Figure 10.6 Ethnic groups of the population

(Cardiff Council, Joint Needs Assessment 2010, based on ONS 2007 Experimental Statistics)

11. Waste

Introduction

11.1. The Welsh Assembly Government has set challenging targets for recycling and composting. Combined with European Union legislation, these are driving change towards more sustainable waste management practice. Cardiff's waste is managed on a sub-regional basis, along with other local authorities in South East Wales. Information on waste produced in Cardiff is limited: much of the information provided in this chapter is about South East Wales as a whole.

11.2 The South East of Wales had an estimated 8.6 years of remaining landfill capacity in 2008, see figure 11.1.

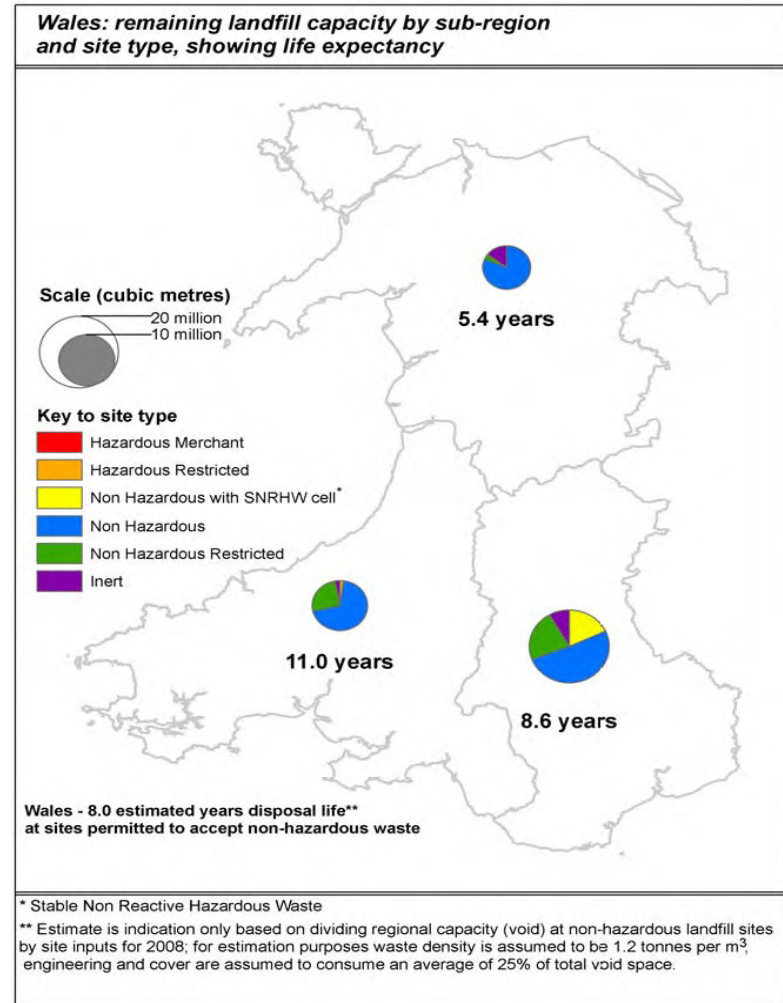

Figure 11.1 Remaining landfill capacity, in years (Environment Agency Wales 2008)

Construction and demolition waste is currently the biggest component of waste in South East Wales

11.2. Construction and demolition waste is the biggest component of waste in South East Wales, accounting for about 55% of all waste produced. This is followed by municipal (17%), industrial (15%) and commercial (10%) waste (South East Wales Regional Waste Group 2008) - see Figure 11.2.

11.3. Municipal waste produced in Cardiff, as in the UK as a whole, increased rapidly to a peak in 2004/05 but is now decreasing significantly. In 2008/09, Cardiff Council was responsible for over 118,000 tonnes of municipal waste, down sharply from a peak of 171,000 four years earlier (Statswales, 2010). The first quarter of 2012 was 11% lower than the same period in 2011.

11.4. In 2005/06, Cardiff had 4 civic amenity sites, 11 scrapyards/metal reprocessing sites, 24 mobile plants, 3 physical treatment plants, 1 physico-chemical treatment plant, 14 transfer stations, and 1 windrow composting site. In total, these had a capacity for 4.44 million tonnes of waste, more than half of that for South East Wales as a whole (South East Wales Regional Waste Group Regional Waste Plan 1st Review, 2008).

Figure 11.2 Amount (in 000 tonnes) of waste arisings in South East Wales, 2005/06 (South East Wales Regional Waste Group, 2008)

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
11.1	Commercial and industrial waste arising per year	247,608 tonnes (2002/03 – most recent data available)	SE Wales 1,244,948 (2005/06)	Not known	No target	↑ 1,290,902 in 2002/03 (SE Wales)	- tonnage down but still high	Cardiff Council has no suitable local data	3	South East Wales Regional Waste Group Regional Waste Plan 1 st Review,

11.2	Construction and demolition waste arising per year	Not available	SE Wales 2,858,774 tonnes (2005/06)	Not known	Recycle or reuse 70% by 2025 (WG)	↓ 2,747,765 in 2002/03 (SE Wales)	-			2008
11.3	Municipal waste arising per year	161,800 tonnes (2011/12), down from 181,800 in 2007/8	Wales 1.479 million (2011/12), down from 1.713 (2007/8)	11% decrease in 4 years		↑ Decreasing	+		1	Statswales, Municipal Waste Arisings 2012 (http://www.statswales.wales.gov.uk/TableViewer/tableView.aspx?ReportId=10564)
11.4	Number of planning applications with site waste management plans		Current data gap. Feasibility of this indicator to be investigated				?	Such plans may become a legal requirement for large projects in the future	Current data gap	

Recycling rates are improving rapidly following the completion of a new recycling facility and rolling out a recycling scheme

11.5. Cardiff's recycling and composting rates have historically been significantly below the Welsh average. Only 10.4% of the municipal waste stream was recycled in 2004/05 compared to a Welsh recycling rate of 21.7%. However this has improved rapidly with the opening of the Materials Recycling Facility, the PAS 100 Composting Facility, the In-vessel composting facility and the roll-out of an integrated kerbside recycling scheme, and Cardiff at 49% is now slightly ahead of the Wales average of 48%.

No.	Indicator	Cardiff data	Wales data	UK data	Target	Trend	Indicator status	Commentary	Data quality	Data sources
11.5	The percent of municipal waste prepared for reuse, composted or recycled	49% (2011-12)	48% (2011-12)		WG targets of 52% (2012-13), 58% (2015-16) 64% (2019-20) and 70% (2024-25)	↑ 3.4% in 2000/01 10.4% in 2004/05 39% (2009/10)	+		1	Statswales, Local Authority Municipal Waste Management, January – March 2012 http://wales.gov.uk/docs/statistics/2012/120628sdr1042012en.pdf
11.6	Number of bring sites and large household recycling centres	14 bring sites 4 Household recycling centres	N/A	N/A	N/A					

It is unclear how Cardiff's waste will change in the future

11.6. There is considerable uncertainty regarding the likely future of Cardiff's waste. Factors affecting waste growth include:

- Population changes
- Changes to the number and size of households
- Consumer behaviour
- Effectiveness of waste minimisation strategies
- Changes in the economic prosperity of the region

11.7. In 2008, based on past trends, future population change, economic activity and legislation, the South East Wales Regional Waste Group predicted an 83% growth in municipal waste between 2003/04 and 2024/25; a 17-20% increase in commercial and construction waste; and a significant reduction in industrial, agricultural and hazardous waste – see Figure 11.3.

11.8. The group predicted in 2004 that Cardiff would need significantly more waste treatment facilities of most types, albeit not landfill (South East Wales Regional Waste Group, 2004, South East Wales Regional Waste Plan). However these predictions may change now as a result of the economic recession, increased population projections for Cardiff, and further measures taken by the Council to reduce waste production. Prosiect Gwyrdd is looking for the best environmental, cost effective and practical solution for waste in South East Wales once recycling and composting has been maximised in each Local Authority area (partnership between Caerphilly, Cardiff, Monmouthshire, Newport and Vale of Glamorgan Councils).

Figure 11.3 Predicted waste arisings, 2003/04 – 2024/25 (South East Wales Regional Waste Group Regional Waste Plan 1st Review, 2008)

Policy Review	
Biodiversity, Flora and Fauna: Suggest including the 'Environment Strategy for Wales'. The Key Policy Document contains a number of outcomes and actions relevant to the LDP.	Agree, added.
Climate Change: <ul style="list-style-type: none"> • Suggest that references to the Flood Risk Regulations (2009) and the Flood and Water Management Act (2010). • The reference to threats from potential flooding is welcomed but the inclusion of a reference to existing communities, development, infra-structure and other assets alongside 'new developments' is suggested for the 'how the LDP might help' column. • Suggest that a reference to the additional flood risk assessments, mapping and related responsibilities and actions for local authorities in the recent legislation. 	Agree, added. Agree, add to bullet point. Agree, added.
Landscape: Suggest including the 'Register of Landscapes of Historic Interest in Wales' to the Key Policy Documents part of the table.	Disagree; this is a non statutory advisory document.
Scoping Report	
The reference to the risk of flooding and new developments but would urge that existing developments are also included,	Agree, amended.
The specific reference to the need to consider the significant threat from flooding for the Wentlooge Levels is welcomed.	Noted.
Sustainability Issues	
Cultural Heritage and the Historic Environment: There is a case for making a reference here to the importance of Historic Landscape interests.	Agree, added.
Landscape: The reference to the Gwent Levels and the Severn Estuary are welcomed as these are very important assets for the City.	Noted.
SA/SEA Objectives	
Sub objective 4e: This point needs to refer to the need to protect existing developments, communities, infrastructure etc.	Disagree, objective 4g in the SA/SEA Framework encompasses all developments new and old.
Sub objective 4f: We welcome the reference here to the relevance and importance of Sustainable Drainage Systems. This is an area of work of direct relevance to the Board.	Noted.
Suggests studying Defra's Adaption to Climate Change Programme; particularly the Climate Change Risk Assessment Project for a comprehensive account of the potential effects of climate change, a section on Wales is available.	Noted.
The Board has concerns that there are development sites on Wentlooge Levels with extant planning permission.	This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been

	forwarded to the LDP Team for consideration as part of the preparation of the LDP.
Appendix 2	
The Board is also concerned about the current data gap in relation to indicators 4.9 and 4.11, relying on the Number of Properties at risk from flooding, percentage of new developments with SUDS and Number of new approved housing units in C1 and CV2 Flood risk areas.	At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. Current data gaps – the feasibility of these indicators is to be investigated, and alternative indicators developed if necessary.
Welcomes the inclusion of Wentlooge Levels in Paragraph 5.3 but would urge that specific reference is made here to the Historic Landscape Interest of this area.	Disagree, already included in cultural heritage and historic environment section.
Welcomes the inclusion of Gwent Levels as one of the five sites to be proposed as Special Landscape Areas.	Noted.

Cardiff Civic Society	
Consultee comment	Recommended response
Scoping Report	
The Draft Sustainability and Environmental Impact Assessment is comprehensive and written in plain English but presented but presented in an overly complex sequence making access difficult.	A Non-Technical Summary is provided, which summarises the information contained within the Scoping Report over 5 pages.
Major concern is the lack of importance given to climate change. Welcome the statement in section 4 “climate change is probably the greatest long-term challenge facing the human race, and is a serious and urgent issue” as it suggests that sustainability and environmental policies will be central to the LDP.	This is a matter for the LDP rather than the SA/SEA and has been forwarded to the LDP Team to consider as part of the preparation of the LDP. However, climate change is a principle concern and will be integral to the development of strategic options and policies. There is a specific objective, and range of sub objectives, in the SA/SEA Framework to ‘reduce emissions of greenhouse gases that cause climate change and adapt to its effects’.
Suggest that a drive for a sustainable city must be central to any assessment of the LDP.	Agreed. The SA/SEA Framework of objectives

	has been designed to take into account socio-economic and environmental factors and provide a range of objectives that are based on achieving a more sustainable city. They form the basis of the criteria for assessment.
Appendix 1	
Transport: The implications of the goals on transport must be based upon extensive modelling of the options available, and requires data on actual projected traffic flows into and around the city. The proposals are too weak and radical alternatives must be professionally examined to ensure solutions are suitable for 2026 and the climate change goals.	This is a matter for the LDP rather than the SA/SEA but has been noted and forwarded to the LDP Team to consider as part of the preparation of the LDP.
Air Quality: Improvements must be specific and delivered, it is not sufficient to minimise travel and consider the location of polluting industry.	The SA/SEA can only set out how it assesses the LDP, but has been noted and forwarded to the LDP Team to consider as part of the preparation of the LDP.
Biodiversity: In this Year of Bio-diversity the importance of addressing this aspect of human damage to the planet has been accepted by many countries, not least by the WAG.	The SA/SEA can only set out how it assesses the LDP, but has been noted and forwarded to the LDP Team to consider as part of the preparation of the LDP. Biodiversity is an objective set out in the SA /SEA Framework.
Climate Change: Vague statements about promoting, helping, supporting and encouraging must be replaced by positive and action orientated words like providing, ensuring and delivering. There is not enough evidence on which to base protective measures like flood protection schemes in the event of water levels increasing and the anticipated risk is understated.	The SA/SEA can only set out how it assesses the LDP, but has been noted and forwarded to the LDP Team to consider as part of the preparation of the LDP.
Cultural heritage and historic environment: Cardiff Civic Society concurs with the implications identified in the draft.	Acknowledged.
Economy: The list of things the LDP must do lacks supporting and justifying data from external sources.	This is a policy review document and supporting data and sources can be found in the original documents reviewed.
Health and well-being: There is no specific reference to the facilities to encourage young people to participate in sports.	This is a policy review document and as such can only reference items

	included in these policies.
Landscape: Cardiff Civic Society concurs with the implications identified in the draft	Acknowledged.
Population: Section on housing needs reinforcing by policy on standards, design, mix and regeneration/ green deals. It is not enough to indicate or support good development.	This is a policy review and cannot set additional policies, but comments have been noted and forwarded to the LDP Team to consider as part of the preparation of the LDP.
Waste: Recycling goals must be achieved not just given help. There is no reference to energy from waste schemes.	This is a policy review document and cannot set additional policies or include recommendations not included in the policies reviewed.
Appendix 2	
Indicator 4.2 Cardiff ecological footprint data is dated 2001; an update is needed to quantify the target “reduce growth in footprint”.	At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. WAG have now taken responsibility for measuring this at a local authority level. Currently awaiting updated data that is comparable with the 2001 data.
Indicator 4.7 As stated, there is no data on affordable housing, despite this being an area of failure last time.	At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. Current data gap and seeking data to fill.
Indicator 4.8 As stated there is no data on renewable energy sources. This is a remarkable omission especially since Cardiff’s potential was showcased in the Government Office for Science report “Powering our Lives” Published in 2008.	At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. Current data gap and the feasibility of this indicator is to be investigated, and alternative indicator developed if required. The LDP Team will be undertaking a Renewable Energy Assessment using

	the WAG toolkit, which will identify potential renewable energy sites and constraints.
Indicator 4.9 – 4.11 Flood Risk – This was specifically mentioned by the Inspector, and data is essential to ensure a prudent response to the LDP.	The SA/SEA contains objectives, sub-objectives and indicators relating to flood risk. Since the Inspectors report further flood risk data is being collected so work on the new LDP is informed by an up to date strategic flood risk consequences assessment.
Indicator 6.2 The assessment of Cardiff's competitiveness is misleading. Our position is, at best, average and it is not with other Welsh cities that we are in competition.	The data in 6.2 refers to the UK competitiveness index and is assessed on that basis. Whilst Cardiff does out perform other Welsh cities it's economy has still experienced strong growth and improved it's position in the UK Index.
Indicator 7.3 and 7.4: The poor state of public health is recognised and is an LDP issue but without targets action cannot be effective.	At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. Targets to be researched.
Indicator 9.2 A total of 1410 ha of contaminated land is identified, but is not accompanied by an analysis of its capability for development. This is sufficient, if appropriate for construction, once decontaminated for all Cardiff's housing needs in the plan period (1410 x 30 per ha). The model of the Olympic Park should be examined.	Noted, this is an issue for the consideration in the LDP, and will be forwarded to the LDP Team to consider as part of the preparation of the new LDP.
Indicator 9.3 As stated, the latest farmland data used is dated 1976, so at least 34 years old. This lack of up to date data will prevent effective planning for careful use of Greenfield sites if this proves necessary to support chosen growth plans.	At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. Further data is currently being collected by the LDP Team in liaison with WAG and ADAS.
Indicator 11.1 and 11.2 The data indicates that the recycling of commercial and construction waste is not adequately managed. As the main sources of waste this should be an LDP focus.	Disagree. Whilst it is an issue that will be considered by the LDP the problem might not be solvable by the Plan, rather

	it may be better addressed by the Waste Management Strategy.
The omission of data from the European Commission report Perception survey on Quality of Life in European Cities, published in November 2009 should be rectified.	At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. This will be used to inform indicators research.
Conclusion	
This report is an update on the 2006 document, and many of the data elements missing last time are still present.	This has been dealt with in the detailed comments and responses above.
The extended period of the plan adds force to the need for an ambitious approach that has not yet been fully grasped.	The SA/SEA can only set out how it assesses the LDP, but has been noted and forwarded onto the LDP Team for consideration as part of the preparation of the LDP.
There is a notable lack of benchmarking information and models of best practice that can be learned from. Cardiff Civic Society commend to the council the work undertaken in Seattle on sustainable cities: in the view of the Cardiff Civic Society this should form a core to the revised sustainability plan for the LDP.	This is a matter for the LDP rather than the SA/SEA, but has been noted and forwarded onto the LDP Team for consideration as part of the preparation of the LDP.

Cardiff and Vale University Health Board	
Consultee comment	Recommended response
Recommend that an HIA be carried out alongside SA/SEA and LDP development.	Noted, LDP Team is coordinating HIA.
Include that Cardiff is a member of the World Health Organisation Network of Healthy Cities for Phase V (2009 – 2013) and is committed to adopting the principles of healthy urban planning is recommended.	Agree, include in Health and Wellbeing chapter of Appendix 2.
Include the concept of healthy urban planning and health map and the impact of the environment on inequalities.	Disagree – the figure does not provide information that contributes to building an overview of the current state of Cardiff.
Healthy and Well-Being indicators (Source: Integrated Partnership Strategy, Interim Report of the Director of Public Health Cardiff Vale University Health Board, November 2010 – Appendix 2). <ul style="list-style-type: none"> - Life expectancy (7.2) (Page 8 of interim report on DPH). - Obesity (7.6). Replace map with data from WHS. 	Appendix 2 contains data from the WHS, and the map demonstrates the distribution of the issues of obesity across the city. This may assist in the delivery of services for promoting healthy lifestyles.

Policy Review	
Include The Cardiff Health, Social Care and Well-being Strategy and Cardiff Children and Young People's Plan.	Agree, added.
Include The Healthy Weight Healthy City Strategic Framework (Cardiff Health Alliance 2010).	Disagree – this is an action plan to deliver policy in the Health, Social Care and Wellbeing Strategy, Cardiff and Young Persons Plan, Safer Capital and LDP in order to fulfil WHO Healthy City status.
Include Creating an Active Wales (Welsh Assembly Government 2009).	Disagree – the policy review only includes key policies.
Include Every Child Has the Right to Play – The Play Strategy for Children and Young People in Cardiff (Cardiff Council 2010).	Disagree – the policy review only includes key policies.
Include Interim Report of the Director of Public Health (Cardiff and Vale University Health Board, November 2010).	Disagree – the policy review only includes key policies.
Include NICE (2008) Physical Activity and the Environment, National Institute for Clinical Excellence, England.	Disagree – the policy review only includes key policies.
Include Marmot M (2010) Strategic Review of Health Inequalities in England post 2010. Fair Society Lives The Built Environment: Task Group 5.	Disagree – the policy review only includes key policies.

Civil Aviation Authority	
Consultee comment	Recommended response
The area in question does not contain any designated aerodrome. Therefore the Civil Aviation has no comments on the Final Draft Scoping Report.	Noted.

Countryside Council for Wales	
Consultee comment	Recommended response
CCW Warmly welcomes the scoping report, which is very clear, well structured and purposeful.	Noted.
Welcomes the recognition that the LDP is subject to Habitats Regulations Assessment Process.	Noted.
Policy review	
Welcome and acknowledge the Council's intention to keep the policy framework under review throughout the plan preparation period.	Noted.
Suggest the following additional information: <u>Biodiversity:</u> <ul style="list-style-type: none"> • Reference geodiversity as well as biodiversity • Cardiff Council's Countryside Strategy • The Welsh Assembly Government's emerging Natural Environmental Framework (A Living Wales) • Encourage the promotion of green infrastructure, a multifunctional network of green space providing for both 	This issue is referenced in objectives 8 and 9. Disagree, already in Landscape section of policy review. Disagree – the policy review only includes

people and biodiversity. Spatial Plan Area work for SE Wales has a vision of a “Networked Environment Region” , which Cardiff could help to deliver.	adopted policies. Disagree – this is guidance and not policy.
<u>Climate Change:</u> Cardiff specific policies should also come from Swansea and Carmarthen Bay Shoreline Management Plan 2.	Disagree – the policy review only includes adopted policies.
<u>Health and Well-Being:</u> <ul style="list-style-type: none"> • Rights of Way Implementation Plans • Encourage the Council to include the promotion of green infrastructure, a multifunctional network of green space providing for both people and biodiversity. 	Only key policies are included in the policy review. The issues of green infrastructure will be covered by SA/SEA objectives 8 and 3.
<u>Landscape:</u> The need to protect the historic landscape of the Gwent Levels should be included as a Cardiff specific policy.	The policy review only includes adopted policies and is not a policy document in itself.
<u>Natural resources:</u> <ul style="list-style-type: none"> • The Welsh Government’s emerging Natural Environment Framework (<i>A living Wales</i>) • Would like to see specific mention of the importance of conserving and enhancing the countryside for all of its intrinsic value – the Gwent Levels and Cardiff Beech Woods are particularly important in providing a setting for Cardiff. 	The policy review only includes adopted policies. There is a SA/SEA objective and sub objectives on designated sites (objective 3).
Indicators	
<u>Air Quality</u> Suggest additional indicators for air quality might include: <ol style="list-style-type: none"> 1. Population living within AQMAs 2. Number of developments in AQMAs 3. annual statistics for PM₁₀ and/or NO². 	At the current time changes are not considered necessary to the Scoping Report. Additional info on AQMAs to be considered to enhance current indicator if data collection feasible. PM10 and NOx are already monitored in order to decide whether a AQMA is required.
<u>Biodiversity, flora and fauna</u> Would like to see more indicators for biodiversity, including some that focus on geodiversity.	Geodiversity already covered in sections 3, 8 and 9 of Appendix 2.
<u>Climate Change</u> Many of the indicators are unclear or cannot be assessed due to lack of data. Would like clarity on how data for the indicators is to be collected in future, ensuring relevance.	At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. Current data gaps in some indicators – the feasibility of these indicators is to be investigated and alternative indicators formulated if required.

<p><u>Health and well-being</u> An indicator expressing the relationship between open/ green space and health and well-being would be beneficial. This should relate to the findings of the council's access to natural green space assessment.</p>	<p>Agree, although this is not currently a measureable indicator, and as such no changes will be made to the Scoping Report at present but the issue will be kept under review.</p>
<p><u>Landscape</u> It is noticeable that the majority of indicators for landscape are either not in use, unclear or lacking data. Suggest additional, measurable indicators are added.</p>	<p>Disagree, current data available for indicators, but lacking historic data for trend comparison due to not previously measuring data.</p>
<p><u>Natural resources</u> Many of the indicators for natural resources are either unclear or lacking data. Suggest additional, measurable indicators are added.</p>	<p>At the current time changes are not considered necessary to the Scoping Report, however the issue will be kept under review. Lacking historic data for trend comparison due to not previously measuring data. Agricultural land data is currently being collected by LDP Team in liaison with WAG and ADAS.</p>
<p>Sustainability issues Suggest that the following issues be considered:</p>	
<p><u>Utility Provision</u> Both the risks to existing infrastructure posed by flooding as well as the need to consider the requirement and location of new installations such as masts and cables carefully.</p>	<p>This is a matter for the LDP rather than the SA/SEA, but it has been noted and forwarded to the LDP Team for consideration as part of the preparation of the LDP.</p>
<p><u>Health and well-being</u> Recognition of the importance of open space to health and well-being (and current provision for this in Cardiff) would be welcomed.</p>	<p>Agree, added.</p>
<p><u>Minerals</u> Supply versus demand and the potential link to aggregate dredging in the Severn Estuary.</p>	<p>Agree, added.</p>
<p><u>Transport</u> The reliance on the car, the opportunity for the LDP to shift choice to favour public transport, the location of new roads/bus and rail stations and connectivity to neighbouring towns and cities.</p>	<p>Whilst not explicitly mentioned, this is implicit in table 4.1.</p>
<p><u>Population</u> While the recognition of housing provision for an expanding population is welcomed, the scope should be extended to include all other services and infrastructure than an increased population will require.</p>	<p>Agree, added.</p>
<p>SA/SEA Objectives</p>	

<p><u>3. Protect and enhance biodiversity, flora and fauna</u> This should also include geodiversity and opportunities to link grey and green infrastructure.</p>	<p>This is referenced in objectives 8 and 9 of the SA/SEA Framework.</p>
<p><u>6. Help deliver growth of a sustainable and diversified economy</u> Development of skills should be mentioned as an objective and these should be consideration of green jobs.</p>	<p>This is covered by the overarching objective 'help deliver the growth of a sustainable and diversified economy' in the SA/SEA Framework.</p>
<p><u>9. Use natural resources efficiently and safeguard their quality</u> Need to consider adding an objective that reflects the Welsh Assembly Government's emerging Natural Environment Framework (<i>A Living Wales</i>) with emphasis on valuing the environment for intrinsic goods and services that it provides.</p>	<p>This is unadopted policy.</p>
<p>Monitoring</p>	
<p>CCW expect to see a reference to a monitoring strategy within the Scoping document along with an Action Plan for monitoring.</p>	<p>The monitoring framework will be set out in detail in later publications.</p>
<p>Appendix 1</p>	
<p>Welsh Assembly Government's Natural Environment Framework (<i>A Living Wales</i>) – Currently under consultation.</p>	<p>The policy review only includes adopted policies.</p>
<p>WAG's Regeneration Framework (October 2010).</p>	<p>Framework for Regeneration Areas (2010) is not a key policy document.</p>
<p>WAG's <i>Creating an Active Wales</i> (2009).</p>	<p>The policy review only includes key policies.</p>
<p>WAG's Planning for Renewable and Low Carbon Energy – A Toolkit for Planners (July 2010).</p>	<p>This is a matter for the LDP rather than the SA/SEA, but has been noted and forwarded onto the LDP Team for consideration as part of the preparation of the LDP.</p>
<p>Emerging national strategy for Flood and Coastal Erosion Risk management in Wales (on consultation).</p>	<p>The policy review only includes adopted policies.</p>
<p>Appendix 2</p>	
<p><u>2. Air Quality</u> Would like to see an explicit statement about the link between air quality and health of both humans and ecosystems.</p>	<p>Agree, added.</p>
<p><u>3. Biodiversity, flora and fauna</u> Would like to see reference to geodiversity in this section – both an explanation of what geodiversity is and a review of important resources in Cardiff. These would include Castell Coch, Flat Holm and Rhymney Quarry.</p>	<p>Geodiversity issues are covered in sections 8 and 9, landscape and natural resources, of Appendix 2. Additional info on Flatholm added to landscape section.</p>
<p><u>3.9 Vulnerability of biodiversity resource</u> Development and changing land use practice are significant concerns. Would also like to see recognition of long-term threats – for example predicted sea level rise and the future sustainability of</p>	<p>Sea level rise issues covered in section 4, climate change, of</p>

<p>the Gwent Levels.</p> <p>Take a broader view of the protection of biodiversity by considering other important reservoirs of biodiversity outside of designated sites such as brownfield land, parks and commons. This could be achieved by promoting green infrastructure.</p> <p>Would like to see recognition of the fact that the natural environment and the goods and services it provides underpin our well-being in a whole range of vastly different ways.</p>	<p>Appendix 2.</p> <p>Already included in section 3.9 of Appendix 2.</p> <p>At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. This is a small sector of the economy and no suitable data currently exists for Cardiff.</p>
<p><u>4.4 Risks associated with climate change</u> Would add the loss of prime agricultural land (often coastal) due to saltwater incursion to the list.</p>	<p>Areas of potential coastal flooding in Cardiff are not prime agricultural land.</p>
<p><u>4.7 Travel in Cardiff</u> Would encourage the Council to work with neighbouring authorities to ensure that sustainable transport solutions are joined up across administrative boundaries.</p>	<p>This is a matter for the LDP rather than the SA/SEA, but has been noted and forwarded onto the LDP Team for consideration as part of the preparation of the LDP.</p>
<p><u>Renewable energy</u> Suggest a specific mention of renewable energy provision should be included on climate change.</p> <p>Suggest using the Welsh Assembly Government's Planning for Renewable and Low Carbon Energy – A Toolkit for Planners.</p>	<p>Objective 4b covers this issue as part of the SA/SEA Framework.</p> <p>The LDP Team will be undertaking a Renewable Energy Assessment using the WAG Toolkit.</p>
<p><u>7.7 Open space and health</u> Would like to see recognition of the fact that the natural environment underpins well-being (as per comments above).</p>	<p>Already included in 8.14 of Appendix 2.</p>

Environment Agency Wales	
Consultee comment	Recommended response
Non Technical Summary	
<p>The table which provides a summary of indicators do not accurately reflect Appendix 2, i.e. indicators under item 4 Climate should include flood risk matters.</p>	<p>Items for which there are current data gaps are not measurable and thus have not been included / assessed in the indicator table within the NTS. Flooding is an important issue and we will identify ways in which to address these omissions as we</p>

	develop the SA/SEA and LDP.
Additional information and data has been provided by the Environment Agency on WFD (Water Framework Directive), water quality and waste.	Acknowledged, information will be considered for the SA/SEA and shared with the LDP team.
Scoping Report	
In reference to the key messages under the policy review, the implications from the review should be addressed in the Plan, for example, inclusion of water efficiency measures and sustainable drainage in proposals; delivery of suitable waste management facilities for different waste streams.	This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP.
Requirements of SEA regulations. Additionally recommend that a comparative analysis is used in reporting i.e. a Wales wide view and cross boundary.	Noted, the SA/SEA will take account of cross boundary issues.
Recommend that a monitoring strategy is agreed so that objectives targets and indicators can be agreed for those environmental measures to be monitored.	The monitoring framework will be set out in detail in later publications.
Climate Change, provides only a selection of areas at risk of flooding. There may be other areas and/or sites to include in your Plan for future development and these may be also at risk from flooding. These areas/sites will also need to be appropriately assessed.	This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP. The LDP Team are currently updating the strategic flood risk consequences assessment for the city.
Natural Resources, agree that whilst water quality is improving in rivers Taff, Ely and Rhymney, WFD requirements still need to be addressed.	Noted.
Noted that in your Table 4.1 in your Scoping Document you state that "Abstraction from the Rivers Usk and Wye is a concern, and this will be exacerbated by population growth and climate change". Noted that your corresponding objective in Table 5.1 is to "Conserve water resources and increase water efficiency". Welcome this, although we would stress that you ensure that your evidence base provides evidence that sufficient water is available to supply new developments, prior to making allocations in the Plan. Policies should be based identification of key issues.	Noted.
Policy Review	
In reference to the key messages under the policy review, the implications from the review should be addressed in your Plan, for example, inclusion of water efficiency measures and sustainable drainage in proposals; delivery of suitable waste management	This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been

facilities for different waste streams.	forwarded to the LDP Team for consideration as part of the preparation of the LDP.
Under the heading of SA/SEA topic 'Climate Change' Technical Advice Note 14: Coastal Planning (Welsh Assembly Government 1998) should be included.	Disagree, already in natural resources section of policy review.
Under the heading of Landscape reference to TAN5 should be included. The EA also agree with LDP approach to delivering policy aim to "avoid development of greenfield sites where possible and appropriate by giving preference to the re-use of suitably developed land".	Disagree, already in biodiversity section of policy review.
Support the delivery of policy aims, "plan for new development in discussions with water and wastewater companies and the Environment Agency Wales, to ensure that water resources are adequate and water quality is maintained".	Noted.
SA/SEA Objectives	
Welcome Objective 3 (Protect and enhance biodiversity, flora and fauna) and its sub objectives 3d and 3e. As part of these sub objectives, the EA would expect the Plan to promote "green infrastructure", wherever possible, such as wildlife corridors and river corridors, in order to enhance the connectivity of biodiversity networks wherever possible.	This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP.
Welcome Objective 4 (Reduce the emissions of greenhouse gases that cause climate change and adapt to its effects). However, we request that sub-objective 4e be re-worded to focus more on the management of consequences, i.e. Ensure that a precautionary approach is applied and ensure that the location and design of new development manages the potential risks and consequences of flooding down to an acceptable level.	Agree, amended.
Taking into account the baseline evidence for 'Environmental Quality – a determinant of health - varies greatly within Cardiff' you may wish to reword Sub Objective 7d to reflect this evidence. Suggest amending Sub Objective 7d to read, "Improve environmental quality by minimising adverse impacts on health and wellbeing from pollution, flooding and waste management disposal".	Agree, amended.
Welcome Objective 8a, in reference to the protection of river valleys. We would question whether there is any "undeveloped" coastline remaining in Cardiff, as most coastline within the borough is either urbanised or covered by flood defences. You may therefore wish to change remove the word "undeveloped".	Agree, amended.
Welcome Objective 9 (Use natural resources efficiently and safeguard their quality), especially sub-objectives 9a, 9b, 9e and 9f.	Noted.
Welcome Objective 11 (Minimise waste, increase re-use and recycling). However, advise that the objective should be expanded to encompass the aim to improve the waste management infrastructure available to the people of Cardiff. (Regional influence may also need to be considered).	Disagree, this is a matter for the Waste Management Strategy.
Acknowledge that in preparing new plan changes there is a policy direction away from building on brownfield land to also building on	This concerns the content of the LDP and is not

greenfield land. Note, however, that Table 2.1 of the Scoping document states that the LDP should give preference to the re-use of suitable previously developed land. Nevertheless decisions will need to be in accord with sustainable development principles. It will also need to be established whether the land is suitable for development.	directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP
Appendix 1	
Welcome that “Locational policies in the LDPs should take account of the effects of development on air quality and vice versa”. Refer to previous advice (in our letter dated 9 June 2009, Reference SE/2006/100087/LD-01/DE1-L01) in relation to air quality impacts (potential, significant and/or in combination effects) and Cardiff Beech Woods SAC. Recommend that further consultation with the Countryside Council for Wales (CCW) takes place in respect of Habitats Regulations Assessment.	This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP.
Recommend the addition of the NERC Act (Natural Environment and Rural Communities Act) 2006.	Agree, added.
Suggest including: Environment Strategy for Wales (2006).	Agree, added.
Recommend the addition of: Sustaining Ecosystem Service for Human Wellbeing, which can be found on CCW’s website. This may be useful to review because this links biodiversity as a resource in improving people’s health and wellbeing.	The policy review only includes policy documents, however this guidance may be a useful resource for the LDP Team and has been forwarded for consideration as part of the preparation of the LDP.
<u>Climate Change Act 2008 and TAN15</u> <ul style="list-style-type: none"> • Ensure that a precautionary approach is applied and ensure that the location and design of new development manages the potential risk, causes and consequences of flooding down to an acceptable level. 	This is a matter for the LDP rather than the SA/SEA, but has been noted and forwarded to the LDP Team for consideration as part of the preparation of the LDP.
<u>TAN15</u> <ul style="list-style-type: none"> • Take a precautionary and strategic approach to flood risk, having regard to WAG guidance, the potential consequences of flooding and the extent and location of unobstructed floodplains . • Ensure that the location and design of new development manages the potential risk, causes and consequences of flooding down to an acceptable level. 	This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP.

<p>It is noted that Technical Appendix 1 does not include reference to documents or implications for LDP relating to the remediation of brownfield land. You may also wish to consider reviewing the following;</p> <ul style="list-style-type: none"> • We would recommend that our new Groundwater Protection Policy is reviewed: "Underground, under threat, Groundwater Protection: Policy and Practice Parts 1-4". This is available from our website: http://www.environment-agency.gov.uk/research/library/publications/40741.aspx • We also advise that you review our latest land contamination guidance, 'Guiding Principles for Land Contamination (GPLC)': a series of 3 documents available at: http://www.environment-agency.gov.uk/research/planning/121619.aspx • Planning Policy Wales (2010) paragraph 13.6, which gives advice on Development Plans and Contaminated Land. 	<p>The policy review only includes policy documents, however this guidance may be a useful resource for the LDP Team and has been forwarded for consideration as part of the preparation of the LDP.</p> <p>The policy review only includes policy documents, however this guidance may be a useful resource for the LDP Team and has been forwarded for consideration as part of the preparation of the LDP.</p> <p>Already included in the policy review under the overarching policy section.</p>
<p>Welcome the implications for the LDP as set out in Technical Appendix 1 (under the heading of Natural Resources) and note that the LDP should include Water Cycle Studies in growth or high risk areas (Severn River Basin Management plan).</p> <p>With regard to EC Directive 1991/271/EEC on Urban Waste Water Treatment (as Amended by EC Directive 1998/15/EEC), we also suggest changes to the following implication;</p> <ul style="list-style-type: none"> • Locational policies to take account of the effects of development on water quality and seek improvements. <p>The PPPs should also include policies in regard to land affected by contamination, as this appears to have been omitted, for example, Planning Policy Wales (2010).</p>	<p>Noted.</p> <p>Agree, amended.</p> <p>PPW is already included in the policy review in the overarching policy section.</p>
<p>With regard to EC Directive 1991/271/EEC on Urban Waste Water Treatment (as Amended by EC Directive 1998/15/EEC) - We note that as part of the policy review in Technical Appendix 1, it is stated that an implication for the Plan is the intention to discuss wastewater treatment arrangements with sewage authorities and with ourselves. The EA welcomes this.</p>	<p>Noted.</p>
<p>The EA request that the SEA and HRA for Cardiff Council should take into account the plans of other local authorities, which are also supplied as part of the SEWCUS zone to understand the regional pressures on water resources, e.g Vale of Glamorgan, Blaenau Gwent, Caerphilly, Merthyr Tydfil, Bridgend, Rhondda Cynon Taff, Forest of Dean, Torfaen and Newport City Council.</p>	<p>Agree, the SA/SEA will take account of cross boundary issues.</p>
<p>The EA suggest the addition and review of: Strategic Environmental Assessment of their Water Resources Management Plan.</p>	<p>Disagree, this is not a policy document and has no direct bearing on the</p>

	SA/SEA or LDP.
The EA suggest the addition and review of: Water Resources Strategy for Wales.	Agree, Added.
Water Cycle Studies: The EA welcome the intention to undertake water cycle studies, following the review of the Severn River Basin Management Plan, as stated in your Technical Appendix 1.	Noted.
<p>Welcome the review CAMS (Catchment Abstraction Management Strategy) as part of the Policy Review in Technical Appendix 1. The CAMS areas within the Cardiff Unitary Authority boundary are Taff & Ely, Ebbw & Lwyd and Rhymney, as correctly stated. The implications of the relevant CAMS, which should be considered in the development of the LDP and which should come out of the Policy review are as follows:</p> <p>The Ely CAMS area has been classified as 'water available' and the Taff as 'over licensed'. The Rhymney CAMS area is also classified as 'water available'. The Ebbw and Lwyd CAMS area has been classified as 'over abstracted'. However, the area contained within Cardiff's Unitary Authority boundary was not assessed as part of the first cycle of CAMS.</p>	At the current time changes are not considered necessary to the Scoping Report, however the issue will be kept under review.
<p><u>Climate Change and Waste headings</u></p> <p>The EA welcome the following implication for the LDP, as set out in Technical Appendix 1 (under the Climate Change and Waste headings):</p> <ul style="list-style-type: none"> • Support for anaerobic digestion, biomass, and other large renewable energy generation projects. • Ensuring that infrastructure for waste management is adequate to accommodate proposed development. • Identifying sites for waste management facilities. • Promotion of recycling, anaerobic digestion and other forms of waste treatment. 	Noted.
Appendix 2	
With reference to section 2 of Technical Appendix 2 Baseline Information, it is recommended that reference also be made to industrial emissions from PPC (Pollution Prevention and Control) Permit regulated installations and their impact on air quality. Examples could include current and proposed power stations.	At the current time changes are not considered necessary to the Scoping Report. Information will be considered as background to air quality indicators.
Condition of Designated sites: In paragraph 3.8 of the baseline data report, it is stated that the Council is not aware of any up to date information relating to the condition of all designated sites. The EA suggest referring to CCW's Special Sites Actions Database, where CCW have identified issues and actions for identified competent authorities which will remove the impact on the relevant designated sites. There will be actions for Cardiff Council in relation to its designated sites, which it may be possible to deliver through the LDP. The Database may also help to provide the conditions of the designated sites.	Noted, however measures are in place to address this and any future changes in condition will be monitored accurately.
Paras 4.9 to 4.11 in Section 4 of Technical Appendix 2, the EA welcome the reference to flood risk. The EA agree that management of flood risk in consideration of climate change is an	Noted.

<p>environmental issue for Cardiff that should be addressed in the LDP and SA.</p>	
<p>Map 4.1 Areas at risk of flooding: With reference to the evidence in Technical Appendix 2, it is noted that Map 4.1 shows 'Areas at risk of flooding'. Please confirm whether these areas reflect the zones contained in TAN15 development advice maps or do these areas reflect your flood risk assessment?</p> <p>Subject to our requested amendments above, we welcome that you have proposed indicators related to flood risk as part of your measurement of the sustainability of the Plan. We would be pleased to discuss the rewording of objectives and indicators, data provision and collection with you further.</p>	<p>These are TAN15 development advice map zones.</p> <p>Acknowledged.</p>
<p>The EA welcome inclusion of indicators 4.9 and 4.10.</p>	<p>Noted.</p>
<p>Indicator 4.11: Whilst it is noted the proposed indicator on the number of housing units proposed in Zones C1 and C2, it may be useful to measure the extent to which planning permissions have been granted where the consequences of flooding can and/or cannot be acceptably managed. It may also be helpful to measure the approval of developments other than housing.</p>	<p>Acknowledged, this will be considered especially since there is a current data gap and this would provide a means to monitor allocations over the plan period. However at the current time changes are not considered necessary to the Scoping Report.</p>
<p>Suggest indicator 4.11 be reworded to "Number and percent of all new development approved in C1 and C2 areas where the risks and consequences of flooding are acceptably managed". Given the justification test, it may be useful to consider different types of development within this indicator, i.e. emergency services, highly vulnerable development, less vulnerable development and other development.</p>	<p>At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. These suggestions will be considered, however clear definitions will be required to monitor effectively.</p>
<p>It is noted that there is currently a data gap, and the LPA should consider how this data can be collected, including information from decision notices and High Level Target (HLT) reporting. The EA also may be able to contribute to data collection.</p>	<p>At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. Current data gap and seeking data to fill.</p>
<p>Comments made 'that brownfield land offers for opportunities for development, although remediation may be required on contaminated sites resulting from previous industrial activities'. Recommendations on the redevelopment of brownfield land is as follows;</p> <p>Brownfield land and biodiversity: Advise that it should be recognised that brownfield sites often contain a significant biodiversity resource, as stated in paragraph 3.9 of Technical Appendix 2. Many of the river banks and coast of Cardiff are brownfield sites, encourage riverbank restoration over</p>	<p>This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP. Issues of biodiversity will be covered by SA/SEA Framework objective 3.</p>

<p>redevelopment at these sites, in order to promote restored green corridors through Cardiff. If redevelopment of riverine and coastal brownfield sites does occur, it is recommended that buffer zones should be incorporated in the new developments to create a network of green infrastructure.</p>	
<p>The environmental impacts of mineral extraction and aggregates must be considered. Any continued operations or any mineral extension proposed may result in the loss of important and protected habitats. Potential impacts to particularly sensitive areas such as Cardiff Beech Woods SAC and Garth Woods SSSI should be appropriately assessed. Any quarry activity proposals should be accompanied with restoration proposals and recommendations, site aftercare and monitoring should also be agreed. CCW and the County Ecologist should be consulted for their advice on whether the expansion of the quarries would require an Appropriate Assessment under the Habitats Regulations.</p> <p>The LPA may wish to include additional indicators and we therefore suggest the following additional indicators;</p> <ul style="list-style-type: none"> • Percentage of developments using secondary aggregates; and/or • Percentage of aggregates being sent to landfill 	<p>This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP.</p> <p>These additional indicators will be considered later in the development of the plan. However at the present time changes are not considered necessary to the Scoping Report.</p>
<p>Welcome that data on the chemical and biological water quality of the Rivers Taff, Ely and Rhymney is being considered as part of the SEA/ SA. It appears that data/information is used from the South East Valleys catchment and it may be appropriate to use information, which is more specific to the Authority area.</p> <p>Refer to the Local Evidence pack for data on GQA (attached). A copy of a 'Summary of WFD Status and Pressures within the Cardiff LDP Boundary' is also enclosed. This summarises the main pressures on the water environment for those waterbodies within Cardiff. It is advised that you should use this as part of your baseline data and consider the data's implications for policies and allocation and for your SEA/SA. From the data it can be seen that water quality is an issue for Cardiff, so should be considered in your LDP, as your Technical Appendix 1 States.</p> <p>You should consider whether the policies and allocations in the LDP are able to address these pressures through suitable policies or allocations. The LDP should also seek improvements.</p>	<p>Noted.</p> <p>Noted, this information will support indicator development for natural resources section in Appendix 2, and has been shared with the LDP Team for consideration as part of the preparation of the LDP.</p> <p>This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP.</p>
<p>It is noted that indicator 9.6 (Percent of river lengths achieving good ecological status) uses data collected under the Water</p>	<p>Noted, this information will support indicator</p>

<p>Framework Directive (WFD). Our Data Package (attached) also gives you information on General Quality Assessment (GQA). Both datasets are useful; The historic GQA data (in the attached Data Package) provides you with historic trends in water quality, while WFD data forms a basis for measuring future water quality trends.</p>	<p>development for natural resources section in Appendix 2, and has been shared with the LDP Team for consideration as part of the preparation of the LDP.</p>
<p>Baseline information in regard to the adequacy and suitability of wastewater facilities in relation to future development appears to have been omitted. The LDP should ensure that there is suitable planned infrastructure to enable delivery. To this end, the EA suggest the LPA;</p> <ul style="list-style-type: none"> • Refer to information on DCWW’s Asset Management Plan (AMP)_Improvement, which is included in our data pack for Cardiff. This summarises the investment programme for the treatment and supply of wastewater. • Review DCWW’s Asset Management Plan (AMP) itself, prior to any discussions with sewerage authorities on sewage capacity. This is available from www.dwrcymru.com 	<p>This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP.</p>
<p>It is advised that information from the Review of Consents process for the Usk and Wye SACs is added as part of the baseline data collection process, in order to establish whether sufficient water exists in order to supply future development. It may be possible to do this as part of your water cycle studies. The EA have identified the need to make changes to public water supply abstraction licences to ensure ‘no adverse effect’ on the integrity of these SACs.</p>	<p>At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. This will be considered as the plan progresses.</p>
<p>We note indicator 9.7 (Total non-tidal water abstractions). It is stated that there is a data gap. The EA hold information on the number of non-tidal water abstractions for Cardiff.</p>	<p>At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. Using the details from Environment Agency Wales on how to acquire this information to support Appendix 2.</p>
<p>It may be more useful to measure the water availability in the Cardiff area, as a measure of sustainability. The EA would therefore suggest that per capita consumption (water use per person per day) should be included as an indicator for reducing water consumption because it appears to be the most suitable indicator for reducing water consumption.</p>	<p>At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. This will be considered as the plan progresses to enhance indicator 9.7 on total abstraction.</p>
<p>It is advised that indicators used within the Wales Waste Strategy and draft sector plans be used to ensure the LDP delivers the requirements of both the Welsh Assembly Government Policy and the European targets. The LPA may wish to include additional</p>	<p>This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been</p>

indicators in the use of secondary materials, such as construction and demolition waste. We request to be re-consulted on future indicators, targets and monitoring requirements.	forwarded to the LDP Team for consideration as part of the preparation of the LDP. EAW as a statutory consultee will be consulted at all applicable stages of the SA/SEA.
Surface water flood maps: Recommend that these should form part of the baseline data for the LDP, and be included in your SA/SEA and appropriately used to assess your Plans proposals.	At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. Data to be investigated and added to baseline.

Scoping Report	
The Council has a duty to under take a Sustainability Appraisal and Strategic Environmental Assessment. Who made this a duty?	A brief outline of the origins of Sustainability Appraisal and Strategic Environmental Assessment can be found on Page 5 of the Scoping Report. Both of these procedures are thoroughly integrated into UK planning law and are a statutory requirement.
There is no such word as "Scoping".	Disagree. The directive and government produced guidance specifies the use of the term "Scoping".
The report consists of a lot of items which appear to have nothing to do with the use of land e.g. Proportion of adults who are overweight...	The purpose of this SA/SEA Scoping Report is to draw out the social, economic and environmental issues for Cardiff and ensure that those issues are considered during the preparation of the LDP.
Some of the items under the Sustainability heading are rather sinister e.g. resource use by Cardiff residents, which significantly exceeds their EARTH SHARE.	In order for the LDP to progress the economic growth of Cardiff the issue of resource use must be considered. The high "earth share" of Cardiff citizens expressed is not intended to scare; more highlight the fact that people are using resources at an unsustainable rate

	that is not conducive with a sustainable city.
Under the heading "Objectives and Indicators" are eleven headings, only two of which have any relationship to the use of land.	The purpose of this SA/SEA Scoping Report is to draw out the social, economic and environmental issues for Cardiff and ensure that those issues are considered during the preparation of the LDP.
To summarise the whole thing has become far too complicated, why were consultants used and how much did they cost? Is the planning department not up to its job?	SA/SEA is a specialist field that requires an environmental scientist with a broad knowledge of environmental factors and the principles of sustainable development. Consultants were used for this report both for quality assurance purposes and to temporarily cover a vacant post.
Why use words not normally used i.e. "demographic" when changes in lifestyle would be simpler?	"Demographic" is a standardised term that is commonly used when referring to the study of human population, particularly the size and distribution thereof. However, in influencing the development of the LDP (through the SA/SEA process) we hope to encourage changes in lifestyle over the plan period.
Your forefathers left us with a Cardiff of tree lined streets, good parks and open green spaces without all this nonsense. How on earth can anyone expect to produce a land plan to cover events until 2026?	Conservation of Cardiff's cultural heritage and historic environment will be key to the LDP. However, in order for Cardiff to grow as a city it is necessary to plan. The LDP will provide the policy framework to guide that growth and it is important that those policies take into account all of the factors that make this city unique (socially, historically, economically and environmentally), and

	that is the purpose of this SA/SEA.
--	-------------------------------------

Friends of Insole Court	
Consultee comment	Recommended response
Scoping Report	
Welcome the thoroughness of the review process.	Noted.
Policy Review	
Suggest in terms of infrastructure the priority should be interpreted as including heritage assets and green infrastructure.	This is a policy review and as such can only refer to information contained in these policies.
Suggest that the General/ Overarching topic should include: <ul style="list-style-type: none"> • Planning and Compulsory Purchase Act 2004 • Planning your community: A guide to Local Development Plans July 2006 • Minerals Planning Policy Wales 2001 	Disagree – only key policy included in the policy review. Disagree - this is guidance and not policy. Disagree – already included in natural resources section of policy review.
Suggest “Facilitate community involvement and life-long learning via appropriate use of heritage assets” is added as a policy aim to Cultural Heritage and Historic Environment.	This is a policy review and as such can only refer to information contained in these policies.
Suggest adding a reference to either Landscape or Natural Resources to the importance of green infrastructure and ecosystem services.	This is a policy review and as such can only refer to information contained in these policies.
Suggest amending 2.12 to read “The Decentralisation and Localism Bill could (not necessarily will) affect how housing and planning decisions are made”. WAG has devolved responsibility for housing and planning in Wales and so makes its own legislation on these matters.	Agree, amended.
Indicators	
Concerned that the number of listed buildings at risk is the same as it was in 2006 i.e. “some way below target.. or .. getting worse”.	Noted.
SA/SEA Objectives	
The Friends of Insole Court agree with SA/SEA Objectives relating to heritage.	Noted.
Suggest adding to either Landscape or Natural Resources (or both): <ul style="list-style-type: none"> • Protect and enhance the City’s legacy of historic parks and gardens and create new ones 	Disagree – protection and enhancement of greenspaces (which includes historic parks and gardens) included in SA/SEA sub objective 8a.

Jane Hayes	
Consultee comment	Recommended response

Scoping Report	
A landscape assessment should be carried out to inform the LDP evidence base. Cardiff is the only local authority in Wales which failed to carry out a landscape character assessment of its urban area.	This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP.
House by house, development by development change will come, the only way to assess the impacts of these changes on the urban landscape of Cardiff and the population concern is by undertaking a landscape character assessment of the whole territory.	This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP.
The plan will affect the whole of Cardiff, how will the environmental characteristics of all of Cardiff be assessed in relation to the whole territory of Cardiff?	The purpose of the SA/SEA Scoping Report is to capture the sustainability and environmental issues for Cardiff and ensure that they are sufficiently incorporated into the SA/SEA Framework, this is the criteria by which the policies and options emerging from the LDP development process will be assessed.
Stage 7 – at what time will the impacts be assessed?	The impacts will be assessed in a detailed Environmental Report.
Table 4.1, population – population growth – how will this impact be assessed?	The SA/SEA Framework contains an objective on ‘responding to demographic changes in a sustainable way’ and population growth is an issue that is relevant to most of the SA/SEA objectives to some degree, particularly those encompassing access, housing and the economy.
Policy Review	
Include European Landscape Convention (2004)	Agree, added.
Include CCW Landmap Public Perceptions of Landscape Cardiff (1999)	Disagree, this is not a policy document and has no direct implications for the LDP.
Cultural heritage - without landscape character assessment of the urban area of Cardiff, where 98% of residents live, how can we	This concerns the content of the LDP and is not

assess local distinctiveness?	directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP.
Landscape – policy HER3 Landscape Protection of the withdrawn LDP states the following ‘the information in the study (Review of Landscape Character Areas 2008) is intended to assist both countryside management and development control matters’ however this policy is intended to apply to the whole county acknowledging that the urban area also contains features of landscape importance.	This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP.

Nathaniel Lichfield and Partners on behalf of the Trustees of Plymouth Estates	
Consultee comment	Recommended response
Policy Context	
Cardiff has an important role as the key economic driver for the Capital Region and a pivotal role as a key provider of higher level services. This role is not fully recognised in the policy review.	The policy review can only reference items included in the reviewed policies. This will be addressed in the LDP evidence base.
New bullet point suggested: <i>“Cardiff occupies a pivotal role in the capital region – being a key economic driver and key provider of higher level services but has an interdependent relationship with the wider Capital Region”.</i>	This is a matter for the LDP rather than the SA/SEA, but has been noted and forwarded to the LDP Team for consideration as part of the preparation of the LDP.
New bullet point suggested: <i>“The Capital Region is projected to have substantial housing growth particularly in the City Coastal Zone and Cardiff will account for a large proportion of this growth”.</i>	This is a matter for the LDP rather than the SA/SEA but has been noted and forwarded to the LDP Team for consideration as part of the preparation of the LDP.
Policy Review	
The policy review includes a review of the “South East Wales Regional Housing Apportionment Memorandum” (SPWSPG 2007). This is regarded as out of date and no longer of relevant to considered. Remove.	Disagree, still valid.
Baseline	
Suggest two new indicators: measuring net migration of families and the level of housing delivery against housing growth in Cardiff.	At the current time changes are not considered necessary to the Scoping Report, however this issue will be kept under review. Investigate feasibility of measuring these indicators.
Sustainability issues	
Support the statement which recognises that Cardiff has seen significant redevelopment of brownfield land in recent years with little Greenfield development.	Noted.

Also support the assertion that it will be important in the future that the market is delivering sufficient family and affordable housing.	Noted.
Extend support to “ <i>Table 4.19 Natural Resources</i> ”, which recognises the under provision of family housing, and to “ <i>10. Population</i> ”, which highlights the need to provide an appropriate range of tenure for population growth in a sustainable way.	Noted.
SEA/SA Objectives	
Despite significant changes in stages A1 and A2 note that very little amendment has been made to the SA/SEA Objectives and sub-objectives. This is considered not appropriate, considering changes.	The SA/SEA objectives were reviewed in light of changes to A1 and A2 and a 5 week consultation held on the amended document during Nov/Dec 2010; this was sent to all LDP database stakeholders and individuals. All suggested changes to objectives have been considered and amended where appropriate.
Objective 8a: a distinction needs to be made between areas of countryside which are designated of landscape value and those which are not; this will help direct development to the least sensitive areas. Suggested amendment: “ <i>protect and enhance areas of designated landscape quality, character and importance</i> ”	Disagree, SA/SEA objective 8a currently encompasses.
Objective 9 – A new sub-objective is necessary, which seeks to make efficient use of Greenfield sites.	Disagree, overarching objective 9 in the SA/SEA Framework already encompasses this.
Objective 10 – New sub-objective under suggested which references the need to create sustainable mixed communities.	Disagree, overarching objective 10 in the SA/SEA Framework already encompasses this.

Mrs Denise Pole	
Consultee comment	Recommended response
Request that St Marys Church, Caerau and surrounding hill fort area be included within the LDP, and that they be made protected heritage sites.	This is not directly related to the SA/SEA but will be forwarded to the LDP and Conservation Teams for consideration.

Reservoir Action Group (RAG)	
Consultee comment	Recommended response
Scoping report	
Support the Final Draft Scoping Report, particularly the three	Noted.

chapters on: 'Biodiversity, Flora and Fauna', 'Cultural Heritage and the Historic Environment' and 'Landscape' found in the main document.	
<p>Wording to be tightened up on:</p> <ul style="list-style-type: none"> • Para 4.9, page 24: Cardiff's "significant network of strategically important open space corridors and green spaces. • Page 26, "8 Landscape": reference is made to the "three river valleys running through the City"; it is assumed that this refers to the Ely, the Taff and the Rhymney. The Nant Fawr also has main river status, has a long distinctive open corridor with features including nature sites. Wording should be amended to "Four" accordingly <p>References within the Scoping Report to the above should then correctly refer to four river valley corridors.</p>	<p>Agree amend to 'strategically important open spaces and green corridors'.</p> <p>Disagree, the Nant Fawr is a tributary of the Rhymney.</p> <p>Disagree, the Nant Fawr is a tributary of the Rhymney.</p>
Appendix 1	
The Welsh Office Circular 61/60 also stresses the need to protect the "setting" of historic buildings. This point is omitted, suggest it is included.	Agree, amended.
Suggest adding Planning Policy Wales, Chapter 6 – Conserving the Historic Environment.	Disagree - Planning Policy Wales is included in the policy review under overarching policies, including a bullet point on 'conserving the historic environment'.
Landscape PPPs - suggest removing the word "possibly" in view of the strategic importance of the Nant Fawr corridor to the open space network of Cardiff.	Agree, amended.
Appendix 2	
The figure of five Local Nature Reserves is mentioned; this should be amended to six to include the Council's decision in October 2010 to designate the Nant Fawr Corridor as the City's sixth Local Nature Reserve.	Disagree. The Nant Fawr LNR has not been formally adopted as the Council are awaiting the outcome of the Llanishen Reservoir Judicial Review.

RPS on behalf of the North East Cardiff Development Consortium	
Consultee comment	Recommended response
The North East Cardiff Development Consortium supports the following statements within the Scoping Report:	
Cardiff's role as the driver of the city region is vital for the wellbeing of the city.	Noted.
It is important that the needs of the future population are met in a sustainable way in terms of their housing, employment and infrastructure requirements.	Noted.
It is important that the market delivers sufficient family and affordable housing.	Noted.
It is essential that the city's unique landscape assets such as its open space corridors are maintained and protected, and even	Noted.

expanded as the city expands to accommodate an increasing population.	
The number of households in Cardiff could increase by 30% over the plan period. Indeed the increase may actually be required to be greater than that number.	Noted.
Cardiff has an international potential and national role that needs to be exploited.	Noted.
A fully integrated high quality transport system is essential if its potential is to be realised with significant emphasis being placed upon the ability of future residents to, where possible, walk, cycle, and use public transport.	Noted.
There is a need for significant investment in infrastructure.	Noted.
Energy efficiency and renewable energy are critical to the reduction of green-house gas emissions by 40% by 2020.	Noted.
Sustainable drainage is key to future development.	Noted.
Totally endorses the comments that recent development has led to <i>“relative under-provision of family housing”</i> and that <i>“providing an appropriate range and choice of housing for this population growth (137,000 to 179,000 from 2008 to 2032) in a sustainable way is the key sustainability issue raised by Cardiff’s planners”</i> .	Noted.

RSPB	
Consultee comment	Recommended response
Environmental Report Requirements	
Concerned that the Environmental Report will not examine the “environmental characteristics of areas likely to be significantly affected” until “possible development sites are identified”.	As sites are identified they will be examined, assessed (using the SA/SEA Framework) and added to the Environmental Report.
Concerned that the policy direction toward the inclusion of Greenfield land and not just brownfield will increase pressure on Wentloog Levels.	This concerns the content of the LDP and is not directly relevant to the SA/SEA, and has been forwarded to the LDP Team for consideration as part of the preparation of the LDP. However, potential sites will be assessed using the SA/SEA Framework as they emerge.
Scoping Report should include an examination of the environmental characteristics of Wentloog Levels.	Disagree. The SA/SEA Scoping Report is intended to set out the framework by which the LDP will be assessed, and the environmental baseline is provided as an overview of Cardiff’s assets. Specific examination of a SSSI is more appropriate for

	project level environmental assessments.
Policy Review	
Support the broad policy aim of “protect and enhance... national designated sites” but objects to the lack of detail in “how the LDP might assist in delivering policy aims” section.	The SA/SEA is an assessment tool to assess the sustainability performance of the LDP, and is not a policy document. The policy review can only reference issues included in these policies.
Given the clear policy line set out in Technical Advice Note 5 and especially in “Nature Conservation and Physical Developments on the Gwent Levels” this section should include a bullet point which establishes a very strong presumption against proposing to allocate sites for development on the Wentloog Levels. Suggest that bullet point 2 is amended to <i>“Provide criteria against which developments affecting the different types of designated sites will be assessed. This will take the form of not allocating sites or affecting nature conservation interest of the Wentloog Levels SSSI except in exceptional circumstances of proven UK-national need, and even then only when no alternatives are possible”</i> .	This is a matter for the LDP rather than the SA/SEA, but has been noted and forwarded to the LDP Team for consideration as part of the preparation of the LDP.
The ODPM Guide “Sustainability Appraisal of Regional Spatial Strategies and Local Development Documents states: <i>“Planning authorities may also choose to include more detailed decision-making criteria... in their SA Framework”</i> Considering the exceptional circumstances detailed above recommend that such a decision making criterion is included in the document.	It is noted by the consultee that this relates to a different stage in SEA formulation and as such will be considered later in the SEA process.
A bullet point on how CIL could be used to promote and deliver Green Infrastructure in Cardiff should be included here.	This is a matter for the LDP rather than the SA/SEA but has been noted and forwarded to the LDP Team for consideration as part of the preparation of the LDP.
Climate Change: This section should include strong presumption against proposing to allocate land for development on or materially affected by the flood plain.	This is a matter for the LDP rather than the SA/SEA but has been noted and forwarded to the LDP Team for consideration as part of the preparation of the LDP.
Economy: supports the statement in “How the LDP might assist in delivering policy aims”, which states:- <i>“Ensure that development for enterprise and employment uses is in line with sustainability principles and respects the environment”</i>	Acknowledged.
Natural Resources: supports the statement in “How the LDP might assist in delivering policy aims”, which states:- <i>“avoid the development of Greenfield sites where possible and appropriate, by giving preference to the re-use of suitable previously developed</i>	Acknowledged.

<i>land</i>	
Population: Reference to the use of CIL in relations to infrastructure should be expanded to include Green Infrastructure.	This is a matter for the LDP rather than the SA/SEA but has been noted and forwarded to the LDP Team for consideration as part of the preparation of the LDP.
Policy Review	
Include Nature Conservation and Physical Developments on the Gwent Levels CCW (1993)	Disagree, the policy review only includes key policies central to the development of the LDP.
Include Welsh Assembly Government Environment Strategy and Action Plans 2008.	Agreed, added.
Baseline	
Indicates that the percentage of SSSI features in favourable condition is: - <i>“some way below target or equivalent regional/national performance, and/or the situation is getting worse”</i> . The RSPB concurs with this conclusion.	Acknowledged.
Table 3.1, Section 3.4: of the view that the 2010 box relating to the percentage of features of designated sites should be red, rather than orange.	Noted, however the process of assessment, whilst underway, is not yet complete.
Objects to the lack of an evidence base in terms of the area of the UK BAP Priority Habitats. It is illogical to include the LBAP equivalent of this, which is a local issue, without reference to the UK national equivalent.	Cardiff’s LBAP priorities reflect local priorities that contribute to the wider UKBAP targets; these LBAP priorities have been agreed with the Local Biodiversity Partnership.
Sustainability Issues	
Strongly supports the statement at paragraph that: - <i>“it is imperative that (Cardiff’s) biodiversity resources are protected and maintained”</i> .	Acknowledged.
Supports the identification as a “Sustainability Problem” that: - <i>“Cardiff’s biodiversity resource is vulnerable to new development... which could result in habitat loss and fragmentation”</i> . However, they object to the lack of detail in this section with relation to the description of the problem. Threats to Wentloog Levels SSSI and UKBAP priority habitat from development should be explicitly identified.	This is a matter for the LDP rather than the SA/SEA, but has been noted and forwarded to the LDP Team for consideration as part of the preparation of the LDP.
Supports the statement that:- <i>“Wentloog Levels... are at particular risk from flooding”</i>	Acknowledged.
SA/SEA Objectives	
Supports the sub-objective which states that it is an SEA objective to:1 <i>“maintain and achieve... favourable condition of... national sites of nature conservation interest”</i>	Acknowledged.
Objects to the lack of inclusion of reference to the protection and enhancement of UKBAP Priority Habitats. Additionally, the wording in this section is not in the form of a target. The LDP	Cardiff’s LBAP priorities reflect local priorities that contribute to the wider

<p>Manual states: - <i>“The SA Framework objectives... should be, where possible, expressed in the form of targets”</i>. Recommend that UKBAP target should be as follows: - <i>“no net loss of UKBAP Priority Habitats”</i>.</p>	<p>UKBAP targets; these LBAP priorities have been agreed with the Local Biodiversity Partnership. SA/SEA objective 3b relates directly to the protection of LBAP priority habitats.</p>

Sustainability Appraisal and Strategic Environmental Assessment of the Cardiff Local Development Plan

Appendix D: Appraisal of LDP Vision and Objectives

Final Sustainability Appraisal Report of the Cardiff Local Development Plan

January 2016

This appendix details the outcomes of the sustainability appraisal of the LDP Vision and Objectives.

The matrices were completed using the following symbols to show how compatible the LDP Vision and Objectives are with the sustainability appraisal objectives:

✘	= incompatible
✓	= compatible
-	= no links
?	= uncertain

The LDP Vision is:

“By 2020...Cardiff will be a world class European capital city with an exceptional quality of life and at the heart of a thriving city region”

The LDP Vision is taken from the emerging ‘Cardiff: What Matters’ Strategy, which will be delivered through 7 outcomes:

- People in Cardiff are healthy;
- People in Cardiff have a clean, attractive and sustainable environment;
- People in Cardiff are safe and feel safe;
- Cardiff has a thriving and prosperous economy;
- People in Cardiff achieve their full potential;
- Cardiff is a great place to live, work and play; and
- Cardiff is a fair, just and inclusive society

SA Objective	LDP Vision
1. Help deliver equality of opportunity and access for all	✓ The LDP Vision aims to achieve outcomes to address inequality and deprivation, ensure education, and improve access to facilities and provision of affordable housing. Focus on education could be improved by explicitly mentioning the need for adult education opportunities as well securing futures for young people; however education for all is explicit in the LDP Objectives.

SA Objective	LDP Vision
2. Maintain and improve air quality	✓ The LDP Vision incorporates “ <i>clean, attractive and sustainable environment</i> ”, this includes delivering sustainable transport and an explicit outcome to improve the quality of Cardiff’s environment. Specific LDP Objectives will assist in the delivery of air quality improvements.
3. Protect and enhance biodiversity, flora and fauna	✓ The LDP Vision looks to improve biodiversity through the outcome for a “ <i>clean, attractive and sustainable environment</i> ” which includes improving the quality of Cardiff’s environment. This could be improved by aiming to protect biodiversity also; however the need to maintain, protect and enhance biodiversity is explicit within the LDP Objectives.
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓ The LDP Vision aims to establish Cardiff as a ‘Carbon Lite’ City and as a sustainable travel city. The Vision could be improved by including the need to adapt to the effects of climate change and not just mitigate climate change through the reduction of carbon emissions. The need to adapt to the effects of climate change, however, is explicit in the LDP Objectives.
5. Protect and enhance historic and cultural heritage	✓ The LDP Vision looks to improve the quality of Cardiff’s environment which will assist in maintaining and enhancing heritage. Additionally provision of world class cultural facilities is included. The LDP Vision is not explicit in the need to protect and enhance historic assets, or ensure that local character and distinctiveness is protected; however measures to ensure that these features are protected are set out in the LDP Objectives.
6. Help deliver the growth of a sustainable and diversified economy	✓ The Vision contributes positively through the outcome “ <i>Cardiff has a thriving and prosperous economy</i> ”, which includes the creation of a sustainable economy, supports skill retention, and, encouraging business and entrepreneurs in Cardiff.
7. Improve health and well-being	✓ Improving health and well being is well addressed through the LDP Vision across multiple outcomes covering life expectancy, encouraging healthy lifestyles, sustainable travel, reducing crime and ensuring that people are safe and feel safe in Cardiff.

SA Objective	LDP Vision
8. Protect and enhance the landscape	✓ The LDP Vision outcome of “ <i>clean, attractive and sustainable environment</i> ” includes improving the quality of Cardiff’s environment. The Vision would contribute more positively to the protection of landscape if it was specifically mentioned in the outcomes; however landscape issues are thoroughly covered by the LDP Objectives.
9. Use natural resources efficiently and safeguard their quality	✓ The LDP Vision seeks to improve the quality of Cardiff’s environment, which would include natural resources. Issues such as the use of brownfield land, soils and mineral resources are not addressed but are adequately covered in the LDP Objectives.
10. Respond to demographic changes in a sustainable way	✓ The LDP Vision supports the provision of a sustainable economy, affordable housing and facilities/services.
11. Minimise waste, increase re-use and recycling	✓ The LDP Vision promotes a “ <i>clean, attractive and sustainable environment</i> ”. Whilst waste management and resource efficiency are not explicitly mentioned in the Vision they are adequately addressed within the LDP Objectives.

Summary:

The LDP Vision is a series of high level statements that support more detailed objectives, and sub objectives, beneath them. No changes to the LDP Vision are recommended as a result of this assessment.

The LDP high level objectives are:

1. To respond to evidenced economic needs and provide the necessary infrastructure to deliver development
2. To respond to evidenced social needs
3. To deliver economic and social needs in a co-ordinated way that respects Cardiff's environment and responds to the challenges of climate change
4. To create sustainable neighbourhoods that form part of a sustainable city

The detailed LDP objectives are shown at Section 3 of the Final Sustainability Appraisal Report. The numbering was altered from 1.1 to 1.a etc between the 2012 Preferred Strategy and 2013 Deposit LDP. The original numbering is retained here for ease of cross reference to earlier documents.

SA Objective	LDP Objectives
1.Help deliver equality of opportunity and access for all	<p>✓</p> <p>The LDP Objectives aim to: provide affordable housing (2.2) and access to education, employment, facilities and services (2.12), and promote social inclusion, equality of opportunity and access for all (2.14). Location of development is key for achieving sustainable transport solutions and networks.</p> <ul style="list-style-type: none"> • Suggest that Headline Objective (1) is amended to include <i>“sustainable and accessible”</i> • Suggest that Sub-objective 2.6 is amended to include <i>“employment opportunities”</i>. • Suggest that Sub-objective 2.12 is amended to include <i>“especially in deprived”</i> areas.
2.Maintain and improve air quality	<p>✓ / ? – per capita ? / ✗ – city wide</p> <p>The LDP Objectives contribute positively towards assisting in the improvement of air quality through the provision of sustainable transport solutions, and by aiming to reduce the need to travel (1.10 and 4.1.2). Additionally Objective 3.3 makes strong commitments to maintaining and enhancing Cardiff's natural environment (including air quality). However, whilst per person emissions may reduce as a result of the LDP, it is a plan for the growth of Cardiff and therefore it is recognised that it is unlikely that, overall, the city's emissions to air will be decreased. Whilst growth <i>per se</i> may bring about increased absolute emissions for the city, the LDP Objectives put in place a framework to</p>

SA Objective	LDP Objectives
	<p>mitigate these impacts and are considered appropriate.</p> <ul style="list-style-type: none"> • Suggest that Sub-objective 1.10 is amended to include <i>“reducing the need to travel”</i> • Suggest that Sub-objective 2.10 is amended <i>“provide a range of youth/adult learning opportunities <u>for all...</u>”</i> • Suggest that Sub-objective 4.1.2 is amended to include <i>“and decrease air pollution”</i> • Mitigation: Ensure green infrastructure is provided to improve air quality.
3.Protect and enhance biodiversity, flora and fauna	<p>✓</p> <p>LDP Objective 3.3 makes strong commitments to protecting and enhancing biodiversity including international, national and local sites, the biodiversity value of recreational open spaces (e.g. parks). Additionally there is provision to protect areas without designation or of unknown biodiversity value, and the LDP Objective recognises the importance of flora in combating climate change. There is need to ensure the biodiversity value of brownfield land is considered and protected.</p> <ul style="list-style-type: none"> • Suggest that Sub-objective 3.3 is amended to include <i>“<u>Networks that link together...</u>”</i>
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	<p>✓ - per capita ✗ - city wide</p> <p>The LDP Objectives assist and support in reducing carbon emissions by reducing the need to travel, encouraging a modal shift in transport, aiming to provide sustainable transport solutions (1.10) and aiming to adapt to and mitigate the effects of climate change, including flooding (3.1 and 3.2). However although carbon emissions per person may reduce as a result of the LDP, this is a plan for the city’s growth and as such it is unlikely that the city’s overall carbon emissions will reduce. Whilst growth <i>per se</i> may bring about increased absolute emissions for the city, the LDP Objectives put in place a framework to mitigate these impacts and are considered appropriate.</p> <ul style="list-style-type: none"> • Suggest that Sub-objective 1.10 is amended to include <i>“reducing the need to travel”</i> and <i>“and networks”</i>. • Suggest that Sub-objective 3.1 is amended: Removed <i>“consumption”</i> in favour of <i>“demand”</i> • Suggest that Sub-objective 3.3 is amended: Add <i>“The role that vegetation plays in combating climate change by providing shading, cooling and carbon sinks’</i> • Suggest that Sub-objective 4.1.2 is reworded to strengthen against <i>‘car-based developments’</i> and for linkage to the <i>‘strategic cycle network’</i>

SA Objective	LDP Objectives
5. Protect and enhance historic and cultural heritage	<p>✓</p> <p>The LDP Objectives contribute positively to ensuring the protection of historic and cultural assets. Objective 3 provides measures to protect and enhance historic assets, and measures to ensure that new development is respectful to existing character are included in objective 4. Objective 2 aims to provide accessible cultural facilities for all communities.</p> <ul style="list-style-type: none"> • Suggest that Sub-objective 2.12 is amended to include “<i>cultural facilities</i>”. • Suggest that Sub-objective 3.4 amended to include “<i>...including parks and amenity spaces</i>” and to ‘<i>define Cardiff’s distinctive character</i>’
6. Help deliver the growth of a sustainable and diversified economy	<p>✓</p> <p>The LDP Objectives provide all of the key drivers to deliver the growth of a diverse sustainable economy including: provision of a range of employment land and promotion of specialist sectors to promote economic diversity (1.1, 1.2 and 1.5), and providing good transport links. Location of development will be <u>key</u> to delivering sustainable economic growth.</p> <ul style="list-style-type: none"> • Suggest that Headline Objective (1) is amended to include “<i>sustainable and accessible</i>” • Suggest that Sub-objective 1.2 is amended to include “<i>...and well connected to other UK cities</i>” • Suggest that Sub-objective 2.6 is amended to include “<i>employment opportunities</i>”
7. Improve health and well-being	<p>✓</p> <p>The LDP Objectives assist in the promotion of more healthy lifestyles by increasing the provision of cycle and walk ways (as alternative transport) (1.10), and aiming to protect public open spaces such as parks (3.3). Additionally Objective 2 promotes the inclusion of healthier food choices as part of community centres and facilities (2.8/ 2.12).</p> <ul style="list-style-type: none"> • Suggest that Sub-objective 2.8 is amended, added “<i>healthy food choices</i>” • Suggest that Sub-objective 2.12 is amended, added “<i>shops with healthy food choices</i>”
8. Protect and enhance the landscape	<p>✓</p> <p>The LDP Objectives, specifically Objective 3, contribute positively toward the protection of Cardiff’s distinctive landscape features both designated and undesignated. Sub-objective 3.3 also aims to safeguard geodiversity and important geological sites.</p>
9. Use natural	<p>✓</p>

SA Objective	LDP Objectives
resources efficiently and safeguard their quality	Several of the measures within the LDP Objectives contribute positively to the Sustainability Objective including: the protection of Cardiff's mineral supply (1.11), protection and enhancement of water and soil quality (3.3), increasing water efficiency (4.1.4) and the promotion of good design with resource efficiency (4.1.9). However, there may be issues with sustainably sourcing appropriate building materials for development.
10. Respond to demographic changes in a sustainable way	<p>✓</p> <p>The LDP Objectives effectively address what is required to meet the needs of Cardiff's growing population both socially and economically. However, it is also important to consider how population growth will impact on factors such as carbon emissions and waste (see Sustainability Objectives 4 and 11). It is recognised that, whilst the amount of carbon emissions and waste per capita may decrease over the plan period, the absolute levels of these will probably increase as a direct result of growth of the city and its population; however the LDP Objectives put in place a framework to mitigate these impacts and are considered appropriate.</p>
11. Minimise waste, increase re-use and recycling	<p>✓ - per capita ✗ - city wide</p> <p>LDP Objective 4 aims to minimise waste, maximise recycling (4.1.3) and reuse and promote good design (4.1.9), which may reduce the waste generated by developments both during construction and after completion. However, whilst the LDP will contribute positively and assist in reducing the amount of waste from development and per capita, it is recognised that the total waste arisings will probably increase over the plan period in Cardiff as a result of growth. Whilst growth <i>per se</i> may bring about increased absolute waste arisings for the city, the LDP Objectives put in place a framework to mitigate these impacts and are considered appropriate.</p> <ul style="list-style-type: none"> • Suggest Sub-objective 1.12 is divided into 3 separate sub-objectives • Suggest an additional sub-objective division to 4.1 to reflect the need to plan for waste in neighbourhoods. • Suggest that Sub-objective 4.1.3 is amended, add "stored" and "reused"

Summary: Overall the LDP Objectives support the Sustainability Objectives. The appraisal has resulted in some suggested changes to the LDP Objectives as detailed above and in table 5.2 of the Final Sustainability Appraisal Report of the LDP.

Cardiff Council & Levett-Therivel Sustainability Consultants

Sustainability Appraisal and Strategic Environmental Assessment of the Cardiff Local Development Plan

Appendix E: Appraisal of LDP Strategic Options

Final Sustainability Appraisal Report of the Cardiff Local Development Plan

January 2016

This appendix first shows the detailed appraisal of the growth options considered at Preferred Strategy stage and then the appraisal of the spatial options for delivery of Option B. For those options included in the LDP, mitigation measures are proposed in Appendix G of the Final Sustainability Appraisal Report (Appraisal of the LDP key and detailed policies).

Growth options

Assumptions:

- LDP will aim to maximise the contribution of Brownfield but allow for phased release of both green and Brownfield land to provide a range and choice of development land in accordance with Welsh Planning Policy

Page 1897

LDP Option	Option A:	Option B:	Option C:
SA Objective	About 54,400 new homes in total (30,548 residual requirement) About 55,000 new jobs in total	About 45,400 new homes in total (21,571 residual requirement) About 40,000 new jobs in total	About 36,500 new homes in total (12,634 residual requirement) About 26,000 new jobs in total
1. Help deliver equality of opportunity and access for all	✓✓ Overall Option A could perform very well against the SA Objective as it has the potential to provide a significant number of affordable homes and help to address an existing shortage in the City. Additionally, the scale of growth provided has the potential to create new communities that are large enough to support a range of community facilities and services. Due to the scale of growth proposed Option A also has the potential to improve connectivity with and between existing	✓ As Option A but to a lesser extent due to the lower scale of growth.	?/✗ The scale of growth under Option C could present fewer opportunities to address and improve equality of access than Option A or B. Whilst the Option could deliver a reasonable number of homes, fewer affordable homes could be provided overall. Additionally the developments could be smaller and may not reach the population thresholds required to support new community services and facilities, which in could increase pressure on existing facilities and services.

LDP Option	Option A:	Option B:	Option C:
SA Objective	<p>About 54,400 new homes in total (30,548 residual requirement)</p> <p>About 55,000 new jobs in total</p>	<p>About 45,400 new homes in total (21,571 residual requirement)</p> <p>About 40,000 new jobs in total</p>	<p>About 36,500 new homes in total (12,634 residual requirement)</p> <p>About 26,000 new jobs in total</p>
	<p>communities and increase accessibility of community facilities.</p> <p>If new developments are provided that include integrated sustainable transport infrastructure or reduce the need to travel by including mixed uses the effect could be more positive as this could help to improve access to services, facilities and employment particularly for those without access to a private car.</p>		
2. Maintain and improve air quality	<p>xx</p> <p>Option A is incompatible with the SA Objective. Independent of any potential improvements to the City’s transport infrastructure, the option could lead to a significant increase in transport (domestic and economic) and potentially an increase in industrial activity. This could lead to a reduction in air quality particularly through increased congestion, which is an existing issue for the City. Additionally Option A could lead to the development of a large proportion of</p>	<p>x</p> <p>Option B is mainly incompatible with the SA Objective but to a lesser extent than Option A.</p>	<p>?/x</p> <p>The negative effects that could occur under Options A and B could also occur under Option C but to a much less degree and with more dependence on location of development. Cardiff already experiences high levels of in-commuting, for example over 33,000 people commute in by car every day from the valleys alone. With the decline of the valleys, and without sufficient provision of housing in Cardiff the level of congestion could continue</p>

LDP Option	Option A:	Option B:	Option C:
SA Objective	<p>About 54,400 new homes in total (30,548 residual requirement)</p> <p>About 55,000 new jobs in total</p>	<p>About 45,400 new homes in total (21,571 residual requirement)</p> <p>About 40,000 new jobs in total</p>	<p>About 36,500 new homes in total (12,634 residual requirement)</p> <p>About 26,000 new jobs in total</p>
	<p>the available Greenfield land in the City, green spaces help to improve air quality.</p> <p>However, there is an opportunity to provide new developments that integrate sustainable transport infrastructure, and mixed uses to reduce the need to travel. This could help to reduce congestion, new developments would also benefit from green infrastructure.</p>		<p>to increase, reducing air quality at key access points to the City.</p>
<p>3. Protect and enhance biodiversity, flora and fauna</p>	<p>xx</p> <p>Option A is incompatible with the SA Objective.</p> <p>The land required to accommodate the level of growth proposed by Option A represents a significant proportion of the available development land in the City, the majority of which is Greenfield. Whilst designated nature sites would be protected, the development of large proportions of the City's Greenfield areas could result in wide scale habitat loss and severe</p>	<p>x</p> <p>Option B is mainly incompatible with the SA Objective but to a lesser extent than Option A.</p>	<p>?/x</p> <p>The effect of Option C is less certain. The pressure of development is considerably lower than Option A or B and there could be more room for mitigation as more land could be available to provide replacement habitat.</p>

LDP Option	Option A:	Option B:	Option C:
SA Objective	<p>About 54,400 new homes in total (30,548 residual requirement)</p> <p>About 55,000 new jobs in total</p>	<p>About 45,400 new homes in total (21,571 residual requirement)</p> <p>About 40,000 new jobs in total</p>	<p>About 36,500 new homes in total (12,634 residual requirement)</p> <p>About 26,000 new jobs in total</p>
	<p>disruption to habitat connectivity.</p> <p>Opportunities for mitigation could be limited due to extensive urbanisation.</p>		
<p>4 Reduce emissions of greenhouse gases that cause climate change and adapt to its effects</p>	<p>✘✘ - Citywide carbon emissions ✓/? – Per capita emissions ✘/? – Adaptation to climate change</p> <p>Under Option A, citywide emissions of green house gases could increase significantly due to a large increase in population, waste, travel and economic activities. Option A could also require the majority of the available Greenfield land for development, significantly reducing the carbon sink this provides and reducing the city’s ability to adapt to climate change as green space also aids in land drainage and helps to reduce the urban heat island effect.</p> <p>Whilst citywide emissions are likely to increase significantly over the plan period there is an opportunity to reduce per capita emissions in the city through the design of developments e.g. mixed use development to reduce</p>	<p>✘ - Citywide carbon emissions ✓/? – Per capita emissions ✘/? – Adaptation to climate change</p> <p>As Option A but to a lesser extent due to a lower scale of growth.</p>	<p>✘ - Citywide carbon emissions ✓/? – Per capita emissions ?/✓ – Adaptation to climate change</p> <p>Under Option C citywide emissions of green house gases could increase due to an increase in population and economic activities. However, this effect would be significantly less than under Option A or B.</p> <p>Additionally the lower scale of growth may allow for more opportunities to mitigate or adapt to climate change; for example more land may be available for the provision of sustainable urban drainage systems and more Greenfield land could be retained as a carbon sink.</p>

LDP Option	Option A:	Option B:	Option C:
	About 54,400 new homes in total (30,548 residual requirement)	About 45,400 new homes in total (21,571 residual requirement)	About 36,500 new homes in total (12,634 residual requirement)
SA Objective	About 55,000 new jobs in total	About 40,000 new jobs in total	About 26,000 new jobs in total
	trips and promote a modal shift to more sustainable transport; and/or the incorporation of energy efficiency measures and renewable energy generation.		
5. Protect and enhance historic and cultural heritage	<p>✘</p> <p>Option A is generally incompatible with the SA Objective due to the demand for development land. There is potential for negative impacts to listed buildings, and to historic assets (both known and unknown) and their settings.</p> <p>Negative impacts to the historic environment could be mitigated by ensuring that developments are sympathetic to local character and distinctiveness, and by ensuring that thorough archaeological investigations are carried out on potential development sites.</p>	<p>✘</p> <p>As Option A.</p>	<p>?/✘</p> <p>The effect of Option C on the SA Objective is less certain. The likelihood of impacts to the historic environment from development is reduced as less land would be required. Negative impacts could still occur if sites for development are not chosen carefully and if the appropriate mitigation is not applied.</p>
6. Help deliver the growth of a sustainable and diversified economy	<p>✓✓</p> <p>Option A is very compatible with the SA Objective as it aims to provide a high number of jobs and homes in Cardiff,</p>	<p>✓</p> <p>Option B is compatible with the SA Objective as it aims to provide a large number of jobs in the City, which is</p>	<p>✓/?</p> <p>The effect of Option C on the SA Objective could be positive as it aims to provide a reasonable number of new</p>

LDP Option	Option A:	Option B:	Option C:
SA Objective	About 54,400 new homes in total (30,548 residual requirement)	About 45,400 new homes in total (21,571 residual requirement)	About 36,500 new homes in total (12,634 residual requirement)
	About 55,000 new jobs in total	About 40,000 new jobs in total	About 26,000 new jobs in total
	<p>which is generally inline with the view of Cardiff as the economic driver for South East Wales.</p> <p>Additionally, the volume of jobs created under Option A is significant and could provide a good range and choice of employment that benefit all areas of the City.</p>	<p>inline with the view of Cardiff as the economic driver for South East Wales.</p> <p>Additionally, the volume of jobs created under Option B is significant and could provide a good range and choice of employment.</p>	<p>jobs. However, the manner in which these jobs are generated could be more dependent on the economic land made available, potentially providing a smaller range and choice and limiting the potential benefits to the more deprived areas of the City.</p> <p>Additionally, the Option is less compatible with the vision of Cardiff as the economic driver for South East Wales.</p>
7. Improve health and well-being	<p>✓✓ - Increased access to health care ✕✕ - Reduced Greenfield amenity</p> <p>Under Option A it may be possible to create new communities with population densities high enough to support new accessible leisure and health care facilities.</p> <p>However, there is a strong link between health and being able to access green open space. The Option could require the release of the majority of the City's Greenfield sites for development.</p>	<p>✓ - Increased access to health care ✕ - Reduced Greenfield amenity</p> <p>As Option A but to a lesser extent due to the lower scale of growth.</p>	<p>✕/? – Increased access to health care ?/✓ – Reduced Greenfield amenity</p> <p>Unlike Options A and B, Option C may not be able to provide new health and leisure facilities as the opportunities to create new communities of appropriate density to support them could be fewer. However, Option C could require considerably less land and may leave more open green space available for recreation over the plan period.</p>
8. Protect and enhance the landscape	✕✕	✕	?/✕

LDP Option	Option A:	Option B:	Option C:
SA Objective	<p>About 54,400 new homes in total (30,548 residual requirement)</p> <p>About 55,000 new jobs in total</p>	<p>About 45,400 new homes in total (21,571 residual requirement)</p> <p>About 40,000 new jobs in total</p>	<p>About 36,500 new homes in total (12,634 residual requirement)</p> <p>About 26,000 new jobs in total</p>
	<p>Option A could have a significant negative effect on the SA Objective as it could require the release of the majority of Greenfield land that is available for development, resulting in a drastic transformation of the landscape from rural to urban.</p>	<p>As Option A but to a lesser extent due to the lower scale of growth.</p>	<p>Like Options A and B, Option C could have a negative impact on the landscape through extensions to the urban environment. However, this impact could be significantly lower as the scale of growth is much lower and requires considerably less Greenfield release.</p>
<p>9. Use natural resources efficiently and safeguard their quality</p>	<p>✓✓ - Reuse and remediation of land ?/* - Conservation of soil resource</p> <p>Overall the effect of Option A on the SA Objective could be positive as there could be opportunities to utilise previously developed land and remediate contaminated land due to the scale of growth proposed, but this would depend on LDP Policy.</p> <p>However, the scale of development, which could require the majority of the available Greenfield land, could result in the loss of a large amount of agricultural land, some of which is of high soil quality.</p>	<p>✓ - Reuse and remediation of land ?/* - Conservation of soil resource</p> <p>As Option A but to a lesser extent due to a lower scale of growth.</p>	<p>? - Reuse and remediation of land ?/✓ - Conservation of soil resource</p> <p>The effect of Option C on the SA Objective is less certain.</p> <p>The scale of development is considerably lower than that proposed under Options A or B, and this may limit the opportunities to remediate or re-develop previously developed land due to a need to provide a range and choice of housing and employment.</p> <p>Additionally the lower level of Greenfield requirement under Option C may allow for better security of the best and most versatile agricultural land but this would be dependant on LDP policy.</p>

LDP Option	Option A:	Option B:	Option C:
SA Objective	<p>About 54,400 new homes in total (30,548 residual requirement)</p> <p>About 55,000 new jobs in total</p>	<p>About 45,400 new homes in total (21,571 residual requirement)</p> <p>About 40,000 new jobs in total</p>	<p>About 36,500 new homes in total (12,634 residual requirement)</p> <p>About 26,000 new jobs in total</p>
<p>10. Respond to demographic changes in a sustainable way</p>	<p>✓/✗</p> <p>For the plan period, Option A could provide a significant number of new jobs and the proposed level of housing could make significant progress in addressing the housing shortage in the City. The release of large areas of development land may also provide new communities on a scale that would support a good provision of new community facilities. However, Option A would also require the release of most of Cardiff’s available development land, which raises concerns over how the City will respond to demographic change beyond the plan period.</p>	<p>✓</p> <p>Option B, like Option A is generally compatible with the SA Objective as it could provide a good level of jobs and housing over the plan period. Option B requires less land than Option A and would leave more residual development land for after the plan period.</p>	<p>?</p> <p>Option C is based upon the long term population figures for the last 8 years and may reflect a more sustainable approach to providing growth. However, the trend in the wider city region and in the valleys is for decline as the region looks to Cardiff for jobs and homes. Option C does not take this eventuality into account may not be able to respond to these demographic changes.</p>

LDP Option	Option A:	Option B:	Option C:
SA Objective	About 54,400 new homes in total (30,548 residual requirement)	About 45,400 new homes in total (21,571 residual requirement)	About 36,500 new homes in total (12,634 residual requirement)
	About 55,000 new jobs in total	About 40,000 new jobs in total	About 26,000 new jobs in total
11. Minimise waste, increase re-use and recycling	<p>✘✘ - Citywide waste ✓/? – Per capita waste</p> <p>Option A would significantly increase the number of households and business premises and therefore the absolute quantity of waste generated in Cardiff will also increase significantly placing increasing pressure on existing waste recycling, disposal and collection facilities.</p> <p>However, there is potential to decrease per capita arisings through the integration of recycling and composting facilities (including bring sites and household recycling facilities) into new developments.</p>	<p>✘ - Citywide waste ✓/? – Per capita waste</p> <p>Under Option B the absolute quantity of waste generated in Cardiff is likely to increase considerably, though not as significantly as under Option A.</p> <p>However, there is also potential to decrease per capita arisings through the integration of recycling and composting facilities (including bring sites and household recycling facilities) into new developments.</p>	<p>✘ - Citywide waste ✓/? – Per capita waste</p> <p>Under Option C the absolute quantity of waste will increase steadily over the plan period but there is potential to decrease per capita arisings through the integration of recycling and composting facilities (including bring sites and household recycling facilities) into new developments.</p>

Spatial options for delivery

Greenfield sites west of Pentrebane		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓ x x	This large site would provide 7,500 new homes including significant amounts of affordable housing, and community facilities. There is the potential to provide community facilities for nearby areas. The site is not in the southern arc of deprivation, and is far from city centre. Transport impacts depend on implementation: active attempts will be made to provide public transport and the plan aims for a 50:50 modal split (50% by car, 50% by other mode). However the site's location does not encourage this.
2. Maintain and improve air quality	x?	The plan aims to minimise car traffic from the site, but an overall increase in traffic (and thus air pollution is expected. Housing and employment development would also increase air pollution. About 3,000 jobs are expected to be provided at the site: this would help to reduce the need to commute if residents also work at the site.
3. Protect and enhance biodiversity, flora and fauna	x	The site is primarily composed of fields, but includes SINCs and a local nature reserve. There are also local streams and hedgerows which would be affected by development
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓ x	The site is not in the flood zone, and has potential for 2MW+ turbines
5. Protect and enhance historic and cultural heritage	x?	The site has some historic interest which could be affected by development – two grade II listed buildings and part of site is in St Fagans conservation area
6. Help deliver the growth of a sustainable and diversified economy	✓	Would help to provide about 3000 jobs
7. Improve health and well-being	✓ ?	The site would provide new areas of accessible green space. It would not cause the loss of existing health facilities. The additional traffic from development could lead to road-related health impacts. The details depend on the masterplan
8. Protect and enhance the landscape	x/x x?	The site is currently undeveloped; development would change this to a more urban, built-up area.
9. Use natural resources efficiently and safeguard their	x	The land is Greenfield, with some 3a agricultural land. It includes no contaminated land, so there is no possibility for remediation. It contains no mineral resources, and so would not sterilise them

quality		
10. Respond to demographic changes in a sustainable way	✓✓	The site would provide about 7500 homes including affordable homes, also community facilities
11. Minimise waste, increase re-use and recycling	✗	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

Greenfield sites south of Creigiau / north of Junction 33 on M4		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✗	This site would provide about 2750 new homes including significant amounts of affordable housing, and community facilities. The site is not in the southern arc of deprivation, and is far from city centre. Transport impacts depend on implementation: a Park & Ride facility is planned, and the site will not go forward until the North West Cardiff site and its bus route have been developed. However the distant location does not encourage non-car transport.
2. Maintain and improve air quality	✗/✗✗	Even with sustainable transport solutions, the site will be heavily car based. The P&R facility would improve air quality in the city centre but could exacerbate air pollution near the P&R site
3. Protect and enhance biodiversity, flora and fauna	✗✗	The site contains 8 SINCs, is adjacent to a riverine SSSI, and there are protected species on the site. Development would have a significant negative impact on these sensitive features.
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓✗	The site is not in a flood zone. It has no real potential for large turbines, although it could possibly accommodate smaller ones
5. Protect and enhance historic and cultural heritage	?	The site contains one grade II listed building which may be affected by development
6. Help deliver the growth of a sustainable and diversified economy	✓✓	4331 jobs are proposed for the site
7. Improve health and well-being	✓?	The site would provide new areas of accessible green space. It would not cause the loss of existing health facilities. The additional traffic from development could lead to road-related health impacts. The details depend on the masterplan Development could enhance the opportunity for Creigiau

		residents to access open space and other facilities, though this would involve crossing the busy A4119.
8. Protect and enhance the landscape	xx	The site is adjacent to a proposed SLA. Development would be on Greenfield sites, and is visible from the M4 motorway
9. Use natural resources efficiently and safeguard their quality	x	The land is Greenfield. It includes no contaminated land, so there is no possibility for remediation. It contains no mineral resources, and so would not sterilise them
10. Respond to demographic changes in a sustainable way	✓✓	The site would provide about 2750 homes including affordable homes, also community facilities
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

Greenfield sties west of Pontprennau		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓x	<p>This large site would provide 6,000 new homes including significant amounts of affordable housing, and community facilities. There is the potential to provide community facilities for nearby areas.</p> <p>The site is not in the southern arc of deprivation, and is far from city centre.</p> <p>Transport impacts depend on implementation: active attempts will be made to provide public transport and the plan aims for a 50:50 modal split (50% by car, 50% by other mode). However the site's location does not encourage this.</p>
2. Maintain and improve air quality	x?	<p>There would be three main entrance/exit points to the site, the eastern one of which would connect to a P&R site. Provision of 5922 jobs at the site would help to reduce the need to travel. Active attempts would be made to reduce car traffic, but this is likely to still be quite a car-based development with consequent air pollution impacts. The additional housing and employment development would also increase air pollution.</p> <p>If the development included a junction onto the motorway, then this might attract residents who work further away, e.g. Swansea. This would further increase air pollution.</p>
3. Protect and enhance biodiversity, flora and fauna	x	The site contains 9 small SINCS, adjacent two SSSIs, a river valley in middle, and several protected species

4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	x	Part of the area is a historic flood zone and some is zone C2 (flood plain without flood defence). See 2. above
5. Protect and enhance historic and cultural heritage	?	One Grade I and two Grade II listed buildings
6. Help deliver the growth of a sustainable and diversified economy	✓✓	The site would help to provide 5922 jobs
7. Improve health and well-being	✓?	The site would provide new areas of accessible green space. Development would not cause the loss of existing health facilities. The additional traffic from development could lead to road-related health impacts. The details depend on the masterplan. Development at the site could enhance facilities for Pontprennau residents
8. Protect and enhance the landscape	x/xx?	The site is currently undeveloped; development would change this to a more urban, built-up area.
9. Use natural resources efficiently and safeguard their quality	x	The land is Greenfield. It includes no contaminated land, so there is no possibility for remediation. It contains no mineral resources, and so would not sterilise them. Development could affect the water quality of the streams on site and downstream.
10. Respond to demographic changes in a sustainable way	✓✓	Development of the site would provide about 6000 homes and almost 6000 jobs, plus community facilities
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

Greenfield sites east of Pontprennau		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓x	This site would provide 2,000 new homes including significant amounts of affordable housing, and community facilities. There is the potential to provide community facilities for nearby areas. The site is not in the southern arc of deprivation, and is far from city centre. Transport impacts depend on implementation: see 2.
2. Maintain and improve air quality	x?	active attempts will be made to provide public transport and the plan aims for a 50:50 modal split (50% by car, 50% by other mode). However the site's location does not encourage this.

3. Protect and enhance biodiversity, flora and fauna	x	Dormice on site, SINC habitat NW of site
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	x	No known flood risk along developable area. Area is severed from facilities to the west by the Link Road – would need significant walking, cycling and public transport infrastructure to prevent the development from being heavily car-based
5. Protect and enhance historic and cultural heritage	x?	Three Grade II and 1 Grade II* listed buildings plus 9 historic records Archaeological features may restrict development
6. Help deliver the growth of a sustainable and diversified economy	0	Housing-based development, although could offer small-scale employment
7. Improve health and well-being	✓ x	The site would provide new areas of accessible green space, as well as a primary school, local stores and a community centre. The additional traffic from development could lead to road-related health impacts. The details depend on the masterplan.
8. Protect and enhance the landscape	x/x x?	The site is currently undeveloped; development would change this to a more urban, built-up area.
9. Use natural resources efficiently and safeguard their quality	x	The land is Greenfield, with a high proportion of grade 3a agricultural land. It includes two areas of landfilling. It contains no mineral resources, and so would not sterilise them. Development could affect the water quality of the streams on site and downstream.
10. Respond to demographic changes in a sustainable way	✓✓	Development of the site would provide about 2000 homes plus community facilities
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

Greenfield site north of M4 at Thornhill		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	x	Not in southern arc of deprivation Has good links to areas outside Cardiff; links into Cardiff are poor Helps to provide affordable housing
2. Maintain and improve air quality	x/x x	Development would be heavily car dependent. The site's long edge alongside the M4 means that residents may be affected by pollution from M4
3. Protect and enhance	x	Roughly 20% of the site is SINC; riverine ecosystems and protected species are on site; the western side of the site

biodiversity, flora and fauna		borders onto a SSSI
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	x	Not in a flood risk zone. Likely to be heavily car dependent. Potential for renewable energy generation
5. Protect and enhance historic and cultural heritage	x	The site includes 3 Grade II listed buildings and a Grade II* listed building. Development has the potential to affect the setting of a Scheduled Ancient Monument at nearby Castell Morgraig
6. Help deliver the growth of a sustainable and diversified economy	0	Housing only
7. Improve health and well-being	✓/x	Would help to improve access to open space, but access to city centre would be minimal. Possible negative impacts from air pollution (see 2.)
8. Protect and enhance the landscape	xx	About half of the site is in a proposed Special Landscape Area. Development would be isolated and in the open countryside
9. Use natural resources efficiently and safeguard their quality	x	Mixture of farmland types affected, including grade 3a (good) agricultural land. Would not lead to remediation of contaminated land. Water quality of streams through the site could decrease.
10. Respond to demographic changes in a sustainable way	✓	Would help to meet the need for homes, but would not improve the provision of community facilities
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

Greenfield sites around Old St. Mellons Village		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	x	Not in the southern arc of deprivation. Local connectivity is poor. Development is unlikely to help provide community facilities.
2. Maintain and improve air quality	x/xx	Development is likely to be heavily car dependent. Located between the M4 and Newport Road, so would have the potential for residents to be affected by air pollution from these roads
3. Protect and enhance biodiversity, flora and fauna	x?	The sites include a small amount of SINCLAND, some riverine ecology, some dormice

4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	x?	No known flood risk on areas earmarked for development. Development is likely to be heavily car dependent
5. Protect and enhance historic and cultural heritage	0	No significant constraints
6. Help deliver the growth of a sustainable and diversified economy	0	Housing only proposed
7. Improve health and well-being	✓/x	Development would increase access to open space. No significant new community facilities are proposed. Development would be heavily car dependent, so few benefits from regular walking and cycling.
8. Protect and enhance the landscape	0	Not in any landscape designations. Cumulatively, development on infill sites is likely to have detrimental impact on countryside
9. Use natural resources efficiently and safeguard their quality	x	Would not allow for high density development, so not a good use of land. Would not allow for clean-up of contaminated land. High probability of best and most versatile agricultural land on some sites
10. Respond to demographic changes in a sustainable way	✓?	Would provide some homes, but likely to be low density and relatively low number
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

Greenfield sites in the east – largely employment uses		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Close to the southern arc of deprivation, and could provide jobs to residents of this area. Would not provide community facilities or housing
2. Maintain and improve air quality	x?	Development is likely to be car-dependent and so worsen air quality
3. Protect and enhance biodiversity, flora and fauna	xx	Located near the Severn Estuary Ramsar/SPA/SSSI site. The entire site is in the SSSI. Development would have a significant cumulative impact on re-en ecosystems

4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	xx	All of the site is in a flood risk area. Public transport to the area is currently poor, and existing development is car dependent; new development is also likely to be car dependent
5. Protect and enhance historic and cultural heritage	x	Roughly 20% of the site is Cardiff Archaeologically Sensitive Site. Most of the site contains historic reens. Adjacent to the Rumney sea wall Scheduled Ancient Monument.
6. Help deliver the growth of a sustainable and diversified economy	✓✓	Would help to provide employment and to support the regeneration of nearby deprived areas
7. Improve health and well-being	x?	Would not improve access to open space or provide new community facilities. Would encourage the use of cars. Flooding would affect people's health
8. Protect and enhance the landscape	xx	Roughly half of the site is a proposed Special Landscape Area and forms part of CCW/CADW/ICOMOS Caldicot and Wentloog Levels Landscape of Outstanding Historic Interest
9. Use natural resources efficiently and safeguard their quality	x	Would not reuse land or remediate contaminated land. Would have significant negative impact on water quality
10. Respond to demographic changes in a sustainable way	✓	Would help to provide jobs but not new housing
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

NB: Dispersed Brownfield sites and dispersed Greenfield sites options were too varied and diffuse to effectively appraise at the strategic level.

Cardiff Council & Levett-Therivel Sustainability Consultants

Sustainability Appraisal and Strategic Environmental Assessment of the Cardiff Local Development Plan

Appendix F: Criteria used in candidate site appraisals

Final Sustainability Appraisal Report of the Cardiff Local Development Plan

January 2016

SA objective	✓✓	✓	0 or ✓x	x	xx	?
1a. Help deliver equality of opportunity and access for all: Transportation context	Very well located in relation to transportation network. Relatively low car generation, location highly accessible by existing sustainable transportation modes, effective measures identified to achieve a 50:50 modal split.	Well located in relation to existing sustainable transport infrastructure. Would generate some additional car trips but site has the potential to deliver sustainable transportation modes to achieve a 50/50 modal split .	Reasonably-well located in relation to existing sustainable transport infrastructure. Would have significant impacts in terms of traffic generation and congestion; impacts could be managed and could potentially achieve 50:50 modal split;	Poorly located in relation to existing sustainable transport infrastructure. Without significant mitigation site would find it difficult to achieve a 50/50 split and wider benefits, and lead to increased congestion and negative impacts on the network.	Very poorly located in relation to existing sustainable transport infrastructure. Significant car trip generation and/or represents car-based site, very limited potential to achieve a 50:50 modal split and deliver wider strategic transport benefits. Would significantly increase congestion. Mitigation not feasible.	Effect unknown
1b. Help deliver equality of opportunity and access for all: Community facilities	The site has the potential to effectively deliver a broad range of community facilities, including local centres, schools, green infrastructure and other public facilities and also benefit existing communities with deficiencies.	The site has the potential to deliver adequate community facilities.	The scale/nature of the site does not place increased pressure on existing community facilities and adequate community facilities already exist.	The site will place increased pressure on existing community facilities and is dependent on existing limited community facilities available in the surrounding area and too few additional facilities are likely to be delivered as part of development.	The scale of the site will result in the loss of community facilities or place significant increased pressure on existing community facilities and is unlikely to be able to deliver new community facilities as part of development.	Effect unknown

SA objective	✓✓	✓	0 or ✓x	x	xx	?
2. Maintain and improve air quality	Not assessable at locational level		Either no air quality issues identified or where impacts can be demonstrably evidenced to fully mitigate harm and which are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.	Commuting off site may impact on an area or areas of air quality concern due to existing congestion issues, and where potential mitigation solutions are considered either not feasible, disproportionately costly, not likely to deliver necessary improvements and/or raise further inappropriate consequences.	Site is likely to increase road traffic within an existing AQMA and where potential mitigation solutions are considered either not feasible, disproportionately costly, not likely to deliver necessary improvements and/or raise further inappropriate consequences.	Effect unknown

SA objective	✓✓	✓	0 or ✓x	x	xx	?
3. Protect and enhance biodiversity, flora and fauna	No negative impact on biodiversity/ geological interests together with additional measures to enhance current biodiversity/geological interests to deliver wider than local benefits. The enhancement measures would need to demonstrate that they are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.*	No negative impact on biodiversity/ geological interests together with additional measures to enhance current biodiversity/geological interests to deliver local benefits to the extent of delivering an enhanced local status of biodiversity/geological interests. The enhancement measures would need to demonstrate that they are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.*	Either no impact on biodiversity/geological interests or where impacts can be demonstrably evidenced to fully mitigate harm and which are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences	Overall, negative impact on biodiversity/geological interests of local importance (e.g. SINC or LNR). Potential mitigation solutions are considered feasible to reduce impact on local biodiversity interests. Also includes proposals where impacts relate to features of more than local importance but where impacts can be effectively reduced.	Overall, significant negative impact on biodiversity/geological interests of more than local importance (e.g. SSSI, SAC, SPA or Ramsar). Potential mitigation solutions are considered either not feasible, disproportionately costly, not likely to deliver necessary improvements and / or raise further inappropriate consequences.	Effect unknown

SA objective	✓✓	✓	0 or ✓x	x	xx	?
4a. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects: flood risk	Not applicable		No known flood risk	Significant flood risk (tidal or fluvial: C1 or C2) relating to part of the site where it is considered to be technically possible to mitigate the risk, in line with TAN 15 guidelines, through major scale mitigation measures but regardless of cost, impact on the and wider consequences.	Significant flood risk (tidal or fluvial C1 or C2) or significant surface water) relating to a large portion of the site where the extent and nature of the risk are such that measures are not considered able to effectively mitigate the risk in line with TAN 15 guidelines.	Effect unknown
4b. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects: scope for renewable energy solutions	The scale of development, and/or the site's physical attributes and/or other opportunities present significant potential for renewable energy solutions. Key strategic sites might offer the opportunity for exemplar solutions, above those standards set out in national guidance. Further detailed work at the master planning stage is needed to fully assess the potential and viability of any renewable energy schemes.	The scale of development, and/or the site's physical attributes and/or other opportunities offer moderate potential for renewable energy solutions. Further detailed work at the master planning stage is needed to fully assess the potential and viability of any renewable energy schemes.	No technical, physical or financial constraints which may limit the opportunity for or feasibility of renewable energy solutions have been identified at this stage. Further detailed work at the master planning stage is needed to fully assess renewable energy opportunities and feasibility.	Limited. Technical, physical or financial constraints may limit the potential or feasibility of renewable energy solutions. Further detailed work at the master planning stage is needed to fully assess the potential and viability of any renewable energy schemes.	Very limited. Significant technical, physical or financial constraints limit the opportunities for, or feasibility of delivering renewable energy solutions. Further detailed work at the master planning stage is needed to fully assess the potential and viability of any renewable energy schemes.	Effect unknown

SA objective	✓✓	✓	0 or ✓x	x	xx	?
5. Protect and enhance historic and cultural heritage	No negative impact on historic, cultural and built environment interests together with additional measures to enhance current historic/ cultural interests to deliver wider than local benefits. The enhancement measures would need to demonstrate that they are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.*	No negative impact on historic, cultural and built environment interests together with additional measures to enhance current historic/cultural interests to deliver local benefits to the extent of delivering an enhanced local status of historic/cultural interests. The enhancement measures would need to demonstrate that they are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.*	Either no impact on historic, cultural and built environment interests or where impacts can be demonstrably evidenced to fully mitigate harm and which are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences	Overall, negative impact on historic, cultural and built environment interests of local importance (e.g. Conservation Area, Historic Parks and Gardens, Archaeologically Sensitive Areas or Locally Listed Building). Potential mitigation solutions are considered feasible to reduce impact on local historic, cultural or built environment interests. Also includes proposals where impacts relate to features of more than local importance but where impacts can be effectively reduced.	Overall, significant negative impact on historic, cultural and built environment interests of more than local importance (e.g. Scheduled Ancient Monument or Nationally Listed Building). Potential mitigation solutions are considered either not feasible, disproportionately costly, not likely to deliver necessary improvements and/or raise further inappropriate consequences.	Effect unknown
7. Improve health and well-being	Site has the potential to deliver significant health and wellbeing benefits for existing as well as future residents, (e.g. significant improvements in health facilities or publicly accessible open space) beyond catering for the site's residents, and	Site has the potential to deliver health and well being benefits for existing as well as future residents (e.g. significant improvements in health facilities, publicly accessible open space), and where these measures are	Either no impact on health and wellbeing or where impacts can be demonstrably evidenced to fully mitigate harm and which are considered feasible, proportionately affordable, likely to deliver necessary	Overall negative impact on health and well being (e.g. site occupies a portion of recreational open space, places significant negative pressure on an existing health facility), and where potential mitigation solutions are considered either not	Overall negative impact on health and well being (e.g. site fully occupies recreational open space, removes existing health facilities), and where potential mitigation solutions are considered either not feasible, disproportionately costly, not likely to deliver	Effect unknown

SA objective	✓✓	✓	0 or ✓x	x	xx	?
	where these measures are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.	considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.	improvements and/or raise no further inappropriate consequences.	feasible, disproportionately costly, not likely to deliver necessary improvements and/or raise further inappropriate consequences.	necessary improvements and/or raise further inappropriate consequences.	
8. Protect and enhance the landscape	No negative impact on landscape interests together with additional measures to enhance current landscape interests to deliver wider than local benefits. The enhancement measures would need to demonstrate that they are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.*	No negative impact on landscape interests together with additional measures to enhance current landscape interests to deliver local benefits to the extent of delivering enhanced local status landscape interests. The enhancement measures would need to demonstrate that they are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.*	Either no impact on landscape interests or where impacts can be demonstrably evidenced to fully mitigate harm and which are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.	Overall, negative impact on landscape interests of local importance (e.g. river valleys, TPOs, LCAs or Greenfield site). Potential mitigation solutions are considered feasible to reduce impact on the local landscape interest. Also includes proposals where impacts relate to features of more than local importance but where impacts can be effectively reduced.	Overall, significant negative impact on landscape interests of more than local importance (e.g land considered to possess qualities meeting Special Landscape Area status following the regionally agreed methodology). Potential mitigation solutions are considered either not feasible, disproportionately costly, not likely to deliver necessary improvements and/or raise further inappropriate consequences.	Effect unknown
9a. Use natural resources efficiently and safeguard	Not assessable at location level		Overall, neutral impact on natural resources including Best and most versatile agricultural land, mineral deposits	Overall, negative impact on natural resources of local importance (aquifers) and where potential	Overall, significant negative impact on natural resources of more than local importance (Sand and	Effect unknown

SA objective	✓✓	✓	0 or ✓x	x	xx	?
their quality: Natural resources			and aquifers. Either no impact on natural resources or where impacts can be demonstrably evidenced to fully mitigate harm and which are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.	mitigation solutions are considered either not feasible, disproportionately costly, not certain to deliver necessary improvements and/or raise further inappropriate consequences.	Gravel Resource, Minerals Buffer Zone, Best and Most Versatile Agricultural Land) and where potential mitigation solutions are considered either not feasible, disproportionately costly, not likely to deliver necessary improvements and/or raise further inappropriate consequences.	
9b. Use natural resources efficiently and safeguard their quality: Contaminated land	Measures can be demonstrably evidenced to effectively bring contaminated land back into safe, beneficial use and which are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.	Site impacts in part upon contaminated land but measures can be demonstrably evidenced to effectively bring contaminated land back into safe, beneficial use and which are considered feasible, proportionately affordable, likely to deliver necessary improvements and/or raise no further inappropriate consequences.	Site does not impact upon contaminated land in any significant way.	Site impacts in part upon contaminated land and where potential mitigation solutions are considered either not feasible, disproportionately costly, not certain to deliver necessary improvements and/or raise further inappropriate consequences	Site significantly impacts upon contaminated land and where potential mitigation solutions are considered either not feasible, disproportionately costly, not likely to deliver necessary improvements and/or raise further inappropriate consequences.	Effect unknown

* Greenfield and some brownfield sites will not achieve this rank without detailed development proposals. Some brownfield sites dependant upon their condition may achieve this rank.

NB: SA objectives 6 (sustainable and diversified economy), 10 (demographic changes) and 11 (waste) are not included as they are not applicable for assessment at the location level.

Cardiff Council & Levett-Therivel Sustainability Consultants

**Sustainability Appraisal and Strategic Environmental Assessment of
the Cardiff Local Development Plan**

Appendix G: Appraisal of LDP Key and Detailed Policies

**Final Sustainability Appraisal Report of the Cardiff Local
Development Plan**

January 2016

The previous (September 2013) version of this Appendix included SA comments and suggestions after many policies. Most of these have been resolved satisfactorily through either changes to policies or further explanations. In the few that remain, the 'response' column reports the planning team's response. In the 'status' column only, 'x' means 'issue unresolved', and '~' means 'partially addressed though not conclusively'.

Policy KP1: LEVEL OF GROWTH		
The Plan makes provision for 45,415 new dwellings (including a 4,000 dwelling flexibility allowance) to deliver a housing requirement of 41,415 new dwellings and 40,000 new jobs in Cardiff between 2006-2026		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Has the potential to provide a significant number of affordable homes and help to address an existing shortage in the City. The scale of growth provided has the potential to create new communities that are large enough to support a range of community facilities and services. Also has the potential to improve connectivity with and between existing communities and increase accessibility of community facilities. If new developments are provided that include integrated sustainable transport infrastructure or reduce the need to travel by including mixed uses the effect could be more positive as this could help to improve access to services, facilities and employment particularly for those without access to a private car
2. Maintain and improve air quality	x	<p>Mainly incompatible with the SA Objective. Independent of any potential improvements to the City's transport infrastructure, the option could lead to a significant increase in transport (domestic and economic) and potentially an increase in industrial activity. This could lead to a reduction in air quality particularly through increased congestion, which is an existing issue for the City.</p> <p>The policy would also lead to the development of a large proportion of the available Greenfield land in the City, green spaces help to improve air quality.</p> <p>However, there is an opportunity to provide new developments that integrate sustainable transport infrastructure, and mixed uses to reduce the need to travel. This could help to reduce congestion, new developments would also benefit from green infrastructure.</p>
3. Protect and enhance biodiversity, flora and	x	The land required to accommodate the proposed level of growth represents a considerable proportion of the available development land in the City, the majority of which is Greenfield. Whilst designated nature sites would be protected, the development of large areas of the City's

fauna		Greenfields could result in significant habitat loss and disruption to habitat connectivity. Opportunities for mitigation could be limited due to extensive urbanisation.
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	<p>✗ - Citywide carbon emissions</p> <p>✓/? – Per capita emissions</p> <p>✗/? – Adaptation to climate change</p>	<p>Citywide emissions of greenhouse gases are likely to increase significantly due to a large increase in population, waste, travel and economic activities. Development on Greenfield land also reduces the carbon sink this provides and reduces the city's ability to adapt to climate change as green space also aids in land drainage and helps to reduce the urban heat island effect.</p> <p>There is an opportunity to reduce per capita emissions in the city through the design of developments e.g. mixed use development to reduce trips and promote a modal shift to more sustainable transport; and/or the incorporation of energy efficiency measures and renewable energy generation.</p>
5. Protect and enhance historic and cultural heritage	✗	Generally incompatible with the SA Objective due to the demand for development land. There is potential for negative impacts to listed buildings, and to historic assets (both known and unknown) and their settings. These impacts could be mitigated by ensuring that developments are sympathetic to local character and distinctiveness, and by ensuring that thorough archaeological investigations are carried out on potential development sites.
6. Help deliver the growth of a sustainable and diversified economy	✓	Compatible with the SA Objective as it aims to provide a large number of jobs in the City, which is in line with the view of Cardiff as the economic driver for South East Wales. Additionally, the volume of jobs created is significant and could provide a good range and choice of employment.
7. Improve health and well-being	<p>✓ - Increased access to health care</p> <p>✗ - Reduced Greenfield amenity</p>	It may be possible to create new communities with population densities high enough to support new accessible leisure and health care facilities. However, there is a strong link between health and being able to access green open space: the use of Greenfield land reduces open space.
8. Protect and enhance the landscape	✗	Likely significant negative effect on landscape as the growth envisaged would lead to significant areas of Greenfield land being developed. This would result in a transformation of the landscape from rural to urban.
9. Use natural resources	✓ - Reuse and remediation	Provides opportunities to utilise previously developed land and remediate contaminated land due to the scale of growth proposed. However, the scale of development

efficiently and safeguard their quality	n of land ?/* - Conservation of soil resource	would result in the loss of a large amount of agricultural land, some of which is of high soil quality.
10. Respond to demographic changes in a sustainable way	✓	Would provide a good level of new jobs and housing over the plan period. The release of large areas of development land may also provide new communities on a scale that would support a good provision of new community facilities. It would require the release of much of Cardiff's available development land, leaving some residual development land for after the plan period
11. Minimise waste, increase re-use and recycling	* - Citywide waste ✓/? - Per capita waste	The absolute quantity of waste generated in Cardiff is likely to increase considerably. However, there is potential to decrease per capita arisings through the integration of recycling and composting facilities (including bring sites and household recycling facilities) into new developments.

KP4 MASTERPLANNING APPROACH (Policy appraised out of sequence because it sets context for KP2 (A) – (H) strategic sites policies.)

SA objective	1. Equality	2. Air quality	3. Biodiversity	4. Climate change	5. Heritage	6. Economy	7. Health and wellbeing	8. Landscape	9. Natural resources	10. Demographic change	11. Waste

Notes:

-Principle 1 not appraised individually since it specifies procedure, not contents.

Potential negative scores for principle 2 (density) equality and air quality reflect risk that density gradient will result in disadvantaged people concentrated on transport corridors. Needs to be watched in detailed planning of each site.

SA Objective	LDP Masterplanning Principles: 1. Masterplanning approach 2. Development density 3. Sustainable transport corridors 4. Sustainable travel choices 5. Neighbourhood centres	6. High quality sustainable design and distinctive character 7. Integration with neighbouring areas 8. Strategic green open space corridors 9. Landscape, biodiversity and historic features 10. Resource efficiency
1. Help deliver equality of opportunity and access for all	✓ The Masterplanning Principles seek to provide and promote transport options including cycling and walking corridors, access to public transport, and access for all to transport modes (including those without cars) (3, 4); provision of new community facilities via neighbourhood centres (5); provision of a range of housing type and tenure (6); to improve facilities for existing communities as well as new ones and to increase connectivity between communities (7); and provision of accessible green space corridors (8). There is no specific mention of deprived areas or disadvantaged sections of society in the Principles, but it is appreciated that the LDP can only influence communities adjacent to proposed areas of growth (ie strategic sites).	
2. Maintain and improve air quality	✓ The Masterplanning Principles contribute positively to the SA objective with provision of walking, cycling and public transport travel options (3, 4), and gaining access to green open space corridors via sustainable and active travel modes (8).	
3. Protect and enhance biodiversity, flora and fauna	✓ Masterplanning Principle 9 aims to protect and enhance the nature conservation of sites and Principle 8 to provide access to biodiversity, provide habitat connectivity within and between sites.	
4. Reduce emissions of greenhouse gases that	✓ The Masterplanning Principles assist in reducing carbon emissions by minimising energy demand, increasing energy	

SA Objective	LDP Masterplanning Principles: 1. Masterplanning approach 2. Development density 3. Sustainable transport corridors 4. Sustainable travel choices 5. Neighbourhood centres	6. High quality sustainable design and distinctive character 7. Integration with neighbouring areas 8. Strategic green open space corridors 9. Landscape, biodiversity and historic features 10. Resource efficiency
cause climate change and adapt to its effects	efficiency and utilising renewable energy sources, and adapt to climate change through the design of buildings to cope with future weather events and by avoiding development in areas of unacceptable risk (10).	
5. Protect and enhance historic and cultural heritage	✓ Masterplanning Principle 9 seeks to retain and improve historic buildings and Principle 6 to ensure that existing site features and characteristics influence and form key features in site design.	
6. Help deliver the growth of a sustainable and diversified economy	? Employment and the local economy are not explicit in the Principles, as they focus on the role of housing in the Masterplanning process. Mixed use developments are mentioned in Principle 2 in terms of density, but sites wholly for employment use are not covered, and Principle 5 looks at provision of new facilities that may have some employment use within them.	
7. Improve health and well-being	✓✓ The Masterplanning Principles contribute positively to the SA Objective through the provision of sustainable transport choices that include walking and cycling (3, 4), access to open space and sports facilities (8) and the attractiveness of the areas design (6).	
8. Protect and enhance the landscape	✓ Masterplanning Principle 9 aims to ensure that existing site features influence and form key features in the design process through identification of these features and effective integration into the development. Additionally Principle 8 seeks to positively respond to existing landscape features and Principle 7 to make links to the wider countryside and public rights of way.	
9. Use natural resources efficiently and safeguard	✓/x Masterplanning Principle 10 is wholly concerned with resource efficiency of energy, water and waste, and Principle 2	

SA Objective	LDP Masterplanning Principles: <ol style="list-style-type: none"> 1. Masterplanning approach 2. Development density 3. Sustainable transport corridors 4. Sustainable travel choices 5. Neighbourhood centres 	<ol style="list-style-type: none"> 6. High quality sustainable design and distinctive character 7. Integration with neighbouring areas 8. Strategic green open space corridors 9. Landscape, biodiversity and historic features 10. Resource efficiency
their quality	<p>sets a quantified minimum density for development ‘close to’ neighbourhood centres and ‘adjacent to’ main sustainable transport corridors but does not say how much development must meet this density, or how much lower it can be elsewhere. The Principles do not set out the reuse of previously developed land prior to Greenfield release, which is likely to result in Greenfield land being built upon whilst Brownfield sites remain derelict. It is understood that this staged land release cannot be specified in the Principles due to current limited land bank figures, but there is potential to include a general statement of principle of reusing derelict land first wherever practical.</p>	
10. Respond to demographic changes in a sustainable way	<p>0 Masterplanning Principles 2, 3, 4 and 5 effectively address what is required to meet the needs of Cardiff’s growing population from a social perspective, and to a certain extent from an economic perspective. The issue of jobs and employment is not clearly covered in the Principles (see Sustainability Objective 6).</p>	
11. Minimise waste, increase re-use and recycling	<p>✓ The Masterplanning Principles seek to ensure that design and layout contribute to sustainable waste management (6) and to provide innovative management of waste (10).</p>	

Policy KP2: STRATEGIC SITES

Policy KP2 designates 8 separate sites. Each is appraised separately, except for D and E which are adjacent and are appraised together. Each of these contains one or more of the previously identified 'candidate sites'. Where this appraisal differs from the candidate site pro formas, this reflects the different criteria used for two appraisals, and more detailed data available for the smaller component sites.

The jobs numbers quoted for each site are estimates the Council provided to the Examination in Public (Action Point 1 of Hearing Session 6.) They do not form part of the formal policies but are relevant context.

Policy KP2(A): CARDIFF CENTRAL ENTERPRISE ZONE AND REGIONAL TRANSPORT HUB

Major employment-led initiative including a Regional Transport Hub together with other mixed uses.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓✓	Adjacent to central train station, with good links to Cardiff and the wider region. Supports development in the southern arc of deprivation; good public transport links to local areas. Provides for 10,000 - 15,000 jobs.
2. Maintain and improve air quality	✓x	Will cause transport impacts, but these would be better than they would be if public transport in the area was not so good. Trains to Cardiff are becoming electrified (will help air quality in the city centre though make it worse elsewhere)
3. Protect and enhance biodiversity, flora and fauna	?	Could affect some brownfield / derelict sites that currently are biodiverse.
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓x	As 2. The area is protected from flooding by the Cardiff Bay Barrage
5. Protect and enhance historic and cultural heritage	0	The area has no significant historic or cultural heritage. Potential for enhancement
6. Help deliver the growth of a sustainable and diversified economy	✓✓	Aims to deliver 10,000 - 15,000 jobs
7. Improve health		The area is easily accessible by walking, cycling and

and well-being	✓	public transport, which help to improve health. Development is expected to help reduce crime.
8. Protect and enhance the landscape	✓	Development of the area will help to revitalise and improve the streetscape
9. Use natural resources efficiently and safeguard their quality	✓	Uses brownfield land, and has the potential to use secondary aggregates
10. Respond to demographic changes in a sustainable way	✓	Provides needed jobs in a sustainable and central location
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

Policy KP2(B): FORMER GAS WORKS, FERRY ROAD		
Housing based scheme of approximately 500 homes with associated community uses.		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓✓	Development of the site would support the regeneration of an existing neighbourhood experiencing high levels of deprivation and vulnerable to decline
2. Maintain and improve air quality	✓x	The site is easily accessible by bus, rail, walking and cycling: although it would generate additional car journeys, its location will help to minimise these
3. Protect and enhance biodiversity, flora and fauna	?	Protected bats recorded on site and grass snakes recorded nearby, though policy requires mitigation and compensation. SINC on adjacent land.
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	x?	The site is partly covered by flood zone C1. See 2.
5. Protect and enhance historic and cultural heritage	0?	One grade II listed building on site
6. Help deliver the growth of a	0	No significant impacts

sustainable and diversified economy		
7. Improve health and well-being	✓	The site has the potential to deliver health and wellbeing benefits by removing an industrial use, remediating contaminated land and improve walking access to public open space
8. Protect and enhance the landscape	✓ x	Would redevelop a brownfield site, and redevelopment of the site unlikely to significantly affect the landscape character of the River Corridor provided mitigation measures are adhered to and development on the river bank is avoided
9. Use natural resources efficiently and safeguard their quality	✓	No mineral resources, aquifers, high quality agricultural land on site. Would bring contaminated land back into use
10. Respond to demographic changes in a sustainable way	✓	Site would provide about 500 homes plus community facilities
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

Policy KP2(C): NORTH WEST CARDIFF		
Comprehensive development including about 6,500 to 7,000 homes (5,000 by 2026) employment and other associated community uses		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓ x x	This large site would provide 6,500-7,000 new homes (including 1,500 after 2026) including significant amounts of affordable housing, and community facilities. There is the potential to provide community facilities for nearby areas. The site is not in the southern arc of deprivation, and is far from city centre. The policy includes extensive public transport provision but the site's location does not encourage this.
2. Maintain and improve air quality	x ?	The plan aims to minimise car traffic from the site, but an overall increase in traffic (and thus air pollution is expected. Housing and employment development would also increase air pollution. About 400 – 600 jobs are expected to be provided: this would help to reduce commuting if residents also work at the site.

3. Protect and enhance biodiversity, flora and fauna	x	The site is primarily composed of fields, but includes SINCs and a local nature reserve. There are also local streams and hedgerows which would be affected by development
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓ x	The site is not in the flood zone, and has potential for 2MW+ turbines
5. Protect and enhance historic and cultural heritage	x?	The site has some historic interest which could be affected by development – two grade II listed buildings and part of site is in St Fagans conservation area
6. Help deliver the growth of a sustainable and diversified economy	✓	Would help to provide about 400 – 600 jobs
7. Improve health and well-being	✓ ?	The site would provide new areas of accessible green space. It would not cause the loss of existing health facilities. The additional traffic from development could lead to road-related health impacts. The details depend on the masterplan
8. Protect and enhance the landscape	x/xx?	The site is currently undeveloped; development would change this to a more urban, built-up area.
9. Use natural resources efficiently and safeguard their quality	x	The land is Greenfield, with some 3a agricultural land. It includes no contaminated land, so there is no possibility for remediation. It contains no mineral resources, and so would not sterilise them
10. Respond to demographic changes in a sustainable way	✓✓	The site would provide about 6,500 homes including affordable homes, also community facilities
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

Policy KP2(D) and (E):
NORTH OF JUNCTION 33 ON M4 AND SOUTH OF CREIGIAU
D – mixed use of approximately 2,000 homes, employment, other associated community uses and a strategic Park and Ride site. E - housing-based scheme of approximately 650 homes with associated community uses.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	x	This site would provide about 2650 new homes including significant amounts of affordable housing, and community facilities. The site is not in the southern arc of deprivation, and is far from city centre. Transport impacts depend on implementation: a Park & Ride facility is planned, and the site will not go forward until the North West Cardiff site and its bus route have been developed. However the distant location does not encourage non-car transport.
2. Maintain and improve air quality	x/xx	Even with sustainable transport solutions, the site will be heavily car based. The P&R facility would improve air quality in the city centre but could exacerbate air pollution near the P&R site
3. Protect and enhance biodiversity, flora and fauna	xx	The site contains 8 SINCs, is adjacent to a riverine SSSI, and there are protected species on the site. Development would have a significant negative impact on these sensitive features.
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓x	The site is not in a flood zone. It has no real potential for large turbines, although it could possibly accommodate smaller ones
5. Protect and enhance historic and cultural heritage	?	The site contains one grade II listed building which may be affected by development
6. Help deliver the growth of a sustainable and diversified economy	✓	400 – 600 jobs are estimated for the site
7. Improve health and well-being	✓?	The site would provide new areas of accessible green space. It would not cause the loss of existing health facilities. The additional traffic from development could lead to road-related health impacts. The details depend on the masterplan Development could enhance the opportunity for Creigiau residents to access open space and other facilities, though this would involve crossing the busy A4119.
8. Protect and enhance the landscape	xx	The site is adjacent to a proposed SLA. Development would be on Greenfield sites, and is visible from the M4 motorway
9. Use natural	x	The land is Greenfield. It includes no contaminated

resources efficiently and safeguard their quality		land, so there is no need for remediation. It contains no mineral resources, and so would not sterilise them
10. Respond to demographic changes in a sustainable way	✓✓	The site would provide about 2650 homes including affordable homes, also community facilities
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

Policy KP2 (F): NORTH EAST CARDIFF (WEST OF PONTPRENNAU)		
Comprehensive development of approximately 4,500 homes, employment and other associated community uses;		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓x	This large site would provide 4,500 new homes including significant amounts of affordable housing, and community facilities. There is the potential to provide community facilities for nearby areas. The site is not in the southern arc of deprivation, and is far from city centre. Transport impacts depend on implementation: active attempts will be made to provide public transport and the plan aims for a 50:50 modal split (50% by car, 50% by other mode). However the site's location does not encourage this.
2. Maintain and improve air quality	x?	There would be three main entrance/exit points to the site, the eastern one of which would connect to a P&R site. Provision of 800-1000 jobs at the site would help to reduce the need to travel. Active attempts would be made to reduce car traffic, but this is likely to still be quite a car-based development with consequent air pollution impacts. The additional housing and employment development would also increase air pollution. If the development included a junction onto the motorway, then this might attract residents who work further away, e.g. Swansea. This would further increase air pollution.
3. Protect and enhance	x	The site contains 9 small SINCS, adjacent two SSSIs, a river valley in middle, and several protected species

biodiversity, flora and fauna		
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	x	Part of the area is a historic flood zone and some is zone C2 (flood plain without flood defence). See 2. Above
5. Protect and enhance historic and cultural heritage	?	One Grade I and two Grade II listed buildings
6. Help deliver the growth of a sustainable and diversified economy	✓✓	The site would help to provide 800-1000 jobs
7. Improve health and well-being	✓?	The site would provide new areas of accessible green space. Development would not cause the loss of existing health facilities. The additional traffic from development could lead to road-related health impacts. The details depend on the masterplan. Development at the site could enhance facilities for Pontprennau residents
8. Protect and enhance the landscape	x/xx?	The site is currently undeveloped; development would change this to an urban, built-up area.
9. Use natural resources efficiently and safeguard their quality	x	The land is Greenfield. It includes no contaminated land, so there is no need for remediation. It contains no mineral resources, and so would not sterilise them. Development could affect the water quality of the streams on site and downstream.
10. Respond to demographic changes in a sustainable way	✓✓	Development of the site would provide about 4,500 homes and almost 800-1000 jobs, plus community facilities
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

Policy KP2(G):EAST OF PONTPRENNAU LINK ROAD		
–Housing-based scheme of approximately 1,300 homes with associated community uses		
SA Objective	Rank	Comments
1. Help deliver	✓x	This site would provide 1,300 new homes including

equality of opportunity and access for all		significant amounts of affordable housing, and community facilities. There is the potential to provide community facilities for nearby areas. The site is not in the southern arc of deprivation, and is far from city centre. Transport impacts depend on implementation: see 2.
2. Maintain and improve air quality	x?	active attempts will be made to provide public transport and the plan aims for a 50:50 modal split (50% by car, 50% by other mode). However the site's location does not encourage this.
3. Protect and enhance biodiversity, flora and fauna	x	Dormice on site, SINC habitat NW of site
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	x	No known flood risk along developable area. Area is severed from facilities to the west by the Link Road – would need significant walking, cycling and public transport infrastructure to prevent the development from being heavily car-based
5. Protect and enhance historic and cultural heritage	x?	Three Grade II and 1 Grade II* listed buildings plus 9 historic records Archaeological features may restrict development
6. Help deliver the growth of a sustainable and diversified economy	0	Housing-based development, although could offer small-scale employment
7. Improve health and well-being	✓ x	The site would provide new areas of accessible green space, as well as a primary school, local stores and a community centre. The additional traffic from development could lead to road-related health impacts. The details depend on the masterplan.
8. Protect and enhance the landscape	x/xx?	The site is currently undeveloped; development would change this to an urban, built-up area.
9. Use natural resources efficiently and safeguard their quality	x	The land is Greenfield, with a high proportion of grade 3a agricultural land. It includes two areas of landfilling. It contains no mineral resources, and so would not sterilise them. Development could affect the water quality of the streams on site and downstream.
10. Respond to demographic changes in a sustainable way	✓✓	Development of the site would provide at least 1300 homes plus community facilities

11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste
---	---	---

Policy KP2(H): SOUTH OF ST. MELLONS BUSINESS PARK		
Employment land		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Close to the southern arc of deprivation, and could provide jobs to residents of this area. Would not provide community facilities or housing
2. Maintain and improve air quality	x?	Development is likely to be car-dependent and so worsen air quality
3. Protect and enhance biodiversity, flora and fauna	xx	Located near the Severn Estuary Ramsar/SPA/SSSI site. All of the site is in the SSSI. Development would have a significant cumulative impact on reen ecosystems
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	xx	All of the site is in a C1 flood risk area. Public transport to the area is currently poor, and existing development is car dependent; new development is also likely to be car dependent
5. Protect and enhance historic and cultural heritage	xx	All of the site is Cardiff Archaeologically Sensitive Site. Most of the site is in the CCW/CADW/ ICOMOS Caldicot and Wentloog Levels Landscape of Outstanding Historic Interest. Most of the site contains historic reens.
6. Help deliver the growth of a sustainable and diversified economy	✓	1,800-2000 jobs estimated. Claimed to provide employment and to support the regeneration of nearby deprived areas. However: (1) Not clear it is realistic to attract the proposed knowledge based jobs to Cardiff; (2) If they do come, site A would seem a better place; (3) If they do come, they are unlikely to be filled by local residents, and (4) even with better transport links they will not be very easy to access.
7. Improve health and well-being	x?	Would not improve access to open space or provide new community facilities. Would encourage the use of cars. Flooding would affect people's health
8. Protect and enhance the landscape	xx	The site is currently undeveloped; development would change this to an urban, built-up area. Most of the site is in the CCW/CADW/ ICOMOS Caldicot and Wentloog

		Levels Landscape of Outstanding Historic Interest. The site is adjacent to a proposed Special Landscape Area and the Newport Green Belt, and the area has been identified as a high quality landscape by a study undertaken in 2008.
9. Use natural resources efficiently and safeguard their quality	x	Would not reuse land or remediate contaminated land. Would have significant negative impact on water quality
10. Respond to demographic changes in a sustainable way	✓	Would help to provide jobs but not new housing
11. Minimise waste, increase re-use and recycling	x	Some of this will depend on how the site is developed. However any development will lead to a net increase in waste

SA comments and suggestions	Response	Status
<p>From an environmental perspective, this is a very poor site and recommend that it is not included in the plan. Its only real benefit is that it will provide land for the kinds of jobs that would not easily be accommodated in the city centre, and that these may be accessible for residents of Trowbridge and Rumney. From a transport perspective, it would be more sustainable to provide several smaller employment sites scattered across the city.</p>	<p>St Mellons Business Park is already an established business park, within a Strategic Location.</p> <p>A large strategic allocation coupled with the provision of modern, flexible premises is important, if Cardiff is to continue to attract inward investment, and promote high value, knowledge based activities, thus fulfilling its role within the City Region. The plan needs to provide a range and choice of sites including out of centre alternatives.</p> <p>Travel implication concerns should be reduced through the provision of smaller local employment sites within mixed use strategic allocations. Furthermore, the protection of existing strategic and locally important areas through policy planning should further</p>	x

	alleviate this concern in relation to travel, in addition to the provision of a rail link to the city centre as a result of this scheme.	
Landscape impacts cannot be mitigated	The Site Specific Principles on page 57 of the Masterplanning Framework which forms a Supporting Document to the LDP state that the Wentloog Levels Landscape of Outstanding Historic Interest will be protected. In order to ensure this it is important that the development of the site is undertaken in a sensitive manner to minimise harm. These principles will be used by the Council through the planning and design process to work with developers to design detailed masterplans.	x

Policy KP3(A) and KP3(B) appraised together because they jointly define settlement boundaries and constraints on development outside them		
<p>KP3(A) GREEN WEDGE: In order to strategically manage the urban form of Cardiff and to protect the setting of the urban area, a Green Wedge is proposed on land North of the M4 as shown on the Proposals Map. Within this area development which prejudices the open nature of this land will not be permitted. Positive biodiversity, landscape, climate change mitigation and informal recreational management and enhancement measures will be encouraged in this area to further enhance the long term role of the area as a key natural resource benefitting the city.</p> <p>KP3(B): SETTLEMENT BOUNDARIES In order to strategically manage the spatial growth of Cardiff, settlement boundaries are proposed as shown on the Proposals Map. In all areas outside the defined settlement boundaries, otherwise referred to as countryside, there will be a corresponding presumption against inappropriate development.</p>		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air	✓	Policies will help reduce air pollution by helping keep settlements compact, reducing need for motorised

quality		transport
3. Protect and enhance biodiversity, flora and fauna	✓	Policies will help maintain open countryside
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policies will help reduce air pollution by helping keep settlements compact, reducing need for motorised transport
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	?	Policies may restrict economic development outside settlements, though provision 'Where it can be demonstrated that development outside settlement boundaries is acceptable in principle, other detailed Deposit LDP policies provide the framework to consider the merits or otherwise of proposals' (4.82 of Deposit LDP) should permit genuinely justified development.
7. Improve health and well-being	✓	Policies will help maintain open countryside
8. Protect and enhance the landscape	✓✓	Policies will help maintain open countryside
9. Use natural resources efficiently and safeguard their quality	✓	Policies will help promote more compact and therefore resource efficient settlements.
10. Respond to demographic changes in a sustainable way	?	Policies will restrict development outside settlements, though provision 'Where it can be demonstrated that development outside settlement boundaries is acceptable in principle, other detailed Deposit LDP policies provide the framework to consider the merits or otherwise of proposals' (4.82 of Deposit LDP) should permit genuinely justified development.
11. Minimise waste, increase re-use and recycling	0	

Policy KP5: GOOD QUALITY AND SUSTAINABLE DESIGN

To help support the development of Cardiff as a world-class European Capital City, all

new development will be required to be of a high quality, sustainable design and make a positive contribution to the creation of distinctive communities, places and spaces by:

- (i) Responding to the local character and context of the built and landscape setting so that layout, scale, form, massing, height, density, colour, materials, detailing and impact on the built and natural heritage are all addressed within development proposals;
- (ii) Providing legible development which is easy to get around and which ensures a sense of continuity and enclosure;
- (iii) Providing a diversity of land uses to create balanced communities and add vibrancy throughout the day;
- (iv) Creating interconnected streets, squares and spaces as distinctive places, which are safe, accessible, vibrant and secure and incorporate public art where appropriate;
- (v) Providing a healthy and convenient environment for all users that supports the principles of community safety, encourages walking and cycling, enables employment, essential services and community facilities to be accessible by sustainable transport and maximises the contribution of networks of multi-functional and connected open spaces to encourage healthier lifestyles;
- (vi) Maximising renewable energy solutions;
- (vii) Achieve a resource efficient and climate responsive design that provides sustainable water and waste management solutions and minimise emissions from transport, homes and industry;
- (viii) Achieving an adaptable design that can respond to future social, economic, technological and environmental requirements;
- (ix) Promoting the efficient use of land, developing at highest practicable densities and where appropriate achieving the remediation of land contamination;
- (x) Ensuring no undue effect on the amenity of neighbouring occupiers and connecting positively to surrounding communities;
- (xi) Fostering inclusive design, ensuring buildings, streets and spaces are accessible to all users and is adaptable to future changes in lifestyle; and
- (xii) Locating Tall buildings in locations which are highly accessible through walking and public transport and within an existing or proposed cluster of tall buildings.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy aims to provide developments with an accessible and inclusive environment
2. Maintain and improve air quality	?	Policy aims to create an environment that encourages walking and cycling and reduces car usage, which may improve air quality
3. Protect and enhance biodiversity, flora	✓	Good design can protect and enhance biodiversity interest

and fauna		
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓✓	Policy aims to provide adaptable developments that mitigate and adapt to the effects of climate change both now and in the future
5. Protect and enhance historic and cultural heritage	✓	Good design can protect historic and cultural heritage
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy should support development of sustainable design and construction expertise and capability
7. Improve health and well-being	✓	Policy aims to provide developments that facilitate and encourage walking and cycling and provide networks of multi-functional open space for recreation
8. Protect and enhance the landscape	✓	Policy aims to provide developments that take into account landscape setting
9. Use natural resources efficiently and safeguard their quality	✓	Policy aims to provide resource efficient developments
10. Respond to demographic changes in a sustainable way	✓	Policy aims to provide developments that responds to future requirements
11. Minimise waste, increase re-use and recycling	✓	Policy aims to provide development with integrated sustainable waste management solutions

Policies KP6 and KP7 appraised together because both are concerned with securing necessary public provisions in new development

KP6: NEW INFRASTRUCTURE

New development will make appropriate provision for, or contribute towards, all essential, enabling and necessary infrastructure required as a consequence of the proposed development in accordance with Planning Policy Guidance. Such infrastructure will be delivered in a timely manner to meet the needs of existing and planned communities and includes the following aspects which may be required having

regard to the nature, scale and location of the proposed development:

Essential / Enabling Infrastructure:

- Transportation and highways including access, circulation, parking, public transport provision, walking and cycling;
- Utility services;
- Flood mitigation / defences;

Necessary Infrastructure:

- Affordable Housing;
- Schools and education;
- Health and social care;
- Community buildings and facilities including District and Local Centre improvements;
- Local employment and training including replacement employment opportunities where relevant;
- Community safety initiatives;
- Open space, recreational facilities, playgrounds, allotments;
- Protection, management, enhancement and mitigation measures relating to the natural and built environment;
- Public realm improvements and public art;
- Waste management facilities including recycling and services;
- District heating and sustainable energy infrastructure;

KP7: PLANNING OBLIGATIONS

Planning obligations will be sought to mitigate any adverse impacts of development and will be assessed on a case by case basis in line with Planning Policy Guidance.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓?	The requirements have potential to avoid negative impacts and impact positively on all SA objectives, depending on how they are applied.
2. Maintain and improve air quality	✓?	
3. Protect and enhance biodiversity, flora and fauna	✓?	

4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓?	
5. Protect and enhance historic and cultural heritage	✓?	
6. Help deliver the growth of a sustainable and diversified economy	✓?	
7. Improve health and well-being	✓?	
8. Protect and enhance the landscape	✓?	
9. Use natural resources efficiently and safeguard their quality	✓?	
10. Respond to demographic changes in a sustainable way	✓?	
11. Minimise waste, increase re-use and recycling	✓?	

Policy KP8: SUSTAINABLE TRANSPORT
<p>Development in Cardiff will be integrated with transport infrastructure and services in order to:</p> <ul style="list-style-type: none"> (i) Achieve the target of a 50:50 modal split between journeys by car and journeys by walking, cycling and public transport. (ii) Reduce travel demand and dependence on the car; (iii) Enable and maximise use of sustainable and active modes of transport; (iv) Integrate travel modes; (v) Provide for people with particular access and mobility requirements; (vi) Improve safety for all travellers;

(vii) Maintain and improve the efficiency and reliability of the transport network; (viii) Support the movement of freight by rail or water; and (ix) Manage freight movements by road and minimise their impacts.		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy aims to improve access to jobs, community facilities and services by sustainable modes of transport
2. Maintain and improve air quality	✓	Policy aims to reduce reliance on private car and encourage the use of sustainable transport
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy aims to provide an integrated sustainable transport system and reduce the use of the private car
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy aims to enable sustainable travel, for all, to employment sites
7. Improve health and well-being	✓	Policy aims to encourage and facilitate walking and cycling by providing safe and attractive routes
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	✓	Policy aims to meet the needs of the population in terms of access via sustainable transport to services, facilities and employment

11. Minimise waste, increase re-use and recycling	0	
---	---	--

Policy KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS		
Provision will be made for a range and choice of new employment sites including those identified in KP2 for different types of employment and in different geographical locations to effectively deliver the level of growth set out in the plan together with putting in place a framework to protect the role of existing employment land		
SA comments and suggestions	Response	Status
Policy as now drafted cannot be meaningfully appraised since it merely says 'provision will be made ...' without saying what, where, when how much etc. The SA appraises specific provisions in the other policies where they occur.		

Policy KP10: CENTRAL AND BAY BUSINESS AREAS		
The following uses are considered appropriate within the Central and Bay Business Areas: (i) New offices, residential and commercial leisure uses within the Central and Bay Business Areas; (ii) Enhanced retail and complementary facilities within the Central Shopping Area; and (iii) Other uses most appropriately located in city centres.		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Opportunities for employment options and leisure facilities with good existing transport links from across city
2. Maintain and improve air quality	✓	Locations support existing infrastructure and could encourage the use of sustainable transport to access them. However, further focussed development in these areas may increase air pollution from traffic without mitigation
3. Protect and enhance biodiversity, flora and fauna	✗	Increased visitors to the bay area may increase disturbance (including on water activities) to wildfowl, and fish nurseries

4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy likely to encourage and promote a shift to sustainable transport
5. Protect and enhance historic and cultural heritage	0	[policy doesn't say anything one way of the other]
6. Help deliver the growth of a sustainable and diversified economy	✓	These areas have good transport links and development may support and enhance the city centre
7. Improve health and well-being	✓	Policy aims to provide new leisure facilities, which contribute to health and well being
8. Protect and enhance the landscape	✓	Policy favours development that supports the attractiveness of the city centre
9. Use natural resources efficiently and safeguard their quality	✓	Policy supports continued regeneration and remediation of the Bay business area
10. Respond to demographic changes in a sustainable way	✓	Policy meets the needs for jobs, retail and leisure facilities
11. Minimise waste, increase re-use and recycling	0	

Policy KP11: CRUSHED ROCK AGGREGATES AND OTHER MINERALS
Cardiff will maintain a steady and adequate supply of minerals and contribute to regional aggregate supplies by:
(i) Promoting and supporting the efficient use of minerals and use of alternatives to naturally occurring minerals including the re-use of secondary aggregates;
(ii) Protecting existing mineral reserves and safeguarding potential resources of limestone, coal and sand and gravel from development that would preclude their future extraction;
(iii) Maintaining a minimum 10 year land bank of permitted crushed rock aggregate

reserves in line with national guidance:

iv) Supporting appropriate applications for sand and gravel extraction; and

v) Safeguarding wharves from development that would prevent their use for landing marine dredged sand and gravel.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	✘	Dust and road transport associated with minerals extract may reduce air quality
3. Protect and enhance biodiversity, flora and fauna	?	Potential for habitat loss There may be opportunities for habitat restoration/ creation once quarries are no longer in use
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	?	Sustained levels of transport and energy intensive activities associated with mining/ quarrying minerals
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Efficiently used and well managed minerals resources could help to support the economy in the long term, particularly the construction sector
7. Improve health and well-being	✘	There may be impacts to health from noise and air pollution associated with the extraction of minerals
8. Protect and enhance the landscape	✘	Minerals extraction invariably results in landscape impacts due to excavation
9. Use natural resources efficiently and safeguard their quality	✓	Policy aims to safeguard mineral resources and encourage the efficient use Potential negative impact upon local water quality without mitigation
10. Respond to demographic changes in a sustainable way	✓	Policy aims to ensure that there are mineral reserves for future use

11. Minimise waste, increase re-use and recycling	✓	Policy encourages the efficient use of minerals and the recycling of secondary aggregates, may help to reduce waste from the construction industry
---	---	--

Policy KP12: WASTE		
Waste arising from Cardiff will be managed by:		
(i) Promoting and supporting additional sustainable waste treatment facilities, measures and strategies in accordance with the Collections, Infrastructure and Markets Sector Plan (2012) and TAN 21 (2014) in a manner that follows the waste hierarchy and the principles of an integrated and adequate network of waste installations; nearest appropriate installation; self-sufficiency and protection of human health and the environment;		
(ii) Encouraging the provision of in-building treatment facilities on existing and allocated areas of general industry;		
(iii) Supporting the provision and maintenance of sustainable waste management storage and collection arrangements in all appropriate new developments; and		
(iv) Supporting waste prevention and reuse and the provision of facilities that use recycled or composted products.		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	?	Policy may help to reduce road traffic associated with waste management by integrating management facilities with waste producer, however potential issues with dust and odour
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy may reduce the need to transport waste, reducing any transport related emissions Policy encourages resource efficiency, reuse and recycling
5. Protect and enhance historic and cultural	0	

heritage		
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy will encourage growth and jobs in the waste management sector
7. Improve health and well-being	✓ / ?	Locating waste management facilities within developments may impact on health of residents/ employees
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	✓	Policy seeks to promote resource efficiency and recycling and may reduce the need for land for land filling purposes
10. Respond to demographic changes in a sustainable way	✓	Policy may help to ensure that waste management facilities can cope with future waste arisings Provision of community facility
11. Minimise waste, increase re-use and recycling	✓✓	Policy promotes resource efficiency, reuse and recycling
SA comments and suggestions		
Suggest putting indent iv first to signal primacy of reducing waste		Disagree. Criteria are not ranked in order of importance, with equal weight afforded to each, so there is no need to reorder.
		✘

Policy KP13: RESPONDING TO EVIDENCED SOCIAL NEEDS
A key part of the successful progression of the city will be to develop sustainable neighbourhoods, tackle deprivation, and improve the quality of life for all. This will be achieved through:
<ul style="list-style-type: none"> (i) Providing a range of dwelling sizes, types and affordability including seeking to provide a target of 6,646 affordable dwellings over the remaining 12 years of Plan period ; (ii) Supporting the vitality, viability and attractiveness of existing District and Local Centres and their regeneration, including retail and other commercial development and housing of an appropriate scale; (iii) Encouraging the provision of a full range of social, health, leisure and education facilities and community infrastructure for both existing and new communities

that are accessible to all by walking and cycling and public transport;

- (iv)** Supporting the regeneration of deprived communities within the city and maximising the additional benefits that new communities can bring to adjoining or surrounding communities;
- (v)** Encouraging the enhancement of communities through better equality of access to services for all, promoting cultural and wider diversity for all groups in society, and creating places that encourage social interaction and cohesion;
- (vi)** Developing new cultural and sporting facilities to build upon Cardiff's role as a major tourist, cultural and sporting destination for visitors and residents alike; and
- (vii)** Designing out crime and creating communities which are safer and feel safer.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓✓	Policy strongly compatible with the SA Objective; aims to provide housing and address existing deprivation issues, provide cultural, sporting and community facilities and ensure that existing neighbourhoods benefit from the infrastructure brought forward from new neighbourhood created over the plan period
2. Maintain and improve air quality	✓	Policy aims to support local and district centres, and their regeneration. This may help to reduce the need to travel
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Provision of local and accessible facilities
5. Protect and enhance historic and cultural heritage	✓	Policy seeks to promote cultural diversity
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy aims to support district and local centres Policy aims to support the regeneration of deprived areas

7. Improve health and well-being	✓	Policy aims to provide new sporting facilities Policy aims to design out crime and create communities where people are safe and feel safe
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	✓	Policy aims to provide community facilities to meet needs
11. Minimise waste, increase re-use and recycling	0	

Policy KP14: HEALTHY LIVING		
Cardiff will be made a healthier place to live by seeking to reduce health inequalities through encouraging healthy lifestyles, addressing the social determinants of health and providing accessible health care facilities. This will be achieved by supporting developments which provide for active travel, accessible and useable green spaces, including allotments.		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy aims to reduce health inequalities
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	?	Providing green spaces may provide opportunities for biodiversity enhancements
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	?	Policy encourages active travel.

5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	?	Providing allotments may help to encourage community/ social enterprise, with potential benefits to deprived areas of the city
7. Improve health and well-being	✓✓	Policy aims to promote healthy living and reduce health inequalities Policy aims to improve access to open spaces for recreation
8. Protect and enhance the landscape	?	Provision of green space may provide opportunities for landscape/ townscape enhancement
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	✓	Policy aims to provide accessible community green space
11. Minimise waste, increase re-use and recycling	0	

Policy KP15: CLIMATE CHANGE
To mitigate against the effects of climate change and adapt to its impacts, development proposals should take into account the following factors:
(i) Reducing carbon emissions;
(ii) Protecting and increasing carbon sinks;
(iii) Adapting to the implications of climate change at both a strategic and detailed design level;
(iv) Promoting energy efficiency and increasing the supply of renewable energy;
(v) Avoiding areas susceptible to flood risk in the first instance in accordance with the sequential approach set out in national guidance; and
(vi) Preventing development that increases flood risk.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	?	Measures to reduce carbon emissions may have potential benefits to air quality
3. Protect and enhance biodiversity, flora and fauna	?	Policy aims to protect and increase carbon sinks, which may provide benefits to biodiversity.
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓?	Policy aims ensure that new developments take account of the causes and consequences of climate change
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	0	
7. Improve health and well-being	0	Policy may help to reduce health related impacts related with flood risk
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	✓?	Policy aims to promote energy efficiency and renewable energy
10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	0	
SA comments and suggestions		
Response		Status
'take into account the following factors' is		Disagree as this is already ~

insufficient to provide grounds for turning down unsupportive development. Suggest replace with 'should, to the maximum extent practical ... '	implied in the policy wording and, in reality, the additional wording does not have a significant policy impact	
--	---	--

Policy KP16: GREEN INFRASTRUCTURE

Cardiff's distinctive natural heritage provides a network of green infrastructure which will be protected, enhanced, and managed to ensure the integrity and connectivity of this multi-functional green resource is maintained.

Protection and conservation of natural heritage network needs to be reconciled with the benefits of development. Proposed development should therefore demonstrate how green infrastructure has been considered and integrated into the proposals. If development results in overall loss of green infrastructure, appropriate compensation will be required.

Natural heritage assets are key to Cardiff's character, value, distinctiveness and sense of place. They include the city's:

- i). Undeveloped countryside and coastline (EN1 and EN2);
- ii). Landscape, geological and heritage features which contribute to the City's setting (EN3);
- iii). Strategically important river valleys of the Ely, Taff, Nant Fawr and Rhymney (EN4);
- iv). Biodiversity interests including designated sites and the connectivity of priority habitats and species (EN5, EN6 and EN7);
- v). Trees (including street trees), woodlands and hedgerows (EN8);
- vi). Strategic recreational routes, cycleways and the public rights of way network (T5, T6 and T8);
- vii). Parks, playing fields, green play areas and open spaces (C3, C4 and C6);
- viii). Growing spaces including allotments, community orchards and larger gardens (C5); and
- ix). Holistic integrated surface water management systems (EN10).

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	✓	Policy aims to protect and enhance Cardiff's biodiversity resources; vegetation provides carbon sinks and can help improve air quality
3. Protect and enhance	✓✓	Policy aims to protect and enhance Cardiff's biodiversity assets (including designated sites)

biodiversity, flora and fauna		
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy aims to maintain and develop recreational routes which reduce the need for motorised travel, and vegetation which can help adapt to climate change
5. Protect and enhance historic and cultural heritage	✓	Policy aims to protect and enhance the city's historic parks and gardens
6. Help deliver the growth of a sustainable and diversified economy	?	Policy could restrict availability of sites for development , but natural assets provide attractive environment for investment
7. Improve health and well-being	✓	Policy aims to maintain and enhance the city's parks and open spaces for recreation
8. Protect and enhance the landscape	✓	Policy aims to protect and enhance the city's river valleys, open spaces, countryside and coastal settings
9. Use natural resources efficiently and safeguard their quality	✓	Safeguarding water resources and natural assets
10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	0	

Policy KP17: BUILT HERITAGE		
Cardiff's distinctive heritage assets will be protected, managed and enhanced, in particular the character and setting of its Scheduled Ancient Monuments; Listed Buildings; Registered Historic Landscapes, Parks and Gardens; Conservation Areas; Locally Listed Buildings and other features of local interest that positively contribute to the distinctiveness of the city.		
SA Objective	Rank	Comments
1. Help deliver equality of	0	

opportunity and access for all		
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	✓	Policy aims to protect and enhance the city's historic parks and gardens
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	0	
5. Protect and enhance historic and cultural heritage	✓✓	Policy aims to protect and enhance nationally and locally important historic and cultural assets
6. Help deliver the growth of a sustainable and diversified economy	✓ / ?	Policy could restrict suitability of site, but heritage assets provide attractive environment for investment
7. Improve health and well-being	✓	Protection of built heritage will contribute to quality of life
8. Protect and enhance the landscape	✓	Policy aims to protect and enhance the city's historic parks and gardens
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	0	

Policy KP18: NATURAL RESOURCES
In the interests of the long-term sustainable development of Cardiff, the city's natural resources development proposals must take full account of the need to minimise

impacts on the city's natural resources and minimise pollution, in particular the following elements:

- (i) Protecting the best and most versatile agricultural land;
- (ii) Protecting the quality and quantity of water resources, including underground, surface and coastal waters;
- (iii) Minimising air pollution from industrial, domestic and road transportation sources and managing air quality; and
- (iv) Remediating land contamination through the redevelopment of contaminated sites.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	✓	Policy aims to manage air quality and minimise air pollution
3. Protect and enhance biodiversity, flora and fauna	✓	Policy aims to protect agricultural land and water resources
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy aims to minimise air pollution which may reduce greenhouse gases
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy aims to protect best and most versatile agricultural land, with potential benefits to the rural economy
7. Improve health and well-being	✓	Policy aims to minimise air pollution with associated health benefits
8. Protect and enhance the landscape	✓	Remediation of contaminated land will enhance the landscape
9. Use natural resources	✓✓	Policy aims to safeguard soil quality, water resources and remediate and redevelop contaminated land

efficiently and safeguard their quality		
10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	0	
SA comments and suggestions		
SA comments and suggestions	Response	Status
Suggest removing the phrase 'take full account of the need to minimise impacts on the city's natural resources and minimise pollution, in particular the following elements:' which weakens the policy.	Disagree – as worded, the policy correctly identifies key issues to be taken account of and considered along with other policies which may promote the need for development or relate to other constraints. Deleting as suggested would make the policy too rigid, inflexible and out of context with the Plan as a whole.	~

DETAILED POLICIES

H1: NON-STRATEGIC HOUSING SITES

Policy H1: NON-STRATEGIC HOUSING SITES			
Table 3: SUMMARY OF NON-STRATEGIC HOUSING SITES			
Site Ref.	Site Name	Estimated Units	Site Size (Ha)
H1.1	Land at Areas 9-12, St Mellons	150	3.98
H1.2	Land rear of Clive Street	80	2.87
H1.3	Rookwood Hospital	<u>90</u>	<u>3.40</u>
H1.4	Former Lansdowne Hospital	75	1.51
H1.5	Land at Dan-y-Garth, Pentrych	<u>47</u>	2.49
H1.6	Land at former St John's College	<u>64</u>	2.50
H1.7	Ely Bridge Farm, Dyfrig Road. Ely	<u>41</u>	0.72

H1.9	Land at Mill Road, Tongwynlais	5	0.40
SA Objective	Rank	Comments	
1. Help deliver equality of opportunity and access for all	✓	Sites will help meet housing need	

2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	✓/✗	Some sites have biodiversity issues
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓/✗	Most, but not all, sites have good public transport. Some have (manageable) flood risks
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	0	
7. Improve health and well-being	0	
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	✓	Sites are generally brownfield in need of improvement
10. Respond to demographic changes in a sustainable way	✓	Sites address housing need.
11. Minimise waste, increase re-use and recycling	0	

Policies H2, H4, H5, H6 (Appraised together because they form a coherent package governing protection and provision of land for housing uses)

H2: CONVERSION TO RESIDENTIAL USE

Within the Central Business Area of the city centre, District and Local centres, as defined

on the Proposals Map, the conversion of suitable vacant space above commercial premises to residential use will be favoured where:

- (i) Adequate servicing and security can be maintained to the existing commercial use(s);
- (ii) Appropriate provision can be made for parking, access, pedestrian access, amenity space, and refuse disposal together with any appropriate external alterations and;
- (iii) The residential use does not compromise the ground floor use.

H4: CHANGE OF USE OF RESIDENTIAL LAND OR PROPERTIES

Outside the Central and Bay Business Areas and District and Local Centres, identified on the Proposals Map, conversion or redevelopment of residential properties to other use will only be permitted where:

- (i) The premises or their location are no longer suitable for residential use; or
- (ii) The proposal is for a community use necessary within a residential area; or
- (iii) There would be no unacceptable impact on residential amenity.

H5: SUB-DIVISION OR CONVERSION OF RESIDENTIAL PROPERTIES

Proposals for any conversion to flats or Houses in Multiple Occupation will be permitted where:

- (i) The property is of a size whereby the layout, room sizes, range of facilities and external amenity space of the resulting property would ensure an adequate standard of residential amenity for future occupiers.
- (ii) There would be no material harm to the amenity of existing, nearby residents by virtue of general disturbance, noise or overlooking.
- (iii) The cumulative impact of such conversions will not adversely affect the amenity and/or the character of the area.
- (iv) Does not have an adverse effect on local parking provision

H6: CHANGE OF USE OR REDEVELOPMENT TO RESIDENTIAL USE

Change of use of redundant premises or redevelopment of redundant previously developed land for residential use will be permitted where:

- (i) There is no overriding need to retain the existing use of the land or premises and no overriding alternative local land use requirement;
- (ii) The resulting residential accommodation and amenity will be satisfactory;
- (iii) There will be no unacceptable impact on the operating conditions of existing businesses;
- (iv) Necessary community and transportation facilities are accessible or can be readily provided or improved; and
- (v) It can be demonstrated that the change of use to a more sensitive end use has been assessed in terms of land contamination risk and that there are no an unacceptable risk to the end users.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	?	Policies will prevent some conversions and reuse of premises.
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	0	
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	H2 and H6 prevent loss of land and premises needed for employment.
7. Improve health and well-being	✓	These policies collectively aim to ensure that changes to and from residential use do not adversely affect well-being
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	✓	These policies collective aim to allow reuse and redevelopment of buildings to meet future needs
10. Respond to demographic changes in a sustainable way	✓	These policies collective aim to allow reuse and redevelopment of buildings to meet future needs
11. Minimise waste, increase re-use and recycling	0	

Policy H3: AFFORDABLE HOUSING

The Council will seek 20% affordable housing on brownfield sites and 30% affordable housing on Greenfield sites in all residential proposals that:

- (i) Contain 5 or more new dwellings; or
- (ii) Sites of or exceeding 0.1 hectares in gross site area; or Where adjacent and related residential proposals result in combined numbers or site size areas exceeding the above thresholds, the Council will seek affordable housing based on the affordable housing target percentages set out above

Affordable housing will be sought to be delivered on-site in all instances unless there are exceptional circumstances

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy will help ensure access to housing for all.
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	0	
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy will help ensure access to housing for all. Viability criterion should ensure the policy does not prevent development.
7. Improve health and well-being	✓	Policy will help ensure access to housing for all.
8. Protect and enhance the	0	

landscape		
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	✓	Policy will help ensure access to housing for all.
11. Minimise waste, increase re-use and recycling	0	

Policy H7: SITES FOR GYPSY AND TRAVELLER CARAVANS		
<p>New sites and extensions to existing sites will be permitted where:</p> <p>(i) Necessary physical, transport and social infrastructure are accessible or can be readily provided;</p> <p>(ii) Environmental factors including flood risk, ground stability, land contamination and proximity of hazardous installations do not make the site inappropriate for residential development;</p> <p>(iii) The site is designed in line with the Welsh Government Good Practice Guide in Designing Gypsy Traveller Sites.</p> <p>(iv) There would be no unreasonable impact on the character and appearance of the surrounding areas including impact on residential amenity of neighbouring occupiers or the operating conditions of existing businesses</p> <p>(v) In the case of a transit or touring site, it has good access to the primary highway network.</p>		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy allows extensions and new sites where relevant conditions met
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	0	

4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	0	
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy aims to provide for travellers' needs where this does not impact on the operating conditions of existing businesses.
7. Improve health and well-being	✓	Policy aims to safeguard the amenity of both travellers and existing residents.
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	✓	Policy aims to provide for travellers' needs.
11. Minimise waste, increase re-use and recycling	0	

<p>Policy EC1, EC2, EC3, EC4, EC5, EC6, EC7</p> <p>(Appraised together because they form a coherent package governing protection and provision of land for economic uses)</p> <p>EC1: EXISTING EMPLOYMENT LAND</p> <p>The city's existing employment areas outside of the Central and Bay Business Areas (as designated on the Proposals Map) will be protected for B class employment generating uses (together with appropriate ancillary and/or complementary uses and activities as referred to in Policy EC2) as described in the table below.</p> <p>EC2: PROVISION OF COMPLEMENTARY FACILITIES FOR EMPLOYEES IN BUSINESS, INDUSTRIAL AND WAREHOUSING DEVELOPMENTS</p>

Provision for open space, public realm, leisure, food and drink, and child-care facilities will be appropriate in office, industrial and warehousing developments, provided, the facility is of an appropriate scale and nature intended primarily to meet the needs of workers in the vicinity, therefore not attracting significant levels of visitor traffic into the area, or exacerbating existing traffic conditions.

EC3: ALTERNATIVE USE OF EMPLOYMENT LAND AND PREMISES

Development of business, industrial and warehousing land and premises for other uses will only be permitted if:

(i) The land or premises are no longer well-located for business, industrial or warehousing use; or

(ii) There is no realistic prospect of employment use on the site and / or the property is physically unsuitable for employment use, even after adaption / refurbishment or redevelopment; or

(iii) There is no need to retain the land or premises for business, industrial or warehousing use, having regard to the demand for such land and premises and the requirement to provide for a range and choice of sites available for such use; and

(iv) There will be no unacceptable impact on the operating conditions of existing businesses.

EC4: PROTECTING OFFICES IN THE CENTRAL AND BAY BUSINESS AREAS

The alternative use of offices within the Central and Bay Business Areas will only be permitted where it can be demonstrated that there is no need to retain the site or premises for office use having regard to the demand for offices and the requirement to provide a range and choice of sites available for such use.

EC5: HOTEL DEVELOPMENT

Proposals for hotel development will be favoured:

(i) Within the Central and Bay Business Areas of the city centre;

(ii) In appropriate locations for the conversion of suitable residential or commercial properties;

(iii) At other locations within the urban area, if there is no need to preserve the site for its existing or allocated use, assessed against the relevant policies of the plan;

Subject to considerations of scale, location, design, amenity and transportation being acceptable.

EC6: NON-STRATEGIC EMPLOYMENT SITE

Land is allocated for university related research and development uses at Maindy Road, Cathays (3.53ha)

EC7: EMPLOYMENT PROPOSALS ON LAND NOT IDENTIFIED FOR EMPLOYMENT USE

Proposals for employment use (B Use Class) on unallocated sites will be permitted

provided that:-

- i. The proposal cannot reasonably be accommodated on existing employment land and in the case of offices in the Central Enterprise Zone (Policy KP2) and the Central and Bay Business Areas (Policy EC4);
- ii. The site falls within the settlement boundary and has no specific policy designation;
- iii. The use is compatible with uses in the surrounding area and;
- iv. The proposal is well related to the primary highway network and accessible to sustainable modes of transport

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	These policies together aim to protect existing economic uses and allow new ones in appropriate locations consistent with the LDP's overall spatial strategy.
2. Maintain and improve air quality	✓	These policies aim to avoid unnecessary traffic generation from economic activities.
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	These policies aim to avoid unnecessary traffic generation from economic activities.
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	These policies together aim to protect existing economic uses and allow new ones in appropriate locations consistent with the LDP's overall spatial strategy.

9. Use natural resources efficiently and safeguard their quality	0	

10. Respond to demographic changes in a sustainable way	✓	These policies together aim to protect existing economic uses and allow new ones in appropriate locations consistent with the LDP's overall spatial strategy.
11. Minimise waste, increase re-use and recycling	0	

Policy EN1 and EN2
Appraised together because together they govern new and altered building in the countryside
<p>EN1: COUNTRYSIDE PROTECTION</p> <p>Development in the countryside, beyond the settlement boundaries identified on the Proposals Map, will only be permitted where the use is appropriate in the countryside, respects the landscape character and quality and biodiversity of the site and surrounding area and where it is appropriate in scale and design. A landscape assessment and landscaping scheme will be required for significant development proposals. Proposals for new housing, rural diversification and rural enterprise, will only be permitted where they comply with National Planning Policy.</p> <p>EN2: CONVERSION, EXTENSION AND REPLACEMENT BUILDINGS IN THE COUNTRYSIDE</p> <p>There will be a presumption against conversion, extension and replacement of buildings in Cardiff's countryside except where:</p> <p>a. The proposed conversion is demonstrated to:</p> <ul style="list-style-type: none"> (i) be structurally sound and capable of being made so without major alterations, reconstructing or extensions; (ii) be possible without materially changing the existing character of the building or have a harmful effect on the countryside; (iii) Not give rise to a demand for additional buildings; and (iv) Be suitable for the proposed re-use. <p>b. The proposed extension is demonstrated to:</p> <ul style="list-style-type: none"> (i) be the subordinate part of the existing building; and (ii) Respect the scale, character and design of the original part of the building within its countryside and landscape setting. <p>c. The proposed replacement building is demonstrated to:</p> <ul style="list-style-type: none"> (i) Not result in any greater impact on the quality and character of the surrounding area in terms of its proposed scale and design, including any residential curtilage; (ii) Be on the footprint of the existing building unless relocation can be justified in terms of either being part of an existing group or improving the countryside or landscape setting; and (iii) Not replace any building of architectural, historic or visual merit. <p>All proposals should be of an appropriate scale and design and be at least as sympathetic in its setting as the existing building.</p>

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	x	Policies will prevent some development in the countryside
2. Maintain and improve air quality	✓	Policies are likely to reduce traffic generation
3. Protect and enhance biodiversity, flora and fauna	✓	Policies will prevent loss of land to buildings in the countryside
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policies are likely to reduce traffic generation
5. Protect and enhance historic and cultural heritage	✓	Policies aim to prevent loss of buildings of architectural, historic or visual merit and ensure new construction is sympathetic to its surroundings
6. Help deliver the growth of a sustainable and diversified economy	x	Policies will prevent some rural diversification
7. Improve health and well-being	0	
8. Protect and enhance the landscape	✓	Policies aim to prevent loss of buildings of architectural, historic or visual merit and ensure new construction is sympathetic to its surroundings
9. Use natural resources efficiently and safeguard their quality	✓	Policies aim to conserve existing buildings unless there are good reasons to the contrary
10. Respond to demographic changes in a sustainable way	x	Policies will prevent some rural diversification
11. Minimise waste, increase re-use and recycling	✓	Policies aim to conserve existing buildings unless there are good reasons to the contrary

Policy EN3: LANDSCAPE PROTECTION		
<p>Development will not be permitted that would cause unacceptable harm to the character and quality of the landscape and setting of the city.</p> <p>Particular priority will be given to protecting, managing and enhancing the character and quality of the following Special Landscape Areas:</p> <ul style="list-style-type: none"> i). St Fagans Lowlands and the Ely Valley ii). Garth Hill Uplands and the Pentyrch Ridges and Valleys; iii). Fforest Fawr and Caerphilly Ridge; iv). Wentloog Levels; and v). Flat Holm <p>A landscape assessment and landscaping scheme will be required for significant development proposals.</p>

11. Minimise waste, increase re-use and recycling	0	

<p>Policies EN4, EN5, EN6, EN7, EN8, EN9</p> <p>Appraised together because they form a coherent package concerned with protecting valuable elements and features of Cardiff's environment</p> <p>EN4: RIVER CORRIDORS</p> <p>The Natural Heritage, character and other key features of Cardiff's river corridors will be protected, promoted and enhanced, together with facilitating sustainable access and recreation.</p> <p>EN5: DESIGNATED SITES</p> <p>Development will not be permitted that would cause unacceptable harm to sites of international or national nature conservation importance. Development proposals that would affect locally designated sites of nature conservation and geological importance should maintain or enhance the nature conservation and/or geological importance of the designation.</p> <p>Where this is not the case and the need for the development outweighs the nature conservation importance of the site, it should be demonstrated that there is no satisfactory alternative location for the development which avoids nature conservation impacts, and compensation measures designed to ensure that there is no reduction in the overall nature conservation value of the area or feature.</p> <p>EN6: ECOLOGICAL NETWORKS AND FEATURES OF IMPORTANCE FOR BIODIVERSITY</p> <p>Development will only be permitted if it does not cause unacceptable harm to:</p> <ul style="list-style-type: none"> (i) Landscape features of importance for wild flora and fauna, including wildlife corridors and 'stepping stones' which enable the dispersal and functioning of protected and priority species; (ii) Networks of importance for landscape or nature conservation. <p>Particular priority will be given to the protection, enlargement, connectivity and</p>
--

management of the overall nature of semi natural habitats.

Where this is not the case and the need for the development outweighs the nature conservation importance of the site, it should be demonstrated that there is no satisfactory alternative location for the development and compensatory provision will be made of comparable ecological value to that lost as a result of the development.

EN7: PRIORITY HABITATS AND SPECIES

Development proposals that would have a significant adverse effect on the continued viability of habitats and species which are legally protected or which are identified as priorities in the UK or Local Biodiversity Action Plan will only be permitted where:

- (i) The need for development outweighs the nature conservation importance of the site;
- (ii) The developer demonstrates that there is no satisfactory alternative location for the development which avoids nature conservation impacts; and
- (iii) Effective mitigation measures are provided by the developer.

Where harm is unavoidable it should be minimised by effective mitigation to ensure that there is no reduction in the overall nature conservation value of the area. Where this is not possible, compensation measures designed to conserve, enhance, manage and, where appropriate, restore natural habitats and species should be provided.

EN8: TREES, WOODLANDS AND HEDGEROWS

Development will not be permitted that would cause unacceptable harm to trees, woodlands and hedgerows of significant public amenity, natural or cultural heritage value, or that contribute significantly to mitigating the effects of climate change.

EN9: CONSERVATION OF THE HISTORIC ENVIRONMENT

Development relating to any of the heritage assets listed below (or their settings) will only be permitted where it can be demonstrated that it preserves or enhances that asset’s architectural quality, historic and cultural significance, character, integrity and/or setting.

- (i) Scheduled Ancient Monuments;
- (ii) Listed Buildings and their curtilage structures;
- (iii) Conservation Areas;
- (iv) Archeologically Sensitive Areas;
- (v) Registered Historic Landscapes, Parks and Gardens; or
- (vi) Locally Listed Buildings of Merit and other historic features of interest that positively contribute to the distinctiveness of the city.

SA Objective	Rank	Comments

10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	0	

Policy EN10 and EN11

Appraised together because they specify the methods and aims of sustainable water resource management

EN10: WATER SENSITIVE DESIGN

Development should demonstrate the incorporation of water sensitive urban design solutions (the process of integrating water cycle management with the built environment through planning and urban design). To include the management of:

- (i) Water demand and supply;
- (ii) Waste water and pollution;
- (iii) Rainfall and runoff;
- (iv) Watercourses and water resource;
- (v) Flooding; and
- (vi) Water pathways.

EN11: PROTECTION OF WATER RESOURCES

Development will not be permitted that would cause unacceptable harm to the quality or quantity of underground, surface or coastal waters.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	✓	Policies will minimise pressure on biodiversity from changes to water resources
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	0	
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	0	
7. Improve health and well-being	0	
8. Protect and	? / ✓	

enhance the landscape		
9. Use natural resources efficiently and safeguard their quality	✓	Policies will safeguard water resources and promote their efficient use.
10. Respond to demographic changes in a sustainable way	✓	Minimising pressure on water resources will help keep 'headroom' for further development as needed.
11. Minimise waste, increase re-use and recycling	✓	Policies promote efficient use of water resources.
SA comments and suggestions		
SA comments and suggestions	Response	Status
EN 10: Suggest replace title with 'water sensitive design' because no reason to privilege 'innovative' methods over old ones that work.	Done	✓
Suggest replace 'should demonstrate the incorporation of' with 'apply'	Done	✓
Could these policies usefully be combined?	Not supported: there are distinct differences between the policies and their intended effect	✓
SUDS not specified in the policy though mentioned in the supporting text – would it be helpful to include this standard term?	No: it is intended to expand the approach beyond SUDS and to refer to it specifically within the policy may lead to a focus on SUDS rather than consideration of wider water management solutions incorporating SUDS.	✓

Policy EN12: RENEWABLE ENERGY AND LOW CARBON TECHNOLOGIES		
<p>Development proposals are required to maximise the potential for renewable energy. The Council will encourage developers of major and strategic sites to incorporate schemes which generate energy from renewable and low carbon technologies. This includes opportunities to minimise carbon emissions associated with the heating, cooling and power systems for new development.</p> <p>An independent energy assessment investigating the financial viability and technical feasibility of incorporating such schemes will be required to support applications.</p>

SA comments and suggestions		
SA comments and suggestions	Response	Status
This policy provides stronger and clearer protection than KP18 and partly overlaps KP16 and EN4-9. Suggest deleting KP18 and reducing repetition between other policies	EN4-9 relate specifically to river valleys, LNRs, ecological networks etc whereas EN13 is a generic policy which will cover all developments regardless of whether they fall within a statutorily designated area for example.	~

Policy EN14: FLOOD RISK		
Development will not be permitted:		
<p>i. Within tidal or fluvial flood plains unless it can be demonstrated that the site is justified in line with national guidance and an appropriate detailed technical assessment has been undertaken to ensure that the development is designed to alleviate the threat and consequences of flooding over its lifetime;</p> <p>ii. Where it would increase the risk of flooding from fluvial and/or tidal flooding or from additional run-off from the development in any location;</p> <p>iii. Where it would hinder future maintenance or improvement schemes of flood defences and watercourses;</p> <p>iv. Where it would cause adverse effects on the integrity of tidal or fluvial defences;</p> <p>v. Where ground floor bedrooms are proposed in areas at high risk of flooding.</p> <p>Where appropriate the developer should demonstrate that they have considered the need to incorporate environmentally sympathetic flood risk mitigation measures such as Sustainable Urban Drainage Systems (SUDS).</p>		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Will avoid vulnerable people being pushed into housing with high flood risk
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora	0	

and fauna		
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	LFRRMS and guidance for carrying out FCAs include taking account of effects of climate change, so the policy will help adaptation.
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	0	
7. Improve health and well-being	✓	Will avoid people being pushed into housing with high flood risk
8. Protect and enhance the landscape	? / ✓	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	0	

Policy T1: WALKING AND CYCLING
<p>To enable people to access employment, essential services and community facilities by walking and cycling the Council will support developments which incorporate:</p> <p>(i) High quality, sustainable design which makes a positive contribution to the distinctiveness of communities and places;</p> <p>(ii) Permeable and legible networks of safe, convenient and attractive walking and cycling routes;</p> <p>(iii) Connections and extensions to the Cardiff Strategic Cycle Network and routes forming part of the Cardiff Walkable Neighbourhoods Plan;</p> <p>(iv) Measures to minimise vehicle speed and give priority to vulnerable road users;</p>

- (v) Safe, convenient and attractive walking and cycling connections to existing developments, neighbourhoods, jobs and services;
- (vi) Infrastructure designed in accordance with standards of good practice including the Council's Cycling Design Guide;
- (vii) Supporting facilities including, signing, secure cycle parking and, where necessary, shower and changing facilities; and
- (viii) The provision of Car-Free Zones .

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy aims to provide developments with good access to employment and essential services via walking or cycling
2. Maintain and improve air quality	✓	Policy encourages walking and cycling and may reduce the need to travel by car/ bus
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy promotes sustainable modes of transport
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy aims to facilitate access to employment opportunities by providing good walking and cycling connectivity

11. Minimise waste, increase re-use and recycling	0	
SA comments and suggestions		
SA comments and suggestions	Response	Status
'Will support' is not very strong. Why not 'Council will only support developments which, to the greatest practicable extent, incorporate ...'?	The supporting text for KP8 emphasises the importance of maximising access by sustainable modes. This implies that in considering applications the Council will seek to secure these provisions as far as practically possible. Policy T1 should be considered in this context. The policy states that to enable people to access employment, essential services and community facilities by walking and cycling the Council will support developments which incorporate the measures specifically listed in the policy. This arguably provides the basis to refuse applications for proposals which fail to enable people to access employment, essential services and facilities by walking and cycling or meet the requirements of KP8.	~
(i) duplicates sustainable design policy and does not mention or have any specific relevance to active travel. Suggest delete.	The 'duplication' of the sustainable design policy is deliberate to make an explicit connection between development design and provision for active modes.	~

Policy T2: STRATEGIC RAPID TRANSIT AND BUS CORRIDORS
To avoid car-based developments and maximise use of sustainable transport, infrastructure and associated services will be introduced to develop strategic rapid transport and bus corridors including:
RAPID TRANSIT CORRIDORS
(i) North West Corridor;
(ii) North Eastern Corridor;
(iii) Eastern Corridor; and
(iv) Southern Corridor.

BUS CORRIDOR ENHANCEMENTS

- (i) City Centre Bus Routes;
- (ii) Eastern Bus Corridor (A48, A4232 from the A48 to Junction 30 of the M4 Motorway, A48M Trunk Road, Southern Way and A4161 Newport Road);
- (iii) Northern Bus Corridor (A470 North Road/ Manor Way and A469 Caerphilly Road / A470 Trunk Road to the County Boundary); and
- (iv) Western Bus Corridor (Cowbridge Road, A48, A4055 Cardiff Road; A4119 Llantrissant Road from the County Boundary to Cowbridge Road and A4232 Trunk Road from Culverhouse Cross to Junction 33 of the M4 Motorway).
- (v) Southern Bus Corridor (Lloyd George Avenue, Lloyd George Avenue to the County Boundary via A4232 and Cogan Spur and via the Cardiff Barrage).

Provision will be made to facilitate the functional integration of these corridors and associated services with the wider transport network including the bus network and local walking and cycling routes. The trunk road sections of the Bus Corridor Enhancements are the responsibility of the Welsh Government. Cardiff Council will work with the Welsh Government to identify appropriate measures on the trunk road sections of these routes.

Improvements to the city's wider bus network, including the provision of new infrastructure and the introduction of new routes and services will be supported where these are necessary to provide sustainable travel options and address the movement impacts of new development.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	?✓	Policy should help achieve better access, via public transport, to key employment areas, services and facilities
2. Maintain and improve air quality	?✓	Policy should reduce car use
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	?✓	Policy aims to improve public transport infrastructure and provision, and may encourage a modal shift from the private car
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a	?✓	Improvements to infrastructure and services will contribute to the regeneration of deprived areas,

sustainable and diversified economy		promote the city centre and access to employment areas
7. Improve health and well-being	0	
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	?✓	Improved access to services and jobs responding to city's population growth
11. Minimise waste, increase re-use and recycling	0	
SA comments and suggestions		
SA comments and suggestions	Response	Status
All positive scores now qualified with '?' because of lack of explicit commitment to implement measures before new developments are occupied (see appraisal comments on most of the strategic sites under KP2.)	In certain cases it will not be possible to implement all transport measures in advance of the occupation development. In practice measures will need to be introduced through a phased approach secured through the master planning and application processes.	x
Restore the clear commitment in PS policy 12: 'all developments will be supported by safe, attractive, fast and efficient public transport services that meet the everyday travel needs of all residents.'	The stated purpose of the policy is to avoid car-based developments and maximise use of sustainable transport. The policy relates to strategic rapid transit corridors and bus corridors. The provision of public transport infrastructure and its contribution to modal share is easier to assess and measure than whether a development meets 'the everyday transport needs' of all residents – some of which may be met by car or walking and cycling. The existing wording is therefore considered to be appropriate.	~

Policy T3: TRANSPORT INTERCHANGES

In order to facilitate the transfer between transport modes and help to minimise travel demand and reduce car dependency, the following developments will be supported:

- (i) New rail stations which can be easily accessed by walking, cycling and local bus services, facilitate rail park and ride, where appropriate, and meet the access needs of all users;
- (ii) Improvements to existing rail and bus interchanges, including measures to facilitate access by active travel modes and people with special access needs;
- (iii) Measures to support interchange between local bus services, including facilities to accommodate bus layover and driver facilities;
- (iv) Strategically located park and ride facilities, supported by attractive, frequent and reliable bus or rapid transit services;
- (v) High quality passenger facilities including but not limited to seating, information, toilet facilities and cycle parking;
- (vi) Facilities for park and share;
- (vii) Facilities for coach parking, taxis and passenger drop off;
- (viii) Facilities for overnight lorry parking and freight transfer; and
- (ix) Facilities for interchange with water-based transport.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy likely to help provide better access to employment areas, services and facilities
2. Maintain and improve air quality	✓	Policy aims to promote sustainable transport into the City and may reduce congestion related air pollution
3. Protect and enhance biodiversity, flora and fauna	?	There may be impacts to biodiversity depending on the location of new Park and Ride/Share Facilities
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓ / ✗	Policy aims to promote public transport infrastructure and improve regional access The policy promotes park and ride / share schemes, which may not mitigate the current commuter congestion effectively and may encourage people from the city region to drive to Cardiff in the first instance rather than use rail / bus.
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	The policy aims to improve transport accessibility from the wider region and may assist in promoting the city centre economy, particularly retail
7. Improve health		

and well-being	0	
8. Protect and enhance the landscape	?	There may be impacts to landscape depending on the location of new Park and Ride/Share Facilities
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	0	
SA comments and suggestions		
SA comments and suggestions	Response	Status
The caveat under 4 is very important. Suggest adding a statement that interchanges with a significant scale of car use will not be implemented if modelling suggests they will result in an overall increase in car mileage.	Park and Ride facilities can help to reduce localised congestion by intercepting vehicles before they enter the central area of the city. Park & Ride on its own is not the answer to congestion but works in conjunction with other physical and non-physical transport measures to provide sustainable alternatives to car travel and reduce demand for it. . Well designed and appropriately located Park and Ride is unlikely to induce additional demand for travel and thus increase overall mileage. Rather it is a means of reducing the impact of car trips which would most likely have taken place anyway whether or not the P&R is available	x

Policy T4: REGIONAL TRANSPORT HUB
Support will be given to the development of infrastructure and facilities in and around Cardiff Central Railway Station which:
(i) Facilitate the easy interchange of passengers between national, regional and local rail and bus services;
(ii) Provide high quality passenger facilities, including but not limited to seating, information, toilet facilities and cycle parking;
(iii) Can be easily accessed by walking and cycling and meets the access needs of all users;
(iv) Is well integrated with development in the surrounding area and facilitates easy

access to the centre of the city, Cardiff Bay and the Enterprise Zone;
(v) Complement the development and regeneration of land north and south of Central Railway Station and the wider Enterprise Zone;
(vi) Provide a public transport gateway of a high aesthetic and functional quality, which is commensurate to Cardiff's status as a European capital city; and
(vii) Provides an attractive, legible and vibrant environment.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy will help all residents access amenities in the city centre, other parts of Cardiff and beyond
2. Maintain and improve air quality	✓	Policy will facilitate non car options
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy will facilitate non car options
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy will improve access to businesses for residents and visitors
7. Improve health and well-being	✓	Policy will support cycling and walking
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	? / ✓	
10. Respond to demographic	0	

changes in a sustainable way		
11. Minimise waste, increase re-use and recycling	0	

Policy T5: MANAGING TRANSPORT IMPACTS		
<p>Where necessary, safe and convenient provision will be sought in conjunction with development for:</p> <ul style="list-style-type: none"> i) Pedestrians; (ii) disabled people with mobility impairments and particular access needs; (iii) Cyclists; (iv) Powered two-wheelers; (v) Public transport; (vi) Vehicular access and traffic management within the site and its vicinity; (vii) Car parking and servicing; (viii) Coach parking; and (ix) Horse-riders. 		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy aims to ensure equality of access to transport, including those with special access and mobility requirements
2. Maintain and improve air quality	✓	Policy may encourage walking and cycling and promote a modal shift from the private car
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy aims to reduce parking and make other forms of transport safer and more convenient, which may promote a modal shift to sustainable transport
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified	0	

economy		
7. Improve health and well-being	✓	Policy may promote a modal shift to walking and cycling Policy aims to improve safety for all users
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	0	
SA comments and suggestions	Response	Status
Policy title is misleading: suggest 'providing for transport needs in development'.	Disagree with comments about the title of the policy – the supporting text provides a clear explanation of the purpose of the policy and its application. The title is relevant in this context.	✘
Restore previous wording on parking restraint	No reference to minimising car parking anywhere now. Supporting text states that parking and servicing will be provided in accordance with the Councils adopted standards.	✘
Hierarchy in the policy is inconsistent with the DfT one referred to at 5.244 of Deposit LDP. Public transport (v) and coach parking (viii) should be above powered two wheelers (iv) vehicular access (vi) and car parking (vii). Should horse riders be above the motorised modes?	The user hierarchy referred to in para 5.244 of Deposit LDP is related to the design considerations in Manual for Streets which makes clear that <i>"In assessing the transport and access aspects of proposals the Council will be more likely to give favourable consideration to developments which through their design and layout give priority to movements by sustainable travel modes and reflect the user hierarchy in Department for Transport Manual for Streets"</i> , The list in the policy is not a hierarchy. Therefore probably best to retain the original list so this is more obvious.	✘

	Horse riding should be retained as this links with bridle routes in Policy T6.	
--	--	--

T6: IMPACT ON TRANSPORT NETWORKS AND SERVICES		
Development will not be permitted which would cause unacceptable harm to the safe and efficient operation of the highway, public transport and other movement networks including pedestrian and cycle routes, public rights of way and bridle routes.		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Existing access to be protected
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	0	
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	0	
7. Improve health and well-being	0	
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	

10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	0	
SA comments and suggestions	Response	
Suggest 'unacceptable NET harm' to make clear that development can go ahead if the harm is remedied / offset eg by new transport provision.	The reference to unacceptable harm in the policy implies that developments that cause harm can go ahead if that harm is mitigated to an acceptable degree. The reference to Net harm is not considered appropriate in this context	~

Policy T7: STRATEGIC TRANSPORTATION INFRASTRUCTURE		
<p>Support will be given to the development of the following elements of strategic transportation infrastructure:</p> <p>(i) Eastern Bay Link;</p> <p>(ii) St Mellons rail interchange; and</p> <p>(iii) New sustainable transport corridor in North West Cardiff</p>		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	x	Will improve access for motorists, and their advantage over other road users
2. Maintain and improve air quality	x	Will facilitate extra motor traffic
3. Protect and enhance biodiversity, flora and fauna	x?	Impacts and any necessary mitigation to be assessed in project level EIA.
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	x	Will facilitate extra motor traffic
5. Protect and	0	

enhance historic and cultural heritage		
6. Help deliver the growth of a sustainable and diversified economy	x	Will further entrench car dependence
7. Improve health and well-being	0	
8. Protect and enhance the landscape	x	Will damage the landscape
9. Use natural resources efficiently and safeguard their quality	x	Will increase resource take in construction and use
10. Respond to demographic changes in a sustainable way	✓/x	Will respond to demand though in an unsustainable way
11. Minimise waste, increase re-use and recycling	0	

SA comments and suggestions	Response	Status
(ii) and (iii) are instances of policies T3 and T2 respectively and share their assessments. This matrix assesses (i) only. This road scheme would appear inconsistent with the aim of all the other transport policies.	<p>All three listed schemes are key strategic projects. Construction of the EBL is now a strategic commitment of Welsh Government and the plan must therefore make provision of it.</p> <p>The project would be subject to a full Environmental Impact Assessment which would highlight the specific environmental impacts and any necessary mitigation.</p>	~

Policy T8: STRATEGIC RECREATIONAL ROUTES
<p>A strategic network of recreational routes will be maintained and developed to link Cardiff's coast, river corridors, open spaces, countryside, and the regional network of routes, facilitating access to them by local communities, and forming an integral part of the wider cycling and walking network in Cardiff.</p> <p>The core strategic network will comprise:</p> <p>i). (i) The Taff Trail; (ii) The Ely Trail; (iii) The Rhymney Trail; (iv) The Nant Fawr Trail; (v) The Bay Trail; (vi) The Wales Coast Path; and (vii) The Glamorgan Ridgeway</p>

Walk.		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy aims to increase access across the city
2. Maintain and improve air quality	✓	Policy may encourage a modal shift from the private car to walking and cycling
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy may encourage a modal shift from the private car to walking and cycling
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	0	
7. Improve health and well-being	✓✓	Improvements to strategic recreational routes may promote walking and cycling with benefits to health Improves access to open space and other opportunities for physical activity
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	0	

11. Minimise waste, increase re-use and recycling	0	
---	---	--

Policy T9: CARDIFF CITY REGION 'METRO' NETWORK

The Council will seek to facilitate the development of a future regional 'Metro' network of integrated public transport routes and services within Cardiff and connecting the city with the wider south east Wales region, including the development and/or enhancement of the following on-highway and off-highway infrastructure components:

- i. Existing and new heavy rail routes
- ii. New light rail routes
- iii. Tram
- iv. Tram/train on segregated rails and/or running on street
- v. conventional buses, or guided buses using busways completely segregated from the main highway along their entire length or for short sections, in combination with use of the public highway/bus priority measures on the public highway.
- vi. conventional buses using dedicated buses lanes and assisted by other bus priority measures, in combination with use of other carriageway space on the public highway; and
- vii. conventional buses using carriageway space on the public highway used by general traffic.

Where the alignment of a future route which is likely to form part of a 'Metro' network falls within any part of a development site, the Council will, through the development management process, seek either to secure provision of the necessary infrastructure as part of the development, or otherwise, safeguard the land and space required to accommodate the route and potential mode options in the future. This will include requiring a development to be designed in a way which does not prejudice the future development of the 'Metro' route and would enable it to be incorporated within the development at a later date.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Metro would improve access and opportunity
2. Maintain and improve air quality	✓	Metro should enable modal shift away from private car
3. Protect and enhance biodiversity, flora and fauna	? ✓	Other policies should protect wildlife. Safeguarded routes offer opportunity for wildlife corridors.

4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Metro should enable modal shift away from private car
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Metro should support economic development across the city region.
7. Improve health and well-being	0	
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	✓	Metro would enable population to grow without unacceptable increases in traffic
11. Minimise waste, increase re-use and recycling	0	

Policies R1 – R7		
Appraised together since they form a package specifying the locations and criteria under which new retail development and changes of use to and from retail will and will not be allowed.		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policies together seek to ensure all residents have the best access to shops of various kinds that is commercially viable for the retailers.
2. Maintain and improve air	✓	Policies overall aim to minimise the need to drive to shops.

quality		
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policies overall aim to minimise the need to drive to shops. R4 particularly important in constraining out-of-centre development.
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Policies seek to maintain the best commercially viable range of kinds and locations of shops.
7. Improve health and well-being	0	
8. Protect and enhance the landscape	? / ✓	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	✓	Policies aim to help the retail sector respond to changing demands while maintaining the best commercially viable range of shopping.
11. Minimise waste, increase re-use and recycling	0	

Policy R8: FOOD AND DRINK USES
Food and Drink Uses are most appropriately located in: (i) The City Centre (Central Business Area) (ii) The inner harbour/waterfront area of Cardiff Bay (Bay Business Area) (iii) District and Local Centres
Subject to amenity considerations, highway matters, crime and fear of crime considerations, and where they do not cause unacceptable harm to the shopping role

and character of designated centres.

Food and drink uses are unlikely to be acceptable within or adjacent to residential areas, where they would cause nuisance and loss of amenity, or result in the loss of a residential property.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	x	Policy will prevent food and drink uses in residential areas, making them harder to access without driving.
2. Maintain and improve air quality	x	Likely to increase driving to food and drink outlets.
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	x	Likely to increase driving to food and drink outlets.
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	x?	May restrict growth of the food and drink sector
7. Improve health and well-being	✓	Main aim of the policy is to protect residential amenity by keeping food and drink uses out of residential areas. Restrictions on outlets near schools also helpful.
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	x	Policy will restrict how food and drink sector responds to consumer demand.

11. Minimise waste, increase re-use and recycling	0	
---	---	--

Policy C1: COMMUNITY FACILITIES

Proposals for new and improved community facilities, health and religious facilities will be encouraged, subject to the following criteria being satisfied:

- (i) The facility would be readily accessible to the local community it is intended to serve by public transport, walking and cycling;
- (ii) The facility would not unduly prejudice the amenities of neighbouring and nearby residential occupiers;
- (iii) The facility would not detract from the character and appearance of a property or the locality;
- (iv) The facility will not lead to unacceptable parking or traffic problems.

(v) The facility is designed with the greatest possible flexibility and adaptability to accommodate additional community uses without compromising its primary intended use

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy supports provision of facilities accessible to their users.
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy should reduce need to travel by car
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and	0	

diversified economy		
7. Improve health and well-being	✓	Policy supports provision of facilities accessible to their users.
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	✓	Policy supports provision of facilities needed to meet present and future demands
11. Minimise waste, increase re-use and recycling	0	

Policy C2: PROTECTION OF EXISTING COMMUNITY FACILITIES		
<p>Proposals involving the loss or change of use of buildings currently or last used for community facilities will only be permitted if:</p> <p>i) An alternative facility of at least equal quality and scale to meet community needs is available or will be provided within the vicinity or;</p> <p>ii) It can be demonstrated that the existing provision is surplus to the needs of the community.</p>		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy ensures no net loss of community facilities that meet needs of local community
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	0	

4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy should prevent need for increased travel to community facilities
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	0	
7. Improve health and well-being	✓	Policy supports retention of facilities accessible to their users
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	✓	Policy supports retention of facilities to meet needs of local community
11. Minimise waste, increase re-use and recycling	0	

Policy C3: COMMUNITY SAFETY/CREATING SAFE ENVIRONMENTS

All new development and redevelopment shall be designed to promote a safe and secure environment and minimise the opportunity for crime. In particular development shall:

- (i) Maximise natural surveillance of areas which may be vulnerable to crime such as publicly accessible spaces, open space, car parking areas and footpaths;
- (ii) Have well defined routes, spaces and entrances that provide convenient movement without compromising security;
- (iii) Maintain perceptible distinction between public and private spaces through well defined boundaries and defensible space;
- (iv) Provide a good standard of lighting to public spaces and routes while minimising

energy use and light pollution; and		
(v) Be designed with management and maintenance in mind, to discourage crime in the present and future.		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	?	Need to avoid unnecessary lighting.
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	0	
7. Improve health and well-being	✓✓	Policy aims to provide safe environments
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	? / ✓	
10. Respond to demographic changes in a sustainable way	0	

11. Minimise waste, increase re-use and recycling	0	
---	---	--

Policies C4 and C5 Appraised together since they deal with protection and provision of open space		
Policy C4: PROTECTION OF OPEN SPACE		
Development will not be permitted on areas of open space unless:		
(i) It would not cause or exacerbate a deficiency of open space in accordance with the most recent open space study; and		
(ii) The open space has no significant functional or amenity value; and		
(iii) The open space is of no significant quality; or		
(iv) The developers make satisfactory compensatory provision; and, in all cases;		
(v) The open space has no significant nature or historic conservation importance.		
C5: PROVISION FOR OPEN SPACE, OUTDOOR RECREATION, CHILDREN’S PLAY AND SPORT		
Provision for open space, outdoor recreation, children’s play and sport will be sought in conjunction with all new residential developments. This Policy is aimed at securing the provision or improvement of open space and other appropriate outdoor recreation and sport in conjunction with all new residential developments over 8 units and on site provision of functional open space in conjunction with all new residential developments over 14 units.		
The appropriate amount of multi functional green space is based on a minimum of 2.43 hectares of functional open space per 1000 projected population.		
All other open space provision will be in addition to the provision of multi functional green space.		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policies will help maintain access to existing open space and provide new ones with new housing.
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	✓	Policy C4 will prevent loss of open space with nature conservation importance.

4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	0	
5. Protect and enhance historic and cultural heritage	✓	Policy C4 will prevent loss of open space with historic importance.
6. Help deliver the growth of a sustainable and diversified economy	0	
7. Improve health and well-being	✓	Policies maintain and increase open spaces, which contributes to wellbeing
8. Protect and enhance the landscape	✓	Policy C4 protects open space
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	✓	Policy C5 seeks to provide sufficient open space to meet the needs of residents of new housing.
11. Minimise waste, increase re-use and recycling	0	

Policy C6: HEALTH		
<p>Priority in new developments will be given to reducing health inequalities and encouraging healthy lifestyles through:</p> <p>(i) Identifying sites for new health facilities, reflecting the spatial distribution of need, ensuring they are accessible and have the potential to be shared by different service providers; and</p> <p>(ii) Ensuring that they provide a physical and built environment that supports interconnectivity, active travel choices, promotes healthy lifestyles and enhances road safety.</p>		
SA Objective	Rank	Comments

1. Help deliver equality of opportunity and access for all	✓	Policy aims to ensure access to health facilities
2. Maintain and improve air quality	✓	Policy aims to reduce need to travel to health facilities, and promote active travel
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy aims to reduce need to travel to health facilities, and promote active travel
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	0	
7. Improve health and well-being	✓✓	Policy aims to promote active travel, road safety and access to health facilities
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	0	
10. Respond to demographic changes in a sustainable way	✓	Policy aims to ensure health provision meets needs.
11. Minimise waste, increase re-use and recycling	0	

Policy C7: PLANNING FOR SCHOOLS

Where a need has been identified for new and improved school facilities as a result of

development, the Council will seek contributions towards the cost of additional education provision. Negotiated contributions will be fairly and reasonably related in scale and kind to the proposed development. Where appropriate on site provision will be required.

Development of nursery, primary, secondary and sixth form education should:

(i) Be well designed, well related to neighbourhood services and amenities, and easily accessible by sustainable transport modes; and

(ii) Include, where appropriate, provision for other appropriate community uses in addition to their educational use.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	✓	Policy aims to provide for educational needs
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	0	
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	0	
7. Improve health and well-being	✓	Availability of schools and colleges will contribute to well-being
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their	0	

quality		
10. Respond to demographic changes in a sustainable way	✓	Policy aims to ensure education provision matches needs.
11. Minimise waste, increase re-use and recycling	0	

<p>Policies M1 – M5 Appraised together because they form a coherent package governing mineral workings</p>
<p>M1: MINERAL LIMESTONE RESERVES AND RESOURCES Mineral reserves with planning permission will be safeguarded from development that would prevent their extraction at:</p> <ul style="list-style-type: none"> (i) Creigiau Quarry; (ii) Taffs Well Quarry; (iii) Ton Mawr Quarry; and (iv) Blaengwynlais Quarry. <p>Preferred areas of known resources suitable for the future working of Limestone have been identified as extensions to:</p> <ul style="list-style-type: none"> (i) Creigiau Quarry; and (ii) Ton Mawr Quarry. <p>M2: PREFERRED ORDER OF MINERAL RESOURCE RELEASE The extension or deepening of existing mineral workings will be favoured in preference to the release of new sites and, with the exception of the lateral extensions of Creigiau and Ton Mawr Quarries referred to in Policy M1, deepening will be preferred to lateral extension. Applications to extend or deepen mineral workings will be permitted where it can be demonstrated that:</p> <ul style="list-style-type: none"> i) There are environmental improvements at the site which can be justified by the addition of new reserves, or traded off by the giving up of existing reserves, or; ii) The addition of new reserves preserves the productive capacity of Cardiff to meet its sub regional apportionment commitments; or iii) There are operational benefits in permitting further reserves that will lead to more efficient exploitation of the resource. <p>It should also be demonstrated that such an approach will not cause unacceptable harm to the environment, including consideration of impacts relating to access, noise, air quality, landscape and visual effects, ecology, soil resources, hydrology and hydrogeology, blast vibration and cultural heritage, and in the case of Creigiau Quarry, the objectives of Policy M3 are delivered as part of an extension or deepening application.</p> <p>M3: QUARRY CLOSURES AND EXTENSION LIMITS Measures to prevent further mineral working and, where appropriate, to secure</p>

restoration and landscaping works at the earliest opportunity, will be sought at the following sites:

- (i) Cefn Garw Quarry, Tongwynlais;
- (ii) Highland Park Brickworks, Ely;
- (iii) West End Brickworks, Ely; and
- (iv) Southern and western parts of Creigiau Quarry.

M4: MINERALS BUFFER ZONES

Within the minerals buffer zones no mineral working, housing or other sensitive development will be permitted.

M5: RESTORATION AND AFTER - USE OF MINERAL WORKINGS

Proposals for mineral working or for related plant and buildings will be permitted only where firm proposals are included for the reinstatement of the site to a condition fit for an appropriate after-use supported, where relevant, by adequate after-care proposals. Appropriate reinstatement and after-care proposals will similarly be required when existing controls are reviewed. In drawing up restoration proposals, mineral operators will be encouraged to:

- (i) Undertake progressive restoration;
- (ii) Make beneficial use of mineral waste generated by mineral operations;
- (iii) Consider whether restoration can contribute to nature conservation targets set out in the Local Biodiversity Action Plan.
- (iv) New uses of former mineral workings other than those appropriate to a rural area will not be permitted without special justification. Proposals to carry out safety works at derelict or dormant sites will be favoured.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	✓	Policies aim to minimise exposure to air pollution from mineral extraction
3. Protect and enhance biodiversity, flora and fauna	✓	M5 aims to encourage nature conservation benefits from restoration and after-use.

4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	0	
5. Protect and enhance historic and cultural heritage	?	
6. Help deliver the growth of a sustainable and diversified economy	✓	Policies aim to ensure adequate supply of minerals to meet demand
7. Improve health and well-being	✓	Policies aim to minimise impacts on health and wellbeing from mineral working
8. Protect and enhance the landscape	?	
9. Use natural resources efficiently and safeguard their quality	✓	Policies aim to safeguard appropriate mineral resources
10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	✓	M5 (ii) encourages restoration and afteruse to 'make beneficial use of mineral waste generated by mineral operations'
SA comments and suggestions	Response	Status
Are the choices of sites designed to safeguard biodiversity, historic / built environment and/or landscape? If so, positive scores and mention justified for objectives 3,5,9.	Minerals can only be worked where they exist, so sites are primarily selected on this basis of where limestone is known to exist. It is not anticipated that there will be a need to release any new mineral resources within the plan period, but if there should be a requirement then permission would only be granted for sites where there would be no unacceptable harm to the environment.	✓

Policy M6: SAND WHARF PROTECTION AREAS

The sand wharves shown on the Proposals Map will be protected against development which would prejudice their ability to land marine dredged sand and gravel. Proposals for the provision and improvement of landing and distribution facilities for marine dredged aggregates within the sand wharves shown on the Proposals Map will be favoured where there will be no unacceptable harm to the environment.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	0	
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Maintains capacity to land sand and gravel.
7. Improve health and well-being	0	
8. Protect and enhance the landscape	0	
9. Use natural resources efficiently and safeguard their quality	✓	Maintains capacity to land sand and gravel.
10. Respond to demographic changes in a sustainable way	0	

11. Minimise waste, increase re-use and recycling	0	
SA comments and suggestions		
None	Noted	✓

Policy M7: SAFEGUARDING OF SAND AND GRAVEL, COAL AND LIMESTONE RESOURCES

Development will not be permitted within the Sand and Gravel, Coal and Limestone Safeguarding Areas shown on the Proposals Map that would permanently sterilise these mineral resources unless:

- i. The applicant can demonstrate to the satisfaction of the Local Planning Authority that the mineral concerned is no longer of any resource value or potential resource value; or
- ii. The mineral can be extracted satisfactorily prior to the incompatible development taking place; or
- iii. The incompatible development is of a temporary nature and can be completed and the site restored to a condition that does not either sterilise the resource or inhibit extraction within the timescale that the mineral is likely to be needed; or
- iv. There is an overriding need for the incompatible development which overrides the need for the resource, including a requirement for prior extraction if practicable.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	x?	Policy may prevent development in locations where it would be beneficial.
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	?✓	Policy may protect open space which might otherwise be developed
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	x?	Safeguarding coal resources will lead to higher emissions if they are ever exploited – unless this replaces coal imports or there is effective carbon capture and storage.
5. Protect and enhance historic and cultural heritage	0	

6. Help deliver the growth of a sustainable and diversified economy	✓	Safeguarding these resources will help keep future economic options open.
7. Improve health and well-being	0	
8. Protect and enhance the landscape	? / ✓	
9. Use natural resources efficiently and safeguard their quality	✓✓	Purpose of the policy is to keep resources available for possible future need.
10. Respond to demographic changes in a sustainable way	?	Safeguarding these resources may prevent desirable development.
11. Minimise waste, increase re-use and recycling	0	

Policy M8: AREAS WHERE COAL WORKING WILL NOT BE ACCEPTABLE		
Future Coal extraction will not be permitted within the Areas where Coal Working will not be Acceptable shown on the Proposals Map unless exceptional circumstances show a smaller Area is appropriate.		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	0	

5. Protect and enhance historic and cultural heritage	✓	
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy provides slight extra flexibility in coal working
7. Improve health and well-being	✓	Policy should ensure that coal working is not near enough to residential areas to cause any health or wellbeing problems.
8. Protect and enhance the landscape	0	Possible risk of additional landscape damage is balanced by opportunity to use further coal working to support remediation.
9. Use natural resources efficiently and safeguard their quality	✓	Policy will ensure that coal resources are not sterilised more than necessary to safeguard amenity.
10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	0	

Policy W1: SITES FOR WASTE MANAGEMENT FACILITIES
<p>Proposals for the development of waste management facilities will be permitted where:</p> <ul style="list-style-type: none"> (i) There is a demonstrable need assessed against County and regional requirements; (ii) They conform with the waste hierarchy and the principles contained in the Waste Framework Directive of An Integrated and Adequate Network; Nearest Appropriate Installation; Self Sufficiency and Protection of Human Health and the Environment; the 'proximity principle' and the principle of regional self-sufficiency; (iii) They would not cause unacceptable harm to the environment, built heritage or to human health; (iv) They include acceptable proposals for restoration, aftercare and after-use, including the beneficial after-use of by-products; (v) They would not endanger aviation safety; and (vi) They include acceptable proposals for the protection of adjoining and nearby land from landfill gas and leachate migration or contamination. (vii) They are not located within an area at risk from flooding;

(viii) They would not cause unacceptable air, noise or light pollution, dust, vibration or odours, or attract excessive vermin;

(ix) They provide safe means of access to the highway and adequate on-site parking facilities; and

(x) They are accompanied by a Waste Planning Assessment containing sufficient information to enable an assessment of the proposal.

Facilities for the handling, treatment and transfer of waste will generally be encouraged towards existing use class B2 general industrial land.

SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	✓	Policy promotes the waste hierarchy, which favours less polluting options.
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy promotes the waste hierarchy, which favours options better for climate change.
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy promotes the waste hierarchy, which favours waste treatment options that create green business opportunities.
7. Improve health and well-being	✓	Policy promotes the waste hierarchy, which favours less polluting options, and requires facilities not to cause unacceptable harm to health.
8. Protect and enhance the landscape	0	
9. Use natural	✓	Options higher in the waste hierarchy reduce the need

resources efficiently and safeguard their quality		for new resources.
10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	✓✓	Policy promotes the waste hierarchy.

Policy W2: PROVISION FOR WASTE MANAGEMENT FACILITIES IN DEVELOPMENT		
Where appropriate, provision will be sought in all new development for facilities for the storage, recycling and other management of waste		
SA Objective	Rank	Comments
1. Help deliver equality of opportunity and access for all	0	
2. Maintain and improve air quality	0	
3. Protect and enhance biodiversity, flora and fauna	0	
4. Reduce emissions of greenhouse gases that cause climate change and adapt to its effects	✓	Policy will help enable waste management higher up the waste hierarchy, which will reduce emissions.
5. Protect and enhance historic and cultural heritage	0	
6. Help deliver the growth of a sustainable and diversified economy	✓	Policy will help enable waste management higher up the waste hierarchy, which will support green businesses eg reuse and recycling.
7. Improve health and well-being	✓	Policy should ensure that wastes can be collected and managed sustainably without health risks
8. Protect and	0	

enhance the landscape		
9. Use natural resources efficiently and safeguard their quality	✓	Policy will help reclaim secondary resources.
10. Respond to demographic changes in a sustainable way	0	
11. Minimise waste, increase re-use and recycling	✓✓	Policy will support and enable options higher in the waste hierarchy.

Cardiff Council & Levett-Therivel Sustainability Consultants

**Sustainability Appraisal and Strategic Environmental Assessment of
the Cardiff Local Development Plan**

**Appendix H: Consultees' Responses to Initial
Sustainability Appraisal Report**

**Final Sustainability Appraisal Report of the Cardiff Local
Development Plan**

January 2016

This appendix summarises statutory consultees' responses to the consultation on the October 2012 Initial SA on the LDP Preferred Strategy, and how these have been taken into account in the Final SA. A summary of public consultation responses appears in the 'Cardiff Deposit Local Development Plan 2006-2026 Initial Consultation Report – September 2013' and is not repeated here.

The tables omit numerous statements of welcome and endorsement, and consider only suggestions for change.

CCW: letter from Chris Uttley, 20 December 2012

Reference	Comment / suggestion	SA response
2.3 Stages of Appraisal	Replace 'impacts' with 'effects': impacts has negative connotations, assessment should pick up positive and negative effects	No: 'impacts' covers both positive and negative and is the standard term in appraisal.
4.3 Identifying other plans (etc)	Add Sustainable Development Bill White Paper	Agree, done.
Table 4.1 Key messages of policy review	Change second 'biodiversity, flora and fauna' LDP objective: networks that <i>link areas of value</i> is vague	No: no disadvantage to a general non technical term here.
	Refer to Welsh Government's <i>Living Wales</i> framework to help embed holistic management and ecosystem services	Agree. Living Wales Framework added to Appendix A, Policy Review.
Table 4.3 SA Framework	Provide indicators to cover all sub-objectives	Chapter 10 sets out a suite of indicators intended to give a good picture of the effects of the plan without disproportionate cost. Indicators will not always relate directly to SA sub-objectives.
	Add sub-objective of protection/enhancement of carbon sinks.	Too late to change sub-objectives: they were consulted on at scoping stage.
5.4 SA of LDP Vision	Vision should be stronger on landscape, and environment generally	Vision was set in the 'What Matters' strategy, not open for review now. LDP Objectives cover the environment in detail.
Table 5.2 / app E	Emphasise 'need to ensure that the biodiversity value of brownfield land is considered and protected	Biodiversity is one of the 11 SA objectives that all the strategic sites, both brownfield and greenfield, are assessed against.
6.9 appraisal results	State which growth option SA prefers	Final SA endorses the eventual growth option (B minus 10% housing) and explains the reasons.
6.16 Greenfield sites west of Pentrebane	Cannot agree that site has 'no significant environmental constraints'	Wording in final SA altered to reflect CCW concerns.
Greenfield sites S of Creigiau / N of J33	Sustainable transport provision must be made right from the start .	Agree. SA has pressed for this for all the remote greenfield sites.
Greenfield sites W & E of Pontpennau	Should take into account recreation impacts	The masterplanning principles for all strategic sites consider linkage to surrounding areas and existing communities.
Table 7.2 candidate	Should have summary of the	No, provided with LDP, no need to

sites summary	assessment of each site here	duplicate.
Strategic site G [now F]	Should record potential presence of dormice and bats and give negative biodiversity score	No, only potential presence, does not justify this.
Candidate sites	Suggestions for alternation of biodiversity scores on several candidate sites plus clarification over inclusion of sites	The candidate site assessment process was a joint process led by the planning team with input from the SA team. The SA influenced many of the scores, in particular those relating to biodiversity, leading to a more precautionary approach being taken. The issue around site inclusion clarification has been passed to the planning team for consideration in their amendments.
Table 8.3	Would welcome explanation for no green belt	Green Belt now in LDP.
Table 9.3	Disappointed site J [now H] not removed	SA continues to recommend removal.
Table 10.1	Add indicators for extent of habitat for European protected species and protection of historic landscape	Chapter 10 sets out a suite of indicators intended to give a good picture of the effects of the plan without disproportionate cost. We do not think these proposed additions would add enough policy relevant information to be justified.

CADW: E-mail from Suzanne Whiting, 20 December 2012

Reference	Comment / suggestion	SA response
p.21 LDP Aims	More specific reference to registered parks and gardens could be made in the LDP aims	Not necessary. Considerable coverage in the policies.
p.33	Include indicators for the number of scheduled ancient monuments and parks and gardens affected by proposals.	No: not informative enough.

EAW: no response received despite reminders.

Cardiff Council & Levett-Therivel Sustainability Consultants

Sustainability Appraisal and Strategic Environmental Assessment of the Cardiff Local Development Plan

Appendix I: Sustainability Appraisal response to Matters Arising Changes

Final Sustainability Appraisal Report of the Cardiff Local Development Plan

January 2016

The following table shows how the Matters Arising Changes set out in the May 2015, October 2015 and January 2016 schedule have been taken account of in the SA. The responses are primarily updates to Appendix G, the appraisal of policies, with some consequential changes to the main Final Sustainability Appraisal Report and Non Technical Summary. To help provide an audit trail, changes (other than trivial drafting corrections) due to the October and January MACS are shown as tracked changes.

Many of the changes do not require any changes to the SA because:

- They are drafting changes, rearrangements or updates which do not materially alter the effect of a policy; or
- They make more precise, explicit, correct or up-to-date reference to national policies which would have been effective anyway; or
- They alter how a policy would affect one or more appraisal criteria, but not enough to alter the assessment.

MAC	Summary description	SA/SEA implications	Response
1	Updates / redrafts of LDP introductory text	None	None
Page 2024	New statement that plan does not detrimentally affect Welsh language	None	None
	Correct number of international biodiversity sites	None: correction only	None
	Slightly increased housing provision resulting from various adjustments to the calculation, addition of a housing trajectory and more detailed monitoring requirements.	The new KP1 reflects a range of adjustments to housing figures prompted by newer data and analysis, changing housing market trends and predictions, new research and advice on interpreting variables and uncertainties, and some corrections and clarifications. These are explained in detail in the <i>Response to Housing related Action Points</i> . The overall result is a slight increase in the housing provision from 41,100 to 41,415 (both with an additional 4000 flexibility allowance) over the plan period. It is outside the SA brief to provide a second opinion on the validity of these figures and reasoning. Assuming it	None, because the adjustment is very small (under 1%) and designed to maintain the plan's response to need.

		is well founded, the result is likely to slightly better meet housing objectives.	
5	Add policies for strategic sites to KP2 (KP2 A-H)	<p>Several strengthenings of generic policies address weaknesses in the strategic site masterplans identified in earlier SA, notably MAC10 bringing stronger requirements for transport infrastructure to help deliver the 50:50 modal split target; and MAC34 changing policy EN12 to require development to maximise renewable energy, and major proposals to have an independent energy assessment.</p> <p>Inclusion of infrastructure requirements and specific density requirements strengthens policies. Otherwise, the policies appear very similar to the previous site master plans, though the material has been rearranged making exact comparison difficult.</p>	Modify the site appraisals already included and reviewed the previous site appraisals in Appendix G in light of the current text and the revised generic policies. Result has been a few improved scores. 'No detriment to the maintenance of favourable conservation status' wording added – welcome addition, though would be better and simpler if it just said 'no net loss'.
	New text saying Infrastructure Plan will implement the infrastructure stipulated in the strategic sites policies.	Provides a delivery mechanism for the infrastructure previously stated in the key site proformas.	No change needed since the SAs of these sites assumed the infrastructure would be delivered.
	Delete justification for site H	Text now included in new policy KP2(H) instead.	No change
6	Changed explanation of masterplanning approach	None	None
7	Drafting change	None	None
8	Creates and explains a-distinction between 'essential, enabling' and 'necessary' infrastructure.	<p>Following an SA recommendation, text clarifying the distinction between different categories of infrastructure has been added. In response to a request for clarification, the planners stated: 'For the purpose of the plan, infrastructure items have been divided into two categories:</p>	<p>The clarification that 'essential/enabling' infrastructure will delivered before, or at the start of, development is very welcome and has enabled removal of a number of SA suggestions for strategic sites assessed under KP2.</p> <p>We strongly recommend addition of the quoted text to the plan: without it, it is not clear why 'essential'</p>

		<p>Category 1: Essential/Enabling Infrastructure—Those items which will need to be delivered prior to, or at the commencement of development (e.g. transportation/ highways infrastructure, utility services and flood mitigation/ defences).</p> <p>Category 2: Necessary Infrastructure (to support growth)—Items which need to be phased and implemented alongside new development, to ensure that the associated growth in population is served with appropriate facilities over time (e.g. schools and health care)'</p>	infrastructure is distinguished from 'necessary'—the words mean the same thing.
9	Drafting clarifying the rules on planning obligations	No difference: just makes more explicit the rules that national guidance already applies	None
10	Stronger requirement for infrastructure to be provided to meet 50/50 modal split	Improve strategic site performance on transport, access, equity and carbon criteria	Remove SA suggestions for infrastructure timing from the strategic site policies (now KP2(A)-(H))
11	Minerals provision updated to reflect latest technical report on demand. Safeguarding strengthened in October.	No significant change	None
12	Remove specific references to waste minimisation and the waste hierarchy	Loss of explicitness is regrettable but the other policies referred to will still maintain in practise, so no significant difference	None
13	Lower affordable housing target reflecting one year later	None	None
14	More explicit and slightly stronger restriction on development with flood risk or that increases flood risk	Slightly stronger performance on climate change adaptation	None - not enough to make any difference to appraisal
15	Remove 'created' from green	Slightly weaker performance – reduces emphasis on	None - not significant enough to make a difference to

	infrastructure	proactive improvement. Don't agree with WG that it is 'superfluous', it's not the same as 'enhanced', in the same way that 'destroyed' is not the same as 'degraded'	appraisal scores.
16	Drafting changes – more precise wording on historic environment	None	None
17	Drafting	None	None
18	Small differences in estimated yield for some non strategic housing sites	Mostly small increases – good for access and response to demographic change.	None. (Rookwood Hospital site boundary change discussed under PM change)
19	Tighter requirements for affordable provision	Slightly better for equality	None - not enough change to make a difference to appraisal score
Page 2024	Removal of commercial uses that 'could contribute to sustainable communities' from the list of permissible changes of residential use outside central area'	Unlikely to make a difference since relevant conversions could qualify under other criteria	None
21	Drafting tidying	None	None
22	Delete gypsy/traveller site policy	Changes will together replace a specific site with a commitment to review and meet need. The result should be to better meet gypsy and traveller needs	Delete appraisal of the removed policy (H7)
23	Announces timetable for Gypsy and Traveller Needs Assessment and implementation Figures for short and long term need added in October.		None.
24	Move 'no realistic prospect' of future employment use from reasoned justification into policy on alternative uses itself	None	None
	New criterion housing need overrides economic	Good for access and demographic objectives	None - not enough change to make a difference to appraisal score

	considerations		
25	New policy allowing employment uses on land not designated for them subject to some criteria	Good for employment, not bad for other objectives because of the criteria in the policy and other plan policies	New policy EC7 added to the group appraisal of EC1-6. Too little change overall to alter the scores.
26	Simpler and less inflexible policy on permitted development in the countryside	No significant change	None
27	Redrafting	None	None
28	Tighter and more explicit requirements for development affecting Special Landscape Areas	Small improvement in landscape protection	None- not enough change to make a difference to appraisal score
29	Drafting	None	None
30	Tighter and more explicit protection of designated conservation sites	Slightly better for biodiversity	None- not enough change to make a difference to appraisal score
31	Removal of para of reasoned justification which is inconsistent with policy	Slightly weaker for biodiversity	None- not enough change to make a difference to appraisal score
32	More explicit reference to legal protection of habits and species	None	None
33	Updated identification of heritage assets and relevant guidance	None	None
34	Stronger renewable energy requirement Commitment to produce SPG on energy assessments added in October.	Greater certainty of climate change benefits	Make policy appraisal more positive
35	Drafting	None	None
36	Stronger and more explicit restraint of development prone to flood risk or increasing it	Better for climate change and health and wellbeing.	None- not enough change to make a difference to appraisal score

37	Drafting	None	None
38	Clarify the bus corridors	None	None
39	New policy for developing 'metro' transport network	Good for transport related objectives	Added appraisal of the new policy.
40-48	Range of changes to clarify and tidy the suite of retail policies, giving a stronger and more explicit retail hierarchy while removing some unnecessarily detailed stipulations.	Overall neutral effect	Update policy numbers and texts.
49	Clarify wording	None	None
50	Update reference	None	None
51	New policy for no net loss of community facilities	New policy good for access, wellbeing and climate change objectives	Add appraisal of new policy. We have told the planners we think 'and' at the end of clause I should be 'or' because the current wording requires developers to <i>both</i> provide substitute facilities <i>and</i> prove they are not needed, instead of one or the other.
52	Add reference to children's play.	Good to clarify that informal play should be provided for, not only sport	None
53	Delete allotments policy	The deleted policy was highly positive for a range of environmental and social objectives, so its removal is a backward step	Remove appraisal. Query reasons the policy was deleted rather than the allotments policy questions answered / contested.
54	Delete separate children's play policy	Incorporated into policy C4 so no net loss	Remove appraisal.
55	Remove restriction on takeaways	Already covered in policy C7 so no difference	None
	Remove requirement for health impact assessment	Criterion ii already requires development to promote all aspects of health that are relevant to planning and likely to be significantly affected, so removing formal assessment is likely to make very little difference.	None
56,57, 59	Two schools policies C8 and C9 combined	Previous SA had appraised the two former policies together and questioned the need for them to be	None

		distinct, so this change is welcome and makes no difference to the appraisal.	
58	Remove the Heath site's designation for health uses	Increases flexibility of deciding future uses of the site together with other non strategic ones.	Remove the appraisal of policy C10.
60-63	Adjusts minerals policies to reflect latest technical information and guidance and Council discussions with operators	No significant overall changes to the effects of the suite of minerals policies	None
64-67	Combines safeguarding of sand and gravel, coal and limestone into one policy	Previous SA had appraised the three former policies together, so this change is welcome and makes no difference to the appraisal.	None
68	New policy to allow coal working closer than the normal 500m from residential areas in certain defined special circumstances.	The exceptional circumstances are tightly enough defined that there is unlikely to be significant loss of amenity from the closer working.	Redraft appraisal of the former three policies to refer to the one new one
69	Delete Lamby Way waste site allocation	Landfilling is about to end, and any future need for the site can be considered under the generic policy W2.	None. Policy had been appraised together with the generic policy W2 so no changes needed.
70	Revisions to waste policy to align with national guidance	None	None
71-74	Insert appendices	None	None
75	Monitoring framework	Extensive range of indicators and specification of trigger points should help ensure the plan is implemented and corrective action identified and taken when necessary	SA monitoring framework revised to use indicators already being monitored for the Plan where possible without loss of significant information.
76-81	Drafting and reference corrections / updates	None except for updating key diagram	None, except for substitute new key diagram in final SA report
PM1	Move settlement boundary outward to River Rhymney at strategic site G	Change will not make any difference to development on the ground because this will be constrained by floodplain which is protected by policies KP15 and EN14.	None

PM2	Explicit demarcation of 'flexibility allowance' sites	Sites already appraised	None
PM3	Small extension to Rookwood Hospital site	Site already appraised	None
PM4	Delete gypsy and traveller site	Implements MAC22	None
PM5	Show sites with planning permission for housing on proposals map	Presentational change only – does not change the planning status of the sites.	None
PM6	Correction to boundary of Central Bay Business Area to reflect land ownership	None	None
PM7	Small reduction in business park area to reflect recent planning permissions for housing	None	None
PM8-	Clarifications and minor changes to river corridor designations	The only large change is the result of an administrative decision not to designate river corridors outside the settlement boundary.	None
PM13	Show bus corridor enhancements	Implements MAC38	None
PM14	Show protected shopping frontages	Implements MAC40	None
PM15	Delete Heath site allocation for health	Implements MAC58	None
PM16	Reductions in coal safeguarding area to comply with guidance	Implements part of MAC 67. Reflects policies to protect other environmental assets.	None
PM17	Limestone safeguarding area redefined as sand and gravel safeguarding area	Implements part of MAC 67. No change.	None
PM18	Delete waste site	Implements MAC 69	None
Insp 1	Replace Green Belt policy KP3A with Green Wedge	Removes assumption that protection will outlast the Plan period, and even opens up the possibility of rolling it back during the plan period if monitoring reveals a	Appraisal unchanged since the new policy has the same scores against appraisal objectives. Para added to report saying that the change weakens incentives for

		shortfall in housing .	developers to support the Plan’s spatial strategy and could even create perverse incentive to hold off from development that supports the Plan’s objectives (such as brownfield and urban regeneration) in the hope of getting permission to develop north of the M4.
Insp 2	Replace ‘or’ with ‘and’ at end of clause I of Protection of Existing Community Facilities policy C2	Will result in safeguarding of community facilities only if there is need in the community	Appraisal unchanged since the amended policy has the same scores against appraisal objectives. NB: this amendment was suggested previously in response to MAC 51.

APPENDICES

APPENDIX 1: Consideration of MACs against HRA screening criteria

SUMMARY

- 0.1 A Habitats Regulations Appraisal (HRA) of spatial development plans is a requirement of the Habitats Directive (92/43/EEC) as set out in the Conservation of Habitats and Species Regulations 2010 (as amended).
- 0.2 This report details the HRA process for the new Matters Arising Changes Schedule (MAC) and the Inspector Changes arising from Hearing Sessions 20-26, the methods and findings, and the conclusions of the assessment.
- 0.3 An assessment was made of the likelihood of significant impact of the MAC and Inspector's Changes on eight international sites in and around Cardiff, namely **Cardiff Beech Woods SAC, Severn Estuary SAC, SPA, Ramsar Site, River Usk SAC, River Wye SAC, Blackmill Woodlands SAC and Aberbargoed Grasslands SAC.**
- 0.4 None of the new MACs or Inspector's Changes were judged to have the potential to affect any of these sites, above or beyond those potential impacts already considered in the HRA of the Deposit LDP.
- 0.5 Therefore, none of these new MACs or Inspector's Changes are likely to have a significant effect on any of the international sites either alone or in combination with other plans, projects or programmes.
- 0.6 The Habitats Regulations Appraisals of the LDPs of neighbouring Local Authorities have indicated that in the absence of direct effects, in-combination effects with other plans are not likely to be significant at the sites considered in the light of the evidence available.
- 0.7 The LDP can proceed without further reference to this section of the Habitats Regulations.

1.0 INTRODUCTION

- 1.1 Cardiff Council is currently progressing a Local Development Plan (LDP), and has undertaken Habitats Regulations Appraisal (HRA) of that plan in line with the requirements set by the Conservation of Habitats and Species Regulations 2010¹ (as amended) [referred to subsequently as The Habitats Regulations].
- 1.2 The HRA of the Deposit LDP concluded that the Deposit LDP was not likely to have a significant effect upon any of the European Sites considered, either alone, or in combination with other plans, projects or programmes in the region.
- 1.3 The present HRA report considers the effect of the Matters Arising Changes Schedule upon the policies and proposals of the Deposit LDP, and whether those changes would give rise to potential effects upon European Sites above or beyond those already assessed.

Requirement for Habitats Regulations Appraisal

- 1.4 The European Directive (92/43/EEC) on the Conservation of Natural Habitats and Wild Flora and Fauna ('The Habitats Directive') protects habitats and species of European nature conservation importance. The Habitats Directive establishes a network of internationally important sites designated for their ecological status. These are referred to as Natura 2000 (N2K) sites or European Sites, and comprise Special Areas of Conservation (SACs) and Special Protection Areas (SPAs) [which are classified under the Council Directive 79/409/EEC on the conservation of wild birds, the 'Birds Directive'].
- 1.5 Articles 6 (3) and 6 (4) of the Habitats Directive require HRA to be undertaken on proposed plans or projects which are not necessary for the management of the site but which are likely to have a significant effect on one or more European sites either individually, or in combination with other plans and projects.² This requirement is set out in Regulation 102 of the Conservation of Habitats and Species Regulations 2010 (as amended) which require the application of HRA to all land use plans. Welsh Government (WG) guidance also requires that Ramsar sites (which support internationally important wetland habitats) and are listed under the Convention on Wetlands of International Importance (Ramsar Convention 1971) are included within HRA/AA and that candidate SACs and proposed SPAs are treated as 'designated' sites in the context of HRA. In this report the term 'European sites' will be used when referring to SACs, cSACs, SPAs, pSPAs and Ramsar sites.
- 1.6 The purpose of HRA is to assess the impacts of a land-use plan, in combination with the effects of other plans and projects, against the conservation objectives of a European Site and to ascertain whether it would

¹ The Conservation of Habitats and Species Regulations 2010 (as amended) consolidate all the various amendments made to the 1994 Regulations in respect of England and Wales.

² Determining whether an effect is 'significant' is undertaken in relation to the designated interest features and conservation objectives of the Natura 2000 sites. If an impact on any conservation objective is assessed as being adverse then it should be treated as significant. Where information is limited the precautionary principle applies and significant effects should be assumed until evidence exists to the contrary.

adversely affect the integrity³ of that site. Where significant negative effects are identified, alternative options or mitigation measures should be examined to avoid any potential damaging effects. The scope of the HRA is dependent on the location, size and significance of the proposed plan or project and the sensitivities and nature of the interest features of the European Sites under consideration.

Guidance for Habitats Regulations Appraisal/Appropriate Assessment

- 1.7 Guidance for HRA is contained in WG's Technical Advice Note 5: Nature Conservation and Planning, Annex 6 'The Appraisal of Development Plans in Wales under the Provisions of the Habitats Regulations' (Sept 2009). NRW (as CCW) has also produced draft guidance⁴ to assist plan-making authorities to comply with the requirements of the Habitats Directive.

Consultation

- 1.8 The Habitats Regulations require the plan making/competent authority to consult the appropriate nature conservation statutory body [Natural Resources Wales (NRW)] if undertaking an Appropriate Assessment. Consultation on the approach to this HRA screening, including advice on which European sites should be considered within the area of search, was undertaken with NRW following the HRA of the Preferred Strategy and Deposit LDP, and their consultation responses were taken into account, where appropriate. The Habitats Regulations leave consultation with other bodies and the public to the discretion of the plan-making authority.

2.0 METHOD

- 2.1 Fuller details of the HRA methodology are set out in the HRA to the Deposit LDP
- 2.2 This report considers only the new Matters Arising Changes (MACs) as set out in the 'City of Cardiff Council Draft Matters Arising Changes Schedule' October 2015, and in subsequent Inspector's Changes. The changes listed in that schedule and in the Inspector's Changes are categorised according to the criteria set out below. Where further consideration is indicated, that change would be subject to the Policy Screening Template as set out in Appendix 2 of the original HRA of the deposit LDP.
- 2.3 The HRA of the Deposit LDP concluded that the deposit plan was not likely to have a significant effect upon any European Sites, subject to implementation of policies within the plan which were designed in part to offset any potential impact.
- 2.4 New MACs and Inspector's Changes are categorised according to one or more of the following criteria:-

³ Integrity is described as the sites' coherence, ecological structure and function across the whole area that enables it to sustain the habitat, complex of habitats and/or levels of populations of species for which it was classified, (ODPM, 2005).

⁴ Tyldesley, D., 2009, Draft Guidance for Plan Making Authorities in Wales: The Appraisal of Plans under the Habitats Directive for Countryside Council for Wales CCW Bangor (Revised April 2010).

- The change will benefit biodiversity and may have a positive effect upon European Sites
- The change does not relate to a specific policy, and therefore cannot affect any European Sites when the LDP is implemented.
- This change proposes the inclusion of factual details, which do not promote any new development.
- The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
- The change relates to restructuring or reorganising the policy, which does not significantly alter the meaning of the policy.
- The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
- The change relates to the insertion of new text into the policy which increases potential of that policy to impact upon a European Site, beyond that in the original HRA of the deposit LDP. Therefore this change requires further consideration.
- The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.
- The change relates to the deletion of existing text from the policy which increases its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. This arises because that wording, when implemented, would have counteracted or offset any impacts upon European Sites arising from other policies elsewhere in the plan. Therefore this change requires further consideration.
- The change relates to the creation of a new policy which does not have the potential to impact upon a European Site.
- The change relates to the creation of a new policy which has the potential to impact upon a European Site, and which therefore requires further more detailed consideration.
- The change relates to deletion of an existing policy which does not alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
- The change relates to deletion of an existing policy which increases the potential of the LDP to impact upon a European Site, beyond that in the original HRA of the deposit LDP. This arises because that policy contained wording which, when implemented, would have counteracted or offset any impacts upon European Sites arising from other policies elsewhere in the plan. Therefore this change requires further consideration.

3.0 SCREENING

Identification of European Sites & characterisation

- 3.1 Four designated European Sites lie within the Cardiff boundary, and these are set out in Table 1 below. Detailed site characterisation information for the sites, is provided in Appendix 1 of the HRA of the Deposit LDP.

Table 1	
European Sites within Plan/ Proposal Boundary	Designation
<ul style="list-style-type: none"> ▪ Cardiff Beech Woods ▪ Severn Estuary ▪ Severn Estuary ▪ Severn Estuary 	<p>SAC SAC SPA Ramsar</p>

- 3.2 Plans, programmes and projects can have spatial implications that extend beyond the intended plan boundaries. In particular, it is recognised that distance in itself is not a definitive guide to the likelihood or severity of an impact (inaccessibility/ remoteness is typically more relevant) as factors such as the prevailing wind direction, river flow direction, and ground water flow direction will all have a bearing on the relative distance at which an impact can occur. This means that a plan directing development some distance away from a European Site could still have effects on the site and therefore, needs to be considered as part of the screening process.
- 3.3 Taking into account the potential for transboundary impacts, screening of the HRA of the Deposit LDP has identified four European Sites that lie within the influence of the Cardiff Council LDP. These sites are outlined in Table 2 below and detailed information for the European Sites is provided in Appendix 1 of the HRA of the Deposit LDP.

Table 2		
European Sites Within Search Area of Plan Area	Designation	Distance from Plan/ Proposal Boundary (approx Km)
Aberbargoed Grasslands	SAC	14
Blackmill Woodlands	SAC	14
River Usk	SAC	6
River Wye	SAC	30

Consideration of Other Plans, Projects and Programmes

- 3.4 It is a requirement of Article 6(3) of the Habitats Directive that HRA examines the potential for plans and projects to have a significant effect either individually or 'in combination' with other plans, programmes & projects (PPPs). Undertaking an assessment of other PPPs for the Cardiff Council LDP required a pragmatic approach given the extensive range of PPPs underway in the surrounding region. The approach taken was cognisant of the emphasis in the forthcoming WG guidance, that considering the potential for in-combination effects is core to delivering robust/ precautionary HRA.⁵
- 3.5 When considering other PPPs attention was focused on those aimed at delivering planned spatial growth with the most significant being those that seek to provide, housing, employment and infrastructure. The review considered the most relevant plans including:
- The Wales Spatial Plan (update) 2008
 - Local Development Plans in South East Wales neighbouring authorities
 - Waste and Mineral Strategies for South East Wales and neighbouring authorities
 - Regional Transport Plans - where relevant and/or major development schemes
 - Catchment Abstraction Management Plans - where relevant to the designated sites under consideration
 - Water Resource Management Plans
- 3.6 The potential effects of these plans are reviewed in detail at Appendix 9 of the HRA of the Deposit LDP and the potential for these effects to act 'in-combination' with effects identified from Cardiff Council Deposit LDP are considered in the screening assessment (Appendix 10 of the HRA of the Deposit LDP).

Assessment of Potential impacts

- 3.7 Each policy or section of the Deposit LDP which is the subject of a MAC, is considered against each of the criteria in Section 2.4 above. The results of this analysis are set out in Appendix 1, below.

4.0 CONCLUSIONS

- 4.1 This report outlines the methods used and the findings arising from the screening stage of the Habitats Regulations Appraisal undertaken for the Matters Arising Changes Schedule and Inspector's Changes
- 4.2 The HRA considered eight European Sites within the influence of the Deposit LDP
- 4.3 Based on the information considered, the findings of the assessment indicate that the new Matters Arising Changes and Inspector's Changes**

⁵ The review also draws on work being undertaken on behalf of the South East Wales Strategic Planning Group (SEWSPG) to build a resource kit of information and analysis to support HRA in the region.

to the City of Cardiff Council Deposit LDP in implementation will not have a likely significant effect on the European sites considered as part of the HRA screening and will not require full Appropriate Assessment under the Habitats Regulations.

- 4.4 This conclusion is dependent in part upon the implementation of policies in the Deposit LDP which would serve to counteract adverse effects arising from policies screened-in to this HRA.

Appendix 1: Consideration of MACs against HRA Screening Criteria

MAC Number	Additional Hearing Session/Action Point	Proposed Change October 2015	HRA Screening Criteria
Inspector MAC1	Policy KP3 (A): Green Belt	Delete Policy KP3 (A) and reasoned justification and replace with new KP3(A) Green Wedge Numerous amendments throughout the LDP to delete reference to Green Belt and insert Green Wedge instead.	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. Over the lifetime of the plan, these changes will not alter the impact that this plan has upon any European designated sites.
Inspector MAC2	Policy C2: Protection of Existing Community Facilities:	Delete 'and' and replace with 'or' between bullet points i) and ii) in the main text of this policy	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC4	Hearing Session 24: Miscellaneous Matters Action Point 4	Minor amendment to point iii, to delete reference to a table elsewhere in the policy.	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC5	Hearing Session 24: Miscellaneous Matters Action Point 5, Action Point 6,	Minor amendment to paragraph 10 of proposed new Policy KP2 (C) Minor amendment to 9 of proposed new Policy KP 2 (D&E) Minor amendment to paragraph 2 of the reasoned justification of new	The changes are minor, and relate to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy

MAC Number	Additional Hearing Session/Action Point	Proposed Change October 2015	HRA Screening Criteria
	Action Point 7, Action Point 8	Policy KP 2 (F), in relation to ownership of the site Delete reference to the disused railway line in KP2 (F), which was included in error in the original text	
MAC8	Hearing Session 25: Transport and Infrastructure Action Point 1,	Amend paragraph 4.89 of Policy KP 6 New Infrastructure, adjusting the wording of the policy and clarifying the scope of potential infrastructure requirements	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC10	Hearing Session 25: Transport and Infrastructure Action Point 3	Amend proposed new paragraph after existing paragraph 4.105 of Policy KP8, with minor changes to wording	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC11	Hearing Session 23: Minerals Action Point 6	Amend Policy KP11: Minerals And Aggregates to include clarifications to wording	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC23	Hearing Session 24: Miscellaneous Matters Action Point 2	Amend paragraphs 5.52 and 5.53 of the reasoned justification to Policy H8 to reinsert references to WG guidance and requirement in PPW to allocate sites to meet identified need for Gypsy and Traveller accommodation. Amendments do not propose specific sites.	This change proposes the inclusion of factual details, which do not promote any new development.

MAC Number	Additional Hearing Session/Action Point	Proposed Change October 2015	HRA Screening Criteria
MAC34	Hearing Session 26 Monitoring Framework Action Point 2	Insert new sentence regarding SPG at the end of paragraph 5.186 of the reasoned justification to Policy EN12 Renewable Energy and Low Carbon Technologies. This sentence explains that SPG guidance will be produce, and does not promote Renewable Energy and Low Carbon Technologies beyond that which has already been assessed in the HRA of the original policies.	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC39	Hearing Session 24: Miscellaneous Matters Action Point 9	Amend reasoned justification to proposed new Policy T9 Cardiff City Region 'Metro' network to update reference to national guidance. This amendment does not specify new infrastructure.	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC40	Hearing Session 22: Retail Provision Within Strategic Sites	Amend Policy R1: Retail Hierarchy to reflect retail provision within Strategic Sites. This amendment does not specify locations for retail development.	This change proposes the inclusion of factual details, which do not promote any new development
MAC41	Hearing Session 22: Retail Provision Within Strategic Sites	Amend Policy R7: Retail Provision within Strategic Sites to remove cross reference with out –of-centre retail tests.	The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.
MAC61	Hearing Session 23:	Amend Policy M2: Preferred Order Of Mineral Resource Release and	The change relates to the deletion of

MAC Number	Additional Hearing Session/Action Point	Proposed Change October 2015	HRA Screening Criteria
	Minerals Action Point 4	reasoned justification. These changes amend the preferred order of release and do not set out new locations for specific mineral workings	<p>existing text from the policy which does not alter its potential to impact upon a European Site.</p> <p>The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.</p>
MAC67	Hearing Session 23: Minerals Action Point 5	Insert new paragraph at the end of the reasoned justification to new Policy M7 Safeguarding of Sand and Gravel, Coal and Limestone Resources	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.

APPENDICES

APPENDIX 1: Consideration of MACs against HRA screening criteria

SUMMARY

- 0.1 A Habitats Regulations Appraisal (HRA) of spatial development plans is a requirement of the Habitats Directive (92/43/EEC) as set out in the Conservation of Habitats and Species Regulations 2010 (as amended).
- 0.2 This report details the HRA process for the new Matters Arising Changes Schedule (MAC) arising from hearings XXXX, the methods and findings, and the conclusions of the assessment.
- 0.3 An assessment was made of the likelihood of significant impact of the MAC on eight international sites in and around Cardiff, namely **Cardiff Beech Woods SAC, Severn Estuary SAC, SPA, Ramsar Site, River Usk SAC, River Wye SAC, Blackmill Woodlands SAC and Aberbargoed Grasslands SAC.**
- 0.4 None of the new MACs were judged to have the potential to affect any of these sites, above or beyond those potential impacts already considered in the HRA of the Deposit LDP.
- 0.5 Therefore, none of these new MACs are likely to have a significant effect on any of the international sites either alone or in combination with other plans, projects or programmes.
- 0.6 The Habitats Regulations Appraisals of the LDPs of neighbouring Local Authorities have indicated that in the absence of direct effects, in-combination effects with other plans are not likely to be significant at the sites considered in the light of the evidence available.
- 0.7 The LDP can proceed without further reference to this section of the Habitats Regulations.

1.0 INTRODUCTION

- 1.1 Cardiff Council is currently progressing a Local Development Plan (LDP), and has undertaken Habitats Regulations Appraisal (HRA) of that plan in line with the requirements set by the Conservation of Habitats and Species Regulations 2010¹ (as amended) [referred to subsequently as The Habitats Regulations].
- 1.2 The HRA of the Deposit LDP concluded that the Deposit LDP was not likely to have a significant effect upon any of the European Sites considered, either alone, or in combination with other plans, projects or programmes in the region.
- 1.3 The present HRA report considers the effect of the Matters Arising Changes Schedule upon the policies and proposals of the Deposit LDP, and whether those changes would give rise to potential effects upon European Sites above or beyond those already assessed.

Requirement for Habitats Regulations Appraisal

- 1.4 The European Directive (92/43/EEC) on the Conservation of Natural Habitats and Wild Flora and Fauna ('The Habitats Directive') protects habitats and species of European nature conservation importance. The Habitats Directive establishes a network of internationally important sites designated for their ecological status. These are referred to as Natura 2000 (N2K) sites or European Sites, and comprise Special Areas of Conservation (SACs) and Special Protection Areas (SPAs) [which are classified under the Council Directive 79/409/EEC on the conservation of wild birds, the 'Birds Directive'].
- 1.5 Articles 6 (3) and 6 (4) of the Habitats Directive require HRA to be undertaken on proposed plans or projects which are not necessary for the management of the site but which are likely to have a significant effect on one or more European sites either individually, or in combination with other plans and projects.² This requirement is set out in Regulation 102 of the Conservation of Habitats and Species Regulations 2010 (as amended) which require the application of HRA to all land use plans. Welsh Government (WG) guidance also requires that Ramsar sites (which support internationally important wetland habitats) and are listed under the Convention on Wetlands of International Importance (Ramsar Convention 1971) are included within HRA/AA and that candidate SACs and proposed SPAs are treated as 'designated' sites in the context of HRA. In this report the term 'European sites' will be used when referring to SACs, cSACs, SPAs, pSPAs and Ramsar sites.
- 1.6 The purpose of HRA is to assess the impacts of a land-use plan, in combination with the effects of other plans and projects, against the conservation objectives of a European Site and to ascertain whether it would

¹ The Conservation of Habitats and Species Regulations 2010 (as amended) consolidate all the various amendments made to the 1994 Regulations in respect of England and Wales.

² Determining whether an effect is 'significant' is undertaken in relation to the designated interest features and conservation objectives of the Natura 2000 sites. If an impact on any conservation objective is assessed as being adverse then it should be treated as significant. Where information is limited the precautionary principle applies and significant effects should be assumed until evidence exists to the contrary.

adversely affect the integrity³ of that site. Where significant negative effects are identified, alternative options or mitigation measures should be examined to avoid any potential damaging effects. The scope of the HRA is dependent on the location, size and significance of the proposed plan or project and the sensitivities and nature of the interest features of the European Sites under consideration.

Guidance for Habitats Regulations Appraisal/Appropriate Assessment

- 1.7 Guidance for HRA is contained in WG's Technical Advice Note 5: Nature Conservation and Planning, Annex 6 'The Appraisal of Development Plans in Wales under the Provisions of the Habitats Regulations' (Sept 2009). NRW (as CCW) has also produced draft guidance⁴ to assist plan-making authorities to comply with the requirements of the Habitats Directive.

Consultation

- 1.8 The Habitats Regulations require the plan making/competent authority to consult the appropriate nature conservation statutory body [Natural Resources Wales (NRW)] if undertaking an Appropriate Assessment. Consultation on the approach to this HRA screening, including advice on which European sites should be considered within the area of search, was undertaken with NRW following the HRA of the Preferred Strategy and Deposit LDP, and their consultation responses were taken into account, where appropriate. The Habitats Regulations leave consultation with other bodies and the public to the discretion of the plan-making authority.

2.0 METHOD

- 2.1 Fuller details of the HRA methodology are set out in the HRA to the Deposit LDP
- 2.2 This report considers only the new Matters Arising Changes (MACs) as set out in the 'City of Cardiff Council Draft Matters Arising Changes Schedule' October 2015. The changes listed in that schedule are categorised according to the criteria set out below. Where further consideration is indicated, that change would be subject to the Policy Screening Template as set out in Appendix 2 of the original HRA of the deposit LDP.
- 2.3 The HRA of the Deposit LDP concluded that the deposit plan was not likely to have a significant effect upon any European Sites, subject to implementation of policies within the plan which were designed in part to offset any potential impact.
- 2.4 New MACs are categorised according to one or more of the following criteria:-

³ Integrity is described as the sites' coherence, ecological structure and function across the whole area that enables it to sustain the habitat, complex of habitats and/or levels of populations of species for which it was classified, (ODPM, 2005).

⁴ Tyldesley, D., 2009, Draft Guidance for Plan Making Authorities in Wales: The Appraisal of Plans under the Habitats Directive for Countryside Council for Wales CCW Bangor (Revised April 2010).

- The change will benefit biodiversity and may have a positive effect upon European Sites
- The change does not relate to a specific policy, and therefore cannot affect any European Sites when the LDP is implemented.
- This change proposes the inclusion of factual details, which do not promote any new development.
- The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
- The change relates to restructuring or reorganising the policy, which does not significantly alter the meaning of the policy.
- The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
- The change relates to the insertion of new text into the policy which increases potential of that policy to impact upon a European Site, beyond that in the original HRA of the deposit LDP. Therefore this change requires further consideration.
- The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.
- The change relates to the deletion of existing text from the policy which increases its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. This arises because that wording, when implemented, would have counteracted or offset any impacts upon European Sites arising from other policies elsewhere in the plan. Therefore this change requires further consideration.
- The change relates to the creation of a new policy which does not have the potential to impact upon a European Site.
- The change relates to the creation of a new policy which has the potential to impact upon a European Site, and which therefore requires further more detailed consideration.
- The change relates to deletion of an existing policy which does not alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
- The change relates to deletion of an existing policy which increases the potential of the LDP to impact upon a European Site, beyond that in the original HRA of the deposit LDP. This arises because that policy contained wording which, when implemented, would have counteracted or offset any impacts upon European Sites arising from other policies elsewhere in the plan. Therefore this change requires further consideration.

3.0 SCREENING

Identification of European Sites & characterisation

- 3.1 Four designated European Sites lie within the Cardiff boundary, and these are set out in Table 1 below. Detailed site characterisation information for the sites, is provided in Appendix 1 of the HRA of the Deposit LDP.

Table 1	
European Sites within Plan/ Proposal Boundary	Designation
<ul style="list-style-type: none"> ■ Cardiff Beech Woods ■ Severn Estuary ■ Severn Estuary ■ Severn Estuary 	<p>SAC SAC SPA Ramsar</p>

- 3.2 Plans, programmes and projects can have spatial implications that extend beyond the intended plan boundaries. In particular, it is recognised that distance in itself is not a definitive guide to the likelihood or severity of an impact (inaccessibility/ remoteness is typically more relevant) as factors such as the prevailing wind direction, river flow direction, and ground water flow direction will all have a bearing on the relative distance at which an impact can occur. This means that a plan directing development some distance away from a European Site could still have effects on the site and therefore, needs to be considered as part of the screening process.
- 3.3 Taking into account the potential for transboundary impacts, screening of the HRA of the Deposit LDP has identified four European Sites that lie within the influence of the Cardiff Council LDP. These sites are outlined in Table 2 below and detailed information for the European Sites is provided in Appendix 1 of the HRA of the Deposit LDP.

Table 2		
European Sites Within Search Area of Plan Area	Designation	Distance from Plan/ Proposal Boundary (approx Km)
Aberbargoed Grasslands	SAC	14
Blackmill Woodlands	SAC	14
River Usk	SAC	6
River Wye	SAC	30

Consideration of Other Plans, Projects and Programmes

- 3.4 It is a requirement of Article 6(3) of the Habitats Directive that HRA examines the potential for plans and projects to have a significant effect either individually or 'in combination' with other plans, programmes & projects (PPPs). Undertaking an assessment of other PPPs for the Cardiff Council LDP required a pragmatic approach given the extensive range of PPPs underway in the surrounding region. The approach taken was cognisant of the emphasis in the forthcoming WG guidance, that considering the potential for in-combination effects is core to delivering robust/ precautionary HRA.⁵
- 3.5 When considering other PPPs attention was focused on those aimed at delivering planned spatial growth with the most significant being those that seek to provide, housing, employment and infrastructure. The review considered the most relevant plans including:
- The Wales Spatial Plan (update) 2008
 - Local Development Plans in South East Wales neighbouring authorities
 - Waste and Mineral Strategies for South East Wales and neighbouring authorities
 - Regional Transport Plans - where relevant and/or major development schemes
 - Catchment Abstraction Management Plans - where relevant to the designated sites under consideration
 - Water Resource Management Plans
- 3.6 The potential effects of these plans are reviewed in detail at Appendix 9 of the HRA of the Deposit LDP and the potential for these effects to act 'in-combination' with effects identified from Cardiff Council Deposit LDP are considered in the screening assessment (Appendix 10 of the HRA of the Deposit LDP).

Assessment of Potential impacts

- 3.7 Each policy or section of the Deposit LDP which is the subject of a MAC, is considered against each of the criteria in Section 2.4 above. The results of this analysis are set out in Appendix 1, below.

4.0 CONCLUSIONS

- 4.1 This report outlines the methods used and the findings arising from the screening stage of the Habitats Regulations Appraisal undertaken for the Matters Arising Changes Schedule
- 4.2 The HRA considered eight European Sites within the influence of the Deposit LDP

⁵ The review also draws on work being undertaken on behalf of the South East Wales Strategic Planning Group (SEWSPG) to build a resource kit of information and analysis to support HRA in the region.

- 4.3 Based on the information considered, the findings of the assessment indicate that the new Matters Arising Changes to the City of Cardiff Council Deposit LDP in implementation will not have a likely significant effect on the European sites considered as part of the HRA screening and will not require full Appropriate Assessment under the Habitats Regulations.**
- 4.4 This conclusion is dependent in part upon the implementation of policies in the Deposit LDP which would serve to counteract adverse effects arising from policies screened-in to this HRA.

Appendix 1: Consideration of MACs against HRA Screening Criteria

MAC Number	Additional Hearing Session/Action Point	Proposed Change October 2015	HRA Screening Criteria
Inspector MAC1	Policy KP3 (A): Green Belt	Delete Policy KP3 (A) and reasoned justification and replace with new KP3(A) Green Wedge Numerous amendments throughout the LDP to delete reference to Green Belt and insert Green Wedge instead.	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. Over the lifetime of the plan, these changes will not alter the impact that this plan has upon any European designated sites.
MAC4	Hearing Session 24: Miscellaneous Matters Action Point 4	Minor amendment to point iii, to delete reference to a table elsewhere in the policy.	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC5	Hearing Session 24: Miscellaneous Matters Action Point 5, Action Point 6, Action Point 7, Action Point 8	Minor amendment to paragraph 10 of proposed new Policy KP2 (C) Minor amendment to 9 of proposed new Policy KP 2 (D&E) Minor amendment to paragraph 2 of the reasoned justification of new Policy KP 2 (F), in relation to ownership of the site Delete reference to the disused railway line in KP2 (F), which was included in error in the original text	The changes are minor, and relate to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy

MAC Number	Additional Hearing Session/Action Point	Proposed Change October 2015	HRA Screening Criteria
MAC8	Hearing Session 25: Transport and Infrastructure Action Point 1,	Amend paragraph 4.89 of Policy KP 6 New Infrastructure, adjusting the wording of the policy and clarifying the scope of potential infrastructure requirements	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC10	Hearing Session 25: Transport and Infrastructure Action Point 3	Amend proposed new paragraph after existing paragraph 4.105 of Policy KP8, with minor changes to wording	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC11	Hearing Session 23: Minerals Action Point 6	Amend Policy KP11: Minerals And Aggregates to include clarifications to wording	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC23	Hearing Session 24: Miscellaneous Matters Action Point 2	Amend paragraphs 5.52 and 5.53 of the reasoned justification to Policy H8 to reinsert references to WG guidance and requirement in PPW to allocate sites to meet identified need for Gypsy and Traveller accommodation. Amendments do not propose specific sites.	This change proposes the inclusion of factual details, which do not promote any new development.
MAC34	Hearing Session 26 Monitoring Framework	Insert new sentence regarding SPG at the end of paragraph 5.186 of the reasoned justification to Policy EN12 Renewable Energy and Low Carbon Technologies. This sentence explains that SPG guidance will be	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site,

MAC Number	Additional Hearing Session/Action Point	Proposed Change October 2015	HRA Screening Criteria
	Action Point 2	produce, and does not promote Renewable Energy and Low Carbon Technologies beyond that which has already been assessed in the HRA of the original policies.	beyond that assessed in the original HRA of the deposit LDP.
MAC39	Hearing Session 24: Miscellaneous Matters Action Point 9	Amend reasoned justification to proposed new Policy T9 Cardiff City Region 'Metro' network to update reference to national guidance. This amendment does not specify new infrastructure.	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC40	Hearing Session 22: Retail Provision Within Strategic Sites	Amend Policy R1: Retail Hierarchy to reflect retail provision within Strategic Sites. This amendment does not specify locations for retail development.	This change proposes the inclusion of factual details, which do not promote any new development
MAC41	Hearing Session 22: Retail Provision Within Strategic Sites	Amend Policy R7: Retail Provision within Strategic Sites to remove cross reference with out –of-centre retail tests.	The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.
MAC61	Hearing Session 23: Minerals Action Point 4	Amend Policy M2: Preferred Order Of Mineral Resource Release and reasoned justification. These changes amend the preferred order of release and do not set out new locations for specific mineral workings	The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.

MAC Number	Additional Hearing Session/Action Point	Proposed Change October 2015	HRA Screening Criteria
			The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC67	Hearing Session 23: Minerals Action Point 5	Insert new paragraph at the end of the reasoned justification to new Policy M7 Safeguarding of Sand and Gravel, Coal and Limestone Resources	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.

APPENDICES

APPENDIX 1: Consideration of MACs against HRA screening criteria

SUMMARY

- 0.1 A Habitats Regulations Appraisal (HRA) of spatial development plans is a requirement of the Habitats Directive (92/43/EEC) as set out in the Conservation of Habitats and Species Regulations 2010 (as amended).
- 0.2 This report details the HRA process for the Matters Arising Changes Schedule (MAC), the methods and findings, and the conclusions of the assessment.
- 0.3 An assessment was made of the likelihood of significant impact of the MAC on eight international sites in and around Cardiff, namely **Cardiff Beech Woods SAC, Severn Estuary SAC, SPA, Ramsar Site, River Usk SAC, River Wye SAC, Blackmill Woodlands SAC and Aberbargoed Grasslands SAC.**
- 0.4 None of the MACs were judged to have the potential to affect any of these sites, above or beyond those potential impacts already considered in the HRA of the Deposit LDP.
- 0.5 Therefore, none of these MACs are likely to have a significant effect on any of the international sites either alone or in combination with other plans, projects or programmes.
- 0.6 The Habitats Regulations Appraisals of the LDPs of neighbouring Local Authorities have indicated that in the absence of direct effects, in-combination effects with other plans are not likely to be significant at the sites considered in the light of the evidence available.
- 0.7 The LDP can proceed without further reference to this section of the Habitats Regulations.

1.0 INTRODUCTION

- 1.1 Cardiff Council is currently progressing a Local Development Plan (LDP), and has undertaken Habitats Regulations Appraisal (HRA) of that plan in line with the requirements set by the Conservation of Habitats and Species Regulations 2010¹ (as amended) [referred to subsequently as The Habitats Regulations].
- 1.2 The HRA of the Deposit LDP concluded that the Deposit LDP was not likely to have a significant effect upon any of the European Sites considered, either alone, or in combination with other plans, projects or programmes in the region.
- 1.3 The present HRA report considers the effect of the Matters Arising Changes Schedule upon the policies and proposals of the Deposit LDP, and whether those changes would give rise to potential effects upon European Sites above or beyond those already assessed.

Requirement for Habitats Regulations Appraisal

- 1.4 The European Directive (92/43/EEC) on the Conservation of Natural Habitats and Wild Flora and Fauna ('The Habitats Directive') protects habitats and species of European nature conservation importance. The Habitats Directive establishes a network of internationally important sites designated for their ecological status. These are referred to as Natura 2000 (N2K) sites or European Sites, and comprise Special Areas of Conservation (SACs) and Special Protection Areas (SPAs) [which are classified under the Council Directive 79/409/EEC on the conservation of wild birds, the 'Birds Directive'].
- 1.5 Articles 6 (3) and 6 (4) of the Habitats Directive require HRA to be undertaken on proposed plans or projects which are not necessary for the management of the site but which are likely to have a significant effect on one or more European sites either individually, or in combination with other plans and projects.² This requirement is set out in Regulation 102 of the Conservation of Habitats and Species Regulations 2010 (as amended) which require the application of HRA to all land use plans. Welsh Government (WG) guidance also requires that Ramsar sites (which support internationally important wetland habitats) and are listed under the Convention on Wetlands of International Importance (Ramsar Convention 1971) are included within HRA/AA and that candidate SACs and proposed SPAs are treated as 'designated' sites in the context of HRA. In this report the term 'European sites' will be used when referring to SACs, cSACs, SPAs, pSPAs and Ramsar sites.
- 1.6 The purpose of HRA is to assess the impacts of a land-use plan, in combination with the effects of other plans and projects, against the conservation objectives of a European Site and to ascertain whether it would

¹ The Conservation of Habitats and Species Regulations 2010 (as amended) consolidate all the various amendments made to the 1994 Regulations in respect of England and Wales.

² Determining whether an effect is 'significant' is undertaken in relation to the designated interest features and conservation objectives of the Natura 2000 sites. If an impact on any conservation objective is assessed as being adverse then it should be treated as significant. Where information is limited the precautionary principle applies and significant effects should be assumed until evidence exists to the contrary.

adversely affect the integrity³ of that site. Where significant negative effects are identified, alternative options or mitigation measures should be examined to avoid any potential damaging effects. The scope of the HRA is dependent on the location, size and significance of the proposed plan or project and the sensitivities and nature of the interest features of the European Sites under consideration.

Guidance for Habitats Regulations Appraisal/Appropriate Assessment

- 1.7 Guidance for HRA is contained in WG's Technical Advice Note 5: Nature Conservation and Planning, Annex 6 'The Appraisal of Development Plans in Wales under the Provisions of the Habitats Regulations' (Sept 2009). NRW (as CCW) has also produced draft guidance⁴ to assist plan-making authorities to comply with the requirements of the Habitats Directive.

Consultation

- 1.8 The Habitats Regulations require the plan making/competent authority to consult the appropriate nature conservation statutory body [Natural Resources Wales (NRW)] if undertaking an Appropriate Assessment. Consultation on the approach to this HRA screening, including advice on which European sites should be considered within the area of search, was undertaken with NRW following the HRA of the Preferred Strategy and Deposit LDP, and their consultation responses were taken into account, where appropriate. The Habitats Regulations leave consultation with other bodies and the public to the discretion of the plan-making authority.

2.0 METHOD

- 2.1 Fuller details of the HRA methodology are set out in the HRA to the Deposit LDP
- 2.2 This report considers only Matters Arising Changes (MACs) as set out in the 'City of Cardiff Council Draft Matters Arising Changes Schedule' May 2015. The changes listed in that schedule are categorised according to the criteria set out below. Where further consideration is indicated, that change would be subject to the Policy Screening Template as set out in Appendix 2 of the original HRA of the deposit LDP.
- 2.3 The HRA of the Deposit LDP concluded that the deposit plan was not likely to have a significant effect upon any European Sites, subject to implementation of policies within the plan which were designed in part to offset any potential impact.
- 2.4 MACs are categorised according to one or more of the following criteria:-

³ Integrity is described as the sites' coherence, ecological structure and function across the whole area that enables it to sustain the habitat, complex of habitats and/or levels of populations of species for which it was classified, (ODPM, 2005).

⁴ Tyldesley, D., 2009, Draft Guidance for Plan Making Authorities in Wales: The Appraisal of Plans under the Habitats Directive for Countryside Council for Wales CCW Bangor (Revised April 2010).

- The change will benefit biodiversity and may have a positive effect upon European Sites
- The change does not relate to a specific policy, and therefore cannot affect any European Sites when the LDP is implemented.
- This change proposes the inclusion of factual details, which do not promote any new development.
- The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
- The change relates to restructuring or reorganising the policy, which does not significantly alter the meaning of the policy.
- The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
- The change relates to the insertion of new text into the policy which increases potential of that policy to impact upon a European Site, beyond that in the original HRA of the deposit LDP. Therefore this change requires further consideration.
- The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.
- The change relates to the deletion of existing text from the policy which increases its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. This arises because that wording, when implemented, would have counteracted or offset any impacts upon European Sites arising from other policies elsewhere in the plan. Therefore this change requires further consideration.
- The change relates to the creation of a new policy which does not have the potential to impact upon a European Site.
- The change relates to the creation of a new policy which has the potential to impact upon a European Site, and which therefore requires further more detailed consideration.
- The change relates to deletion of an existing policy which does not alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
- The change relates to deletion of an existing policy which increases the potential of the LDP to impact upon a European Site, beyond that in the original HRA of the deposit LDP. This arises because that policy contained wording which, when implemented, would have counteracted or offset any impacts upon European Sites arising from other policies elsewhere in the plan. Therefore this change requires further consideration.

3.0 SCREENING

Identification of European Sites & characterisation

- 3.1 Four designated European Sites lie within the Cardiff boundary, and these are set out in Table 1 below. Detailed site characterisation information for the sites, is provided in Appendix 1 of the HRA of the Deposit LDP.

Table 1	
European Sites within Plan/ Proposal Boundary	Designation
<ul style="list-style-type: none"> ■ Cardiff Beech Woods ■ Severn Estuary ■ Severn Estuary ■ Severn Estuary 	<p>SAC SAC SPA Ramsar</p>

- 3.2 Plans, programmes and projects can have spatial implications that extend beyond the intended plan boundaries. In particular, it is recognised that distance in itself is not a definitive guide to the likelihood or severity of an impact (inaccessibility/ remoteness is typically more relevant) as factors such as the prevailing wind direction, river flow direction, and ground water flow direction will all have a bearing on the relative distance at which an impact can occur. This means that a plan directing development some distance away from a European Site could still have effects on the site and therefore, needs to be considered as part of the screening process.
- 3.3 Taking into account the potential for transboundary impacts, screening of the HRA of the Deposit LDP has identified four European Sites that lie within the influence of the Cardiff Council LDP. These sites are outlined in Table 2 below and detailed information for the European Sites is provided in Appendix 1 of the HRA of the Deposit LDP.

Table 2		
European Sites Within Search Area of Plan Area	Designation	Distance from Plan/ Proposal Boundary (approx Km)
Aberbargoed Grasslands	SAC	14
Blackmill Woodlands	SAC	14
River Usk	SAC	6
River Wye	SAC	30

Consideration of Other Plans, Projects and Programmes

- 3.4 It is a requirement of Article 6(3) of the Habitats Directive that HRA examines the potential for plans and projects to have a significant effect either individually or 'in combination' with other plans, programmes & projects (PPPs). Undertaking an assessment of other PPPs for the Cardiff Council LDP required a pragmatic approach given the extensive range of PPPs underway in the surrounding region. The approach taken was cognisant of the emphasis in the forthcoming WG guidance, that considering the potential for in-combination effects is core to delivering robust/ precautionary HRA.⁵
- 3.5 When considering other PPPs attention was focused on those aimed at delivering planned spatial growth with the most significant being those that seek to provide, housing, employment and infrastructure. The review considered the most relevant plans including:
- The Wales Spatial Plan (update) 2008
 - Local Development Plans in South East Wales neighbouring authorities
 - Waste and Mineral Strategies for South East Wales and neighbouring authorities
 - Regional Transport Plans - where relevant and/or major development schemes
 - Catchment Abstraction Management Plans - where relevant to the designated sites under consideration
 - Water Resource Management Plans
- 3.6 The potential effects of these plans are reviewed in detail at Appendix 9 of the HRA of the Deposit LDP and the potential for these effects to act 'in-combination' with effects identified from Cardiff Council Deposit LDP are considered in the screening assessment (Appendix 10 of the HRA of the Deposit LDP).

Assessment of Potential impacts

- 3.7 Each policy or section of the Deposit LDP which is the subject of a MAC, is considered against each of the criteria in Section 2.4 above. The results of this analysis are set out in Appendix 1, below.

4.0 CONCLUSIONS

- 4.1 This report outlines the methods used and the findings arising from the screening stage of the Habitats Regulations Appraisal undertaken for the Matters Arising Changes Schedule
- 4.2 The HRA considered eight European Sites within the influence of the Deposit LDP

⁵ The review also draws on work being undertaken on behalf of the South East Wales Strategic Planning Group (SEWSPG) to build a resource kit of information and analysis to support HRA in the region.

- 4.3 **Based on the information considered, the findings of the assessment indicate that the Matters Arising Changes to the City of Cardiff Council Deposit LDP in implementation will not have a likely significant effect on the European sites considered as part of the HRA screening and will not require full Appropriate Assessment under the Habitats Regulations.**
- 4.4 This conclusion is dependent in part upon the implementation of policies in the Deposit LDP which would serve to counteract adverse effects arising from policies screened-in to this HRA.

Appendix 1: Consideration of MACs against HRA Screening Criteria

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
Chapter 1:Introduction			
MAC1	1.1 – 1.19	Update and amend paragraphs 1.1 – 1.19	The change does not relate to a specific policy, and therefore cannot affect any European Sites when the LDP is implemented.
MAC2	New paragraph	Insert new paragraph in the Introduction after existing paragraph 1.19 Other Assessment Processes.	The change does not relate to a specific policy, and therefore cannot affect any European Sites when the LDP is implemented.
Chapter 2: The Cardiff Context and Key Issues the Plan must Address			
MAC3	2.1 (page 21)	Key Environmental trends and issues	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
Chapter 4: Strategy, Key Policies and Key Diagram			
MAC4	KP1: Level of Growth	Replace existing Policy KP 1: Level of Growth with revised KP1 Please see Appendix One of this schedule for amended KP 1	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site. Taken together, these changes do not increase the level of growth, nor do they propose new locations for growth, beyond that proposed in the Deposit LDP, which was subject to HRA.
MAC5	Policy KP2 Strategic Sites KP2	Amend Policy KP2:Strategic Sites and	The change relates to restructuring or reorganising the policy, which

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
	New Key Policies, KP2(A) to KP2(H)	<p>reasoned justification and insert new policies KP2A to H after existing KP2</p> <p>Please see Appendix Two of the MAC schedule for new Policies KP2(A) – KP2(H)</p> <p>Policy KP2</p> <p>New paragraphs to be inserted after existing paragraph 4.54 Delete existing paragraphs 4.55 to 4.67 relating to Strategic Site H as these matters will now be covered by proposed new KP2(H)</p>	<p>does not significantly alter the meaning of the policy.</p> <p>The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.</p> <p>The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site. – The deleted section includes the sentence <i>'Additionally, the adjoining Estuary is a European designated site so run-off issues and disturbance will be particularly sensitive.'</i> However, this is replaced in New Policy KP2(H) by the sentence <i>'Run-off will enter the River Severn Estuary, a European designated site so drainage and potential disturbance to birds will need to be suitably addressed.'</i></p>
MAC6	KP4: Master planning Approach Paragraphs 4.84 – 4.85	Amend reasoned justification of KP4: Masterplanning approach	<p>The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.</p> <p>The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.</p> <p>Taken together, these changes reflect the embedding of the Masterplanning Framework document into the LDP, which does not alter the conclusion of the HRA of the LDP.</p>
MAC7	KP5: Good Quality and Sustainable Design	Amend criterion (ix) of Policy KP5: Good Quality and Sustainable Design	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
MAC8	Policy KP6: New Infrastructure	Amend Policy KP 6 and reasoned justification	<p>The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.</p> <p>The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.</p> <p>The changes include the insertion of a bullet point 'Flood mitigation / defences', which may conceivably refer to sea defences along the Severn Estuary Foreshore, which may conceivably lead to an effect upon the Severn Estuary designations. However, no detail is provided as to the actual location of these defences, so the effects of this insertion cannot be assessed further, and in any event, the potential need for sea defences were addressed in paragraphs 4.57 to 4.61 of the deposit LDP, which was subject to HRA, which itself was considered acceptable by NRW.</p>
MAC9	Policy KP7 Planning Obligations Paragraphs 4.98 and 4.101	Amend KP 7 and paragraph reasoned justification	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC10	Policy KP8 new paragraph and amendments to 4.117	<p>Insert new paragraph after existing paragraph 4.105 and amend paragraph 4.117 of Policy KP8.</p> <p>New paragraph after existing paragraph 4.105</p>	The change will benefit biodiversity and may have a positive effect upon European Sites, by reducing the effects of pollution arising from motorised vehicle traffic.
MAC11	KP11: Minerals And Aggregates	Amend Policy KP11 and the reasoned justification	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
	Paragraph 4.141		that assessed in the original HRA of the deposit LDP. The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site. Taken together, these changes do not alter the potential for impact of this policy upon any European Sites, as assessed in the original HRA of the Deposit LDP.
MAC12	Policy KP12 Waste Paragraphs 4.144, 4.145	Amend Policy KP 12 and the reasoned justification	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.
MAC13	Policy KP13: Responding to Evidenced Social Needs	Amend Policy KP13 and reasoned justification Insert new paragraph after existing paragraph 4.149	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy. The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC14	KP15 Climate Change Paragraph 4.167	Amend Policy KP15 and paragraph 4.167 of the reasoned justification	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC15	Policy KP16 Green Infrastructure	Amend Policy KP16	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC16	Policy KP17 Built Heritage Paragraphs 4.174, 4.176, 4.178, 4.179	Amend Policy KP17	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
MAC17	KP18: Natural Resources Paragraph 4.184	Amend criterion (iv) and paragraph 4.184 of Policy KP18	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC18	Policy H1 Non Strategic Housing Sites Table 3	Amend Table 3 of Policy H1	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy. The changes to these non-strategic housing allocations are relatively small and are not likely to result in a different effect to that previously assessed in the HRA of the Deposit LDP
MAC19	Policy H3 Affordable Housing Paragraphs 5.11, 5.12, 5.13	Amend Policy H3 and paragraphs 5.11, 5.12 and 5.13 of the reasoned justification.	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.
MAC20	Policy H4: Change Of Use Of Residential Land Or Properties Paragraph 5.18	Amend Policy H4 and paragraph 5.18 of the reasoned justification.	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.
MAC21	Policy H5 Sub-Division or Conversion of Residential Properties	Amend Policy H5	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC22	Policy H7:Allocation Policy for Gypsy and Traveller Site Paragraphs 5.34 – 5.50	Delete Policy H7 and reasoned justification	The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site. The policy relates to the location of Gypsy and Traveller allocations, so its deletion would not affect any European Sites.

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
MAC23	Policy H8 Sites for Gypsy and Traveller Caravans Paragraphs 5.52 and 5.53	Amend criterion (ii) and paragraphs 5.52 and 5.53 of the reasoned justification to Policy H8	<p>The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.</p> <p>The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.</p> <p>The amendments refer to a Gypsy and Traveller site selection process to take place over the next 2 years, and as these sites have not yet been selected, their impacts upon any European Sites cannot yet be assessed. Where individual sites come forward in the future for construction of Gypsy and Traveller sites, these will be subject to individual HRA at the project level.</p>
MAC24	Policy EC3: Alternative Use Of Employment Land And Premises Paragraphs 5.68 and 5.69	Amend Policy EC3 and paragraphs 5.68 and 5.69 of the reasoned justification	<p>The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.</p> <p>The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.</p>
MAC25	New Policy	Insert new policy and reasoned justification after paragraph 5.85 new policy to be referenced EC7	<p>The change relates to the creation of a new policy which does not have the potential to impact upon a European Site.</p> <p>The new policy does not specify any new locations, so its effects upon any European Sites cannot yet be assessed. Where individual sites come forward in the future for employment use, these will be subject to individual HRA at the project level. The new policy refers to sites allocated in policies KP2 and EC4; these have previously been assessed in the HRA of the Deposit LDP</p>
MAC26	Policy EN: Countryside Protection	Amend Policy EN1 and the reasoned justification	The change relates to restructuring or reorganising the policy, which does not significantly alter the meaning of the policy.

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
MAC27	Policy EN2 Conversion, Extension and Replacement Buildings in the Countryside Paragraph 5.96	Amend Policy EN2 by deleting criterion v and to include criterion vi within an amended criterion ii remaining parts of the policy stays the same. Amend paragraph 5.96	The change relates to restructuring or reorganising the policy, which does not significantly alter the meaning of the policy.
MAC28	Policy EN3 : Landscape Protection Paragraph 5.106	Amend Policy EN3 and reasoned justification	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC29	Policy EN4 River Valleys	Amend paragraph 5.118 of Policy EN4	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC30	Policy EN5:—Local Nature Reserves And Non-Statutory Sites Of Nature Conservation And Geological Importance	Rename and amend Policy EN5 and reasoned justification	The change will benefit biodiversity and may have a positive effect upon European Sites
MAC31	Policy EN6 Ecological Networks and Features of Importance for Biodiversity Paragraph 5.137	Delete paragraph 5.137 of EN6	The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.
MAC32	Policy EN7: Priority Habitats And Species	Amend Policy EN7 and reasoned justification	The change will benefit biodiversity and may have a positive effect upon European Sites

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
MAC33	Policy EN9: Conservation of the Historic Environment: paragraphs 5.152, 5.153, 5.155, 5.159	Amend paragraphs 5.152, 5.153, 5.155 and 5.159 of the reasoned justification to Policy EN9	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC34	EN12: Renewable Energy And Low Carbon Technologies Paragraphs 5.184, 5.186, 5.187	Amend Policy EN12 and reasoned justification	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC35	EN13 Air, Noise, Light Pollution and Contaminated Land, Paragraph 5.208	Amend title of Policy EN13 and paragraph 5.208 of the reasoned justification	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC36	EN14: Flood Risk Paragraph 5.211	Amend Policy EN14 and paragraph 5.211 of the reasoned justification	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. This new text clarifies and updates the policy in relation to current NRW flood risk management advice, and does not alter the impact of this policy upon European Sites as previously assessed by the HRA of the Deposit LDP.
MAC37	Policy T1: Walking and	Amend paragraph 5.221 of Policy T1	The change is minor, and relates to spelling, grammar, or accuracy or

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
	Cycling Paragraph 5.221		clarification of wording, which do not alter the meaning of the policy.
MAC38	Policy T2: Strategic Rapid Transit And Bus Corridors	Amend Policy T2 and reasoned justification T2: STRATEGIC RAPID TRANSIT AND BUS CORRIDORS	<p>The change will benefit biodiversity and may have a positive effect upon European Sites, by reducing the effects of pollution arising from motorised vehicle traffic.</p> <p>Bus route enhancements to not entail construction of new roads, and so are not likely to impact upon European Sites in this respect.</p> <p>The alignment and mode of rapid transit corridors and how they connect to and interchange with the public transport network is not yet known and cannot be defined precisely on a map. Therefore the impacts of these rapid transit corridors cannot be fully assessed at this stage. However, individual developments will be subject to HRA at the detailed project stage.</p> <p>The changes introduce a ‘Southern Bus Corridor’ which passes via the Cardiff Bay Barrage, which is close to the boundary of the Severn Estuary SAC/SPA/Ramsar. However, this route is already accessible to traffic, and the road across the barrage is more than 200m away from the SPA boundary, which is the distance beyond which visual disturbance of birds is thought not to occur. Therefore the potential for impact upon the Severn Estuary is not likely to be significant.</p>
MAC39	New Policy and reasoned justification	Insert new policy to be referenced T9 after existing paragraph 5.259	<p>The change will benefit biodiversity and may have a positive effect upon European Sites, by reducing the effects of pollution arising from motorised vehicle traffic.</p> <p>The alignment and mode of a ‘Metro’ network is not yet known and</p>

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
			cannot be defined precisely on a map. Therefore the impacts of these rapid transit corridors cannot be fully assessed at this stage. However, individual developments will be subject to HRA at the detailed project stage.
MAC40	New Policy and reasoned justification	Insert new policy at the start of the Retail Section to be referenced R1	The change relates to the creation of a new policy which does not have the potential to impact upon a European Site.
MAC41	Policy R1 Retail Provision Within Strategic Sites	Amend Policy R1 i.	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC42	Policy R3: Protected Shopping Frontages Para 5.264 of	Amend paragraph 5.264 of Policy R3	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC43	Policy R4:Retail Development (Out of Centre) Paragraphs 5.271, 5.272, 5.276	Amend paragraph 5.271 and delete paragraphs 5.272 and 5.276 of the reasoned justification to Policy R4	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy. The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site
MAC44	Policy R5 District Centres	Amend Policy R5	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC45	Policy R6 Local Centres	Amend Policy R6 and insert new paragraph after existing paragraph 5.295	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC46	Policy R7: Food and Drink Uses Paragraphs 5.299,	Amend paragraph 5.299 and delete paragraph 5.303 of Policy R7	The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
	5.303,		
MAC47	Policy R8 Protection Of Local Shopping Parades	Delete Policy R8 and reasoned justification	The change relates to deletion of an existing policy which does not alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC48	All Retail Policies	Re-order and renumber retail policies	The change relates to restructuring or reorganising the policy, which does not significantly alter the meaning of the policy.
MAC49	Policy C1 Community Uses Paragraphs 5.311 and 5.316 of	Amend reasoned justification of Policy C1 and insert new paragraph after existing paragraph 5.311	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC50	Policy C2 Community Safety / Creating Safe Environments Paragraphs 5.318, 5.321	Amend paragraph 5.318 and 5.321 of existing Policy C2	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy
MAC51	New Policy and reasoned justification	Insert new Policy to be referenced C2 after existing paragraph 5.316	The change relates to the creation of a new policy which does not have the potential to impact upon a European Site.
MAC52	Policy C4: Provision For Open Space, Outdoor Recreation, And Sport Paragraph 5.340	Amend Policy C4 and reasoned justification	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC53	Policy C5: Provision For	Delete Policy C5 and reasoned	The change relates to deletion of an existing policy which does not

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
	Allotments And Community Growing	justification	alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC54	Policy C6: Provision of Children's Play	Delete Policy C6 and reasoned justification	The change relates to deletion of an existing policy which does not alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC55	Policy C7 Health Paragraphs 5.355, 5.350, 5.362	Amend Policy C7 and reasoned justification	The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site.
MAC56	C8 Planning for Schools	Delete Policy C8 and reasoned justification	The change relates to deletion of an existing policy which does not alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC57	Policy C9: New Educational Facilities	Delete Policy C9 and reasoned justification	The change relates to deletion of an existing policy which does not alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC58	Policy C10: Health Employment Non Strategic Allocation	Delete Policy C10 and reasoned justification	The change relates to deletion of an existing policy which does not alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC59	New Policy and reasoned justification	Insert new Policy after existing paragraph 5.362 to be referenced as Policy C7	The change relates to the creation of a new policy which does not have the potential to impact upon a European Site. No specific locations for schools are proposed so their impact cannot be assessed at this stage, however, individual developments will be subject to HRA at the detailed project stage.
MAC60	Policy M1: Mineral	Amend Policy M1 and the reasoned	The change is minor, and relates to spelling, grammar, or accuracy or

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
	Limestone Reserves And Resources Paragraph 5.380	justification	clarification of wording, which do not alter the meaning of the policy.
MAC61	Policy M2: Preferred Order Of Mineral Resource Release Paragraphs 5.382, 5.384, 5.384	M2: PREFERRED ORDER OF MINERAL RESOURCE RELEASE	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site. Taken together, these changes do not alter the potential for impact of this policy upon any European Sites, as assessed in the original HRA of the Deposit LDP.
MAC62	Policy M3: Quarry Closures And Extension Limits Paragraphs 5.389 and 5.391	Amend Policy M3 and reasoned justification in paragraphs 5.389 and 5.391	The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. The change relates to the deletion of existing text from the policy which does not alter its potential to impact upon a European Site. These changes propose no new areas for mineral extraction, compared with the Deposit LDP, which was subject to HRA.
MAC63	Policy M6: Dredged Aggregate Landing And Distribution Facilities Paragraphs 5.405, 5.408	Amend Policy M6 and the reasoned justification	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy. The inclusion of a reference to the need to consider the Severn Estuary SAC/SPA/Ramsar site should serve to further reduce the potential for this policy to affect those sites, as assessed in the HRA of the Deposit LDP.
MAC64	Policy M7: Safeguarding Of	Delete Policy M7 and the reasoned	The change relates to deletion of an existing policy which does not

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
	Sand And Gravel Resource	justification	alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC65	Policy M8: Safeguarding Coal Resources	Delete Policy M8 and the reasoned justification	The change relates to deletion of an existing policy which does not alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC66	Policy M9: Safeguarding Of Limestone Resources	Delete Policy M9 and the reasoned justification	The change relates to deletion of an existing policy which does not alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.
MAC67	New Policy: Safeguarding Of Sand And Gravel, Coal And Limestone Resources	Insert new policy after existing paragraph 5.408 to be referenced M7	The change relates to the creation of a new policy which does not have the potential to impact upon a European Site. This new policy encompasses the deleted M7, M8 and M9 policies, without increasing the potential for those activities to affect European Sites (Specifically, the Cardiff Beech Woods SAC), beyond that assessed in the HRA of the Deposit LDP.
MAC68	New Policy: <u>Areas Where Coal Working Will Not Be Acceptable</u>	Insert new policy to be referenced M8	The change relates to the creation of a new policy which does not have the potential to impact upon a European Site. It relates to exclusion of coal mining, so will not lead to new development which would affect European Sites.
MAC69	Policy W1: Land for Waste Management	Delete Policy W1 and reasoned justification	The change relates to deletion of an existing policy which does not alter the potential of the LDP to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP. Although the allocation in the Deposit LDP of the waste management site at Lamby Way was assessed in the HRA of the Deposit LDP as not likely to have a significant effect upon the Severn Estuary designations, it is nonetheless welcomed that this allocation is to be removed, thereby removing any remaining potential for impact.

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
MAC70	Policy W2: Sites For Waste Management Facilities	Amend Policy W2 and the reasoned justification	<p>The change relates to the insertion of new text into the policy which does not alter its potential to impact upon a European Site, beyond that assessed in the original HRA of the deposit LDP.</p> <p>Caveats which prevent unacceptable harm to the environment are retained in the amended policy.</p> <p>No specific locations are proposed, so these cannot be assessed in detail, but individual developments will be screened for the need for HRA at the detailed project stage.</p>
MAC71	New Appendix	<p>Insert New Appendix Showing Sites over 10 dwellings with planning permission for residential</p> <p>Please see Appendix Three of this schedule</p>	These sites all have planning consent, either with or without Section 106 legal agreement, and so it can be presumed that they have already been screened for the need for HRA.
MAC72	New Appendix	Insert New Appendix – Designated Sites	This change proposes the inclusion of factual details, which do not promote any new development.
MAC73	New Appendix: Areas of Protection	Insert New Appendix	This change proposes the inclusion of factual details, which do not promote any new development.
MAC74	Appendix 5	<p>Delete Appendix 5:Supplementary Planning Guidance and insert new appendix</p> <p>Please see Appendix Four of this</p>	The change does not relate to a specific policy, and therefore cannot affect any European Sites when the LDP is implemented.

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
		schedule	
MAC75	Appendix 9	Insert new monitoring chapter & monitoring framework Please see Appendix Five of this schedule.	The change does not relate to a specific policy, and therefore cannot affect any European Sites when the LDP is implemented.
MAC76		Amend the plan to ensure appropriate cross referencing is applied	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC77		Amend the Plan to reflect consequential changes to the policy and paragraph numbers resulting from the amendments in this schedule Please see Appendix Six of this schedule to show amendments to the Policy numbering	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC78		To address any typographical or grammatical errors	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC79		Amend the plan to ensure references to national guidance are correct	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC80		Amend the Key Diagram to reflect amendments proposed through the matters arising.	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.
MAC81		Amend the Plan to remove references to the Background Technical Papers	The change is minor, and relates to spelling, grammar, or accuracy or clarification of wording, which do not alter the meaning of the policy.

MAC Number	Deposit Policy /Para No	Proposed Change	HRA Screening Criteria
		where appropriate	
		Amendments to the Proposals Map	<p>Most changes relate to factual amendments of allocated site boundaries, river corridors and mineral safeguarding areas. The changes to the policies which are reflected in these Proposals Map changes, are assessed in full above.</p> <p>The denotation of the Flexibility Areas has been amended, but this does not entail a change in the location, scale or impacts of those flexibility areas, nor therefore any additional potential for impact upon European Sites.</p> <p>The housing allocation at Roath Basin, denoted by Number 2 on the MAC PM5, has already received consent (03/00099/C) and it can be assumed that it was screened for the need for an HRA at the planning application stage.</p>

- 3. Potential Impacts**
- 4. Plans and Programmes Review**
- 5. Likely Significant Effect Screening Assessment**

EXECUTIVE SUMMARY

- 0.1 Habitats Regulations Appraisal (HRA) of spatial, development plans is a requirement of the Habitats Directive (92/43/EEC) as set out in the Conservation of Habitats and Species Regulations 2010. This report details the HRA Screening for the Preferred Strategy of the Cardiff Council Local Development Plan (LDP) the methods and findings and the conclusions of the Screening Assessment.
- 0.2 An assessment was made of the likelihood of significant impact of the Preferred Strategy on eight international sites in and around Cardiff, namely **Cardiff Beech Woods SAC, Severn Estuary SAC, SPA, Ramsar Site, the River Usk SAC, the River Wye SAC, Blackmill Woodlands SAC and Aberbargoed Grasslands SAC.**
- 0.3 Those elements of the Preferred Strategy which were judged to have the potential to affect some or all of these sites, were **Policy 1: Level of growth-Delivering sustainable development, Policy 2: Strategic sites to deliver growth, Policy 5: City Centre and Bay Business Areas, Policy 6: Minerals and Aggregates, Policy 7: Waste, Policy 24: Strategic Recreational Routes, Strategic Growth Options A, B and C, Spatial Option - Greenfield site north of M4 at Thornhill, Spatial Option - Dispersed smaller greenfield sites, Spatial Option - Dispersed brownfield sites and Spatial Option - Greenfield sites south of Creigiau/north Junction 33.**
- 0.4 Following this screening assessment, none of these policies were considered likely to have a significant effect on any of the international sites either alone or in combination with other plans, projects or programmes.
- 0.5 The Habitats Regulations Appraisals of the LDPs of neighbouring Local Authorities have indicated that in the absence of direct effects, in-combination effects with other plans are not likely to be significant at the sites considered in the light of the evidence available.
- 0.6 Subject to any significant changes to the proposals considered by the HRA, this plan will now proceed without further reference to the Habitats Regulations.

1.0 INTRODUCTION

- 1.1 Cardiff Council is currently developing a Preferred Strategy for its Local Development Plan (LDP) and is undertaking Habitats Regulations Appraisal (HRA) in line with the requirements set by the Conservation of Habitats and Species Regulations 2010¹ [The Habitats Regulations].
- 1.2 This HRA Screening report addresses the likely significant effects on designated European Sites of implementing the policies and proposals of the Preferred Strategy
- 1.3 Habitats Regulations Appraisal is also commonly referred to as Appropriate Assessment (AA) although the requirement for AA is first determined by an initial 'screening' stage undertaken as part of the full HRA. This report addresses the Screening Phase of the HRA; it outlines the screening tasks and the key findings emerging from the assessment.

Requirement for Habitats Regulations Appraisal

- 1.4 The European Directive (92/43/EEC) on the Conservation of Natural Habitats and Wild Flora and Fauna (the Habitats Directive) protects habitats and species of European nature conservation importance. The Habitats Directive establishes a network of internationally important sites designated for their ecological status. These are referred to as Natura 2000 (N2K) sites or European Sites, and comprise Special Areas of Conservation (SACs) and Special Protection Areas (SPAs) [which are classified under the Council Directive 79/409/EEC on the conservation of wild birds, the 'Birds Directive'].
- 1.5 Articles 6 (3) and 6 (4) of the Habitats Directive require AA to be undertaken on proposed plans or projects which are not necessary for the management of the site but which are likely to have a significant effect on one or more European sites either individually, or in combination with other plans and projects.² This requirement is set out in the Conservation of Habitats and Species Regulations 2010 which require the application of HRA to all land use plans. Welsh Assembly Government (WAG) guidance also requires that Ramsar sites (which support internationally important wetland habitats) and are listed under the Convention on Wetlands of International Importance (Ramsar Convention 1971) are included within HRA/AA and that candidate SACs and proposed SPAs are treated as 'designated' sites in the context of HRA. In this report the term 'European sites' will be used when referring to SACs, cSACs, SPAs, pSPAs and Ramsar sites.
- 1.6 The purpose of HRA/AA is to assess the impacts of a land-use plan, in combination with the effects of other plans and projects, against the conservation objectives of a European Site and to ascertain whether it would

¹ The Conservation of Habitats and Species Regulations 2010 consolidate all the various amendments made to the 1994 Regulations in respect of England and Wales.

² Determining whether an effect is 'significant' is undertaken in relation to the designated interest features and conservation objectives of the Natura 2000 sites. If an impact on any conservation objective is assessed as being adverse then it should be treated as significant. Where information is limited the precautionary principle applies and significant effects should be assumed until evidence exists to the contrary.

adversely affect the integrity³ of that site. Where significant negative effects are identified, alternative options or mitigation measures should be examined to avoid any potential damaging effects. The scope of the HRA/AA is dependent on the location, size and significance of the proposed plan or project and the sensitivities and nature of the interest features of the European sites under consideration.

Guidance for Habitats Regulations Appraisal/Appropriate Assessment

- 1.7 Guidance for HRA is contained in WAG's Technical Advice Note 5: Nature Conservation and Planning, Annex 6 'The Appraisal of Development Plans in Wales under the Provisions of the Habitats Regulations' (Sept 2009). CCW has also produced Draft guidance⁴ to assist plan making authorities to comply with the requirements of the Habitats Directive.
- 1.8 The methods and approach used for this screening are based on the formal Welsh guidance currently available and emergent practice, which recommends that HRA is approached in three main stages - outlined in **Table 1** below. This report outlines the method and findings for stage 1 of the HRA process.

³ Integrity is described as the sites' coherence, ecological structure and function across the whole area that enables it to sustain the habitat, complex of habitats and/or levels of populations of species for which it was classified, (ODPM, 2005).

⁴ Tyldesley, D., 2009, Draft Guidance for Plan Making Authorities in Wales: The Appraisal of Plans under the Habitats Directive for Countryside Council for Wales CCW Bangor (Revised April 2010).

Table 1	
Habitats Regulations Appraisal: Key Stages	
Stage 1	
Screening for likely significant effect	<ul style="list-style-type: none"> ■ Identify international sites in and around the plan/ strategy area in a search area agreed with the Statutory Body the Countryside Council for Wales ■ Examine conservation objectives of the interest feature(s)(where available) ■ Review plan policies and proposals and consider potential effects on European sites (magnitude, duration, location, extent) ■ Examine other plans and programmes that could contribute to 'in combination' effects <hr/> <ul style="list-style-type: none"> ■ <i>If no effects likely - report no significant effect (taking advice from CCW as necessary).</i> ■ <i>If effects are judged likely or uncertainty exists - the precautionary principle applies proceed to stage 2</i>
Stage 2	
Appropriate Assessment	<ul style="list-style-type: none"> ■ Complete additional scoping work including the collation of further information on sites as necessary to evaluate impact in light of conservation objectives ■ Agree scope and method of AA with CCW ■ Consider how plan 'in combination' with other plans and programmes will interact when implemented (the Appropriate Assessment) ■ Consider how effect on integrity of site could be avoided by changes to plan and the consideration of alternatives ■ Develop mitigation measures (including timescale and mechanisms) ■ Report outcomes of AA including mitigation measures, consult with CCW and wider [public] stakeholders as necessary ■ If plan will not significantly effect European site proceed without further reference to Habitats Regs <hr/> <ul style="list-style-type: none"> ■ <i>If effects or uncertainty remain following the consideration of alternatives and development of mitigations proceed to stage 3</i>
Stage 3	
Procedures where significant effect on integrity of international site remains	<ul style="list-style-type: none"> ■ Consider alternative solutions, delete from plan or modify ■ Consider if priority species/ habitats affected ■ Identify 'imperative reasons of overriding public interest' (IROPI) economic, social, environmental, human health, public safety ■ Notify Assembly Government ■ Develop and secure compensatory measures

Consultation

1.9 The Habitats Regulations require the plan making/competent authority to consult the appropriate nature conservation statutory body [Countryside

Council for Wales (CCW)] if undertaking an Appropriate Assessment. Consultation on the approach to this HRA screening, including advice on which European sites should be considered within the area of search, was undertaken with CCW following the HRA of the previous Preferred Strategy and previous draft LDP, which did not progress. Their consultation responses have been taken into account, where appropriate, in this HRA of the current Preferred Strategy. The Habitats Regulations leave consultation with other bodies and the public to the discretion of the plan making authority. The WAG guidance notes that it is good practice to make information on HRA available to the public at each formal development plan consultation stage. Therefore, in addition to the statutory consultation undertaken with CCW this report is being made available for wider public consultation.

Purpose & Structure of Report

- 1.13 This report documents the process and the findings from the Screening stages of the HRA for Cardiff Council Preferred Strategy. Following this introductory section, the document is organised into a further three sections:
- **Section 2** - outlines the method used for the Screening process and includes reference to the key information sources used.
 - **Section 3** - outlines the process and summary findings of the Screening Process and the assessment.
 - **Section 4** - outlines the conclusions, and how the plan should proceed with reference to the Habitats Regulations.

2.0 METHOD

Screening

- 2.1 In accordance with the official Welsh guidance and current practice, conducting the screening stage of the HRA for the Cardiff Council Preferred Strategy employed the method outlined below. This approach combines both a **plan** focus and a **site** focus.
- The **plan** focus first screens out those elements of the plan unlikely to affect European site integrity and then considers the impacts of the remaining elements on European sites, including the potential for ‘in-combination’ impacts.
 - The **site** focus considers the environmental conditions of the site and the factors required to maintain site integrity, and looks at the potential impacts the plan may have.
- 2.2 HRA experience to date has indicated that maintaining a site based approach as core to the HRA/AA method more closely reflects the intent of the Habitats Directive. This means that subsequent mitigation measures [developed if/as required during the AA stage 2] seek to focus on the conditions necessary to maintain site integrity (e.g. avoiding specific types of development/ activity at or near sensitive areas). This is considered to be a more robust and defensible approach than adding policy caveats at a strategic level and devolving decisions about impacts on site integrity to lower level planning documents. Although, this approach does recognise that some decisions on avoidance and mitigation can only be made when site level detail becomes available.
- 2.3 The key tasks employed for the HRA Screening are set out in **Table 2** below.

Table 2	
HRA Screening Stage 1: Key Tasks	
<p>Task 1</p> <p>Identification of Natura 2000 sites & characterisation</p>	<ul style="list-style-type: none"> ■ Identification of European sites both within the plan/proposal boundaries and in an area of search extending to 15km [as recommended by extant guidance] around the plan/proposal area. This includes considering hydrological connectivities and the catchment of watercourses relating to identified designations ■ Information was obtained for each European site, based on publicly available information and consultation with Countryside Council for Wales where appropriate.⁵ ■ This included information relating to the sites' qualifying features; conservation objectives; vulnerabilities/ sensitivities, current conditions, trends & geographical boundaries.
<p>Task 2</p> <p>Plan review and identification of likely impacts</p>	<ul style="list-style-type: none"> ■ Screening of the plan/proposal and the identification of likely impacts (including a review of the plan/proposal's aims, objectives, strategic policies, including spatial implications where identified to determine likely impacts).
<p>Task 3</p> <p>Consideration of other plans and programmes</p>	<ul style="list-style-type: none"> ■ Consideration, where appropriate of other plans and programmes that may have in-combination effects with the plan/proposal.
<p>Task 4</p> <p>Screening Assessment</p>	<ul style="list-style-type: none"> ■ Assessment of the potential of identified impacts to affect the designated interest features of European sites ■ Summary of screening outcomes and recommendations.

⁵ Key Information Sources: Joint Nature Conservation Committee (JNCC) web resource www.jncc.gov.uk including site details/ character contained on Natura 2000 Standard Data Form. 3.0 SCREENING

Task 1: Identification of European Sites & characterisation

3.1 Two designated sites lie within the Cardiff boundary. Detailed site characterisation information for the sites, is provided in **Appendix 1**.

Table 3	
European Sites within Plan/ Proposal Boundary	Designation
<ul style="list-style-type: none"> ▪ Cardiff Beech Woods ▪ Severn Estuary ▪ Severn Estuary ▪ Severn Estuary 	<p>SAC SPA SAC Ramsar</p>

3.2 Plans, programmes and projects can have spatial implications that extend beyond the intended plan boundaries. In particular, it is recognised that distance in itself is not a definitive guide to the likelihood or severity of an impact [inaccessibility/ remoteness is typically more relevant] as factors such as the prevailing wind direction, river flow direction, and ground water flow direction will all have a bearing on the relative distance at which an impact can occur. This means that a plan directing development some distance away from a European Site could still have effects on the site and therefore, needs to be considered as part of the screening process.

3.3 Taking into account the potential for transboundary impacts the screening has identified four European Sites that lie within the influence of the Cardiff Council Preferred Strategy. These sites are outlined in **Table 3** below and detailed information for the European sites is provided in **Appendix 1**.

Table 3		
European Sites within a search area of 15km around Plan/Proposal Area	Designation	Distance from Plan/ Proposal Boundary (approx Km)
Aberbargoed Grasslands	SAC	14
Blackmill Woodlands	SAC	14
River Usk	SAC	7
River Wye	SAC	30

Task 2: Plan/Strategy review, policy screening and identification of likely impacts

Cardiff Council Preferred Strategy: Summary Review

- 3.5 This Cardiff Council Preferred Strategy sets out a strategy for the future development of Cardiff, capital city of Wales and economic driver of the wider city-region to 2026. It provides an opportunity for people and organisations to comment on the strategy before a more detailed framework called the Deposit Local Development Plan (LDP) is consulted on and then formally submitted for independent examination prior to adoption. LDP's are a key driver for investment, help the city-region compete in a competitive market, create homes and protect sensitive environments. They deliver vital outcomes for not only the local community but also for businesses and other interests. In this way LDP's set out how development can be delivered in a sustainable way for the next 15 years.

Cardiff Council Preferred Strategy: Screening Plan/Proposal

- 3.6 The Cardiff Council Preferred Strategy was - for the purposes of the HRA - subject to an initial screening process. The aim of this screening is to identify at a broad level those policies that will not have an effect on European Sites and those that have the potential to have a likely significant effect both alone and in combination at the sites identified at Task 1.
- 3.7 The approach is in accordance with CCW draft guidance for the appraisal of plans under the Habitats Directive (Tyldesley, D. 2009). In order to complete the policy screening each policy was categorised as to its likely effects on each European site identified in **Appendix 1**. There are four categories of potential effects, which are as follows:
- **Category A:** elements of the plan/options that would have no negative effect on a European site at all;
 - **Category B:** elements of the plan/options that could have an effect, but the likelihood is there would be no significant negative effect on a European site either alone or in combination with other elements of the same plan, or other plans or projects;
 - **Category C:** elements of the plan/options that could or would be likely to have a significant effect alone and will require the plan to be subject to an appropriate assessment before the plan may be adopted;
 - **Category D:** elements of the plan/options that would be likely to have a significant effect in combination with other elements of the same plan, or other plans or projects and will require the plan to be subject to an appropriate assessment before the plan may be adopted.
- 3.8 Categories A, C and D are subdivided so that the specific reason why a policy has been allocated to a particular category is clear. The detail of the screening assessment which considers each of the policies against the categories is provided in **Appendix 2** and policies which were considered to potentially lead to likely significant effects are listed in **Table 4**.

Table 4	
Plan/ Proposal Policies Screened in to the assessment process	Assessment Category
Policy 1: Level of growth- Delivering sustainable development.	C2
Policy 2: Strategic sites to deliver growth	C2
Policy 5: City Centre and Bay Business Areas.	C2
Policy 6: Minerals and Aggregates.	C1
Policy 7: Waste.	C1
Policy 24: Strategic Recreational Routes	C2
Strategic Options A, B and C	C2
Spatial Option - Greenfield site north of M4 at Thornhill	C2
Spatial Option - Dispersed smaller greenfield sites;	C2
Spatial Option - Dispersed brownfield sites;	C2
Greenfield sites south of Creigiau/ north Junction 33	C2

- 3.9 The potential impacts arising as a result of these policies are set out in detail in **Appendix 3**, wherein the factors to which each site is broadly sensitive, are compared with each of the screened-in policies, for each of the 8 sites identified in 3.1 and 3.3 above. Where there is the potential for interaction between an activity likely to arise from the Preferred Strategy, and a sensitivity which has been identified for one or more of the features of a European site, then a screening for Likely Significant Effect is undertaken, as described in **'Task 4'**, below. In general terms, the potential effects of the Preferred Strategy upon these sites is as follows:-
- 3.10 The Aberbargoed Grasslands and Blackmill Woodlands SAC lie outside Cardiff's boundary and are not in contact with Cardiff hydrologically, so the only potential effect for the Preferred Strategy on these sites would be via aerial pollutants arising from traffic, industry and housing.
- 3.11 The Rivers Usk and Wye SACs are also outside Cardiff's boundary, but are hydrologically linked to Cardiff via the Severn Estuary, so there is the potential for water-borne pollution arising from activities within Cardiff to migrate to these rivers, both of which flow into the estuary, as well as the potential for aerial pollution.
- 3.12 However, the most important potential effect upon these two sites arises because they are both used to supply water to Cardiff, so housing and industry allocations provided for by the Preferred Strategy would place an increased water demand on these rivers, which in turn could affect the special features for which they have been designated.
- 3.13 Cardiff Beechwoods SAC is almost wholly within the Cardiff boundary, so as well as aerial pollution mentioned above, developments close to the woods could lead to increased recreational pressure at the site. Furthermore, most of Cardiff's sites for extraction of minerals and aggregates lie close to this site, so this has to be examined for potential effects.

- 3.14 The Severn Estuary has three separate designations with a range of different features which could be impacted by a number of activities arising from the Preferred Strategy. As well as aerial and aquatic pollution mentioned above, recreational activity and operation of industry has the potential to cause visual and noise disturbance to wetland birds, where these activities take place close to the foreshore.

Task 3: Consideration of other plans and programmes

- 3.12 It is a requirement of Article 6(3) of the Habitats Directive that HRA examines the potential for plans and projects to have a significant effect either individually or 'in combination' with other plans, programmes & projects (PPPs). Undertaking an assessment of other PPPs for the Cardiff Council Preferred Strategy required a pragmatic approach given the extensive range of PPPs underway in the surrounding region. The approach taken was cognisant of the emphasis in the forthcoming WAG guidance, that considering the potential for in-combination effects is core to delivering robust/precautionary HRA.⁶
- 3.13 When considering other PPPs attention was focused on those aimed at delivering planned spatial growth with the most significant being those that seek to provide, housing, employment and infrastructure. The review considered the most relevant plans including:
- The Wales Spatial Plan (update) 2008
 - Local Development Plans in South East Wales neighbouring authorities
 - Waste and Mineral Strategies for South East Wales and neighbouring authorities
 - Regional Transport Plans - where relevant and/or major development schemes
 - Catchment Abstraction Management Plans - where relevant to the designated sites under consideration
 - Water Resource Management Plans
- 3.14 The potential effects of these plans are reviewed in detail at **Appendix 4** and the potential for these effects to act 'in-combination' with effects identified from Cardiff Council Preferred Strategy are considered in the screening assessment [**Appendix 5**].

Task 4: Screening Assessment

- 3.15 In line with the screening requirement of the Habitats Regulations, an assessment was undertaken to determine the potential significant effects of the Cardiff Council Preferred Strategy on the eight European sites that lie within the influence of the Preferred Strategy. The screening decision was informed by:
- The information gathered on the European sites - **Appendix 1**;

⁶ The review also draws on work being undertaken on behalf of the South East Wales Strategic Planning Group (SEWSPG) to build a resource kit of information and analysis to support HRA in the region.

- The review of the Cardiff Council Preferred Strategy policies and their likely impacts (**Appendix 2**) ; which included an analysis of the potential environmental impacts generated by the development activities directed by the LDP and;
- The review of other relevant plans and programmes - **Appendix 4**
- WAG and CCW guidance which indicates that HRA for plans is typically broader and more strategic than project level HRA and that it is proportionate to the available detail of the plan.

Screening Assessment Summary

3.16 The detail of the main screening exercise is set out at **Appendix 5** and the result of the assessment is summarised in the paragraphs below and at **Table 5**.

Table 5 HRA Screening Table Summary			
European Site[s]	Designation	AA required alone? x No ✓ Yes ? Uncertain	AA required in combination? x No ✓ Yes ? Uncertain
Aberbargoed Grasslands	SAC	x	x
Blackmill Woodlands	SAC	x	x
Cardiff Beechwoods	SAC	x	x
River Usk	SAC	x	x
River Wye	SAC	x	x
Severn Estuary	Ramsar	x	x
Severn Estuary	SAC	x	x
Severn Estuary	SPA	x	x

4.0 CONCLUSIONS, FUTURE WORK

- 4.1 This report outlines the methods used and the findings arising from the screening stage of the Habitats Regulations Appraisal undertaken for the Cardiff Council Preferred Strategy
- 4.2 The HRA considered eight European Sites within the influence of the Preferred Strategy
- 4.3 Based on the information considered as part of the screening process, the findings of the assessment indicate that the Cardiff Council Preferred Strategy in implementation will not have a likely significant effect on the European sites considered as part of the HRA screening and will not require full AA under the Habitats Regulations. The assessment may be revised should further relevant comments be received or if there are significant changes to the plan/proposal as screened.

Special Areas of Conservation

<p>Site Name: Aberbargoed Grasslands Location Grid Ref: ST163992 JNCC Site Code: UK0030071 Size: 39.78 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
<p>Site Description</p>	<p>Aberbargoed Grasslands covers an area of 42.5ha and lies on a southwest facing hillside in the Rhymney Valley, 1km east of Bargoed and adjacent to the A4049. A large and relatively isolated population of marsh fritillary butterfly (<i>Euphydryas aurinia</i>) is present on a series of damp pastures and heaths in Gwent, representing the species on the eastern edge of its range in Wales.</p> <p>The fields in the south and west of Aberbargoed Grasslands have impeded drainage and contain a mixture of marshy grassland communities. Areas of particular interest are characterised by abundant purple moor grass <i>Molinia caerulea</i> and meadow thistle <i>Cirsium dissectum</i> with devil's bit scabious <i>Succisa pratensis</i> and carnation sedge <i>Carex panicea</i>. Other species such as saw-wort <i>Serratula tinctoria</i> and lousewort <i>Pedicularis sylvatica</i> occur frequently in heavily flushed areas. Associated stands of <i>Molinia caerulea</i> – <i>Potentilla erecta</i> mire contain abundant purple moor grass with tormentil <i>Potentilla erecta</i>, mat grass <i>Nardus stricta</i>, common sedge <i>Carex nigra</i> and spotted orchid <i>Dactylorhiza maculata</i>. Small stands of rush pasture are scattered across the site, with soft rush <i>Juncus effuses</i>, greater bird's foot trefoil <i>Lotus uliginosus</i> and marsh bedstraw <i>Galium palustre</i>.</p>
<p>Qualifying Features</p>	<p>Annex I Habitats qualifying feature:</p> <ul style="list-style-type: none"> ■ Molinia meadows on calcareous, peaty or clayey-silt-laden soils (<i>Molinion caeruleae</i>) <p>Annex II Species primary reason for selection:</p> <ul style="list-style-type: none"> ■ Marsh fritillary butterfly <i>Euphydryas</i> (<i>Eurodryas</i>, <i>Hypodryas</i>) <i>aurinia</i>
<p>Conservation Objectives</p>	<p>Conservation Objective for Feature 1: Marsh fritillary Butterfly <i>Euphydryas</i> (<i>Eurodryas</i>, <i>Hypodryas</i>) <i>aurinia</i></p> <p>The vision for this feature is for it to be in a favourable conservation status, where all of the following conditions are satisfied:</p>

<p>Site Name: Aberbargoed Grasslands Location Grid Ref: ST163992 JNCC Site Code: UK0030071 Size: 39.78 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<ul style="list-style-type: none"> ■ The site will support a sustainable metapopulation of the marsh fritillary in the Aberbargoed area. This will require at least 50ha of suitable habitat, although not all of this will be within the SAC ■ The population will be viable in the long term, acknowledging the extreme population fluctuations of the species. ■ Habitats on the site will be in optimal condition to support the metapopulation. ■ At least 25ha of the total site area will be marshy grassland suitable for supporting marsh fritillary, with <i>Succisa pratensis</i> present and only a low cover of scrub. ■ At least 6.25ha will be good marsh fritillary breeding habitat, dominated by purple moor-grass <i>Molinia caerulea</i>, with <i>S. pratensis</i> present throughout and a vegetation height of 10-20cm over the winter period. ■ All factors affecting the achievement of the foregoing conditions are under control. <p>Conservation Objective for Feature 2: <i>Molinia</i> meadows on calcareous, peaty or clayey-silt-laden soils (<i>Molinion caeruleae</i>)</p> <p>Vision for feature 2</p> <p>The vision for this feature is for it to be in a favourable conservation status, where all of the following conditions are satisfied:</p> <ul style="list-style-type: none"> ■ <i>eu-Molinion</i> marshy grassland will occupy at least 70% of the total site area. ■ The remainder of the site will be other semi-natural habitat or areas of permanent pasture. ■ The following plants will be common in the <i>eu-Molinion</i> marshy grassland: purple moor-grass <i>Molinia caerulea</i>; meadow thistle <i>Cirsium dissectum</i>; devil's bit scabious <i>Succisa pratensis</i>; carnation sedge <i>Carex panicea</i>; saw wort <i>Serratula tinctoria</i>; and lousewort <i>Pedicularis sylvestris</i>. ■ Cross-leaved heath <i>Erica tetralix</i> and common heather <i>Calluna vulgaris</i> will also be common in some areas. ■ Rushes and species indicative of agricultural modification, such as perennial rye grass <i>Lolium perenne</i> and white

<p>Site Name: Aberbargoed Grasslands Location Grid Ref: ST163992 JNCC Site Code: UK0030071 Size: 39.78 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>clover <i>Trifolium repens</i> will be largely absent from the <i>eu-Molinion</i> marshy grassland.</p> <ul style="list-style-type: none"> ■ Scrub species such as willow <i>Salix</i> and birch <i>Betula</i> will also be largely absent from the <i>eu-Molinion</i> marshy grassland. ■ All factors affecting the achievement of these conditions are under control. <p>Performance indicators for Feature 1</p> <p>The performance indicators are part of the conservation objective, not a substitute for it. Assessment of plans and projects must be based on the entire conservation objective, not just the performance indicators. The performance indicators can be found within the Aberbargoed Grasslands SAC Management Plan.</p>
<p>Component SSSIs</p>	<ul style="list-style-type: none"> ■ Aberbargoed Grasslands SSSI <p>The site has been divided into 2 management units of which unit 1 forms the Aberbargoed Grasslands SAC. A map of the management units can be viewed on the CCW website.</p>
<p>Key Environmental Conditions (factors that maintain site integrity)</p>	<p>The Marsh fritillary butterfly is dependent on the <i>Molinia</i> meadows and wet heath.</p> <ul style="list-style-type: none"> ■ Livestock grazing - The <i>eu-Molinion</i> marshy grassland needs to be maintained through traditional farming practices. Without an appropriate grazing regime, the grassland will continue to become rank and eventually turn to scrub and woodland. Light grazing by cattle and ponies between April and November each year is essential in maintaining the marshy grassland communities.
<p>SAC Condition Assessment</p>	<p>Conservation Status of Feature 1: Marsh fritillary butterfly <i>Euphydryas (Eurodryas, Hypodryas) aurinia</i></p> <p>The Marsh Fritillary feature at Aberbargoed Grasslands SAC is considered to be in unfavourable condition and conservation status (October 2003).</p>

<p>Site Name: Aberbargoed Grasslands Location Grid Ref: ST163992 JNCC Site Code: UK0030071 Size: 39.78 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>Web counts have in recent years been very low, but the species naturally undergoes significant fluctuations in population numbers due to a variety of factors, including cold and wet weather conditions and parasitic attack.</p> <p>Conservation Status of Feature 2: <i>Molinia</i> meadows on calcareous, peaty or clayey-silt-laden soils (<i>Molinion caeruleae</i>)</p> <p>The SAC report dated October 2003 states that the site is considered to be Unfavourable condition and conservation status. This is because the habitat is not in suitable condition for the marsh fritillary. In areas of the site the vegetation is too tall, is dominated by <i>Molinia</i> and does not have sufficient <i>Succisa</i>. There is only 2.3ha of good condition habitat and 9.7ha of suitable habitat within the site.</p>
<p>Vulnerabilities (includes existing pressures and trends)</p>	<p>The marsh fritillary butterfly population is under threat from:</p> <ul style="list-style-type: none"> ■ Parasites - Parasitic wasps. <p>The <i>Molinia</i> meadows are under threat from:</p> <ul style="list-style-type: none"> ■ Anti-social behaviours - In previous years anti-social behaviour such as off-roading and burning have occurred at Aberbargoed grasslands. This issues need to be addressed to prevent the <i>eu-Molinion</i> habitat from being damaged. <p>CCW states that work has progressed well on the site in the past few years; the site is now stock-proof and a mixture of Welsh Black and Belted Galloways graze the land with a Limousin bull. Scrub clearance and bracken control has begun and flight lines have been cut to improve the connectivity for the butterflies. A programme has been set up to educate the local community to understand why this area is important. A newsletter has been created detailing activities on the grassland and difficulties the site is facing. This and the presence of staff and stock onsite seem to have halted the illegal burning and off-roading.</p>

<p>Site Name: Blackmill Woodlands Location Grid Ref: SS929859 JNCC Site Code: UK0030090 Size: 71.01 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
<p>Site Description</p>	<p>Blackmill Woodlands is an example of old sessile oak woods at the southern extreme of the habitat's range in Wales, and contributes to representation of the habitat in Wales and in south-west England. The site is situated within Bridgend County Borough and is approximately 3km away from the City of Bridgend. The A4061 runs directly between the two areas that comprise to make up the SAC. The ground flora is restricted by the relative dryness of the site, but the main habitat features of sessile oak <i>Quercus petraea</i> canopy, acidic ground flora of <i>Vaccinium myrtillus</i> and wavy hair-grass <i>Deschampsia flexuosa</i>, and moderate fern and bryophyte cover are present. The woodlands have a long cultural history of management, reflected in the distinctive gnarled appearance of many of the trees.</p>
<p>Qualifying Features</p>	<p>Annex I Habitats primary reason for selection:</p> <ul style="list-style-type: none"> ■ Old sessile oak woods with <i>Ilex</i> and <i>Blechnum</i> in the British Isles
<p>Conservation Objectives</p>	<p>Conservation Objective for Feature 1: Old sessile oak woods with <i>Ilex</i> and <i>Blechnum</i> in the British Isles</p> <p>Vision for feature 1 There is only one feature for the site, and so the vision for this feature is the same as that for the site: At least 90% of the site will be covered by semi-natural broadleaved woodland. The trees will be locally native broadleaved species, with a dominance of oak in the canopy. In the long term, the canopy will include trees of a wide range of age classes, with particular attention given to retaining old or veteran trees and encouraging natural regeneration of tree species, in particular oak. Dead wood, standing and fallen, will be maintained where possible to provide habitat for invertebrates, fungi and other woodland species. The tree canopy will not be completely closed; approximately 10% of the woodland will include a naturally occurring dynamic, shifting pattern of gaps.</p> <p>It is required that the feature be in a favourable conservation status, where all of the conditions set out in the Performance Indicators table are satisfied, and all factors affecting the achievement of these conditions are under control.</p> <p>Performance indicators for Feature 1</p>

	<p>needs to be assessed over a ten-year period. Both woodland blocks failed to have sufficient seedlings and saplings within canopy gaps. To summarise, the feature within this site is considered to be in unfavourable condition. However Unit 1 should be classified as unfavourable recovering and Unit 2 as unfavourable declining.</p>
Vulnerabilities (includes existing pressures and trends)	<ul style="list-style-type: none"> ■ Grazing - Sheep grazing has, and continues to have, a major impact on the condition of the site with significant problems as a result of the heavy grazing in the Craig Tal-y-Fan (unit 2) woodland block. Excessive sheep grazing leads to a severely impoverished ground flora and severely inhibits the growth or recruitment of young seedlings and saplings for regeneration. Cessation of all grazing over a long period could be detrimental to the field layer, especially bryophytes, as they can become shaded out. The ideal is either to mimic the very low level within a natural woodland ecosystem, or to periodically vary grazing pressure. ■ Air pollution* - Possible in-combination effect of EA permitted licences, currently under investigation. <ul style="list-style-type: none"> ○ Acidification. ○ Eutrophication. ○ Photochemical oxidants. ○ Particulate matter.
Landowner/ Management Responsibility	<p>These woodlands are situated entirely on Common Land, and are subject to rights of common. These include the lopping of branches for firewood which has resulted in the distinctive gnarled shape of many of the trees.</p>

Habitats Regulations Assessment: Data Proforma	
Site Name: Cardiff Beech Woods Location Grid Ref: ST118824 JNCC Site Code: UK0030109 Size: 115.62 Designation: SAC	
Site Description	<p>Cardiff Beech Woods lies to the north east of Cardiff and is intersected by the A4054 and the A470. The site contains one of the largest concentrations of <i>Asperulo-Fagetum</i> beech forests in Wales, and represents the habitat close to the western limit of its past native range in both the UK and Europe. The woods show mosaics and transitions to other types, including more acidic beech woodland and oak <i>Quercus</i> and ash <i>Fraxinus excelsior</i> woodland. Characteristic and notable species in the ground flora include ramsons <i>Allium ursinum</i>, <i>sanicle Sanicula europaea</i>, bird's-nest orchid <i>Neottia nidus-avis</i> and yellow bird's-nest <i>Monotropa hypopitys</i>.</p>
Qualifying Features	<p>Annex I Habitats primary reason for selection:</p> <ul style="list-style-type: none"> ■ Asperulo-Fagetum beech forests <p>Annex I Habitats qualifying feature:</p> <ul style="list-style-type: none"> ■ Tilio-Acerion forests of slopes, screes and ravines* Priority feature

<p>Component SSSIs</p>	<ul style="list-style-type: none"> ■ Fforestganol, Tongwynlais a Cwm Nofydd (units 1-5) ■ Castell Coch Woodlands and Road Section (units 6-9) ■ Garth Wood (units 10-12) <p>There are 12 management units of which numbers 1, 2, 3, 4, 8, 9 and 10 comprise to form the Cardiff Beech Woods SAC. A map showing the management units can be viewed on the CCW website.</p>
<p>Key Environmental Conditions (factors that maintain site integrity)</p>	<ul style="list-style-type: none"> ■ Maintain/manage the surrounding woodland - Commercial forestry in the vicinity of Castell Coch may have implications for surface water supply and quality. There are also a number of active and disused limestone quarries in the area. Garth Wood surrounds Taff's Well Quarry but there are other, smaller quarries in and around all component SSSIs. Quarrying can lead to direct loss of the feature together with indirect impacts from issues such as access. There are also a number of impacts arising from restoration at the end of a quarry's working life. ■ Manage public access - Management of the recreational use of the woodlands should focus on maintaining the network of public footpaths and access routes. Regular maintenance of the footpaths and bridleways is essential to stop them spreading onto the adjacent woodland habitat. By restricting recreational use of the woodlands to certain

<p>Site Name: Cardiff Beech Woods Location Grid Ref: ST118824 JNCC Site Code: UK0030109 Size: 115.62 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>areas and paths, natural woodland processes can be left to occur away from these areas of recreational use and without the need for intervention from a public health and safety perspective.</p>
<p>SAC Condition Assessment</p>	<p>Conservation Status of Feature 1 Aperulo-Fagetum beech forest</p> <p>The sites were monitored in March 2004 to gather the extent or condition of the habitat. The current feature status for the Asperulo-fagetum beech forest is Unfavourable - Unclassified (March 2004).</p> <p>The justification for the above feature status (March 2004) is as follows:</p> <p>CCW view is that the site is still recovering from undesirable effects of past management. Although most if not all aspects of the component sites are heading in the right direction the status is still short of favourable. Implementation of appropriate management will be addressed but in our view there is no urgent or immediate need for action.</p> <p>The Garth Wood component is thought to be 'unfavourable recovering' although a management plan has not been prepared to date so its status has not been fully assessed. The management is mostly limited intervention and for most of the site there is good age structure and gap regeneration. Natural processes could be enhanced by localised intervention and this will be addressed through management recommendations.</p> <p>Fforestganol a Chwm Nofydd is thought to be 'unfavourable recovering', although a management plan has not been prepared to date so its status has not been fully assessed. Although there are small areas of even age structure there is generally a diverse age structure. This, together with concerns at the percentage of beech at some locations, will be addressed through management recommendations.</p> <p>Castell Coch Woodlands and Road Section is thought to be 'unfavourable recovering'. A full management plan has not been prepared to date so its status has not been fully assessed. There is generally an even age structure with low canopy cover. However, there is evidence of natural woodland processes, with good regeneration within the pattern of gaps. Recovery is expected over time and this could be hastened with increased localised intervention. This, together</p>

<p>Site Name: Cardiff Beech Woods Location Grid Ref: ST118824 JNCC Site Code: UK0030109 Size: 115.62 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>with concerns over the species composition (particularly ash and sycamore) at some locations will be addressed through management recommendations.</p> <p>Conservation Status of Feature 2 Tilio-Acerion forest of slopes, screes and ravines</p> <p>The sites were monitored in February 2004 to gather the extent or condition of the habitats and the species. The current feature status for the Tilio-Acerion forest of slopes, screes and ravines is Unfavourable - Recovering (February 2004).</p> <p>The justification for the above feature status (February 2004) is as follows:</p> <p>CCW view is that the site is still recovering from undesirable effects of past management. Although most if not all aspects of the component sites are heading in the right direction the status is still short of favourable. Implementation of appropriate management will be addressed but in our view there is no urgent or immediate need for action.</p> <p>The Garth Wood component is thought to be 'unfavourable recovering' although a management plan has not been prepared to date so its status has not been fully assessed. The management is mostly limited intervention and for most of the site there is good age structure and gap regeneration. Natural processes could be enhanced by localised intervention and this will be addressed through management recommendations.</p> <p>Fforestganol a Chwm Nofydd is thought to be 'unfavourable recovering', although a management plan has not been prepared to date so its status has not been fully assessed. Although there are small areas of even age structure there is generally a diverse age structure. This, together with concerns at the percentage of beech at some locations, will be addressed through management recommendations.</p>
<p>Vulnerabilities (includes existing pressures and trends)</p>	<ul style="list-style-type: none"> ■ Atmospheric Pollution - its location in industrialised South Wales, together with the presence of nearby quarrying and associated activities, means that there is the potential for localised atmospheric pollution. Quarry dust deposition is an issue that occasionally comes up. <ul style="list-style-type: none"> ○ Nitrogen deposition.

<p>Site Name: Cardiff Beech Woods Location Grid Ref: ST118824 JNCC Site Code: UK0030109 Size: 115.62 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<ul style="list-style-type: none"> ○ Photochemical oxidants (ozone). ○ Acidification. <ul style="list-style-type: none"> ■ Recreational pressure - All component SSSIs are used to a greater or lesser extent for recreation purposes. Castell Coch Woodlands and Fforestganol a Chwm Nofydd experience the most recreation pressure, and are popular for walking, climbing and mountain biking. The Taff train runs through part of the Castell Coch Woodlands site and the historic building of Castell Coch attracts many visitors, which increases the access pressure on the woodlands. The road section is becoming increasingly popular for climbing, and this is unlikely to be a problem for the geological interest of the site. However, climbing could be potentially damaging to trees at the top of the crag and needs to be kept under review. Management of access is nominally through the individual site owners but there are potential conflicts between different users which to date have been addressed through the Local Authority Access Forum. Recreation within the areas supporting this habitat feature is restricted due to the steep and rocky nature of the terrain. Therefore the recreational pressure on areas of Tilio-acerion is less than on areas of Asperulo-fagetum habitat. Nonetheless, given the high recreation pressure experienced by Fforestganol a Chwm Nofydd, which supports areas of Tilio-acerion habitat, aspects of recreational management still apply to this feature. ■ Mineral extraction and related activities - There are a number of active and disused limestone quarries in the area. Garth Wood surrounds Taff's Well Quarry but there are other, smaller quarries in and around all component SSSIs. Quarrying can lead to direct loss of the feature together with indirect impacts from issues such as access. There are also a number of impacts arising from restoration at the end of a quarry's working life. ■ Development - Its location in the populated South Wales area means that there is considerable development pressure in the vicinity including associated infrastructure on land adjacent to the site. There is the potential for a range of impacts arising from increasing urbanisation. ■ Commercial Forestry - Commercial forestry in the vicinity of Castell Coch may have implications for surface water supply and quality.

<p>Site Name: Cardiff Beech Woods Location Grid Ref: ST118824 JNCC Site Code: UK0030109 Size: 115.62 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<ul style="list-style-type: none"> ■ Non-native species - The presence of a number of species considered to be non-native e.g. sycamore and Japanese knotweed, is currently under review to determine any detrimental effects on the woodland communities of special interest.
<p>Landowner/ Management Responsibility</p>	<p>The majority of the woodlands are owned, or in the guardianship of government agencies, with most of the remainder of the woodland covered by a Section 106 agreement. Cardiff County Council, Cadw and Forestry Commission carry out woodland management for conservation purposes and occasionally health and safety purposes.</p>

<p>Site Name: River Usk Location Grid Ref: SO301113 JNCC Site Code: UK0013007 Size: 1007.71 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
<p>Site Description</p>	<p>The River Usk SAC rises in the Black Mountain range in the west of the Brecon Beacons National Park and flows east and then south, to enter the Severn Estuary at Newport. The overall form of the catchment is long and narrow, with short, generally steep tributaries flowing north from the Black Mountain, Fforest Fawr and Brecon Beacons, and south from Mynydd Epynt and the Black Mountains. The underlying geology consists predominantly of Devonian Old Red Sandstone with a moderate base status, resulting in waters that are generally well buffered against acidity. This geology also produces a generally low to moderate nutrient status, and a moderate base-flow index, intermediate between base-flow dominated rivers and more flashy rivers on less permeable geology. The run-off characteristics and nutrient status are significantly modified by land use in the catchment, which is predominantly pastoral with some woodland and commercial forestry in the headwaters and arable in the lower catchment. The Usk catchment is entirely within Wales.</p> <p>The ecological structure and functions of the site are dependent on hydrological and geomorphological processes (often referred to as hydromorphological processes), as well as the quality of riparian habitats and connectivity of habitats. Animals that move around and sometimes leave the site, such as migratory fish and otters, may also be affected by factors operating outside the site.</p> <p>The River Usk is also important for its population of sea lamprey <i>Petromyzon marinus</i>. The site also supports a healthy population of brook lamprey <i>Lampetra planeri</i> and river lamprey <i>Lampetra fluviatilis</i> and is considered to provide exceptionally good quality habitat likely to ensure the continued survival of the species in this part of the UK. The site supports a range of Annex II fish species, which includes twaite shad <i>Alosa fallax</i>, salmon <i>Salmo salar</i> and bullhead <i>Cottus gobio</i>. The River Usk is an important site for otters <i>Lutra lutra</i> in Wales.</p>
<p>Qualifying Features</p>	<p>Annex I Habitats qualifying feature:</p> <ul style="list-style-type: none"> ■ Water courses of plain to montane levels with the <i>Ranunculus fluitantis</i> and <i>Callitriche-Batrachion</i> vegetation <p>Annex II Species primary reason for selection:</p>

<p>Conservation Objectives</p>	<p>The ecological status of the water course is a major determinant of Favourable Condition Status (FCS) for all features. The required conservation objective for the water course is defined below.</p> <p>Conservation Objective for the water course</p> <ul style="list-style-type: none"> ■ The capacity of the habitats in the SAC to support each feature at near-natural population levels, as determined by predominantly unmodified ecological and hydromorphological processes and characteristics, should be maintained as far as possible, or restored where necessary. ■ The ecological status of the water environment should be sufficient to maintain a stable or increasing population of each feature. This will include elements of water quantity and quality, physical habitat and community composition and structure. It is anticipated that these limits will concur with the relevant standards used by the Review of Consents process given in Annexes 1-3. ■ Flow regime, water quality and physical habitat should be maintained in, or restored as far as possible to, a near-natural state, in order to support the coherence of ecosystem structure and function across the whole area of the SAC. ■ All known breeding, spawning and nursery sites of species features should be maintained as suitable habitat as far as

<p>Site Name: River Usk Location Grid Ref: SO301113 JNCC Site Code: UK0013007 Size: 1007.71 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>possible, except where natural processes cause them to change.</p> <ul style="list-style-type: none"> ■ Flows, water quality, substrate quality and quantity at fish spawning sites and nursery areas will not be depleted by abstraction, discharges, engineering or gravel extraction activities or other impacts to the extent that these sites are damaged or destroyed. ■ The river planform and profile should be predominantly unmodified. Physical modifications having an adverse effect on the integrity of the SAC, including, but not limited to, revetments on active alluvial river banks using stone, concrete or waste materials, unsustainable extraction of gravel, addition or release of excessive quantities of fine sediment, will be avoided. ■ River habitat SSSI features should be in favourable condition. In the case of the Usk Tributaries SSSI, the SAC habitat is not underpinned by a river habitat SSSI feature. In this case, the target is to maintain the characteristic physical features of the river channel, banks and riparian zone. ■ Artificial factors impacting on the capability of each species feature to occupy the full extent of its natural range should be modified where necessary to allow passage, eg. weirs, bridge sills, acoustic barriers. ■ Natural factors such as waterfalls, which may limit the natural range of a species feature or dispersal between naturally isolated populations, should not be modified. ■ Flows during the normal migration periods of each migratory fish species feature will not be depleted by abstraction to the extent that passage upstream to spawning sites is hindered. ■ Flow objectives for assessment points in the Usk Catchment Abstraction Management Strategy will be agreed between EA and CCW as necessary. It is anticipated that these limits will concur with the standards used by the Review of Consents process given in Annex 1 of this document. ■ Levels of nutrients, in particular phosphate, will be agreed between EA and CCW for each Water Framework Directive water body in the Usk SAC, and measures taken to maintain nutrients below these levels. It is anticipated that these limits will concur with the standards used by the Review of Consents process given in Annex 2 of this document. ■ Levels of water quality parameters that are known to affect the distribution and abundance of SAC features will be agreed between EA and CCW for each Water Framework Directive water body in the Usk SAC, and measures taken to maintain pollution below these levels. It is anticipated that these limits will concur with the standards used by the Review of Consents process given in Annex 3 of this document. ■ Potential sources of pollution not addressed in the Review of Consents, such as contaminated land, will be

<p>Site Name: River Usk Location Grid Ref: SO301113 JNCC Site Code: UK0013007 Size: 1007.71 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>considered in assessing plans and projects.</p> <ul style="list-style-type: none"> ■ Levels of suspended solids will be agreed between EA and CCW for each Water Framework Directive water body in the Usk SAC. Measures including, but not limited to, the control of suspended sediment generated by agriculture, forestry and engineering works, will be taken to maintain suspended solids below these levels. <p>Conservation Objective for Features 1-5:</p> <ul style="list-style-type: none"> - Sea lamprey <i>Petromyzon marinus</i>; - Brook lamprey <i>Lampetra planeri</i>; - River lamprey <i>Lampetra fluviatilis</i>; - Twaite shad <i>Alosa fallax</i>; - Allis shad <i>Alosa alosa</i>; - Atlantic salmon <i>Salmo salar</i>; - Bullhead <i>Cottus gobio</i>. <p>Vision for features 1-5 The vision for this feature is for it to be in a favourable conservation status, where all of the following conditions are satisfied:</p> <ul style="list-style-type: none"> ■ The conservation objective for the water course as defined in 4.1 above must be met. ■ The population of the feature in the SAC is stable or increasing over the long term. ■ The natural range of the feature in the SAC is neither being reduced nor is likely to be reduced for the foreseeable future. The natural range is taken to mean those reaches where predominantly suitable habitat for each life stage exists over the long term. Suitable habitat is defined in terms of near-natural hydrological and geomorphological processes and forms eg. suitable flows to allow upstream migration, depth of water and substrate type at spawning sites, and ecosystem structure and functions eg. food supply. Suitable habitat need not be present throughout the SAC but where present must be secured for the foreseeable future. Natural factors such as waterfalls may limit the natural range of individual species. Existing artificial influences on natural range that cause an adverse effect on site integrity, such as physical barriers to migration, will be assessed in view of the following bullet point.

<p>Site Name: River Usk Location Grid Ref: SO301113 JNCC Site Code: UK0013007 Size: 1007.71 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<ul style="list-style-type: none"> ■ There is, and will probably continue to be, a sufficiently large habitat to maintain the feature's population in the SAC on a long-term basis. <p>Performance indicators for features 1-5</p> <p>The performance indicators are part of the conservation objective, not a substitute for it. Assessment of plans and projects must be based on the entire conservation objective, not just the performance indicators. The performance indicators can be found within the River Usk SAC Management Plan .</p> <p>Conservation Objective for Feature 6: - European otter <i>Lutra lutra</i></p> <p>Vision for feature 6 The vision for this feature is for it to be in a favourable conservation status, where all of the following conditions are satisfied:</p> <ul style="list-style-type: none"> ■ The population of otters in the SAC is stable or increasing over the long term and reflects the natural carrying capacity of the habitat within the SAC, as determined by natural levels of prey abundance and associated territorial behaviour. ■ The natural range of otters in the SAC is neither being reduced nor is likely to be reduced for the foreseeable future. The natural range is taken to mean those reaches that are potentially suitable to form part of a breeding territory and/or provide routes between breeding territories. The whole area of the Usk SAC is considered to form potentially suitable breeding habitat for otters. The size of breeding territories may vary depending on prey abundance. The population size should not be limited by the availability of suitable undisturbed breeding sites. Where these are insufficient they should be created through habitat enhancement and where necessary the provision of artificial holts. No otter breeding site should be subject to a level of disturbance that could have an adverse effect on breeding success. Where necessary, potentially harmful levels of disturbance must be managed. ■ The safe movement and dispersal of individuals around the SAC is facilitated by the provision, where necessary, of suitable riparian habitat, and underpasses, ledges, fencing etc at road bridges and other artificial barriers.

<p>Key Environmental Conditions (factors that maintain site integrity)</p>	<ul style="list-style-type: none"> ■ Hydrological processes: <ul style="list-style-type: none"> ○ River flow (level and variability) and water chemistry, determine a range of habitat factors of critical importance to the SAC features, including current velocity, water depth, wetted area, substrate quality, dissolved oxygen levels and water temperature. Maintenance of both high ‘spate’ flows and base-flows is essential. Reduction in flows may reduce the ability of the adults of migratory fish to reach spawning sites. Water-crowfoot vegetation thrives in relatively stable, moderate flows and clean water. The flow regime should be characteristic of the river in order to support the functioning of the river ecosystem. ■ Geomorphological processes - of erosion by water and subsequent deposition of eroded sediments downstream, create the physical structure of the river habitats. Whilst some sections of the river are naturally stable, especially where they flow over bedrock, others undergo constant and at times rapid change through the erosion and deposition of bed and bank sediments as is typical of meandering sections within floodplains (called ‘alluvial’ rivers). These processes help to sustain the river ecosystem by allowing a continued supply of clean gravels and other important substrates to be transported downstream. In addition, the freshly deposited and eroded surfaces, such as shingle banks and earth cliffs, enable processes of ecological succession to begin again, providing an essential habitat for specialist, early-successional species. Lampreys need clean gravel for spawning, and marginal silt or sand for the

<p>Site Name: River Usk Location Grid Ref: SO301113 JNCC Site Code: UK0013007 Size: 1007.71 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>burrowing juvenile ammocoetes. Processes at the wider catchment scale generally govern processes of erosion and deposition occurring at the reach scale, although locally, factors such as the effect of grazing levels on riparian vegetation structure may contribute to enhanced erosion rates. In general, management that interferes with natural geomorphological processes, for example preventing bank erosion through the use of hard revetments or removing large amounts of gravel, are likely to be damaging to the coherence of the ecosystem structure and functions.</p> <ul style="list-style-type: none"> ■ Riparian habitats - including bank sides and habitats on adjacent land, are an integral part of the river ecosystem. Diverse and high quality riparian habitats have a vital role in maintaining the SAC features in a favourable condition. The type and condition of riparian vegetation influences shade and water temperature, nutrient run-off from adjacent land, the availability of woody debris to the channel and inputs of leaf litter and invertebrates to support in-stream consumers. Light, temperature and nutrient levels influence in-stream plant production and habitat suitability for the SAC features. Woody debris is very important as it provides refuge areas from predators, traps sediment to create spawning and juvenile habitat and forms the base of an important aquatic food chain. Otters require sufficient undisturbed riparian habitats as breeding and resting sites. It is important that appropriate amounts of tree cover, in general at least 50% high canopy cover, tall vegetation and other semi-natural habitats are maintained on the riverbanks and in adjacent areas, and that they are properly managed to support the SAC features. This may be achieved, for example, through managing grazing levels, selective coppicing of riparian trees and restoring adjacent wetlands. In the urban sections the focus may be on maintaining the river as a communication corridor but this will still require that sufficient riparian habitat is present and managed to enable the river corridor to function effectively. ■ Habitat connectivity - is an important property of a river ecosystem structure and function. Many of the fish that spawn in the river are migratory, depending on the maintenance of suitable conditions on their migration routes to allow the adults to reach available spawning habitat and juvenile fish to migrate downstream. For resident species, dispersal to new areas, or the prevention of dispersal causing isolated populations to become genetically distinct, may be important factors. Naturally isolated feature populations that are identified as having important genetic distinctiveness should be maintained. Artificial obstructions including weirs and bridge sills can reduce connectivity for some species. In addition, reaches subject to depleted flow levels, pollution, or disturbance due to noise, vibration or light, can all inhibit the movement of sensitive species. The dispersal of semi-terrestrial species such as the otter can be adversely affected by structures such as bridges under certain flow conditions; therefore, these must be designed to allow safe passage. The continuity of riparian habitats enables a wide range of terrestrial species, for example

<p>Site Name: River Usk Location Grid Ref: SO301113 JNCC Site Code: UK0013007 Size: 1007.71 Designation: SAC</p>	<p align="center">Habitats Regulations Assessment: Data Proforma</p>
	<p>lesser horseshoe bats, to migrate and disperse through the landscape. Connectivity should be maintained or restored where necessary as a means to ensure access for the features to sufficient habitat within the SAC.</p>
<p>SAC Condition Assessment</p>	<p>Conservation status of Feature 1: Sea lamprey <i>Petromyzon marinus</i></p> <p>Status: Unfavourable: Unclassified. Sea lamprey monitoring showed that overall catchment mean ammocoete density considerably exceeded the JNCC target threshold and also complied with targets for spawning site and ammocoete distribution. A caveat on the latter is uncertainty over whether the natural range of sea lamprey extends above Brecon weir: this is assumed not to be the case.</p> <p>Factors leading to an unfavourable assessment are the presence of probable partial barriers further downstream (notably Crickhowell Bridge), and flow depletion resulting from abstractions including Brecon canal and Prioress Mill public water supply abstraction. The latter in particular has been shown to have effects both on a seasonal timescale by reducing spate flows during the migration period and on a diurnal timescale by substantially depleting flows during the night time to the extent that sea lamprey nests and nursery areas are likely to be exposed above the water level. The effect of the Brecon canal abstraction has been shown to comprise a substantial depletion of flows, at least locally, during low flow periods with a resulting reduction in river depth downstream of the off-take weir.</p> <p>Conservation status of Feature 2: Brook lamprey <i>Lampetra planeri</i> and River lamprey <i>Lampetra fluviatilis</i></p> <p>Status: Favourable. Brook/river lamprey monitoring showed that overall catchment mean ammocoete density considerably exceeded the JNCC target threshold and also complied with targets for ammocoete distribution¹.</p> <p>It has not been possible to distinguish between these two species during monitoring, due to the reliance on juvenile stages (ammocoetes). Anecdotal evidence suggests that both species are likely to be present in many reaches, though brook lamprey are expected to predominate in the headwaters and river lamprey may be the more abundant species in the main channel and the lower reaches of larger tributaries. More information on the relative abundance of these two species in different parts of the Usk SAC is desirable. Records of spawning adult river lamprey would be particularly useful.</p>

<p>Site Name: River Usk Location Grid Ref: SO301113 JNCC Site Code: UK0013007 Size: 1007.71 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>Conservation status of Feature 3: Twaite shad <i>Alosa fallax</i> and Allis shad <i>Alosa alosa</i></p> <p>Status: Unfavourable: Unclassified. Monitoring of these species in the Usk relies on two methods, Kick sampling for eggs provides qualitative information on spawning distribution, Netting for juveniles in the lower river and tidal reaches during late summer/autumn when juveniles drift downstream towards the estuary.</p> <p>These methods do not distinguish between the two species. Allis shad is thought to be rare, with no recent records in the Usk, while twaite shad is relatively common. Kick sampling for eggs is only able to give a broad scale indication of presence or absence at sampled locations. Netting for juveniles gives a quantitative estimate of abundance, though may be subject to a high degree of uncertainty due to sampling error. This uncertainty is likely to be compounded by variation between years in the size of the adult run, spawning success and resulting numbers of juveniles. Poor adult runs are likely to result from unsuitable flows during the March to June migration period, in particular prolonged low flows, while poor survival of eggs and juveniles is related to spate flows in the mid to late summer which can flush them into the estuary prematurely.</p> <p>CSM guidance states that adult run size should comply with an agreed target for each river, with no drop in the annual run greater than would be expected from variations in natural mortality alone. This attribute is not currently assessed in the Usk due to the absence of a fish counter.</p> <p>The current unfavourable status results from a precautionary assessment of feature distribution and abundance, and from the presence of adverse factors, in particular flow depletion and physical barriers to migration.</p> <p>Conservation status of Feature 4: Atlantic salmon <i>Salmo salar</i></p> <p>Status: Unfavourable: Unclassified. Monitoring of Atlantic salmon in the Usk relies on two methods,</p> <ol style="list-style-type: none"> 1. Estimation of adult run size from angling catch returns, 2. Electro-fishing for juveniles in nursery areas. <p>The estimate of adult numbers is converted into an estimate of numbers of eggs deposited which is compared against an Egg Deposition Target (EDT), calculated by considering the area of suitable spawning habitat within the catchment. The</p>

<p>Site Name: River Usk Location Grid Ref: SO301113 JNCC Site Code: UK0013007 Size: 1007.71 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>equivalent adult run to achieve the EDT is described in terms of a Conservation Limit, which must be exceeded 4 years in 5 for the Management Target to be considered attained. Electro-fishing for juveniles is either quantitative or semi-quantitative, and estimated juvenile densities are classified in one of six categories A to F. The monitoring guidance produced by the LIFE in UK Rivers project recommends that ideally juvenile densities should be compared to predicted densities for the sample reach using the HABSCORE model⁶. These targets are calculated and monitored by the Environment Agency as part of the Salmon Action Plan for the Usk.</p> <p>The current unfavourable status results from a precautionary assessment of feature distribution and abundance, in particular the results of juvenile surveys, and from the presence of adverse factors, in particular flow depletion and localised water quality failures.</p> <p>Conservation status of Feature 5: Bullhead <i>Cottus gobio</i></p> <p>Status: Unfavourable: Unclassified. The current unfavourable status results from the presence of adverse factors, in particular flow depletion and localised water quality failures. Records obtained from juvenile salmon monitoring show that bullhead are widespread in the main river and tributaries. There is a need for quantitative information on bullhead abundance, which will be addressed by targeted monitoring in 2007.</p> <p>Conservation status of Feature 6: European otter <i>Lutra lutra</i></p> <p>Status: Favourable. The conservation status of otters in the Usk SAC is determined by monitoring their distribution, breeding success, and the condition of potential breeding and feeding habitat outlined in the Performance Indicators. Their current condition can be considered favourable, but with scope for further improvement, if habitat and other natural factors can be maintained and enhanced.</p> <p>Conservation status of Feature 7: Water courses of plain to montane levels with the <i>Ranunculion fluitantis</i> and <i>Callitriche-Batrachion</i> vegetation</p> <p>Status: Unfavourable: Unclassified. The present unfavourable status of the feature results from the over-abundance of invasive non-native species of bankside plant communities, which are included within the feature definition. These are predominantly giant hogweed and Himalayan balsam in the lower reaches of the main river.</p>

<p>Site Name: River Usk Location Grid Ref: SO301113 JNCC Site Code: UK0013007 Size: 1007.71 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
<p>Vulnerabilities (includes existing pressures and trends)</p>	<ul style="list-style-type: none"> ■ Abstraction levels - Entrainment in water abstractions directly impacts on lamprey population dynamics through reduced recruitment and survival rates. The impact of flow depletion resulting from a small number of major abstractions was highlighted in the Review of Consents process. ■ Eutrophication - factors that are important to the favourable conservation status of this feature include flow, substrate quality and water quality, which in turn influence species composition and abundance. These factors often interact, producing unfavourable conditions by promoting the growth of a range of algae and other species indicative of eutrophication. Under conditions of prolonged low flows and high nutrient status, epiphytic algae may suppress the growth of aquatic flowering plants. ■ Diffuse Pollution - The Atlantic salmon is the focus for much of the management activity carried out on the Usk. The relatively demanding water quality and spawning substrate quality requirements of this feature mean that reduction in diffuse pollution and siltation impacts is a high priority. In the Usk catchment, the most significant sources of diffuse pollution and siltation are from agriculture, including fertiliser run-off, livestock manure, silage effluent and soil erosion from ploughed land. The most intensively used areas such as heavily trampled gateways and tracks can be especially significant sources of polluting run-off. Farm operations should avoid ploughing land which is vulnerable to soil erosion or leaving such areas without crop cover during the winter. Contamination by synthetic pyrethroid sheep dips, which are extremely toxic to aquatic invertebrates, has a devastating impact on crayfish populations and can deprive fish populations of food over large stretches of river. These impacts can arise if recently dipped sheep are allowed access to a stream or hard standing area, which drains into a watercourse. Pollution from organophosphate sheep dips and silage effluent can be very damaging locally. Pollution from slurry and other agricultural and industrial chemicals, including fuels, can kill all forms of aquatic life. All sheep dips and silage, fuel and chemical storage areas should be sited away from watercourses or bunded to contain leakage. Recently dipped sheep should be kept off stream banks. Discharges from sewage treatment works, urban drainage, engineering works such as road improvement schemes, contaminated land, and other domestic and industrial sources can also be significant causes of pollution, and must be managed appropriately. Pollution of rivers with toxic chemicals, such as PCBs, was one of the major factors identified in the widespread decline of otters during the last century.

<p>Site Name: River Usk Location Grid Ref: SO301113 JNCC Site Code: UK0013007 Size: 1007.71 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<ul style="list-style-type: none"> ■ Barriers to migration - There are few barriers to migration for the anadromous species and where barriers exist, investigation is proposed to analyse for potential impacts and remedy them through multi-species fish passes. Crickhowell Bridge is considered to be the most significant barrier to fish migration in the Usk. Management to reduce or remove the effect of this barrier is a high priority for the River Usk SAC. Artificial physical barriers are probably the single most important factor in the decline of shad in Europe. Impassable obstacles between suitable spawning areas and the sea can eliminate breeding populations of shad. Both species (but particularly allis shad) can make migrations of hundreds of kilometres from the estuary to spawning grounds in the absence of artificial barriers. Existing fish passes designed for salmon are often not effective for shad. ■ Development pressure - in the lower catchment can cause temporary physical, acoustic, chemical and sediment barrier effects that need to be addressed in the assessment of specific plans and projects. Noise/vibration e.g. due to impact piling, drilling, salmon fish counters present within or in close proximity to the river can create a barrier to shad migration. Land on both sides of the river in Newport is potentially highly contaminated. Contamination of the river can arise when this is disturbed e.g. as a result of development. Contamination can also arise from pollution events (which could be shipping or industry related). Barriers resulting from vibration, chemicals, low dissolved oxygen and artificially high sediment levels must be prevented at key times (generally March to June). ■ Invasive non-native plants - are a detrimental impact on the water courses of plain to montane levels with the <i>Ranunculus fluitans</i> and <i>Callitriche-Batrachion</i> vegetation. Giant hogweed, Himalayan balsam and Japanese knotweed should be actively managed to control their spread and hopefully reduce their extent in the SAC. ■ Artificially enhanced densities of other fish - may introduce unacceptable competition or predation pressure and the aim should be to minimise these risks in considering any proposals for stocking. ■ External factors - operating outside the SAC, may also be influential, particularly for the migratory fish and otters. For example, salmon may be affected by barriers to migration in the Severn Estuary, inshore fishing and environmental conditions prevailing in their north Atlantic feeding grounds. Otters may be affected by developments that affect resting and breeding sites outside the SAC boundary.

Habitats Regulations Assessment: Data Proforma	
<p>Site Name: River Wye Location Grid Ref: SO109369 JNCC Site Code: UK0012642 Size: 2234.89 Designation: SAC</p>	
<p>Site Description</p>	<p>The River Wye rises on Plynlimon in the Cambrian Mountains and flows in a generally south-easterly direction to enter the Severn Estuary at Chepstow. The upper catchment comprises several large sub-catchments, including the Irfon on the generally infertile upland landscape in the north-west, the Ithon in the north-east often on more low-lying, fertile terrain and the Lugg in the east in a predominantly low-lying fertile landscape much of which lies within England. The underlying geology consists predominantly of impermeable, acidic rocks of Silurian and Ordovician age in the north-west and more permeable Devonian Old Red Sandstone with a moderate base status in the middle and lower catchment. This geology produces a generally low to moderate nutrient status and a low to moderate base-flow index, making the river characteristically flashy. The run-off characteristics and nutrient status are significantly modified by land use in the catchment, which is predominantly pastoral with some woodland and commercial forestry in the headwaters and arable in the lower catchment and the Lugg. The Wye catchment is divided between Wales and England; the river forms the border from south of Monmouth to Chepstow and to the east of Hay-on-Wye.</p> <p>Historically, the Wye is the most famous and productive river in Wales for Atlantic salmon <i>Salmo salar</i>, with high-quality spawning grounds and juvenile habitat in both the main channel and tributaries. The Wye salmon population is particularly notable for the very high proportion (around 75%) of multi sea winter (MSW) fish, a stock component which has declined sharply in recent years throughout the UK. This pattern has also occurred in the Wye, with a consequent marked decline in the population since the 1980s. However, the Wye salmon population is still of considerable importance in UK terms. The Atlantic salmon is the focus for much of the management activity carried out on the Wye. The relatively demanding water quality and spawning substrate quality requirements of this feature mean that reduction in diffuse pollution and siltation impacts is a high priority. The Wye also holds the densest and most well-established otter <i>Lutra lutra</i> population in Wales, representative of otters occurring in lowland freshwater habitats in the borders of Wales. The river has bank-side vegetation cover, abundant food supply, clean water and undisturbed areas of dense scrub suitable for breeding, making it particularly favourable as otter habitat. The population remained even during the lowest point of the UK decline, confirming that the site is particularly favourable for this species and the population likely to be highly stable. The site is considered one of the best in the UK for white-clawed crayfish <i>Austropotamobius pallipes</i>. The tributaries are the main haven for the species, particularly at the confluences of the main river and the Edw, Dulas Brook, Sgithwen and Clettwr Brook. Other importance species supported by the River Wye are twaite shad, bullhead and river, sea and brook lamprey.</p>

Existing artificial influences on natural range that cause an adverse effect on site integrity will be assessed in view of the objective below. ■ There is, and will probably continue to be, a sufficiently large habitat to maintain the feature's population in the SAC on a long-term basis. <p>Performance indicators for feature 8 (see performance indicators for features 1 - 5)</p> <p>Conservation Objective for Feature 9: - Quaking bogs and transition mires</p>

<p>Site Name: River Wye Location Grid Ref: SO109369 JNCC Site Code: UK0012642 Size: 2234.89 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>Vision for feature 9</p> <p>The vision for this feature is for it to be in a favourable conservation status, where all of the following conditions are satisfied:</p> <ul style="list-style-type: none"> ■ The conservation objective for the water course as defined in 4.1 above must be met. ■ The natural range of the plant communities represented within this feature should be stable or increasing in the SAC. The natural range is taken to mean those reaches where near-natural hydrological and geomorphological processes and landforms favour the development of this habitat. The feature need not be present in all suitable locations in the SAC but where present must be secured for the foreseeable future. ■ The area covered by the feature within its natural range in the SAC should be stable or increasing. ■ The conservation status of the feature's typical species should be favourable. The typical species are defined with reference to the species composition of the appropriate NVC type(s), unless differing from this type due to natural variability/local distinctiveness when other typical/indicator species may be defined as appropriate. <p>Performance indicators for feature 9 (see performance indicators for features 1 - 5)</p>
<p>Component SSSIs</p>	<p>The site has been divided into management units to enable practical communication about features, objectives, and management. This will also allow CCW to differentiate between the different designations where necessary. In the management plan units have been based on the following:</p> <ul style="list-style-type: none"> ■ SSSI boundaries ■ Natural hydromorphology, where there are significant differences in management issues/key features between reaches ■ Units partly within England coincide with Natural England's equivalent units, as far as is practicable ■ The units include one or more of EA's River Basin Management Plan water bodies; as far as is practicable, unit boundaries coincide with these water body boundaries.

<p>Site Name: River Wye Location Grid Ref: SO109369 JNCC Site Code: UK0012642 Size: 2234.89 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>The component SSSIs and management units that comprise to form the River Wye SAC are:</p> <ul style="list-style-type: none"> ■ River Wye (Lower Wye) SSSI - Management units 1A to 1D; ■ River Wye (Upper Wye) SSSI - Management units 2A & 2B; ■ River Wye (Tributaries) SSSI - Management unit 3; ■ Afon Llynfi SSSI - Management unit 4; ■ Duhonw SSSI - Management unit 5; ■ Afon Irfon SSSI - Management unit 6; ■ River Ithon SSSI - Management unit 7; ■ Upper Wye Tributaries SSSI - Management unit 8; and ■ Colwyn Brook Marshes (North & South) SSSI - Management units 9A to 9G & 10A & 10E. <p>Note: a number of smaller SSSI have part of their area included within the River Wye SAC. These are not all included separately here, but management actions for adjacent SAC units also apply to these sites.</p> <p>Maps containing the component SSSIs and management units can be viewed on the CCW website.</p>
<p>Key Environmental Conditions (factors that maintain site integrity)</p>	<p>The ecological structure and functions of the site are dependent on hydrological and geomorphological processes (often referred to as hydromorphological processes), as well as the quality of riparian habitats and connectivity of habitats. Animals that move around and sometimes leave the site, such as migratory fish and otters, may also be affected by factors operating outside the site.</p> <ul style="list-style-type: none"> ■ Hydrological processes in particular river flow (level and variability) and water chemistry, determine a range of habitat factors of importance to the SAC features, including current velocity, water depth, wetted area, substrate quality, dissolved oxygen levels and water temperature. Maintenance of both high 'spate' flows and base-flows is essential. Reductions in flow may reduce the ability of the adult migratory fish to reach spawning sites. Water-crowfoot vegetation thrives in relatively stable, moderate flows and clean water. The flow regime should be characteristic of the river in order to support the functioning of the river ecosystem.

<p>Site Name: River Wye Location Grid Ref: SO109369 JNCC Site Code: UK0012642 Size: 2234.89 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<ul style="list-style-type: none"> ■ Geomorphological processes of erosion by water and subsequent deposition of eroded sediments downstream create the physical structure of the river habitats. While some sections of the river are naturally stable, especially where they flow over bedrock, others undergo continual and at times rapid change through the erosion and deposition of bed and bank sediments as is typical of meandering sections within floodplains (called ‘alluvial’ rivers). These processes help to sustain the river ecosystem by allowing a continued supply of clean gravels and other important substrates to be transported downstream. In addition, the freshly deposited and eroded surfaces, such as shingle banks and earth cliffs, enable processes of ecological succession to begin again, providing an essential habitat for specialist, early-successional species. Processes at the wider catchment scale generally govern processes of erosion and deposition occurring at the reach scale, although locally factors such as the effect of grazing levels on riparian vegetation structure may contribute to enhanced erosion rates. In general, management that interferes with natural geomorphological processes, for example preventing bank erosion through the use of hard revetments or removing large amounts of gravel, are likely to be damaging to the coherence of the ecosystem structure and functions. ■ Riparian habitats including bank sides and habitats on adjacent land, are an integral part of the river ecosystem. Diverse and high quality riparian habitats have a vital role in maintaining the SAC features in a favourable condition. The type and condition of riparian vegetation influences shade and water temperature, nutrient run-off from adjacent land, the availability of woody debris to the channel and inputs of leaf litter and invertebrates to support in-stream consumers. Light, temperature and nutrient levels influence in-stream plant production and habitat suitability for the SAC features. Woody debris is very important as it provides refuge areas from predators, traps sediment to create spawning and juvenile habitat and forms the base of an important aquatic food chain. Otters require sufficient undisturbed riparian habitat for breeding and resting sites. It is important that appropriate amounts of tree cover, in general at least 50% high canopy cover, tall vegetation and other semi-natural habitats are maintained on the riverbanks and in adjacent areas, and that they are properly managed to support the SAC features. This may be achieved for example, through managing grazing levels, selective coppicing of riparian trees and restoring adjacent wetlands. In the urban sections the focus may be on maintaining the river as a communication corridor but this will still require that sufficient riparian habitat is present and managed to enable the river corridor to function effectively. Overhanging trees provide valuable shade and food sources for Atlantic salmon whilst tree root systems provide important cover and flow refuges for juveniles. Bullheads are particularly associated with woody debris in lowland reaches, where it is likely that it provides an alternative source of cover from predators and floods. It may also be

<p>Site Name: River Wye Location Grid Ref: SO109369 JNCC Site Code: UK0012642 Size: 2234.89 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>used as an alternative spawning substrate. Debris dams and woody debris should be retained where characteristic of the river/reach. Woody debris removal should be minimised, and restricted to essential activities such as flood defence.</p> <ul style="list-style-type: none"> <p>Habitat connectivity is an important property of river ecosystem structure and function. Many of the fish that spawn in the river are migratory, depending on the maintenance of suitable conditions on their migration routes to allow the adults to reach available spawning habitat and juvenile fish to migrate downstream. For resident species, dispersal to new areas, or the prevention of dispersal causing isolated populations to become genetically distinct, may be important factors. Naturally isolated feature populations that are identified as having important genetic distinctiveness should be maintained.</p> <p>In all river types, artificial barriers should be made passable. Physical modification of barriers is required where depth/velocity/duration of flows is unsuitable to allow passage. Complete or partial natural barriers to potentially suitable spawning areas should not be modified or circumvented. Certain areas of the SAC are critical to the movement of otters both within the system and to adjacent sites. The Wye SAC provides a key movement corridor for otters passing between the relatively high densities in mid Wales and the south-east Wales coastal strip (Seven Estuary and Gwent Levels). The function of this aspect of the site should be protected through the maintenance of suitable resting sites (in terms of size, quality and levels of disturbance) through urban centres such as Monmouth. Connectivity should be maintained, or restored where necessary, as a means to ensure access for the features to sufficient habitat within the SAC.</p> <p>External factors operating outside the SAC, may also be influential, particularly for the migratory fish and otters. For example, salmon may be affected by barriers to migration in the Severn Estuary, inshore fishing and environmental conditions prevailing in their north Atlantic feeding grounds. Otters may be affected by developments that affect resting and breeding sites outside the SAC boundary.</p>
<p>SAC Condition Assessment</p>	<p>Conservation status of Feature 1: Sea lamprey <i>Petromyzon marinus</i></p> <p>Conservation status (2006)</p>

<p>Site Name: River Wye Location Grid Ref: SO109369 JNCC Site Code: UK0012642 Size: 2234.89 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>Status within the site: Favourable: Unclassified. Sea lamprey monitoring showed that overall catchment mean ammocoete density considerably exceeded the JNCC target threshold and also complied with targets for spawning site and ammocoete distribution. Sea lamprey ammocoetes were recorded in good numbers immediately upstream of the falls at Rhayader, their most upstream recorded site on the main Wye. They were also recorded in the Irfon and Ithon tributaries.</p> <p>Conservation status of Feature 2: Brook lamprey <i>Lampetra planeri</i> and River lamprey <i>Lampetra fluviatilis</i></p> <p>Conservation status (2006)</p> <p>Status within the site: Favourable: Unclassified. Brook/river lamprey monitoring showed that overall catchment mean ammocoete density considerably exceeded the JNCC target threshold. However, <i>Lampetra</i> ammocoetes were recorded at only 30 of the 54 sample sites (56%) thus failed to meet the criterion of presence at least two thirds of sites within their natural range. Consequently, the feature may be in unfavourable condition. Further clarification is needed concerning a number of sample sites in the upper reaches (Upper Wye and Elan), which may reflect unsuitable habitat and be outside the natural ranges of the species.</p> <p>It has not been possible to distinguish between these two species during monitoring, due to the reliance on juvenile stages (ammocoetes). Anecdotal evidence suggests that both species are likely to be present in many reaches, though brook lamprey are expected to predominate in the headwaters and river lamprey may be the more abundant species in the main channel and the lower reaches of larger tributaries. More information on the relative abundance of these two species in different parts of the Wye SAC is desirable. Records of spawning adult river lamprey would be particularly useful.</p> <p>Conservation status of Feature 3: Twaite shad <i>Alosa fallax</i> and Allis shad <i>Alosa alosa</i></p> <p>Conservation status (2006)</p> <p>Status within the site: Unfavourable: Unclassified.</p> <p>Physical barriers to migration are a major cause of unfavourable status of these species in Europe as a whole; however,</p>

<p>Site Name: River Wye Location Grid Ref: SO109369 JNCC Site Code: UK0012642 Size: 2234.89 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>there are not thought to be any significant barriers to shad migration in the Wye.</p> <p>The current unfavourable status results from a precautionary assessment of feature abundance, and from the presence of adverse factors, in particular the potential for damaging flow depletion and entrainment/impingement in water intakes.</p> <p>Conservation status of Feature 4: Atlantic salmon <i>Salmo salar</i></p> <p>Conservation status (2006)</p> <p>Status within the site: Unfavourable: Unclassified.</p> <p>The current unfavourable status results from failure of the Management Target for adult run size as well as a precautionary assessment of juvenile distribution and abundance and the presence of adverse factors, in particular the potential for flow depletion and localised water quality failures. Acidification due to forestry is a factor in the upper reaches of the Wye and Irfon.</p> <p>Conservation status of Feature 5: Bullhead <i>Cottus gobio</i></p> <p>Conservation status (2006)</p> <p>Status within the site: Unfavourable: Unclassified. The current unfavourable status results from the presence of adverse factors, in particular localised water quality failures. Records obtained from juvenile salmon monitoring show that bullhead are widespread in the main river and tributaries. Quantitative information on bullhead abundance is being provided through targeted monitoring.</p> <p>Conservation status of Feature 6: European otter <i>Lutra lutra</i></p> <p>Conservation status (2006)</p> <p>Status within the site: Unfavourable. The conservation status of otters in the Wye SAC is determined by monitoring their distribution, breeding success, and the condition of potential breeding and feeding habitat as outlined in the</p>

<p>Site Name: River Wye Location Grid Ref: SO109369 JNCC Site Code: UK0012642 Size: 2234.89 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>Performance Indicators. Their current condition is considered unfavourable due a lack of suitable breeding sites around the middle reaches of the river.</p> <p>Conservation status of Feature 7: Water courses of plain to montane levels with the <i>Ranunculion fluitantis</i> and <i>Callitricho-Batrachion</i> vegetation</p> <p>Conservation status (2006)</p> <p>Status within the site: Unfavourable: Declining. The present unfavourable status of the feature results from declining water quality in some tributaries of the Wye e.g. parts of the Ithon and Llynfi sub-catchments, due mainly to diffuse pollution from agriculture.</p> <p>A further adverse factor is the over-abundance of invasive non-native species of bankside plant communities, which are included within the feature definition. Japanese knotweed and Himalayan balsam are widespread in the catchment, including the Irfon sub-catchment.</p> <p>Conservation status of Feature 8: White-clawed crayfish <i>Austropotamobius pallipes</i></p> <p>Conservation status (2006)</p> <p>Status within the site: Unfavourable: Declining. There is considerable anecdotal evidence of a major decline in the distribution and abundance of the native white-clawed crayfish in the Wye catchment over the last few decades. Native crayfish may have been lost from the main river channel, from tributaries such as the Duhonw and Ithon and have almost disappeared from the Afon Irfon. Significant populations within the Wye SAC are now confined to the Sgithwen, Cletwr, Edw, Llynfi Dulas and Builth Road Dulas. The most recent assessment of the condition of crayfish in the Wye SAC, using modified Common Standards Monitoring techniques, found that populations are unfavourable.</p>
<p>Vulnerabilities (includes existing pressures and trends)</p>	<ul style="list-style-type: none"> ■ Abstraction levels - entrainment in water abstractions directly impacts on species population dynamics through reduced recruitment and survival rates. The impact of flow depletion resulting from a small number of major abstractions was highlighted in the Review of Consents process. As a result of this process, flow targets have been

<p>Site Name: River Wye Location Grid Ref: SO109369 JNCC Site Code: UK0012642 Size: 2234.89 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>set which are considered likely to significantly reduce or remove the potential impacts on SAC features.</p> <ul style="list-style-type: none"> ■ Eutrophication - factors that are important to the favourable conservation status of this feature include flow, substrate quality and water quality, which in turn influence species composition and abundance. These factors often interact, producing unfavourable conditions by promoting the growth of a range of algae and other species indicative of eutrophication. Under conditions of prolonged low flows and high nutrient status, epiphytic algae may suppress the growth of aquatic flowering plants. ■ Diffuse Pollution - in the Wye catchment the most significant sources of diffuse pollution and siltation are from agriculture, including fertiliser run-off, livestock manure, silage effluent and soil erosion from ploughed land. The most intensively used areas such as heavily trampled gateways and tracks can be especially significant sources of polluting run-off. Preventative measures can include surfacing of tracks and gateways, moving feeding areas, and separating clean and dirty water in farmyards. Farm operations should avoid ploughing land which is vulnerable to soil erosion or leaving such areas without crop cover during the winter. <p>Among toxic pollutants, sheep dip and silage effluent present a particular threat to aquatic animals in this predominantly rural area. Contamination by synthetic pyrethroid sheep dips, which are extremely toxic to aquatic invertebrates, has a devastating impact on crayfish populations and can deprive fish populations of food over large stretches of river. These impacts can arise if recently dipped sheep are allowed access to a stream or hard standing area, which drains into a watercourse. Pollution from organophosphate sheep dips and silage effluent can be very damaging locally. Pollution from slurry and other agricultural and industrial chemicals, including fuels, can kill all forms of aquatic life. All sheep dips and silage, fuel and chemical storage areas should be sited away from watercourses or bunded to contain leakage. Recently dipped sheep should be kept off stream banks.</p> <p>Discharges from sewage treatment works, urban drainage, engineering works such as road improvement schemes, contaminated land, and other domestic and industrial sources can also be significant causes of pollution, and must be managed appropriately. Used dip should be disposed of strictly in accordance with Environment Agency Regulations and guidelines. Statutory and voluntary agencies should work closely with landowners and occupiers to minimise the risk of any pollution incidents and enforce existing regulations. Measures to control diffuse pollution in the water environment, including 'Catchment Sensitive Farming', may be implemented as a result of the Water Framework</p>

<p>Site Name: River Wye Location Grid Ref: SO109369 JNCC Site Code: UK0012642 Size: 2234.89 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>Directive and, along with existing agri-environment schemes, will help to achieve the conservation objectives for the SAC. Pollution of rivers with toxic chemicals, such as PCBs, was one of the major factors identified in the widespread decline of otters during the last century. There should be no increase in pollutants potentially toxic to otters.</p> <ul style="list-style-type: none"> ■ Barriers to migration - Artificial obstructions including weirs and bridge sills can reduce connectivity for some species. In addition, reaches subject to depleted flow levels, pollution, or disturbance due to noise, vibration or light, can all inhibit the movement of sensitive species. The dispersal of semi-terrestrial species, such as the otter, can be adversely affected by structures such as bridges under certain flow conditions, therefore these must be designed to allow safe passage. ■ Development pressure - can cause temporary physical, acoustic, chemical and sediment barrier effects that need to be addressed in the assessment of specific plans and projects. Noise/vibration eg. due to impact piling, drilling, salmon fish counters present within or in close proximity to the river can create a barrier to shad migration. Barriers resulting from vibration, chemicals, low dissolved oxygen and artificially high sediment levels must be prevented at key times. Engineering works such as bridge repairs in reaches where white-clawed crayfish are known to occur should include appropriate pollution prevention measures and a crayfish rescue by a suitably licensed person where there is a risk of physical damage to crayfish. ■ Invasive and non-native species - are a detrimental impact on the water courses of plain to montane levels with the <i>Ranunculion fluitantis</i> and <i>Callitriche-Batrachion</i> vegetation. Giant hogweed, Himalayan balsam and Japanese knotweed should be actively managed to control their spread and hopefully reduce their extent in the SAC. The American signal crayfish is present in the Wye catchment and poses a very serious threat to the continued existence of the native white-clawed crayfish in the site and in Wales. Native crayfish are unable to co-exist where signal crayfish are present, due to the latter's superior competitive ability and a disease, crayfish plague, which it carries but to which native crayfish have no immunity. American signal crayfish and crayfish plague are widespread and abundant in nearby catchments such as the Lugg, Arrow and Severn. Crayfish plague can be transferred to streams on wet fishing gear, boots, canoes, machinery, stocked fish etc., so measures such as raising awareness, disinfection facilities and where appropriate restrictions on access, should be implemented where a significant risk is identified. Signal crayfish are also extremely harmful to fish communities and the overall ecology of the river. It is illegal to release non-native crayfish into the wild, to keep live crayfish in most of Wales or to trap crayfish without a licence

<p>Site Name: River Wye Location Grid Ref: SO109369 JNCC Site Code: UK0012642 Size: 2234.89 Designation: SAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>from the Environment Agency. Bullhead densities have been found to be negatively correlated with densities of non-native crayfish, suggesting competitive and/or predator-prey interactions. Non-native crayfish should be absent from the SAC.</p> <ul style="list-style-type: none"> ■ Artificially enhanced densities of other fish - may introduce unacceptable competition or predation pressure and the aim should be to minimise these risks in considering any proposals for stocking. A small-scale salmon rearing and stocking programme is currently in operation in the Wye, run by the Wye and Usk Foundation. The management objectives for SAC salmon populations are to attain naturally self-sustaining populations. Salmon stocking should not be routinely used as a management measure. Salmon stocking represents a loss of naturalness and, if successful, obscures the underlying causes of poor performance (potentially allowing these risks to perpetuate). It carries various ecological risks, including the loss of natural spawning from broodstock, competition between stocked and naturally produced individuals, disease introduction and genetic alterations to the population. Therefore, there is a presumption that salmon stocking in the Wye SAC will be phased out over time. The presence of artificially high densities of salmonids and other fish will create unacceptably high levels of predatory and competitive pressure on juvenile and adult bullhead. Stocking of fish should be avoided in the SAC. ■ External factors - operating outside the SAC, may also be influential, particularly for the migratory fish and otters. For example, salmon may be affected by barriers to migration in the Severn Estuary, inshore fishing and environmental conditions prevailing in their north Atlantic feeding grounds. Otters may be affected by developments that affect resting and breeding sites outside the SAC boundary.
<p>Landowner/ Management Responsibility</p>	<ul style="list-style-type: none"> ■ N/A

<p>Site Name: Severn Estuary Location Grid Ref: ST321748 JNCC Site Code: UK0013030 Size: 73715.4 Designation: cSAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
<p>Site Description</p>	<p>The Severn Estuary is the largest coastal plain estuary in the UK with extensive mudflats and sandflats, rocky shore platforms, shingle and islands. Saltmarsh fringes the coast, backed by grazing marsh with freshwater and occasional brackish ditches. The estuary's classic funnel shape, unique in the UK, is a factor causing the Severn to have the second highest tidal range in the world (after the Bay of Fundy in Canada) at more than 12 meters. This tidal regime results in plant and animal communities typical of the extreme physical conditions of strong flows, mobile sediments, changing salinity, high turbidity and heavy scouring. The resultant low diversity invertebrate communities, that frequently include populations of ragworms, lugworms and other invertebrates in high densities, form an important food source for passage and wintering birds. The site is important in the spring and autumn migration periods for waders moving along the west coast of Europe, as well as in winter for large numbers of waterbirds including swans, geese, ducks and waders. These bird populations are regarded as internationally important.</p> <p>Glassworts and annual sea-blite colonise the open mud, with beds of all three species of eelgrass <i>Zostera</i> occurring on more sheltered mud and sandbanks. Large expanses of common cord-grass also occur on the outer marshes. Heavily grazed saltmarsh fringes the estuary with a range of saltmarsh types present. The middle marsh sward is dominated by common saltmarsh-grass with typical associated species. In the upper marsh, red fescue and saltmarsh rush become more prominent.</p> <p>Areas of saltmarsh fringe the estuary, mostly grazed with a range of vegetation communities. There are gradual and stepped transitions between bare mudflat to upper marsh and grassland. Main vegetation types are: upper saltmarsh with <i>Festuca rubra</i> and <i>Juncus gerardii</i>; middle marsh dominated by <i>Puccinellia maritima</i> with <i>Glaux maritima</i> and <i>Triglochin maritima</i>; dense monocultures of <i>Spartina anglica</i> at the edge of the mudflats-brackish pools and depressions with <i>Phragmites australis</i> and <i>Bolboschoenus maritimus</i>.</p>

<p>Key Environmental Conditions (factors that maintain site integrity)</p>	<ul style="list-style-type: none"> Hydrodynamic and sedimentary regime - The conservation of the site features is dependent on the tidal regime. The tidal range in the Severn Estuary is the second-highest in the world and the scouring of the seabed and strong tidal streams result in natural erosion of the habitats and the presence of high sediment loads. Maintain suitable distance between the site and development - to allow for managed retreat of intertidal habitats and avoid coastal squeeze. Manage public access and activities.
<p>SAC Condition Assessment</p>	<ul style="list-style-type: none"> N/A
<p>Vulnerabilities (includes existing pressures and trends)</p>	<ul style="list-style-type: none"> Physical loss of supporting habitats through removal - The physical loss of areas of intertidal habitats may be caused directly through change of land use or indirectly as a consequence of changes to sedimentation processes (e.g. coastal defences) as well as via the effects of smothering by artificial structures (e.g. jetties) or the disposal of spoils. The intertidal mudflats and sandflats and the saltmarsh are highly sensitive to removal by land reclamation and barrage construction. Information provided by NE and CCW states that large areas of the European marine site are not currently under threat, however when combined with a high level of sensitivity this leads to a moderate vulnerability. Contamination by synthetic and/or non-synthetic toxic compounds - At the moment there is no evidence to show that this is the case on the Severn Estuary, but the estuary is vulnerable to oil spills and there is a continuous discharge of toxins into the estuary, some of which bind to the sediments. NE and CCW identify this is an area which requires further assessment. The intertidal mudflats and sandflats and the saltmarsh are currently highly vulnerable to the introduction of synthetic and non-synthetic compounds. Damage by abrasion or selective extraction - Saltmarsh may be physically damaged from overgrazing or eroded

<p>Site Name: Severn Estuary Location Grid Ref: ST321748 JNCC Site Code: UK0013030 Size: 73715.4 Designation: cSAC</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>when boats are moored on it and when paths are worn through it to reach moored boats on foot or via vehicles. Currently all supporting habitats are considered to be moderately vulnerable to abrasion. Intertidal habitats are highly sensitive to damage by direct and indirect effects of aggregate dredging. The intertidal mudflats and sandflats and the shingle and rocky shore are therefore considered by NE and CCW to be highly vulnerable to selective extraction.</p> <ul style="list-style-type: none"> ■ Changes in nutrient and/or organic loading - Changes in organic or nutrient loading can change the species composition of the plants on the saltmarsh and thus the structure of the sward. Increases in nutrients can also cause excessive algal growth on the mudflats, denying the birds access to their invertebrate prey and changing the invertebrate species composition in the sediment. Though the water quality has been improved in recent years there are still local areas of concern and any increase in nutrient loading should be avoided. At present the intertidal mudflats and sandflats are moderately vulnerable to this category of operation. ■ Inappropriate grazing - Much of the saltmarsh is managed by grazing and changes in management can alter the availability of prey and suitability of roosting sites. The saltmarsh is currently highly vulnerable to the selective extraction of species.

<p>Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK9015022 Size: 24662.98 Designation: SPA</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
<p>Site Description</p>	<p>The Severn Estuary is the largest coastal plain estuary in the UK with extensive mudflats and sandflats, rocky shore platforms, shingle and islands. Saltmarsh fringes the coast, backed by grazing marsh with freshwater and occasional brackish ditches. The estuary's classic funnel shape, unique in the UK, is a factor causing the Severn to have the second highest tidal range in the world (after the Bay of Fundy in Canada) at more than 12 meters. This tidal regime results in plant and animal communities typical of the extreme physical conditions of strong flows, mobile sediments, changing salinity, high turbidity and heavy scouring. The resultant low diversity invertebrate communities, that frequently include populations of ragworms, lugworms and other invertebrates in high densities, form an important food source for passage and wintering birds. The site is important in the spring and autumn migration periods for waders moving along the west coast of Europe, as well as in winter for large numbers of waterbirds including swans, geese, ducks and waders. These bird populations are regarded as internationally important.</p> <p>Glassworts and annual sea-blite colonise the open mud, with beds of all three species of eelgrass <i>Zostera</i> occurring on more sheltered mud and sandbanks. Large expanses of common cord-grass also occur on the outer marshes. Heavily grazed saltmarsh fringes the estuary with a range of saltmarsh types present. The middle marsh sward is dominated by common saltmarsh-grass with typical associated species. In the upper marsh, red fescue and saltmarsh rush become more prominent.</p> <p>Areas of saltmarsh fringe the estuary, mostly grazed with a range of vegetation communities. There are gradual and stepped transitions between bare mudflat to upper marsh and grassland. Main vegetation types are: upper saltmarsh with <i>Festuca rubra</i> and <i>Juncus gerardii</i>; middle marsh dominated by <i>Puccinellia maritima</i> with <i>Glaux maritima</i> and <i>Triglochin maritima</i>; dense monocultures of <i>Spartina anglica</i> at the edge of the mudflats-brackish pools and depressions with <i>Phragmites australis</i> and <i>Bolboschoenus maritimus</i>.</p>

The mudflats and sandflats exposed as the tide falls where the estuary widens in the

<p>Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK9015022 Size: 24662.98 Designation: SPA</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>upper reaches of the site at Waveridge Sands, Frampton Sands and The Noose are used as safe refuge areas when the birds are disturbed.</p> <ul style="list-style-type: none"> ○ Unimpeded sightlines at feeding and roosting sites - Bewick’s swan require unrestricted views >500m to allow early detection of predators when feeding and roosting. <p>■ Saltmarsh communities:</p> <ul style="list-style-type: none"> ○ Habitat extent - The birds feed on the saltmarsh and the transition from saltmarsh to coastal grazing marsh in front of the sea defences in the upper estuary at The Dumbles, where areas of the high marsh are mainly affected only by brackish water during tidal inundation. ○ Vegetation characteristics - Bewick’s swan graze on a range of ‘soft’ meadow grasses such as <i>Agrostis stolonifera</i> and <i>Alopecurus geniculatus</i> found in wet meadows which are outwith the European marine site boundary. ○ Unimpeded sightlines at feeding and roosting sites - Bewick’s swan require unrestricted views >500m to allow early detection of predators when feeding and roosting. <p>Key supporting habitats for populations of regularly occurring migratory species and assemblage of waterfowl:</p> <p>■ Intertidal mudflats and sandflats:</p> <ul style="list-style-type: none"> ○ Habitat extent - Intertidal mudflats and sandflats and their communities are important habitats as they provide both roosting and feeding areas. The European white-fronted geese roost at night on estuarine sandbanks and usually fly less than 10km to the daytime feeding grounds. Therefore conservation of traditional roosting sites is necessary to enable the population to exploit potential feeding habitats. ○ Food availability - Most of the waders and waterfowl within the assemblage including the internationally important regularly occurring migratory birds feed on invertebrates within and on the sediments. ○ Unimpeded sightlines at feeding and roosting sites - Waterfowl require unrestricted views >500m to allow early detection of predators when feeding and roosting. <p>■ Saltmarsh:</p> <ul style="list-style-type: none"> ○ Habitat extent - Saltmarsh and their communities are important habitats as they provide both roosting and feeding

<p>Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK9015022 Size: 24662.98 Designation: SPA</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>areas. Upper and lower saltmarsh provide important feeding and roosting areas for the internationally important migratory birds throughout the estuary.</p> <ul style="list-style-type: none"> ○ Food availability - The saltmarshes provide a rich feeding habitat for redshank and shelduck, which feed on invertebrate species in the sediments, such as the mudsnail Hydrobia. The European white-fronted geese graze on a range of saltmarsh grasses and herbs such as common saltmarsh grass Puccinellia maritime and sea barley Hordeum marinum. The birds feed on the saltmarsh and the transition to coastal grazing marsh in front of the sea defences in the upper estuary and particularly at the The Dumbles. ○ Vegetation characteristics - Vegetation of <10 cm is required throughout areas used by roosting waders. This is managed by grazing. ○ Unimpeded sightlines at feeding and roosting sites - Waterfowl require unrestricted views >500m to allow early detection of predators when feeding and roosting. The saltmarshes also have an important function providing a safe haven from the tides that flood the mudflats twice a day. The low-growing dense vegetation provides a suitable roosting habitat for redshank and dunlin, which prefer to roost on areas of short vegetation ensuring good visibility. <ul style="list-style-type: none"> ■ Shingle and rocky shore: <ul style="list-style-type: none"> ○ Habitat extent - the shingle and rocks in the estuary provide feeding areas for dunlin and redshank and some limited foraging at high tide. It also provides important roost sites at high tide particularly for the dunlin and redshank. Many of the rocks are off shore and are therefore generally free from human disturbance. These include Guscar Rocks in the upper reaches, Blackstone Rocks at Clevedon and Stert Island in Bridgwater Bay. ○ Food availability - see above. ○ Unimpeded sightlines at feeding and roosting sites - Waterfowl require unrestricted views >500m to allow early detection of predators when feeding and roosting. ■ Wet coastal grazing marsh, improved grassland and open standing waters - these supporting habitats lie outside the European marine site boundary but within the SPA. They provide key areas for feeding and roosting for all the migratory species particularly at high tide.

	<p>*PSA target - The Government's Public Service Agreement (PSA) target to have 95% of the SSSI area in favourable or recovering condition by 2010.</p>
<p>Vulnerabilities (includes existing pressures and trends)</p>	<p>Internationally important populations of regularly occurring Annex 1 species:</p> <ul style="list-style-type: none"> ■ Physical loss of supporting habitats through removal - The physical loss of areas of intertidal habitats may be caused directly through change of land use or indirectly as a consequence of changes to sedimentation processes (e.g. coastal defences) as well as via the effects of smothering by artificial structures (e.g. jetties) or the disposal of spoils. Activities or developments resulting in physical loss of the intertidal supporting habitats are likely to reduce the availability of feeding and roosting habitat and thus be detrimental to the favourable condition of the SPA interest features including the Annex 1 species, Bewick's swan. The intertidal mudflats and sandflats and the saltmarsh are highly sensitive to removal by land reclamation and barrage construction. Information provided by NE and CCW states that large areas of the European marine site are not currently under threat, however when combined with a high level of sensitivity this leads to a moderate vulnerability. ■ Noise or visual disturbance - Overwintering birds are disturbed by sudden movements and sudden noises. This can displace the birds from their feeding grounds. Disturbance can prevent the birds from feeding and in response they either a) decrease their energy intake at their present (disturbed) feeding site through displacement activity, or b) move to an alternative less favoured feeding site. Such a response affects energy budgets and thus survival. There is intermittent disturbance from both the landward and seaward side of the site. Bewick's swans are mainly affected by disturbance from the landward side and any increase in disturbance should be avoided. At present NE and CCW assess that the Annex 1 species are moderately vulnerable to noise and visual disturbance on the intertidal mudflats and sandflats and highly vulnerable to this category of operation on the saltmarsh. ■ Contamination by synthetic and/or non-synthetic toxic compounds - Waterfowl are subject to the accumulation of toxins through the food chain or through direct contact with toxic substances when roosting or feeding. Their ability to feed can also be affected by the abundance or change in palatability of their prey caused by toxic contamination. At the moment there is no evidence to show that this is the case, but the estuary is vulnerable to oil spills and there is a

<p>Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK9015022 Size: 24662.98 Designation: SPA</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>continuous discharge of toxins into the estuary, some of which bind to the sediments. NE and CCW identify this is an area which requires further assessment. They also identify Bewick's swans as currently moderately vulnerable to toxic contamination.</p> <p>Internationally important waterfowl assemblage including populations of regularly occurring migratory species:</p> <ul style="list-style-type: none"> ■ Physical loss through removal - The physical loss of areas of intertidal habitats may be caused directly through change of land use or indirectly as a consequence of changes to sedimentation processes (e.g. coastal defences) as well as via the effects of smothering by artificial structures (e.g. jetties) or the disposal of spoils. Eelgrass beds are being affected by siltation due to changes in sediment movement after construction of the Second Severn Crossing which has resulted in smothering. Activities or developments resulting in physical loss of the intertidal supporting habitats are likely to reduce the availability of food and roosting habitat and thus be detrimental to the favourable condition of the SPA interest features including all the migratory species and waterfowl assemblage. All three supporting habitats are highly sensitive to removal by land reclamation and barrage construction. Information provided by NE and CCW states that large areas of the European marine site are not currently under threat, however when combined with a high level of sensitivity this leads to a moderate vulnerability. ■ Damage by abrasion or selective extraction - Saltmarsh may be physically damaged from overgrazing or eroded when boats are moored on it and when paths are worn through it to reach moored boats on foot or via vehicles. Currently all supporting habitats are considered to be moderately vulnerable to abrasion. Intertidal habitats are highly sensitive to damage by direct and indirect effects of aggregate dredging. The intertidal mudflats and sandflats and the shingle and rocky shore are therefore considered by NE and CCW to be highly vulnerable to selective extraction. ■ Noise or visual disturbance - Overwintering birds are disturbed by sudden movements and sudden noises. This can have the effect of displacing the birds from their feeding grounds. Disturbance can prevent the birds from feeding and in response they either a) decrease their energy intake at their present (disturbed) feeding site through displacement activity, or b) move to an alternative less favoured feeding site. Such a response affects energy budgets and thus survival. There is intermittent disturbance to the internationally important migratory species and the waterfowl

<p>Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK9015022 Size: 24662.98 Designation: SPA</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>assemblage from both the landward and seaward side of the site which has increased in recent years, due to the estuary becoming more populated and the development of all weather recreational pursuits. All supporting habitats are currently highly vulnerable to noise and visual disturbance.</p> <ul style="list-style-type: none"> ■ Contamination by synthetic and/or non-synthetic toxic compounds - Waterfowl are subject to the accumulation of toxins through the food chain or through direct contact with toxic substances when roosting or feeding. Their ability to feed can also be affected by the abundance or change in palatability of their prey caused by toxic contamination. At the moment there is no evidence to show that this is the case on the Severn Estuary, but the estuary is vulnerable to oil spills and there is a continuous discharge of toxins into the estuary, some of which bind to the sediments. NE and CCW identify this is an area which requires further assessment. The intertidal mudflats and sandflats and the saltmarsh are currently highly vulnerable to the introduction of synthetic and non-synthetic compounds. ■ Changes in nutrient and/or organic loading - Changes in organic or nutrient loading can change the species composition of the plants on the saltmarsh and thus the structure of the sward. Increases in nutrients can also cause excessive algal growth on the mudflats, denying the birds access to their invertebrate prey and changing the invertebrate species composition in the sediment. Though the water quality has been improved in recent years there are still local areas of concern and any increase in nutrient loading should be avoided. At present the intertidal mudflats and sandflats are moderately vulnerable to this category of operation. ■ Biological disturbance through the selective extraction of species - Wildfowling is carried out all around the estuary. NE and CCW have not established that it has a detrimental effect on the overall bird populations but state that wildfowling needs to be exercised in a managed and sustainable manner preferably by a British Association of Shooting and Conservation (BASC) affiliated association, applying the BASC wildfowlers code of conduct. Bait digging is also carried out around the estuary. If too large an area is regularly dug over, it can change the availability of prey in the sediment as the area needs a period of recovery and recolonisation. The removal of strandline vegetation by beach cleaning removes an important habitat for invertebrates, as well as many of the invertebrates themselves, reducing the quantity and variety of prey available to the birds. Much of the saltmarsh is managed by grazing and changes in management can alter the availability of prey and suitability of roosting sites. The saltmarsh is

Ramsar Sites

Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK11081 Size: 24662.98 Designation: Ramsar	Habitats Regulations Assessment: Data Proforma
Site Description	The Severn Estuary is the largest coastal plain estuary in the UK with extensive mudflats and sandflats, rocky shore platforms, shingle and islands. Saltmarsh fringes the coast, backed by grazing marsh with freshwater and occasional brackish ditches. The estuary's classic funnel shape, unique in the UK, is a factor causing the Severn to have the second highest tidal range in the world (after the Bay of Fundy in Canada) at more than 12 meters. This tidal regime results in plant and animal communities typical of the extreme physical conditions of strong flows, mobile sediments, changing salinity, high turbidity and heavy scouring. The resultant low diversity invertebrate communities, that frequently include populations of ragworms, lugworms and other invertebrates in high densities, form an important food source for passage and wintering birds. The site is important in the spring and autumn migration periods for waders moving along the west coast of Europe, as well as in winter for large numbers of waterbirds including swans, geese, ducks and waders. These bird populations are regarded as internationally important.

<p>Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK11081 Size: 24662.98 Designation: Ramsar</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>Glassworts and annual sea-blite colonise the open mud, with beds of all three species of eelgrass <i>Zostera</i> occurring on more sheltered mud and sandbanks. Large expanses of common cord-grass also occur on the outer marshes. Heavily grazed saltmarsh fringes the estuary with a range of saltmarsh types present. The middle marsh sward is dominated by common saltmarsh-grass with typical associated species. In the upper marsh, red fescue and saltmarsh rush become more prominent.</p> <p>Areas of saltmarsh fringe the estuary, mostly grazed with a range of vegetation communities. There are gradual and stepped transitions between bare mudflat to upper marsh and grassland. Main vegetation types are: upper saltmarsh with <i>Festuca rubra</i> and <i>Juncus gerardii</i>; middle marsh dominated by <i>Puccinellia maritima</i> with <i>Glaux maritima</i> and <i>Triglochin maritima</i>; dense monocultures of <i>Spartina anglica</i> at the edge of the mudflats-brackish pools and depressions with <i>Phragmites australis</i> and <i>Bolboschoenus maritimus</i>.</p>
<p>Qualifying Features</p>	<p>Ramsar criterion 1</p> <ul style="list-style-type: none"> ■ Immense tidal range (second-largest in world) creating diversity of physical environment and biological communities. <p>Ramsar criterion 3</p> <ul style="list-style-type: none"> ■ Due to unusual estuarine communities, reduced diversity and high productivity. <p>Ramsar criterion 4</p> <ul style="list-style-type: none"> ■ This site is important for the run of migratory fish between sea and river via estuary. Species include Salmon <i>Salmo salar</i>, sea trout <i>S. trutta</i>, sea lamprey <i>Petromyzon marinus</i>, river lamprey <i>Lampetra fluviatilis</i>, allis shad <i>Alosa alosa</i>, twaite shad <i>A. fallax</i>, and eel <i>Anguilla anguilla</i>. It is also of particular importance for migratory birds during spring and autumn. <p>Ramsar criterion 5</p> <p>Species with peak counts in winter:</p> <ul style="list-style-type: none"> ■ 70919 waterfowl

<p>Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK11081 Size: 24662.98 Designation: Ramsar</p>	<p>Habitats Regulations Assessment: Data Proforma</p>

<p>Key Environmental Conditions (factors that maintain site integrity)</p>	<p>Key supporting habitats for the Bewick’s swan:</p> <ul style="list-style-type: none"> ■ Intertidal mudflats and sandflats: <ul style="list-style-type: none"> ○ Habitat extent - The focal area for the Bewick’s swans is the upper Severn Estuary in the vicinity of the New Grounds, Slimbridge area. The mudflats and sandflats exposed as the tide falls where the estuary widens in the upper reaches of the site at Waveridge Sands, Frampton Sands and The Noose are used as safe refuge areas when the birds are disturbed. ○ Unimpeded sightlines at feeding and roosting sites - Bewick’s swan require unrestricted views >500m to allow early detection of predators when feeding and roosting. ■ Saltmarsh communities: <ul style="list-style-type: none"> ○ Habitat extent - The birds feed on the saltmarsh and the transition from saltmarsh to coastal grazing marsh in front of the sea defences in the upper estuary at The Dumbles, where areas of the high marsh are mainly affected only by brackish water during tidal inundation. ○ Vegetation characteristics - Bewick’s swan graze on a range of ‘soft’ meadow grasses such as <i>Agrostis stolonifera</i> and <i>Alopecurus geniculatus</i> found in wet meadows which are outwith the European marine site boundary. ○ Unimpeded sightlines at feeding and roosting sites - Bewick’s swan require unrestricted views >500m to allow early detection of predators when feeding and roosting. <p>Key supporting habitats for populations of regularly occurring migratory species and assemblage of waterfowl</p> <ul style="list-style-type: none"> ■ Intertidal mudflats and sandflats: <ul style="list-style-type: none"> ○ Habitat extent - Intertidal mudflats and sandflats and their communities are important habitats as they provide both

<p>Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK11081 Size: 24662.98 Designation: Ramsar</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>roosting and feeding areas. The European white-fronted geese roost at night on estuarine sandbanks and usually fly less than 10km to the daytime feeding grounds. Therefore conservation of traditional roosting sites is necessary to enable the population to exploit potential feeding habitats.</p> <ul style="list-style-type: none"> ○ Food availability - Most of the waders and waterfowl within the assemblage including the internationally important regularly occurring migratory birds feed on invertebrates within and on the sediments. ○ Unimpeded sightlines at feeding and roosting sites - Waterfowl require unrestricted views >500m to allow early detection of predators when feeding and roosting. <p>■ Saltmarsh:</p> <ul style="list-style-type: none"> ○ Habitat extent - Saltmarsh and their communities are important habitats as they provide both roosting and feeding areas. Upper and lower saltmarsh provide important feeding and roosting areas for the internationally important migratory birds throughout the estuary. ○ Food availability - The saltmarshes provide a rich feeding habitat for redshank and shelduck, which feed on invertebrate species in the sediments, such as the mudsnail Hydrobia. The European white-fronted geese graze on a range of saltmarsh grasses and herbs such as common saltmarsh grass Puccinellia maritime and sea barley Hordeum marinum. The birds feed on the saltmarsh and the transition to coastal grazing marsh in front of the sea defences in the upper estuary and particularly at the The Dumbles. ○ Vegetation characteristics - Vegetation of <10 cm is required throughout areas used by roosting waders. This is managed by grazing. ○ Unimpeded sightlines at feeding and roosting sites - Waterfowl require unrestricted views >500m to allow early detection of predators when feeding and roosting. The saltmarshes also have an important function providing a safe haven from the tides that flood the mudflats twice a day. The low-growing dense vegetation provides a suitable roosting habitat for redshank and dunlin, which prefer to roost on areas of short vegetation ensuring good visibility. <p>■ Shingle and rocky shore:</p> <ul style="list-style-type: none"> ○ Habitat extent - the shingle and rocks in the estuary provide feeding areas for dunlin and redshank and some limited foraging at high tide. It is also provides important roost sites at high tide particularly for the dunlin and

<p>Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK11081 Size: 24662.98 Designation: Ramsar</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<p>redshank. Many of the rocks are off shore and are therefore generally free from human disturbance. These include Guscar Rocks in the upper reaches, Blackstone Rocks at Clevedon and Stert Island in Bridgwater Bay.</p> <ul style="list-style-type: none"> ○ Food availability - see above. ○ Unimpeded sightlines at feeding and roosting sites - Waterfowl require unrestricted views >500m to allow early detection of predators when feeding and roosting. <p>■ Wet coastal grazing marsh, improved grassland and open standing waters - these supporting habitats lie outside the European marine site boundary but within the SPA. They provide key areas for feeding and roosting for all the migratory species particularly at high tide.</p> <p>Key environmental conditions for the supporting habitats:</p> <ul style="list-style-type: none"> ■ Hydrodynamic and sedimentary regime - the tidal range in the Severn Estuary is the second-highest in the world and the scouring of the seabed and strong tidal streams result in natural erosion of the habitats and the presence of high sediment loads. ■ Maintain suitable distance between the site and development - to allow for managed retreat of intertidal habitats and avoid coastal squeeze. <p>Other key conditions:</p> <ul style="list-style-type: none"> ■ Manage/restrict public access - at certain times of the year. Significant disturbance attributable to human activities can result in reduced food intake and/or increased energy expenditure. ■ Maintain levels of prey.

<p>Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK11081 Size: 24662.98 Designation: Ramsar</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
<p>Ramsar Condition Assessment</p>	<ul style="list-style-type: none"> ■ N/A
<p>Vulnerabilities (includes existing pressures and trends)</p>	<ul style="list-style-type: none"> ■ Physical loss of supporting habitats through removal - The physical loss of areas of intertidal habitats may be caused directly through change of land use or indirectly as a consequence of changes to sedimentation processes (e.g. coastal defences) as well as via the effects of smothering by artificial structures (e.g. jetties) or the disposal of spoils. Activities or developments resulting in physical loss of the intertidal supporting habitats are likely to reduce the availability of feeding and roosting habitats. The intertidal mudflats and sandflats and the saltmarsh are highly sensitive to removal by land reclamation and barrage construction. Information provided by NE and CCW states that large areas of the European marine site are not currently under threat, however when combined with a high level of sensitivity this leads to a moderate vulnerability. ■ Noise or visual disturbance - Overwintering birds are disturbed by sudden movements and sudden noises. This can displace the birds from their feeding grounds. Disturbance can prevent the birds from feeding and in response they either a) decrease their energy intake at their present (disturbed) feeding site through displacement activity, or b) move to an alternative less favoured feeding site. Such a response affects energy budgets and thus survival. There is intermittent disturbance to the internationally important migratory species and the waterfowl assemblage from both the landward and seaward side of the site which has increased in recent years, due to the estuary becoming more populated and the development of all weather recreational pursuits. Bewick's swans are mainly affected by disturbance from the landward side and any increase in disturbance should be avoided. All supporting habitats are currently highly vulnerable to noise and visual disturbance. ■ Contamination by synthetic and/or non-synthetic toxic compounds - Waterfowl are subject to the accumulation of toxins through the food chain or through direct contact with toxic substances when roosting or feeding. Their ability to feed can also be affected by the abundance or change in palatability of their prey caused by toxic contamination. At the moment there is no evidence to show that this is the case, but the estuary is vulnerable to oil spills and there is a continuous discharge of toxins into the estuary, some of which bind to the sediments. NE and CCW identify this is an area which requires further assessment. The intertidal mudflats and sandflats and the saltmarsh are currently highly vulnerable to the introduction of synthetic and non-synthetic compounds.

<p>Site Name: Severn Estuary Location (Lat & Long): 51 13 29 N 03 02 57 W JNCC Site Code: UK11081 Size: 24662.98 Designation: Ramsar</p>	<p>Habitats Regulations Assessment: Data Proforma</p>
	<ul style="list-style-type: none"> ■ Damage by abrasion or selective extraction - Saltmarsh may be physically damaged from overgrazing or eroded when boats are moored on it and when paths are worn through it to reach moored boats on foot or via vehicles. Currently all supporting habitats are considered to be moderately vulnerable to abrasion. Intertidal habitats are highly sensitive to damage by direct and indirect effects of aggregate dredging. The intertidal mudflats and sandflats and the shingle and rocky shore are therefore considered by NE and CCW to be highly vulnerable to selective extraction. ■ Changes in nutrient and/or organic loading - Changes in organic or nutrient loading can change the species composition of the plants on the saltmarsh and thus the structure of the sward. Increases in nutrients can also cause excessive algal growth on the mudflats, denying the birds access to their invertebrate prey and changing the invertebrate species composition in the sediment. Though the water quality has been improved in recent years there are still local areas of concern and any increase in nutrient loading should be avoided. At present the intertidal mudflats and sandflats are moderately vulnerable to this category of operation. ■ Biological disturbance through the selective extraction of species - Wildfowling is carried out all around the estuary. NE and CCW have not established that it has a detrimental effect on the overall bird populations but state that wildfowling needs to be exercised in a managed and sustainable manner preferably by a British Association of Shooting and Conservation (BASC) affiliated association, applying the BASC wildfowlers code of conduct. Bait digging is also carried out around the estuary. If too large an area is regularly dug over, it can change the availability of prey in the sediment as the area needs a period of recovery and recolonisation. The removal of strandline vegetation by beach cleaning removes an important habitat for invertebrates, as well as many of the invertebrates themselves, reducing the quantity and variety of prey available to the birds. Much of the saltmarsh is managed by grazing and changes in management can alter the availability of prey and suitability of roosting sites. The saltmarsh is currently highly vulnerable to the selective extraction of species.

**Habitat Regulations Assessment Report:
Appendix 2 - Policy Screening Template**

September 2013

Appendix 2 - POLICY SCREENING TEMPLATE

Policy Screening: Categorising the Potential Effects of the Plan (Tyldesley, 2009)	
Criteria Category	Rationale
Category A: No negative effect	
A1	Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.
A2	Options/ policies intended to protect the natural environment, including biodiversity.
A3	Options/ policies intended to conserve or enhance the natural, built or historic environment, where enhancement measures will not be likely to have any negative effect on a European site.
A4	Options/ policies that positively steer development away from European sites and associated sensitive areas.
A5	Options/ policies that would have no effect because no development could occur through the policy itself, the development being implemented through later policies in the same plan, which are more specific and therefore more appropriate to assess for their effects on European Sites and associated sensitive areas.
Category B: No significant effect	
B	Options/ policies that could have an effect but would not be likely to have a significant (negative) effect on a European site (alone or in-combination with other plans or projects) because the effects are trivial or 'de minimis' even if combined with other effects.
Category C: Potential significant effect alone	
C1	The option, policy could directly affect a European site because it provides for, or steers, a quantity or type of development onto a European site, or adjacent to it.
C2	The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.
C3	Proposals for a magnitude of development that, no matter where it is located, the development would be likely to have a significant effect on a European site.
C4	An option, or policy that makes provision for a quantity/ type of development (and may indicate one or more broad locations e.g. a particular part of the plan area), but the effects are uncertain because the detailed location of the development is to be selected following consideration of options in a later, more specific plan . The consideration of options in the later plan will assess potential effects on European Sites, but because the development could possibly affect a European site a significant effect cannot be ruled out on the basis of objective information
C5	Options, policies or proposals for developments or infrastructure projects that could block options or alternatives for the provision of other development or projects in the future, which will be required in the public interest, that may lead to adverse effects on European sites, which would otherwise be avoided.

Policy Screening: Categorising the Potential Effects of the Plan (Tyldesley, 2009)	
Criteria Category	Rationale
C6	Options, policies or proposals which depend on how the policies etc are implemented in due course, for example, through the development management process. There is a theoretical possibility that if implemented in one or more particular ways, the proposal could possibly have a significant effect on a European site
C7	Any other options, policies or proposals that would be vulnerable to failure under the Habitats Regulations at project assessment stage; to include them in the plan would be regarded by the EC as 'faulty planning'.
C8	Any other proposal that may have an adverse effect on a European site, which might try to pass the tests of the Habitats Regulations at project assessment stage by arguing that the plan provides the imperative reasons of overriding public interest to justify its consent despite a negative assessment.
Category D: Potential significant effects in combination	
D1	The option, policy or proposal alone would not be likely to have significant effects but if its effects are combined with the effects of other policies or proposals provided for or coordinated by the Local Development Document (internally) the cumulative effects would be likely to be significant.
D2	Options, policies or proposals that alone would not be likely to have significant effects but if their effects are combined with the effects of other plans and projects and possibly the effects of other developments provided for in the Local Development Document as well, the combined effects are likely to be significant.
D3	Options or proposals that are, or could be, part of a programme or sequence of development delivered over a period, where the implementation of the early stages would not have a significant effect on European sites, but which would dictate the nature, scale, duration, location, timing of the whole project, the later stages of which could have adverse effects on such sites.

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
KP1: LEVEL OF GROWTH Provision will be made for a range and choice of opportunities to deliver 41,100 new dwellings and 40,000 new jobs in Cardiff between 2006-2026. Furthermore, in order to demonstrate that the Plan	C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it	Proposed growth will not incur land take at European sites, but may potentially affect sites within and outside Cardiff. The magnitude of housing and employment development proposed requires examination to determine any effects

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
meets the flexibility test of soundness and to accommodate potentially higher build rates than anticipated, provision has been made to deliver an additional 10% flexibility allowance (for 4,000 dwellings) which can be triggered, if demonstrated as necessary through annual monitoring, in the later phases of the Plan period.	may increase disturbance as a result of increased recreational pressure. C3 Proposals for a magnitude of development that, no matter where it is located, the development could potentially have a significant effect on a European site.	upon European Sites.
KP2: STRATEGIC SITES Strategic Sites will be allocated as set out below to help meet the need for new dwellings and jobs: Brownfield Strategic Sites: (A) Cardiff Central Enterprise Zone and Regional Transport Hub; (B) Former Gas Works, Ferry Road; Greenfield Strategic Sites: (C) North West Cardiff; (D) North of Junction 33 on M4; (E) South of Creigiau; (F) North East Cardiff (West of Pontprennau); (G) East of Pontprennau Link Road; and (H) South of St Mellons Business Park - Employment only.	C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure. C3 Proposals for a magnitude of development that, no matter where it is located, the development could potentially have a significant effect on a European site.	Proposed growth will not incur land take at European sites, but may potentially affect sites within and outside Cardiff. The magnitude of housing and employment development proposed requires examination to determine any effects upon European Sites.
KP3(A): GREEN BELT In order to strategically manage the urban form of Cardiff and to protect the setting of the urban area, a Green Belt is proposed on land North of the M4 as shown on the Proposals Map. Within this area	A2 Options/ policies intended to protect the natural environment, including biodiversity. A3 Options/ policies intended to conserve or enhance the natural, built or historic environment,	This policy is aimed in part at preserving the natural environment.

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
development which prejudices the open nature of this land will not be permitted. Positive biodiversity, landscape, climate change mitigation and informal recreational management and enhancement measures will be encouraged in this area to further enhance the long term role of the area as a key natural resource benefitting the city.	where enhancement measures will not be likely to have any negative effect on a European site.	
KP3(B): SETTLEMENT BOUNDARIES In order to strategically manage the spatial growth of Cardiff, settlement boundaries are proposed as shown on the Proposals Map. In all areas outside the defined settlement boundaries, otherwise referred to as countryside, there will be a corresponding presumption against inappropriate development.	A5 Options/ policies that would have no effect because no development could occur through the policy itself, the development being implemented through later policies in the same plan, which are more specific and therefore more appropriate to access for their effects on European Sites and associated sensitive areas.	Definition of a settlement boundary will not affect European sites per se.
KP4: MASTERPLANNING APPROACH New development should accord with: (i) The Masterplanning General Principles (as set out in the Deposit LDP) (ii) Guidance set out in Site-Specific Masterplanning Frameworks, where prepared.	A5 Options/ policies that would have no effect because no development could occur through the policy itself, the development being implemented through later policies in the same plan, which are more specific and therefore more appropriate to access for their effects on European Sites and associated sensitive areas.	This policy does not stipulate development in itself, but instead provides the Masterplanning principles that policies such as KP1 and KP2 should follow.
KP5: HIGH QUALITY AND SUSTAINABLE DESIGN To help support the development of Cardiff as a world-class European Capital City, all new development will be required to be of a high quality,	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning	Design-related policy which does not in itself lead to development.

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
sustainable design and make a positive contribution to the creation of distinctive communities, places and spaces	policy.	
KP6: NEW INFRASTRUCTURE New development will make appropriate provision for, or contribute towards, the necessary infrastructure required as a consequence of the proposed development. Such infrastructure will be delivered in a timely manner to meet the needs of existing and planned communities and includes the aspects which may be required subject to the nature and details of the proposal as set out in text of this policy.	C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.	Proposed infrastructure will not incur land take at European sites, but may potentially affect sites within and outside Cardiff.
KP7: PLANNING OBLIGATIONS Planning obligations will be sought to mitigate any adverse impacts of development.	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.	Policy will not lead to development in itself.
KP8: SUSTAINABLE TRANSPORT Development in Cardiff will be integrated with transport infrastructure and services in order to: <ul style="list-style-type: none"> (i) Minimise travel demand and dependence on the car; (ii) Enable and maximise use of sustainable and active modes of transport; (iii) Integrate travel modes; 	A2 Options/ policies intended to protect the natural environment, including biodiversity.	Policy will serve to offset potential negative impacts arising from other parts of the plan.

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>(iv) Provide for people with special access and mobility requirements; (v) Improve safety for all travellers; (vi) Maintain and improve the efficiency and reliability of the transport network; (vii) Support the movement of freight by rail or water; and (viii) Manage freight movements by road and minimise their impacts.</p>		
<p>KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS Provision will be made for a range and choice of new employment sites including those identified in KP2 for different types of employment and in different geographical locations to effectively deliver the level of growth set out in the plan together with putting in place a framework to protect the role of existing employment land</p>	<p>C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.</p> <p>C3 Proposals for a magnitude of development that, no matter where it is located, the development could potentially have a significant effect on a European site.</p>	<p>Proposed employment sites will not incur land take at European sites, but may potentially affect sites within and outside Cardiff. The magnitude of housing and employment development proposed requires examination to determine any effects upon European Sites.</p>
<p>KP10: CENTRAL AND BAY BUSINESS AREAS The following uses are considered appropriate within the Central and Bay Business Areas: (i) New offices, residential and commercial leisure uses within the Central and Bay Business</p>	<p>C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of</p>	<p>Proposed development sites will not incur land take at European sites, but are connected to the Severn Estuary via Cardiff Bay, and so may potentially affect this site.</p>

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>Areas;</p> <p>(ii) Enhanced retail and complementary facilities within the Central Shopping Area; and</p> <p>(iii) Other uses most appropriately located in city centres.</p>	<p>increased recreational pressure.</p>	
<p>KP11: MINERALS AND AGGREGATES Cardiff will contribute to regional aggregate supplies by:</p> <p>(i) Promoting and supporting the efficient use of minerals and use of alternatives to naturally occurring minerals including the re-use of secondary aggregates;</p> <p>(ii) Protecting existing mineral reserves and potential resources from development that would preclude their future extraction; and</p> <p>(iii) Maintaining a 10 year land bank of permitted aggregate reserves in line with national guidance.</p>	<p>C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.</p>	<p>Mineral sites are close to Cardiff Beech Woods SAC, so potential for effect should be examined in further detail.</p>
<p>KP12: WASTE Waste arising from Cardiff will be managed by:</p> <p>(i) Promoting and supporting additional sustainable waste treatment facilities, measures and strategies in accordance with the Regional Waste Plan;</p>	<p>C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.</p>	<p>Where waste sites are close to the Severn Estuary, the potential for an effect should be examined in further detail.</p>

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>(ii) Encouraging the provision of in-building treatment facilities on existing and allocated areas of general industry;</p> <p>(iii) Supporting the provision and maintenance of sustainable waste management storage and collection arrangements in all appropriate new developments; and</p> <p>(iv) Supporting waste minimisation and the provision of facilities that use recycled or composted products.</p>		
<p>KP13: RESPONDING TO EVIDENCED SOCIAL NEEDS A key part of the successful progression of the city will be to develop sustainable neighbourhoods, tackle deprivation, and improve the quality of life for all.</p>	<p>A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.</p>	<p>Policy will not lead to development in itself.</p>
<p>KP14: HEALTHY LIVING Cardiff will be made a healthier place to live by seeking to reduce health inequalities through encouraging healthy lifestyles, addressing the social determinants of health and providing accessible health care facilities. This will be achieved by supporting developments which provide for active travel, access to quality open spaces and accessible health facilities.</p>	<p>C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.</p>	<p>Where access to open spaces is promoted as part of developments, and this access is in a sensitive area such as Cardiff beech Woods or the foreshore of the Severn Estuary, the potential for an effect should be examined in further detail.</p>

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>KP15: CLIMATE CHANGE To mitigate against the effects of climate change and adapt to its impacts, development proposals should take into account the following factors:</p> <ul style="list-style-type: none"> (i) Reducing carbon emissions; (ii) Protecting and increasing carbon sinks; (iii) Adapting to the implications of climate change at both a strategic and detailed design level; (iv) Promoting energy efficiency and increasing the supply of renewable energy; and (v) Avoiding unnecessary flood risk by assessing the implications of development proposals within areas susceptible to flooding and preventing development that unacceptably increases risk. 	<p>C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.</p>	<p>Where policies promote generation of renewable energy, this could include wind turbines situated on the foreshore of the Severn Estuary, so the potential for an effect should be examined in further detail.</p>
<p>KP16: NATURAL HERITAGE Cardiff's distinctive natural heritage that provides a network of green infrastructure. The network will be protected, enhanced, created and managed to ensure integrity and connectivity of this multi-functional green resource is maintained.</p> <p>Protection and conservation of natural heritage network needs to be balanced against the benefits of development. Proposed development should therefore demonstrate how green infrastructure has been considered and integrated into the proposals. If</p>	<p>A2 Options/ policies intended to protect the natural environment, including biodiversity.</p>	<p>Policy will serve to offset potential negative impacts arising from other parts of the plan.</p>

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
development results in overall loss of green infrastructure, appropriate compensation will be required.		
KP17: BUILT HERITAGE Cardiff's distinctive heritage assets will be protected, managed and enhanced.	A3 Options/ policies intended to conserve or enhance the natural, built or historic environment, where enhancement measures will not be likely to have any negative effect on a European site.	Policy itself will not lead to development.
KP18: NATURAL RESOURCES In the interests of the long-term sustainable development of Cardiff, development proposals must take full account of the need to minimise impacts on the city's natural resources and minimise pollution	A2 Options/ policies intended to protect the natural environment, including biodiversity.	Policy will serve to offset potential negative impacts arising from other parts of the plan.
H1: NON-STRATEGIC HOUSING SITES The non-strategic sites which are allocated for housing are listed in Table 3 of the draft deposit LDP document.	D1 The option, policy or proposal alone would not be likely to have significant effects but if its effects are combined with the effects of other policies or proposals provided for or coordinated by the Local Development Document (internally) the cumulative effects could potentially to be significant.	Non-strategic housing sites, when combined with educational, community, retail, waste management, and employment development, may have a combined effect upon European sites within and outside Cardiff, so the potential for a combined effect should be examined in further detail.
H2: CONVERSION TO RESIDENTIAL USE Within the Central Business Area of the city centre, District and Local centres, as defined on the Proposals Map, the conversion of suitable vacant	A4 Options/ policies that positively steer development away from European sites and associated sensitive areas.	Areas referred to in this policy are not close to European Sites, and the effects of building conversions are likely to be localised.

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
space above commercial premises to residential use will be favoured where: (i) Adequate servicing and security can be maintained to the existing commercial use(s); (ii) Appropriate provision can be made for parking, access, pedestrian access, amenity space, and refuse disposal together with any appropriate external alterations and; (iii) The residential use does not compromise the ground floor use		
H3: AFFORDABLE HOUSING Where there is evidence of need, the Council will seek a target of X% affordable housing in all residential proposals that: (i) Contain X or more new dwellings; or (ii) Exceed X hectares in gross site area; or (iii) Exceed the thresholds in (i) or (ii) above for adjacent sites. The exact affordable housing contribution to be provided will depend on the circumstances of each proposal, particularly scheme viability	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.	Policy itself will not lead to development.
H4: CHANGE OF USE OF RESIDENTIAL LAND OR PROPERTIES Outside the Central and Bay Business Areas and District and Local Centres, identified on the	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning	Policy itself will not lead to new development, and in any case the effects of redevelopment of residential properties are likely to be localised.

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
<p>Proposals Map, conversion or redevelopment of residential properties to other use will only be permitted where:</p> <ul style="list-style-type: none"> (i) The premises or their location are no longer suitable for residential use; or (ii) The proposal is for a community use necessary within a residential area; or (iii) The proposal is for a use that could contribute to the creation of sustainable communities. 	<p>policy.</p>	
<p>H5: SUB-DIVISION OR CONVERSION OF RESIDENTIAL PROPERTIES Proposals for any conversion to flats or Houses in Multiple Occupation will be permitted where:</p> <ul style="list-style-type: none"> (i) The existing property is of a size (without being extended for the proposed use), whereby the layout, room sizes, range of facilities and external amenity space of the resulting property would ensure an adequate standard of residential amenity for future occupiers. (ii) There would be no material harm to the amenity of existing, nearby residents by virtue of general disturbance, noise or overlooking. (iii) The cumulative impact of such conversions will not adversely affect the amenity and/or the character of the area. (iv) Does not have an adverse affect on local parking provision 	<p>A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.</p>	<p>Policy itself will not lead to new development, and in any case the effects of conversion of residential properties are likely to be localised.</p>

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
<p>H6: CHANGE OF USE OR REDEVELOPMENT TO RESIDENTIAL USE Change of use of redundant premises or redevelopment of redundant previously developed land for residential use will be permitted where:</p> <ul style="list-style-type: none"> (i) There is no overriding need to retain the existing use of the land or premises and no overriding alternative local land use requirement; (ii) The resulting residential accommodation and amenity will be satisfactory; (iii) There will be no unacceptable impact on the operating conditions of existing businesses; (iv) Necessary community and transportation facilities are accessible or can be readily provided or improved; and (v) It can be demonstrated that the change of use to a more sensitive end use has been assessed in terms of land contamination risk and that there are no an unacceptable risk to the end users. 	<p>A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.</p>	<p>Policy itself will not lead to new development, and in any case the effects of change of use likely to be localised.</p>

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S)</p> <p>Land is allocated for the provision of Gypsies and Travellers accommodation at Pengam Green as defined on the Proposals Map.</p>	<p>D1 The option, policy or proposal alone would not be likely to have significant effects but if its effects are combined with the effects of other policies or proposals provided for or coordinated by the Local Development Document (internally) the cumulative effects could potentially to be significant.</p>	<p>This allocation, when combined with other housing, educational, community, waste management, and employment development, may have a combined effect upon European sites within and outside Cardiff, so the potential for a combined effect should be examined in further detail.</p>
<p>H8: SITES FOR GYPSY AND TRAVELLER CARAVANS</p> <p>New sites and extensions to existing sites will be permitted where:</p> <ul style="list-style-type: none"> (i) Necessary physical, transport and social infrastructure are accessible or can be readily provided; (ii) Environmental factors including flood risk, ground stability, contaminated land and proximity of hazardous installations do not make the site inappropriate for residential development; (iii) The site is designed in line with the Welsh Government Good Practice Guide in Designing Gypsy Traveller Sites. (iv) There would be no unreasonable impact on the character and appearance of the surrounding areas including impact on residential amenity of neighbouring occupiers or the operating conditions of existing 	<p>C4 An option, or policy that makes provision for a quantity/ type of development (and may indicate one or more broad locations e.g. a particular part of the plan area), but the effects are uncertain because the detailed location of the development is to be selected following consideration of options in a later, more specific plan. The consideration of options in the later plan will assess potential effects on European Sites, but because the development could possibly affect a European site a significant effect cannot be ruled out on the basis of objective information</p>	<p>Where there exists the potential for new sites and extensions to existing sites close to the foreshore of the Severn Estuary, then the potential for an effect should be examined in further detail.</p>

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
businesses (v) In the case of a transit or touring site, it has good access to the primary highway network.		
EC1: EXISTING EMPLOYMENT LAND The city's existing employment areas outside of the Central and Bay Business Areas (as designated on the Proposals Map) will be protected for B class employment generating uses (together with appropriate ancillary and/or complementary uses and activities as referred to in Policy EC2) as described in the table included in the text of this policy in the draft deposit LDP.	C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.	Some of the sites referred to in this policy are close to the Severn Estuary foreshore, so the potential for an effect should be examined in further detail.
EC2: PROVISION OF COMPLEMENTARY FACILITIES FOR EMPLOYEES IN BUSINESS, INDUSTRIAL AND WAREHOUSING DEVELOPMENTS Provision for open space, public realm, leisure, food and drink, and child-care facilities will be appropriate in office, industrial and warehousing developments, provided, the facility is of an appropriate scale and nature intended primarily to meet the needs of workers in the vicinity, therefore not attracting significant levels of visitor traffic into the area, or exacerbating existing traffic conditions.	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.	Policy itself will not lead to new development, and in any case the effects of these facilities are likely to be localised.
EC3: ALTERNATIVE USE OF EMPLOYMENT	A1 Options/ policies that will not themselves	Policy itself will not lead to new development, but

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
<p>LAND AND PREMISES Development of business, industrial and warehousing land and premises for other uses will only be permitted if:</p> <ul style="list-style-type: none"> (i) The land or premises are no longer well-located for business, industrial or warehousing use; or (ii) There is no need to retain the land or premises for business, industrial or warehousing use, having regard to the demand for such land and premises and the requirement to provide for a range and choice of sites available for such use; and (iii) There will be no unacceptable impact on the operating conditions of existing businesses. 	<p>lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.</p>	<p>instead controls the type of development at these sites.</p>
<p>EC4: PROTECTING OFFICES IN THE CENTRAL AND BAY BUSINESS AREAS The alternative use of offices within the Central and Bay Business Areas will only be permitted where it can be demonstrated that there is no need to retain the site or premises for office use having regard to the demand for offices and the requirement to provide a range and choice of sites available for such use.</p>	<p>A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.</p>	<p>Policy itself will not lead to new development, but instead controls the type of development at these sites.</p>
<p>EC5: HOTEL DEVELOPMENT Proposals for hotel development will be favoured:</p>	<p>C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically,</p>	<p>Development in the Bay area may potentially have effects upon the Severn Estuary, so this potential should be examined in more detail.</p>

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>(i) Within the Central and Bay Business Areas of the city centre;</p> <p>(ii) In appropriate locations for the conversion of suitable residential or commercial properties;</p> <p>(iii) At other locations within the urban area, if there is no need to preserve the site for its existing or allocated use, assessed against the relevant policies of the plan;</p> <p>Subject to considerations of scale, location, design, amenity and transportation being acceptable.</p>	<p>hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.</p>	
<p>EC6: NON-STRATEGIC EMPLOYMENT SITE</p> <p>Land is allocated for university related research and development uses at Maindy Road, Cathays.</p>	<p>B Options/ policies that could have an effect but would not be likely to have a significant (negative) effect on a European site (alone or in-combination with other plans or projects) because the effects are trivial or ‘de minimis’ even if combined with other effects.</p>	<p>The size of development is too small and too far removed from any European Site to have any potential effect, either alone or in combination with other developments.</p>
<p>EN1: COUNTRYSIDE PROTECTION</p> <p>There will be a presumption against development in the countryside, beyond the settlement boundaries identified on the Proposals Map, except where it can be justified for agricultural and forestry needs or it is essential for facilitating sustainable access to and enjoyment of the countryside including appropriate outdoor recreation and tourism uses.</p> <p>Appropriate development in the countryside should be in harmony with, and not cause unacceptable</p>	<p>A2 Options/ policies intended to protect the natural environment, including biodiversity.</p>	<p>This policy is aimed in part at preserving the natural environment.</p>

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
harm to, the character and quality of the surrounding countryside and landscape		
EN2: CONVERSION, EXTENSION AND REPLACEMENT BUILDINGS IN THE COUNTRYSIDE There will be a presumption against conversion, extension and replacement of buildings in Cardiff's countryside except in accordance with the detailed criteria set out in this policy in the draft deposit LDP.	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.	Policy itself does not lead to development.
EN3: LANDSCAPE PROTECTION Development will not be permitted that would cause unacceptable harm to the character and quality of the landscape and setting of the city, with particular priority given to protecting, managing and enhancing the character and quality of the following Special Landscape Areas: (i) St Fagans Lowlands and the Ely Valley; (ii) Garth Hill and Pentyrch Ridges; (iii) Fforest Fawr and Caerphilly Ridge; (iv) Wentloog Levels; and (v) Flat Holm.	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.	Policy itself does not lead to development.
EN4: RIVER VALLEYS The Natural Heritage, character and other key features of Cardiff's river corridors will be protected,	C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that	Where the Taff Trail is promoted, the potential for an effect upon the Cardiff Beech Woods should be examined in further detail.

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>promoted and enhanced, together with facilitating sustainable access and recreation.</p>	<p>may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.</p>	
<p>EN5: LOCAL NATURE RESERVES AND NON-STATUTORY SITES OF NATURE CONSERVATION AND GEOLOGICAL IMPORTANCE Development proposals that would affect locally designated sites of nature conservation and geological importance should maintain or enhance the nature conservation and/or geological importance of the designation</p>	<p>A2 Options/ policies intended to protect the natural environment, including biodiversity.</p>	<p>This policy is aimed at preserving the natural environment.</p>
<p>EN6: ECOLOGICAL NETWORKS AND FEATURES OF IMPORTANCE FOR BIODIVERSITY Development will only be permitted if it does not cause unacceptable harm to:</p> <ul style="list-style-type: none"> (i) Landscape features of importance for wild flora and fauna, including wildlife corridors and ‘stepping stones’ which enable the dispersal and functioning of protected and priority species; (ii) Networks of importance for landscape or nature conservation. <p>Particular priority will be given to the protection, enlargement, connectivity and management of the overall nature of semi natural habitats.</p>	<p>A2 Options/ policies intended to protect the natural environment, including biodiversity.</p>	<p>This policy is aimed at preserving the natural environment.</p>

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
<p>EN7: PRIORITY HABITATS AND SPECIES Development proposals that would have a significant adverse affect on the continued viability of habitats and species identified as priorities in the UK or Local Biodiversity Action Plan will only be permitted where:</p> <ul style="list-style-type: none"> (i) The need for development outweighs the nature conservation importance of the site; (ii) The developer demonstrates that there is no satisfactory alternative location for the development which avoids nature conservation impacts; and (iii) Effective mitigation measures are provided by the developer. 	<p>A2 Options/ policies intended to protect the natural environment, including biodiversity.</p>	<p>This policy is aimed at preserving the natural environment.</p>
<p>EN8: TREES, WOODLANDS AND HEDGEROWS Development will not be permitted that would cause unacceptable harm to trees, woodlands and hedgerows of significant public amenity, natural or cultural heritage value, or that contribute significantly to mitigating the effects of climate change.</p>	<p>A2 Options/ policies intended to protect the natural environment, including biodiversity.</p>	<p>This policy is aimed at preserving the natural environment.</p>
<p>EN9: CONSERVATION OF THE HISTORIC ENVIRONMENT Development relating to any of the heritage assets</p>	<p>A3 Options/ policies intended to conserve or enhance the natural, built or historic environment, where enhancement measures will not be likely</p>	<p>Policy itself will not lead to development</p>

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>listed (or their settings) will only be permitted where it can be demonstrated that it preserves or enhances that asset's architectural quality, historic and cultural significance, character, integrity and/or setting.</p>	<p>to have any negative effect on a European site.</p>	
<p>EN10: INNOVATIVE WATER SOLUTIONS Development should demonstrate the incorporation of water sensitive urban design solutions (the process of integrating water cycle management with the built environment through planning and urban design). To include the management of:</p> <ul style="list-style-type: none"> (i) Water demand and supply; (ii) Waste water and pollution; (iii) Rainfall and runoff; (iv) Watercourses and water resource; (v) Flooding; and (vi) Water pathways. 	<p>A2 Options/ policies intended to protect the natural environment, including biodiversity.</p>	<p>Policy itself will not lead to development, and will serve to offset any potential negative effects arising from other part of the plan.</p>
<p>EN11: PROTECTION OF WATER RESOURCES Development will not be permitted that would cause unacceptable harm to the quality or quantity of underground, surface or coastal waters.</p>	<p>A2 Options/ policies intended to protect the natural environment, including biodiversity.</p>	<p>Policy itself will not lead to development, and will serve to offset any potential negative effects arising from other part of the plan.</p>
<p>EN12: RENEWABLE ENERGY AND LOW CARBON TECHNOLOGIES The Council will encourage developers of major and strategic sites to incorporate schemes which</p>	<p>C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically,</p>	<p>Where policies promote generation of renewable energy, this could include wind turbines situated on the foreshore of the Severn Estuary, so the potential for an effect should be examined in</p>

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
generate energy from renewable and low carbon technologies. This includes opportunities to minimise carbon emissions associated with the heating, cooling and power systems for new development.	hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.	further detail.
EN13: AIR, NOISE, LIGHT POLLUTION AND CONTAMINATED LAND Development will not be permitted where it would cause or result in unacceptable harm to health, local amenity, the character and quality of the countryside, or interests of nature conservation, landscape or built heritage importance because of air, noise, light pollution or the presence of unacceptable levels of land contamination.	A2 Options/ policies intended to protect the natural environment, including biodiversity.	Policy itself will not lead to development, and will serve to offset any potential negative effects arising from other part of the plan.
EN14: FLOOD RISK Development will not be permitted: <ul style="list-style-type: none"> (i) Within tidal or fluvial flood plains unless existing or proposed flood prevention and/or protection measures are acceptable; or (ii) Where it would increase the risk of flooding; or (iii) Where it would hinder future maintenance or improvement schemes of flood defences and watercourses; or (iv) Where it would cause adverse effects on the integrity of tidal or fluvial defences; or (v) Where ground floor bedrooms are proposed in areas at high risk of flooding. 	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.	Policy itself will not lead to development.

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
T1: SUPPORTING ACTIVE TRAVEL To enable people to access employment, essential services and community facilities by walking and cycling the Council will support developments which incorporate the attributes detailed in the text of this policy in the draft deposit LDP	A2 Options/ policies intended to protect the natural environment, including biodiversity.	Policy itself will not lead to development, and will serve to offset any potential negative effects arising from other part of the plan.
T2: STRATEGIC RAPID TRANSIT AND BUS CORRIDORS To avoid car-based developments and maximise use of sustainable transport, infrastructure and associated services will be introduced to develop strategic rapid transport and bus corridors including those detailed in the text of this policy in the draft deposit LDP	A2 Options/ policies intended to protect the natural environment, including biodiversity.	Policy itself will not lead to development, and will serve to offset any potential negative effects arising from other part of the plan.
T3: TRANSPORT INTERCHANGES In order to facilitate the transfer between transport modes and help to minimise travel demand and reduce car dependency, developments detailed in the text of this policy in the draft deposit LDP will be supported.	A2 Options/ policies intended to protect the natural environment, including biodiversity.	Policy itself will not lead to development, and will serve to offset any potential negative effects arising from other part of the plan.
T4: REGIONAL TRANSPORT HUB Support will be given to the development of infrastructure and facilities in and around Cardiff	A4 Options/ policies that positively steer development away from European sites and associated sensitive areas.	Locations mentioned are not near European sites, and any effects are likely to be localized.

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>Central Railway Station which meet the criteria detailed in the text of this policy in the draft deposit LDP.</p>		
<p>T5: MANAGING TRANSPORT IMPACTS Where necessary, safe and convenient provision will be sought in conjunction with development for:</p> <ul style="list-style-type: none"> (i) Pedestrians; (ii) People with special access and mobility requirements; (iii) Cyclists; (iv) Powered two-wheelers; (v) Public transport; (vi) Vehicular access and traffic management within the site and its vicinity; (vii) Car parking and servicing; (viii) Coach parking; and (ix) Horse-riders. 	<p>A2 Options/ policies intended to protect the natural environment, including biodiversity.</p>	<p>Policy itself will not lead to development, and will serve to offset any potential negative effects arising from other part of the plan.</p>
<p>T6: IMPACT ON TRANSPORT NETWORKS AND SERVICES Development will not be permitted which would cause unacceptable harm to the safe and efficient operation of the highway, public transport and other movement networks including pedestrian and cycle routes, public rights of way and bridle routes.</p>	<p>A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.</p>	<p>Policy itself will not lead to development.</p>

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>T7: STRATEGIC TRANSPORTATION INFRASTRUCTURE Support will be given to the development of the following elements of strategic transportation infrastructure: (i) Eastern Bay Link; (ii) St Mellons rail interchange; and (iii) New sustainable transport corridor in North West Cardiff</p>	<p>C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.</p>	<p>The Eastern Bay Link Road passes close to the Severn Estuary and so its potential effects should be examined in more detail.</p>
<p>T8: STRATEGIC RECREATIONAL ROUTES A strategic network of recreational routes will be maintained and developed to link Cardiff's coast, river corridors, open spaces, countryside, and the regional network of routes, facilitating access to them by local communities, and forming an integral part of the wider cycling and walking network in Cardiff.</p>	<p>C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.</p>	<p>Where recreational routes are promoted or enhanced, and these routes are in a sensitive area such as Cardiff Beech Woods or the foreshore of the Severn Estuary, the potential for an effect should be examined in further detail.</p>
<p>R1: RETAIL PROVISION WITHIN STRATEGIC SITES Retail development which forms part of the allocated housing led Strategic Sites will be supported, where: (i) It is of an appropriate scale which satisfies an identified local need; (ii) It is located along public transport corridors and easily accessible by walking and cycling; and</p>	<p>D1 The option, policy or proposal alone would not be likely to have significant effects but if its effects are combined with the effects of other policies or proposals provided for or coordinated by the Local Development Document (internally) the cumulative effects could potentially to be significant.</p>	<p>Retail provision in Strategic Sites, when combined with housing, educational, community, waste management, and employment development, may have a combined effect upon European sites within and outside Cardiff, so the potential for a combined effect should be examined in further detail.</p>

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
(iii) It forms part of a planned centre which reinforces a sense of place.		
R2: DEVELOPMENT IN THE CENTRAL SHOPPING AREA Development proposals within the Central Shopping Area (CSA) will be assessed against the following criteria: <ul style="list-style-type: none"> (i) Whether the proposal involves the loss of shop uses (Class A1) from within Protected Shopping Frontages; (ii) Whether the proposal involves retail and other uses which enhance the vitality, viability and attractiveness of the city centre; (iii) Whether the development allows for, or retains the effective use of, upper floors; and (iv) Supports the regeneration, renewal and enhancement of the city centre. 	A4 Options/ policies that positively steer development away from European sites and associated sensitive areas.	Locations mentioned are not near European sites, and any potential effects are likely to be localised.
R3: PROTECTED SHOPPING FRONTAGES Development proposals involving the loss of Class A1 (shop) uses within Protected Shopping Frontages will be assessed against the following criteria: <ul style="list-style-type: none"> (i) The balance and distribution of existing and committed non-shop uses; (ii) The amount of A1 floorspace and frontage length being lost; (iii) Whether, and for how long, the premises have 	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.	Policy itself will not lead to development.

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
been vacant and actively marketed; (iv) The location, character and prominence of individual premises or frontages; (v) The nature of the proposed use, including whether an appropriate shop front and window display is to be provided; and (vi) The impact of the proposed use upon the amenity of adjacent or nearby residents.		
R4: RETAIL DEVELOPMENT (OUT OF CENTRE) Retail development will only be permitted outside the Central Shopping Area, District and Local Centres identified on the Proposals Map if it meets the criteria in the text of this policy in the draft deposit LDP.	B Options/ policies that could have an effect but would not be likely to have a significant (negative) effect on a European site (alone or in-combination with other plans or projects) because the effects are trivial or 'de minimis' even if combined with other effects.	This policy does not provide for development, but identifies the criteria against which development out of Central Shopping Area, District and Local Centres, will be judged.
R5: DISTRICT CENTRES Retail, office, leisure and community facilities will be favoured within the District Centres identified on the Proposal Map.	A4 Options/ policies that positively steer development away from European sites and associated sensitive areas.	Areas referred to in this policy are not close to European Sites, and the effects of building these facilities are likely to be localised.
R6: LOCAL CENTRES Retail, office, leisure and community facilities will be favoured within the Local Centres identified on the Proposal Map.	A4 Options/ policies that positively steer development away from European sites and associated sensitive areas.	Areas referred to in this policy are not close to European Sites, and the effects of building these facilities are likely to be localised.
R7: FOOD AND DRINK USES	A1 Options/ policies that will not themselves	Policy itself will not lead to development.

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
Food and Drink Uses are most appropriately located in: (i) The City Centre (Central Business Area) (ii) The inner harbour/waterfront area of Cardiff Bay (Bay Business Area) (iii) District and Local Centres	lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.	
R8: PROTECTION OF LOCAL SHOPPING PARADES Proposals that would lead to the loss of local shops outside of identified centres will be assessed having regard to the role of those shops in meeting local shopping needs and the viability of the premises for continued retail use.	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy	Policy itself will not lead to development.
C1: COMMUNITY FACILITIES Proposals for new and improved community facilities, health and religious facilities will be encouraged, subject to the criteria detailed in this policy in the draft deposit LDP being satisfied.	D1 The option, policy or proposal alone would not be likely to have significant effects but if its effects are combined with the effects of other policies or proposals provided for or coordinated by the Local Development Document (internally) the cumulative effects could potentially to be significant.	Community facilities, when combined with housing, educational, Waste management, and employment development, may have a combined effect upon European sites within and outside Cardiff, so the potential for a combined effect should be examined in further detail.
C2: COMMUNITY SAFETY/CREATING SAFE ENVIRONMENTS All new development and redevelopment shall be designed to promote a safe and secure environment	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning	Policy itself will not lead to development.

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
and minimise the opportunity for crime	policy.	
<p>C3: PROTECTION OF OPEN SPACE Development will not be permitted on areas of open space unless:</p> <ul style="list-style-type: none"> (i) It would not cause or exacerbate a deficiency of open space in accordance with the most recent open space study; and (ii) The open space has no significant functional or amenity value; and (iii) The open space is of no significant quality; or (iv) The developers make satisfactory compensatory provision; and, in all cases; (v) The open space has no significant nature or historic conservation importance. 	<p>A2 Options/ policies intended to protect the natural environment, including biodiversity.</p>	Policy itself will not lead to development, and will serve to offset any potential negative effects arising from other part of the plan.

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>C4: PROVISION FOR OPEN SPACE, OUTDOOR RECREATION AND SPORT Provision for open space, outdoor recreation and sport will be sought in conjunction with all new residential developments. This Policy is aimed at securing the provision or improvement of open space and other appropriate outdoor recreation and sport in conjunction with all new residential developments over 8 units and on site provision of functional open space in conjunction with all new residential developments over 14 units.</p>	<p>B Options/ policies that could have an effect but would not be likely to have a significant (negative) effect on a European site (alone or in-combination with other plans or projects) because the effects are trivial or 'de minimis' even if combined with other effects.</p>	<p>The nature of the development provided for by this policy is such that any potential effect upon European sites is minimal.</p>
<p>C5: PROVISION FOR ALLOTMENTS AND COMMUNITY GROWING Provision for allotments and/or community growing areas will be sought on new residential developments over 46 units and on all developments over 1800, provision of a 40 plot allotment site will be sought, increasing on a pro-rata basis for larger sites.</p>	<p>B Options/ policies that could have an effect but would not be likely to have a significant (negative) effect on a European site (alone or in-combination with other plans or projects) because the effects are trivial or 'de minimis' even if combined with other effects.</p>	<p>The nature of the development provided for by this policy is such that any potential effect upon European sites is minimal.</p>
<p>C6: PROVISION FOR CHILDREN'S PLAY Provision for children's play should be an essential element of the layout of new developments. Access to at least three different types of outdoor play provision as indicated in the text of this policy in the draft deposit LDPA shall be provided within 400m of family homes within new developments.</p>	<p>B Options/ policies that could have an effect but would not be likely to have a significant (negative) effect on a European site (alone or in-combination with other plans or projects) because the effects are trivial or 'de minimis' even if combined with other effects.</p>	<p>The nature of the development provided for by this policy is such that any potential effect upon European sites is minimal.</p>

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
C7: HEALTH Priority in new developments will be given to reducing health inequalities and encouraging healthy lifestyles	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.	Policy itself will not lead to development.
C8: PLANNING FOR SCHOOLS New and improved school facilities will be provided to meet existing and future educational needs.	D1 The option, policy or proposal alone would not be likely to have significant effects but if its effects are combined with the effects of other policies or proposals provided for or coordinated by the Local Development Document (internally) the cumulative effects could potentially to be significant.	Educational facilities, when combined with housing, retail, waste management, educational, community, and employment developments, may have a combined effect upon European sites within and outside Cardiff, so the potential for a combined effect should be examined in further detail.
C9: NEW EDUCATIONAL FACILITIES Development of nursery, primary, secondary and sixth form education should: <ul style="list-style-type: none"> (i) Be well designed, well related to neighbourhood services and amenities, and easily accessible by sustainable transport modes; and (ii) Include, where appropriate, provision for other appropriate community uses in addition to their educational use. 	D1 The option, policy or proposal alone would not be likely to have significant effects but if its effects are combined with the effects of other policies or proposals provided for or coordinated by the Local Development Document (internally) the cumulative effects could potentially to be significant.	Educational facilities, when combined with housing, retail, waste management, community, and employment developments, may have a combined effect upon European sites within and outside Cardiff, so the potential for a combined effect should be examined in further detail.
C10: HEALTH EMPLOYMENT NON STRATEGIC ALLOCATION	D1 The option, policy or proposal alone would not be likely to have significant effects but if its effects are combined with the effects of other policies or proposals provided for or	Health employment facilities, when combined with housing, retail, waste management, educational and community developments, may have a combined effect upon European sites

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>Land is allocated for health related uses at Government Offices, St Agnes Road, Heath (4.07ha)</p>	<p>coordinated by the Local Development Document (internally) the cumulative effects could potentially to be significant.</p>	<p>within and outside Cardiff, so the potential for a combined effect should be examined in further detail.</p>
<p>M1: MINERAL LIMESTONE RESERVES AND RESOURCES Mineral reserves with planning permission will be safeguarded from development that would prevent their extraction at: (i) Creigiau Quarry; (ii) Taffs Well Quarry; (iii) Ton Mawr Quarry; and (iv) Blaengwynlais Quarry. Resource areas will be safeguarded from development that would prevent their extraction at: (i) Creigiau Quarry; and (ii) Ton Mawr Quarry.</p>	<p>C1 The option, policy could directly affect a European site because it provides for, or steers, a quantity or type of development onto a European site, or adjacent to it.</p>	<p>Quarries referred to lie close to Cardiff Beech Woods SAC</p>
<p>M2: PREFERRED ORDER OF MINERAL RESOURCE RELEASE The extension or deepening of existing mineral workings will be favoured in preference to the release of new sites and deepening will be preferred to lateral extension.</p>	<p>A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.</p>	<p>Policy does not provide for quarrying per se, just the preferred order of release.</p>

<p>Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)</p>	<p>Potential effects (Category A - D, see key above)</p>	<p>Rationale/ Comments</p>
<p>M3: QUARRY CLOSURES AND EXTENSION LIMITS Measures to prevent further mineral working and, where appropriate, to secure restoration and landscaping works at the earliest opportunity, will be sought at the following sites: (i) Cefn Garw Quarry, Tongwynlais; (ii) Highland Park Brickworks, Ely; (iii) West End Brickworks, Ely; and (iv) Southern and western parts of Creigiau Quarry. (v) No further extension to mineral reserves will be permitted at these sites, or at: (vi) Blaengwynlais Quarry, Rhiwbina Hill.</p>	<p>C1 The option, policy could directly affect a European site because it provides for, or steers, a quantity or type of development onto a European site, or adjacent to it.</p>	<p>Restoration activities may potentially have an effect upon Cardiff Beech Woods SAC.</p>
<p>M4: MINERALS BUFFER ZONES Within the minerals buffer zones no mineral working, housing or other sensitive development will be permitted.</p>	<p>A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.</p>	<p>Policy does not provide for quarrying per se, just the buffer zone around the quarries.</p>
<p>M5: RESTORATION AND AFTER - USE OF MINERAL WORKINGS Proposals for mineral working or for related plant and buildings will be permitted only where firm proposals are included for the reinstatement of the site to a condition fit for an appropriate after-use supported, where relevant, by adequate after-care</p>	<p>C1 The option, policy could directly affect a European site because it provides for, or steers, a quantity or type of development onto a European site, or adjacent to it.</p>	<p>Restoration activities may potentially have an effect upon Cardiff Beech Woods SAC.</p>

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
proposals. Appropriate reinstatement and after-care proposals will similarly be required when existing controls are reviewed.		
M6: DREDGED AGGREGATE LANDING AND DISTRIBUTION FACILITIES The sand wharves shown on the Proposals Map will be protected against development which would prejudice their ability to land marine dredged sand and gravel. Proposals for the provision and improvement of landing and distribution facilities for marine dredged aggregates within Cardiff Docks will be favoured where there will be no unacceptable harm to the environment, nearby residential areas or future regeneration prospects of the waterfront area.	C1 The option, policy could directly affect a European site because it provides for, or steers, a quantity or type of development onto a European site, or adjacent to it.	The wharves are close to the Severn Estuary, and access to them is via the estuary, so the potential for an effect upon the European site need to be examined further.
M7: SAFEGUARDING OF SAND AND GRAVEL RESOURCE The area of sand and gravel resource shown on the Proposals Map will be protected against all forms of permanent development in order to prevent sterilisation of the resource and to ensure that the sand and gravel within that area will be preserved for the future, should a demonstrable need for the use of those resources arise.	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.	The policy protects sites from development, rather than promoting development.
M8: SAFEGUARDING OF COAL RESOURCES Areas of coal resource as shown on the Proposals	A1 Options/ policies that will not themselves lead to development e.g. because they relate to	The policy protects sites from development, rather than promoting development.

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
Map will be protected against all forms of permanent development in order to prevent sterilisation of the resource and to ensure that the coal within that area will be preserved for the future, should a demonstrable need for the use of those resources arise.	design or other qualitative criteria for development, or they are not a land use planning policy.	
M9: SAFEGUARDING OF LIMESTONE RESOURCES Areas of limestone resource as shown on the Proposals Map will be protected against all forms of permanent development in order to prevent sterilisation of the resource and to ensure that the limestone within that area will be preserved for the future, should a demonstrable need for the use of those resources arise.	A1 Options/ policies that will not themselves lead to development e.g. because they relate to design or other qualitative criteria for development, or they are not a land use planning policy.	The policy protects sites from development, rather than promoting development.
W1: LAND FOR WASTE MANAGEMENT Land will be allocated for waste management purposes at Lamby Way as defined on the Proposals Map	C2 The option, policy could indirectly affect a European site e.g. because it provides for, or steers, a quantity or type of development that may be very close to it, or ecologically, hydrologically or physically connected to it or it may increase disturbance as a result of increased recreational pressure.	The Lamby Way site is close to the foreshore of the Severn Estuary, so any development in this area must be examined for its potential to affect the features of the European Site.
W2: SITES FOR WASTE MANAGEMENT FACILITIES Proposals for the development of waste management	D1 The option, policy or proposal alone would not be likely to have significant effects but if its effects are combined with the effects of other	Waste management facilities, when combined with housing, retail, educational, community, and employment developments, may have a

Policy References (for full text of policy and supporting text, please refer to the Deposit LDP document)	Potential effects (Category A - D, see key above)	Rationale/ Comments
facilities will be permitted where they meet the criteria detailed in the text of this policy in the draft deposit LDP	policies or proposals provided for or coordinated by the Local Development Document (internally) the cumulative effects could potentially to be significant.	combined effect upon European sites within and outside Cardiff, so the potential for a combined effect should be examined in further detail.
W3: PROVISION FOR WASTE MANAGEMENT FACILITIES IN DEVELOPMENT Where appropriate, provision will be sought in all new development for facilities for the storage, recycling and other management of waste	D1 The option, policy or proposal alone would not be likely to have significant effects but if its effects are combined with the effects of other policies or proposals provided for or coordinated by the Local Development Document (internally) the cumulative effects could potentially to be significant.	Waste management facilities, when combined with housing, retail, educational, community, and employment developments, may have a combined effect upon European sites within and outside Cardiff, so the potential for a combined effect should be examined in further detail.

Appendix 5 - Potential Effects of Policies upon European Sites**

September 2013

Appendix 5 – SUMMARY OF POTENTIAL EFFECTS OF POLICIES UPON EUROPEAN SITES

Policy	Potential Impacts of Policy	Summary of Potential Effects upon European sites
KP1: LEVEL OF GROWTH	Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance
	Impacts on surface water run-off	Changes in Water Quality
	Increase in population and therefore recreation levels	Disturbance
	Increased demand for water resources	Changes to Hydrological Regime Changes in Water Quality
	Increased noise and light pollution	Disturbance
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime Changes in Water Quality Barriers to Dispersal
	Wastewater and Sewage	Changes in Water Quality
KP2: STRATEGIC SITES	Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance

Policy	Potential Impacts of Policy	Summary of Potential Effects upon European sites
	Impacts on surface water run-off	Changes in Water Quality
	Increase in population and therefore recreation levels	Disturbance
	Increased demand for water resources	Changes to Hydrological Regime Changes in Water Quality
	Increased noise and light pollution	Disturbance
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime Changes in Water Quality Barriers to Dispersal
	Wastewater and Sewage	Changes in Water Quality
KP6: NEW INFRASTRUCTURE	Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance
	Impacts on surface water run-off	Changes in Water Quality
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime

Policy	Potential Impacts of Policy	Summary of Potential Effects upon European sites
		Changes in Water Quality Barriers to Dispersal
	Laying pipes and cables	Disturbance Changes to Hydrological Regime Changes in Water Quality
	Wind Turbines	Disturbance Direct Harm
KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS (Employment)	Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance
	Impacts on surface water run-off	Changes in Water Quality
	Increase in population and therefore recreation levels	Disturbance
	Increased demand for water resources	Changes to Hydrological Regime Changes in Water Quality
	Increased noise and light pollution	Disturbance
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime Changes in Water Quality Barriers to Dispersal
	Wastewater and sewage	Changes in Water Quality

Policy	Potential Impacts of Policy	Summary of Potential Effects upon European sites
KP10: CENTRAL AND BAY BUSINESS AREAS	Dust, noise, vibration, movement and odour associated with industrial and construction processes Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance
	Impacts on surface water run-off	Changes in Water Quality
	Increase in population and therefore recreation levels	Disturbance
	Increased demand for water resources	Changes to Hydrological Regime Changes in Water Quality
	Increased noise and light pollution	Disturbance
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime Changes in Water Quality Barriers to Dispersal
KP11: MINERALS AND AGGREGATES	Contamination, accumulation of toxic substances	Changes in Water Quality
	Aggregates removal	Changes in Water Quality Changes to Hydrological Regime
	Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance

Policy	Potential Impacts of Policy	Summary of Potential Effects upon European sites
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime Changes in Water Quality Barriers to Dispersal
	Wastewater and Sewage	Changes in Water Quality
	Topography alteration	Changes to Hydrological Regime Changes in Water Quality
KP12: WASTE	Contamination, accumulation of toxic substances	Changes in Water Quality
	Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime Changes in Water Quality Barriers to Dispersal
	Wastewater and Sewage	Changes in Water Quality
KP14: HEALTHY LIVING	Increase in population and therefore recreation levels	Disturbance

Policy	Potential Impacts of Policy	Summary of Potential Effects upon European sites
KP15: CLIMATE CHANGE	Wind Turbines	
H1: NON STRATEGIC HOUSING SITES	Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance
	Impacts on surface water run-off	Changes in Water Quality
	Increase in population and therefore recreation levels	Disturbance
	Increased demand for water resources	Changes to Hydrological Regime Changes in Water Quality
	Increased noise and light pollution	Disturbance
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime Changes in Water Quality Barriers to Dispersal
	Wastewater and Sewage	Changes in Water Quality

Policy	Potential Impacts of Policy	Summary of Potential Effects upon European sites
H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S)	Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance
	Impacts on surface water run-off	Changes in Water Quality
	Increase in population and therefore recreation levels	Disturbance
	Increased demand for water resources	Changes to Hydrological Regime Changes in Water Quality
	Increased noise and light pollution	Disturbance
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime Changes in Water Quality Barriers to Dispersal
	Wastewater and Sewage	Changes in Water Quality
H8: SITES FOR GYPSY AND TRAVELLER CARAVANS	Impacts on surface water run-off	Changes in Water Quality
	Increase in population and therefore recreation levels	Disturbance
	Increased demand for water resources	Changes to Hydrological Regime Changes in Water Quality

Policy	Potential Impacts of Policy	Summary of Potential Effects upon European sites
	Increased noise and light pollution	Disturbance
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime Changes in Water Quality Barriers to Dispersal
	Wastewater and Sewage	Changes in Water Quality
EC1: EXISTING EMPLOYMENT LAND	Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance
	Impacts on surface water run-off	Changes in Water Quality
	Increase in population and therefore recreation levels	Disturbance
	Increased demand for water resources	Changes to Hydrological Regime Changes in Water Quality
	Increased noise and light pollution	Disturbance
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime Changes in Water Quality

Policy	Potential Impacts of Policy	Summary of Potential Effects upon European sites
		Barriers to Dispersal
	Wastewater and Sewage	Changes in Water Quality
EC5: HOTEL DEVELOPMENT	Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance
	Impacts on surface water run-off	Changes in Water Quality
	Increased demand for water resources	Changes to Hydrological Regime Changes in Water Quality
	Increased noise and light pollution	Disturbance
	Increased traffic movements	Disturbance Changes in Air Quality
	Land take	Habitat Fragmentation & Loss Disturbance Changes to Hydrological Regime Changes in Water Quality Barriers to Dispersal
	Wastewater and Sewage	Changes in Water Quality

Policy	Potential Impacts of Policy	Summary of Potential Effects upon European sites
EN4: RIVER VALLEYS	Increase in population and therefore recreation levels	Disturbance
EN12: RENEWABLE ENERGY AND LOW CARBON TECHNOLOGIES	Wind Turbines	
T7: STRATEGIC TRANSPORTATION INFRASTRUCTURE	Dust, noise, vibration, movement and odour associated with industrial and construction processes	Changes in Air Quality Disturbance

**Habitat Regulations Assessment Report:
Appendix 6 - Screening of Vulnerabilities for each Site**

September 2013

Appendix 6 – SCREENING OF VULNERABILITIES / SENSITIVITIES OF EACH SITE FOR RELEVANCE TO DEPOSIT LDP

Where a site features is vulnerable or sensitive to any effect arising from the Deposit LDP, this is indicated with a tick (✓)

Site Name:	Vulnerabilities/Sensitivities	Relevance of Vulnerability/Sensitivity to Deposit LDP	Further Consideration in HRA
Aberbargoed Grasslands SAC	<ul style="list-style-type: none"> Parasites (parasitic wasps affecting Marsh Fritillary Butterflies) 	A development plan for Cardiff cannot influence levels of parasitism on Marsh Fritillary Butterflies living on this site, which is about 14Km away from Cardiff.	✗
	<ul style="list-style-type: none"> Direct habitat Loss 	Site is in Caerphilly CBC, and about 14Km from Cardiff, so development in Cardiff cannot result in land-take at this site.	✗
	<ul style="list-style-type: none"> Aerial Pollution 	There is the potential for diffuse pollution arising from Cardiff to reach this site.	✓
	<ul style="list-style-type: none"> Inappropriate grazing levels 	A development plan for Cardiff cannot influence levels of grazing on this site, which is about 14Km away from Cardiff.	✗
	<ul style="list-style-type: none"> Off-road vehicle use 	A development plan for Cardiff cannot influence levels of off-road vehicle use on this site, which is about 14Km away from Cardiff.	✗
Blackmill Woodlands SAC	<ul style="list-style-type: none"> Inappropriate grazing levels 	A development plan for Cardiff cannot influence levels of grazing on this site, which is about 14Km away from Cardiff.	✗
	<ul style="list-style-type: none"> Air pollution 	There is the potential for diffuse pollution arising from Cardiff to reach this site.	✓
	<ul style="list-style-type: none"> Direct Habitat Loss 	Site is in Bridgend CBC, and about 14Km from Cardiff, so development in Cardiff cannot result in land-take at this site.	✗
Cardiff Beech Woods	<ul style="list-style-type: none"> Recreational pressure 	There is the potential for an increase in	✓

Site Name:	Vulnerabilities/Sensitivities	Relevance of Vulnerability/Sensitivity to Deposit LDP	Further Consideration in HRA
SAC		recreational pressure to arise from a local development plan, and subsequently impact upon this site.	
	<ul style="list-style-type: none"> Atmospheric Pollution 	There is the potential for diffuse pollution arising from new development and infrastructure within Cardiff to impact upon this site.	✓
	<ul style="list-style-type: none"> Mineral extraction and related activities 	Mineral extraction sites are close to this SAC, so this activity, together with subsequent quarry restoration activities, as the potential to impact upon this site.	✓
	<ul style="list-style-type: none"> Development 	General effects of development not considered under other vulnerabilities/sensitivities have the potential to affect this site	✓
	<ul style="list-style-type: none"> Non-native species 	The development plan itself could not lead to invasive non-native species affecting this site. An increase in recreational use may lead to an increase in dispersal of non-native species' seeds, but this would be accounted for under 'recreational pressure', above,	x
	<ul style="list-style-type: none"> Changes to Local Hydrology 	Any development close to this site would have the potential to affect local hydrology within it.	✓
River Usk SAC	<ul style="list-style-type: none"> Abstraction levels 	A proportion of Cardiff's water supply may be abstracted from this river, so increased housing, industry, and amenity building within Cardiff could lead to increased abstraction levels at this site.	✓
	<ul style="list-style-type: none"> Eutrophication 	Sewage from Cardiff is ultimately discharged into the Severn Estuary, following treatment, so there is potential for this treated material to enter the River Usk and affect its features.	✓
	<ul style="list-style-type: none"> Diffuse Pollution 	There is the potential for diffuse pollution from Cardiff to be deposited in the River Usk and its	✓

Site Name:	Vulnerabilities/Sensitivities	Relevance of Vulnerability/Sensitivity to Deposit LDP	Further Consideration in HRA
		catchment, and affect the River Usk SAC features.	
	<ul style="list-style-type: none"> Barriers to migration 	The River Usk is about 6 Km from Cardiff so there is no possibility that development in Cardiff will impede fish or Otter migration within the River itself.	x
	<ul style="list-style-type: none"> Development pressure 	A development plan in Cardiff will not result in development near the River Usk, which is in Newport at its nearest point to Cardiff.	x
	<ul style="list-style-type: none"> Invasive non-native plants 	A development plan in Cardiff will not result in the spread of invasive non-native plant species in or next to the River Usk, which is in Newport.	x
	<ul style="list-style-type: none"> Artificially enhanced densities of other fish 	A development plan in Cardiff will not artificially alter the densities of fish species in River Usk, which is in Newport. Any effects of the development plan upon Severn Estuary fish populations, which may then subsequently affect those in the River Usk, will be dealt with under consideration of the Severn Estuary, below.	x
	<ul style="list-style-type: none"> External factors 	Any effects of the development plan upon Severn Estuary habitats and species, which may then subsequently affect those in the River Usk, will be dealt with under consideration of the Severn Estuary, below.	x
River Wye SAC	<ul style="list-style-type: none"> Abstraction levels 	A proportion of Cardiff's water supply may be abstracted from this river, so increased housing, industry, and amenity building within Cardiff could lead to increased abstraction levels at this site.	✓
	<ul style="list-style-type: none"> Eutrophication 	Sewage from Cardiff is ultimately discharged into the Severn Estuary, following treatment, so there is potential for this treated material to enter the	✓

Site Name:	Vulnerabilities/Sensitivities	Relevance of Vulnerability/Sensitivity to Deposit LDP	Further Consideration in HRA
		River Wye and affect its features.	
	<ul style="list-style-type: none"> Diffuse Pollution 	There is the potential for diffuse pollution from Cardiff to be deposited in the River Wye and its catchment, and affect the River Wye SAC features.	✓
	<ul style="list-style-type: none"> Barriers to migration 	The River Wye is about 14 Km from Cardiff so there is no possibility that development in Cardiff will impede fish or Otter migration within the River itself.	✗
	<ul style="list-style-type: none"> Development pressure 	A development plan in Cardiff will not result in development near the River Wye, which is in Monmouthshire at its nearest point to Cardiff.	✗

National	
People, Places, Futures: The Wales Spatial Plan (update) 2008	
Plan Type	Regional Spatial Strategy
Plan Owner/ Competent Authority	Welsh Assembly
Currency	Adopted 2004
Region/Geographic Coverage	Wales
Sector	Planning
Related work SA/SEA HRA/AA	SEA of the Wales Spatial Plan Update 2008 HRA and AA of the Wales Spatial Plan Update (June 2008)
Document Details	Potential impacts that could cause 'in-combination' effects
<p>The Wales Spatial Plan sets out an agenda for the sustainable development of Wales over the next 20 years. The purpose of the update is to reflect new drivers of change and to give status to the Area work which has developed over the past two years. The plan aims to make South East Wales a networked city-region able to provide quality of life for the population and to be able to compete with comparable areas in the UK and the EU for investment and growth.</p> <p>The pattern of housing development across South East Wales is seen as developing a greater mix and balance of housing in the Heads of the Valleys and Connections Corridor whilst ensuring that development in the Coastal Belt of South East Wales does not undermine this housing market. There should also be a targeted action to secure a supply of affordable housing.</p> <p>Three Strategic Opportunity Areas (SOA) were identified as offering potential regional benefits from their sustainable development.</p>	<ul style="list-style-type: none"> ▪ Direct loss of habitat through development - One of the three Strategic Opportunity Areas identified is 'the area around Llantrisant and North West Cardiff'; Cardiff Beech Woods SAC is in close proximity to this. ▪ Housing and employment growth may lead to increased transport movements - the potential for in-combination effect is greater where housing sites are in close proximity to Natura 2000 sites. ▪ New communities require increased infrastructure – potential for land take, pollution increase, disturbance/ severance of habitats and species. ▪ Growth in the requirement for waste management/ transport disposal from new communities and businesses has the potential to increase pollution, and introduce land take issues. ▪ Recreation pressures may result from housing developments near/ adjacent to Natura 2000 sites. ▪ Atmospheric pollution generated as a result of housing, employment and transport growth.

National	
People, Places, Futures: The Wales Spatial Plan (update) 2008	
<p>These areas are: developments linked to the dualling of the Heads of the Valleys road (A465); the area around Llantrisant and North West Cardiff which has seen major growth over the past 30 years; and development in the Vale of Glamorgan linked to the proposed St Athan military training academy.</p> <p>The Plan states that improvements to transport are essential to making the city-region work, and to the regeneration of Valleys communities, highlighting the importance of external transport links, such as the M4, east/west rail links and Cardiff International Airport.</p>	

National	
Property Strategy for Employment in Wales 2004- 2008	
Plan Type	Employment Strategy
Plan Owner/ Competent Authority	Welsh Development Agency
Currency	2004 - 2008
Region/Geographic Coverage	Wales
Sector	Planning
Related work SA/SEA HRA/AA	N/A
Document Details	Potential impacts that could cause 'in-combination' effects
<p>The Property Strategy for Employment in Wales 2004-2008 sets out the Welsh Assembly Government's approach for employment sites and buildings across Wales. The document aims to provide a framework to ensure that Wales can provide high quality employment sites and premises in the right locations for inward investors and indigenous businesses.</p>	<ul style="list-style-type: none"> ▪ Direct loss of habitat through development - There are 4 SACs in close proximity to the M4, these are: <ul style="list-style-type: none"> ○ River Usk SAC; ○ Cardiff Beech Woods SAC; ○ Cefn Cribwr Grasslands SAC; and ○ Kenfig SAC.

National	
Property Strategy for Employment in Wales 2004- 2008	
<p>Premier Business Park (1) - focused on M4/capital of Wales One park is needed for Wales as a whole, with a land requirement of some 100-300 acres (40-121 hectares). The current lack of such a premier business park is a major weakness in Wales' current property armoury and investor offer. Only the "Greater Cardiff" area can in principle meet the criteria set out in the strategy.</p> <p>Business Parks (6) - 2/3 on M4 Corridor.</p> <p>Strategic Sites (15/20) -concentrated on large centres of population with proximity to the primary road network.</p> <p>Strategic Mixed Use Sites (5-10) - to complement the business parks and strategic sites network.</p> <p>Special Category Sites (1) - but with other sites having 'key' sector roles</p> <p>City/Town Centre Office Sites Extensive network based on the main centres of population and existing critical mass, supplemented by smaller scale opportunities The following areas are recommended for early consideration: - major settlements</p> <ul style="list-style-type: none"> ■ Cardiff/Cardiff Bay ■ Swansea ■ Newport ■ Wrexham 	<ul style="list-style-type: none"> ■ Employment growth may lead to increased transport movements. ■ New development requires increased infrastructure - potential for land take, pollution increase, disturbance/ severance of habitats and species. ■ Growth in the requirement for waste management/ transport disposal from new businesses has the potential to increase pollution, and introduce land take issues. ■ Recreation pressures may result from developments near/ adjacent to Natura 2000 sites. ■ Atmospheric pollution generated as a result of employment and transport growth.

Document Details	Potential impacts that could cause 'in-combination' effects
<p>Phase 1 (Start March 2007) A465 Abergavenny to Gilwern</p> <ul style="list-style-type: none"> ▪ The scheme comprises the on-line widening of some 6km of the A465 between the existing Hardwick Roundabout and Glanbaiden junction, and then continues for just under 1km to Gilwern. Includes the areas: Hardwicke roundabout, Llanfoist, West of Llanfoist, Govilon and Gilwern East. <p>M4 Castleton to Coryton Widening</p> <ul style="list-style-type: none"> ▪ A 13.5km (8.0 mile) long scheme to widen from dual two lane to dual three lane motorway standard at an estimated cost of £71m. The main programme of construction work started in May 2007. Reconstruction and realignment of the motorway within the central reserve is currently underway between Junctions 30 and 32. This will continue until June 2008. The main widening will then follow in core phases: <ul style="list-style-type: none"> ○ June 2008 - November 2008: J30 to J32 - Westbound widening. ○ November 2008 - April 2009: J29 to J30 - Eastbound widening. ○ April 2009 - August 2009: J29 to J30 - Central Reserve works. ○ August 2009 - December 2009: J29 to J32 - Westbound widening. <p>Phase 2 (Could be ready to start by April 2010) A465 Brynmawr to Tredgog</p> <ul style="list-style-type: none"> ▪ The A465 Trunk Road is part of the Trans European Road Network and is an important strategic route in South Wales, linking the Midlands and Northern England to West Wales and Ireland. Includes the areas: The Dingle, Blaen-y-Cwm Reservoir, Garn Lydan, Rassau Industrial Estate East, Rassau Industrial 	<ul style="list-style-type: none"> ▪ A465 Abergavenny to Gilwern - Runs in close proximity and across the River Usk SAC. Potential for disturbance at point which the A465 crosses the River Usk and for pollution as a result of construction activities. ▪ M4 Castleton to Coryton Widening - Junction 32 of the M4 lies approximately 1.2km away from Cardiff Beech Woods SAC. ▪ A465 Gilwern to Brynmawr - This section of the A465 runs directly through Cwm Clydach Woodlands SAC and Usk Bat Sites SAC. Potential for direct land take, increased disturbance for bat population and possible pollution as a result of construction activities. ▪ New M4 Magor to Castleton - This development would involve the building of a bridge across the River Usk SAC. Potential for disturbance at point which the bridge crosses the River Usk and for pollution as a result of construction activities. There is potential for the bridge to have significant effects on migratory fish populations. ▪ All the development proposed has the potential to increase levels of traffic and therefore contribute to an increase in diffuse air pollution.

National	
The Trunk Road Forward Programme 2002 (including 2004 supplement)	
<p>Estate West and Nantybwh Junction (phase two).</p> <p>A465 Gilwern to Brynmawr</p> <ul style="list-style-type: none"> ▪ The A465 Trunk Road is part of the Trans European Road Network and is an important strategic route in South Wales, linking the Midlands and Northern England to West Wales and Ireland. Includes the areas: Gilwern East (phase two), Gilwern West, Maesygartha, Upper Clydach, Blackrock and Brynmawr. <p>New M4 Magor to Castleton</p> <ul style="list-style-type: none"> ▪ The Welsh Assembly Government has proposed a new dual 3-lane motorway link between Magor and Castleton as part of the optimum long-term wider integrated transport strategy for South-East Wales. The new dual 3-lane motorway will be 15 miles (24 km) long, linking Junction 23A at Magor and Junction 29 at Castleton. The route crosses the Gwent Levels, including several Sites of Special Scientific Interest (or SSSIs), so great care will be taken to minimise the effects on the SSSIs by using previous industrial land where feasible. <p>Phase 3 (Unlikely to start before April 2010)</p> <p>A4042 Llanellen</p> <ul style="list-style-type: none"> ▪ A narrow bridge crossing with limited pedestrian facilities and narrow winding approach from the south. <p>Cardiff International Airport Access</p> <ul style="list-style-type: none"> ▪ The scheme is proposed to address access problems to Cardiff International Airport and Culverhouse Cross. Detailed investigations are underway to ascertain how well various options address the identified issues whilst taking into account environmental, social and economic considerations. As part of the ongoing study traffic surveys and roadside interviews with travellers on roads in the Vale of Glamorgan area will be carried 	

National	
The Trunk Road Forward Programme 2002 (including 2004 supplement)	
<p>out in early March 2008. It is anticipated that solutions which are considered to best address the issues will be the subject of a public consultation planned to start in July 2008. The study is expected to be complete by the end of 2008.</p> <p>A465:A470 to Hirwaun</p> <p>A465 Dowlais Top to A470</p> <ul style="list-style-type: none"> ▪ Includes the areas: Dowlais Top Junction (phase two), Penywern, Galon Uchaf, Gurnos, Cefn Coed, A470 Junction and West of A470. <p>On Hold A4042 Penperlleni A40 Abergavenny</p>

Document Details	Potential impacts that could cause 'in-combination' effects

National	
Minerals Planning Policy Wales 2001	
<p>Special Protection Areas (SPAs), Special Areas of Conservation (SACs) and Ramsar Sites</p> <p>23. Minerals proposals within or likely to significantly affect potential and classified SPAs, designated, candidate or proposed SACs or Ramsar sites must be carefully examined in relation to the site's conservation objectives in order to ascertain whether or not they are likely to be significant in terms of the ecological objectives of the site. For the purpose of considering development proposals affecting them, potential SPAs and candidate SACs should be given the same protection and treated as classified SPAs and designated SACs. As a matter of policy, the Assembly has chosen to apply the same considerations to Ramsar sites. If a proposal individually or in combination with other proposals and sites with extant planning permission is likely have a significant effect on such a site, an appropriate assessment of the implications for the site must be made by the planning authority. If the proposal would adversely affect the integrity of the site (taking into account advice from the Countryside Council for Wales) and conditions would not remove this effect, planning permission will not be granted unless there are:</p> <ul style="list-style-type: none"> ▪ no alternative solutions (i.e. alternative supplies cannot be made available at reasonable cost; and there is no scope for meeting the need in some other way); and, ▪ imperative reasons of overriding public interest – including those of a social and economic nature. In determining this, authorities should have regard to considerations such as the need for the development in terms of UK mineral supply; and, the impact of permitting the development or refusing it on the local economy. The Assembly would consider the question of whether there are imperative reasons of overriding public interest for the development, taking account of advice from the Countryside Council for Wales, and bearing in mind the views of any other 	<p>No locations are specified. The document contains strong policies in regard to the protection of Natura 2000 and Ramsar sites.</p>

Document Details	Potential impacts that could cause 'in-combination' effects
<p>The estimated total land area required in South East Wales for new in-building facilities by 2013 for the seven sub-Options ranges from between 48 hectares to 108 hectares. An analysis of the potentially available land area on existing B2 or major industry sites and B2 sites that have already been allocated in development plans has shown that in each UA area for which data is available there is, at the current time, a clear surplus of developable land with a B2 planning permission or proposed use to accommodate the highest estimate of the total land area required for new in-building waste management facilities. In South East Wales there is a total of 734 developable hectares of land with a B2 planning permission or proposed use.</p> <p>Biodiversity - The footprint of statutory designated sites, including Special Areas of Conservation, Ramsar sites, Sites of Special Scientific Interest, National Nature Reserves and Special Protection Areas have all been designated as absolute areas of constraint, constituting areas that are unsuitable for waste management facilities. These have subsequently been omitted from the search. In addition, impacts on designated sites as a result of placing waste management facilities nearby have been considered. This has been undertaken by applying buffer areas around the footprint of designated sites, which present areas of some constraint. As the distance from the designated sites increases, the level of constraint</p>	<p>Natura 2000 sites have designated as absolute areas of constraint, constituting areas that are unsuitable for waste management facilities. In addition, impacts on designated sites as a result of placing waste management facilities nearby have been considered.</p>

Regional	
The South East Wales Consultation Draft Regional Waste Plan 1 st Revision Oct 2007	
<p>decreases as reflected by the lowering weighting. The buffer zones vary depending on the importance of the designated site; buffers have been derived from information held within current planning policy regarding siting development near such sites, the weightings are appropriate to this and reflect the distance from the designated site, as well as the type of waste facility. For biodiversity issues, the Areas of Search subsequently reflect areas that are considered to be constrained by virtue of planning policy, reflected at the broad, national level. By excluding sites of nature conservation importance and applying buffers around them representing constraints, the permanent negative effects on biodiversity, including flora and fauna, are minimised.</p>

<p>The aim of this RTP is to improve regional transport in South East Wales and help deliver the social, economic and environmental objectives of the Wales Spatial Plan and the Wales Transport Strategy.</p>	<ul style="list-style-type: none"> ▪ The key focus of the regional transport plan is to rebalance capital investment away from road building towards public transport, walking and cycling, this includes investment in travel planning measures. ▪ The overarching aim of this plan is to seek long term sustainable transport

Regional	
South East Wales Transport Alliance: Regional Transport Plan December 2009	
<p>The RTP vision is: To provide a modern, integrated and sustainable transport system for South East Wales that increases opportunity, promotes prosperity and protects the environment; where public transport, walking, cycling and sustainable freight provide real travel alternatives.</p> <p>Sewta's priorities build on the RTP's vision. They tackle Sewta's main problems and they set the general direction of the RTP, as follows:</p> <ol style="list-style-type: none"> 1. To improve access to services, facilities and employment, particularly by public transport, walking and cycling; 2. To provide a transport system that increases the use of sustainable modes of travel; 3. To reduce the demand for travel; 4. To develop an efficient and reliable transport system with reduced levels of congestion and improved transport links within the Sewta region and to the rest of Wales, the UK and Europe; 5. To provide a transport system that encourages healthy and active lifestyles, is safer and supports local communities; 6. To reduce significantly the emission of greenhouse gases and air pollution from transport; 7. To ensure that land use development in South East Wales is supported by sustainable transport measures; 8. To make better use of the existing transport system; 9. To play a full role in regenerating South East Wales. <p>The document identifies a number of specific core activities and interventions that according to SEWTA are absolutely critical to achieving its vision.</p> <ol style="list-style-type: none"> 1. Continuing investment into the regional rail system. 2. Improving quality of the bus services. 3. Developing of public transport integration. 4. Making better use of the existing road system. 	<p>solutions. Key objectives include seeking a modal shift for private and freight transports onto more sustainable modes, reducing the impact of the transport system on the natural environment, reducing greenhouse gas emissions from transport, and reducing traffic growth and congestion.</p> <ul style="list-style-type: none"> ■ The in-combination effects of the Regional Transport Plan with Local Development Plans are likely to be positive in the long-term. ■ The shared approach of these plans to deliver more sustainable transport and travel solutions for commercial and private traffic provides strong support for overarching aims to reduce air pollution which can contribute to the reduction of damaging effects to habitats and species.

Regional	
SEWTA Rail Strategy Study Jan 2006	
<p>In summary the strategy includes:</p> <ul style="list-style-type: none"> ▪ Additional rolling stock to strengthen peak trains to provide for passenger growth and to avoid overcrowding and rolling stock renewal; ▪ Station improvements including improved station facilities, information, security and access - including additional parking; ▪ Reliability and capacity improvements; changes to the network to reduce delays and improve the ability to cope with performance problems; specifically at Cardiff Central, Cardiff Queen Street, Barry, Cogan Junction and Llandaff; ▪ Frequency enhancements on existing lines; improving the levels of service on selected routes to meet passengers' expectations and increase the transfer of car trips to rail; specifically new services on the Abergavenny, Chepstow, Ebbw Vale, Rhymney Valley, Taff Vale and Vale of Glamorgan Lines. Additional services to the north of Cardiff are required to cope with the growth in passenger demand and will require a significant investment in the capacity of the network at and between Cardiff Queen Street and Cardiff Central stations; ▪ New stations on existing lines; improving access to the rail network and integrated with the development of improved services; specifically at Caerleon, Magor with Undy, Llanwern, Coedkernew and St Mellons. With those on the main line between Cardiff and Severn Tunnel sited on the Relief Lines; ▪ Network extensions and new stations; to investigate further improving access to the rail network through extending to Ebbw Vale Town and from Pontyclun to Beddau (with stations at Talbot Green, Llantrisant, Gwaun Meisgyn & Beddau); and ▪ Rail - Link Bus Services; to extend the reach of the rail services to communities remote from the network, specifically providing access to the Valleys to the north of Cardiff and Newport. 	<ul style="list-style-type: none"> ▪ Improvements to the rail network could lead to a reduction in car use and improvements to air quality in the region.

Catchment Abstraction Management Strategies	
The Thaw & Cadoxton Catchment Abstraction Management Strategy 2006	
Plan Type	Catchment Abstraction Management Strategy
Plan Owner/ Competent Authority	Environment Agency Wales
Currency	2006-2011
Region/Geographic Coverage	Thaw and Cadoxton Catchment
Sector	Water
Related work SA/SEA HRA/AA	N/A
Document Details	
<p>The document sets out how the Environment Agency Wales will manage water abstraction from the Thaw and Cadoxton catchment until 2011. The strategy provides the framework for any decision on an abstraction license application.</p> <p>The Thaw & Cadoxton CAMS area encompasses approximately 159km² of the distinctive lowland landscape of the Vale of Glamorgan. The principal town in the catchment is Barry, with the market town of Cowbridge to the west and Penarth to the east. Although some parts of the catchment are heavily industrialised the catchment as a whole is predominantly rural with much of the land area used for agriculture.</p>	<p>Potential impacts that could cause ‘in-combination’ effects</p> <p>Under the Habitats Regulations the Environment Agency Wales has a duty to assess the effects of existing abstraction licences and any new applications to make sure they are not impacting on internationally important nature conservation sites. Water efficiency is also tested by the EA before a new license is granted. If the assessment of a new application shows that it could have an impact on a SAC/SPA the EA will have to follow strict rules in setting a time limit for that license.</p> <p>The catchment has been split into 5 Water Resource Management Units (WRMU) and 5 Groundwater Management Units (GWMU). The document states that WRMU 1 and all 5 of the GWMUs have ‘water available’. WRMUs 2 to 4 are considered to have ‘no water available’, while WRMU 10 is assessed to be ‘over abstracted’.</p> <p>Both the River Thaw and the River Cadoxton ultimately flow into the Severn Estuary.</p>

Page 2337

	Therefore any impact to the Severn Estuary caused by changes to the water resource management of the catchment needs is considered as part of the CAMS process.

Catchment Abstraction Management Strategies	
The Taff and Ely Catchment Abstraction Management Strategy 2006	
Plan Type	Catchment Abstraction Management Strategy
Plan Owner/ Competent Authority	Environment Agency Wales
Currency	2006-2010
Region/Geographic Coverage	Taff and Ely Catchment
Sector	Water
Related work SA/SEA HRA/AA	N/A
Document Details	
<p>The document sets out how the Environment Agency Wales will manage water abstraction from the Taff and Ely catchment until 2010. The strategy provides the framework for any decision on an abstraction license application.</p> <p>The Taff and Ely have a total catchment area of approximately 576 km², which encompasses the River Taff, the River Ely and their respective tributaries. A large groundwater abstraction occurs at Ely Wells (in the lower Ely catchment) providing water for operations at Aberthaw Power Station. In the upper areas of the catchment there are carboniferous limestone and sandstone units (capable of supporting significant yields), which are currently not being used to their full potential.</p>	<p>Potential impacts that could cause 'in-combination' effects</p> <p>Under the Habitats Regulations the Environment Agency Wales has a duty to assess the effects of existing abstraction licences and any new applications to make sure they are not impacting on internationally important nature conservation sites. Water efficiency is also tested by the EA before a new license is granted. If the assessment of a new application shows that it could have an impact on a SAC/SPA the EA will have to follow strict rules in setting a time limit for that license.</p> <p>The catchment has been split into 3 Water Resource Management Units (WRMU) and 1 Groundwater Management Unit (GWMU). The document states that two of the WRMUs and the GWMU are over licensed. The WRMU that contains the River Ely has water available for abstraction.</p> <p>Blaen Cynon SAC falls within WRMU 6 which according to the CAMS is over licensed. The Resource availability status of WRMU 6 is that there will be no water available by 2016. A reduction in the water table could affect the devil's-bit scabious, which prefers moist soils. The Marsh Fritillary Butterfly requires this plant species as it is their larval food.</p>

Catchment Abstraction Management Strategies	
The Ebbw and Lwyd Catchment Abstraction Management Strategy 2006	
Plan Type	Catchment Abstraction Management Strategy
Plan Owner/ Competent Authority	Environment Agency Wales
Currency	2006-2010
Region/Geographic Coverage	Ebbw and Lwyd Catchment
Sector	Water
Related work SA/SEA HRA/AA	N/A
Document Details	Potential impacts that could cause 'in-combination' effects
<p>The document sets out how the Environment Agency Wales will manage water abstraction from the Ebbw and Lwyd catchment until 2010. The strategy provides the framework for any decision on an abstraction license application.</p> <p>The Ebbw and Lwyd CAMS cover an area of approximately 330 km2 and encompasses the River Ebbw, River Sirhowy and the River Lwyd as well as their respective tributaries. The area extends from the mountainous landscape and steep river channels in the north to the urbanised valley floors in the south. The main urban areas associated with the River Lwyd are Cwmbran and Blaenavon. The main urban areas, which are situated on the Ebbw River are Ebbw Vale and Risca. The River Sirhowy passes through the towns of Tredegar and Blackwood. In this CAMS area water is abstracted from both surface water and groundwater for agriculture, industry, domestic use and public water supply.</p>	<p>Under the Habitats Regulations the Environment Agency Wales has a duty to assess the effects of existing abstraction licences and any new applications to make sure they are not impacting on internationally important nature conservation sites. Water efficiency is also tested by the EA before a new license is granted. If the assessment of a new application shows that it could have an impact on a SAC/SPA the EA will have to follow strict rules in setting a time limit for that license.</p> <p>The catchment has been split into 3 Water Resource Management Units (WRMU). The document states that WRMU 1 (Ebbw and Sirhowy) is over abstracted, WRMU 2 (Lwyd) has no water available and WRMU 3 (Lwyd) is over licensed.</p> <p>The River Usk SAC lies outside the boundary of the Ebbw and Lwyd CAMS. The River Lwyd (WRMU 10 & 14) however is a tributary of the River Usk and could therefore have an influence on water flow within the lower reaches of the River Usk SAC. The site is sensitive to changes in water flow and eutrophication, which can both be influenced by levels of abstraction.</p> <p>The Severn Estuary SAC, SPA and Ramsar sites are all sensitive to changes in the hydrological regime. All CAMS in SE Wales drain into the Severn Estuary and therefore have the potential to affect the habitats and species reliant on the estuary.</p>

Catchment Abstraction Management Strategies	
The Rhymney Catchment Abstraction Management Strategy 2006	
Plan Type	Catchment Abstraction Management Strategy
Plan Owner/ Competent Authority	Environment Agency Wales
Currency	2006-2010
Region/Geographic Coverage	Rhymney Catchment
Sector	Water
Related work SA/SEA HRA/AA	N/A
Document Details	
<p>The document sets out how the Environment Agency Wales will manage water abstraction from the Rhymney catchment until 2010. The strategy provides the framework for any decision on an abstraction license application.</p> <p>The Rhymney CAMS area, some 221km², comprises the hydrological surface water catchment to the River Rhymney and Roath Brook catchment (Cardiff). This includes the River Rhymney and all its tributaries, but not the Rhymney Estuary.</p> <p>The catchment can be divided into two main parts: a steep-sided, wet, mountainous upper valley with limited floodplain and short steep tributaries, and a flatter wider valley below Machen, where the river assumes a lowland meandering character. Being a narrow valley with limited floodplain, towns lie in close proximity to and on the banks of the main river and its tributaries.</p> <p>Thus, urban development and historical industrial developments have resulted in extensive riverbank protection works and a loss of riverine habitats. Despite this the main river and tributaries follow a</p>	<p>Potential impacts that could cause ‘in-combination’ effects</p> <p>Under the Habitats Regulations the Environment Agency Wales has a duty to assess the effects of existing abstraction licences and any new applications to make sure they are not impacting on internationally important nature conservation sites. Water efficiency is also tested by the EA before a new license is granted. If the assessment of a new application shows that it could have an impact on a SAC/SPA the EA will have to follow strict rules in setting a time limit for that license.</p> <p>The catchment has been split into 4 Water Resource Management Units (WRMU). The document states that WRMU 1, 2 and 3 all have water available. WRMU 6 has no water available. All the WRMUs are combined surface water/groundwater units.</p> <p>Aberbargoed Grasslands SAC is situated within WRMU 3, which according to the CAMS has water available for abstraction. The CAMS states that the Aberbargoed Grasslands SAC “<i>will be taken into consideration during the licence determination process for applications within its vicinity</i>”.</p>

<p>largely natural course with many of the watercourses remaining tree-lined.</p> <p>Within Cardiff, the Brook and its tributaries have been modified by man including diversions, culverting, revetments and reprofiling.</p>

Document Details	Potential impacts that could cause 'in-combination' effects
<p>The Deposit LDP is comprised of three parts, the first of which is the Development Strategy which sets the strategic framework and policies necessary to deliver land use planning in the County Borough. The Development Strategy splits the County Borough into three parts; The Heads of the Valleys Regeneration Area, the Northern Connections Corridor and the Southern Connections Corridors. Part two of the Deposit LDP comprises the criteria based policies (Countywide Policies) against which development proposals will be determine and part three contains the allocations where development is expected to be located and where areas of land use protection are to be found (Area Specific Policies).</p> <p>Development Strategy for the LDP is based on three broad areas:</p>	<p>Overarching Development Pressures</p> <p>Generic effects related to development/ growth scenarios include:</p> <ul style="list-style-type: none"> ■ Potential for land take/ habitat fragmentation ■ Increased demand for water resources/ abstraction/ hydrological impacts ■ Increased traffic movements, contributions to atmospheric pollution loading ■ Growth in requirements for waste management facilities, increased demand for minerals ■ Increased recreational pressure from existing/ new populations <p>SAC Specific Issues:</p>

Local Development Plans

Caerphilly County Borough Council Deposit LDP Consultation October 2008

- The Heads of the Valleys Regeneration Area (HOVRA)
- The Northern Connections Corridor (NCC)
- The Southern Connections Corridor (SCC)

The Deposit LDP is underpinned by eight components which set a framework for the approach to - and the nature of - land use development. They are:

1. Target development to reflect the roles and functions of individual settlements
2. Allow for development opportunities in the Heads of the Valleys Regeneration Area
3. Promote a balanced approach to managing future growth
4. Exploit brownfield opportunities where appropriate
5. Promote resource efficient settlement patterns
6. Ensure development contributes towards necessary infrastructure improvements
7. Ensure development provides necessary community facilities
8. Reduce the impact of development upon the countryside

Settlement Strategy

SP4 The Council will support existing settlements, which will be enhanced based on their role and function in the settlement strategy:

Principal Towns:

- Bargoed (HOVRA)
- Blackwood (NCC)
- Ystrad Mynach (NCC)
- Caerphilly (SCC)
- Risca / Pontymister (SCC)

Key Settlements:

- Rhymney (HOVRA)

- Cardiff Beech Woods is within 500m and is vulnerable to air pollution and recreational pressure.
- Aberbargoed Grasslands SAC covers an area of 42.5ha and lies on a southwest facing hillside in the Rhymney Valley, 1km east of Bargoed and adjacent to the A4049. The site is vulnerable to recreational pressure, air pollution and changes in water quantity and quality. The HRA Report of the Deposit LDP (July 2008) concluded that “impacts predicted to arise from the implementation of the plan when considered in-combination with the potential impacts from other surrounding plans and projects, would not significantly affect the integrity of the SAC”.

Local Development Plans

Document Details	Potential impacts that could cause ‘in-combination’ effects
<p>This document outlines the main development issues to be addressed in Merthyr Tydfil and sets out a vision and objectives for tackling these issues. It considers the spatial strategy options available and considers the development implications of following this particular route, including the major sites on which the strategy will depend.</p> <p>The LDP is pursuing an Enhanced Growth Strategy that aims to “facilitate a reduction in current levels of out migration from the County Borough so that population levels stabilise by 2011 and a 10- year period of enhanced growth is achieved thereafter”.</p> <p>Overall, the deposit plan aims to provide the basis for meeting the economic, social and environmental needs of the County Borough in order that they:</p> <ul style="list-style-type: none"> Reflect local aspirations for Merthyr Tydfil based on the vision agreed by the local community and other stakeholders Provide a basis for rational and consistent development decisions Guide growth and change, while protecting local diversity, character and sensitive environments. <p>The three spatial zones have been directly translated in the Enhanced Growth Strategy into the following growth areas:</p> <ul style="list-style-type: none"> Primary Growth Area comprising the northern sector communities of Pant, Dowlais, Penydarren, Galon Uchaf, Gurnos, Swansea Road, Heolgerrig, Cefn coed, Twynrodyn, 	<p>Overarching Development Pressures</p> <p>Generic effects related to development/ growth scenarios include:</p> <ul style="list-style-type: none"> Potential for land take/ habitat fragmentation Increased demand for water resources/ abstraction/ hydrological impacts Increased traffic movements, contributions to atmospheric pollution loading Growth in requirements for waste management facilities, increased demand for minerals Increased recreational pressure from existing/ new populations <p>SAC Specific Issues</p> <ul style="list-style-type: none"> There are no European sites within the County Borough Boundaries. Blaen Cynon SAC (approx 5km) and Cardiff Beech Woods SAC (12.1km) are situated adjacent to major transport routes (A 470, A465) which intersect within the County Borough. LDP policies seek to reduce road based transportation, and air quality assessments in the County Borough (2004 most recent figures) show that no air quality objectives are being exceeded. Improved emissions standards/ greater use of public transport likely to contribute to improvements in air quality - lessens likelihood of cumulative impacts at sensitive sites. The HRA screening concluded that the LDP Preferred Strategy policies in implementation will not have a significant effect on the N2K sites considered in the assessment.

<p>The Monmouthshire Draft LDP Vision:</p> <p>By 2021, Monmouthshire will be a place where:</p> <ol style="list-style-type: none"> 1. The distinctive character of its built heritage, countryside and environmental assets has been protected and enhanced. 2. People live in more inclusive, cohesive, prosperous and vibrant communities, both urban and rural, where there is better access to local services, facilities and employment opportunities. 3. People enjoy more sustainable lifestyles that give them opportunities for healthy activity, reduced reliance on the private motorcar and minimised impact on the global environment. <p>For the purposes of the public consultation three possible levels of growth are put forward for consideration:</p> <p>Option 1 - 'Environmental Capacity' Option 250 dwellings per year.</p> <p>Option 2 - 'Regional Collaboration' Option 350 dwellings per year.</p> <p>Option 3 - 'Market Led Growth' Option 475 dwellings per year.</p> <p>From a strategic point of view, however, it is considered that the main settlements in the County can be clearly identified: Main towns.</p>	<p>Overarching Development Pressures</p> <p>Generic effects related to development/ growth scenarios include:</p> <ul style="list-style-type: none"> ■ Potential for land take/ habitat fragmentation ■ Increased demand for water resources/ abstraction/ hydrological impacts ■ Increased traffic movements, contributions to atmospheric pollution loading ■ Growth in requirements for waste management facilities, increased demand for minerals ■ Increased recreational pressure from existing/ new populations <p>SAC Specific Issues</p> <p>Monmouthshire County Council has 11 European sites within its administrative boundary.</p> <ol style="list-style-type: none"> 1. Coed y Cerrig - SAC 2. Cwm Clydach Woodlands - SAC 3. River Usk - SAC 4. River Wye/ Afon Gwy - SAC 5. Severn Estuary - SAC 6. Severn Estuary - Ramsar 7. Severn Estuary - SPA 8. Sugar Loaf Woodlands - SAC 9. Usk Bat Sites - SAC 10. Wye Valley Woodlands - SAC <p>Wye Valley and Forest of Dean Bat Sites - SAC</p>

<p>Abergavenny/Llanfoist Chepstow Monmouth Caldicot/Portskewett</p> <p>Secondary settlements. Rural: Other 'Severnside' settlements: Usk Magor/Undy Raglan Rogiet Penperlleni Sudbrook</p> <p>It is these main settlements that will provide the focus of the suggested strategic spatial options. For the purposes of the public consultation four possible options for the spatial distribution of new housing development are put forward for consideration:</p> <p>A. Focus development within or adjoining the three main towns of Abergavenny, Chepstow and Monmouth where there is the best access to jobs, services and public transport.</p> <p>B. Focus development on the 'Severnside' area around the M4 corridor in an attempt to harness its strategic location to promote growth and achieve a 'critical mass' to boost public transport, employment, services and community facilities.</p> <p>C. Distribute development proportionately across rural and urban areas to meet housing needs evenly throughout the County, although focusing in rural areas on those small towns and main villages where there is a basic level of services and facilities.</p> <p>D. Focus development on sites and settlements where opportunities exist for large scale mixed development to enable new residential development to be accompanied by an associated increase in employment opportunities.</p>

Related work SA/SEA HRA/AA	The Vale of Glamorgan Council Local Development Plan 2006 – 2021 Initial Sustainability Appraisal Report 2007 AA Screening of the Vale of Glamorgan Local Development Plan Preferred Strategy Dec 2007
Document Details	
<p>The document sets out the Vale of Glamorgan Council’s strategic priorities for development between 2011 and 2026. It outlines a range of key issues affecting the Vale that the Draft Preferred Strategy will need to address and defines a vision of how the Vale of Glamorgan should develop. It identifies the general location of development, sets objectives and establishes a series of strategic policies that will guide future growth and development.</p> <p>The Draft Preferred Spatial Strategy “To concentrate development opportunities in Barry and the South East Zone. The St Athan area to be a key development opportunity. Other sustainable settlements to accommodate further housing and associated development”</p> <p>CSP4: Housing Need Provision for the development of 7500 new dwellings during the period 2011-2026. This provision will be met through:</p> <ul style="list-style-type: none"> ▪ existing committed sites with planning permission ▪ the development of a range of strategic sites that accord with the council’s strategic settlement hierarchy, and 	<p style="background-color: #92d050;">Potential impacts that could cause ‘in-combination’ effects</p> <p>The Habitats Regulations Assessment Screening for the Vale of Glamorgan LDP Draft Preferred Strategy has identified the potential for the Strategy to have a negative impact on 2 of the 6 European Sites identified within or in close proximity to the Vale of Glamorgan namely, the Severn Estuary SPA/SAC/RAMSAR and the Kenfig SAC. In addition, it is concluded that a precautionary approach be undertaken in respect of the other 4 sites and that further investigations be undertaken. It is therefore recommended that an Appropriate Assessment is undertaken to fully ascertain the effect of the LDP on the integrity of the sites identified.</p> <p>Severn Estuary SPA, Ramsar & SAC</p> <ul style="list-style-type: none"> ▪ Given the extent of the Severn Estuary and the diverse range of activities and operations that could result in adverse impact to the European Site, it is considered inevitable that the Draft Preferred Strategy will in some way, impact upon the designated site. While much of the development arising from the draft preferred strategy is likely to be located well away from the Severn Estuary, the south-eastern zone has been identified as a growth area and abuts the boundary of the designated site. Therefore, it is recommended that a more detailed assessment of the LDP be undertaken following consultation on the Draft Preferred Strategy to ascertain and mitigate against any likely significant effects to the SPA, SAC, RAMSAR.

<p> <ul style="list-style-type: none"> ▪ the subdivision of suitable dwellings, the appropriate reuse of vacant dwellings and buildings, and appropriate infill development. <p>To ensure a sustainable supply of housing land is maintained during the plan period, housing development will be phased as follows:</p> <ul style="list-style-type: none"> ▪ 2011-2016 2500 dwellings ▪ 2016-2021 2500 dwellings ▪ 2021-2026 2500 dwellings <p>The phasing of sites will be considered in accordance with the council's strategic settlement hierarchy.</p> <p>CSP8: Employment The employment needs of the Vale of Glamorgan will be met through:</p> <ul style="list-style-type: none"> ▪ the enhancement and improvement of existing employment sites; ▪ suitable extensions to existing employment sites; ▪ the safeguarding of existing employment sites from non-employment uses, and ▪ favouring farm diversification, and tourism initiatives. <p>CSP11: Strategic Transport Improvements Strategic transport improvements that serve the economic, social and environmental needs of the Vale of Glamorgan and the objectives of the South East Wales Regional Transport Plan will be favoured. In support of these objectives land will be safeguarded for:</p> <ul style="list-style-type: none"> ▪ the Barry Waterfront to Cardiff Link Road. </p>	<p>Kenfig SAC</p> <ul style="list-style-type: none"> ▪ The primary focus of the Draft Preferred Strategy will be in Barry and the south-eastern zone with St Athan being seen as a major development opportunity. Development resulting from the LDP in the proximity of the SAC is therefore unlikely to be of scale that would result in a detrimental impact upon the site. Notwithstanding this, there are three operational quarries (Ewenny, Pant, Lithalun) within 3 kilometres of the SAC. Mineral extraction and/or after use of the site could therefore impact upon the SAC as described above however this is considered to be unlikely due to the distance and ground contours. However, the site should be subject to a more detailed assessment at a later stage of the LDP development.

Document Details	Potential impacts that could cause ‘in-combination’ effects
<p>The Plan sets a vision for the future of the Park and specifies actions and outcomes to pursue in the next five years to bring the Park closer to this shared vision. The Plan promotes coordinated implementation, monitoring, and evaluation of these activities collectively across a wide range of partners and stakeholders. In essence, it creates a framework for Park management, guiding decision-making and developing priorities.</p> <p>Twenty-year Aims for Biodiversity</p> <p>4. Ensure that sustainable management of designated sites maintains habitats and species populations in favourable condition. As examples of the best habitats and species within the National Park, it is critical to ensure designated sites (e.g., SSSIs, SACs, NNRs, etc.) are brought into, or remain, in favourable condition. The designations provide the means to ensure that these sites are managed with special regard to biodiversity conservation. However, these sites still need to be managed in a wider context, to be considered as the focal sites of developing functional ecosystems at a landscape scale. Their sustainable management can be a catalyst to achieving better habitat condition in the surrounding land.</p> <p>Twenty-year Aims for Planning and Development</p>	<p>Overarching Development Pressures</p> <ul style="list-style-type: none"> ■ Housing and employment growth - direct land take and increased transport movements and associated air pollutants. ■ Water abstraction for expanding communities - potential to impact surface and groundwater. ■ Recreational pressures from housing/ development that is close to European sites. <p>SAC Specific Issues</p> <ul style="list-style-type: none"> ■ Specific potential in-combination impacts cannot be explored in absence of specific development locations.

Development Plan	
Brecon Beacons National Park Management Plan 2009-2014	
<ol style="list-style-type: none"> 1. Prepare an LDP which is responsive to drivers of change and enables development to meet identified needs. The NPA will prepare an LDP which is resilient and responsive to drivers of change and which is proactive in mitigating the effects of climate change where possible. 2. Provide a first class planning service. In order to make its services first class, the NPA will strive to improve consistency of decision making, increase public engagement in, understanding of, and satisfaction with the NPA's planning service, and improve relationships with partner organisations. 3. Ensure that there is sufficient land for market and affordable housing to meet the identified need. The NPA is not a housing authority; this is the role of the unitary authorities. Nonetheless the NPA works closely with the relevant Housing Authorities in the preparation of the Local Housing Market Assessments and Local Housing Strategies. 4. Allocate sufficient land for the provision of a variety and mix of employment opportunities to encourage a better link between the provision of employment and housing. The NPA and its partners will ensure the availability of land and investment in the Park is consistent with the special qualities of the area and avoids damage to important nature conservation sites and species. 5. Maintain and encourage the vitality and viability of the Park's communities and town centres. From the standpoint of local communities, this means that the NPA and its partners should encourage development which contributes to the creation of sustainable places, promotes integrated communities, with opportunities for living, working and socialising for all, and enables development that encourages a healthy and safe lifestyle and promotes well being. 6. Improve the physical quality, energy efficiency, accessibility and sustainable design and construction of all development throughout the park. In keeping with the National Park's commitments to sustainability and the climate change agenda, the 	

Development Plan	
Brecon Beacons National Park Management Plan 2009-2014	
<p>NPA is producing up-to-date guidance on sustainable building design and materials in the National Park. This Sustainable Design Guide will become an exemplar in sustainable design.</p> <p>7. Minimise light and noise pollution. Despite its proximity to urban centres such as Cardiff, Bristol, and Swansea, the Park boasts a dark night sky year round where, on clear nights, a plethora of stars can be seen. Similarly, its low population density and lack of major motorways limit light and noise pollution. These factors contribute significantly to the sense of tranquillity and remoteness so often cited as a key special quality of the Brecon Beacons National Park. The NPA and its partners will seek to maintain and enhance these attributes.</p> <p>Twenty-year Aims for Transport</p> <ol style="list-style-type: none"> 1. Reduce the need for travel by controlling the location and design of development. The NPA works closely with highway authorities in the production of integrated transport and land-use strategies and will be considering these factors as part of the development of the Park's forthcoming Local Plan. 2. Provide an integrated transport system that encourages healthy and active lifestyles, and supports local communities. The need to travel should be reduced, and the attractiveness of public transport increased, without adversely affecting the overall quality of people's lives. Better links between public transport, recreational travel, and access to the countryside would benefit tourists and residents alike. 3. Maintain and develop Beacons Bus as key delivery mechanism for visitor transport. The project should continue to grow in time and space with the aim of covering as much of the summer season as possible and increasing routes to meet demand. 4. Encourage and support use of the weekday service network. Achievable only by partnership working, this process needs to ensure that best use is made of existing services by ensuring that journeys are made easier for visitors with high quality 	

Development Plan	
Brecon Beacons National Park Management Plan 2009-2014	
<p>marketing, information, and service provision including excellent customer care from transport operators.</p> <p>5. Encourage the development of new services aimed at the visitor market. Partnership working to develop and market services with the needs of visitors in mind to provide transport to those attractions and outdoor activity locations that would especially benefit.</p> <p>6. Facilitate sustainable long distance transport to the National Park. The key to this process is integration with a need for rail/coach/bus interchanges to work efficiently for visitors.</p> <p>7. Work with Transport Generators on Green Travel Plans. Public and private sector attractions, festivals, tourism businesses, and other organisations can minimise their impacts through the adoption of Green Travel Plans.</p> <p>8. Support working practices and behaviour change initiatives that reduce the Park’s greenhouse gas emissions and reduce people’s dependency on fossil fuels for transport.</p> <p>9. Develop Sustainable Travel Marketing. Whatever mechanisms are adopted, it is essential that they are attractively and consistently marketed to the visiting public.</p> <p>Twenty-year Aims for Waste Management</p> <p>1. Promote the waste hierarchy of reduce, reuse, and recycle across all sectors of the National Park. The NPA and its partners should seek to minimize the production of waste and seek to contribute to sustainable waste solutions.</p>	

Cardiff International Airport Master Plan 2006	
Plan Type	Masterplan
Plan Owner/ Competent Authority	Cardiff International Airport
Currency	2006
Region/Geographic Coverage	administrative boundary
Sector	Planning
Related work SA/SEA HRA/AA	N/A
Document Details	Potential impacts that could cause 'in-combination' effects
<p>Runway It is not envisaged that any runway extension is required to meet the traffic forecasts; a taxiway extension would satisfy this increased traffic. The taxiway extension would provide a parallel route running right to the end of the runway pavement.</p> <p>Terminal, Aprons, Car Parks and Access Roads It is likely that, in addition to a reorganisation of the existing stand layout, additional stands and parking areas will be required within this time frame.</p> <p>There is no requirement for a new terminal at any time in the planned period. It is anticipated that all the growth forecast can be accommodated by modest extensions and re-organisations of the existing terminal building. The floor space of the Terminal totals at approximately 47,800 sq m. in 2030. Based on 6000 sq m per million passengers, which is an accepted standard, this would provide for projected passenger numbers of 7.9million for 2030.</p> <p>Car parking will be accommodated by structural car parking on the existing car parking sites. This will minimise land take but may lead to a slight increase in visual intrusion.</p> <p>Highways Access</p>	<p>Overarching Development Pressures</p> <ul style="list-style-type: none"> ■ Increased air traffic - increased levels of disturbance (noise), emissions and recreational pressure. ■ Improvements to highways access - increase in recreational pressure as a result of improved access. <p>SAC Specific Issues</p> <ul style="list-style-type: none"> ■ A greater number of planes and improved highways access has the potential to increase the levels of recreational pressure at Cardiff Beech Woods SAC and the Severn Estuary SPA/ Ramsar/ SAC. ■ Severn Estuary SPA/ Ramsar/ SAC - overwintering birds can be disturbed by sudden movements and noises that can result in reduced food intake and/or increased energy expenditure. ■ Cardiff Beech Woods SAC - All component SSSIs are used to a greater or lesser extent for recreation purposes. Castell Coch Woodlands and Fforestganol a Chwm Nofydd experience the most recreation pressure, and are popular for walking, climbing and mountain biking. The Taff train runs through part of the Castell Coch Woodlands site and the historic building of Castell Coch attracts many visitors, which increases the access pressure on the woodlands. The road section is becoming increasingly popular for climbing, and this is unlikely to be a problem for the geological interest of the site. However, climbing could be potentially damaging to trees at the top of the crag.

Cardiff International Airport Master Plan 2006	
<p>Short-term It was proposed in the Culverhouse Cross Study to implement a range of public transport and highway improvements, including the 'trunking' of the existing A48 between Culverhouse Cross and Bonvilston and the A4226 (Five Mile Lane) to the airport. Following the trunking of the route, highway improvements to the existing route were proposed, largely to improve safety.</p> <p>Medium Term In the Culverhouse Cross Study it is proposed to improve the A48/ Five Mile Lane route from the Culverhouse Cross junction to the airport, providing an alternative route to the current signed route via Wenvoe and north Barry. This would involve the following proposals:</p> <ul style="list-style-type: none"> ▪ Junction capacity enhancement, (junction at south end A4226 Five Mile Lane / Waycock Road with A4050 in north Barry at Green Farm); ▪ Safety enhancements on Five Mile Lane / Waycock Road; ▪ Junction capacity and safety enhancements at the Five Mile Lane junction with A48 (Sycamore Cross). <p>Longer Term In the longer-term, further improvements of this route to allow airport traffic to avoid Culverhouse Cross were to be considered. The preferred option involved a new link to the airport from the M4 at Junction 34 to the A48 at Sycamore Cross. In conjunction with the new highway link, it would be possible to provide a strategic park and ride/modal interchange at Junction 34 of the M4.</p> <p>These longer-term proposals are referred to in Phase 3 of the Trunk Road Forward Programme of the Welsh Assembly Government, which indicates a commencement of work after March 2010.</p> <p>Future Opportunities for Rail</p>	

Cardiff International Airport Master Plan 2006	
<p>A number of options for introducing enhanced services to Rhose Cardiff International Airport station have been considered. The options generally revolve around the basic principle of two all-station Valley Lines services per hour on the Vale of Glamorgan line and at least one interurban service from Bristol.</p>	

**Habitat Regulations Assessment Report:
Appendix 10 - Test of Likely Significant Effect**

September 2013

Appendix 10 - TEST OF LIKELY SIGNIFICANT EFFECT SCREENING TABLE

Where it has been identified in Appendix 8 that a screened-in policy has the potential to interact with a feature of a European site, via one or more of the factors to which that feature is sensitive, then that Policy is further assessed here to determine whether it is likely to have a significant effect upon that site.

Aberbargoed Grasslands SAC			
Policies with Potential Effects (From Appendix 8)	Potential effects	Test of Likely Significant Effect (LSE)	Likely Significant Effect?
<p>KP11: MINERALS AND AGGREGATES M1: MINERAL LIMESTONE RESERVES AND RESOURCES M3: QUARRY CLOSURES AND EXTENSION LIMITS M5: RESTORATION AND AFTER USE OF MINERAL WORKINGS</p>	<p>Aggregates removal leading to aerial pollution</p>	<p>Quarrying and associated activities are likely to generate dust, and whilst these activities in Cardiff will take place about 14 Km from the Aberbargoed Grasslands SAC, there is the potential for these dusts to be transported by wind to that site. However, the dispersal of dust particles is affected by the size of the particles emitted, and wind speed as well as their shape and density. Large dust particles (greater than 30µm), which make up the greatest proportion of dust emitted from mineral workings, will largely deposit within 100m of sources. Intermediate-sized particles (10–30µm) are likely to travel up to 200–500m. Smaller particles (less than 10 µm) which make up a small proportion of the dust emitted from most mineral workings are only deposited slowly but may travel 1000m or more". (Office of the Deputy Prime Minister: Minerals Policy Statement 2: Controlling and Mitigating the Environmental Effects of Minerals Extraction in England. Annex 1: Dust (March 2005): http://www.communities.gov.uk/documents/planningandbuilding/pdf/mps2annex1.pdf).</p> <p>Therefore it is highly likely that these particulates will have dropped out of the atmosphere before reaching the Aberbargoed Grasslands SAC.</p> <p>Furthermore, according to the National Atmospheric Emissions Inventory, overall emissions of particulates have fallen by 58% since 1990. If this downward trend continues, the total deposition of particulates at this site will gradually decrease, thereby reducing any impact upon the site's features. http://naei.defra.gov.uk/overview/pollutants?pollutant_id=24</p> <p>Implementation of policies aimed at minimising air pollution and managing air quality (KP18: Natural Resources; EN13: Air, Noise, Light Pollution and Contaminated Land) would counteract any increase in atmospheric pollution resulting from this policy. Policies relating to mineral extraction accord with Minerals Planning Policy Wales, which contains strong policies in regard to the protection of European Sites.</p> <p>All of the mineral extraction sites in Cardiff benefit from existing consents, and these consents were subject to a Review of Consents process in 2010/11. The conclusions of this review were that none of the extant consents were likely to have a significant effect upon any European Sites provided that planning conditions aimed at mitigating any effects of aerial pollution, are implemented. If these planning conditions continue to be implemented, and similarly-worded conditions are attached to any new minerals consents issued, then this absence of any significant effect will continue.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>Minerals Planning Policy Wales 2001 does not specify any locations, therefore the risk of 'in combination' effects with this policy cannot be assessed. Furthermore, the document contains strong policies in relation to the protection of European sites.</p>	<p>No</p>

Furthermore, there is a gradual reduction in UK-wide levels of pollutants such as Ammonia, NO_x, SO_x and particulates, which would serve to offset any residual local increase in these pollutants arising from these policies.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>Although there are local environmental factors which may affect this site, the distance of this site from Cardiff and the overall improving air quality in the area make it unlikely that this policy will have a significant effect in-combination with</p>	<p>No</p>

<p>C9: NEW EDUCATIONAL FACILITIES C10: HEALTH EMPLOYMENT NON STRATEGIC ALLOCATION M1: MINERAL LIMESTONE RESERVES AND RESOURCES M3: QUARRY CLOSURES AND EXTENSION LIMITS M5: RESTORATION AND AFTER USE OF MINERAL WORKINGS W1: LAND FOR WASTE MANAGEMENT W2: SITES FOR WASTE MANAGEMENT FACILITIES W3: PROVISION FOR WASTE MANAGEMENT FACILITIES IN DEVELOPMENT</p>		<p>these factors upon this site.</p> <p>The Wales Spatial Plan (Update) 2008 and promotes developments in the region, however none of the three Strategic Opportunity Areas within that document entails land-take at this site, and any increase in aerial pollution due to traffic movement is likely to be counteracted by other regional strategies such as the Wales Transport Strategy 2008, the SEWTA Regional Transport Plan Consultative Draft 2008 and the SEWTA Rail Strategy Study 2006, which promote sustainability of transport, reduction of aerial emissions and modal shift towards more sustainable forms of transport such as public transport and cycling</p> <p>The HRA of the Bridgend Deposit LDP identifies reducing air quality as a factor that could adversely affect the features of this site. However, the HRA points out that there are policies elsewhere in the Bridgend Deposit LDP, which, together with regional policies identified above, will counteract any decrease in air quality arising from policies which prescribe development. Furthermore, decreases in air quality are attributed to increases in traffic movements, but these effects are likely to be restricted to within approximately 200m of the road concerned, because the principal pollutants arising from traffic tend to drop out of the atmosphere within this range. Therefore, due to the distance between Cardiff and this SAC, any cumulative effect between increased traffic in Cardiff and increased traffic along the road through this SAC is unlikely to be significant.</p>

Cardiff Beech Woods SAC			
Policies	Potential effects	Test of Likely Significant Effect (LSE)	Likely Significant Effect?
<p>KP11: MINERALS AND AGGREGATES M1: MINERAL LIMESTONE RESERVES AND RESOURCES M3: QUARRY CLOSURES M5: RESTORATION M6: DREDGED AGGREGATE LANDING</p>	<p>Aggregates removal leading to aerial pollution and changes to local hydrology</p>	<p>All of the mineral extraction sites in Cardiff are immediately adjacent to, or very close to, the Cardiff Beech Woods SAC. There is therefore the potential for mineral extraction activities to cause deposition of dust and other pollutants on this site, or to affect the hydrology of the site, both of which could have impacts on the ground flora and the trees themselves.</p> <ul style="list-style-type: none"> Quarrying and associated activities are likely to generate particulate aerial pollution in the form of dust, so there is the potential for these dusts to be transported by wind to the Cardiff Beech Woods SAC. However, the dispersal of dust particles is affected by the size of the particles emitted, and wind speed as well as their shape and density. Large dust particles (greater than 30µm), which make up the greatest proportion of dust emitted from mineral workings, will largely deposit within 100m of sources. Intermediate-sized particles (10–30µm) are likely to travel up to 200–500m. Smaller particles (less than 10 µm) which make up a small proportion of the dust emitted from most mineral workings are only deposited slowly but may travel 1000m or more”. (Office of the Deputy Prime Minister: Minerals Policy Statement 2: Controlling and Mitigating the Environmental Effects of Minerals Extraction in England. Annex 1: Dust (March 2005): http://www.communities.gov.uk/documents/planningandbuilding/pdf/mps2annex1.pdf). Therefore it is highly likely that the majority of these particulates will have dropped out of the atmosphere close to their source, thereby limiting the extent of the Cardiff Beech Woods SAC that could potentially be affected by these emissions. All of the mineral extraction sites in Cardiff benefit from existing consents, and these consents were subject to a Review of Consents process in 2010/11. The conclusions of this review were that none of the extant consents were likely to have a significant effect upon any European Sites provided that planning conditions aimed at mitigating any effects of aerial pollution, are implemented. If these planning conditions continue to be implemented, and similarly-worded conditions are attached to any new minerals consents issued, then this absence of any significant effect will continue. Furthermore, according to the National Atmospheric Emissions Inventory, overall emissions of particulates have fallen by 58% since 1990. If this downward trend continues, the total deposition of particulates at this site will gradually decrease, thereby offsetting any increase in deposition of particulates arising from these policies. http://naei.defra.gov.uk/overview/pollutants?pollutant_id=24 Implementation of policies aimed at minimising air pollution and managing air quality (KP18: Natural Resources; EN13: Air, Noise, Light Pollution and Contaminated Land) would also serve to counteract any increase in atmospheric pollution resulting from this policy. Policies relating to mineral extraction accord with Minerals Planning Policy Wales, which contains strong policies in regard to the protection of European Sites. There is no evidence to date that atmospheric pollution arising from mineral extraction has had an adverse impact on the features of the Cardiff Beech Woods SAC, but this may need to be addressed in more detail in the future. The location of the woodland on the top or side of raised ground means that, with the exception of Castell Coch Woodlands and Road Section, there are unlikely to be any issues arising from changes in hydrology. However, according to the Sites Issues Briefing for this site, this will be kept under review especially with respect to quarrying. All new minerals consents within the lifetime of this LDP will be subject to Habitats Regulations Assessment. These consents will only be considered to conform to the LDP if it can be demonstrated that they will not have an adverse effect on the integrity of the 	<p>No</p>

Policies	Potential effects	Test of Likely Significant Effect (LSE)	Likely Significant Effect?
DEVELOPMENT			
<p>KP1: LEVEL OF GROWTH KP2: STRATEGIC SITES KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS (Employment) KP10: CENTRAL AND BAY BUSINESS AREAS KP14: HEALTHY LIVING H1: NON STRATEGIC HOUSING SITES H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S) H8: SITES FOR GYPSY AND TRAVELLER CARAVANS EC1: EXISTING EMPLOYMENT LAND EN4: RIVER VALLEYS T8: STRATEGIC RECREATIONAL ROUTES</p>	<p>Increase in population and therefore recreation levels leading to increase in recreational pressure</p>	<p>Increased housing provision may increase recreational pressures such as walking and climbing within the Cardiff Beech Woods SAC. Increased recreational pressure on the Cardiff Beech Woods has potential adverse implications for the ground flora and, depending on the scale of the proposals, the trees themselves.</p> <p>Management of the recreational use of the woodlands should focus on maintaining the network of public footpaths and access routes. Regular maintenance of the footpaths and bridleways is essential to stop them spreading onto the adjacent woodland habitat. By restricting recreational use of the woodlands to certain areas and paths, natural woodland processes can be left to occur away from these areas of recreational use and without the need for intervention from a public health and safety perspective. The vision for these features are for them to have favourable conservation status, whereby the condition that recreational use of the site will continue to be managed so it does not damage the wildlife interest of the site, is satisfied. No limits are set for the performance indicators for factors affecting the features, pending a fuller understanding of current situation and impact on habitat. Considering that there is an already high level of recreation on site and that CCW views that most if not all aspects of the component sites are heading in the right direction in terms of condition, it is unlikely that these policies will have significant adverse effect on the site as a result of increased recreation.</p> <p>Car parking facilities at the site are limited and the site is not easily accessed by public transport, which further limits the impact of recreation on the site. Alternative recreational facilities within and around Cardiff are more readily accessible to the existing and proposed resident population. Furthermore, implementation of policies designed to provide and protect public open space throughout Cardiff (Policies KP3, EN4, C3) would also serve to offset any increase in recreational pressure on the beech woods.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>Other plans and programmes may result in increased recreational activity in the general area, but there are no plans or programmes which are likely to result in a direct increase in recreational activity specifically at this site.</p> <p>Caerphilly Council's Deposit LDP concluded that the Cardiff Beech Woods SAC is unlikely to be significantly affected by the proposals outlined in their Deposit LDP. The analysis noted that in the absence of direct effects, in-combination effects with other plans are not likely to be significant at the sites considered in the light of the evidence available.</p> <p>Only a small portion of Cardiff Beech Woods falls within the Rhondda Cynon Taff area and the closest development proposal (RCT LDP policy No 262) is located to the north of the westernmost woodland block near Taffs Well. The proposal is for a residential development of less than 1 ha in size and given that no direct habitat loss would occur, the risk from indirect impacts, for example increased recreational use (pedestrian) is likely to be negligible. This being the case, the potential for in-combination effects of recreational pressure on the Cardiff Beech Woods is negligible also.</p> <p>The Habitats Regulations Assessment of the Rhondda Cynon Taf LDP has indicated that in the absence of direct effects, in-combination effects with other plans are not likely to be significant at the sites considered in the light of the evidence available.</p> <p>Both Caerphilly and RCT deposit LDP's contains policies relating to the provision of access and recreation to areas other than Cardiff Beech Woods, which are closer to proposed strategic development sites, and which are therefore more likely to be used by the eventual occupiers of those sites.</p>	No

<p> KP1: LEVEL OF GROWTH KP2: STRATEGIC SITES KP6: NEW INFRASTRUCTURE KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS (Employment) KP10: CENTRAL AND BAY BUSINESS AREAS KP11: MINERALS AND AGGREGATES KP12: WASTE H1: NON STRATEGIC HOUSING SITES H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S) H8: SITES FOR GYPSY AND TRAVELLER CARAVANS EC1: EXISTING EMPLOYMENT LAND EC5: HOTEL DEVELOPMENT T7: STRATEGIC TRANSPORTATION INFRASTRUCTURE R1: RETAIL PROVISION WITHIN STRATEGIC SITES C1: COMMUNITY FACILITIES C8: PLANNING FOR SCHOOLS. C9: NEW EDUCATIONAL FACILITIES C10: HEALTH EMPLOYMENT NON STRATEGIC ALLOCATION M1: MINERAL LIMESTONE RESERVES AND RESOURCES M3: QUARRY CLOSURES AND EXTENSION LIMITS M5: RESTORATION AND AFTER USE OF MINERAL WORKINGS M6: DREDGED AGGREGATE LANDING </p>	<p>Increased traffic movements leading to aerial pollution</p>	<p>If these policies were to lead to an increase in road traffic movements, then this may result in an increased number of car journeys along the A470 to and from the valleys to the north. The A470 runs between, and close to, the Cardiff Beech Woods SAC in the Taff's Well area, and the habitat features of this site are sensitive to acidification and deposition of nitrogen, the source of these pollutants being predominantly road traffic. Therefore the impact of any extra car journeys on the beech woods is a potential problem. However:-</p> <ul style="list-style-type: none"> The Candidate Sites near the Cardiff Beech Woods (e.g at Junction 33 and South of Creigiau) are predominantly Candidate Sites for housing rather than industry. Therefore it can be assumed that the bulk of any increased traffic movement will be directed southwards to and from the employment centres of Cardiff rather than north to the valleys region along the A470. The effects of road traffic pollution are likely to be restricted to within approximately 200m of the road concerned, because the principal pollutants arising from traffic tend to drop out of the atmosphere within this range. Approximately 6 Hectares of the Cardiff Beech Woods SAC (Approx. 5.2% of the SAC as a whole) are within 200m of the A470 at Tongwynlais, so the effects of an increase in road traffic pollution would be limited to a small proportion of the SAC. The area of Cardiff Beech Woods SAC within 200m of the A470 at Tongwynlais supports one of the two European features of interest present in the SAC, namely, <i>Asperulo-fagetum</i> beech forest. The vision for this feature is for it to have favourable conservation status, whereby the condition that there are pockets of ground flora across the site, comprising species typical of lime-rich beech wood, including indicators of ancient woodland such as wood anemone, ramsons and sanicle, is satisfied. An assessment of conservation status contained within the Core Management Plan for this site describes the condition of the component SSSI at this section as 'favourable'. Also, the Core Management Plan for this site states that there is no evidence to date that atmospheric pollution has had an adverse impact on this feature. If it is that case that, with the A470 at capacity, the component SSSI is in favourable condition and there is no evidence that road traffic pollution is having an adverse impact upon the <i>Asperulo-fagetum</i> beech forest feature, then Cardiff Council Pollution Control Officers have indicated that the effect on atmospheric pollution of an increase in traffic resulting from these policies would not be measurable because the A470 is already at capacity. The LDP contains policies intended to reduce dependency on car travel, facilitate and increase use of sustainable and active modes of transport (Policies KP8, T1, T2, T3, T5), mitigate the effects of climate change (Policies KP15 and EN12), and promote the sustainable use of natural resources (Policies KP18, EN10 and EN11). In the long-term these measures will mitigate or off-set any increase in atmospheric pollution as a result of the LDP and should lead to gradual improvements in air quality. Levels of NO₂ across Wales are recorded as decreasing, and recorded areas of NO₂ pollution concern in Cardiff are in the City Centre rather than near this SAC. <p>In-combination with other Plans, Projects and Programmes</p>	<p>No</p>

Cardiff Beech Woods SAC			
Policies	Potential effects	Test of Likely Significant Effect (LSE)	Likely Significant Effect?
<p>W1: LAND FOR WASTE MANAGEMENT W2: SITES FOR WASTE MANAGEMENT FACILITIES W3: PROVISION FOR WASTE MANAGEMENT FACILITIES IN DEVELOPMENT</p>		<p>The Wales Spatial Plan (Update 2008) identifies three 'Strategic Opportunity Areas', one of which is the area around Llantrisant and North West Cardiff. Development within this area is likely to lead to an increase in traffic volume within the region. A proportion of this increased volume may use the M4 and A470 when travelling to and from the eastern South Wales Valleys. However, the construction of the Church Village by-pass between Upper Boat and Llantrisant will provide an alternative route, and subject to the availability of traffic movement prediction data, may alleviate increased traffic movements along the A470 at Tongwynlais caused by the Llantrisant and North West Cardiff Strategic Opportunity Area.</p> <p>The Wales Spatial Plan (Update) 2008 and promotes developments in the region, however none of the three Strategic Opportunity Areas within that document entails land-take at this site, and any increase in aerial pollution due to traffic movement is likely to be counteracted by other regional strategies such as the Wales Transport Strategy 2008, the SEWTA Regional Transport Plan Consultative Draft 2008 and the SEWTA Rail Strategy Study 2006, which promote sustainability of transport, reduction of aerial emissions and modal shift towards more sustainable forms of transport such as public transport and cycling.</p> <p>Development arising from policies in the Local Development Plan for neighbouring Rhondda Cynon Taf is likely to lead to an increase in traffic volume within the region. A proportion of this increased volume may use the M4 and A470 when travelling to and from the eastern South Wales Valleys. However, the construction of the Church Village by-pass between Upper Boat and Llantrisant will provide an alternative route, and subject to the availability of traffic movement prediction data, may alleviate increased traffic movements along the A470 at Tongwynlais caused by the RCT LDP policies.</p> <p>Furthermore, both the RCT and Caerphilly Deposit LDP's contain policies to provide for housing and employments within their respective boundaries, thereby reducing need for travel journeys to and from the centre of Cardiff, via routes which pass through this SAC at Tongwynlais..</p> <p>The Habitats Regulations Assessments of the Rhondda Cynon Taf LDP and of Caerphilly LDP have indicated that in the absence of direct effects, in-combination effects with other plans are not likely to be significant at the sites considered in the light of the evidence available.</p>

KP11: MINERALS AND AGGREGATES M1: MINERAL LIMESTONE RESERVES AND RESOURCES M3: QUARRY CLOSURES AND EXTENSION LIMITS M5: RESTORATION AND AFTER USE OF MINERAL WORKINGS M6: DREDGED AGGREGATE LANDING AND DISTRIBUTION FACILITIES	Aggregates removal, leading to aerial pollution	<p>Quarrying and associated activities are likely to generate dust, and whilst these activities in Cardiff will take place about 30 Km from the River Wye SAC, there is the potential for these dusts to be transported by wind to that site. However:-</p> <ul style="list-style-type: none"> The dispersal of dust particles is affected by the size of the particles emitted, and wind speed as well as their shape and density. Large dust particles (greater than 30µm), which make up the greatest proportion of dust emitted from mineral workings, will largely deposit within 100m of sources. Intermediate-sized particles (10–30µm) are likely to travel up to 200–500m. Smaller particles (less than 10 µm) which make up a small proportion of the dust emitted from most mineral workings are only deposited slowly but may travel 1000m or more”. (Office of the Deputy Prime Minister: Minerals Policy Statement 2: Controlling and Mitigating the Environmental Effects of Minerals Extraction in England. Annex 1: Dust (March 2005): http://www.communities.gov.uk/documents/planningandbuilding/pdf/mps2annex1.pdf). Therefore it is highly likely that these particulates will have dropped out of the atmosphere before reaching the River Wye SAC. According to the National Atmospheric Emissions Inventory, overall emissions of particulates have fallen by 58% since 1990. If this downward trend continues, the total deposition of particulates at this site will gradually decrease, thereby reducing any impact upon the site’s features. http://naei.defra.gov.uk/overview/pollutants?pollutant_id=24 Implementation of policies aimed at minimising air pollution and managing air quality (KP18: Natural Resources; EN13: Air, Noise, Light Pollution and Contaminated Land) would counteract any increase in atmospheric pollution resulting from this policy. Policies relating to mineral extraction accord with Minerals Planning Policy Wales, which contains strong policies in regard to the protection of European Sites. All of the mineral extraction sites in Cardiff benefit from existing consents, and these consents were subject to a 	No

This excludes mineral extraction activities to the north of Cardiff, and allocations for housing and industry which are not situated near the foreshore.</p> <p>Construction and operation of waste management facilities on industrial land adjacent to the Severn Estuary has the potential to have an effect upon the Severn Estuary European site. However, the site allocated in this policy already supports existing planning consents which have been the subject of previous Habitats Regulations Appraisals. In all cases, these assessments found there to be no likely significant effect on the Severn Estuary. Therefore, any effect on the Severn Estuary arising from this allocation will have already been taken account of in previous planning consents. Any new consents arising from these policies will be subject to individual Habitats Regulations Assessments. These consents will only be considered to conform to the LDP if it can be demonstrated that they will not have an adverse effect on the integrity of this SAC.</p> <p>Where policies direct development towards Cardiff Bay and the rivers that feed into it, they could potentially lead to pollution from a number of sources, including oil and chemical spills from industrial and commercial premises and vessels. If this pollution were to enter the Severn Estuary, there is a potential for harm to the designated features of Severn Estuary SAC.</p> <p>In view of Cardiff Bay's proximity to the Severn Estuary European site, Cardiff Harbour Authority (CHA) has prepared an Oil Spill Contingency Plan in accordance with Clause 3(1)(d) of the Merchant Shipping (Oil Pollution Preparedness Response and Co-operation Convention) Regulations 1998, SI 1998 No 1056. The equipment for managing oil spills (and blue green algal scums) is the largest collection of its type in South East Wales. This plan has been reviewed and accepted by the Maritime and Coastguard Agency (MCA), and is reviewed by the Environment Team of the CHA on an annual basis. To help manage any pollution incidents which may occur along the Rivers Taff and Ely, the Environment Team have undertaken "time of travel" studies. The data collected has provided estimates of how long pollutants will take to reach the Bay from various locations and how they will disperse once in the Bay. This information will be used to ensure the effective deployment of pollution equipment to minimise the impact of any spills. A contingency plan that is effective for oil pollution will have much in common with plans required to combat other pollutants. The hazards, and techniques for cleaning-up, will vary, but command and control procedures will be very similar.</p> <p>With these measures in place it is unlikely that development arising from these policies will have a significant on the Severn Estuary SAC.</p> <p>As no clearly defined route for the Eastern Bay Link Road is provided with Policy T7, or on the Proposals Map, there is insufficient information to assess the impacts of such a policy upon the Severn Estuary SAC site. <p>H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S) H8: SITES FOR GYPSY AND TRAVELLER CARAVANS EC1: EXISTING EMPLOYMENT LAND EC5: HOTEL DEVELOPMENT R1: RETAIL PROVISION WITHIN STRATEGIC SITES C1: COMMUNITY FACILITIES C9: NEW EDUCATIONAL FACILITIES C10: HEALTH EMPLOYMENT NON STRATEGIC ALLOCATION M1: MINERAL LIMESTONE RESERVES AND RESOURCES M5: RESTORATION AND AFTER USE OF MINERAL WORKINGS M6: DREDGED AGGREGATE LANDING W1: LAND FOR WASTE MANAGEMENT W2: SITES FOR WASTE MANAGEMENT FACILITIES W3: PROVISION FOR WASTE MANAGEMENT FACILITIES IN DEVELOPMENT</p>	<p>organic loading</p>	<p>Bewick's swans as currently moderately vulnerable to toxic contamination.</p> <p>Sewage from Cardiff west of the River Taff is treated at the Cog Moors Sewage Treatment Works (STW), serving the Barry and Cardiff West catchments. This STW discharges to the Bristol Channel, via a long sea outfall, off Lavernock Point. Effluent is disinfected through ultra violet treatment, which reduces the environmental impact and protects water quality. Sewage from Cardiff east of the River Taff is treated at the WWTW at Tremorfa, and cleaned water is discharged via the outfall 4.2 Km into the estuary at ST25257393. DCWW have confirmed that the WWTW at Tremorfa has sufficient capacity across the lifespan of the plan (2006 - 2026) to accommodate the domestic foul flows from all of the allocations in the Deposit LDP.</p> <p>In terms of water quality issues the Severn Estuary is under greatest threat from point source pollution within the area of designation. The EA set very strict quality standards for the final effluent that can be returned to rivers, and Welsh Water achieved 99.85% compliance of wastewater treatment works in 2009. Given the regulatory compliance measures and the current favourable condition assessment for the Severn Estuary SSSIs that are components of the SAC, it is unlikely that development resulting from the Cardiff Deposit LDP will have a significant effect on the water quality of the Severn Estuary SAC/SPA/ Ramsar site.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>Other plans and programmes which result in increased sewage discharge at the South Wales Coast, may act in combination with this policy to exacerbate nutrient and /or organic loading in the Severn Estuary, which could impact on the River Usk. Development plans for all unitary authorities whose sewage discharges at the South Wales Coast such as Caerphilly, RCT, Blaenau Gwent and Merthyr Tydfil make provision for a combined allocation of over 30000 new dwellings in total. However, Dwr Cymru Welsh Water have had the opportunity to comment on these LDPs and the inclusion of these levels of housing allocation indicates that there is the capacity to treat the predicted increase in sewage,</p> <p>Furthermore, all effluent is treated to meet the consent limits laid down by NRW and subject to strict conditions which include HRA processes where the potential for impacts on the estuary are identified. Policies	Potential effects	Test of Likely Significant Effect (LSE)	Likely Significant Effect?
<p>KP11: MINERALS AND AGGREGATES KP12: WASTE M1: MINERAL LIMESTONE RESERVES AND RESOURCES M3: QUARRY CLOSURES AND EXTENSION LIMITS M5: RESTORATION AND AFTER USE OF MINERAL WORKINGS M6: DREDGED AGGREGATE LANDING AND DISTRIBUTION FACILITIES W1: LAND FOR WASTE MANAGEMENT W2: SITES FOR WASTE MANAGEMENT FACILITIES W3: PROVISION FOR WASTE MANAGEMENT FACILITIES IN DEVELOPMENT</p>	<p>Contamination, accumulation of toxic substances</p>	<p>Quarrying and associated activities are likely to generate dust, and whilst these activities in Cardiff will take place about 10 Km from the Severn Estuary, there is the potential for these dusts to be transported by wind to that site. However, the dispersal of dust particles is affected by the size of the particles emitted, and wind speed as well as their shape and density. Large dust particles (greater than 30µm), which make up the greatest proportion of dust emitted from mineral workings, will largely deposit within 100m of sources. Intermediate-sized particles (10–30µm) are likely to travel up to 200–500m. Smaller particles (less than 10 µm) which make up a small proportion of the dust emitted from most mineral workings are only deposited slowly but may travel 1000m or more". (Office of the Deputy Prime Minister: Minerals Policy Statement 2: Controlling and Mitigating the Environmental Effects of Minerals Extraction in England. Annex 1: Dust (March 2005): http://www.communities.gov.uk/documents/planningandbuilding/pdf/mps2annex1.pdf).</p> <p>Therefore it is highly likely that these particulates will have dropped out of the atmosphere before reaching the Severn Estuary.</p> <p>Furthermore, according to the National Atmospheric Emissions Inventory, overall emissions of particulates have fallen by 58% since 1990. If this downward trend continues, the total deposition of particulates at this site will gradually decrease, thereby reducing any impact upon the site's features. http://naei.defra.gov.uk/overview/pollutants?pollutant_id=24</p> <p>Implementation of policies aimed at minimising air pollution and managing air quality (KP18: Natural Resources; EN13: Air, Noise, Light Pollution and Contaminated Land) would counteract any increase in atmospheric pollution resulting from this policy. Policies relating to mineral extraction accord with Minerals Planning Policy Wales, which contains strong policies in regard to the protection of European Sites.</p> <p>All of the mineral extraction sites in Cardiff benefit from existing consents, and these consents were subject to a Review of Consents process in 2010/11. The conclusions of this review were that none of the extant consents were likely to have a significant effect upon any European Sites provided that planning conditions aimed at mitigating any effects of aerial pollution, are implemented. If these planning conditions continue to be implemented, and similarly-worded conditions are attached to any new minerals consents issued, then this absence of any significant effect will continue.</p> <p>The features of the Severn Estuary SPA are sensitive to marine aggregates dredging, and whilst this activity is outside the control of Cardiff Council, the draft LDP contains a policy (M6) which protects sand wharves as shown on the Proposals Map against development which would prejudice their ability to land marine dredged sand and gravel. The operation of these wharves is ongoing and Policy M6 would not lead to new wharves or increased capacity, so the policy (and thereby the draft LDP in this respect) would not have a significant effect upon the Severn Estuary SPA, above and beyond that which is already occurring.</p> <p>Construction and operation of waste management facilities on industrial land adjacent to the Severn Estuary have the potential to have an effect upon the Severn Estuary European site. Polluted surface water runoff and aerial pollution during construction and operation may harm certain habitat features such as mudflats and saltmarsh, and key supporting habitats for the waterfowl such as intertidal mudflats and sandflats, saltmarsh, shingle and rocky shore, wet coastal grazing marsh, and improved grassland and open standing waters.</p> <p>However, the site allocated in this policy already supports existing planning consents which have been the subject of previous Habitats Regulations Appraisals. In all cases, these assessments found there to be no likely significant effect on the Severn Estuary. Therefore, any effect on the Severn Estuary arising from this allocation will have already been taken account of in previous planning consents. Any new consents arising from these policies will be subject to individual Habitats Regulations Assessments These consents will only be considered to conform to the LDP if it can be demonstrated that they will not have an adverse effect on the integrity of this SPA.</p> <p>In-combination with other Plans, Projects and Programmes</p>	<p>No</p>

<p>KP6: NEW INFRASTRUCTURE T7: STRATEGIC TRANSPORTATION INFRASTRUCTURE</p>	<p>Laying pipes and cables, leading to disturbance of species</p>	<p>Laying pipes and cables within the Severn Estuary SPA would be likely to significantly affect it, none of these policies direct land-take to within the boundaries of this site. No clearly defined route for the Eastern Bay Link Road is provided with Policy T7, or on the Proposals Map. Therefore there remains the potential that such a project would result in these activities within the Severn Estuary SPA if an Estuary Route option were selected. If this were the case, the effects of Laying pipes and cables ancillary to construction and operation of this road will be considered in a Habitats Regulations Assessment at the project stage, when more details become available. Consent for such a project will only be considered to conform to the LDP if it can be demonstrated that it will not have an adverse effect on the integrity of this SPA.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>No other plans projects and programmes which could lead to the laying of pipes and cables around the Cardiff foreshore have been identified.</p>	No
<p>KP1: LEVEL OF GROWTH KP2: STRATEGIC SITES KP11: MINERALS AND AGGREGATES</p>	<p>Wastewater and sewage, leading to contamination and changes in nutrient</p>	<p>None of the candidate sites for housing is within a European Site. However, increased sewage arising from these housing provisions may increase discharge into the Severn Estuary. This could potentially lead to changes in nutrient and /or organic loading, which could change the species composition of Saltmarsh plants and cause excessive algal growth on mudflats. This could subsequently deny wetland birds access to their invertebrate prey. At the current time there is no evidence to show that this is the case at this site, but the estuary is vulnerable to oil spills</p>	No

Severn Estuary SPA			
Policies	Potential effects	Test of Likely Significant Effect (LSE)	Likely Significant Effect?
<p>KP12: WASTE H1: NON STRATEGIC HOUSING SITES H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S) H8: SITES FOR GYPSY AND TRAVELLER CARAVANS EC1: EXISTING EMPLOYMENT LAND EC5: HOTEL DEVELOPMENT R1: RETAIL PROVISION WITHIN STRATEGIC SITES C1: COMMUNITY FACILITIES C9: NEW EDUCATIONAL FACILITIES C10: HEALTH EMPLOYMENT NON STRATEGIC ALLOCATION M1: MINERAL LIMESTONE RESERVES AND RESOURCES M5: RESTORATION AND AFTER USE OF MINERAL WORKINGS M6: DREDGED AGGREGATE LANDING AND DISTRIBUTION FACILITIES W1: LAND FOR WASTE MANAGEMENT W2: SITES FOR WASTE MANAGEMENT FACILITIES W3: PROVISION FOR WASTE MANAGEMENT FACILITIES IN DEVELOPMENT</p>	<p>and/or organic loading</p>	<p>and JNCC states that there is a continuous discharge of toxins into the estuary, some of which bind to the sediments, although no specific sources or locations are identified. NE and CCW identify this is an area which requires further assessment. They also identify Bewick's swans as currently moderately vulnerable to toxic contamination.</p> <p>Sewage from Cardiff west of the River Taff is treated at the Cog Moors Sewage Treatment Works (STW), serving the Barry and Cardiff West catchments. This STW discharges to the Bristol Channel, via a long sea outfall, off Lavernock Point. Effluent is disinfected through ultra violet treatment, which reduces the environmental impact and protects water quality. Sewage from Cardiff east of the River Taff is treated at the WWTW at Tremorfa, and cleaned water is discharged via the outfall 4.2 Km into the estuary at ST25257393. DCWW have confirmed that the WWTW at Tremorfa has sufficient capacity across the lifespan of the plan (2006 - 2026) to accommodate the domestic foul flows from all of the allocations in the Deposit LDP.</p> <p>In terms of water quality issues the Severn Estuary is under greatest threat from point source pollution within the area of designation. The EA set very strict quality standards for the final effluent that can be returned to rivers, and Welsh Water achieved 99.85% compliance of wastewater treatment works in 2009. Given the regulatory compliance measures and the current favourable condition assessment for the Severn Estuary SSSIs that are components of the SAC, it is unlikely that development resulting from the Cardiff Deposit LDP will have a significant effect on the water quality of the Severn Estuary SAC/SPA/ Ramsar site.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>Other plans and programmes which result in increased sewage discharge at the South Wales Coast, may act in combination with this policy to exacerbate nutrient and /or organic loading in the Severn Estuary, which could impact on the River Usk. Development plans for all unitary authorities whose sewage discharges at the South Wales Coast such as Caerphilly, RCT, Blaenau Gwent and Merthyr Tydfil make provision for a combined allocation of over 30000 new dwellings in total. However, Dwr Cymru Welsh Water have had the opportunity to comment on these LDPs and the inclusion of these levels of housing allocation indicates that there is the capacity to treat the predicted increase in sewage,</p> <p>Furthermore, all effluent is treated to meet the consent limits laid down by NRW and subject to strict conditions which include HRA processes where the potential for impacts on the estuary are identified. Provided this continues to occur, there is not likely to be a significant effect on the Severn Estuary SPA by sewage outfall.</p>	

Severn Estuary SPA			
Policies	Potential effects	Test of Likely Significant Effect (LSE)	Likely Significant Effect?
M6: DREDGED AGGREGATE LANDING	Aggregates removal, leading to damage by abrasion or selective abstraction	<p>The features of the Severn Estuary SPA may indirectly be sensitive to marine aggregates dredging, and whilst this activity is outside the control of Cardiff Council, the draft LDP contains a policy (M6) which protects sand wharves as shown on the Proposals Map against development which would prejudice their ability to land marine dredged sand and gravel. The operation of these wharves is ongoing and Policy M6 would not lead to new wharves or increased capacity, so the policy (and thereby the draft LDP in this respect) would not have a significant effect upon the Severn Estuary SPA, above and beyond that which is already occurring.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>Whilst there are other plans, projects and programmes in the Severn Estuary area which may increase the dredging of aggregates, none of these would affect the landing facilities at Cardiff Docks.</p>	No

Severn Estuary Ramsar			
Policies	Potential effects	Test of Likely Significant Effect (LSE)	Likely Significant Effect?
<p>KP11: MINERALS AND AGGREGATES KP12: WASTE M1: MINERAL LIMESTONE RESERVES AND RESOURCES M3: QUARRY CLOSURES AND EXTENSION LIMITS M5: RESTORATION AND AFTER USE OF MINERAL WORKINGS M6: DREDGED AGGREGATE LANDING AND DISTRIBUTION FACILITIES W1: LAND FOR WASTE MANAGEMENT W2: SITES FOR WASTE MANAGEMENT FACILITIES W3: PROVISION FOR WASTE MANAGEMENT FACILITIES IN DEVELOPMENT</p>	<p>Contamination, accumulation of toxic substances</p>	<p>Quarrying and associated activities are likely to generate dust, and whilst these activities in Cardiff will take place about 10 Km from the Severn Estuary, there is the potential for these dusts to be transported by wind to that site. However, the dispersal of dust particles is affected by the size of the particles emitted, and wind speed as well as their shape and density. Large dust particles (greater than 30µm), which make up the greatest proportion of dust emitted from mineral workings, will largely deposit within 100m of sources. Intermediate-sized particles (10–30µm) are likely to travel up to 200–500m. Smaller particles (less than 10 µm) which make up a small proportion of the dust emitted from most mineral workings are only deposited slowly but may travel 1000m or more". (Office of the Deputy Prime Minister: Minerals Policy Statement 2: Controlling and Mitigating the Environmental Effects of Minerals Extraction in England. Annex 1: Dust (March 2005): http://www.communities.gov.uk/documents/planningandbuilding/pdf/mps2annex1.pdf).</p> <p>Therefore it is highly likely that these particulates will have dropped out of the atmosphere before reaching the Severn Estuary.</p> <p>Furthermore, according to the National Atmospheric Emissions Inventory, overall emissions of particulates have fallen by 58% since 1990. If this downward trend continues, the total deposition of particulates at this site will gradually decrease, thereby reducing any impact upon the site's features. http://naei.defra.gov.uk/overview/pollutants?pollutant_id=24</p> <p>Implementation of policies aimed at minimising air pollution and managing air quality (KP18: Natural Resources; EN13: Air, Noise, Light Pollution and Contaminated Land) would counteract any increase in atmospheric pollution resulting from this policy. Policies relating to mineral extraction accord with Minerals Planning Policy Wales, which contains strong policies in regard to the protection of European Sites.</p> <p>All of the mineral extraction sites in Cardiff benefit from existing consents, and these consents were subject to a Review of Consents process in 2010/11. The conclusions of this review were that none of the extant consents were likely to have a significant effect upon any European Sites provided that planning conditions aimed at mitigating any effects of aerial pollution, are implemented. If these planning conditions continue to be implemented, and similarly-worded conditions are attached to any new minerals consents issued, then this absence of any significant effect will continue.</p> <p>The features of the Severn Estuary Ramsar site are sensitive to marine aggregates dredging, and whilst this activity is outside the control of Cardiff Council, the draft LDP contains a policy (M6) which protects sand wharves as shown on the Proposals Map against development which would prejudice their ability to land marine dredged sand and gravel. The operation of these wharves is ongoing and Policy M6 would not lead to new wharves or increased capacity, so the policy (and thereby the draft LDP in this respect) would not have a significant effect upon the Severn Estuary Ramsar, above and beyond that which is already occurring.</p> <p>Construction and operation of waste management facilities on industrial land adjacent to the Severn Estuary have the potential to have an effect upon the Severn Estuary European site. Polluted surface water runoff and aerial pollution during construction and operation may harm certain habitat features such as mudflats and saltmarsh, and key supporting habitats for the waterfowl such as intertidal mudflats and sandflats, saltmarsh, shingle and rocky shore, wet coastal grazing marsh, and improved grassland and open standing waters.</p> <p>However, the site allocated in this policy already supports existing planning consents which have been the subject of previous Habitats Regulations Appraisals. In all cases, these assessments found there to be no likely significant effect on the Severn Estuary. Therefore, any effect on the Severn Estuary arising from this allocation will have already been taken account of in previous planning consents. Any new consents arising from these policies will be subject to individual Habitats Regulations Assessments</p>	<p>No</p>

Any new consents arising from these policies will be subject to individual Habitats Regulations Assessments These consents will only be considered to conform to the LDP if it can be demonstrated that they will not have an adverse effect on the integrity of this Ramsar site.</p> <p>Where policies direct development towards Cardiff Bay and the rivers that feed into it, they could potentially lead to pollution from a number of sources, including oil and chemical spills from industrial and commercial premises and vessels. If this pollution were to enter the Severn Estuary, there is a potential for harm to the designated features of Severn Estuary Ramsar site.</p> <p>In view of Cardiff Bay's proximity to the Severn Estuary European site, Cardiff Harbour Authority (CHA) has prepared an Oil Spill Contingency Plan in accordance with Clause 3(1)(d) of the Merchant Shipping (Oil Pollution Preparedness Response and Co-operation Convention) Regulations 1998, SI 1998 No 1056. The equipment for managing oil spills (and blue green algal scums) is the largest collection of its type in South East Wales. This plan has been reviewed and accepted by the Maritime and Coastguard Agency (MCA), and is reviewed by the Environment Team of the CHA on an annual basis. To help manage any pollution incidents which may occur along the Rivers Taff and Ely, the Environment Team have undertaken "time of travel" studies. The data collected has provided estimates of how long pollutants will take to reach the Bay from various locations and how they will disperse once in the Bay. This information will be used to ensure the effective deployment of pollution equipment to minimise the impact of any spills. A contingency plan that is effective for oil pollution will have much in common with plans required to combat other pollutants. The hazards, and techniques for cleaning-up, will vary, but command and control procedures will be very similar.</p>	<p>No</p>

Severn Estuary Ramsar			
Policies	Potential effects	Test of Likely Significant Effect (LSE)	Likely Significant Effect?
STRATEGIC ALLOCATION		<p>With these measures in place it is unlikely that development arising from these policies will have a significant on the Severn Estuary Ramsar site</p> <p>As no clearly defined route for the Eastern Bay Link Road is provided with Policy T7, or on the Proposals Map, there is insufficient information to assess the impacts of such a policy upon the Severn Estuary Ramsar site. KP1: LEVEL OF GROWTH KP2: STRATEGIC SITES KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS (Employment) KP10: CENTRAL AND BAY BUSINESS AREAS KP14: HEALTHY LIVING H1: NON STRATEGIC HOUSING SITES H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S) H8: SITES FOR GYPSY AND TRAVELLER CARAVANS EC1: EXISTING EMPLOYMENT LAND EN4: RIVER VALLEYS T8: STRATEGIC RECREATIONAL ROUTES	Increase in population and therefore recreation levels, leading to disturbance of species	<p>The National Coastal Path has already been subject to an Appropriate Assessment, which concluded no adverse effect on the integrity of the Severn Estuary European sites, subject to the implementation of mitigation measures. This mitigation, which includes restricting access to sensitive habitats and natural screening to avoid disturbance to wetland birds, will ensure that this policy is not likely to have a significant effect upon these sites.</p> <p>Whilst there are policies which seek to encourage active lifestyles and outdoor recreation, including along the Wales Coastal Path, it is equally the case that citizens are more likely to make use of outdoor access and recreation facilities closer to where they live. None of the proposed housing allocations on the Proposals Maps are close to the Wales Coastal Path, and for each such allocation there are alternative access and recreational facilities closer by, which will serve to mitigate any increase in recreational activity along the foreshore.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>Welsh Coastal Tourism Strategy 2008. The purpose of the Welsh Coastal Tourism Strategy 2008 is to identify a clear way forward for the development of Coastal Tourism, which realises and builds on the economic potential of the coastline of Wales whilst respecting its environmental quality and recognising the importance of achieving community benefits. The strategy provides spatial guidance for the future allocation of funds to support coastal tourism in the regions of Wales through the Spatial Plan.</p> <p>However, as no specific locations are specified, no assessment of in-combination effects can be made at this stage.</p>	No

Severn Estuary Ramsar

<p>KP1: LEVEL OF GROWTH KP2: STRATEGIC SITES KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS (Employment) KP10: CENTRAL AND BAY BUSINESS AREAS H1: NON STRATEGIC HOUSING SITES H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S) H8: SITES FOR GYPSY AND TRAVELLER CARAVANS EC1: EXISTING EMPLOYMENT LAND EC5: HOTEL DEVELOPMENT R1: RETAIL PROVISION WITHIN STRATEGIC SITES C1: COMMUNITY FACILITIES C8: PLANNING FOR SCHOOLS. C9: NEW EDUCATIONAL FACILITIES C10: HEALTH EMPLOYMENT NON STRATEGIC ALLOCATION</p>	<p>Increased noise and light pollution, leading to disturbance of species</p>	<p>The potential effects of noise and light pollution are localised in nature, and only those activities directly adjacent to the foreshore which give rise to these effects have the potential to affect the Ramsar site. This excludes mineral extraction activities to the north of Cardiff, and allocations for industry which are not situated near the foreshore, and all allocations for housing.</p> <p>Construction and operation of waste management facilities on industrial land adjacent to the Severn Estuary has the potential to have an effect upon the Severn Estuary European site. However, the site allocated in this policy already supports existing planning consents which have been the subject of previous Habitats Regulations Appraisals. In all cases, these assessments found there to be no likely significant effect on the Severn Estuary. Therefore, any effect on the Severn Estuary arising from this allocation will have already been taken account of in previous planning consents. Any new consents arising from these policies will be subject to individual Habitats Regulations Assessments These consents will only be considered to conform to the LDP if it can be demonstrated that they will not have an adverse effect on the integrity of this Ramsar site.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>These potential effects are localised in nature, so only plans, projects and programmes which are close to those within Cardiff could act in combination with these policies. Along the foreshore, neither of Cardiff's neighbouring authorities (Vale of Glamorgan and Newport) have policies which direct development to the foreshore adjacent to the respective county boundaries with Cardiff which could cause noise and light pollution.</p>	<p>No</p>
<p>KP1: LEVEL OF GROWTH KP2: STRATEGIC SITES KP6: NEW INFRASTRUCTURE KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS (Employment) KP10: CENTRAL AND BAY BUSINESS AREAS KP11: MINERALS AND AGGREGATES KP12: WASTE H1: NON STRATEGIC HOUSING SITES</p>	<p>Increased traffic movements, leading to disturbance of species and contamination of habitats</p>	<p>The LDP contains policies intended to reduce dependency on car travel, facilitate and increase use of sustainable and active modes of transport (Policies KP8, T1, T2, T3, T5), mitigate the effects of climate change (Policies KP15 and EN12), and promote the sustainable use of natural resources (Policies KP18, EN10 and EN11). In the long-term these measures will mitigate or off-set any increase in atmospheric pollution as a result of the LDP and should lead to gradual improvements in air quality.</p> <p>Furthermore, levels of NO₂ across Wales are recorded as decreasing, and recorded areas of NO₂ pollution concern in Cardiff are in the City Centre rather than near the foreshore. Similarly, according to the National Atmospheric Emissions Inventory, overall emissions of particulates have fallen by 58% since 1990. If this downward trend continues, the total deposition of particulates at this site will gradually decrease, thereby reducing any impact upon the site's features. http://naei.defra.gov.uk/overview/pollutants?pollutant_id=24</p> <p>As no clearly defined route for the Eastern Bay Link Road is provided with Policy T7, or on the Proposals Map, there is insufficient information to assess the impacts of such a policy upon the Severn Estuary Ramsar site. The effects of the construction and</p>	<p>No</p>

Consent for such a project will only be considered to conform to the LDP if it can be demonstrated that it will not have an adverse effect on the integrity of this Ramsar site.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>The Wales Spatial Plan (Update) 2008 and promotes developments in the region, however none of the three Strategic Opportunity Areas within that document entails land-take at this site, and any increase in aerial pollution due to traffic movement is likely to be counteracted by other regional strategies such as the Wales Transport Strategy 2008, the SEWTA Regional Transport Plan 2009 and the SEWTA Rail Strategy Study 2006. These strategies all seek a modal shift for private and freight transports onto more sustainable modes, reducing the impact of the transport system on the natural environment, reducing greenhouse gas emissions from transport, and reducing traffic growth and congestion. These strategies will serve to reduce and offset the effects of any atmospheric pollution acting in combination with that arising from the Preferred Construction and operation of waste management facilities on industrial land adjacent to the Severn Estuary have the potential to have an effect upon the Severn Estuary International site. Visual and noise disturbance during construction may cause disturbance to waterfowl such as Shelduck, Oystercatcher, Dunlin, Curlew, Pintail and Redshank which are designatory features of the SPA and which form part of one of the notable estuarine species assemblages of the estuary feature of the SAC.</p> <p>However, the site allocated in this policy already supports existing planning consents which have been the subject of previous Habitats Regulations Appraisals. In all cases, these assessments found there to be no likely significant effect on the Severn Estuary. Therefore, any effect on the Severn Estuary arising from this allocation will have already been taken account of in previous planning consents.</p>	
<p>KP15: CLIMATE CHANGE EN12: RENEWABLE ENERGY AND LOW CARBON TECHNOLOGIES</p>	<p>Installation of wind turbines leading to disturbance and direct harm to species</p>	<p>As no specific locations for wind turbines are provided with these policies, on the Proposals map, their effects cannot be assessed at this stage. However, where wind turbines are proposed for locations along the Cardiff foreshore, effects of disturbance caused by construction and operation of wind turbines will be considered in a Habitats Regulations Assessment at the individual project stage. Consent for such projects will only be considered to conform to the LDP if it can be demonstrated that they will not have an adverse effect on the integrity of this Ramsar site.</p> <p>In-combination with other Plans, Projects and Programmes</p>	<p>No</p>

Severn Estuary Ramsar			
Policies	Potential effects	Test of Likely Significant Effect (LSE)	Likely Significant Effect?
		No other plans projects and programmes which could lead to the construction and operation of wind turbines around the Cardiff foreshore have been identified. Other Local Authorities in the region have developed LDP policies which promote the use of renewable energy sources, which would include wind turbines, but no locations for these turbines are specified, so their in-combination effects cannot be assessed. Where individual projects elsewhere in the Severn Estuary involve the operation of wind turbines within this site, those projects would be each subject to an individual HRA.	
KP1: LEVEL OF GROWTH KP2: STRATEGIC SITES KP6: NEW INFRASTRUCTURE KP9: RESPONDING TO EVIDENCED ECONOMIC NEEDS (Employment) KP10: CENTRAL AND BAY BUSINESS AREAS KP11: MINERALS AND AGGREGATES KP12: WASTE H1: NON STRATEGIC HOUSING SITES H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S) H8: SITES FOR GYPSY AND TRAVELLER CARAVANS EC1: EXISTING EMPLOYMENT LAND EC5: HOTEL DEVELOPMENT T7: STRATEGIC TRANSPORTATION INFRASTRUCTURE R1: RETAIL PROVISION WITHIN STRATEGIC SITES C1: COMMUNITY FACILITIES C8: PLANNING FOR SCHOOLS. C9: NEW EDUCATIONAL FACILITIES C10: HEALTH EMPLOYMENT NON STRATEGIC ALLOCATION M1: MINERAL LIMESTONE RESERVES AND RESOURCES M3: QUARRY CLOSURES AND EXTENSION LIMITS M5: RESTORATION AND AFTER	Land take, leading to physical loss of supporting habitats	<p>Whilst land-take would result from these policies, and land take within the Ramsar site would be likely to significantly affect it, none of these policies direct land-take to within the boundaries of this site. No clearly defined route for the Eastern Bay Link Road is provided with Policy T7, or on the Proposals Map. Therefore there remains the potential that such a project would incur land-take within the Ramsar Site if an Estuary Route option were selected. If this were the case, the effects of land-take caused by construction and operation of this road will be considered in a Habitats Regulations Assessment at the project stage, when more details become available. Consent for such a project will only be considered to conform to the LDP if it can be demonstrated that it will not have an adverse effect on the integrity of this Ramsar site</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>No other plans projects and programmes which could lead to land-take around the Cardiff foreshore have been identified. <p>KP6: NEW INFRASTRUCTURE T7: STRATEGIC TRANSPORTATION INFRASTRUCTURE</p>	<p>Laying pipes and cables, leading to disturbance to species</p>	<p>Laying pipes and cables within the Ramsar site would be likely to significantly affect it, none of these policies direct land-take to within the boundaries of this site. However, no clearly defined route for the Eastern Bay Link Road is provided with Policy T7, or on the Proposals Map. Therefore there remains the potential that such a project would result in these activities within the Ramsar Site if an Estuary Route option were selected. If this were the case, the effects of Laying pipes and cables ancillary to construction and operation of this road will be considered in a Habitats Regulations Assessment at the project stage, when more details become available. Consent for such a project will only be considered to conform to the LDP if it can be demonstrated that it will not have an adverse effect on the integrity of this Ramsar site</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>No other plans projects and programmes which could lead to the laying of pipes and cables around the Cardiff foreshore have been identified.</p>	No
<p>KP1: LEVEL OF GROWTH KP2: STRATEGIC SITES KP11: MINERALS AND AGGREGATES KP12: WASTE H1: NON STRATEGIC HOUSING SITES H7: ALLOCATION POLICY FOR GYPSY AND TRAVELLER SITE(S) H8: SITES FOR GYPSY AND TRAVELLER CARAVANS EC1: EXISTING EMPLOYMENT LAND EC5: HOTEL DEVELOPMENT R1: RETAIL PROVISION WITHIN STRATEGIC SITES C1: COMMUNITY FACILITIES</p>	<p>Wastewater and sewage, leading to contamination and changes in nutrient and/or organic loading</p>	<p>None of the candidate sites for housing is within a European Site. However, increased sewage arising from these housing provisions may increase discharge into the Severn Estuary. This could potentially lead to changes in nutrient and /or organic loading, which could change the species composition of Saltmarsh plants and cause excessive algal growth on mudflats. This could subsequently deny wetland birds access to their invertebrate prey. At the current time there is no evidence to show that this is the case at this site, but the estuary is vulnerable to oil spills and JNCC states that there is a continuous discharge of toxins into the estuary, some of which bind to the sediments, although no specific sources or locations are identified. NE and CCW identify this is an area which requires further assessment. They also identify Bewick's swans as currently moderately vulnerable to toxic contamination.</p> <p>Sewage from Cardiff west of the River Taff is treated at the Cog Moors Sewage Treatment Works (STW), serving the Barry and Cardiff West catchments. This STW discharges to the Bristol Channel, via a long sea outfall, off Lavernock Point. Effluent is disinfected through ultra violet treatment, which reduces the environmental impact and protects water quality. Sewage from Cardiff east of the River Taff is treated at the WWTW at Tremorfa, and cleaned water is discharged via the outfall 4.2 Km into the estuary at ST25257393. DCWW have confirmed that the WWTW at Tremorfa has sufficient capacity across the lifespan of the plan (2006 - 2026) to accommodate the domestic foul flows from all of the allocations in the Deposit LDP.</p> <p>In terms of water quality issues the Severn Estuary is under greatest threat from point source pollution within the area of designation. The EA set very strict quality standards for the final effluent that can be returned to rivers, and Welsh Water achieved</p>	No

Severn Estuary Ramsar			
Policies	Potential effects	Test of Likely Significant Effect (LSE)	Likely Significant Effect?
<p>C9: NEW EDUCATIONAL FACILITIES C10: HEALTH EMPLOYMENT NON STRATEGIC ALLOCATION M1: MINERAL LIMESTONE RESERVES AND RESOURCES M3: QUARRY CLOSURES AND EXTENSION LIMITS M5: RESTORATION AND AFTER USE OF MINERAL WORKINGS M6: DREDGED AGGREGATE LANDING AND DISTRIBUTION FACILITIES W1: LAND FOR WASTE MANAGEMENT W2: SITES FOR WASTE MANAGEMENT FACILITIES W3: PROVISION FOR WASTE MANAGEMENT FACILITIES IN DEVELOPMENT</p>		<p>99.85% compliance of wastewater treatment works in 2009. Given the regulatory compliance measures and the current favourable condition assessment for the Severn Estuary SSSIs that are components of the SAC, it is unlikely that development resulting from the Cardiff Deposit LDP will have a significant effect on the water quality of the Severn Estuary SAC/SPA/ Ramsar site.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>Other plans and programmes which result in increased sewage discharge at the South Wales Coast, may act in combination with this policy to exacerbate nutrient and /or organic loading in the Severn Estuary, which could impact on the River Usk. Development plans for all unitary authorities whose sewage discharges at the South Wales Coast such as Caerphilly, RCT, Blaenau Gwent and Merthyr Tydfil make provision for a combined allocation of over 30000 new dwellings in total. However, Dwr Cymru Welsh Water have had the opportunity to comment on these LDPs and the inclusion of these levels of housing allocation indicates that there is the capacity to treat the predicted increase in sewage,</p> <p>Furthermore, all effluent is treated to meet the consent limits laid down by NRW and subject to strict conditions which include HRA processes where the potential for impacts on the estuary are identified. Provided this continues to occur, there is not likely to be a significant effect on the Severn Estuary Ramsar by sewage outfall.</p>	
<p>M6: DREDGED AGGREGATE LANDING</p>	<p>Aggregates removal, leading to damage by abrasion or selective abstraction</p>	<p>The features of the Severn Estuary Ramsar site are sensitive to marine aggregates dredging, and whilst this activity is outside the control of Cardiff Council, the draft LDP contains a policy (M6) which protects sand wharves as shown on the Proposals Map against development which would prejudice their ability to land marine dredged sand and gravel. The operation of these wharves is ongoing and Policy M6 would not lead to new wharves or increased capacity, so the policy (and thereby the draft LDP in this respect) would not have a significant effect upon the Severn Estuary Ramsar, above and beyond that which is already occurring.</p> <p>In-combination with other Plans, Projects and Programmes</p> <p>Whilst there are other plans, projects and programmes in the Severn Estuary area which may increase the dredging of aggregates, none of these would affect the landing facilities at Cardiff Docks.</p>	<p>No</p>

Appendix 8: Programme of Supplementary Planning Guidance

(As at January 2016)
